• Here is a winning formula: Mix 2 parts **wild yam**, 1 part **valerian**, 1 part **black haw**, and 1 part **peppermint**.

• Other beneficial herbs include **aloe vera, goldenseal, cayenne, yarrow, papaya, and red clover**.

• **B complex**, plus **acidophilus** to reinforce beneficial intestinal bacteria. **Beta carotene** (25,000 IU daily), to protect and heal the colon lining. **Vitamin E** (600 IU) protects the bowel lining. **Vitamin C** with **bioflavonoids** (2,000 mg in divided doses), to reduce inflammation.

DURING AN ATTACK—As soon as an attack begins, give yourself a cleansing **enema** (2 quarts of water and the juice of a fresh **lemon**). Take 4 **charcoal** tablets with a large glass of water.

In case of pain or spasm in the colon, apply a **heating pad** over the abdomen.

During the acute phase of an attack, it may be best to eat a low-**fiber** diet for a very short time. Then return to the high-fiber regime.

If the attack is severe, temporarily **blend** your food. Drink **carrot, cabbage, and green juices**.

To relieve pain, **massage** the abdomen on the left side. Stand up and **stretch.**

Try to have bowel movements on **schedule.** Take **fiber** first thing in the morning, and down a quart of **water** before breakfast.

Check your stools daily. If they are black, this means blood is present; take a sample to a physician.

ENCOURAGEMENT—Christ's followers are to be more than a light in the midst of men. They are to be *the* light of the world. God calls you to be His representative, to minister to the needs of those around you. As you do this, your life will become marvelously fulfilled. Matthew 5:14-16.

COLON POLYPS

SYMPTOMS—Intestinal polyps usually cause no symptoms. But if they occur, they include: diarrhea, blood in the feces, or bleeding from the anus (sometimes with mucus). Occasionally, anemia may develop due to blood loss, causing fatigue and shortness of breath. Rarely, a polyp protrudes through the anus.

CAUSES—Polyps are slow-developing growths that protrude inward from the lining of the large intestine. Some are small and spherical and are attached directly to the intestinal wall; others are over an inch long and attached to the wall by a stalk. They can occur singly or in groups. Those which are larger than ½ in diameter may become cancerous.

They are very common in developed countries, where at least 1 in 3 people over age 60 may be affected. Chemicals in the air, water, soil, and food are causal factors. Others include excessive eating and eating junk food. So much useless excess and harmful material enters the body that some of it is stored in polyps.

NATURAL REMEDIES

• Eat a small amount of nourishing food, consisting of fresh **fruits, vegetables, legumes, and nuts.** Eat a **high-fiber diet** which includes **no animal fats.** Fiber in the diet is important. Eating simply of high-fiber, nourishing food, and avoiding living in areas where **chemical pollution** exists can help one avoid the development of polyps. Increase **water** intake as you increase fiber consumption.

• Avoid **processed, fried, and junk food.** Do not use **caffeine, tobacco, or alcohol.**

• Take a **multivitamin supplement,** plus **vitamin A** (10,000 IU), **carotene** (in the form of **carrot juice** and **red and yellow vegetables**), **vitamin C** (1,000 mg), and **vitamin E** (400 mg).

• Keep the colon clean by occasionally taking a low enema when needed. Do not strain during bowel movements.

—*Also see Nasal Polyps (319), Diverticulitis (377).*

ENCOURAGEMENT—If you are willing to learn meekness and lowliness of heart in Christ's school, He will surely give you rest and peace. It is a terribly hard struggle to give up your own will and your own way. But this lesson learned, you will find rest and peace.

LEAKY GUT SYNDROME

SYMPTOMS—Recurring pain in the intestinal tract, resulting in a variety of complications.

CAUSES—This is a common, seldom recognized, problem in which the intestinal lining becomes hyperpermeable. Large spaces develop between the cells of the intestinal wall; and bacteria, toxins, and food leak through. Toxic materials (including bacteria, fungi, parasites, and fats) enter the bloodstream. This strains the liver's ability to detoxify the blood. Various gastrointenstinal disorders can result, including Crohn's disease, colitis, migraines, eczema, and immune problems.

The causes of leaky gut syndrome include: **poor diet, antibiotics, alcohol, caffeine, NSAIDS (non-steroidal anti-inflammatory drugs), chemicals, molds and fungi (from grains and fruits), enzyme deficiencies, parasite infection, fatigue, low-grade fever, frequent colds, flue, infections, food intolerances, and skin rashes.**

Causative diseases include: **AIDS, liver disease, cystic fibrosis, asthma, rheumatoid arthritis, celiac disease, lupus, chronic fatigue syndrome, fibromyalgia, and autism.**

NATURAL REMEDIES

• The following vegetable juice combinations will help rid the body of leaky gut syndrome: **Carrot, parsley, and cabbage. Carrot, celery, and endive. Ginger, parsley, garlic, carrots, and celery.** Fast on these juices 2-3 days a week.

• **Cook grains in a thermos** jar. This slow-cooking helps heal the digestive tract. The grains are rich in enzymes, vitamins, minerals, and proteins. No enzymes are lost.

• Drink plenty of liquids: **pure water, fruit juices, almond milk.** Almond milk can be added to fruit juices.

• **Buckwheat and millet** can be eaten for breakfast. They are nourishing and easily digested. Eat **raw and steamed vegetables, also fruit.** Eat **whole grains, nuts, and legumes.**

• Take **acidophilus, plant digestive enzymes (papain and bromelain), beta carotene, B complex, vitamin C, antioxidants, calcium, magnesium,** essential fatty acids (**flaxseed oil and wheat germ oil** are the best), **seaweed.**

• Helpful herbs include **aloe vera juice, grapeseed extract, paul d'arco, cat's claw, licorice, slippery elm,**

comfrey, goldenseal.

ENCOURAGEMENT— The character of God is righteousness and truth; such is the nature of His ten commandment law. Says the psalmist, "Thy law is the truth"; "all thy commandments are righteousness." Such a law, being an expression of the mind and will of God, must be as enduring as its Author.

HERBAL LAXATIVES

In the following herbal lists, you will notice some overlap. This is because some herbs fit more than one category. That is why they are repeated.

HERBAL LAXATIVES

Herbal laxatives promote bowel activity with mild purgation. They are used when there is constipation, insufficient fiber in the diet, blood toxicity, gallstones, hypertension, a skin condition caused by insufficient elimination, or an infection in which cleansing of the bowel is needed.

The most frequently used laxative herb is cascara sagrada. Senna, the second most-frequently used one, is actually a purgative (see below); it is stronger and harsher (only 1 cup of the tea daily).

Other laxatives include aloe vera, licorice root, psyllium seed, wahoo bark, and dandelion root (when there is liver involvement). They can be combined or taken individually. Some, like cascara and senna, operate by purging the bowels; others (such as psyllium seed, flaxseed, and agar agar) provide a soft gel-like bulk that slides it out (see demulcents, below).

During fevers, these laxative herbs help cool the system by eliminating heat from the intestines.

Here is a list of herbs that promotes bowel action: buckthorn bark, cleavers, agar agar, boneset, flaxseed, licorice root, cascara sagrada, elder, mandrake, motherwort, Oregon grape root, goldenseal, senna, safflower, yellow dock, and peach bark.

DEMULCENTS

Demulcent herbs bathe and lubricate the intestines and help expel contents, especially when the fecal matter in the bowel is dry. The best ones are psyllium seed, flaxseed, slippery elm, and agar agar. Here are several other demulcents: fenugreek, licorice root, comfrey root, aloe vera, and mullein.

HERBAL ENEMA

Instead of a laxative, an herbal enema can be taken. A peppermint tea enema is one of the best.

PURGATIVES

Purgatives are fast-acting herbs which are best avoided. They deplete the energy of the body and should not be used during hemorrhoids, bleeding intestines, dryness of the bowels, or prolaspe of the bladder, uterus, or intestines. Do not use them when the body is chilled or there are skin infections.

Purgatives are so powerful that they work within 8-24 hours; and only robust, strong individuals should take them. The most frequently used purgative herbs are senna, castor oil, buckthorn bark, jalap, and American mandrake root.

CARMINATIVES

Purgative herbs should be combined with carminative herbs, to lessen griping. Carminatives contain volatile oils which stimulate the expulsion of flatus (gas) from the bowels and peristalsis. The best is peppermint. Here are several other carminatives: angelica, anise, caraway, catnip, celery, chamomile, coriander, cumin, dill, fennel, garlic, ginger, myrrh, peppermint, sassafras, thyme, and valerian.

ENCOURAGEMENT—God can help you as you commit the keeping of your soul unto the Lord as unto a faithful Creator. To learn the lessons Christ teaches is the greatest treasure you can find. Rest comes in the consciousness that you are trying to please the Lord.

OVERCOMING THE ENEMA AND LAXATIVE HABIT

PROBLEM—Having taken enemas for a long time, you find you cannot have a bowel movement without taking another. Or, because you have the cathartic habit, you need to take laxatives to have a bowel movement.

NATURAL REMEDIES

• A **small, cold enema** is especially useful in retraining the colon to evacuate normally by itself. Cold water has a bracing, strengthening, enlivening effect. In hydrotherapy, the enema is considered cold if the temperature is **55°-70° F.**; whereas it is only cool if it is 70°-80° F. The cold enema is a powerful stimulant to bowel movements and should be more generally used for this purpose instead of the warm enema. Use the cold enema to overcome both the enema habit and the cathartic habit.

How to do it: Obtain an ear irrigation syringe, from the drugstore, and inject one syringeful of cold water into the rectum. Hold it 1 minute; then expel. A bowel movement will generally follow. Use this treatment at the same time each day, to establish regularity.

BULK AIDS VS. LAXATIVE AGENTS

1 - Bulk-forming agents: **bran, psyllium, and raw fruits and vegetables** are not referred to as "laxatives." Their use is an ideal way to promote bowel movements; and they are safe to use on a long-term basis.

2 - Laxatives are supposed to promote bowel movements, but some only hinder it. They are also poisonous. **Mineral oil** and **docusate sodium** are stool softening agents. If used at all, they should only be used temporarily. The mineral oil can damage the lungs, if inhaled; it absorbs fat-soluble vitamins in the digestive tract. Docusate sodium increases toxicity of other drugs and may cause liver damage.

Salts are osmotic agents which draw water into the bowel for a flush. These are safe if used only occasionally; but, otherwise, they can initiate dependency. In

addition, some people dare not take extra salts into their body (edema, pleurisy, etc.). Examples include **milk of magnesia, Epsom salt, and table salt**.

3 - Stimulant agents cause a laxative effect by irritating the intestinal walls and inducing peristalsis. But they can result in dependency and damage the bowels. Examples include various drugstore items, **castor oil, senna,** and laxative herbs (such as **cascara sagrada**).

ENCOURAGEMENT—Friendship with God. What privilege can be greater? Study His Word, pray often, and tell others how wonderful He is. Tell them that God is love. This can give them the peace and rest they so much want. Hosea 10:12.

GASTRO-INTESTINAL - 10 - ANUS

HEMORRHOIDS
(Piles)

SYMPTOMS—Burning, pain, itching, inflammation, swelling, irritation, seepage, and bleeding.

CAUSES—Hemorrhoids are enlarged varicose veins, which are found in the anus and rectum.

Those occurring below the internal sphincter (a circular muscle which closes the rectum) are called external hemorrhoids. Those above that sphincter are called internal hemorrhoids.

Internal hemorrhoids are generally painless, but often bleed. When they do, the blood is bright red.

External hemorrhoids are also called piles. Sometimes they protrude from the anus. Because they enlarge and lose their elasticity, they often form little sacs which protrude into the anal canal. The skin above them turns blue or purple and can be extremely painful.

A *prolapsed hemorrhoid* is an internal one which is protruding outside the anus. Often there is a mucous discharge and heavy bleeding. They can be extremely painful.

When they bleed, a fair amount of blood can issue forth. Yet it does not indicate a serious disease.

Older people are more likely to have them. **Pregnant women**, and **women who have had children**, tend to have hemorrhoids more often than other younger people.

Circulatory weakness of the veins, along with constipation, are primary causes of hemorrhoids. Liver congestion can also be a factor.

Any condition which increases pressure on that area or reduces the flow of blood through those veins can induce hemorrhoids.

Hemorrhoids are common in folk who live on **junk food diets, low-fiber diets, lack of exercise, sit while working (especially sitting when tense and nervous), do heavy lifting, are obese or pregnant, strain at the stool, do heavy coughing, frequently sneeze, have prolonged use of laxatives or enemas, have elevated pressure on the portal vein of the liver (as occurs in cirrhosis of the liver), and sit on something cold**.

NATURAL REMEDIES

• To whatever degree you are able, take corrective actions as indicated in the above two paragraphs.

• Avoid **spicy, highly seasoned foods**; for they irritate the inflamed area.

• Avoid **sitting or standing** for long periods of time.

• **When lifting**, bend your knees and not your back. Do not hold your breath as you lift. Instead, take a deep breath and exhale at the moment of lifting. Avoid heavy lifting as much as possible.

• Do not **sit on things** which do not warm up (a rock, steel, the ground, or deep foam) for periods of time. Sit on a soft cushion, but not on a doughnut-shaped one.

• A **high-fiber diet**, which is **nourishing**, is crucial to success in avoiding or managing this problem. **Fresh fruits and vegetables** are full of fiber.

• Use soft **toilet paper** and only dab with it. Use only non-perfumed, white toilet paper.

• Do not **scratch** the area.

• Avoid **diarrhea** *(369)*; it intensifies the problem. For the same reason, avoid **constipation** *(367)*.

• **Sitz (sitting) baths** soothe inflamed tissues and relax spasms of the rectal and anal muscles.

• In severe cases, take an alternating **hot and cold sitz (sitting) bath**. Use two large galvanized washtubs, propped up at one end, to make sitting in them more comfortable. Fold a large towel and place it in the bottom and sides, for comfort. Fill one with hot water (100° F.), the other with tap water. Sit in the hot, for 5 minutes, and in the cold for 30 seconds. Spread the buttocks, as you do this, so the temperature changes will have the best effect on the desired area. Do this 3 times. You can come back later and do it again as needed.

• An alternate method, for less severe cases, is to **sit in a bathtub** with 10-12 inches of hot water. Do this 3-5 times a day.

• **Take B complex, beta carotene** (25,000 IU), **vitamin E** (400 IU), **vitamin C** (2,000 IU in divided doses), **calcium** (800 mg), and **magnesium** (1,200 mg).

• For hemorrhoids which are extruded or prolapsed, take supplements containing glycosaminoglycans.

HERBS

• Apply cold **witch hazel** tea to help shrink them.

• **Cranberry** poultices are helpful. Blend a handful of cranberries, wrap a tablespoonful in cloth, and lay against the area. Change an hour later and repeat when you wish.

• Dab **lecithin** on the area, as you would Vaseline.

• An **ice pack** to that area may also bring relief.

• Peel a **garlic** bulb and scrape it to get the juice to flow. Then insert it. It will be expelled the next day during elimination. Do this 3 times a week.

• Cut a piece of aloe vera, about 2½ inches in length, peel, and insert.

• Applications of **white oak bark** tea or **witch hazel** to the area will, through astringent action, tend to shrink the hemorrhoids.

• Apply **goldenseal** as an anal antiseptic.

• In a research study, 84% of those receiving a **psyllium** preparation reported improvement: less pain, itching, bleeding, and discomfort when defecating. **Psyllium** and **flaxseed** absorb water, expand, and soften stools.

• Very good poultices for this problem include **butcher's broom, horse chestnut,** and **plaintain**.

• Mix equal parts **witch hazel, slippery elm, mullein, wild alum, and goldenseal**. Internally, take 2-4 capsules daily. Externally, mix with vasoline and apply to area.

• Apply **ginger tea** or **yarrow extract**.

• Melt 2 oz. **cocoa butter** on top of a double boiler. Stir in 2 Tbsp. finely powdered **witch hazel, bayberry, or yellow dock** (all astringent). When pliable, roll into cigar-shaped inserts (suppositories). Harden them in refrigerator. Insert. Cocoa butter melts at room temperature.

• **Flavonoids** (found in fresh fruits and vegetables) strengthen the anal veins so hemorrhoids are less likely to occur.

• **Stone root** strengthens hemorrhoidal veins (2 capsules between meals twice daily during acute attacks; otherwise, use once a day).

OTHER INFORMATION

• Medicinal **drugs** generally contain local anesthetics; but these often irritate the area and delay healing.

• A 1976 report stated that there was no evidence that any of the ingredients in *Preparation H* could reduce inflammation or shrink hemorrhoids.

• Aspirin will intensify the bleeding.

• Prolapsed hemorrhoids can become *thrombosed*; that is, they can form clots inside them which prevent their receding. Severe, increased pain indicates this has occurred. Go to a physician to remove the clot. This is not the same as a hemorrhoidectomy and is a simple, rapid treatment.

• In case of persistent, severe problems, some may choose to have hemorrhoidectomy done. Find a physician who has done this and adequately knows what to do.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR HEMORRHOIDS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

PORTAL CONGESTION—Cold Footbath, in running water. **Hot Footbath** or Hot Foot and Leg Bath. **Hot Leg Pack**, Revulsive Douche to feet and legs. **Hot Abdominal Pack**.

IRREDUCIBLE PROLAPSE—Rest in bed, lying on the face in knee-chest position, if required. **Ice Compress**, daily bathing parts with ice water. Small **Cold Enema** after stool. Relieve bowels while lying in horizontal position; avoid straining. Need abdominal supporter. In many cases, surgical measures are necessary.

INFLAMED HEMORRHOIDS—Rest in bed with feet and hips elevated; knee-chest position, if necessary. **Ice Cold Compress**, pressed firmly against anus. Ice suppositories (ice placed in rectum). Very shallow **Ice-cold Sitz Bath**.

PAIN—If due to inflammation, short **hot Fomentation** followed by **cold compress** applied to the anus and nates, with **Hot Footbath** at the same time; repeat **Fomentation** hourly or every 2 hours. Prolonged **tepid Sitz Bath**, at 85°-90° F. **Hot Hip and Leg Pack**, followed by **Cold Compress** over nates, perineum, and lower back.

ENCOURAGEMENT—Bible religion is to be interwoven into everything we do and say. Let others see Jesus in you. Make His honor first. Show others that the Ten Commandments are the best commands to be kept in the whole world. 2 Chronicles 13:12. Surrender your heart and life anew to Him.

RECTAL FISSURES
(Rectal Abscesses)

SYMPTOMS—After passing a larger-diameter bowel movement, there is burning, stinging, and possible bleeding on the rectum. Painful red swelling or sore at, or near, the anal opening.

CAUSES—Hemorrhoids are swollen veins in the anus and rectum area. Fissures are ulcers or breaks in the skin which just happen to occur in the same area.

The margins where the skin meets the mucous membrane can have small tears. This occurs sometimes at the corners of the mouth. Fissures on the rectum are somewhat similar. A common cause is the passing of a **large, hard stool**.

NATURAL REMEDIES

• A research study revealed that patients given **sitz baths** and a **high-fiber, non-constipating diet** recovered the most quickly.

• Avoid **constipation**. Be sure to include enough **fiber** in the diet and drink enough **water** each day (at least 6-8 glasses). The two, combined, will produce soft stools. Eat more **fruits and vegetables**.

• Do not **scratch** the area. Wipe yourself gently.

• Avoid **diarrhea**. An ongoing case of it can soften rectal tissue, so it is more likely to tear.

• Sit on something soft. A special **pillow** can be purchased in the drugstore.

• Fairly **hot water** on the area will relax and soothe it. This can be a **sitz** (sitting) bath, with astringent plants which will dry and heal (such as **white oak bark** tea).

• Outstanding healing herbs for this purpose: Rhatany (use in sitz baths), Mother of thyme (antiseptic and cleansing), psyllium (soothing, anti-inflammatory, relieves discomfort).

• If needed, to keep it dry, place **cornstarch** on the area after each bath. Do not use **talcum powder** for this—or any other purpose. It can cause cancer. Talcum powder is rock dust and should not enter body openings or be inhaled.

• These swellings may be **opened** with a blade or by **soaking** them in hot sitz baths of 3% boric acid. A poultice of **echinacea** may be applied directly to the abscess,

to disinfect and help bring it to a pointed shape, so it can be opened. Flush the opened abscess with 3% **hydrogen peroxide**, to clean it out and disinfect the wound.

• Infants with this problem should be taken off **cow's milk**, since it is constipating.

ENCOURAGEMENT—If Christ is dwelling in the heart, it is impossible to conceal the light of His presence. Let Him use you to be a blessing to others, which they so much need. Psalm 41:1.

"I will lift up mine eyes unto the hills, from whence cometh my help. My help cometh from the Lord, which made heaven and earth. Psalm 121:1-2. Claim this promise as yours. Plead with Him for help and determine to be His obedient child. He wants to help you in all your need.

RECTAL ITCHING
(Pruritis Ani, Anus Itch)

SYMPTOMS—Itching around the anus.

CAUSES—Causes include **infection, parasites, poor hygiene, diabetes, estrogen deficiency, or liver disease**. Skin diseases, such as **psoriasis, seborrheic dermatitis, and eczema** can also cause it. Another possible cause is **contact dermatitis**, due to **perfumed or dyed toilet tissue, deodorants, soap, or underclothing. Food allergies** are thought to be another cause.

Rectal itching is a symptom of a problem rather than a disease. Resolving the basic problem is essential to eliminating the itching.

NATURAL REMEDIES

• Take **pulse tests** to determine food allergies. *See Pulse Test (575).*

• Take **beta carotene** (carrot juice, green and yellow vegetables) and **flaxseed oil** (2 tsp.) orally.

• Use **wet tissue** to clean the area after a bowel movement, but do not leave the area wet.

• Eliminating **moisture** from the area is a key factor. Moisture, leakage, and fecal soiling are frequently primary causes.

• After a bowel movement, it will help to **wash** the area with a syringe of water. Dry thoroughly afterward.

• Take a hot **sitz bath** daily. After the bath, apply **lemon juice** to the area with a piece of cotton. Or rub **wheat germ oil** on all affected parts after washing and drying well.

• A warm (not hot) tea bag of **goldenseal** may be applied to the area for up to a half hour, to relieve itching.

• Avoid using **soap** in the area; for soap is highly alkaline.

• Avoid **tight clothing** of any type in the abdominal area.

• Avoid **drugs**; many irritate the colon, leading to rectal itching.

Pinworms are frequently the cause in children, but rarely in adults. *See Pinworms (590).*

AVOID

• Several foods have been found to cause allergies, leading to itching: **beer, wine, hard liquor, coffee, milk, cola drinks, tea, citrus, chocolate, tomatoes, popcorn, nuts, and spicy food.**

• Avoid **gas-forming foods**.

• Avoid **stressful situations**. High-strung individuals tend to have this problem more than others. Their nerves are on edge.

• Do not use **anesthetic medications** with "caine" in the name. They produce strong allergic reactions, making the condition worse. They also tend to keep moisture on the area.

—Also see pinworms under "Worms" (588).

ENCOURAGEMENT—Resolve that, not in your own strength, but in the strength and grace given of God, that you will consecrate to Him now every power and ability of your life. Psalm 18:27-28.

ANAL ECZEMA

SYMPTOMS—Itching, reddening, and irritation on the anal mucosa.

CAUSES—An eczema infection was transferred to the anal area, probably by unwashed hands.

NATURAL REMEDIES

• Mallow helps heal superficial skin and mucosa irritation. Use the herb tea in compresses with an infusion or decoction of flowers and/or leaves.

• For additional treatment information, *see Rectal Fissures (379), Rectal Itching (380), and Eczema (270).*

ENCOURAGEMENT— Since the law of God is "holy, and just, and good," a transcript of the divine perfection, it follows that a character formed by obedience to that law will be holy. Christ is the perfect example of such a character.

GASTRO-INTESTINAL - 11 - DIGESTIVE

ANOREXIA NERVOSA

SYMPTOMS—Thin people who try to keep losing more weight. Special indications of the problem: Persistent, intense fear of gaining weight. Continuous diet-

ing, to the point of self-starvation. Refusal to eat, except small portions. Abnormal weight loss. Irregular or stoppage of menstruation.

CAUSES—Both anorexia nervosa and bulimia are obsessive eating disorders; but they are not the same.

Anorexia describes people who, although thin and often weak, are certain that they need to lose additional weight. **They fear food and weight gain**, and will hardly eat.

Bulimia describes people who try to eat less, then go on eating binges because they feel starved. Each one is concluded by purging (induced vomiting) in order to bring up the food eaten. *See Bulimia (381).*

Believing they are overweight, and terrified of putting on more pounds, these individuals rather consistently try to keep themselves starved. They tend to have **low self-esteem**, and often are **depressed**. Certain that they look terrible, and sure that eating still less might solve the problem, they have a thinking pattern which is difficult to change.

In some cases, **drug and/or alcohol abuse** is also involved.

Lack of proper nutrition tends to intensify the feelings and attitudes.

Almost all anorexics are women, typically between the ages of 12 to 18.

The word, "anorexia," means "appetite loss" and technically could apply to anyone who has an ongoing disinclination to eat food. This can be caused by stress, malnutrition, shock, or injury. But, today, the term is generally applied only to those who have anorexia nervosa; and this article only applies to this latter definition.

Some consider anorexia nervosa to be a psychiatric illness. Others believe that reaction to a strong, underlying collection of **allergenic foods** is the problem. The often repeated phrase, "I always feel better when I don't eat and feel bad when I do" can apply to both viewpoints.

About a third of those with this problem prematurely die from starvation, infections, heart disorders, or suicide.

The underlying cause must be dealt with. Love and understanding is needed. Help from someone outside the family may be needed. However, there is danger in consulting professional counselors or psychologists, since they have been trained in hypnotic procedures; a growing number of instances are occurring where so-called "repressed memories" are implanted in the counselee. —And that only adds to the problems!

About 30% of those with this problem tend to have it all their lives.

NATURAL REMEDIES

• **Pray with the person and help her find peace in God. We must accept ourselves as we are**, physically, and go on from there.

• **Perk up the appetite**. Give **betaine hydrochloride** and **pancreatic enzymes (papain and bromelain)**.

• Give herbs which help stimulate the appetite: **sweet flag, calamus, yellow gentian, buckbean, gotu kola, ginger, peppermint, or marsh trefoil**. Give these herbs before meals.

• **St. John's wort** will aid in preventing depression.

• A **good nutritional program**, along with **vitamin / mineral supplementation**, is urgently needed. The delicate problem is getting the individual to eat enough food, so that normal balances can be regained. If extremely nourishing food is eaten, a person can maintain good health on less food. And "less food" means less calories and less weight gain.

• Take a full **vitamin-mineral supplementation**. This, along with certain herbs (such as **ginseng**), will provide vibrant energy without weight gain. The very minerals (**potassium** and **iodine**) which girls lose through vomiting are the ones that help them control their weight. (Do not use ginseng if there is high blood pressure.)

• Try to locate **food allergies** *(576)*. Research studies have disclosed that, because certain foods are undesirable to eat, anorexics decide to reject almost all food.

• Avoid **sugar foods, processed foods, white-flour products, and food additives**.

• Obtain mild **exercise** every day. It not only builds lung, heart, and muscle, but it makes a person more confident. The exercise should not be excessive, unless the girl is eating enough food.

• Help her cultivate **relationships** with girls who have positive outlooks on life.

• Get her into a project where she is **helping** others. It is impossible to be happy when we only think about ourself and our own appearance.

—Also see Bulimia (below).

ENCOURAGEMENT—No one can remain neutral in the conflict. Everyone must decide whether he will stand under the banner of Satan or the ensign of Christ. Everyday we are deciding where we will stand in this battle. "Choose you this day whom you will serve." Joshua 24:15.

BULIMIA

(Bulimia Nervosa, Binge Eating Disorder)

SYMPTOMS—The people appear normal; and the symptoms occur in secret.

CAUSES—Bulimia describes people who try to eat less to keep their weight down; then, every so often, they go on a eating binge. This is followed by purging (induced vomiting) or the taking of laxatives, so the food will be eliminated without being properly digested. *Also see Anorexia Nervosa (380).*

Bulimia can result in serious physical problems, including hypoglycemia, internal bleeding, ulcers, erratic heartbeat, kidney damage, menstrual cessation, low pulse rate and blood pressure, and glandular damage.

Some bulimics overdo on exercise, in order to better manage weight.

Professions requiring a beautiful appearance are where we are most likely to find bulimics (models, actors, dancers, ballet dancers). By her own admission, Princess Diana was a bulimic. Thinness is equated with beauty by many people.

Oddly enough, while anorexics tend to be overly thin, bulimics are generally just right—not too heavy or too thin.

But their way of life may produce hair loss, yellow skin, premature wrinkles, muscle fatigue, dizziness, and extreme weakness.

The primary physical signs are those which are caused by sessions of induced vomiting: swollen salivary glands, constant sore throat, hiatal hernia, esophageal inflammation, erosion of the enamel of the back teeth, swollen glands in the face and neck, and broken blood vessels in the face.

If laxative abuse is done, then rectal bleeding, bowel damage, and chronic diarrhea may result. Excessive laxative use removes an excess of potassium and sodium, leading to muscle spasms, dehydration, and eventual cardiac arrest.

Bulimics tend to have low levels of serotonin, which can lead to increased cravings for simple carbohydrates (sugars). Yet it is likely that the binges produced those chronically low levels.

NATURAL REMEDIES

• Follow the suggestions for anorexia *(381)*. The person should expect to experience temporary anxiety, depression, insomnia, and possible irritation, as he or she attempts to break with the old way of life. But the rewards are outstanding and well-worth the effort.

• Do not eat any **sugar or sugary foods**. Avoid all junk food and white-flour products.

• A **simple diet of the most nourishing food** is urgently needed in order to restore the needed balance in life. Take a complete **vitamin-mineral supplementation**.

• CCK *(cholecystokinin-pancreozymin)* is a hormone, found in the small intestine and brain, which signals a satisfied feeling and that it is time to stop eating. When a person gets into a pattern of overeating, that hormone is not properly produced. So the person only feels satisfied after heavily overeating a meal. The only solution is to **rigorously eat just so much**, even though it does not seem like enough. Eventually, the hormone will start being produced again in the proper amount at the proper time.

• **Marjoram, valerian, and prickly lettuce** are sedative, ease anxiety, and calm nervous excitation. **Fucus and kelp** (both types of seaweed) produce a sensation of being full and decrease appetite.

• Take a **small plate** of the **most nourishing food**, take **small bites**, **chew your food** very slow, and **eat slowly**. Do not eat **complicated mixtures or meat**.

—*Also see Anorexia Nervosa (381).*

ENCOURAGEMENT—For Christ's sake, we are to endure trials. We are not engaged in mimic battles. Satan wants to have you. But, pleading with God for help, you can choose to cast in your lot with Christ. And you will have angels to help you win the battle.

CELIAC DISEASE
(Celiac Sprue, Gluten Intolerance)

SYMPTOMS—Diarrhea, weight loss, and nutritional deficiencies (such as anemia). Other symptoms include frequently pale and/or light-yellow, foul-smelling stools that float. Fatigue, depression, abdominal swelling, muscle cramps, wasting, and bone and/or joint pain. Diarrhea is the most commonly observed symptom.

Infants and children may show vomiting, stunted growth, intense burning sensation of the skin, and a red itchy skin rash. Ulcers may develop in the mouth. The child may look anemic and undernourished.

Some children develop blisters and sores all over their body from celiac disease. Symptoms vary, but can include fatigue, irritability, and/or behavior changes.

Babies may lose weight or gain it more slowly, and do not seem to be thriving well. The disease can begin in the first few months of life.

CAUSES—Celiac disease affects the small intestine. There are abnormalities in the intestinal lining, due to a permanent **intolerance to gluten**. Gluten is in **wheat, rye, barley, and oats**. (Corn, rice, millet, soybeans, quinoa, and amaranth do not contain gluten. There seems to be a little uncertainty about buckwheat.) The protein, **gliadin**, is thought to be the toxic part of the gluten. It interacts with the lining of the intestines, causing the tiny absorptive fingers which jut from it (the villi) to flatten and atrophy. As a result, nutrients are not absorbed (including vitamins A, D, and K) and the disease symptoms appear.

Unfortunately, many physicians and the food industries recommend that grains be introduced into the diet of the infant when they are less than a year old. This can prompt celiac disease to first appear then or even decades later.

This is important! Tell every expectant mother not to feed her child grains until it is at least a year old.

Celiac disease tends to start between 9 and 18 months, immediately after wheat, rye, barley, and/or oats is given to the child. Those are often the first solid foods given to infants. (Breast-fed infants first show the symptoms at 16 months while the bottle-fed ones first develop them at 10 months.) The disorder is rare in blacks and Asians, and tends to run in families.

Removing gluten from the diet of a celiac produces a marked change; whether an infant, child, or adult, the person starts feeling better again. But he must not return to gluten foods.

Some infants do not tolerate **cow's milk protein**; they react to it with celiac symptoms, even before gluten is given to them. So remove that also from them.

Celiac disease is often misdiagnosed as spastic colon, irritable bowel syndrome *(372)*, or something else which affects the intestines.

Yet, if left untreated, celiac disease can be quite serious. It can lead to pancreatic disease, infertility, miscarriages, internal hemorrhaging, bone disease, gynecological disorders, nervous system damage, intestinal lymphoma, and many more problems. For example, anemia is common, due to poor absorption of folic acid, iron, and vitamins B_{12} and K.

Scarring of the intestinal lining can progress so far that, by the ages of 45 to 50, 90% of the intestine can be damaged, resulting in a significant reduction (as much as 70%) of the absorptive surfaces.

But there is evidence that partial repair to those walls can be made within several months—if you permanently part company with the offending foods.

NATURAL REMEDIES

AVOID

• You will want to avoid *gluten foods*, which are **wheat, oats, rye, and barley**.

• Do not eat products containing **cow's milk**. Breastfeed the child, to avoid using cow's milk.

• Some celiacs must also exclude **soybean** products. **Eggs** are also a problem for some.

• Do not overeat **sugar or white-flour products**.

• Avoid **processed, fried, and junk food**. Do not eat **sugary foods, chocolate, and processed foods**. Do not eat **meat**. Avoid **tobacco, tea, coffee, and alcohol**.

• Read the **labels** and watch for "hidden" gluten or cow's milk ingredients in bottles and packages. Some of these are malt, modified food starch, some soy sauces, grain vinegars, binders, fillers, excipients, and "natural flavorings." Almost all commercial breads, bread mixes, crackers, cereals, pastas, and processed foods contain gluten. It is often found in commercially prepared puddings, candies, cookies, cakes, ice cream, salad dressings, luncheon meats, non-dairy creamer, beer, bouillon cubes, chocolate, frankfurters, canned chili, macaroni, noodles, spaghetti, bread stuffings, and anything thickened with flour (soups, vegetables, bottled meat sauces, gravies, flavoring syrups, sauces, bottled salad dressing, cocoa mixes, curry powder or seasonings, or mustard.

GOOD FOODS

• The follow grains do not have gluten: **corn, millet, and rice. Soybeans, quince, potato starch, and amaranth** are also okay. Breads and cereals made from any of these do well. **Buckwheat** is all right for some celiacs, but not for others. **Oats** should be okay, but some oat preparations include gluten.

• All grains fed to babies or adults should be **cooked for 2-3 hours**, if the preparation is done by boiling at 212° F.

• Eat a nourishing diet, including **fresh fruit, vegetables, and fresh vegetable juices**. **Fiber** is important in the diet of celiacs.

• Take a complete **vitamin-mineral supplement**. But everything should be **wheat-free, yeast-free, and hypoallergenic**.

• *Allisatin*, found in **garlic**, is said to help treat celiac disease.

• Ripe **bananas** are tolerated well and help control the diarrhea. Only eat **homemade desserts**.

• Frozen, fresh, canned **vegetables and vegetable juices** are all right.

• A **lactose intolerance** *(383)* frequently exists, requiring that milk products be excluded. **Vitamin K** deficiency frequently occurs. Therefore, be sure to include **acidophilus** in the diet.

• Helpful herbs include **aloe vera, burdock, pau d'arco, psyllium, saffron, slippery elm, and alfalfa**.

• **Infections** and **stress** worsen the symptoms; **sunlight** and **garlic** (raw or cooked) tend to improve them.

—Also see Lactose Intolerance (below). Lactose Intolerance and Crohn's Disease (374) have some similar symptoms and problems.

ENCOURAGEMENT—You may at times hesitate. Should you choose the right? But the command of God is "Go forward!" Do what is right, regardless of the consequences; and the angels of God will be by your side. Psalm 107:19.

LACTOSE INTOLERANCE

SYMPTOMS—Diarrhea, gas, and abdominal cramps. Symptoms generally begin 30 minutes to 2 hours after eating dairy products. Symptoms are similar to those of celiac disease *(382)*.

In infants, symptoms include foamy diarrhea with diaper rash, slow weight gain and development, as well as vomiting.

CAUSES—Lactose intolerance is inability to digest milk sugar. The intestinal wall is not able to make the digestive enzyme, *lactase*, which is needed to split lactose into *glucose* and *galactose*. When the lactose is not split, it remains undigested in the intestinal tract. It retains fluid and ferments in the colon, producing gas, diarrhea, and abdominal cramping. It can cause blood loss from gastrointestinal bleeding. It can inhibit the absorption of iron. (Milk also contains saturated fat, which is not good for the heart and blood vessels.)

Although it can cause digestive disruption and discomfort, lactose intolerance will not produce dangerous results. Fortunately, it can easily be controlled through careful diet.

Very few adults throughout the world can digest milk sugar after the age of 20. The exceptions are most caucasians of northern European origin. Milk is one of the two or three most common food allergens in Western diets. But most of the symptoms do not show up right away; so milk is not always suspected as the cause.

The following infections can result in lactose intolerance: irritable bowel syndrome, regional enteritis, and ulcerative colitis. It can cause allergic symptoms such as diarrhea, asthma, ear infections, rashes, and hives.

Although less common in infants and children, it can occur after a severe attack of gastroenteritis and injure the intestinal wall.

If you are pregnant and there is lactose intolerance in your family, plan to breast-feed your child or give him a nondairy formula (such as soy milk). But, if you do, give him added calcium gluconate powder, since soy milk does not contain enough calcium.

Lactose intolerance is different than milk allergy. A person with lactose intolerance cannot digest milk sugar; one with milk allergy can digest milk, but his immune system is antagonistic to one or more of its components.

SENSITIVITY TEST

To find out if you are sensitive to milk, cut out all diary products for 10 days and see how you feel. If your symptoms disappear during those 10 days, and then return when you start drinking it again, you probably have a milk sensitivity. During the test, it is best that you only eat food you have prepared yourself at home.

NATURAL REMEDIES

• Avoid all **milk and dairy products**. This includes **ice cream, frozen yogurt, powdered milk, whipped cream, creamed soups**.

• Beware of products which contain small amounts of **added milk ingredients**, such as "milk solids." Lactose is added to many processed foods, including **cookies, pancake mixes, breads, canned and powdered soups, flavored coffee, powdered drink mixes, processed meats, hot dogs, milk chocolate, non-dairy creamers, protein powder drinks, biscuits, candies, snacks, and ranch dressing**.

• Many **pharmaceutical drugs** contain lactose as a filler.

• Since you cannot drink milk, eat foods which are rich in **calcium**. This includes **broccoli, dried figs, apricots, blackstrap molasses, collards, turnip greens, cabbage, carrots, parsley, romaine lettuce, summer squash, and other vegetable greens**.

• Do not eat **spinach or rhubarb**, for they contain a chemical (oxalic acid) which blocks absorption of calcium.

• Take **supplemental calcium** powder (calcium citrate, calcium gluconate; but *do not take* calcium lactate). *See Strengthening the Bones (505) for much more information.* Osteoporosis *(509)* affects 1 out of every 4 women over age 50.

• During a **lactose attack** of diarrhea, do not eat any solid food. Just drink lots of good water and replace lost minerals.

• **Acidophilus milk** does not help the person with lactose intolerance; for the acidophilus works to improve conditions in the colon. And the problems with lactose occur in the small intestine.

• Milk-containing foods one eats or drinks **hot** are often better tolerated than are cold ones.

• Acceptable **milk substitutes** include soy milk, rice milk, almond milk, or a milk product which contains the lactose-digesting enzyme, lactase.

• Take a **lactose supplement** (in drops, capsules, or tablets) along with a milk product at a meal, to help digest that milk. When several drops of the enzyme in the supplement are mixed with a quart of milk and then refrigerated for 24 hours, about 70% of the lactose in the milk will have been predigested before you drink it. To speed up the process, heat the milk to 90° F. before the enzyme is added. Because the lactose has been changed to sweeter sugars (glucose and galactose), it may be best for diabetics not to use it.

• Some with lactose intolerance are still able to eat small amounts of **plain yogurt, goat's milk, or fat-free milk**. They have smaller amounts of lactose and allergy-causing components of whole milk.

• Never drink milk alone; take it with solid food (such as whole-grain cereal). This will slow digestion and help the lactose digest more of the milk.

• If you are pregnant and have a family history of problems with digesting milk, then you do well to **breast-feed your child** instead of giving him cow's milk.

—Also see Celiac Disease (382). Celiac Disease and Lactose Intolerance (383) have some similar symptoms and problems.

ENCOURAGEMENT—The victory can be gained; for nothing is impossible with God. Give Him your heart, and you have given Him the best gift you can. Is it not worth it? He offers you Christ and eternal life in heaven.

GLUTEN INTOLERANCE

SYMPTOMS—Indigestion, often severe, after eating a food containing gluten.

CAUSES—Gluten is a protein which is found in wheat, oats, barley, rye, and malt. It is in many processed foods. Gluten is not found in millet, rice, or corn.

NATURAL REMEDIES

• Do not eat wheat, oats, barley, rye, malt, or foods containing them. Here are these gluten foods:

Breads made from oats, barley, rye, or malt flavoring. Cakes, cookies, ice cream, pastries, pies, puddings, sherbert made with stabilizers. Cream, commercial salad dressings. Fried potatoes, potato chips, hominy, macaroni, noodles, spaghetti. Many soups, candy, jam, and marmalade. Chocolate, gravy, malt extract, pickles, white sauce, spices. Alcoholic beverages, cereal coffee substitutes, or beverages made with chocolate or malted milk.

• There are many, many foods which are not included in the above list.

ENCOURAGEMENT—Obedience to the ten commandments was the only condition upon which ancient Israel was to receive the fulfillment of the promises that made them the highly favored people of God; and obedience to that law, by the enabling grace of Christ, will bring as great blessings to individuals and nations now as it would have brought to the Hebrews.

WILSON'S DISEASE
(Copper Disease)

SYMPTOMS—There is a pigmented ring (the Kayser-Fleischer ring) at the outer margin of the cornea of the eye. This is called the "fissure sign."

Later symptoms include bloody vomit, drooling, an enlarged spleen, jaundice, loss of coordination, progressive fatigue, weakness, intellectual impairment, personality changes, bizarre behavior, spasms, tremors, rigidity of the muscles, fluid accumulation, swelling in the abdomen, weight loss. Also difficulty in speaking, swallowing, and/or walking.

Although the disease begins at birth, symptoms generally do not appear until the age of six or more often in the teens or later.

CAUSES—Wilson's disease is rare and inherited. The body is not able to metabolize the trace mineral copper, although it is still absorbed by the small intestine into the bloodstream.

The result is an excess of copper in the various organs (liver, kidneys, brain, and corneas of the eyes). If not cared for, Wilson's disease will result in serious damage to the liver and brain and, ultimately, death.

Early detection and treatment can minimize the damage. If you have a family history of this disease, have diagnostic tests made of you and your children. Early detection is important. The following is a treatment for one with this disease; it should not be used by those who do not have Wilson's disease:

NATURAL REMEDIES

• A lifetime must be spent **avoiding things which have copper** and **taking substances which remove it** from the body.

• Check your **drinking water**, to make sure it has no copper. If it has more than 1 part per million of copper, drink bottled water.

• Make sure your vitamin / mineral **supplements** do not include copper. Maintain a high intake of **vitamin C**, since copper in the body tends to destroy it.

• Onions and garlic contain **sulfur**, which **helps rid the body of copper**. But do not take flowers of sulfur (the chemical sulfur); they will give you boils.

• Eliminate from the diet those **foods which are high in copper**. This includes **chocolate, molasses, nuts, organ meats, shellfish, broccoli, mushrooms, avocados, legumes, oats, egg yolks, soybeans, raisins, and whole grains**.

• Avoid **exposure to metal**. Do not use copper cooking utensils or cookware.

• Grains are important; and so are nuts, legumes, and broccoli. All of these are high in copper. But by taking zinc supplementation (below), you may be able to eat them.

• **Zinc** is able to reduce copper absorption by the body, and has been used successfully in alleviating this disease. Take 50 mg 3 times per day. (One person with Wilson's disease, who took too much zinc [480 mg], experienced a copper deficiency!) Taking more than 300 mg of zinc per day may weaken immune function. Some research indicates that those with Alzheimer's should avoid zinc supplementation. Zinc destroys copper by locking with it; that is why you have to keep taking zinc. Zinc is nontoxic.

• **Hair analysis** reveals whether normal people have been exposed to too much copper. But, oddly enough, it does not show excess copper in those with Wilson's.

• The standard **drugs** for Wilson's disease destroy vitamin B_6 and iron, which can produce extremely serious side effects (including kidney disease, damaged blood cells, bleeding of the lungs, and kidney failure).

ENCOURAGEMENT—The true man or woman is the one who will stand by principle, even though all others may be compromising. Obedience to the commandments of God, by enabling faith in Christ, is what is needed. Jeremiah 31:12.

COPPER DEFICIENCY

SYMPTOMS—Diarrhea, stunted growth, inadequate utilization of iron and protein. In babies: impaired development of bones, nerves, and lung tissue.

CAUSES—In contrast with Wilson's Disease (above), in which there is too much copper in the body, this is a disorder in which there is not enough.

Not enough red blood cells are made. White blood cells cannot fight infection. Iron is not absorbed. Copper-deficiency anemia results. Mental and emotional problems develop. It may be a factor causing anorexia nervosa *(381)*. It is one of several causal factors, resulting in sprue *(371)* and kidney disease *(397-402)*.

Without enough zinc, copper cannot be absorbed and used. Without copper, iron cannot be absorbed and used.

NATURAL REMEDIES

• Take 5 mg of **copper** daily for 1 month; then reduce to 3 mg daily.

• Take 30 mg of **zinc** daily, but do not exceed this amount. Do not take too much zinc; for it will reduce copper absorption.

• Take the equivalent of 100 mg of **iron** daily. It is best not to take tablet supplements; but, instead, obtain it from a natural source. Each day take 1 tsp. **blackstrap molasses**, the richest source.

• Take a multivitamin supplement daily.
• Babies fed only **cow's milk** are more likely to develop copper deficiency.

ENCOURAGEMENT—Those who think themselves the strongest may become the weakest unless they depend on Christ as their efficiency, their worthiness. This is the Rock upon which we may successfully build.

GASTRO-INTESTINAL -
12 - NUTRITIONAL

EMACIATION

SYMPTOMS—Extreme thinness and gauntness.

CAUSES—Lack of proper nourishment, which is caused by **under-eating** and eating almost totally of **junk foods. Alcoholics** and those addicted to **street drugs** do not always obtain adequate nourishment. Decided changes need to be made.

Extreme cases of emaciation demand immediate attention. Here is Dr. John Harvey Kellogg's prescription:

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR EMACIATION AND ITS SEVERAL COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

BASIC FACTORS—**Rest** in bed, also **fattening diet** that will build tissue and blood. This should include dairy products, well-cooked cereals, malted or predigested cereals, a graduated program of tonic treatments (the Tonic Frictions). **Fomentation** over the stomach twice daily, followed by **Hot Abdominal Pack**.

GASTRIC ULCER—**Withhold food by mouth**. Do rectal feeding, **Fomentation** over stomach twice daily, well-protected **Heating Compress** during the interval between. **Graduated Tonic Frictions.**

CHRONIC GASTRITIS—**Rest** in bed. Abdominal **Fomentations** 2-3 times daily. Protected **Heating Compress** during intervals.

INTESTINAL CATARRH—Enema at 95° F. after each bowel movement. During the interval between, apply a **Heating Compress** at 60° F., changing it every 30 minutes.

HYPOPEPSIA—Graduated tonic treatment (**Tonic Frictions**). **Ice Bag** over stomach half an hour before each meal.

CONTRAINDICATIONS—Avoid prolonged Hot Baths and Cold Full Baths.

GENERAL METHOD—The general plan of treatment must be such as to secure increased income of tissue-building material with a diminished outflow; hence the diet must be very simple, easily assimilable, and taken in as large a quantity as possible. Exercise must be diminished or, in grave cases, suspended altogether. Moderate exercise may be allowed, if necessary, to maintain the appetite. Special attention must be given to increase of the appetite and improvement of digestion by suitable hydrotherapy applications. Cold applications must be very short and intense, so as to produce strong nervous impressions upon the nerve centers without removing animal heat (to any considerable degree) or increasing oxidation.

ENCOURAGEMENT—The strength of every soul is in God and not in man. Quietness and confidence is to be the strength of all who give their hearts to God.

PICA
(craves dirt)

SYMPTOMS—The child keeps eating dirt.

CAUSES—Children eat dirt because they crave minerals they are not obtaining in the foods served them. Sometimes they eat paint chips from the walls. But paint often contains lead or cadmium, both of which are quite toxic. Lead can produce brain damage.

During pregnancy, the expectant mother may crave substances other than food, such as coal, dirt, ice, starch, or hair. These are signs of nutritional deficiency.
—*See Lead Poisoning (600) and Anemia (440, 723).*

NATURAL REMEDIES

Supplement the child's diet with extra **vitamins and minerals**. Provide him with a nourishing diet of **fresh fruits, vegetables, beans, and nuts.**

Include Nova Scotia **dulse** or Norwegian **kelp** in his diet. This will supply trace minerals. If you live near the ocean, use a little ocean water to help salt the food.

Do **pulse tests** to determine if a celiac type of disease exists. *See Pulse Test (575) and Celiac Disease (382).*

Do a **hair analysis** test, to determine which minerals are needed and whether he may have ingested toxic minerals.

ENCOURAGEMENT—The temptations of Satan are greater now than ever before; for he knows that his time is short and that very soon every case will be decided, either for life or for death. It is no time to sink beneath discouragement or give up the battle. Cling to Jesus and, by His grace, live the life of an overcomer. John 17:3.

MALABSORPTION SYNDROME

SYMPTOMS—Anemia, diarrhea, and weight loss are frequent. Sometimes there is weight gain instead of weight loss. Nausea, vomiting, abdominal pain.

Other causes may include dry skin, fatigue, abdominal bloating, gas, constipation, diarrhea, PMS, thinning hair, tendency to bruise easily, depression, or inability to concentrate. There may also be vision problems (especially impaired night vision) and bulky, pale, and fatty stools (known as steatorrhea).

CAUSES—This disorder appears to be a wastebasket category. Whenever nutrients, in general, cannot be

properly absorbed by the gastro-intestinal (GI) tract, the problem is dubbed "malabsorption syndrome."

Possible causes include an **impoverished diet, primarily junk food**. The body may not be producing enough **digestive enzymes**. Vitamin **B complex** may not be in the diet or is not being properly absorbed. **Diseases of the gallbladder, liver, bile ducts, or pancreas** may exist. There may be **food allergies**.

Other causes include **damaged intestinal walls** (caused by irritable bowel syndrome), **lactose intolerance, Crohn's disease, diverticulitis, celiac disease, colitis, or parasitic infestation.** Other causes include excessive consumption of **antacids, alcohol, or laxatives**. **Chronic constipation or diarrhea** can have a similar result.

Radiation therapy, sugary foods, or digitalis treatment can reduce the absorptive area of the intestines. An overgrowth of **candida** in the digestive tract or **obstructions in the lymphatic system** can have a similar effect.

Too rapid intestinal transit time causes nutrients to pass out of the body as waste.

AIDS and cancer can produce many of these symptoms.

There are a number of other possible causes, including a variety of **drug medications**.

Premature aging can be caused by a decline in secretions of stomach acid and digestive enzymes.

NATURAL REMEDIES

• Try to identify which of the above causal factors applies and apply solutions, as given elsewhere in this book. A great need is to cleanse the body and, then, rebuild it with a good healthy program.

• A good **nourishing diet of fresh fruits and vegetables. Include well-cooked brown rice or whole-wheat cereal.** Eat **smaller meals** and **chew thoroughly.**

• Omit all **fats and oils**, except 2 tsp. **flaxseed oil** daily. Do not eat **meat products, coffee, or alcohol; do not use tobacco**. Drink 8 glasses of pure **water** daily.

• Obtain adequate **rest, outdoor exercise, fresh air, and sunlight.**

• **Oregon grape** root is healing and improves digestion. **Chamomile** calms the nervous stomach. **Peppermint** and **parsley** are also healing.

• Make sure the **bowels** are kept open and working properly. This reduces toxins in the intestinal tract and digestive organs.

• Freedom from **worry and tension**.

• Do not use **drugs** which interfere with nutrient absorption (which includes antibiotics, sulfasalazine, corticosteroids).

ENCOURAGEMENT—God is love and He cares for us. "Like as a father pitieth His children, so the Lord pitieth them that fear Him." Trust and obey your sweet heavenly Father. You will never be sorry that you did. John 15:2, 5.

BERIBERI
(B_1 Vitamin Deficiency)

SYMPTOMS—In children: mental confusion, muscle wasting, impaired growth, convulsions, nausea, vomiting, stomach and intestinal problems, diarrhea, and constipation.

In adults: weight loss, diarrhea, edema, fatigue.

CAUSES—Beriberi is a nutritional disease, caused by a **deficiency of thiamine (vitamin B_1)**, but also all **the other B complex vitamins** as well.

Beriberi is not common in the West. In the East, where many subsist primarily on polished (stripped of it hull) rice, it is endemic. The rice bran contains the vitamins; and the polished kernel only contains starch and protein.

In America, beriberi occurs as a result of **alcoholism, hypothyroidism, pregnancy, infections, or stress**.

NATURAL REMEDIES

• Eat **brown rice, raw fruits and vegetables, seeds, nuts, legumes, and whole grains**.

• Take **vitamin-mineral supplements**.

• Do not drink **liquids** with your meals; for this washes away water-soluble vitamins.

ENCOURAGEMENT—All who give themselves to the service of Christ will follow the example of Christ and will be perfect overcomers. In His strength, you can stand firm amid the pollutions of this degenerate age. Psalm 91:14.

PELLAGRA
(Vitamin B Deficiency)

SYMPTOMS—Depression, anxiety, dizziness, headaches, diarrhea, loss of appetite, red tongue that is sore and inflamed, weakness, weight loss, dementia, and itchy skin on the hands and neck.

It is sometimes diagnosed as mental illness.

CAUSES—Pellagra is a deficiency disease, caused by a severe lack of several vitamins. It is rare in the United States at this time; but, when it does occur, it is caused by diseases which heavily deplete those vitamins.

The primary vitamins involved are **niacin (vitamin B_3)** and, secondarily, **thiamine (B_1)** and **riboflavin (B_2)**. Also needed is **folic acid** and **vitamin B_{12}**.

NATURAL REMEDIES

• Eat plenty of **foods high in the B vitamins** and take **nutritional supplements**.

• Worthwhile foods include **potatoes, legumes, broccoli, collards, bananas, figs, nuts, seeds, peanut butter, tomatoes, prunes, whole-grain breads, and cereals**.

ENCOURAGEMENT—All power to do good is God-

given. His grace is sufficient for all our trials. If we trust wholly in God, we can overcome every temptation and, through His grace, come off victorious.

Christ has not a casual interest in us, but an interest stronger than a mother for her child. Our Saviour has purchased us by human suffering and sorrow, by insult, reproach, abuse, mockery, rejection and death. He is watching over you, trembling child of God. He will make you secure under His protection. Our weakness in human nature will not bar our access to the heavenly Father; for Christ died to make intercession for us.

—Also see Pernicious Anemia (442) and Megaloblastic Anemia (443).

SCURVY
(Vitamin C Deficiency)

SYMPTOMS—Swelling and bleeding of the gums, tenderness of joints and muscles, poor healing of wounds, and increased susceptibility to bruising and infection. Rough, dry, discolored skin. Scurvy may occur concurrently with gingivitis *(337)*.

An infant with scurvy is comfortable only when lying on his back with his knees partially bent and his thighs turned outward. His bones are less capable of retaining calcium and phosphorus, causing them to become weak and eventually brittle.

CAUSES—Scurvy is a malnutrition disease, caused by a diet that is deficient in **vitamin C**.

NATURAL REMEDIES

• Scurvy responds, in as little as 2-3 days, to a daily intake of 100-200 mg of vitamin C. Gradually increase the dosage, as the patient is able to do so, to 1,000-3,000 mg for 30 days.

• **Fresh fruits and green leafy vegetables** are also rich in vitamin C.

• In order to promote blood and bone repair from damage caused by scurvy, a **well-balanced diet that is high in protein and iron** is also needed.

• Supply **bioflavonoids** (vitamin P), which work closely with vitamin C. These will be found in foods with vitamin C.

ENCOURAGEMENT—When temptations and trials rush in upon us, let us go to God and agonize with Him in prayer. He will not turn us away empty, but will give us grace and strength to overcome and break the power of the enemy. 2 Peter 1:2-3.

KWASHIORKOR
(Protein Starvation)

SYMPTOMS—Retarded growth, changes in skin and hair, diarrhea, loss of appetite, edema, and nervous irritability.

CAUSES—Kwashiorkor *(kwash-uh-OR-kor)* is a serious nutritional disease. Adequate carbohydrates are provided, but **not enough protein**.

This condition generally occurs in children, between the ages of one and five, who have been weaned from milk to **a diet primarily of starches and sugars**.

Low-blood protein levels cannot hold water in the blood vessels; water just goes into the cells and produces a distended, bloated belly and edema.

There are 22 amino acids which children need and 20 which adults need. Complete protein meals should be the objective.

NATURAL REMEDIES

• Add **protein** to the diet. In underdeveloped countries, a **skim milk formula** is usually first given, because the child's fat-absorption ability has been damaged. Other foods are gradually added until he can handle a **balanced diet**.

• Correct all **vitamin-mineral** deficiencies which may exist.

ENCOURAGEMENT—To obey the commandments of God is the only way to obtain His favor. "Go forward" should be the Christian's watchword. Let God lead you by His Written Word, and you will not take missteps. Psalm 46:11. "If . . we suffer with Him . . we may be also glorified together." Romans 8:17.

GASTRO-INTESTINAL - 13 - WEIGHT

OVERWEIGHT
(Obesity)

SYMPTOMS—The person is heavier by at least 20% than the average for his height and weight.

CAUSES—Obesity is an excess of body fat; too much is being stored. It is also consuming more calories than one can use.

The average human body has 30-40 million fat cells. That is too many for some of us. It has been said that when a person makes an extra fat cell, in order to store some extra fat, he will keep that extra cell for the rest of his life—even though he may remove the fat from it.

Poor diet, fatty foods, and a lack of exercise are common causes of overweight. Other factors include **diabetes** *(547)*, **hypoglycemia** *(544)*, and **endocrine glands** *(543-552)* which do not function properly. **Boredom, tension, and love of food** are other causes. An-

other factor is **inadequate intake or absorption of key nutrients**, which causes fat to be stored instead of used.

Each year in America, over $30 billion is spent on foods or equipment to help lose weight.

Obesity can be involved with hormonal imbalances in the **hypothalamus, pituitary, pineal, thyroid, adrenals, or pancreas**.

Obese people tend to store fat, not only in regular fat cells, but also in muscle tissue. Then, when they try to lose weight (via a weight loss diet), they lose both fat from the fat cells and protein from the muscles—before they lose fat from the muscles. The best solution is to keep fit, so you do not store fat in your muscle tissue.

It is said that 90% of obese people overeat and binge because they are eating **meals with too many empty calories**, which do not supply enough minerals (especially trace minerals) and vitamins.

NATURAL REMEDIES

FOOD AND NUTRITION

People try to cut down on the calories, when they should make sure they steadily obtain **good basic nutrition, day after day**. Without adequate nourishment, they will generally binge or go off their special diets. It is now known that steady eating is better than losing weight and regaining it, losing it and regaining it. The up and down program damages the body and makes it more susceptible to disease. The 14-year Framingham Study established that repeated crash diets increase the risk of heart disease.

• To maintain **a program of weight loss** (that is, an ongoing program of gradually losing a little weight), calculate how many calories you need each day, in this way: **Multiply your weight by 10. Then add 30% (about a third) to the total.** This total is the amount of calories you can consume daily, without gaining the weight back which you have already lost. Assuming that you are moderately active, eating anything less than that total amount should cause you to lose weight. (*Example*: 150 lb. x 10 = 1,500 + 30% (450) = 1,950 calories.)

• **Crash diets** are useless. Quick weight loss tends to come back quickly, resulting in elevated cholesterol.

• Test for **food allergies** and eliminate them. *See Food Allergies (576) and Pulse Test (575).*

• Consistently eat a **lighter, but more nourishing, diet**. Do not eat food for fun; eat for health.

• Avoid **junk food, fatty food, fried food, processed food, caffeine, nicotine, and soft drinks**. Do not drink **alcohol** in any form. It has calories without giving nourishment. It inhibits the burning of fat deposits.

• Drink at least 8-10 glasses of **water** each day.

• **Do not skip breakfast and lunch**. Make breakfast the largest, lunch a moderate meal, and supper the lightest. Or skip the evening meal entirely. Do not eat before bedtime or at night. Best: Eat nothing after 3 p.m.

• Include Nova Scotia **dulse** or Norwegian **kelp** in your diet, to supply trace minerals.

• Include a good **vitamin-mineral supplement**. Be sure to obtain enough **fiber** in your diet. It fills you up, without adding body weight. **Phenylalanine**, an amino acid, helps in reducing weight because of its effect on the thyroid. It increases endorphins in the brain.

• Powdered **barley malt** sweetener is quite sweet, yet contains fewer calories than other sweets. Use it to sweeten your food. Do not end a meal with sweets.

• Here is an **all-in-one food drink** which, because it is so nourishing, can help you lose weight—if you will let it be your only nourishment at a meal. It is filled with nutrition! Mix the following ingredients in a blender and drink: 1 cup rice milk, 1 cup soy milk, 1 cup fruit juice (apple, orange, or other), 1 banana, 4 fresh strawberries (if available), 1 tsp. blackstrap molasses, 1 Tbsp. black cherry concentrate, 1 Tbsp. powdered "green" (Barley Green, etc.), 1-2 Tbsp. powdered nutritional yeast, and 1 Tbsp. flaxseed oil. Drink it slowly, leave the table, and eat nothing more till the next meal.

A BASIC DIET

Go on a good basic diet and stay on it. Here is an example of one:

• Eat moderate amounts of **raw citrus and subacid fruits, but no sweet fruits** (such as grapes or dried fruits). **No fruit juices, except diluted grape juice** taken a half hour before the meal, to reduce appetite. No bananas.

• Eat as much **raw vegetables** as you want. The only cooked ones should be **fresh and conservatively cooked vegetables**. Do not use frozen, fried, or canned vegetables.

• Primarily eat vegetarian protein foods with some moderation: **beans, sprouted beans, seeds, nuts**, etc.

• All **refined carbohydrates** are forbidden. This includes **sugar, alcohol, white-flour products, quick oats, most packaged cereals, and processed starch**.

• Eat only well-cooked, unrefined **brown rice, barley, rye, millet, buckwheat, wheat berries, bulgur, corn**, and other whole grains. Do not grind them, but cook and eat them in their natural state.

• Use **cold-pressed unsaturated oils**, plus **lemon juice**, and possibly some herbs for flavoring. **Flaxseed oil** (2 tsp. daily) will help you burn excess calories. Use no other oil. Put the raw oil on your food at the table.

• Eat **spirulina** 30 minutes before meals. It is very nourishing, adds energy, and will reduce your appetite.

ADDITIONAL SUGGESTIONS

• **Do not overeat**, ever. It is a very, very bad habit to get into. But it is a habit which can be stopped.

• When you end a meal, make a determined habit to **eat nothing until the next meal**.

• When eating, concentrate on **quietly eating and thinking about when you should stop**. Do not just relax, talk, socialize, and eat and eat. Do not listen to the radio, read a book, or watch television. Stick to your work of eating lightly of nourishing food, and quitting when you should.

• **You will not be harmed** by finishing the meal a little hungry. Keep that in mind. Frankly, you will be greatly helped; for your stomach will gradually shrink to the size it ought to be.

• People who are overweight do best to eat as much **food raw** as much as possible rather than cooked food. If cooked, the food should be baked, steamed, or boiled; never fried.

• Go on a cleansing **juice fast** once a week.

• A regular exercise program is needed. Aerobic exercises are better than other kinds. This simply means **exercise done out in the open air.** It helps lose weight and build strength. It strengthens the heart, arteries, and veins. It also invigorates the vital organs and endocrine glands.

• **Walking** uses up to 120 calories per hour while actual jogging burns 440 calories per hour. But walking remains the best exercise.

• **Swimming** is usually done in cold water; and this triggers the body to store extra fat as protection against the cold. So swimming does not help one lose weight.

• Regular **bowel movements** are important. Reduce **salt** intake. **Gum chewing** gets the stomach moving and makes you hungry.

• **Do not overfeed children** with an excess of starches and cow's milk. Most infants receive starches by four months; but that is far too early and only leads to later allergies or celiac disease *(382)*. Children who are overweight by the age of 2 turn into fat adults more frequently than others.

• If you are only moderately overweight, do not worry about the comments of your thin friends; they probably wish they could gain a little.

HERBS

• Take 3 grams of **plaintain** leaves (or 3 grams of **psyllium**, the seed of that plant) in water 30 minutes before meals. In an Italian research study, women who were 60% over their proper weight did this; and they lost more weight than another group of women who ate less. What to do? Simply mix 1 tsp. **psyllium seed** with juice or water and eat it before each meal. (But some are allergic to psyllium; if so, stop using it.)

• **Astragalus** improves nutrient absorption, thus adding energy. **Green tea** helps you reduce weight.

• Adding fresh **chickweed** (a common weed) to your salad each day will help you lose weight. Eating one whole, fresh **pineapple** daily also helps do it.

• **Ginger** and **butcher's broom** improves fat metabolism. **Fenugreek** helps dissolve fat in the liver.

• A study of 25,000 Seventh-day Adventists found that those who ate the most **nuts** were the slimmest. Nuts are rich in serotonin, which helps make us feel full. Adventists are vegetarians. But **Meat eaters** would have a harder time losing weight, since their diet is heavy in grease and saturated fat.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR OVERWEIGHT AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INCREASE OXIDATION OF HYDROCARBONS—Moderately prolonged cold baths, especially **Wet Sheet Pack. Shallow Bath, Cold Shower**, Dripping Sheet Rub, Plunge Bath, and **moderate exercise** several times daily. The Cold Bath may be advantageously preceded by the Radiant Heat Bath or some other form of **sweating bath** that is not too prolonged. Exercise should always be preceded by a cold bath of sufficient duration to lower the temperature a few tenths of a degree.

CARDIAC WEAKNESS—**Cold Compress** over the heart (except in fatty degeneration of the heart) 15-30 minutes, 3 times daily; **graduated exercises outdoors** when possible.

CONTRAINDICATIONS—Avoid prolonged Hot Baths unless immediately followed by a cold bath.

GENERAL METHOD—The general plan of treatment must be prolonged cold baths and vigorous exercise while reducing the daily ration of food to the lowest point consistent with the maintenance of his strength. The treatment must never be conducted in such a way as to diminish his muscular or nervous energy. If he complains of feeling weak or debilitated, the vigor of the treatment must be diminished. There should be a steady gain in muscular strength accompanying the loss of flesh. His strength should be tested weekly. Do not use Hot Baths; for they are especially debilitating.

ENCOURAGEMENT—Victories are not gained by ceremonies or display, but by simple obedience to the Lord God of heaven. He who trusts in this Leader will never know defeat. Proverbs 3:5-10.

UNDERWEIGHT
(Thinness)

SYMPTOMS—The person weighs at least 10% less than an average person of his height and weight.

In addition to thinness, symptoms may include hunger, dizziness, fatigue, weakness, sensitivity to cold, and loss of ambition.

CAUSES—For some, being underweight is seen as a problem; for others it is no problem at all. Actually, as one ages, being unusually slim can be an advantage in a number of ways. If a person is in good health, as the years pass, there is less and less reason to gain weight. Thinner people live longer and are in less danger from heart disease.

But underweight is sometimes associated with health problems. This especially should be a cause for concern if unintended, sudden weight loss has occurred.

REASONS FOR SUDDEN WEIGHT LOSS—Try, if possible, to ascertain the cause of the unplanned weight loss or inability to gain weight. Here is a list of several possible causes:

• Unplanned-for weight loss may be caused by **an inability by the gastro-intestinal tract to digest and absorb food** properly, resulting from **ulcerative colitis** *(373)*, **diverticulitis** *(375)*, etc.

• It may be caused by **intestinal parasites** *(588)*, or **problems with the liver** *(357-362)* or **pancreas** *(356)*.

• It may be caused by **digestive enzyme deficiency, allergy, or food sensitivity**.

• It may be caused by endocrine imbalances, such

as **diabetes** *(547)*, **hyperthyroidism** *(552)*, or (sometimes) **hypothyroidism** *(549)*. If you are both underweight and feel cold all the time, you may be hypothyroid. Problems in the **thyroid, pancreas** *(356)*, **or adrenals** *(544-546)* can make weight gain impossible. **Hypoglycemics** *(544)* and **diabetics** *(547)* have an especially hard time maintaining proper weight.

• It may be caused by a **chronic illness, surgery, stress** *(455)*, **or emotional trauma** (such as the death of a loved one). It may be caused by **smoking** *(607, 773)*.

• It may be caused by **surgery, chemotherapy** *(603)*, **radiation therapy** *(602, 743)*, **medicinal or street drugs** *(778-780)*, or **AIDS** *(632)*.

• In addition, there may be **an eating disorder**: The person eats too little (anorexia, *381*) or, in some cases, eats too much (bulimia, *381*).

• **Zinc deficiency** and some **wasting diseases**, such as **cancer** *(611-626)*, can reduce appetite.

A valuable diagnostic aid is the consistency of the bowel movement and a check for undigested foods.

In infants and children, the cause may be **not enough food**; in old people, it may result from **disinterest in eating** or **poverty**.

You should especially be concerned about an infant or small child who suddenly seems to stop gaining weight normally. This may be caused by **celiac disease** *(382)* or something else.

The problem is usually that, for one reason or another, thin people have a harder time digesting and absorbing food than those who can easily gain weight.

NATURAL REMEDIES

Your body is having a hard time meeting the challenges of life and needs help. The recommendations are simple enough:

• Eat a **nourishing diet**, such as is repeatedly outlined in this book. For some people, it should include **more calories and protein** than should normally be eaten. But for many who are habitually underweight, the solution is to continue eating moderate-sized meals—while only eating the most **nourishing food** (no junk or processed food). Adequate and complete proteins are essential.

• If you want to go on a careful **weight-gain program**, try to eat 2,500 to 3,000 calories a day, including 100 grams of protein and 300 grams of complex carbohydrates. Eat only nourishing food; nothing processed, no "foodless food." Be sure and correct **vitamin and mineral deficiencies**. You may need to take **digestive enzymes** and/or supplemental **hydrochloric acid** (betaine HCl).

• Obtain moderate outdoor **exercise** each day. This will help your system digest the food. Take a walk after every meal.

• Obtain adequate **rest** at night; and **try to lie down and rest 15, 30, or 60 minutes before each meal**. This is important and will strengthen your body for the challenge of coping successfully with another meal.

• Avoid **stress** of various kinds.

• Eat in relaxed surroundings. **Do not eat when you are nervous or upset**.

• Try to **maintain regularity** in all your habits and activities, including when you eat.

• You may have a **food allergy**, such as wheat, cow's milk, etc. *See Allergies (576) and Pulse Test (575).*

• It is extremely important that you not eat **fried food, junk food or drink, and processed food.** Avoid **caffeine, tobacco, and alcohol.** If you are able to do so, do not take **medicinal drugs.**

• For infants, **mashed bananas** are more easily digested than some other foods.

Last but not least: If you are normally thin, but feel good, ignore the comments of others who say you need to gain weight. Some of them wish they could be thinner.

If you are determined to add more pounds, the experts tell us that, for adults, weight should not be gained at the rate of more than a pound a week.

ENCOURAGEMENT—If you will maintain a meek and quiet spirit, which is always obedient to God's Word, you will be spared many of the troubles in our world. Let Christ live in you and help others through you. Matthew 6:25, 30-32.

POOR APPETITE

SYMPTOMS—Day after day, a person does not want to eat hardly anything. He picks at his food and has little interest in eating.

CAUSES—A poor appetite may trace back to one or another of several possible causes. A medicinal **drug** he is taking may be the reason. Or he could be using too much **alcohol, tobacco, or street drugs**. It could be heavy **metal poisoning, nutritional deficiencies, depression, stress, or an injury**.

NATURAL REMEDIES

• In order to stimulate the appetite, the **food** should look good, taste good, and nourish the system. Eat **whole grains, fruits, vegetables, nuts, and legumes**.

• Do not drink **liquids** immediately before or during the meal. They fill the stomach so it does not want anything else.

• Eat **smaller meals** and more of them. Eat a **small amount** of quality food and nothing more till the next meal.

• Decide that you are going to **enjoy the food** and that you want to eat it. Be thankful that you have food to eat.

• Immediately after the meal, and at other times during the day, **get outside and walk**, work in the garden, or do something worthwhile.

• Forget yourself and **find someone else to help**. All around you are people who need encouragement.

• Stop **smoking**, drinking **liquor**, taking **hard drugs**, or doing anything that is damaging your health and interest in life.

ENCOURAGEMENT—The law of God is simple, and easily understood. If the children of men would, to the best of their ability, obey this law, they would gain strength of mind and power of discernment to comprehend still more of God's purposes and plans.

CELLULITE
(Lumpy Fat)

SYMPTOMS—Lumpy pockets of fat on the thighs, insides of upper arms, and gluteus maximus.

CAUSES—With the passing of years, strands of fibrous tissue anchor to the skin. As they do this, they pull the skin inward. This causes fat cells to push upward. Women especially tend to have this problem in the buttocks, hips, and thighs.

NATURAL REMEDIES

There is no known cure, but there are suggestions you may wish to try:

• **Lose weight.** This will help reduce the protruding pockets of fat. Go on a cleansing **juice fast** once a week.

• Eat plenty of **fresh fruits and vegetables**, including plenty of **leafy greens**. These are both nourishing and lower in calories. Improve your general pattern of diet and take **vitamin / mineral supplements**. Eat **whole grains, nuts, and legumes**.

• Keep the channels of elimination open, so excess fluids and fat can be more easily removed from the body. Drink plenty of **water**, keep the **bowels** open, maintain **regularity**, and avoid constipation.

• Avoid all **refined, fried, fatty, or canned foods.** Do not use carbonated drinks or liquor. Salty foods make your problem worse. Do not use **caffeine** or **tobacco.** Both constrict your blood vessels and make the cellulite more prominent.

• **Exercise** out in the fresh air and **breathe** deeply. The oxygen helps burn fat; and the better ventilation helps empty carbon dioxide from body cells. Do muscle-toning **exercises**. Take a vigorous, arm-swinging **walk** after every meal. Obtain adequate **rest** at night.

• To whatever degree you can, avoid **stress, tension, and time schedules**. Cellulite builds up when muscles become tense; and muscles tense when you are agitated.

• **Hawthorn** extract helps reduce blood fat levels.

ENCOURAGEMENT—The Lord has honored us by choosing us as His soldiers. Let us fight bravely for Him, maintaining the right in every transaction. Stand for the right though the heavens fall. God will help you. Psalm 71:3.

Phytochemicals

In recent years, laboratory researchers have discovered the existence of phytochemicals. These are substances which protect the human body against a variety of diseases, including cancer. Twenty are currently known to exist; and they are only found in fruits and vegetables. Here are the names of these substances, plus the foods you would need to eat in order to absorb them into your body:

Allyl sulfides - garlic, onions, leeks, chives
Carotenoids - yellow-orange vegetables and fruits; green, leafy vegetables; red fruits
Coumarins - celery, parsnips, figs, parsley
Curcumins - turmeric, ginger
Dithiolthiones - cruciferous vegetables (cabbage, broccoli, cauliflower, brussels sprouts, kale, collards)
Ellagic acid - grapes, strawberries, raspberries, nuts
Flavonoids - most fruits and vegetables
Indoles / isothiocyanates - broccoli, cabbage, cauliflower, brussels sprouts, radish
Isoflavones - soybeans, tofu
Glucarates - citrus fruits, grains, tomatoes, bell peppers
Lignans - flaxseed, flaxseed oil, soybeans
Liminoids - citrus fruits
Phthalides / polyacetylenes - celery, caraway, cumin, dill, fennel, parsley, carrots, coriander
Phenolic acids - berries, grapes, whole grains, nuts
Phytates - grains, legumes
Phytosterols - seeds, legumes
Protease inhibitors - grains, seeds, nuts, legumes
Saponins - beans, herbs
Terpenes - cherries, citrus fruits, herbs
Tocotrienols - seeds, nuts

Phytochemicals not only provide color, texture, and flavor to plant foods; they also protect the plants against microorganisms and insects. When eaten, these substances protect us against disease! A high intake of fruit and vegetables protects the human body against various cancers, coronary heart disease, and stroke. A Harvard study found that the risk of stroke, alone, was reduced by 31%. A Finnish study found that phytochemicals reduce the likelihood of death by 35%.

For example, there are over 600 types of carotenoids in plants. Rich in antioxidants, they reduce or eliminate cancers in research animals, stimulate the immune system, and protect against age-related macular degeneration. Another example is the glucarates (found in the white portion under the peel of citrus) which protect against breast cancer.

URINARY - 1 - URINE

URINE PROBLEMS

NATURAL REMEDIES

WATER THERAPY

Here are a number of hydrotherapy treatments for several different urine difficulties. This brief summary is taken from the *Hydrotherapy* section of this *Encyclopedia (153-211)*, which will provide many more details on how to give the treatments:

***Albumin in urine** (Albuminuria):* **Hot Blanket Pack** and **other sweating measures** to maintain cutaneous activity, repeated every 2-4 hours *(185)*.

Incontinence: **Percussion Douche** to spine, **Neutral Sitz Bath** for 15-30 minutes.

Urine too acid: Free use of **fruit** and **water drinking** in the forenoon.

Urinary suppression: **Hot Blanket Pack** *(185)*, followed by **Dry Sweating Pack** *(174)*.

Nocturia: **Revulsive Sitz Bath**. Begin at 100° and increase rapidly to 106°-115° F. (with a **footbath** at 110°-112° F.) for 3-8 minutes. Keep the head cool with cold cloths over forehead or around back of neck. Finish with a cold (55°-65° F.) **pail pour** to hips *(191)*.

DIURETIC HERBS

These are herbs which increase the flow of urine. Whatever the problem may be with the kidneys, a major part of the solution is to increase the flow of urine. This is how the kidneys clean themselves out. For this purpose, you need to drink a large amount of liquids (either good water or fruit juices; no junk beverages), and take diuretic herbs.

• **Corn silk** tea is generally considered the best diuretic herb. *Go to p. 127 to learn how to use it.*

• **Celery seeds** act on the kidneys. Eat crushed **parsley**. Eat **grapes** freely to induce a free flow of urine. **Juniper berries** eaten in dried form produce a powerful diuretic action. Add raw **onions** to food to increase urine flow. Make a **salad** of raw tomato, onion, garlic, lemon juice, and oil.

• To improve the excretion of fluids, mix equal parts of **fennel root, celery root, parsley root, and asparagus root**. Steep 1 tsp. in ½ cup boiling hot water. Take ½-1 cup daily, unsweetened, in mouthful doses.

• Here is a powerful diuretic combination: Add ½ tsp. each of **juniper berries, dandelion root, and broom tops** (the herb, not your kitchen broom) to 1 pint water. Boil on a low flame till it is down to ½ pint. Strain, put in a jar, drink 2 Tbsp. 3 times daily.

• ***Here are a few of the best known of over a hundred diuretic herbs:*** You will find most of them listed in our chapter on herbs *(its index is on pp. 107-108)*. **Agrimony, asparagus, balm of Gilead, barberry, bayberry, bistort, black cohosh, blue cohosh, boneset, buchu, buckthorn, bugleweed, burdock, chamomile, catnip, celery, chaparral, chicory, cleavers, corn silk, dandelion, elecampane, elder, fennel, fleabane, juniper berry, kava kava, lady's slipper, marshmallow, mugwort, mullein, onion, Oregon grape, Peruvian bark, pipsissewa, plantain, pleurisy root, prickly ash, pumpkin seeds, purslane, radish, sarsaparilla, sassafras, saw palmetto, selfheal, shave grass, sheep sorrel, shepherd's purse, smartweed, sorrel, squaw vine, tansy, uva ursa, valerian, vervain, watermelon seeds, white oak, wild yam, wood sorrel, yarrow,**

ENCOURAGEMENT—The one who had revolted in heaven offered Christ the kingdoms of this world, if He would pay homage to the principles of evil; but He would not be bought. When Satan comes to you, answer him, "It is written"; and, in Christ's strength, stand true for God. Zechariah 13:9.

"This poor man cried, and the Lord heard him, and saved him out of all his troubles . . The eyes of the Lord are upon the righteous, and His ears are open unto their cry." Psalm 34:6, 15

ENURESIS
(Bed-Wetting)

SYMPTOMS—Bed-wetting during the night and sometimes during the day; this is usually after the age of 3 for girls and 4 for boys.

A slight loss of urine during the day by adults.

CAUSES—There can be a bladder infection that releases the urine. The infection in boys can be a residual effect of fecal contamination from earlier times when diapers were used. In girls, it can be the result of improper cleaning after urination. (They need to wipe from the front to back, not back to front.) Another cause can be stress from tensions in the home.

In adults, the cause can be the pressure at the office or shop to keep working and not promptly answer the urge to go to the restroom.

NATURAL REMEDIES

• Teach correct hygiene methods to the child. Identify the pathogenic bacteria by means of a urine culture. Begin providing an antibacterial remedy. Cranberry juice is both a natural diuretic, and its acidity helps purify the bladder. Garlic, echinacea, and burdock root tea are also very helpful.

• Train yourself to pay attention to the slightest beginning of the urge to urinate. By responding to it promptly, you can regain control in this matter.

—Also see Bed-wetting in the childhood section (697).

URINE RETENTION

SYMPTOMS—Flow of urine is lessening. Great pain

is felt in the bladder; and the odor of urine is on the body. Almost total suppression can produce extreme pain in the back and bladder, and even convulsions. There is always a great desire to urinate.

CAUSES—There can be a blockage of some type. *See Urine Problems (394), Kidney Problems (397-402), Bladder Problems (402), and other topics in this Urinary section.*

Urine retention is generally caused by **inflammation** and **swelling** in the bladder and its outlet. **Excess urine** in it causes the bladder to enlarge and can cause great pain. It can be caused by an obstruction, inflammation, and swelling at the bladder outlet, or along the prostate.

NATURAL REMEDIES

• In case of a serious stoppage, the first need is for a catheter to be placed through the urethra in order to allow the urine to flow. Attention can then be given to removing the cause of the obstruction.

• *Important: See Diuretic Herbs in Urine Problems (394).*

• *Poor urine flow:* Take a **cold sitz bath** (cold partial bath, as you sit in the bathtub). Stop using **salt.** Drink 2 quarts a day of 50-50 **orange juice and water.**

• Alternate method: Take a **hot sitz bath** repeatedly, followed by a **short cold bath.** If bedridden, **apply hot, followed by short cold,** over bladder, genital area, and entire length of spine.

• **Drink more water and take herbs which increase urine flow. Corn silk** tea is the best; others include **juniper berries, carrot tops, comfrey, plantain, cleavers, chickweed.** *See list under Urinary Problems (394).*

• Give a high **enema** of catnip tea. This is important in helping the urine to again begin flowing.

• Steep the following in a quart of boiling water: 1 teaspoon **goldenseal** and a half teaspoon each of **boric acid** and **myrrh.** Strain through a fine cloth and inject through a fountain syringe. Retain as long as possible. You can moisten the tip with slippery elm tea. Slippery elm is slippery!

• A **cold shower** often helps.

STOPPED URINE FLOW

• Almost total urine suppression generally points to the kidneys as the problem. There is a blockage.

If the urine has not been secreted for several days, there will be severe symptoms (such as convulsions, extreme pain the back and bladder, and a great desire to urinate).

Put the person to **bed** and give him **quiet;** give him a very warm high **enema** of catnip tea. This will bring great relief. Also apply hot **fomentations,** wrung out of **smartweed** tea, to the bladder and lumbar region (small of back). Give 2-3 hot **sitz baths** in a bathtub each day.

• An especially helpful remedy is a strong (hot as can be taken) tea of **catnip,** given as an **enema.** Drink it freely.

• Steep a heaping tsp. of **yarrow** in a cup of boiled water for 20 minutes. Drink a cup cold before each meal and before retiring.

• Insert a soft **catheter** and draw out the urine.

—Also see the kidney and bladder diseases in this Urinary section.

ENCOURAGEMENT—Christ's victory over Satan was as complete as had been Adam's failure. So we may resist temptation and force Satan to depart from us. It is in totally yielding ourselves to God that, in His strength, we can have power to resist the devil and come off more than conquerors. Psalm 41:1-3.

INCONTINENCE

(Urinary Stress Incontinence)

SYMPTOMS—Occasional dribbling. An involuntary loss of urine (in very small amounts) accompanies coughing, sneezing, laughing, walking, running, lifting, or any sudden shock or strain.

CAUSES—Incontinence tends to occur in women more than men, although older men may also have it.

The most common cause of urinary incontinence in women is a loss of muscle tone in the perineal area, due to multiple births. The second most frequent cause in women is chronic bladder infection.

Possible causes include **repeated births, poor pelvic floor tone, damage to pelvic floor** by the physician at time of delivery, **visceroptosis, overweight, poor abdominal tone, failure to do prenatal and postnatal exercises.**

A wide variety of other causes can be involved—including **food allergies, hypoglycemia, multiple dystrophy, multiple sclerosis, cancer, stroke, injuries, and surgical damage.**

It may follow a **prolonged labor** during childbirth, resulting from the stretching of the pelvic floor. If postpartum exercises are not done, this problem (which may disappear for years) can later return.

Incontinence is far less likely in the nullipara (women who have never delivered a child).

Urinary incontinence can occur in men as a result of **prostate surgery.**

NATURAL REMEDIES

EXERCISES

• The best pelvic floor exercises are variations of the **Kegel exercise;** these should begin early in pregnancy, or before, and continue on for at least 3 months after childbirth. These exercises strengthen certain muscles.

• Using your **urinary sphincter muscle,** slow urine flow and eventually stop it. Doing this helps you recognize the muscles involved. Later practice stopping the urine flow, by holding for 1-2 seconds and repeating 6-8 times, as you urinate. You should eventually be able to stop urine flow completely with no leakage. Learn to slowly relax pelvic floor muscles in stages from full contraction to full relaxation.

• Practice tightening these muscles at various other

times during the day. Repeat 6-8 times each session and 50-100 times a day. Hold each contraction for 2-5 seconds; then relax. These are called "Kegel exercises."

• When doing these exercises, do not hold your breath. Bear down; that is, push down on the pelvic floor or contract the buttocks, inner thighs, or abdominal muscles. When beginning, do not exhaust the pelvic muscles. Whenever contractions weaken, discontinue at that time. Build muscle strength slowly; there is no rush.

HERBS

When this disorder is not caused by some other disease (such as gout, palsy, or kidney stones), do this:

• Mix equal parts of **white poplar bark, bistort root, valerian, sumach berries, and white pond lily**. Steep a heaping tsp. in a cup of boiling water. Drink 1 cup 1 hour before each meal and on retiring (at least 4 cups a day). Or take **plantain** tea by itself for similar effects. Increase the dose if necessary.

OTHER THINGS TO DO

• Drink cranberry juice. Avoid **alcohol, caffeine, tobacco, and grapefruit juice**. Use **cranberry juice** instead.

• Reduce general **fluid** intake, but not too much.

• Avoid **constipation**. Lose **weight**.

• **Go** when you have to; do not wait, or you weaken bladder control. And involuntary dribbling will afterward begin. This is very important.

• **Double voiding** is helpful: After voiding, stand up and sit down again. Lean forward slightly at the knees and try again.

• Sleep either on the side or face.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR INCONTINENCE AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

TO INCREASE ENERGY OF BLADDER—Cold Plantar (bottom of foot) Douche for 1-2 minutes. **Cold Footbath**, using running water over the feet. **Cold Percussion Douche** to hips and legs at 60°-65° F. **Cold Douche** to lower back. Cold Fan Douche, at 65° F., over bladder. **Cold rubbing Sitz Bath. Colonic**, begin at 100° and lower 1° daily to 80° F.

RELIEVE VESICAL IRRITATION—**Revulsive Sitz Bath. Hot Pack** to pelvis. Prolonged **Neutral Sitz Bath**, following **Revulsive Sitz Bath. Neutral Douche** to lower spine. **Revulsive Douche** to feet and legs.

IMPROVE GENERAL NERVE TONE—Cold Mitten Friction or **Cold Towel Rub. Cold Pack** to pelvis, general Cold Douche, Shallow Bath. **Wet Sheet Rub**.

—For incontinence in children, see Bed-wetting (394).

ENCOURAGEMENT—The gift of God to mankind was immense. It could not be said that anything was withheld. God gave all in Christ. Accept Him and you become a child of God, known and loved by Him. Matthew 10:42.

The truths of the Bible, received, will uplift the mind from its earthliness and debasement. If the Word of God were appreciated as it should be, both young and old would possess an inward strength of character, an indomitableness of principle, that would enable them to resist temptation.

HEMATURIA
(Blood in Urine)

SYMPTOMS—Blood appears in the urine. This blood shows a smoky sediment, and is reddish brown. Urine may be slightly smoky, reddish, or very red.

CAUSES—Red, or reddish, urine may be due to blood in the urine, known as hematuria, or to senna or rhubarb, which may color the urine either brown or orange. The urine should never contain blood, protein, or sugar.

If the blood is well-mixed with the urine, it is probably from the kidneys. If it is clotted in tubular casts of ureters, it is from the kidneys or urethra. If it is passed at the beginning of urination, it is from the urethra; if at the end, it is from the bladder.

Bleeding from the kidneys produces smoky urine, which may be bright red. Bleeding from the urethra is always bright red and precedes urination. Bleeding from the urine vesicle produces bright red urine, which is not uniform.

Other causes of blood in urine can be a **lesion of the urinary tract, contamination during menstruation, prostatic disease, tumors, poisoning (especially carbolic acid and cantharides), malaria, toxemias, and calculus (kidney stones), and bladder infection**.

NATURAL REMEDIES

• Apply a very **cold water spray** to the perineum.

• Read the other sections, elsewhere in this urinary section on urine, kidneys, and bladder.

• Drink herb teas which have hemostatic and astringent properties, and act on the urinary organs that bleed. Such herbs would include **horseweed**. Make an infusion or decoction of dry leaves. It is hemostatic and reduces kidney inflammation. Another herb is **smartweed**. Make an infusion of its powdered, dry leaves. This stops hemmorrhage.

• Dr. Christopher prescribes drinking a tea made from powdered **acorns** or powdered **cups** they are formed within.

ENCOURAGEMENT—When a soul receives Christ, he receives power to live the life of Christ. He becomes a new man in Christ. He can obey the Ten Commandments and resist sin; for he has God's help.

SCALDING URINE

SYMPTOMS—The urine seems to burn as it is ejected.

CAUSES—There is an excess of uric acid and other acids in the system.

NATURAL REMEDIES

• Cleanse the system by taking the following herbs, and the scalding urine will be elimninated. Mix equal parts of **fennel, burdock, slippery elm.** Steep 1 tsp. 20 minutes in a cup of boiled water. Drink 1 cold cupful before each meal and on retiring. A tea of **cubeb** berries is also excellent, prepared and used in the same way.

• **Change your diet. Meat eating** is a major cause of excess acids in the system. It fills the body with purines and other strong acids which settle in the joints, causing arthritis and other painful conditions. **Soft drinks, liquor, junk food, sugar, and processed foods** all contain harmful substances.

ENCOURAGEMENT—"Weeping may endure for a night, but joy cometh in the morning." Psalm 30:5. If faithful, soon we will see Jesus when He returns for His children; and what a happy day that will be! Oh, my friend, we must be ready every day! Trust Him and obey all His Word. He will not fail His promises to you.

URINARY - 2 - KIDNEY

KIDNEY PROBLEMS

PROBLEMS AND CAUSES—In addition to other conditions mentioned in this section on the kidneys, there are less known diseases which can be just as serious. These include:

Renal tubular acidosis: The kidneys fail to reabsorb bicarbonate properly, resulting in inadequate ammonia production and acid excretion. This leads to a severe lack of fluid and potassium in the body, and an excess of acid. The bones can become deranged.

Hydronephrosis: The kidneys and bladder become filled with urine, due to obstruction of the flow.

Glomerulonephritis: This is an inflammation of the tiny kidney filtering units, sometimes resulting from a bacterial infection in the body.

Uremia: A toxic waste buildup in the blood, due to kidney malfunction.

In all of these conditions, a basic need is to cleanse the kidneys, increase urine flow, and restore proper function.

NATURAL REMEDIES

• Eat **75% raw foods** (including **garlic, parsley, potatoes, celery, cucumbers, and bananas**). **Green vegetables** are especially important.

• Drink 6-8 ounces of distilled **water** every hour.

DIURETICS

• **Corn-silk tea** is the best single herb for increasing urine flow and restoring the kidneys. **Watermelon-seed tea, pumpkin seeds**, and **celery and parsley seeds** are also diuretic in function

• **Cranberries** help acidify the urine, destroying bacteria and restoring the bladder.

AVOID

• **Stop eating meat.** An excess of protein is part of your problem; and meat also has a variety of waste products, plus bacteria, purines, and uric acid.

• Avoid **dairy products**, except yogurt. Do not eat **chocolate, cocoa, or fish.**

• Do not eat much **phosphorous.** For this reason, **avoid beet greens, spinach, rhubarb, and Swiss chard;** they contain oxylic acid.

• **Lead, other metals, pain relieving drugs** (Advil, Nuprin, etc.), and **infectious diseases** (scarlet fever, measles, etc.) can damage the kidneys. **Spirulina** is known to reduce kidney poisoning that is caused by **mercury** and drugs.

ENCOURAGEMENT—Only those who receive Christ as their Saviour are given the power to become sons and daughters of God. The sinner cannot, by any power of his own, rid himself of sin. But Christ can give the needed strength to come off victor in the battle with Satan. Romans 8:37.

KIDNEY STONES
(Nephrocalcinosis, Lithemia, Uric-acid Diathesis)

SYMPTOMS—Initially an intermittent, dull, dragging pain radiating from the upper back to the lower abdomen, usually increased by motion.

There is bleeding and renal colic (strong kidney pain) when the stone enters the ureters. These sharp pains may last hours or days. There is increased urination with pus and blood, pallor, nausea, and vomiting. Sometimes there are fevers and chills.

When you have bloody urine and sharp pain in the bladder or kidneys (a pain stronger than those of childbirth), it is very likely kidney stones.

CAUSES—Kidney stones (also called bladder stones or cystic calculi) are an abnormal accumulation of mineral salts (primarily calcium oxalate [70%-80%], uric acid crystals [10%], and/or calcium phosphate, magnesium ammonium phosphate, uric acid, or cystine). They form in the kidneys and, during passage down the ureters, may lodge in them or in the bladder. Kidney stones primarily affect middle-aged and older men. (In contrast, women mainly have gallstones.)

Oddly enough, a key factor in the production of kidney stones is a **calcium and/or magnesium deficiency** often the result of drinking sodas instead of water. The minerals in the stones come from your own bones!

Refined carbohydrates, especially sugar, prompts kidney stone formation. The amount of sugar in the pancreas increases; and it excretes additional insulin which, in turn, causes the kidneys to discharge more calcium in the urine.

Calcium is needed by the body. If there is not enough calcium is in the diet, the parathyroids will signal the body to extract calcium from the bones in order to keep the blood calcium at normal levels.

A **vitamin B_6 and magnesium deficiency** may also cause stone formation. A Swedish research group found that taking both daily stopped stone formation in 90% of their patients. Magnesium, like calcium, can bond with the oxalate. B_6 (10 mg a day) lowers the amount of oxalate in the urine.

In response to reduced blood calcium levels, the parathyroids trigger the body to draw it out of the bones.

It is vital that you obtain a **balanced diet of vitamins and minerals** every day.

Partial causes of kidney stone formation can include **dehydration** (not drinking enough water), **infections**, **prolonged periods of rest in bed**, and only rarely taking **vitamin D and calcium**.

Too much food, including **acid-forming foods—especially meat, along with white-flour products, sugar foods, tea, coffee, spices, and vinegar**—all help produce an excess of waste in the kidneys. Eventually it accumulates into gravel and stones.

If you are eating the **wrong kind of fatty acids** (the kind found in meat and junk food), it can combine with the calcium and be excreted in the stool. This keeps the oxalate in your food from combining with the calcium; so it passes into the kidneys and forms stones.

NATURAL REMEDIES

INCREASE WATER OUTPUT

• It is vital that you increase the amount of **water** you drink! Kidney health is keyed to an adequate fluid level in the blood. It is best to only use distilled water. Buy a distiller and you will not have to pay for bottles of it at the store. (In addition, those bottles are soft plastic; some of which is probably absorbed by the water.)

• Used in conjunction with more fluid intake, **cornsilk tea** increases urine output, a very necessary factor in purifying and detoxifying the kidneys.

• **Watermelon** provides additional water. Eat it alone and often; but do not eat it with other foods during meals.

• Drink **watermelon-seed tea**; steep in hot water for 15 minutes, strain, add a little honey, and drink.

NUTRIENTS

• A lack of **vitamin A** can lead to stone formation. It helps protect the lining of the urinary tract. A **vitamin B_6** and **magnesium** deficiency may also cause stone formation.

• A more **acid urine** prevents and dissolves kidney stones. Drink **cranberry juice** frequently. (One writer says that Ocean Spray brand is only 30% cranberry juice, plus sugar, etc.) All other fruit juices become alkaline in the system. A research study found that, in 10 patients, drinking cranberry juice reduced the stones in size by an average of 50%.

• Drink **potassium broth**. This is made from thick potato peelings. The outer portion is rich in potassium. Cook it with carrots, garlic, and celery. Simmer for 30-40 minutes, then strain and drink the liquid. Excess can be stored in the refrigerator for no more than 2 days.

AVOID THIS

• Oxalate, a key chemical in kidney stone formation, occurs naturally in various green vegetables, some more than others. **Rhubarb** has the highest oxalic acid content of anything eaten by man. Hardly any bug will touch it. People should never eat it. Also do not eat **spinach, chard, or beet tops**. About 60% of all stones are calcium oxalate in nature. Do not put vinegar into the body.

There may be an excess of purines. **Stop eating meat**. Meat-based proteins are a causal factor in producing kidney stones. Do not overeat on other proteins. In addition, calcium and magnesium are crucial, to stop the calcium loss from the bones. But meat supplies too much phosphorus, which keeps the calcium from being utilized.

• Do not use **soft drinks, caffeine, chocolate, cocoa, pepper, nuts, poppy seeds, or black tea**.

• Reduce **salt** intake.

• A strict **macrobiotic diet** (lots of grains, and little fruits and vegetables) tends to concentrate the urine and may cause stones. But this is not a primary cause of them.

HERBS

• Take **licorice**, to reduce swelling of the ureters, so the stone can pass.

• Hot compresses made with concentrated **ginger** tea help alleviate the pain of kidney stone attacks. The compresses act as counter irritants, taking the mind off the pain.

• **Horsetail** tea is recommended by the German government to increase urine output during a kidney stone attack.

• **Parsley** tea will help prevent and treat kidney stones. Use 1 tsp. dried root, steep for 10-15 minutes, strain, and drink 2-3 cups daily.

• Drink several cups daily of **stinging nettle** tea to prevent and treat kidney stones. (Use gloves when gathering them, but the stings are lost during cooking; the leaves are delicious.)

• Other helpful herbs include **dandelion, rupturewort, and madder**.

TO DISSOLVE KIDNEY STONES

• To dissolve most kidney stones located in the renal pelvis, ureters, or in the bladder, drink 3 quarts to 1 gallon of hot water, along with lemon juice or cranberry juice, for 3 consecutive days. After this, on the 3rd day, drink 2 oz. **olive oil**. *For the complete formula for how to do this, see Gallstones (362).*

• An alternate formula is **apple juice** and **lemon juice** fasts, followed later by **olive oil**.

• To dissolve kidney stones, Dr. M. Tierra prescribes this: Make a decoction of 2 parts each of **parsley root, gravel root, marshmallow root**, ½ part of **lobelia and ginger root**. Simmer 2 oz. per quart of water for 1 hour or until the liquid is reduced to ½ quart. Add an equal volume of vegetable **glycerine** to preserve it. Take ½ cup, 3 times, daily. Or make a tincture of the above herbs and take 15 drops, 3 times daily.

• To help pass stones, Dr. J.B. Lust prescribes this: Mix equal parts of witch grass, birch leaves, speedwell, and chickory. Steep 1 tsp. in ½ cup boiled water. Take 1-1½ cups daily, unsweetened, in mouthful doses.

• Guillermo Asis, M.D., prescribes this to eliminate the pain, when passing the stones: Fill an 8-quart or larger pot with water, bring to a boil. Wrap a piece of fresh **ginger** (about the size of your palm) in a cloth, tie it with a string, put it in the boiling water 2-3 minutes. Immediately reduce the heat so boiling stops. Remove the cloth and squeeze it so the juice runs into the pot. Replace the bag in the pot. Remove the cloth and wring it out. It should be hot but not scalding. Place it on the lower back over the affected kidney. Put plastic on top and a dry towel over that. Repeat the applications every 5-10 minutes for 30-45 minutes. If it is still painful in 12 hours, do it again. This should eliminate all pain; and the heat should open the duct so the stones pass out. It can be done by heat, combined with pain-relieving ginger.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR KIDNEY STONES AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL DIET AND LIVING—A spare **aseptic diet**, especially avoiding beef tea, animal broths, meat, tea, coffee, and cocoa. Use fruits freely. In extreme cases, eat **a fruit diet** for a few days. **Outoor life, abundant exercise, dry and cool climate, daily cold bathing.**

INCREASE OXIDATION OF PROTEIN WASTES—**Hot Full Bath**, prolonged sufficiently to elevate body temperature 2°-4° F. Sweating **Wet Sheet Pack**, Dry Pack, Steam Bath, Radiant Heat Bath or Hot Full Bath, followed by **Dry Pack**. Follow all hot baths by a **short, cold application** adapted to his condition: Cold Mitten Friction, Cold Towel Rub, Wet Sheet Rub, Dripping Sheet, Shallow Bath. Follow bath by **prolonged moderate exercise**, massage, and inhalation of oxygen.

ENCOURAGE ELIMINATION OF TISSUE WASTES—In addition to the above: **Water** drinking, free use of **fruit juices** and distilled water, Hot **Abdominal Pack** day and night. Cool **Colonic** daily, if bowels are sluggish.

INCREASE ALKALINITY OF BLOOD—**Exercise, cold baths**, cold air bath, **sweating baths**, and **fruit diet**.

SWOLLEN AND PAINFUL JOINTS—**Fomentation** 2-4 times daily. **Heating Compress** during intervals between, well-protected with plastic covering and cotton (or flannel) covering.

PAINFUL JOINTS, NOT SWOLLEN—**Revulsive Compress** 3 times a day, followed by deep massage of the limb above the joint and light circular friction of the joint. During intervals between, **Dry Pack** or cotton poultice to the joint.

STIFF AND ENLARGED JOINTS—Alternate Douche (jet or spray) or the **Alternate Compress**, applied twice daily and protected with **Heating Compress** during intervals between. Follow by thorough massage of the joint with **passive joint movements**.

GENERAL METHOD—Diminish the production of uric acid by regulation of diet and elimination of meat products. Increase the destruction of uric acid by exercise, Prolonged Hot Full Baths, followed by short cold applications. Increase elimination of uric acid by copious water drinking.

If any of the following related problems exist, check on them under their respective headings: Headache and Migraine, Neurasthenia, Neuralgia, Insomnia, Muscular pains, Gallstones, Renal colic, Irritable prostate, Arteriosclerosis, Bright's Disease.

—See Renal Colic (399) and Kidney Problems (397-402).

ENCOURAGEMENT—Christ, after having redeemed man from the condemnation of the law, could impart divine power to unite with human effort—in keeping that law. Galatians 3:14.

RENAL COLIC
(Kidney Pain Attack)

The following natural remedies, by Dr. Kellogg, were prescribed for any kind of kidney pain. You will find them very helpful.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR RENAL COLIC AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DURING ATTACK—**Rest** in bed, diet of **fruit** and **buttermilk**, hot **water** drinking. Hot **Enema**, repeated every 2 hours. **Hot Full Bath** with cold to head and over heart, if bath is greatly prolonged. **Hot Trunk Pack** renewed hourly. **Revulsive Sitz Bath. Cold Compress** over heart, if it is weak or much excited.

TO PREVENT ATTACKS—Combat lithemia.

VOMITING—**Ice pills**, ice to throat.

URINARY SUPPRESSION—**Hot Blanket Pack**, followed by **Dry sweating Pack**.

—See Kidney Stones (397).

NEPHRITIS
(Kidney Infection, Glomerulonephritis)

SYMPTOMS—There may be no symptoms or they may include blood and/or albumin in the urine and lower back, abdominal pain, even chills, fatigue, facial edema, nausea and vomiting, frequent urge to urinate, and loss of appetite. Severe cases may include anemia and high blood pressure.

CAUSES—This is inflammation of one or both kidneys. Thousands of tiny cells in the kidneys filter fluids out of the blood in order to purify it. But the filter can become plugged with toxins and mucus. When these tiny cells become swollen and inflamed, infection soon follows.

This infection can be acute or chronic, and may require hospitalization.

Constipation causes toxic matter to be reabsorbed by the blood. This clogs the kidneys.

Overuse of **aspirin** and other **pain killers** weakens the kidneys; **beer** can cause their failure. **Environmental toxins**, such as **heavy metals**, add to the damage. **Anti-hypertensive drugs** are used to reduce blood circulation and therefore injure the kidneys.

Kidney infection can also be caused by **bacterial infection** in the bladder *(cystitis, 402)* which has traveled up the ureters to the kidneys.

NATURAL REMEDIES

• Drink plenty of pure **water**. Eat nourishing food, and avoid processed and junk food. Avoid **coffee, alcohol, and artificial drinks**.

• Drinking unsweetened **cranberry juice** and **apple juice** helps reduce bacterial growth in the kidneys. **Carrot, celery, and parsley juice** is also helpful.

• Include enough **vitamins C, A, and B complex** in the diet. **Potassium** deficiencies can encourage kidney problems.

• Go on a 3-day cleansing water-and-juice fast. Take enemas and rest. Keep the fluid level high.

• Helpful herbs include **garlic, echinacea, burdock, red clover, and goldenseal**. Also of value are herb teas made of **juniper berries, parsley, watermelon-seed, Buchu tea and/or marshmallow**.

• Used in conjunction with more fluid intake, **cornsilk tea** has been used for hundreds of years to increase urine output, a very necessary factor in purifying and detoxifying the kidneys.

— Read the previous articles on kidney problems.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR NEPHRITIS, BOTH ACUTE AND CHRONIC, AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

KIDNEY INFECTION (ACUTE) —

RELIEVE CONGESTION OF KIDNEYS—Congest the skin by means of the **Hot Trunk Pack**, Hot Blanket Pack, or Hot Full Bath continued to perspiration, followed by **Friction**, avoiding deep massage procedures. Rubbing until vigorous perspiration is induced. Maintain active cutaneous circulation; **Fomentation** to loins for 30 minutes every 3-4 hours. **Heating Compress** over lower back during the interval between.

ENCOURAGE KIDNEY ACTIVITY—**Ice Bag** over lower third of sternum. **Hot Enema**, hot water drinking. Prolonged **Neutral Bath**.

ENCOURAGE ELIMINATION OF TOXINS—**Hot or Cold Enema** twice daily. Prolonged **Hot Blanket Pack**. Sweating Wet Sheet Pack. Radiant Heat Bath. Steam Bath, copious **water** drinking.

NAUSEA—**Hot and Cold Compress** over stomach. **Ice Bag** over stomach, and sipping very hot **water**.

DIET—**Fruit juice**, fruit purees, and buttermilk.

CARDIAC WEAKNESS—**Ice Bag** over heart for 15 minutes, every 2 hours. Cold Mitten Friction. **Cold Towel Rub**, 2-3 times daily.

CONTRAINDICATIONS—Avoid prolonged general cold applications, Cold Douche, and Cold Pail Pour.

GENERAL METHOD—Absolute rest in bed. Maintain a warm and active skin, even to the extent of perspiration. An aseptic, liquid dietary, to encourage free diuresis. Copious water drinking.

KIDNEY INFECTION (CHRONIC) —

GENERAL—**Aseptic dietary**. Especially avoid meats, condiments, buttermilk diet, or exclusive fruit diet during acute attack. Strictly avoid tea, coffee, tobacco, and alcoholic liquors.

MAINTAIN ACTIVITY OF THE SKIN—Warm **woolen clothing**. **Friction** given dry and applied daily. Cold Mitten Friction, followed by dry friction. Oil rubbing, carefully **graduated cold applications** (Tonic Frictions), Radiant Heat Bath, followed by cold Towel Rub. A **sweating bath** twice a week at bedtime, followed by **Cold Mitten Friction**.

ACUTE EXACERBATION—Apply treatment recommended for Bright's Disease, Acute.

DROPSY—Short Radiant **Heat Bath**, followed by **Cold Mitten Friction** or Cold Towel Rub. And **water** drinking, 1-2 pints twice daily.

CONTRAINDICATIONS—Avoid Cold Full Baths, frequently repeated and prolonged Cold Douches, or prolonged Hot Baths.

GENERAL METHOD—The essential features are a carefully regulated regimen adapted to his condition. This would include warm clothing, avoidance of chill, frequent Neutral Baths, very gentle tonic measures, copious water drinking, perfect digestion and bowel action, an aseptic dietary, outdoor life. Avoidance of exposure to cold and excesses of every description, especially sexual and dietetic excesses.

—See Cystitis (402), which is infection of the bladder. The two are closely associated in health and in sickness. Also see Bright's Disease (401), which is a variant form of nephritis.

ENCOURAGEMENT—The love of Jesus is an active principle, uniting heart with heart in bonds of Christian fellowship. Everyone who enters heaven will, on earth, have been perfected in love. How thankful we can be for the enabling strength of Christ, by which we can fulfill God's will for our lives and obey His commandments.

NEPHROSIS

SYMPTOMS—Swelling of the kidneys with loss of protein in the urine.

CAUSES—An abnormal amount of proteins is excreted by the kidneys.

The condition may be worsened by eating **foods which a person is allergic to**. This can include **meat, wheat, junk food, greases, synthetic sugars**, etc. **Medicinal or street drugs** can also trigger this condition.

Overeating and **eating too much protein** can worsen the condition.

NATURAL REMEDIES

See your physician.

• **Eliminate the causes**, listed above. Eat a **nutritious diet**. Drink lots of clean **water** and **fruit juices**. Take **diuretic herb teas** to increase urine output, so the kidneys can clean themselves.

— Read the previous articles on kidney problems.

ENCOURAGEMENT—Resist the devil, and he will flee from you. Draw nigh to God; and if you are desirous of taking the first upward step, you will find His hand stretched out to help you. It remains with you, individually, as to whether you walk in the light of the Sun of Righteousness or in the darkness of error. The truth of God's Inspired Word can be a blessing to you only as you permit its influence to purify and refine your soul.

BRIGHT'S DISEASE

SYMPTOMS—Fever, chills, urgency and frequency of urination, loss of appetite, nausea, and vomiting. The urine is cloudy with pus and often bloody. Pain may be intense and sudden in the lower back, just above the waist, and running down the groin. An excessive amount of blood protein in the urine is a marked symptom of Bright's disease. It is usually accompanied by hypertension and edema, which is retention of water in the tissues.

CAUSES—Bright's disease involves a chronic inflammation of the kidneys, similar to Nephritis *(400)*; but it is unique in the following respect: The kidneys cannot properly excrete salt and other wastes. The result is that salt and various wastes are stored by the blood in tissues throughout the body. This produces tissue swellings, edema, and high blood pressure. Excessive amounts of blood and protein are also in the urine.

Gradually the blood itself becomes contaminated with these waste products; and uremia (uremic poisoning) is the result.

Consuming **alcohol, tea, coffee, and spices** are excellent ways to ruin your kidneys. Do not use **aluminum** cooking ware.

NATURAL REMEDIES

See your physician.

• Take a high **enema** and a daily hot half-hour **tub bath**. Give 2-3 cups of **pleurisy** tea or **sage** tea while in the tub. Finish with a short **cold shower** or **cold towel rub**. Do not let him chill. Wrap him up well, put him in **bed**, and give him more **pleurisy** tea or **sage** tea to encourage perspiration. **Fomentations** over the lower back and the entire length of the spine will help alleviate pain. Do this also over the stomach, liver, and spleen.

• Begin with a **fruit juice diet** for several days, before eating other foods. **Soybean milk with whole wheat flakes** dissolved in it is easily digested and nourishing. Avoid **salt**. Do not mix fruits and vegetables at the same meal.

• Then begin eating **vegetable broths, cauliflower, asparagus, eggplant**, etc. All the food eaten should be **low in protein. No stimulating or heavy foods.**

HERBS

• Make a tea of **Juniper berries**. It is a stimulating diuretic and helps the kidneys excrete waste products. It is also a great healer to the kidneys' urinary passages and bladder. American Indians used it for this purpose. It is also good for reducing the edema associated with Bright's disease.

• Mix 1 oz. each of **juniper berries and gravel root**, 2 oz. **ginger**. Steep in 2 cups boiled water, take 1 tsp. 4 times a day.

For other natural remedies which can help control urinary tract infection, see under Nephritis (399) and Cystitis (402).

ENCOURAGEMENT—You do not know how much good you can do by always wearing a cheerful, sunny face and watching for opportunities to help others. You may not always be appreciated, but God understands; and your work will be rewarded. He will always care for His own—even unto the end. You are safe in His hands.

EDEMA

(Dropsy, Water Retention)

SYMPTOMS—Swelling of the hands, ankles, feet, face, abdomen, or other areas of the body. Swelling is most often seen in the hands, in the feet, or around the eyes. The bloating or swelling causes muscle aches and pains.

CAUSES—Edema is a fluid accumulation in the body. It can be caused by **poor kidney function, chronic kidney disease, congestive heart disease, varicose veins, phlebitis, protein or thiamine deficiency, sodium retention, or cancer**.

Other causal factors include **pregnancy, standing for lengthy periods** of time, **premenstrual tension**, the use of **oral contraceptives**. A **confining injury**, such as a sprain, allergic reactions, or a bee sting.

Fluid retention is sometimes caused by a **food allergy. Hypothyroidism, anemia, adrenal malfunction, constipation**, or **lack of exercise** can be causal factors. Also **deficiencies of potassium, vitamin B complex, or vitamins B_1, B_3, or B_6**.

As soon as edema is found to exist, it is well to obtain a clear diagnosis. Once **congestive heart disease, kidney disease, or liver disease** are ruled out, more

subtle causes can more easily be dealt with.

If the skin indents, forming little pits, when the skin of the feet or ankles is pressed by a finger, the situation is worsening. Contact a physician.

TREATMENT—

If edema is caused by heart disease, then turn to that section. If it is caused by kidney failure or other causes, then read the following:

• If it is the result of **protein or thiamine** deficiency, the intake of either or both should be increased. Fluid can be retained in the belly cavity because the protein content of the blood is so low that fluid cannot be kept in the blood vessels.

• If **excess salt** in the diet is the problem, then a very restricted salt diet should be adhered to. (Too much salt in the body requires additional water to keep the salt diluted, so it will not damage living tissue.)

• Increasing the **vitamin B_6** intake will reduce the amount of fluid retention.

• Take the pulse test *(575)*, to determine certain foods which do not agree with you. Then avoid those foods.

• A 1-3 day **juice fast** will be helpful. *But if a protein deficiency is the problem*, then **nutrition** is needed, not cleansing. Take **hot baths** twice a week. Eat more **fruits and vegetables**, emphasizing the **raw foods**.

• Carry out a regular **daily exercise** program, outdoors. **Poor circulation** because of liver or heart disease is a common cause of edema. When at rest, elevate the legs.

Avoid **tight clothing, stress, processed and junk foods. Do not cross the legs**. Stop eating **meat**.

• Helpful herbs include **corn silk, dandelion, Scotch broom, alfalfa, Canadian fleabane, garlic, English hawthorn, juniper berries, lily of the valley, parsley, nettle, marshmallow, pau d'arco, and prickly ash**.

ENCOURAGEMENT—"The righteous cry, and the Lord heareth, and delivereth them out of all their troubles." Psalm 34:17. With such a promise as this, how can we become disheartened? Thank God for the our precious Bibles!

URINARY - 3 - BLADDER

BLADDER PROBLEMS

NATURAL REMEDIES

***HYDRO*—**Here are several hydrotherapy applications found in the *Hydrotherapy* section *(153-211)* of this *Encyclopedia:*

Bladder atony: **Ascending jet or spray** directed upward, in this case, against the perineum. In addition, a **spray** to the front of the abdomen only.

Bladder inflammation: Copious **water** drinking. **Revulsive Sitz Bath**, twice a day. **Hot Leg Packs**, followed by **dry heat** (Radiant Heat Bath) to legs. **Neutral Bath** for 20-40 minutes, 2-3 times a week. **Prolonged Neutral Sitz Bath, Cold Mitten Friction, Cold Towel Rub, Fomentation** over bladder, **Hot Enema, Hot Pelvic Pack, Aseptic Dietary**.

Irritable bladder: When inflammation is not present, give a **very hot Sitz Bath** for 5 minutes, followed by **Neutral Sitz Bath** for 10-20 minutes. **Hot pack** to pelvis, **Heating Compress** over perineum and genitals, **Revulsive Sitz**, and **Hot Colonic**.

Bladder insufficiency: **Spinal** (Dorsal) **Spray**. This is a hand-held hosing of water to the dorsal (upper and central) part of the spine. The stream should be allowed to play rapidly up and down, extending 3-4 inches on either side of the spine. Use tepid water for irritability of the bladder (when of spinal origin).

Bladder paresis (paralysis): Daily **colonic, Cold Plantar Spray** to bottom of feet.

Bladder retention: **Lumbar Revulsive spray**. This spray should be hot and then very brief cold; it will help alleviate urinary retention, due to spasm in the neck of the bladder.

ENCOURAGEMENT—As we cherish and obey the promptings of the Holy Spirit to obey God and help others, our hearts are enlarged to receive more and more of His power and to do more and better work. As we seek to help others, the angels work with us.

CYSTITIS

(Bladder and Urinary Tract Infection, Irritable Bladder)

SYMPTOMS—Pain in the lower abdomen and back. Frequent, urgent, and painful urination. Urine often has a strong, unpleasant odor and may appear cloudy (from pus). A desire to urinate even after the bladder has been emptied.

Children with this condition may experience a painful burning sensation when urinating.

CAUSES—Cystitis is an infection of the urinary bladder. It is the most frequent bacterial infection in women. About 10%-15% of them have recurrent bladder infections.

The cause is generally **bacteria which have ascended up from the urinary opening**; but, it is less frequently from **infected urine** sent down from the kidneys. The usual cause is ascended bacteria.

Cystitis most often occurs in females. The urinary outlet of the urethra is close to the vagina. Ways to avoid cross infection between the two are given in the concluding paragraph of this article.

Frequency and urgency of burning urine is the obvious symptom of cystitis; but a home test can also be done. Purchase "Dipstick" at a pharmacy and follow the directions. A positive nitrate test will reveal the presence of a large quantity of white blood cells, indicating infection in the urinary tract.

Women who frequently have bladder infections often have enlarged bladders from **trying to retain their urine**. In order to maintain good urinary tract health, it is important to drink water and urinate frequently.

In older men, the cause of the bladder problem might be **kidney stones** *(397)*.

Blood in the urine could indicate a more serious problem. Consult a physician. *Also see Hematuria (396)*.

Bladder infection in men may signal **prostate trouble** *(637)*.

Cyclamate (an artificial sweetener found in synthetic sugar) causes bladder tumors.

NATURAL REMEDIES

• Increase the fluid intake—lots of **water**, especially distilled, is best. Drink a half pint every 20 minutes for 3 hours, then one cup every hour. This is important.

• Acidify the urine by drinking 1-2 quarts of **cranberry juice** per day, for the first day, and 1 quart a day thereafter while the crisis continues. It is the only fruit juice that remains acid until it reaches the kidneys. When you have this problem, citrus juice is not as good; since it tends to make the urine more alkaline, encouraging bacterial growth.

• Eat a **nourishing diet**; avoid the wrong foods. *See Nephritis (Kidney Infection, 399)* for much more information on the proper care and healing of the urinary tract. The bladder and kidneys are closely associated; whatever helps one helps the other.

• **Potassium deficiencies** can lead to renal (kidney) disorders. Prepare a **broth** with thick potato peelings, plus carrots, and other vegetables.

• The use of **aluminum** cookware is one of several causes of cystic symptoms. Avoid **zinc** and **iron** supplements until this problem is healed.

HERBS AND WATER THERAPY

• Helpful herbs include **juniper, lovage, parsley, uvi ursa, rupturewort, bearberry, birch, and prickly ash**. Of course, do not add sweetener or milk to the tea.

• Drink tea made from 2-3 crushed or blended **garlic** bulbs several times a day.

• To relieve the pain and encourage healing, take **hot sitz** (sitting) **baths** twice a day, for 20 minutes. To one of those daily sitz baths, add 1 cup of **vinegar**. The next day, add 2 cloves crushed **garlic** or garlic juice to the water of one of the two baths.

• A **hot-water bottle** placed in direct contact to the urethral and vaginal openings may be extremely helpful in reducing pain. A heat lamp can also be used.

SPECIAL NOTE

• Women should especially avoid bacterial infection ascending into the bladder: The urinary outlet of the urethra is close to the vagina. Improper female hygiene is the most common cause of cystitis; she should start wiping from the front and go toward the back. When sexual intercourse is not done with clean hands or too frequently, germs are more likely to enter the urethra. Wipe from front to back following bowel movements. Urinate before and after intercourse. And wear cotton underclothing; it lets air through and absorbs moisture better. Avoid douches, hygiene sprays, bubble baths, soap in the bathwater, and nylon clothing. Wash carefully during the monthly, to avoid bacteria from going up the urethra. Do not use tampons if there are frequent urinary tract infections. Rinse underwear well, to get all the soap out. Boil panties in plain (not soapy) water. Shower after having bathed in a swimming pool. Dress to keep the extremities warm; cold extremities weaken the trunk organs, including the urinary tract. Birth control pills and spermaticides may cause cystitis.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR BLADDER AND URINARY TRACT INFECTION AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INFLAMMATION—Copious **water** drinking. **Revulsive Sitz Bath**, twice a day. **Hot Leg Packs,** followed by dry heat (Radiant Heat bath) to legs. **Neutral Bath** for 20-40 minutes, 2-3 times a week. Prolonged Neutral Sitz Bath, Cold Mitten Friction, Cold Towel Rub. **Fomentation** over bladder, **Hot Enema**, Hot Pelvic Pack, **Aseptic Dietary**.

IRRITABLE BLADDER—With inflammation not present: Very **Hot Sitz Bath** for 5 minutes, followed by **Neutral Sitz Bath** for 10-20 minutes. **Hot Pack** to pelvis, **Heating Compress** over perineum and genitals. **Revulsive Sitz**, Hot **Colonic**.

CONTRAINDICATIONS—Do not apply Cold Sitz Bath, Cold Full Bath, Cold Douche, or Cold Footbath.

ENCOURAGEMENT—Christ was lifted upon the cross of Calvary, to draw all men unto Himself. What shall we do then with Jesus? Shall we accept Him or reject Him? Isaiah 42:16.

When God gave His Son to our world, He endowed human beings with imperishable riches—riches compared with which the treasured wealth of men since the world began is nothingness. Christ came to the earth and stood before the children of men with the hoarded love of eternity. And this is the treasure that, through our connection with Him, we are to receive, to reveal, and to impart.

Never was there a time when the Lord would manifest His grace unto His chosen ones more fully than in these last days when His law is made void

Thank God every day for the immense blessings He grants us. Draw close to Him and He will care for you each day.

— SECTION 7 —
RESPIRATORY

RESPIRATORY - 1 - BREATHING

POSTNASAL DRIP

SYMPTOMS—The back of the mouth drips fluid and runs down into the respiratory tract, starting a coughing attack, or into the voice box.

CAUSES—Most people only experience postnasal drip while they are sick with a bad cold or something similar. However, some have it when they are well. This article is for them. *See Common Cold (222) and similar articles in that section.*

Normally, these secretions from the sinuses flow down the back of the nose and throat and are swept away by cilia, which are small waving hair-like projections.

But sometimes the mucus dries out and the cilia no longer wiggle. Then the secretions pool in the back of the nose, thicken, and begin dripping into the bronchial tubes or into the voice box.

Postnasal drip may be due to **allergy**. **Spicy foods** are especially known to produce this symptom.

A primary cause is that **you never fully recovered from a sickness**. You may have never permitted yourself time to rest during a heavy cold; and, while all the other symptoms left, the nasal congestion became chronic.

Here are several suggestions; one or more of these may solve the problem for you at such times:

NATURAL REMEDIES

• **Blow** your nose regularly, but do it very gently.

• **Flush your nose** with saltwater and gargle with it. Place a half teaspoon of salt in about 8 ounces of warm water (the experts recommend only a third of a teaspoon if you have high blood pressure). Draw the water into an aspirator and put the tip into your nose. Then hold your head back, so you are looking up—and gently squeeze on the aspirator as you carefully suck it into your nostrils. Although this may, at first, seem uncomfortable, it can bring you a lot of relief. Conclude by **blowing** your nose gently, to get all the fluid out. Do this 3 times a day for 5 days. Next, **gargle** with the same ratio of salt in the water.

• Reduce the amount of **stress** you are under and stop drinking **milk**; but do drink lots of **water** or nourishing fluids. An **herb tea** with some lemon and honey is helpful.

• A **humidifier** in the room can keep the air moist.

• **Avoid nasal decongestants, nose drops**, etc. In the long run, they will cause you more trouble than they are worth.

• If you want to really solve this chronic problem in the quickest and best way, go to **bed** for a couple days. Go on a **fruit juice fast**, take a few **enemas**, and by the third day you should be in perfect shape.

ENCOURAGEMENT—If you can exert a saving influence over one soul, remember there is joy in heaven over the one that repents. You may, by careful effort, be the means of bringing back the lost sheep into the fold of Jesus. It is wonderful to work with the angels. Psalm 34:7.

CROUP

SYMPTOMS—The larynx (vocal cords), or trachea, (windpipe) narrows. This is because of infection which causes the walls to swell inward. There is difficulty in breathing, hoarseness, tightness in the lungs. Also a harsh, barking cough and even a feeling of suffocation. Croup most often occurs in children, because their air pipes are smaller,

The special symptom of croup is a harsh, wheezing noise as air is breathed in through the narrowed windpipe and past the inflamed vocal cords, often accompanied by fits of coughing.

CAUSES—Very often the original cause is **overeating**. When the stomach is overloaded with food, it is easier to catch cold; and croup develops. The sickness may be either bacterial or viral. When caused by a bacteria, croup generally follows a cold or another mild respiratory infection. But when it is caused by a virus (as happens more often, especially in boys), more serious conditions, such as the flu, have occurred.

Croup most often occurs during the winter months; it most frequently affects children from 3 months to 3 years (9 to 18 months is the peak). It is most common in **areas with sudden changes in temperature**. Drinking cow's milk may be the cause. It is often associated with the third or fourth nights of **measles**.

In false croup, which is generally caused by stomach disorders and worms, there is less likelihood of fever; but, in true croup, there is often high fever. Work earnestly to help the child. The attacks are often worse at night.

NATURAL REMEDIES

• Maintain a good water intake, to help loosen secretions. Only drink **lukewarm water**. If the child is told

to drink a glass of water after each coughing attack, the coughs will stop after the third or fourth glass. Water is the best cough medicine. It thins the mucus.

• Use a **vaporizer or humidifier** at night, or put a **pan of water** or teakettle on a hot plate. This will help keep the air moist for the child through the night.

• Try to have someone stay with the child. If he is too anxious, you may find it best to hold him for a time. This will reassure him.

• **Avoid sudden temperature changes**. Keep the child **warm, but avoid overheating**.

• During the day, you might wish to put a few drops of **eucalyptus oil** in a vaporizer; and, for a time, have him inhale the vapor.

• **Peppermint and honey** is good. A few drops of **lobelia** tincture **in catnip** tea **or peppermint** tea will relax the throat so he will not cough violently. Induce perspiration by giving the child warm **catnip** tea **or chamomile** tea. Give him a catnip tea **enema**.

• Teas made from **echinacea, fenugreek, goldenseal, and thyme** are helpful. Give the child very warm **ginger** herb baths. Then wrap him in a warm towel, put him in bed, and let him perspire

• Homemade **soups and broths** are good for the child. **Slippery elm gruel with oatmeal** is nourishing.

• **Fomentations** to the neck and upper chest region bring relief. After the acute phase, a **heating compress** may be applied to the chest.

• You can apply **hot onion packs** over the chest and back 3 times a day. Place sliced onions between cloths and cover with a heating pad.

• **Avoid steroids and antibiotics**; they are useless if this is a viral sickness. Do not use **cough medicines** and other colds preparations; for they tend to thicken the secretions (anti-congestants are always drying agents) and make it still harder to clear the throat.

• *When croup keeps reoccurring*, the cause may well be that the child is **allergic** to some type of food. Try to ascertain what it might be. *See Allergies (576).* Instead of using drug medications, carefully figure out the cause.

• Give a fruit diet for a few days, such as **pineapple juice, grape juice, orange juice, baked apples. Soybean milk with toast or whole wheat flakes** is easily digested. A **broth** of thick potato peelings, plus a few other vegetables, is good.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CROUP AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

(1) ACUTE CATARRH OF LARYNX —

GENERAL TREATMENT—Hot Bath with **Cold Compress** to head. Hot **water** drinking. **Cold Mitten Friction**, every 3 hours. **Warm Vapor Inhalation**, inhalation of vapor from water with calcium in it. **Cold Compress** at 60° F. over throat, changed every 10-20 minutes. **Hot Blanket Pack**, every 3-4 hours for 15 minutes. Keep feet, legs, and arms warm.

ENCOURAGEMENT—When we accept Christ, we are adopted into His family. We have a nearness to Him and can hold sweet communion with Him. We learn what He is like; and we become changed into His likeness. 2 Corinthians 3:18.

FALSE CROUP
(Spasmodic Laryngitis)

SYMPTOMS—False croup is less serious than true croup, with generally no fever involved. But the coughing and difficulty in breathing are just as bad. Here are the Kellogg remedies for this problem.

—Also see Croup (405).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR FALSE CROUP AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

(2) FALSE CROUP, SPASMODIC LARYNGITIS —

PREVENT ATTACKS—Harden the skin with daily **Cold Bath. Remove nasal obstruction**, hypertrophies, or adenoid vegetation. Inhalations.

PREVENT CHILLING OF SHOULDERS—During sleep wear proper clothing, perhaps a **warm sleeping jacket**.

DEVELOP RESISTANCE—Graduated Tonic Frictions, outdoor life, careful regulation of **clothing**.

RELIEVE CONGESTION—If spasm is severe, relieve the congestion by Hot Blanket Pack or **Hot Full Bath**. Repeat every 3-6 hours. **Hot Half Bath with Cold Pail Pour** to head, back, and chest. Follow bath with **ice-cold Heating Compress** to neck, to be changed every 2-4 hours. **Fomentation** to cervical, upper, and middle spine for 15 minutes each time the ice compress is changed.

TO RELIEVE SPASM—Compress the phrenic nerve by pressure just above the sternal intersection of the sternocleidomastoid muscle; **percuss** (hit) the chest with the end of a cold wet towel or a dash of cold water over the chest and back.

BRONCHITIS—If present, relieve it with **Chest Pack**; repeat in 4-6 hours. **Cold Mitten Friction** twice a day. **Warm Vapor Inhalation** and copious **water** drinking when bronchial or laryngeal catarrh exists.

ASTHMA

SPECIAL NOTE: Asthma is a serious respiratory disorder. But, since 80% of asthma problems are caused by allergies, the large section dealing with it will be found in the allergy section. ***Please turn to page 580.***

SUFFOCATION

SYMPTOMS—The person is apparently suffocating.

NATURAL REMEDIES

• Immediate action must be taken. Quickly plunge him into cold water or **pour cold water** (the colder the

ietter) on him. This simple procedure powerfully affects the breathing centers; and he may immediately begin taking deep breaths.

• Then begin other resuscitation treatments while someone calls for emergency help.

— Turn to "How to Give **CPR***" in the Emergency Section of this Encyclopedia (753).*

ENCOURAGEMENT—When we love others as unselfishly as Christ loved us, then for us His mission is accomplished. We are fitted for heaven; for we have heaven in our hearts. Matthew 5:44-48.

RESPIRATORY -

2 - BRONCHIAL TUBES

ACUTE BRONCHITIS

SYMPTOMS—Coughing and mucus, pain in the chest (and possibly back), fever, sore throat, and difficult breathing. Sudden chills and shaking may occur.

CAUSES—There are two types of bronchitis: acute and chronic. *Acute bronchitis* very often occurs as an infection in the throat which moves on down toward the lungs. A cold or the flu, if not immediately given careful treatment, can spread into other areas (such as the bronchi or the eustachian tubes). If bronchitis is not carefully dealt with, the infection will move on into the lungs, resulting in pneumonia.

Chronic bronchitis is an ongoing infection in the bronchials, and will be dealt with in the next article *(below)*.

The bronchial tubes are the airways which lead into the lungs. The bronchi are two main branches of the trachea. They divide into many smaller bronchi, like tree roots. These, in turn, divide off into the grape-like maze, called the lungs.

Bronchitis is inflammation of the bronchi, and is frequently complicated by mucous obstruction of those passageways. When the bronchi are badly infected, the cause is often viral rather than bacterial. Irritating substances (or invading bacteria or viruses) cause the bronchi to produce an excess of mucus, which clogs the airways.

Acute bronchitis attacks occur most often in winter, among the elderly, smokers, infants, and those who have lung disease. Most are men over the age of 40.

NATURAL REMEDIES

• Take an **emetic**. Add ½ tsp. lobelia to a quart of boiled water, let steep. When lukewarm, strain, and drink as much of it as possible. Run your finger down your throat until you vomit. This will clear the stomach of mucus and phlegm. Then take a high **enema** (constipation is often a causal factor). Keep the bowels open thereafter.

• Take a **full hot bath** or steam bath, followed by a short **cold shower** or brief **cold towel rub**. Put him in **bed** and give **hot fomentations** to the chest and spine, finishing with **cold**. This will do much to relieve congestion. **Hot footbaths** with a Tbsp. of **mustard** in the water brings good relief.

• Go on a **juice fast** for 1-2 days; then give a **light, nutritious diet** of fruit and vegetables.

—Also read Acute Bronchitis (above) and Fevers (233).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ACUTE BRONCHITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INCREASE RESISTANCE—**Graduated cold applications** daily, **outdoor life**, daily air bath.

ELIMINATE TOXINS—Moderately prolonged **sweating procedures** followed by **cold applications**.

RELIEVE INTERNAL CONGESTION—Radiant Heat Bath for 10-20 minutes. **Sweating Wet Sheet Pack** for 1-2 hours or Steam Bath for 6-15 minutes, followed by Wet Sheet Rub or **Cold Douche** (spray). **Hot Full Bath** at bedtime for 6-10 minutes, followed by prolonged **Neutral Bath** for 2-40 minutes. Apply (daily or twice a day) **Hot Hip and Leg Pack**, followed by **Dry Towel Rub**.

COUGH—**Heating Chest Pack**, to be changed every 8 hours. If temperature is elevated, change Chest Pack every 2-4 hours. Copious **water** drinking, 2-3 pints daily.

IRRITABLE COUGH, WITHOUT EXPECTORATION—Sip very hot **water**, **gargle** hot water, **Warm Vapor Inhalations**. Avoid mouth breathing. Keep **air of room** warm (75°-80° F.) and moist with steam. Carefully **avoid exposure of the back of neck, chest, or shoulders** to drafts or to chill by evaporation during treatment.

COUGH WITH VISCID EXPECTORATION—Copious hot **water** drinking, **fluid diet**, **Fomentation** to chest every 2 hours, followed by **Heating Compress**.

PAINFUL COUGH—**Fomentation** to chest every 2 hours. Tight bandage about the chest, to restrain movement, if necessary. **Revulsive Compress** for 15 minutes, every 2 hours, as often as needed. Dry cotton **Chest Pack** between applications.

ENCOURAGEMENT—God has built a hedge around about His subjects, to protect them. It is the Ten Commandments. By faith in Christ, we are empowered to obey the Father's law. Doing so preserves us from transgression. In requiring obedience to the laws of His kingdom, God gives His people health and happiness. Revelation 22:14.

CHRONIC BRONCHITIS

SYMPTOMS—There is almost continual coughing, which brings up quantities of mucus and phlegm. There is shortness of breath. The symptoms often become very severe.

CAUSES—Chronic bronchitis is an ongoing problem which results from repeated bouts of **acute bronchitis** or from something that is frequently **irritating**

the lungs. This can be allergies, especially tobacco smoke. The only ones who gain from tobacco are the manufacturers. Interestingly enough, only 9% of bronchitis patients in the U.S. are non-smokers. Infants exposed to cigarette smoke are far more likely to come down with bronchitis.

Chronic bronchitis reduces the amount of oxygen to the lungs and the amount of carbon dioxide exhaled. This eventually can lead to enlargement of the heart, pulmonary hypertension, and finally heart failure. If it is not cured, it can go into tuberculosis of the lungs.

NATURAL REMEDIES

• Drink plenty of **fluids**: pure **water, soups, and herb teas**. Drink at least 2 quarts of liquid a day so the phlegm can easily be expelled. **No soft drinks, caffeine, or alcohol.**

• Take **vitamin C** to bowel tolerance.

• All kinds of **fruits and vegetables and their juices** are beneficial, if no allergic reactions occur.

• **Anise tea and almond milk** are helpful in bronchitis. Make the almond milk by blending 6 tablespoons of almonds in a pint of water.

• Swallowing a little **cayenne and lobelia** will help break up the congestion.

• If there is shortness of breath or gasping, clear the throat by giving a few drops of **lobelia tincture**. This will relax the throat and bronchi.

• Add moisture to the air with a **vaporizer** or **humidifier.** Or heat a pan of water on the stove.

• Remain in **bed** as long as fever is present. Bronchitis often hangs on because people think it is about over and begin going about their everyday duties. *Go to bed and get well!*

• **Breathe deeply**. Blow up a **balloon** several times everyday. This helps open up and enlarge the airways. Deep **breathing exercises** should be taken 3-4 times a day. Take a deep breath, hold it a few seconds, and exhale. Do this 10-20 times. This will help air out the infected area.

• Apply a **heating compress** at night.

• A **hot footbath** will help pull the blood away from the chest and reduce congestion.

• **Hot drinks** help you cough out the phlegm. Coughing is the only way the phlegm can come out. Do not use cough suppressants while you have bronchitis.

• Apply **warm, moist heat or a hot-water bottle** over the chest and back before bedtime. This will help relieve congestion and aid in sleep.

• Helpful herbs include **pau d'arco, chickweed, ginkgo biloba, burdock, lobelia, slippery elm bark, echinacea,** and **wild cherry bark**.

AVOID THIS

• **Stop smoking** and get tobacco out of the house. If you have chronic bronchitis, do not expect much improvement as long as tobacco smoke is in the home.

• Do not use **milk**; it produces a thick phlegm which complicates healing. **White-flour products** and **sugar** foods should not be used until bronchitis is past.

• **Avoid fatigue and chilling**. Do not walk **barefoot** on cold floors while you are trying to get well.

• **Avoid talking, laughing loudly, crying, or too much exertion**. They can trigger attacks.

BEWARE

• If the coughing gets worse, there is a high fever, wheezing sounds, lethargy, and weakness. And chest pains develop, along with very difficult breathing. —*Contact a health professional; the condition may be developing into pneumonia.*

• If the condition persists over too long a time, there is the possibility of tuberculosis or lung cancer.

• A professional can use bronchoscopy instruments to examine the bronchial tubes and to suction out phlegm. The problem is that, in recent years, such instruments are often contaminated.

• In recent years, a new type of bronchitis has arisen, which is contracted primarily by women. Difficult to treat, it often continues for 3 weeks to 5 months. Drinking goldenseal tea is helpful with this condition, as well as with other types of bronchitis.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHRONIC BRONCHITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

IMPROVE GENERAL RESISTANCE—Graduated **cold treatment, aseptic dietary, warm dry climate, outdoor life.**

COUGH—**Heating Chest Pack**, protected by plastic covering. Copious **water** drinking (3-6 pints daily), and **Warm Vapor inhalation.**

NON-PRODUCTIVE COUGH—Increase expulsive power by rubbing or **percussion of the chest** with the hand dipped in ice water or slapping the chest with a cold, wet towel.

ASTHMA—Cold Fan **Spray** to back of chest, followed by **Heating Chest Pack. Revulsive Compress** to chest. Revulsive Douche to legs. **Hot Footbath** or Hot Leg Bath. Hot Leg Pack. **Hot Enema**. If sympathetic nerve is irritable, apply a **Hot Abdominal Pack**. Chest Pack that is well-protected.

EMPHYSEMA—**Alternate Compress** or Alternate Douche to spine, Cold Mitten Friction, **Cold Towel Rub**, Wet Sheet Rub. Hot Abdominal Pack, covered with flannel only. **Hot Leg Packs. Cold Compress** over heart for 5-30 minutes, 3 times a day.

GENERAL METHOD—The general method is the same as for "Intestinal Catarrh, Chronic."

See Acute Bronchitis (407).
—Also see Bronchiectasis (409).

ENCOURAGEMENT—Christ determined (in council with His Father) to spare nothing, however costly, that would rescue the poor sinner. He did all this for you. Kneel

down and accept Him anew just now. Give Him your life and, by His enabling grace, obey His Ten Commandment law. Psalm 91:11-12.

BRONCHIECTASIS

SYMPTOMS—Chronic cough with sputum. He may cough up blood or bloodstained sputum and have inflammation of the lungs. In advanced cases, there may be shortness of breath when any exertion is made. The coughing is often worse with a change in position; and it may occur when the person lies down, rolls over, or sits up. Sometimes the coughing is severe enough to produce vomiting.

CAUSES—Bronchiectasis is permanent dilation and infection of one or more bronchi. It is a sac-like enlargement of the ends of the small bronchi, with a chronic inflammation. Some become partially or entirely blocked by mucus, scarring, or inflammation.

Causes can include **obstructions** in the bronchi, lung **infections**, breathing in of **foreign substances** or **vomitus**, enlarged **lymph nodes, pressure tumors, or dilated blood vessels**. It is often associated with **cystic fibrosis**. About 20% initially occur in children under 1 year of age. And 75% occurs before the child reaches 5.

If the condition lasts a long time, the child may develop an enlarged chest, anemia, clubbing of fingers, excessive fatigue, and may grow slowly.

NATURAL REMEDIES

• Determine to **cough slowly** by first breathing slowly and deeply; then hold the breath for several seconds. Then give two short, forceful coughs with the mouth open. The first loosens the phlegm; the second brings it up. Hold the breath again; and then breathe in slowly, to avoid non-productive coughing.

• Drink lots of **fluid**, so the phlegm will be thinner and looser.

• Use a cool-air **vaporizer** each night. Try to maintain 30%-50% humidity in the house during the day.

• Outside in cold weather, wear a **scarf or mask** over the mouth and nose, to warm the air.

• **Do not use cough medicines** and **antihistamines**. They dry up the secretions, making them even harder to expel. Do not wear **belts**; the abdomen should be free to breathe and cough properly. Men should wear suspenders.

• There should be as much regular outdoor **exercise** as the condition permits.

• A simple **nourishing diet**, free of sugar and low in fats. No junk food. Extremely hot or cold foods should be avoided; for they can trigger coughing.

—See Bronchitis (407) for much more.

ENCOURAGEMENT—We are strangers and pilgrims in this world. We are to wait, watch, pray, and work. There are souls all around us who desperately need God. You can help them come to Him. Job 22:26.

RESPIRATORY - 3 - LUNGS

LUNG CONGESTION

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR LUNG CONGESTION AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

ACTIVE CONGESTION—Fomentation to back, **Cold Compress** to chest with **Hot Leg Pack**, followed by **Cold Mitten Friction** and **dry heat to legs**, short cold applications to hands and arms, followed by Hot Packs to arms. Revulsive Douche to legs, Hot Leg Bath with very Cold Compress to the chest and to the back opposite the chest. Change compress as soon as it is warmed.

PASSIVE CONGESTION OF CHEST—Apply **Fomentation** over chest for 10 minutes every hour. During the interval between, apply a **Cold Compress**, renewing it every 15 minutes, rubbing the surface well at each change. This condition most frequently occurs with fevers. Prevent it by frequent change of position. Apply the same derivative measures as for active congestion (see just above).

PULMONARY HEMORRHAGE—Ice Pack to chest. Remove and **rub chest** with dry warm flannel, 1-2 minutes every 15 minutes. **Hot Leg Pack**, very **Hot Sponging** of the upper half of the spine. Place **hands in ice water** for 1-2 minutes; maintain skin circulation by **dry rubbing**. Keep him very quiet. *After hemorrhage ceases,* **graduated cold treatment** to increase resistance and combat the disease causing the hemorrhage.

—Also see Pneumonia (409) and Tuberculosis of the Lung (412).

PNEUMONIA
(Lung Fever)

SYMPTOMS—Fever, chills, aching muscles, coughing, sore throat, bloody sputum, enlarged lymph nodes in the neck, pain in the chest. Rapid, difficult breathing and cyanosis (bluish skin and nails from lack of oxygen).

In bacterial pneumonia, the onset is sudden and the cough is dry at first; then a rust-colored sputum is produced, and breathing becomes rapid and labored. The viral form is more variable in seriousness, from the time it begins.

CAUSES—There is *lobar, bronchopneumonia,* or *interstitial* pneumonia, according to the area of the lungs involved. Pneumonia is a serious infection of the lungs and bronchial tubes. It can be caused by bacteria, viruses, fungi, or protozoa. The tiny sacs in the lungs (which look somewhat like grapes hanging from their stems) are where the oxygen and carbon dioxide ex-

change is made. These sacs become inflamed and filled with mucus and pus.

Generally an upper respiratory infection in the throat and the bronchial tubes (such as a cold, the flu, or perhaps the measles) occurs. Those under one year or over 60 are the most susceptible.

Bacterial pneumonia is more dangerous and severe than the viral type. There is also a fungal pneumonia; but those with HIV are most likely to contract it.

In children, the pain of pneumonia is frequently located in the abdomen; it causes others to think there is acute indigestion or appendicitis. Some 40,000 older Americans die of pneumonia every year. It is the fifth largest cause of death in the U.S.

If chills, high fever, rapid shallow respirations, cyanosis (blue color) of lips or skin, or delirium occurs, a physician should be contacted. If the treatment is early, careful, and vigorous, pneumonia can usually be successful controlled and eliminated. He will often have weakness for 4-6 weeks after the acute phase is past.

The use of antibiotics for minor infections, such as colds, can produce strong bacteria in the bronchials, which can later cause pneumonia.

NATURAL REMEDIES

• You will want to use essentially the **same treatment as outlined for bronchitis** (also see bronchial problems); except that, because the person's illness is so much more serious, he must be given much rest and intensified care.

• Getting enough **fluids** into the body is important; for this will thin secretions in the lungs, making them easier to cough up. Increase air moisture in the room with a cool air vaporizer. As they become damp, change the bed clothing and linen to prevent chilling.

• **Rinse out the nose** with saltwater, gently taking it in and blowing it out. **Gargle** with saltwater. Then **repeat** the rinsing and gargling with a goldenseal and myrrh mixture. This will help keep a cold or flu from going down into the lungs.

• *If the lungs are already affected,* after giving the above treatment, give **hot footbaths** and a high **herb enema** at least once a day. Drink plenty of **water**. Take **laxative herbs**, to keep the bowels working properly. Every 2 hours give short, **hot fomentations** to the chest and upper back, with **short cold** between each hot application. Keep the heat on for 10-12 minutes; then sponge off vigorously with a cold cloth. Repeat the cycle 3 times in each series. **Dry** the chest. **Repeat** the series as often as every 2 hours. A **heating compress** may be used between other treatments and at night.

• The head should be kept cool with **washcloths** wrung from ice water if the temperature goes above 100°-101° F. by mouth (101°-102° F. by rectum).

• For those who are not very sick, give a **hot half bath**, followed by a **cold water pour** and vigorous **dry sponging**.

• A **heating pad or hot-water bottle** applied to the chest may ease chest pain; but some are better helped by an **ice bag**. **Coughing** is helpful in bringing up mucus; it should not be treated with medications to prevent it from occurring. Sneeze or cough into disposable tissues, which should be destroyed.

• Diet: Only give **liquids** the first few days. These should consist of **fruit juices** (diluted pineapple juice or orange juice) or **lemon and water** (without sugar), etc. Continue this until the high fever abates. Then give **strained vegetable broths, whole grains** (best in dry form, so they will be chewed well), fresh **carrot juice**.

• Numerous clinical trials show the effectiveness of the **dandelion** against pneumonia. **Echinacea** is also powerful; so is **garlic** and **goldenseal**. **Fenugreek** tea is very helpful in relieving the wracking cough. For small children, the easiest way to give garlic is liquid **Kyolic** (the Japanese preparation). Give a dropper to infants and a teaspoon 3 times daily to older children. **Astragalus** enhances the body's immune system. **Ginger** is a good antibiotic to fight fever.

• The **room** should be warm, but ventilated. Protect him from chilling.

—See Lung Congestion (409), Bronchio-pneumonia (below), and Lobar Pneumonia (411). Also see Bronchitis (407), Bronchial Problems (407-409), and Pleurisy (417) for more .

ENCOURAGEMENT—It is essential that every child of God obey His law. He never asks that you obey in your own strength. But, in Christ, you can be an overcomer, resisting all the wiles of the devil.

BRONCHIAL PNEUMONIA
(Bronchopneumonia)

SYMPTOMS—Cough that may produce rust-colored or bloody sputum. Chest pain that becomes worse when you inhale. Shortness of breath at rest. High fever, delirium, or confusion.

CAUSES—This is pneumonia which also extends into the bronchials. *Essentially treat it exactly like "Pneumonia" (409).*

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR BRONCHIAL PNEUMONIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL MEASURES—*See Pneumonia (above).*

BRONCHIAL IRRITATION—Warm Vapor Inhalation for 15 minutes every hour. **Fomentation** to chest every 2 hours for 15 minutes, followed by **Heating Compress**, Hot Blanket Pack.

CYANOSIS—Short **Hot Half Bath. Pour cold water** over head, spine, and chest (to induce cough, if cough is checked or inefficient while secretion is abundant). It is well to have him **sit in a tub** with a small amount of **hot** water while a **Cold Pail Pour** is given, followed by vigorous rubbing and wrapping in dry blankets in bed.

AFTER CONVALESCENCE BEGINS—Heating Chest Pack night and day. Graduated cold applications, to build up

general resistance.

—*Also see Pneumonia (above).*

ENCOURAGEMENT— Thoughtful courtesies, that (commencing in our families) extend outside the family circle, help make up the sum of life's happiness. As we try to encourage and help others, we ourselves will be helped.

LOBAR PNEUMONIA

This is pneumonia in one or both lobes of the lungs, but without bronchial infection. *Treat it as "Pneumonia" (above).*

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR LOBAR PNEUMONIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL—Exercise special care to prevent lung congestion due to exposure of shoulders or chest to chill by evaporation. Provide him with an abundance of pure **warm air**; have a supply of **oxygen** at hand for immediate use, if required.

MAINTAIN GENERAL VITAL RESISTANCE—Cold Mitten Friction or **Cold Towel Rub** 2-4 times daily, after some appropriate heating procedure, as a **Fomentation** to chest or back. **Hot Blanket Pack** or Sweating Wet Sheet Pack.

COMBAT LOCAL CONGESTION OF THE LUNGS AND INVASION OF THE SPECIFIC BACILLUS—**Fomentation** to the chest (both front and back) for 15 minutes every 3 hours. During the interval between, apply **Cold Compress** at 60° F., changing every 15 minutes or as soon as warmed. Lengthen the period between fomentations and change the compress less frequently as the temperature is lowered, the pain less, and the stage of the disease more advanced. Several **Ice Bags** may be used in place of the Cold Compress; but the bags should be removed at least every half hour and the chest should be rubbed until red and warm, to maintain surface circulation and skin reflexes. The skin must be kept warm.

ELIMINATION OF POISONS—**Sweating Wet Sheet Packs**, continued for 2-4 hours. Follow by **Cold Mitten Friction**, carefully administered. The Sweating Bath may be preceded by the short **Full Hot Bath**. Copious **water** drinking. **Neutral enema** twice daily.

COUGH—**Fomentations** every 3 hours. **Heating Compress**, changing every 15-30 minutes during the interval between. **Warm Vapor Inhalation** 15 minutes, every hour. Sip half a glass of hot **water** when inclined to cough. Carefully **protect neck and shoulders** from chilling by contact with wet bed clothing. Keep shoulders covered.

PAIN IN CHEST—**Revulsive Compress** covering the whole chest before and behind.

EXUDATION (ELIMINATION) OF PHLEGM—**Alternate Compresses** for 20 minutes, 3 times a day, with continuous well-protected **Heating Compress** during the intervals between and after convalescence begins. For unresolved exudation, Alternate Fan Douche or Alternate Spray.

CONSTIPATION—Daily **Cold Enema** or Cold Colonic.

DIARRHEA—**Enema** at 96° F. after each bowel movement. Cold Abdominal Bandage, renewing every half hour. **Fomentation** every 2-4 hours, if pain or tenderness is present.

TYMPANITES (gaseous distension of abdomen)—**Hot Enema** followed by small **Cool Enema**. Cold Colonic. **Cold Abdominal Compress**, changing hourly.

GASTRO-DUODENITIS—**Fomentation** over stomach and bowels or **Hot Trunk Pack** every 3 hours. During intervals between, **Cold Compress** at 60° F., changing every 30 minutes. **Neutral Enema** daily.

JAUNDICE—Large **Hot Colonic** at 105° F., followed by small **Cold Enema** twice daily. **Fomentation** over the liver and stomach every 2 hours. During the interval between, **Heating Compress**, changing every 30 minutes.

WEAK HEART, FEEBLE PULSE—**Cold Compress** or Ice Bag over the heart for 15 minutes every 2 hours. Cold Mitten Friction every 2 hours. Prolonged **Neutral Bath** with **Ice Bag** over heart, **Cold Pail Pour** to back of head and upper spine at the end of the bath.

CYANOSIS (BLUENESS)—**Hot Blanket Pack** for 15 minutes, followed by **Cold Mitten Friction**. Avoid exposure of the body to chill by evaporation.

HEADACHE—Ice Compress, or **Ice Cap**, to head. **Hot Pack to legs and hips**, or other derivative treatment. **Hot and Cold Head Compress.**

NOSEBLEED—**Ice Bag** to back of neck, short hot **Fomentations** to face.

DELIRIUM—**Heating Wet Sheet Pack**, **Ice Cap** to Head, Prolonged **Sweating Wet Sheet Pack.**

INSOMNIA—**Neutral Wet Sheet Pack.**

CEREBRAL CONGESTION—**Hip and Leg Pack**, **Ice Cap** to head.

FEVER—Prolonged **Neutral Bath**, Wet Sheet Pack, **Cooling Enema.**

SUBNORMAL TEMPERATURE—Dry Pack, **Hot Blanket Pack**, Hot **Enema**, and hot **water** drinking. Do not expose him during changing of application or after it.

PAIN IN ABDOMEN AND BACK—Hot **Blanket Pack** or large **Fomentations** over affected parts, followed by **Heating Compress.**

CAPILLARY BRONCHITIS—Hot **Blanket Pack** followed by Sweating **Wet Sheet Pack**. Hot **Enemas** followed by **Cold Friction**, carefully given. **Fomentation** to the chest followed by **Heating Compress** or Chest Pack, to remain in place an hour or until thoroughly warmed. Repeat bath when temperature rises to 102° F.

CONTRAINDICATIONS—Do not use Cold Full Baths or anything equivalent.

GENERAL METHOD—Maintain warmth and activity of the skin, taking special care to avoid chilling of the shoulders, which should be especially protected by a wrapping, closely applied. Combat pulmonary congestion by local applications made as directed above. Keep the temperature down by carefully managed hydrotherapy measures (such as the Heating Pack, the Hot Blanket Pack, followed by Cold Mitten Friction and like measures) rather than Cold Full Baths and Cooling Packs, which aggravate lung congestion by producing retrostasis. Promote vital resistance by frequently repeated partial Cold Frictions; and thus sustain the vital powers until opportunity has been afforded for the development of antitoxins and the suppression of the

disease by the natural healing processes.

—Also see Pneumonia (409).

ENCOURAGEMENT—Let us, under all circumstances, preserve our confidence in Christ. He is to be everything to us—the first, the last, the best in everything. Then let us educate our tongues to speak forth His praise at all times, not only when we feel gladness and joy.

TUBERCULOSIS
(Consumption)

SYMPTOMS—Coughing, general fatigue, loss of appetite, chest pain, night sweats, and low-grade fever. The cough is at first not too productive; but, later, increasing amounts of phlegm are coughed up.

The person loses weight and the sputum becomes bloody.

CAUSES—In the 19th century, tuberculosis (TB) was called *consumption*; for the person seemed to waste away. It is caused by a highly contagious bacteria, the Koch bacillus, called *Mycobacterium tuberculosis*. Although it generally affects the lungs, it can attack any part of the body: kidneys, bones, skin, intestines, spleen, and liver.

In adults, pleurisy is frequently a complication of tuberculosis. The sharp chest pain one may feel might be the pleurisy *(417)*.

It is spread by coughing. Tiny droplets are inhaled by others. The germ enters the lungs and remains there. As long as the person maintains a healthy lifestyle, the body encapsulates the germs; that is, a tiny calcium shell is placed around the TB germ, to render it harmless.

If the person continues to eat right, obtains enough calcium in his diet, gets adequate rest, exercises outdoors, and breathes vigorously to keep his lungs in good health—he will not develop TB, even though the germs are in his lungs. Remember that. Tuberculosis can progressively worsen at a slow pace; you do best to catch it in its early stages.

It is said that overweight people tend to have heart trouble and thin ones tend to have tuberculosis. So be extra careful if you are thin.

At the present time, tuberculosis is making a powerful comeback—and is once again becoming a modern plague. So be careful. It may be in the air of the next building you enter (especially buildings crowded with people). Live right everyday. Homeless shelters and prisons have the highest percentage of people with TB. It is estimated that, by 2020, there will be 200 million new cases throughout the world; and 70 million people will die from it.

NATURAL REMEDIES

• The treatment is obviously a matter of retracing one's steps—and doing what he should have done earlier. Initially, he must overcome the critical phase of the disease with **fasting, rest, and good food**, all the while having **fresh air** in his room.

• Maintain a moderate temperature, never too warm and always good ventilation. Avoid becoming chilled. The room should be sunny, airy, and dry. Stay outdoors, breathing deeply, as much as possible.

• If he is not too weak, clean the stomach out with an **emetic** (to induce vomiting). This will eliminate a large amount of mucus, which would otherwise be brought up in paroxysms of coughing; it contaminates the air for those helping him. To induce vomiting, drink some **lobelia** tea in warm water and run a finger down the throat. All **sputum** and discharges should be burned or buried.

• But later, he must take time each day to do something **outdoors** that will exercise his lungs, not only his body. Walking up a hill and **breathing deeply** is excellent. Maintain an erect posture, so you can breathe properly.

• *Remember the formula* to prevent and eliminate tuberculosis: adequate **rest**, good **diet** including **calcium**, daily deep **breathing** outdoors.

• If you suspect you might be getting tuberculosis, here are excellent herbs for tuberculosis: **Echinacea**. Take two 450-mg capsules 3 times a day for a week; wait a week and do it again. **Garlic**: 1 garlic capsule a day or equivalent. **Licorice** has up to 33% antibacterial compounds on a dry-weight basis. The Chinese use licorice to treat TB. Add it to any herbal preparation you take for tuberculosis. Kloss suggests drinking at least 1 quart of **slippery elm** tea every day.

• To clean out the pus and accumulation, mix equal parts powdered **comfrey, marshmallow, chickweed, and slippery elm**. Add 4 oz. to 4 quarts water, boil down to 2 quarts. Strain and take ½ cup every 2 hours, either hot or cold.

• Give short, **hot fomentations** with **short cold** applied to chest and then to back. Also apply it the full length of the spine and over the stomach, liver, and spleen.

• In accordance with the strength of the patient, give **warm baths** followed by a **salt glow** and **massage**.

• *Take cough medicine*, especially after a coughing spell. Here are the best herbs for this purpose: **Ginger** has several chemicals with cough-suppressing, pain-relieving, and fever-reducing action. **Licorice** has a long history of use in treating coughs. **Slippery elm**, with its mucilage, is a throat soother and cough suppressant. **Marshmallow** and **mullein** have similar properties.

• Keep him warm with **warm clothing**, especially the feet, legs, and arms.

• Keep in mind that the *tubercle bacillus* remains in the lungs for the remainder of one's lifetime. So once you are on your feet again and appear to be well, you must continue a program of careful eating, living, and outdoor activity; all the while obtain adequate rest every night.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR TUBERCULOSIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL—Destroy sputum (spit); avoid swallowing it again; live in the open air and sleep in cool, well-ventilated rooms.

INCREASE GENERAL VITAL RESISTANCE—Graduated **Cold Baths**, twice daily. **Fattening dietary**. Systematic **exercise**. **Outdoor life**. **Cool, dry, elevated climate**. Very brief Radiant Heat Bath, daily or 3 times a week.

ANEMIA—**Cold Bath** twice daily. Food rich in blood-making material. **Easily digested foods**, rich in protein.

INDIGESTION, ANOREXIA—**Dry aseptic dietary**, dry toast, malted cereals. Hot **Abdominal Pack**. **Ice Bag** over the stomach half an hour before meals.

CHILL—Rest in bed, **Dry Pack**, hot-water drinking.

COUGH—**Fomentation** to chest, followed by **Heating Chest Pack**. Sip hot water when inclined to cough.

PAIN—**Revulsive Compress** for 15 minutes, 2-3 times daily. During intervals between, apply well-protected **Heating Compress**.

PULMONARY (LUNG) HEMORRHAGE OR CONGESTION—Very hot application to spine between shoulders, Ice to chest, ice to hands, Hot **Leg Pack**. Keep the extremities warm; elevate the chest and shoulders.

FEVER—**Neutral Pack** for 15-20 minutes. Free **water** drinking. **Rest** in the horizontal position until the daily evening temperature becomes nearly normal.

NIGHT SWEATS—Very **Hot Sponging** at bedtime.

HYPOPEPSIA, ATONIC DYSPEPSIA—Daily, general **cold applications**. **Ice Bag** over stomach for half an hour before meals.

DIARRHEA—**Enema** at 95° F., after each bowel movement, followed by Cold **Abdominal Compress** at 60° F., changing every half hour. **Rest** in bed till checked.

CONTRAINDICATIONS—Avoid general cold baths when hemorrhage is threatened. This includes Cold Full Baths, Cold Pail Pours, Cold Sitz Baths. It also includes Steam Baths.

GENERAL METHOD—The great object to be kept in mind, in the hydrotherapy treatment of this disease, is to build up his vital resistance by carefully graduated cold applications (the various Tonic Frictions), repeated 2-3 times a day. The intensity of the application should be steadily increased from day to day in order to secure good results. No one is too feeble to receive water therapy of some sort; and, by careful graduation, persons of feeble physique, but in whom the disease is not yet far advanced, may be trained to receive very vigorous cold applications with excellent effects. In making the cold applications, care must be taken to avoid chilling him; for this would immediately aggravate his cough.

—Follow the cleansing and healing program given to Bronchitis (407), Bronchial Problems (407-409), and Pneumonia (409). Also see Pleurisy (417).

ENCOURAGEMENT—Day by day we are to live for God. Day by day, we are to help those around us. As we do this, angels work with us; and what a joy is ours! Matthew 18:10.

EMPHYSEMA

SYMPTOMS—It is only with great effort that the person can exhale air from his lungs. There is continual breathlessness. Most any exertion brings coughing. It is hard to breathe in, but worse to breathe out. The neck veins often stand out from the effort; and he breathes through the mouth in order to try to get enough air in and out. Breathing is usually rapid and short. He may breathe 25-30 times a minute; and he still does not get enough air.

Eventually his chest becomes barrel-shaped, his face ruddy, and he speaks with short and broken phrases.

CAUSES—The word, "emphysema," comes from a Greek word meaning "to puff up with air." The walls of the lungs lose their elasticity; so air cannot be easily pushed in and out, as should normally happen. There is air in the lungs, but it is not moving in and out. As emphysema progresses and the obstruction to airflow increases, the lungs enlarge with trapped air.

The most frequent cause is **smoking**; but **dust** and **air pollution** also receives some of the blame. Live in the country and do not have tobacco in your home; and you should be able to avoid this problem.

Emphysema has become the most common modern lung infection in the Western world. Needing a continual exchange of air to survive, we use about a thousand cubic feet of air each day. It passes over lung surfaces which, if laid flat, would be as large as a tennis court. In emphysema, a large portion of the alveoli (the grape-like sacs where the air exchange occurs) are destroyed and the blood is not properly aerated.

NATURAL REMEDIES

TREATMENT: LIVING WITH THE PROBLEM—

• The person absolutely must **stop smoking**. **Tobacco smoke** should be banished from the home, car, and place of work. Also avoid **hair spray** and **other sprays**. Avoid **allergens** that you know of.

• Maintain a program of regular **exercise**. Walking outdoors is always the best. Try using 1- or 2-pound hand weights and work the muscles in the neck, upper shoulders, and chest. Those with chronic emphysema need strong muscles there more than others do.

• **Eat less** and a little **more often**. Prolonged digestion requires more oxygen and blood to the stomach, and away from other parts of the body which also need them. Maintain a **low-salt** diet. **Flaxseed oil** is rich in omega-3 fatty acids, which help to decrease lung inflammation and ease breathing.

• **Avoid gas-forming foods**, such as **legumes** and **cabbage**. These cause abdominal distention which can interfere with breathing. **Avoid hard-to-chew foods** and

excessively hot or cold foods that may induce coughing. Do not eat when emotionally **upset** or angry.

• Drink enough **water**. The fluid intake is needed to keep the mucus, in the lungs, thin. Sip warm, clear liquids in the morning (such as herb teas), to help clear mucus from the airways.

• Maintain your ideal **body weight**. Some of those with this problem tend to put on weight and retain fluid. The closer you are to your ideal weight, the better for your lungs. Stay on a low-calorie diet. The thinner you are, the less flesh your lungs have to supply oxygen to. Obesity and **constipation** decrease the patient's resistance to respiratory infection.

• Learn to **breathe correctly**. The tendency is to breathe short and fast. But make yourself breathe steadily, from the diaphragm. Strengthen your respiration muscles by blowing out slowly through pursed lips for 30 minutes a day. Try to exhale twice as long as it took you to breathe in. Wear **loose clothing**; this helps you breathe better. Begin each morning by taking several deep breaths before rising.

• Learn to **cough properly**. Inhale slowly and deeply. Exhale through pursed lips and cough in short huffing bursts rather than vigorously.

• Learn when to **inhale and exhale** air. When working, lift while you exhale through pursed lips; inhale while you rest. When climbing steps, climb while exhaling; inhale when you stop to rest. **Pace yourself** in your work. Work steadily; it is not necessary to work fast.

• Go through the day **relaxed** instead of with a sense of alarm over your air problems.

• **Avoid** contact with anyone with a **respiratory infection**.

• **Avoid cough suppressant drugs**. They dry up secretions, which you do not want. Use only **essential and unscented soaps**.

• **Avoid perfumes, gas stoves, carpeting, curtains and draperies** which cannot easily be cleaned. Avoid **hot, humid climates**. Avoid **furry, feathered animals** in your home. Leave the house during major **housecleaning**; and stay away for two hours.

• Get plenty of **fresh air**. Use a **warm scarf or mask** over the mouth and nose when outdoors in cold weather. **Keep the body warm** at all times. Do not live in a **hot, humid climate**, unless you have central air conditioning.

• **Elevate the bed**. Place 3, 4, or 5-inch blocks under the foot of the bed. This will help prevent mucus from accumulating in the lower part of the lungs during the night. (But not too steep; for that would be hard on the heart.)

• **Hang** from the waist **over the edge of a bed** with a bowl placed at the head for easy expectoration. Apply a **hot, moist compress** to the back repeatedly for 5-10 minutes. Then have a friend **pound vigorously** on the back with open plams. As mucus is loosened, it should be **spit out**. Repeat 1-3 times a day.

• Alternate **hot and cold chest packs** to stimulate circulation, respiration, and mucus elimination. **Alternate hot and cold showers**.

• Herbs that can help thin mucus or clear it from the lungs are especially helpful. Here are some of the best: **mullein, licorice, peppermint, elecampane,** and **cayenne**.

TREATMENT: SOLVING THE PROBLEM—

The official pronouncement is that there is no cure for emphysema. But there is!

The suggestions above are typical of what you will find in most books. It is difficult to find remedial solutions, but here is one:

Several years ago, a Christian mother visited her neighbors and met a woman with emphysema. It was a small, stuffy house and the lady smoked. So the mother went back home and eventually found a treatment; it was a wet heating pack from Kneipp's book, written nearly two centuries ago. She gave the treatment to the woman, who got well within several weeks. This was the treatment:

• Place a **plastic sheet** on the bed, both above the bottom sheet and beneath the top sheet and covers. **Dip another sheet in very cold water, and wring it out somewhat**—quickly, to keep in the cold.

• Work quickly: **Wrap the sheet about the person**, who is standing unclothed. The sheet covers everything but the head and perhaps part of the neck. Than **wrap a dry blanket around him**. The person immediately gets into the bed, and is covered well with the top sheet and blankets. This is essentially something like a heating pack, but done only with a wet sheet. The effect is immediate freezing cold, which the body gradually warms and warms and warms. The person can remain like this all night.

In the years that followed, the mother mentioned the incident to a number of medical people and doctors who were astounded; for everyone says there is no cure for emphysema. Note: A more moderate treatment (with less intense cold to start) might have to be given to a very thin, frail person.

ENCOURAGEMENT—By both creation and redemption we are the Lord's property. We are required to obey His laws; but we are never asked to do it in our own strength. Christ helps us in all that we do.

LEGIONNAIRE'S DISEASE

SYMPTOMS—It initially appears to be the flu. There is headache, fatigue, achiness, and moderate fever. But then it develops into what seems more like pneumonia: a high fever (105° F.) with coughing, diarrhea, chills, disorientation, slow heart rate, dry cough, infection of the pleura, vomiting, severe chest pain, and shortness of breath. From lack of oxygen, the skin becomes bluish. The sputum that is coughed up eventually is gray or blood-streaked.

CAUSES—This is the strange disease which was first identified at the American Legion convention in 1976, which affected 182 partying in a hotel.

Those who **smoke, drink, have diabetes, emphysema, or kidney problems** are more likely to contract the disease. Younger people quickly recover; but the elderly can die from respiratory failure. **Immunosuppressed patients** (such as chemotherapy-treated cancer patients, **transplant patients**, and **AIDS patients**) are the most susceptible to contracting it.

The *Legionella pneumophila* bacteria are not directly transmitted from person to person, but through cool air-borne vapor droplets (primarily **heating and cooling systems**). That is how the Legionnaire's got it in that hotel. The bacteria have also been found in newly plowed soil and excavation sites.

NATURAL REMEDIES

• Essentially follow the regime listed under Pneumonia *(409)*, Bronchitis *(407)*, and Fever *(233)*. See your health-care provider. The present rate is that 80% of those contracting the disease die; so this disease is a very serious matter.

ENCOURAGEMENT—Copy the example of Christ: His love, tenderness, and obedience. Minister to the needs of everyone around you. They need the peace and happiness that you have found in Christ.

Q FEVER

SYMPTOMS—Some of the symptoms of Q fever are like those of typhus *(567)*; and some are like those of bronchopneumonia. See *Pneumonia (409)* and *"Bronchitis" (407)*. There is a sudden onset of fever, headache, weakness, and a pneumonia-like infection.

CAUSES—Q fever is quite rare in the Western world. The name comes from "query," because scientists initially questioned what it was. Caused by a rickettsial organism *(Coxiella burnetii)*, Q fever is worldwide in its coverage. First discovered in Australia, it is now known to even occur in the United States.

It is endemic in domestic animals. Sheep, goats, and cattle are the primary reservoirs for transference to humans. The disease is spread to humans by bites from an infected **tick** *(Dermacentor andersoni)* and from drinking **raw milk**.

NATURAL REMEDIES

• See your physician. Give this problem the care you would give to typhus *(567)*, bronchitis *(407)*, and pneumonia *(409)*.

ENCOURAGEMENT—There are many from whom hope has departed. Bring back the sunshine into their lives. You can do this as, prayerfully, you seek to bring a knowledge of Jesus into their lives.

HYPERSENSITIVITY PNEUMONITIS

SYMPTOMS—*Acute attack:* This resembles symptoms of influenza and usually develops within 4-8 hours after initial exposure. It may include fever and chills, coughing and wheezing, tightness in the chest, and sometimes shortness of breath. If exposure to the substance stops immediately, the symptoms usually clear up within 12-24 hours and often disappear completely within 48 hours.

Chronic attacks: If further exposure to the substance occurs, the problem becomes chronic with continuous symptoms: Coughing becomes progressively worse. Increasing shortness of breath. Loss of appetite and weight. Symptoms may continue even after exposure to the substance ends. Continued exposure can eventually lead to respiratory failure.

CAUSES—Dust, fungal spores, chemicals, proteins, chemicals containing organic substances. *Farmer's lung:* The reaction is triggered by fungal spores from **moldy hay**. In ***bird fancier's lung***, the cause is particles from **bird droppings**. Other causes include **cheese mold, coffee dust, mushroom soil, microorganisms in air-conditioning systems, humidifiers, certain chemicals used in manufacturing insulation, packing materials, or other materials**.

In reaction, the walls of the alveoli (the air sacs, or small airways, of the lungs) thicken and oxygen cannot get through the narrowed passageways.

NATURAL REMEDIES

• **Locate the source** of the problem. It may be your occupational work or a hobby. Instead of trying to take drugs to counteract the harmful effects of the substance, no longer be around the problem. **Switch jobs or change your hobbies**.

• Wearing a **protective mask** might work on a short-term basis; but you will still be breathing some of the substance. Make sure **air conditioners are cleaned** regularly.

—See Occupational Lung Disease (below), which is concerned with mineral dusts. Also see Black Lung (416), which discusses coal-mining dust problems, and Silicosis (416), caused by silicon dust.

ENCOURAGEMENT—As we associate together, we may be a blessing to one another. If we are Christ's, our sweetest thoughts will be of Him. We shall love to talk of Him; and as we speak to one another of His love, our hearts will be softened by divine influences. Beholding the beauty of His character, we shall be "changed into the same image from glory to glory."

OCCUPATIONAL LUNG DISEASE

SYMPTOMS—Coughing and wheezing, tightness in the chest, shortness of breath, fever, and chills. The coughing becomes progressively worse, with increasing shortness of breath. Asthma may begin.

CAUSES—Small mineral particles and gases are breathed into the lungs. Some **organic substances** may

be included. The type and amount of particles determine the nature of the lung disease. Three primary ones are **coal** (causing black lung, *below*), **silicon** (causing silicosis, *416*), and **asbestos** (causing asbestosis, *416*).

Inflammation of the alveoli inside the lungs occurs. Asbestos can also cause thickening of the pleura (the two-layered membrane separating the lungs from the chest), and mesothelioma, a form of cancer of the pleura.

There is a growing list of substances which can cause this problem and an increasing number of cases each year.

Chemical factories, paper companies, oil firms, manufacturing plants (especially those burning coal) also cause problems by polluting the air in a wide area.

NATURAL REMEDIES

• It is vital that you avoid the substances which are causing your problem; and you must do it as quickly as possible! **Change employment**. If the dust is in the air, **move to a different area**. There can be no other effective solution.

—See Hypersensitivity Pneumonitis (415), which results from organic dusts. Also see Black Lung (below), which discusses coal-mining dust problems, and Silicosis (416), caused by silicon dust.

ENCOURAGEMENT—Jesus is bending over you in love. He wants you to live in His presence forever. Accept Him just now as your Saviour.

BLACK LUNG
(Coalworkers' Pneumoconiosis)

SYMPTOMS—Coughing up black sputum. Shortness of breath with exertion that becomes progressively worse.

CAUSES—The cause is inhaling **coal dust**. It gradually built up, produced scar tissue in the lungs over many years, and led to progressive and disabling shortness of breath. If the coal dust contains silicon, the effects are even worse.

NATURAL REMEDIES

• **Quit your job**; and, **if there is dust in the air, move** to a different locality.

—See Occupational Lung Disease (415), which is concerned with mineral dusts. Also see Silicosis (below), caused by silicon dust, and Hypersensitivity Pneumonitis (415), which results from organic dusts.

ENCOURAGEMENT—It would be well for us to spend a thoughtful hour each day in contemplation of the life of Christ. We should take it point by point, and let the imagination grasp each scene, especially the closing ones. As we thus dwell upon His great sacrifice for us, our confidence in Him will be more constant.

SILICOSIS, ASBESTOSIS

SYMPTOMS—Coughing up sputum, shortness of breath with exertion and tightness of the chest. Tuberculosis can later result.

CAUSES—This disease can affect those who work with **sandstone, granite, slate, or coal**. It can also injure **potters, foundry workers, sandblasters, and those who work in asbestos factories or handle asbestos** material. Between 1.2 to 3 million U.S. workers have been exposed to silica dust. The chronic form usually develops after 20-30 years of exposure. But only a few months of exposure to lots of the dust can lead to sudden death. More than most dusts, silica causes a strong inflammatory response in the lungs. Thickening and scarring of the lungs occur and less oxygen is available to the body. The problem is intensified in those who **smoke tobacco**.

NATURAL REMEDIES

• **Stop smoking, change jobs, and (if necessary) move** out of the area.

ENCOURAGEMENT—The Lord Jesus loves you. If you doubt His love, look to Calvary. The light reflected from the cross shows you the magnitude of that love which no tongue can tell.

SWIMMING POOL SYNDROME

SYMPTOMS—Headaches and grogginess after swimming in an indoor swimming pool.

CAUSES—Public swimming pools are heavily chlorinated. The chlorine continually vaporizes into the air; and those working in those buildings or swimming in the water breathe that contaminated air. In addition, swimmers occasionally accidentally swallow some of the water. Because chlorine is bleach, those who inhale it are taking diluted bleach into their lungs. The chlorides especially affect the lungs and brain.

NATURAL REMEDIES

• Avoid public swimming pools which are enclosed. Open air pools are less dangerous, but still a problem.

• After swimming, shower off; then walk outside for a time, inhaling and exhaling a lot. Even city water has less chlorine than swimming pools.

ENCOURAGEMENT—By beholding we become changed. As we look in faith to Jesus, His image is engraven on the heart. We are transformed in character. He enables us by His grace to obey His ten commandment law and live pure lives. This is the only way to truly live a happy life: Living for Jesus, and doing all we can to help and encourage others.

RESPIRATORY - 4 - PLEURA

PLEURISY

SYMPTOMS—The pleural membranes become swollen and inflamed; they at first rub together with each breath, causing severe pain and sound that can be heard by a physician using his stethoscope. The pain suddenly becomes more severe if the person attempts to take a quick deep breath, cough, or sneeze.

Fluid may form in the space between the lung and the chest wall. When that happens, the rubbing sound disappears, as well as most or all of the pain. There may only be a little fluid or it may fill half the chest cavity, compressing the lung.

Pleurisy can also appear on the surface of the diaphragm. In this case, the pain is in the abdomen, at the pit of the stomach, or can even be referred pain to the shoulder.

In children, both the pain of pleurisy and that of pneumonia are frequently located in the abdomen, causing others to think the problem is acute indigestion or appendicitis.

CAUSES—The lungs are enclosed within a sack-like covering. Since the lungs are constantly in motion, they must be able to slip against this covering without harming themselves or the pleura. Pleurisy occurs when this sack becomes inflamed. The cause is generally the *tubercle bacillus* (the cause of tuberculosis), *pneumococcus*, or *streptococcus*. The two later germs are present in pneumonia.

Some pleurisy is always present in lobar pneumonia *(see Pneumonia, 409)*; and, in adults, pleurisy is frequently a complication of tuberculosis *(412)*.

But the underlying cause is **not eating right, getting enough sleep, or not avoiding stress and overwork**.

Damaged kidneys, caused by drugs or eating and drinking the wrong things, can also be a factor. One individual who contracted pleurisy regularly poured a couple spoonfuls (literally) of cayenne on his food, so that only the red color could be seen. Although small amounts of **cayenne** are excellent as a remedy, large amounts, week after week, weaken and injure the kidneys. This can result in an edemic condition affecting the pleural membrane, causing it to fill with water.

NATURAL REMEDIES

• Put him to **bed** and keep him **warm**. Give a high **enema**; and apply **fomentations** to the chest and upper back. Continue this for 1-2 hours, let the patient rest; then repeat. Keep doing this until the pain has ceased.

• Maintain hot **fomentations**; this will disperse the water in the lungs and keep the pain from returning. The fomentations should be large, thick, and hot, and changed frequently. Do about 5 changes; and do not follow with any cold treatment. This is important. Use a **hot-water bottle** on the chest following the fomentations. It may be kept there nearly all the time. If his chest is allowed to become chilled, the pleurisy will become worse!

• Give hot **herb teas of pleurisy root, yarrow, valerian, and buckthorn bark**. Add **skullcap** if the pain is severe.

• An excellent herb tea is a tablespoon each of **pleurisy root and yarrow**, and a pinch of **cayenne**. Put it in water brought to a boil. Let it steep; and then drink a large swallow of the warm tea every hour.

• Only give **fruits, oatmeal water, vegetables, and grains**. Allow no meat, milk, alcohol, or junk food.

• Do not jar the patient. Move him carefully, gently. **Jars and quick motions** make the pleurisy worse and greatly increase the pain.

• He, of course, needs **fluid**; but do not give him too much during the crisis.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ACUTE PLEURISY AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

(1) ACUTE FORM —

GENERAL—Improve general resistance by **cold applications**, 2-3 times daily. **Hot Leg Bath**, if extremities are cold. **Water** drinking. **Aseptic diet**.

PAIN—Very hot **Fomentation** for 10 minutes over the affected side. **Revulsive Compress**. Limit movement of lung by tight bandage to the chest. Repeat every 2 hours. During interval, apply either Cold compress or **Heating Compress** as best suits the case.

AFTER CONVALESCENCE—Alternate Chest Douche or **Alternate Compress**, if necessary to absorb exudation. Apply, 3 times a day, a continuous **Heating Compress** with plastic covering during the interval between.

EXUDATION—**Alternate Compress** or Alternate spray Douche 3 times a day, graduated general tonic applications. Prolonged **Neutral Bath**, half an hour to an hour daily.

(2) CHRONIC FORM —

GENERAL TREATMENT—**Neutral Bath** at night, 3 times a week, of 20-30 minutes duration. Graduated **cold applications** daily. **Fomentation** to chest, 3 times a day, or Revulsive spray Douche. Well-protected **Heating Compress** during the interval between.

TUBERCULAR PLEURISY—Short **Revulsive Compress** for 5 minutes for relief of pain, 3-4 times a day or as often as necessary. Flannel **Heating Compress** during the intervals between; graduated **Tonic Frictions**.

ENCOURAGEMENT—Christ, the Majesty of heaven, became poor; that we, though His poverty, might become rich. What kind of riches? The riches of clean living, health, happiness, and eternity with Christ to look forward to. Job 22:26.

— SECTION 8 —
CARDIOVASCULAR

CARDIOVASCULAR - 1 - HEART

HEART ATTACK - *EMERGENCY !!*
(THREATENED CARDIAC FAILURE)

WHAT YOU SHOULD IMMEDIATELY DO IF YOU HAVE A HEART ATTACK

Since many people are alone when they suffer a heart attack, this suggestion may save a life. Even if someone is with them, the friend may not be able to do anything more than phone 911.

If, upon experiencing a sudden heart attack and being alone, you will not receive immediate help, you will begin to feel faint because your heart is no longer beating properly. You only have about 10 seconds left before losing consciousness. However, **you can help yourself by coughing repeatedly and very vigorously**. *Here is how to do it:*

- **Take a deep breath before each cough.**
- **The cough must be deep and prolonged**, as when producing sputum from deep inside the chest.
- **A breath and a cough must be repeated about every two seconds, without letup**, until help arrives or until the heart is beating normally again.

These deep breaths get oxygen into the lungs; and the coughing movement squeezes the heart and keeps the blood circulating. The squeezing pressure on the heart also helps it regain normal rhythm. In this way, heart attack victims are more likely to survive the trip to the hospital. Tell as many other people as possible about this. It could save their lives.

- Here is another life-saving help: If you think you could have a heart attack, purchase some **arnica** and have it ready to take. It is said to be an immediate remedy for a heart attack.
- Also extremely helpful: If a heart attack is threatening and about to occur, *take half a teaspoon of* **cayenne pepper** (red pepper, not black or white pepper) *in some water and swallow it.* Just placing some cayenne in the mouth, with or without water, will help. It will nicely strengthen and speed up heart action.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR THREATENED CARDIAC FAILURE *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

THREATENED CARDIAC FAILURE—Cold bag (ice pack) over heart for 15 minutes every hour. **Cold Mitten Friction** every 2 hours. **Hot Blanket Pack** for 10 minutes, followed by **Cold Towel Rub. Hot Enema**, followed by **Cold Enema**. Artificial respiration.

These are all very grave conditions and must receive immediate attention. Immediately call your physician and begin water treatments.

—Also see Heart Attack Signals (753), How to Give CPR (753), How to Do Rescue Breathing (when unconscious, 755).

—Also see Heat Exhaustion (219), Heat Stroke (220), Sunstroke (220), Heart Problems (below), Arteriosclerosis (427), and Hypertension (429).

ENCOURAGEMENT—There is joy and consolation for the truehearted, faithful Christian, that the world knows not of. To them it is a mystery. The Christian's hope is big with immortality and full of glory. It reaches to that within the veil; and it is as an anchor to the soul, both sure and steadfast. And when the storm of God's wrath shall come upon the ungodly, this hope will not fail them; but they are hid as in the secret of His pavilion.

HEART PROBLEMS
(Cardiac Problems)

INTRODUCTION—Heart disease is the number one killer in civilized nations.

There are so many aspects to this, that it seems well to combine them all in one article rather than divide them into several.

Part of the confusion is that everything is so interrelated: diet, high blood pressure, arteriosclerosis, atherosclerosis, angina, and other degenerative heart changes.

In order to fully utilize the data in this article, you should also carefully read the companion articles in the first two parts of this chapter *(Heart, 419-427, and Circulatory, 427-439).*

The underlying cause of most heart disease is atherosclerosis *(427).* This is brought on by high blood cholesterol levels which are themselves caused by a diet low in antioxidants and high in animal fat, butter, and hydrogenated vegetable fats.

SYMPTOMS OF A HEART ATTACK—*Signs of a soon-coming heart attack* may include nausea, sweating, shortness of breath, dizziness, fainting, feelings of anxiety, difficulty in swallowing, vomiting, sudden ringing in the ears, and loss of speech.

The medical term for heart attack is *angina.*

The heart attack itself may feel as a band of intense pressure to the heart. A powerful pain is produced, which may last for several minutes. It often extends to the shoulder, arm, neck, or jaw.

But it may be a small attack, producing relatively little discomfort. Sometimes it is mistaken as indigestion. Sometimes there are no symptoms at all. This is termed a "silent heart attack."

An *angina pectoris* shows itself as recurrent pain beneath the sternum. It lasts 30-60 seconds. It is a severe constricting pain in the chest, often radiating from the heart to the left shoulder and down the arm.

SYMPTOMS OF HEART FAILURE—Shortness of breath, poor color, fatigue, accumulation of fluids, especially around the ankles (edema).

WHAT BRINGS ON A HEART ATTACK—What is a heart attack? What leads up to it? This article will provide you with an overview of the problem, along with several specific suggestions.

The *cardiovascular system* starts with the *heart*, which is a blood pump. The blood is sent through *arteries* and *veins* throughout the body.

Cardiovascular disease is the name given to several problems which can stop the heart and can lead to death.

1 - A *coronary* is one type of cardiovascular disease. The arteries which nourish the heart muscle itself are the coronary arteries. But if these arteries become narrowed, not enough oxygen and nutrients are supplied to the heart; and not enough carbon dioxide and waste products are carried off. This oxygen deprivation causes a tight, heavy chest pain, usually following some exertion or after a meal. There is a sharp, debilitating pain in the center of the chest. It is called *angina pectoris* (or simply *angina*). The pain generally recedes when the person rests. But it is a forewarning of events to come.

An angina attack may be precipitated by **stress, exertion, a large meal (especially late in the evening), extreme cold, emotion**, or other factors. Average life expectancy after the first onset of angina is 5-7 years.

2 - If that blood flow through the coronaries becomes entirely blocked or limited enough, so that it does not reach part of the heart, then a *heart attack* or *myocardial infarction* occurs. This refers to the formation of *infarcts* (areas of local tissue decay or death) in the *myocardium* (heart muscle). A heart attack does not always kill. But, whether it is mild or severe, a heart attack always produces some irreparable damage to the heart.

3 - The problem may not be in the heart, but in the arteries which nourish it. The arteries have hardened (called *arteriosclerosis*); and, when cholesterol and other materials flow through them, a clot (also called a *thrombus*) occurs. The hardened walls do not flex to let the blob pass on through. Arteriosclerosis is responsible for most of the deaths due to heart attack.

4 - Lack of oxygen and nutrients can also cause *spasm of the coronary arteries*, resulting in a heart attack.

5 - Then there is *high blood pressure* (called *hypertension*). This is another form of cardiovascular disease, which also prepares the way for a heart attack. When the heart pumps blood, the blood shoots through the body at a fairly rapid speed. The muscular contractions of the heart produce a certain amount of pressure which produces this pumping action throughout the body. But sometimes the pressure builds up too high. This also is not the fault of the heart.

Here are some of the things which produce high blood pressure:

• **Hardening of the arteries** *(arteriosclerosis)* is a primary cause. Earlier, the flexing of the walls kept the pressure lower.

• **Clogged arteries:** A second major cause of hypertension is a reduction in the size (interior dimension) of the arteries. They come to look like old water pipes, with congealed stuff sticking to the walls. For years, certain foods had been eaten which caused this problem (**meat fat, grease, saturated fats, hydrogenated vegetables oils, margarine, butter, corn chips, etc.**).

• Too much sodium in the diet, eaten for too long a time, is another cause of hypertension. The solution should have been to earlier stop eating **sodium (salty) foods**.

• Other causes include **stress, enzyme imbalances, certain drugs (including oral contraceptives), and nutritional deficiencies**.

• There are still more factors which could be involved: **hyperthyroidism, kidney disease, adrenal or pituitary disorders, and heredity**.

Unfortunately, there is no pain as the hardening and clogging of arteries (both of which produce hypertension) progresses. So people keep living and eating the wrong way until one day the crisis comes.

HEART FAILURE—So far, we have only discussed heart attack, which is an interruption in blood flow to the heart. But there is also *heart failure*, which is inadequate blood flow from the heart. It is not providing enough blood to supply the needs of the body. Heart failure can either be acute (short-term) or chronic.

Here are some of the problems which, over a period of time, can occur in the heart:

1 - *Arrhythmia*. The heart does not beat right. The natural rhythms are more irregular. This is caused by problems in the cells in the heart which send out electrical signals to do the pumping sequences.

2 - *Palpitations* occur when the heart seems to pound, whether regular or irregular.

3 - *Tachycardia* occurs when the heart beats too fast when it is resting.

4 - *Bradycardia* occurs when the heart beats too slowly.

5 - *Ectopic beats* (also called skipped beats) are beats which are premature, producing longer rests between some beats than between others.

6 - *Fibrillation* and *flutter* are a little different. An electrical error occurs, which sends some beat signals to the heart muscle, causing it to twitch instead of carrying out its normal blood pumping action.

7 - *Valvular disease* is the name for problems in the heart valves, so they do not open and/or shut properly. Sometimes this is **congenital**; at other times it is caused by **rheumatic fever** or **endocarditis** (infection of the heart muscle).

OTHER HEART PROBLEMS—There are a variety of problems which trace their cause to coronary problems, artery problems, or heart muscle problems. Here are some of them:

1 - *Cardiomegaly (cardiac hypertrophy)* occurs when the heart can no longer function normally. It works so hard that it enlarges. But this only weakens it. Causes of an enlarged heart include too much resistance from blood flow through the arteries.

2 - *Congestive heart failure* is a chronic condition that results in fluids accumulating in the heart and edema in the feet and ankles. There is labored breathing after mild exertion.

3 - *Cardiac arrest* occurs when the heart just stops beating. Because fresh blood is no longer reaching the brain, the person falls unconscious. Coronary artery problems are often the cause.

There are other problems which can occur in the heart, which can also weaken it. But these do not trace their causes to coronary or artery problems.

1 - *Carditis* is an infection in the heart muscle, sometimes caused by rheumatic fever. It can lead to permanent heart damage.

2 - *Endocarditis* is an infection of the endocardium. This is the sac-like membrane which surrounds the heart. People with **damaged immune systems** (from **HIV**, etc.) can acquire it. It can also be caused by **surgery**, to replace defective heart valves. Permanent heart damage occurs.

3 - *Cardiomyopathy* summarizes several heart problems, including enlargement of one or more heart chambers, heart muscle rigidity, etc. Causes include inherited defects and certain diseases.

NATURAL REMEDIES

Cardiovascular disease (which includes heart attack, stroke, and other disorders of the heart and blood vessel system) is the leading health problem in the Western world. Over 50 million Americans have heart and blood vessel disease; many do not realize it, since symptoms have not appeared yet. Here is a brief overview of some facts you need to know, if you would avoid a later buildup of conditions leading to a heart attack:

DIET

• Be sure to drink enough **water** everyday, and frequently throughout the day! *This cannot be stressed too much.* Sludged blood is a very real cause of heart and vessel problems. If you sense your heart is bothering you, immediately drink two glasses of water!

• Do not eat **meat**. Fat is in all meat. Do not eat meat and you will have a longer life. It is well-known that vegetarians live longer than others. They have less coronary disease, fewer heart attacks, and less heart failure.

• Eat **smaller meals**.

• Do not use **refined, processed, fried, white flour, or junk foods**.

• Do not eat any type of **grease or oil (fatty foods, meat, margarine, butter, peanut butter, hydrogenated oil)**, saturated fats (animal fats), **hydrogenated vegetable oils**, or **overheated or oxidized vegetable oils**. Dean Ornish says: "Only a diet almost entirely free of animal fat, oil and cholesterol will significantly lower blood cholesterol levels reliably in just about everyone." Do that which will keep you from having **elevated cholesterol, triglyceride, and uric acid levels**.

• **Vegetables, fruits, grains, and beans** are low in the heart-hurting saturated fat found in meat and dairy products. But they are high in heart-healing fiber, and loaded with heart-nourishing vitamins and minerals. Avoid an excess of **carbohydrates (especially refined ones) and sugar**. Sugar increases triglyceride levels, platelet adhesiveness, uric acid levels, and blood pressure.

• **Garlic** lowers LDL cholesterol and raises HDL (the "good cholesterol").

• Use **cold-pressed vegetable oil**. See *Cholesterol, Reducing (435) for more information.* Take 1-2 tablespoons daily of uncooked **flaxseed oil**. It contains *omega-3* and *omega-6* fatty acids, which reduce the stickiness of platelets, blood components that can bunch together and form the kind of clot that lodges in an artery and causes a heart attack. You want a **high HDL-to-cholesterol ratio**, in order to avoid cholesterol deposits in your blood vessels. (This is later explained in detail in this article.)

• Be sure to include **natural fat emulsifiers (especially lecithin)** in your diet.

• Eat a **high-fiber diet**, using **whole grains, brown rice, beans, and fresh fruit and vegetables**. A 6-year Harvard study of more than 40,000 men showed that those who ate the most fiber had only one-third the risk of heart attacks.

• Do not eat many **peanuts**; but, when you do, leave the papery red skins on them because they contain the heart-protective compounds called *oligomeric procyanidins* (OPCs). OPCs are potent antioxidants that help prevent, not only heart attacks but also, cancer and stroke. OPCs are also in a number of other vegetables, including grape skins.

• Do not use **MSG** (monosodium glutamate).

• Locate your **food allergies** and eliminate them *(see Pulse Test, 575).*

NUTRIENTS

• Through **nourishing food and supplements**, obtain all the vitamins and minerals you need. **Calcium, magnesium, and potassium** are important; so are the **vitamins (A, B complex, C, and E)**. Eat **Nova Scotia dulse or Norwegian kelp** for trace minerals.

• Helpful antioxidants include **wheat germ oil**, which raises oxygen levels 30%. Also good: **vitamin E** (400 IU) with **selenium**, **pycnogenol**, **Coenzyme Q_{10}** (30 mg), **ginkgo biloba** extract, and **rosemary**.

• Three B vitamins (**folic acid, B_6, and B_{12}**) help convert the amino acid, *homocysteine* to two other amino acids which do not injure your coronary arteries (by scarring them so arterial plaque can stick). As much as 30% of heart problems are partly due to high homocysteine levels. Each day take 800-1,000 g of folic acid, 400 mcg B_{12}, and 50 mg B_6.

• Heart attacks were reduced 40% in nurses who took **vitamin E** supplements. In another study, the arteries of men who had undergone bypass surgery were examined; and those who had taken vitamin E for the two previous years were found to have smaller lesions.

• If you are an adult, avoid very much **vitamin D** intake (from meat, milk, eggs, or sunlight). Taking over 3,000 units a day adds to the plaque development and hardening of atherosclerosis. It can result in calcification of the coronary arteries. But **carotene** (pro-vitamin A) in the diet, from orange and yellow vegetables and fruits, will not cause this problem.

HERBS

• Tonic herbs which help strengthen the heart include **hawthorn extract, cayenne, ginger, garlic, and Siberian ginseng extract**.

• ***L-carnitine*** helps dissolve fat deposits around the heart. **CoQ_{10}** and **germanium** strengthen veins and provide oxygen to the blood and cells.

• In Europe, people use **hawthorn** (as a syrup, extract, or fresh juice) as a heart tonic. The berry, leaves, and flowering tops contain *proyanidin* flavonoids which help patients with cardiac insufficiency. American herbalists also strongly recommend this.

Hawthorn has been used for thousands of years as an herbal medicine to strengthen the heart. It has been studied scientifically since the 19th century. The flowers mainly (with lesser amounts in its fruits) contain *flavonic glycosides (polyphenols)*, which is known for its action on the heart and circulatory system. Several other chemicals enhance its cardiotonic effect. It blocks the destruction of ATP, thus providing more energy in the cells and increasing the contractile strength of the heart. It is good for coronary insufficiency (weak heart) and arrhythmia (heartbeat disorders). It reduces angina pectoris by increasing the amount of blood in the coronary arteries and reducing their spasms. Like garlic, hawthorn has a balancing effect on blood pressure, decreasing it in those with high blood pressure.

• **Rosemary** tea is a quieting tonic and helps the kidneys reduce edema caused by a malfunctioning heart.

• **Grapeseed extract** contains *oligomeric proanthocyanidins* (OPCs); and it tends to lower high blood pressure, which can cause heart disease.

OTHER THINGS

• Do not put much **salt** and other **sodium products** (look at the labels!) into your body. Do not drink **chemically softened water**. Water softeners have sodium in them.

• Do not use **coffee**. Caffeine blocks the breakdown of adrenaline, resulting in the same response as heavy stress. Heavy caffeine consumption doubles the risk of coronary heart disease.

• Do not use **alcohol**.

• Do not use **tobacco**. The dangers of tobacco in producing heart attacks and other heart problems are well-documented.

• Do not use **drugs**.

• Make sure you are getting enough **exercise**. Sedentary living can kill you. Go outdoors and do something. Doing this is extremely important! All the nutrition in the world cannot help you, if you sit all the time. Regular exercise helps control weight, brings down high blood pressure, lowers blood sugar, increases HDL (the good cholesterol), reduces emotional stress, and helps reverse heart disease. Exercise outside 4-6 times a week. But if you have already had a heart attack, you will have to exercise more cautiously—but you must still exercise.

• Hot and cold showers are a good way to increase circulation.

• Keep your **weight** down. *See Overweight (388).*

• If you have **high blood pressure**, use natural ways to reduce it. *See Hypertension (429).*

• Research studies by the Chinese reveal that **constipation** *(367, 723)* is a significant factor in many heart attacks.

• Special problems: **Diabetes** *(547)* **or gout** *(520)*. **Taking birth control pills. Heavy metal poisoning** *(596)*. **A family history of heart trouble, living under heavy stress** *(455)*, **having a type-A personality**.

• If you tend to experience angina attacks at night, place 3-4-inch **blocks under the head of your bed**. This will reduce the attacks. More blood pools in the legs, and not so much tries to crowd in through the narrowed arteries into the heart.

Do everything in the above list that you can, and you will live a lot longer.

How to check your heartbeat:

• Check your heartbeat every so often. The best way to begin the day is to check your pulse when you wake up in the morning. If it is under 60 beats per minute, you are doing all right. But if your resting heart rate is above 80, that is not so good; it indicates that you may be developing hypertension or already have it. An estimated 25% of those who have heart attacks experienced no previous symptoms. So, right now, start eating right and living right.

An easy way to check your heartbeat: Place your

finger on the side of your neck; and, looking at your watch, count the pulse for 15 seconds. Multiply that by four. A count of 15 means you are doing very well; you have a pulse of 60. A count of 20 means you are not: you have a pulse of 80. Immediately after jogging, it should not go above 30, which translates to a pulse of 120.

Sodium is a problem which must be dealt with; since it can increase the likelihood of heart disease. Here are items to omit from the diet:

- Table salt. Use a small amount of Nova Scotia dulse or Norwegian kelp instead. That will supply some salt, plus many vital trace minerals.
- MSG (monosodium glutamate), which is an accent flavor enhancer.
- Diet soft drinks.
- Canned vegetables.
- Commercially prepared food.
- Baking soda.
- Foods with preservatives.
- Meat tenderizers.
- Softened water.
- Saccharin products.
- Foods with mold inhibitors.
- Foods with preservatives.
- Some medical drugs.
- Some toothpastes.
- If you have any kind of heart problem, see your physician. Prevention—living right and eating right ahead of time—is the best key to success.

Specific help for specific problems:

- ***Heart disease:*** Eat no **fried foods**. Avoid **vitamin D**. Instead, obtain essential fatty acids; the best is cold-pressed **flaxseed oil or wheat germ oil**. Also take **selenium**, **vitamin E**, 5-10 **alfalfa tablets** daily. And, if needed, supplementary **hydrochloric acid**. Take a 30-minute **walk** outside every day. Keep a 30-minute **oxygen tank** in your house, ready for use when you need it.
- ***Palpitations:*** Do not eat **MSG, caffeine, sugar, or processed foods**. Avoid **food allergens** (foods that bother you). Obtain **vitamins B_1, B_3, C, selenium, and potassium**.
- ***Cardiac arrhythmia:*** Avoid **food allergens** and **MSG**. Add **selenium, chromium, magnesium, potassium**, and **CoQ_{10}** to your diet. **Hypoglycemia** (chronic low blood sugar) can be a cause.
- ***Nervous heart:*** Causes can include **anemia** and **low stomach acid**. Obtain **B_1, B_{12}, and iron**.
- ***Angina:*** If you survive, take **calcium, magnesium, essential fatty acids, and extra vitamins and minerals**. **Exercise** for 30 minutes everyday. Reduce **vitamin D** intake from all sources (meat, fish, dairy products, etc.). Avoid **caffeine, sugar, and cigarette smoke**.
- ***Congestive heart failure:*** Causes can include **lung disease** and **high blood pressure**. Obtain **vitamin B_1 and selenium**.

Myocardial infarction: Rebuilding afterward (if you are still alive) should include **vitamin C** to bowel tolerance, **vitamin E, selenium**, vitamin A (in the form of **beta carotene**). Use supplementary **hydrochloric acid**.

Here is information about fats and oils:

Animal flesh contains fat. Do not eat animals. Doing so increases blood cholesterol. Some vegetable oils are also a problem: those that are **refined, heat-treated, and partly (or completely) hydrogenated oils**.

Heating the oil changes it from the *cis* form to the *trans* form (also called a trans-fat), which is abnormal and can cause heart diseases, just as animal fats do. Only use cold-pressed vegetable oils, and not too much of them.

Then there is the LDL and HDL story. It is also important, if you want to live longer. In order to better understand the following facts, also read the articles: *Lowering Triglycerides (434)* and *High Cholesterol (435)*. Much more information will be found there.

All kinds of fats (both the grease and oil forms) are carried in the blood in a protein-fat molecule, called a *lipoprotein*. There are two primary kinds: the *low-density lipoproteins (LDLs)*, which are large cholesterol-laden molecules, and the *high-density lipoproteins (HDLs)*, which are smaller molecules with more protein and less cholesterol and triglycerides.

High levels of LDLs in the blood increase the risk of coronary heart disease. But high levels of HDLs actually reduce the risk of heart disease. For this reason, the *cholesterol-to-HDL ratio* is very important. Physicians even use it to estimate how likely it is that you will have a heart attack. The HDLs get rid of excess cholesterol in your bloodstream! They carry cholesterol from the blood to the liver, so it can be converted into bile and eliminated from the body. Here are nutritional facts which have been found since the importance of HDLs was discovered:

How to make your blood vessels more youthful, so you can live longer:

- **Eat bran fiber.** It reduces blood cholesterol and triglycerides. It increases HDL and lowers LDL. It also helps prevent the recycling of bile from the bowel back to the liver. So bran fiber in your diet does three very important things.
- **Vitamin C** helps increase HDL levels and lower LDL levels. It also activates conversion of cholesterol into bile salts. Taking 1-2 grams a day can produce a 30% reduction in cholesterol levels (which are 400 or above). Vitamin C also lowers triglyceride levels.
- **Vitamin E** helps dissolve blood clots, dilate blood vessels, and conserve oxygen so the heart does not have to work as hard. Because of its antioxidant function, it also prevents fatty acids from becoming toxic.
- **Vitamin B complex** helps keep cholesterol from collecting as plaque in the blood vessels.
- **Flaxseed oil** (and to a lesser extent, wheat germ oil) is rich in Omega 3. It decreases platelet adhesion, reduces blood cholesterol, and increases HDLs.
- **Lecithin** is essential for utilizing fat and cholesterol in the body; and it significantly lowers blood cholesterol levels.
- **Brewer's yeast and chromium** reduce LDL levels and cause atherosclerotic plaques to recede.

• **Garlic** lowers blood cholesterol and reduces platelet adhesiveness, as well as lowering triglycerides and increasing HDLs. In addition, it also helps normalize blood pressure.

• **Alfalfa meal** (from ground seeds) contains *saponins*, which prevent bile-like substances from recirculating to the liver.

• **Soy protein** lowers blood cholesterol.

• It should be noted that *coronary bypass surgery* has failed to prevent second heart attacks or extend life. It is not the "cure" for coronary atherosclerosis and severe angina that it is said to be. Bypass operations are not the solution. They are only emergency repair jobs which do not remove the cause—which, unless properly corrected, will only return. It is a known fact that, unless changes are made in one's diet and way of life, the bypasses eventually clog up months or years later. $9 billion is spent each year on bypasses (300,000 each year, at a cost of $30,000 on each one).

• Fortunately, even the most advanced cases of heart disease can be helped by the discoveries provided by nutritional research.

• We will conclude this summary of ways to avoid heart attacks with this story: Dean Ornish, M.D., tells about genetically identical rabbits which were all fed the same diet; yet half of them had 60% fewer heart attacks. What was the difference? Half the rabbits were in upper cages and half in lower cages. The man who fed them all liked rabbits and would take time to reach in and pet the lower ones, the only ones he could reach.

—Also see Lowering Triglycerides (434), High Cholesterol (435); Hypertension (429), Stroke (432), Arteriosclerosis (427), and Atherosclerosis (427).

ENCOURAGEMENT—Today Jesus is in heaven preparing mansions for those who love Him; yes, more than mansions, it is a kingdom which is to be ours. But all who shall inherit these blessings must be partakers of the self-denial and self-sacrifice of Christ. Obey the Ten Commandments, and live to help and bless others. Psalm 126:5-6.

PERICARDITIS, ENDOCARDITIS

SYMPTOMS—The symptoms of endocarditis are often generalized and unrelated to heart damage. They may include fatigue, fever, night sweats, aching joints, or weight loss.

The symptoms of acute pericarditis develop over a few hours and last for about 7 days. They include pain in the center of the chest; this worsens when taking a deep breath and is relieved by sitting forward. Pain in the neck and shoulders. Fever. In the chronic stage, the heart may become unable to properly pump blood.

CAUSES—Infective endocarditis is an inflammation of the lining of the heart, particularly affecting the heart valves. It is caused by an infection.

Pericarditis is an inflammation of the pericardium, the double-layered membrane that envelops the heart.

Both problems are caused by the kind of factors described under Heart Trouble *(419-427)*.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR PERICARDITIS OR ENDOCARDITIS AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

TO COMBAT INFLAMMATION—Continuous **Ice Bag** over heart or **Cold Compress** over heart area at 60° F., changed every 15 minutes. **Rub chest** with dry flannel until skin is red.

TO ENERGIZE HEART AND MAINTAIN VITAL RESISTANCE—Cold Mitten Friction. **Cold Towel Rub** twice a day.

FEVER—Prolonged **Neutral Bath.** Neutral **Wet Sheet Pack.**

PAIN—**Fomentation** for 1-3 minutes every half hour. **Cold Compress,** changed every 15 minutes during the interval between.

MYOCARDITIS—Employ all the means recommended above, except avoid Ice Bag over the heart.

—Also see Heart Problems (419-427).

ENCOURAGEMENT—Talk of heavenly things. Talk of Jesus, His loveliness and glory, and of His undying love for you; and let your heart flow out in love and gratitude to Him, who died to save you.

CARDIOMYOPATHY
(Keshan Disease, Muscular Dystrophy of the Heart)

SYMPTOMS—In many cases of mild dilated cardiomyopathy, there are no symptoms. If they do occur, they usually develop over a number of years and may include fatigue, shortness of breath during exertion, palpitations (an irregular or abnormally rapid heartbeat), and swelling of the ankles. As the disorder progresses, the heart's pumping efficiency decreases, which worsens the symptoms.

CAUSES—The word means "heart muscle disease." This is a disease of the myocardium, which is the heart muscle itself. It is a damaged heart muscle, which leads to enlargement of the heart.

NATURAL REMEDIES

The World Health Organization recognizes that cardiomyopathy is a **selenium** deficiency disease.

J.D. Wallach, in his book, *Let's Play Doctor,* makes this statement:

"This is the type of heart disease that makes individuals a candidate for heart transplant . . It is typical that $1 per month in selenium supplement would prevent this disease and the need for a $250,000 procedure that carries a 20% mortality rate. This disease is also found in cystic fibrosis patients . . Veterinarians have eliminated this disease [cardiomyopathy] in animals with selenium injections and oral supplementa-

tion of diets."

ENCOURAGEMENT—Only Christ can satisfy the wants of the soul. If Christ is abiding in us, our hearts will be full of divine sympathy. We will do all we can to help and encourage others. Revelation 22:14.

CARDIAC ARRHYTHMIA

SYMPTOMS—Symptoms do not always develop; but, if they do, their onset is usually sudden and may include palpitations (irregular heartbeats). Other symptoms include light-headedness, sometimes leading to loss of consciousness, shortness of breath, pain in the chest or neck. Stroke and heart failure are possible complications.

CAUSES—These are abnormal rates in the rhythm of the heartbeat. In the more common palpitations, the heart occasionally seems to skip a beat or two. They are often minor and self-correcting. But cardiac arrhythmia is not. They generally do not normalize by themselves; and they can lead to a potentially fatal heart attack. Arrhythmia usually occur in people over 50. The following suggestions are for arrhythmia. But you might have a different type of heart problem.

NATURAL REMEDIES

• **Hawthorn** helps prevent heart problems by gently strengthening the heart muscle, improving blood circulation through the heart, and reducing the heart's need for oxygen. It also helps the heart circulate blood with less effort. It is best to take standardized extracts. If the extract is standardized to 18 percent OPCs, the recommended dosage is 240-480 mg once a day.

• **Coenzyme Q_{10}** is normally found in the body, where it helps manufacture energy. It can help stabilize the body's electrical system, thus helping to prevent arrhythmia. It is especially effective in preventing premature ventricular contractions (PVCs), which feel like skipped heartbeats. Those with this problem should take 120-240 mg daily.

• **Taurine** is an amino acid which can help stop your nerves from overstimulating your heart. This is necessary in order to control heart arrhythmia.

• **Magnesium** is the mineral which relaxes your heart. Too little magnesium jangles the electricity that controls muscles and nerves, possibly leading to arrhythmia. Taking enough can help keep the electricity stable and your heart calm. For mild arrhythmia, take 250 mg, 4 times daily, or 500 mg twice a day with food. Continue taking this for about 2 months; then lower the dose to 500-800 mg a day.

• **Angelica** contains at least 14 anti-arrhythmic compounds. You can blend it with raw vegetables, garlic, some water, and a little honey to improve the taste.

• **Astragalus** is an immune stimulant; and **Barberry** is an herbal antibiotic. Both are also heart tonics that help prevent and treat arrhythmia.

• **Motherwort** (*Leonurus cardiaca*), as its scientific name indicates, helps heart problems. The Chinese discovered that it slows a rapid heartbeat, improving cardiac activity. It also calms the nervous system.

• **Valerian** has been used for arrhythmia and palpitations as far back as Roman times. It also lowers blood pressure, increases blood flow to the heart, and improves its pumping action.

• Sometimes the problem is overstimulated adrenal glands. When you are stressed, these glands pump out hormones that can irritate and overstimulate your heart so that it races or flutters. Make fists of your hands; put your **fists** behind the small of your back (on either side of your spine), and then gently rub your hands up and down. Do this 2-3 minutes daily.

—Also see Heart Attack (419), Heart Problems (419), Arteriosclerosis (427), and Hypertension (429).

ENCOURAGEMENT—When Christ returns, at His Second Advent, the redeemed will shine forth in the glory of the Father and His Son. The angels of heaven, touching their golden harps, will welcome the King and those who are the trophies of His victory,—those who have been washed and made white in the blood of the Lamb. A song of triumph will peal forth, filling all heaven. Christ has conquered. He enters the heavenly courts accompanied by His redeemed ones, the witnesses that His mission of suffering and self-sacrifice has not been in vain.

ANGINA PECTORIS

SYMPTOMS—A pain in the chest, usually brought on by exertion and quickly relieved by rest. The pain varies from mild to severe. It usually starts during mild exertion and is relieved after a short rest. There is a dull, heavy, constricting sensation in the center of the chest; a discomfort spreads into the throat and down one or both arms, more often the left arm.

CAUSES—The pain is due to an inadequate supply of blood to the heart muscle. It is less common in women before the age of 60, because estrogen protects against it. The most common cause of angina is coronary artery disease, which is a narrowing of the arteries that supply the heart muscle. The originating cause is eating meat, fat, etc. *See Heart Problems (419) and Atherosclerosis (427).*

NATURAL REMEDIES

• Eat fresh **vegetables, fruit, whole grains, nuts, and legumes**.

• Eat more **fiber** to lower cholesterol and improve bowel function. **Garlic** lowers LDL cholesterol and raises HDL (the "good cholesterol").

• Each day, take **vitamin C** (500 mg), **E** (200 mg), and **beta-carotene** to reduce the incidence and severity of angina. Also take **choline** (in lecithin).

• Eliminate all **animal fats** to avoid saturated fat and cholesterol. Reduce blood cholesterol to below 180 mg per deciliter (mg / dL) of blood.

Refined **sugar** increases triglycerides (blood fat) that

cause platelet adhesiveness, thus increasing the frequency of angina attacks. Stop using **coffee** and **alcohol**, which interfere with calcium absorption. Stop all use of **nicotine**.

• Obtain mild but regular **exercise**. Walking is best. Begin with mild, stretching exercises; then walk, slowly at first. If angina pain occurs, stop and rest.

• Outstanding herbs include **hawthorn, angelica, ginger, garlic, bilberry, and purslane**.

ENCOURAGEMENT—Every action of ours in helping and encouraging others will be rewarded.

CONGESTIVE HEART FAILURE

SYMPTOMS—There is breathlessness, labored breathing after mild exertion. Also there is fatigue and accumulation of fluid in the lungs and/or the veins (primarily in the legs, ankles, and feet).

CAUSES—When you have a **heart attack**, part of the heart muscle is destroyed and the remainder tries to do the work. This is called congestive heart failure. Another cause is **high blood pressure**. **Lung disease** can intensify the problem.

In this chronic condition, the heart muscle is unable to pump blood as quickly as is needed. Too much exercise can be very dangerous to those with Congestive Heart Failure.

NATURAL REMEDIES

• The vitamin-like **coenzyme Q_{10}** stimulates the body to form ATP, a key chemical for producing energy in every cell. Take 30 mg 3 times daily. You may not feel the good effects for several months. However, do not stop taking it suddenly, lest your heart not be able to compensate for its loss.

• Because of Congestive Heart Failure, the cells of the body are not receiving enough oxygen. But this problem can partially be reduced by taking **carnitine** (500 mg 2-3 times daily), which is a natural substance made from two amino acids (lysine and methionine). Those who have Congestive Heart Failure tend to be low in carnitine.

• People with Congestive Heart Failure are often given drugs which deplete both magnesium and potassium. In those with Congestive Heart Failure, this depletion of magnesium and potassium often leads to heart arrhythmia. So take supplementary **magnesium** (300 mg per day). Eat thick, white potato peeling soup for **potassium**. Fruit and vegetables also contain it. (But be cautious: Some drugs given to treat Congestive Heart Failure actually cause a *retention* of potassium.) Those with kidney disease should not take extra magnesium.

• Those with Congestive Heart Failure have an inadequate flow of blood through the body. The amino acid, **arginine**, is used by the body to make nitric oxide, which increases blood flow. Arginine has been experimentally given to patients in doses of 5.6-12.6 g daily with good results.

• **Taurine** is an amino acid which helps the heart carry on its pumping action. Research has found that taurine (6 g daily) definitely helps those with Congestive Heart Failure. But if you have a tendency to any kind of herpes, do not take taurine.

• As discussed in the article on Heart Problems *(419)*, be sure to also take an extract of *Hawthorn*. This invaluable herb heals early-stage Congestive Heart Failure by increasing blood flow to the heart, increasing the strength of heart contractions, reducing resistance to blood flow in the extremities, and acting as an antioxidant. Take 80-300 mg, 2 times per day, or a tincture of 4-5 ml. 3 times daily.

• Also important are **vitamin B_1 and selenium**.

—Also see Heart Attack (419), Heart Problems (419), Arteriosclerosis (427), and Hypertension (429).

ENCOURAGEMENT—In view of so many encouraging promises in the Bible, how earnestly should we strive (by the enabling grace of Christ) to perfect a character that will enable us to be His obedient children and stand before the Son of God, when He returns in the clouds of heaven (at His Second Advent) for His people!

HEART PALPITATIONS

SYMPTOMS—Abnormally fast or irregular heartbeats.

CAUSES—Palpitations are most often caused by stimulants, such as **caffeine (in coffee, tea, and cola), nicotine**, and by **anxiety**. They may also occur as a side effect of medicinal **drugs** or because of a **heart disorder**. **Hyperthyroidism** or an overdose of a drug for hypothyroidism is a possibility.

NATURAL REMEDIES

• Use tea made from **wild cherry bark** or wild cherry syrup added to a tea, to help nervous palpitations of the heart. This tea can also be used for a spasmodic cough.

• **Lemon juice plus water** has sedative action and can help sedate nervous palpitations.

• Jethro Kloss, who cured himself of a weak heart, recommended the following herbs: Make a tea of **tansy** for heart palpitation (1 heaping tsp. to a cup boiling water, taken 3-4 cups daily). For a weak heart or irregular beat, mix 1 tsp. each of **black cohosh, valerian, skullcap, lobelia, and a pinch of cayenne**. Add 1 heaping tsp. to 1 cup boiling water and steep ½ hour. Drink 4 cups daily or take a swallow every 2 hours. For heart palpitation, take **lily of the valley**. Also good: **angelica, blue cohosh, borage, cayenne, goldenseal, wood**

betony, valerian, and vervain.

• Here is an herbal formula for a nervous heart: Mix equal parts **valerian root, lavender flowers, chamomile, and fennel.** Steep 2 tsp. in ½ cup boiling-hot water. Take 1-1½ cups a day, in mouthful doses.

—Also see Heart Attack (419), Heart Problems (419), Arteriosclerosis (427), and Hypertension (429).

ENCOURAGEMENT—The only hope of any man lies through Jesus Christ. We must prepare now for what is ahead. How thankful we can be that Jesus will provide us with all the help we need, to live good, clean lives and encourage and help all those around us.

CARDIOVASCULAR - 2 - CIRCULATORY

Also: Raynaud's Disease (284)

ARTERIOSCLEROSIS
(Hardening of the Arteries)
and
ATHEROSCLEROSIS
(Plaque Development and Hardening)

SYMPTOMS—Early warning symptoms are intermittent claudication *(530)*. These are pains in the legs and possibly feet, which leave upon resting. High blood pressure *(see Hypertension, 429)*, which produces the chest pains of angina *(425)*, and heart attack.

CAUSES—Arteriosclerosis and atherosclerosis are two separate, major diseases; yet they are here discussed together because the problems, effects, and solutions are so similar.

Arteriosclerosis is hardening of the walls of the arteries; atherosclerosis is the hardening of plaque on the walls, which causes the walls to harden. (The full explanation is somewhat more complicated.)

Hardened walls produce higher blood pressure; but plaque-hardened blood vessels, which narrow them, do it also. The end result of both is a heart attack.

The main difference between the two is that arteriosclerosis is primarily the hardened walls themselves (primarily produced by the plaque) and atherosclerosis is the thickening of that plaque in the arteries, so that the amount of space in which the blood flows keeps narrowing.

In arteriosclerosis, these deposits are primarily composed of calcium; in atherosclerosis, the deposits consist of fatty substances, primarily cholesterol (a blood protein). But, much of the time, an odd assortment of both, along with lipoproteins, fatty acids, and blood clump together, along with fibrous scar tissue.

Both conditions have essentially the same effect on circulation, both cause hardening of the artery walls, both cause high blood pressure, and both eventually lead to one or more of the same things: angina (chest pain following exertion), heart attack (the heart muscle can no longer bear the lack of blood supply to it), and stroke (when the blood supply to part of the brain is cut off). Death may or may not follow. The problem is that a clot of this plaque breaks loose, flows through the arteries, and gets stuck in a narrower artery. When this occurs in the heart muscle, angina and a heart attack may result; if in the brain, a stroke occurs.

To complicate the matter further, not only can arteriosclerosis and atherosclerosis cause high blood pressure, but high blood pressure intensifies them both. Therefore you should also read the article on *Hypertension (429)*.

Causes include **elevated cholesterol or triglyceride levels, eating high cholesterol foods (such as meat, eggs, whole milk, or milk products)**.

Other causes include **smoking, hypertension (high blood pressure), obesity, diabetes, emotional stress, lack of exercise, or a family history of the disease.** Advancing age increases the risk factor.

LOWER LIMB ATHEROSCLEROSIS

Atherosclerosis is the most common form of arterial disease in the U.S. and most frequently occurs in the lower limbs (which is called peripheral atherosclerosis). It is the primary cause of death over the age of 65. Over 50% of those between 65 and 70 will die of some form of this.

Here are the earliest symptoms: pain in the legs (usually in the calf, but sometimes in the feet or elsewhere in the legs); this increases when walking but stops as soon as one rests, is intermittent claudication *(530)*, an early warning of blood vessel hardening and/or plaque development in them. There may also be weakness, numbness, and a heavy feeling in the legs. This is a symptom of atherosclerosis in the limbs (peripheral atherosclerosis). There can also, but less often, be pain in the arms.

There is a home test you can do to help determine if this is beginning to occur: Test the pulse in your legs and foot. There are three places where this can be done: Apply light pressure on the *top* of the foot, the *inner hollow* of the ankle, and *in the hollow* behind the knee. If you feel no pulse, then the artery may be narrowing.

Autopsies on U.S. soldiers killed in World War II showed little or no signs of arteriosclerosis; but autopsies on those young men killed in the Korea and Vietnam wars revealed that 77% had some form of it.

NATURAL REMEDIES

DIET

• Drink enough **liquids**! Drink **distilled water**.

• A strict **vegetarian diet** (without milk and eggs) is a good way to avoid artery problems. **Broccoli, Brussels sprouts, carrots, pumpkin, sweet potatoes, and cantaloupe** are considered especially beneficial for healthy arteries. All fresh **vegetable and fruit juices**.

• Eat **high-fiber foods** that are **low in fat and cholesterol**. Primarily eat **fruits, vegetables, and grains**.

Dark green leafy vegetables are important. Wheat bran, and other particulate fibers are not as effective as those in fruits, vegetables, and legumes.

• Eat foods rich in **vitamin E**. This includes **nuts, seeds, and whole grains**.

• Only use **cold-pressed vegetable oils** (soy, corn, wheat germ, flaxseed). Never heat these oils; place them on your food at the table.

• **Garlic** eaten with cholesterol foods tends to reduce the likelihood that cholesterol will clog the arteries. It lowers cholesterol, raises HDL, and prevents blood from forming clots. Many research studies support this.

• **Eggplant** tends to lower cholesterol levels.

• **Chromium** (found in brewer's yeast, whole grains, and supplements) added to the diet lowers cholesterol.

• Vitamin supplements include vitamin A in the form of **beta-carotene** (15,000-50,000 IU), **B complex** tablet (including B_6, B_{12}, **niacin, and folic acid**), **vitamin C** (500-5,000 mg), **bioflavonoids** (300-600 mg), **vitamin E** (400 IU).

• In addition to its antioxidant capability, **vitamin E** helps clear arterial scars, helps dissolve preexisting blood clots, and reduces (by 80%) the ability of blood platelets to stick to artery wall plaque.

• **B vitamins** help metabolize fat. **Niacin** dilates small arteries and lowers cholesterol. **Vitamin C and bioflavonoids** protect the vessel walls. **Selenium** helps C and E protect against arterial plaque. **Lecithin** emulsifies fats in the blood so they can be used. It breaks up existing plaques.

• Other supplements you will need are **calcium** (500-1,500 mg), **magnesium** (300-750 mg), **selenium** (100-200 mcg), **zinc** (10-30 mg), **lecithin** (1-2 Tbsp.). All are important, along with the vitamins listed above.

• **Alfalfa** is rich in saponins, which are able to bind to cholesterol in the bowel and prevent absorption.

AVOID

• Avoid **refined sugar**. It has been shown to increase serum cholesterol levels, leading to atherosclerosis.

• Do not eat **animal protein**; there is a definite connection between eating meat and cardiovascular disease.

• Do not eat **processed, junk, dairy, white flour, spiced, or fried foods.** Avoid **pies, ice cream, salt, egg yolks, sugar, coffee, colas, nicotine, and alcohol**.

• If you know you are moving toward artery problems, eat no **free oils**.

• Eat no **animal fat, hydrogenated oils, trans-fat oils, butter, or margarine**. Both **peanut oil** and **coconut oil** increase atherosclerosis.

• Research at the University of Wisconsin disclosed that **skim milk** did not lower blood cholesterol.

• **Glucose intolerance** can produce a 100% increased risk of atherosclerosis. Keep your blood sugar levels normal. Do not binge on **sweets**, etc.

• Too much **vitamin D** can elevate blood cholesterol.

• Reduce **stress** and avoid situations causing it.

• **Overweight** people should reduce. Even 20% or more above ideal weight carries a significantly increased risk of atherosclerosis. What is your ideal weight? Assume 100 pounds for the first five feet; add to this five pounds for each inch over that, for women; add seven pounds per inch over that, for men.

• Do not smoke or use **nicotine** in any other form. Avoid secondhand smoke.

• Do not take **shark cartilage**. It may inhibit production of new blood vessels needed to increase blood circulation.

• Eliminate all environmental sources of **metal poisoning (such as aluminum or copper cooking utensils, copper or lead plumbing, lead-glazed ceramics, contaminated water**, etc.). Toxic metals are known to be deposited, among other places, on artery walls.

• **X-rays** make premature arteriosclerosis more likely.

• Do not eat **big evening meals**. Best: Only eat plain fruit and plain bread for supper; and do this several hours before bedtime.

• Do not wear **constrictive clothing** (belts, garters, girdles, tight hosiery, etc.)

• Avoid **constipation.** This weakens the liver and kidneys, and sludges the blood. The Chinese treat stroke by treating constipation.

• All **alcohol** not immediately used for energy is changed into saturated fat, as are excess amounts of **sugar** and **refined carbohydrates**. So avoid them.

• Do not drink **caffeine**-containing beverages.

MORE INFORMATION

• Get regular moderate **exercise**. Walking every day is the best. Build up slowly; but keep at it. Do not do strenuous exercise until the cholesterol is lowered.

• Keep the **extremities warm**, to maintain good circulation in them.

• Periodically **check your blood pressure**. Buy a blood pressure set so it can be done in your own home.

• Chelation therapy *(596)* can greatly help reduce atherosclerosis and other circulatory problems.

HERBS

• Useful herbs include **Asian ginseng, bilberry, butcher's broom, fenugreek, fo-ti, garlic, ginger, hawthorn, psyllium, and turmeric**.

Hawthorn (80-200 mg daily) contains flavonoids that prevent blood vessels from constricting, thereby preventing angina pain. It lowers cholesterol and helps to reverse atherosclerosis.

• **Bilberry** reduces platelet clumping. **Bromelain** (in pineapple) inhibits platelet aggregation, reduces angina, and lowers constriction of vessels. **Curcumin** (the yellow pigment in **turmeric**) reduces cholesterol levels and inhibits clumping. **Fenugreek** lowers blood lipids. Ginger inhibits clumping.

• Here is an herbal formula for artheriosclerosis: Mix 4 parts each of **European mistletoe** and **hawthorn** with 1 part each of **valerian root** and **shave grass**. Soak 1 Tbsp. of the mixture in ½ cup cold water for 8 hours. Drink ½ cup daily, spaced out in 3-4 doses.

—Also see Lowering Triglycerides (434), High Cholesterol (435), Stroke (434), Heart Problems (419),

Heart Attack (419), Arteriosclerosis (427), and Hypertension (429).

ENCOURAGEMENT—He whose life consists in ever receiving and never giving soon loses the blessings he has. We must constantly seek to help others. Only in this way can God bless us. Jeremiah 7:23.

HYPOTENSION
(Low Blood Pressure)

SYMPTOMS—There are generally few symptoms which will tend to alert you to the problem. There may be headache, shortness of breath, dizziness, inability to concentrate, or digestive disturbances. There can be low energy and dizzy feelings when you stand up fast from a lying down or sitting position, fainting, blurred vision, palpitations, inability to solve simple problems, and slurring of speech.

CAUSES—The pressure at which the blood travels through the arteries is lower than normal, which means the blood is not circulating through the body as efficiently as it should.

This is one "disease" which many people are thankful to have! High blood pressure can be a killer; low blood pressure is generally just something to live with. Blood pressure readings below the average range of 110/70 to 140/90 are normal for some healthy people and are often considered a blessing.

One researcher who investigated the strange death of Pope John Paul I (who had low blood pressure and few other physical problems) asked 30 physicians and specialists whether low blood pressure would shorten life. Each one said it would tend to lengthen, rather than shorten, life expectancy.

For this reason, you will find that medical guides say relatively little about hypotension. But the risk of heart attack increases if *high* blood pressure is forced down by drugs to a diastolic reading (the lower figure) of 85 or less.

However, low blood pressure can become a problem when blood flow to the brain is reduced to the extent that dizziness or fainting spells are experienced.

In some instances, low blood pressure is due to an **impoverished diet**, the existence of some **chronic wasting disease**, or some other condition that needs treatment on its own account. Also it can be a symptom of a different problem (such as hypothyroidism, *549*).

Hypotension can be caused by **prescribed drugs, kidney disease, anemia, low blood sugar, food allergies, dehydration, adrenal exhaustion, malnutrition, underactive thyroid, diabetic nerve damage that disrupts blood pressure-controlling reflexes, or a debilitating disease**. Continuing to take **diuretics** (to increase urination) when no longer needed can initiate low blood pressure symptoms.

Acute hypotension (sudden drop in blood pressure) results from injuries with **heavy blood loss** or physiological **shock**, such as a **heart attack**.

Hypotension is usually diagnosed in this way: Blood pressure is checked while lying down. Then, after standing 1 minute, it is checked again—and a 20-point drop in the systolic pressure (the upper figure) is registered.

NATURAL REMEDIES

• Treatment, if needed, should be aimed at locating and eliminating the problem of the symptom of hypotension.

• Drink one 6-oz. glass of **beet juice** and eat one serving of beets, 3 times a week to enliven lagging blood pressure. Other favorites for raising blood pressure include **dandelion greens, dandelion tea, ginger root,** or **skullcap tea** with a pinch of **cayenne**.

• Take **vitamin C** (1,000-3,000 mg), to bowel tolerance, and eight glasses of **water** each day. Also **vitamin B_{12}**. **Vitamin E** is important (100 IU, gradually increased to 600 IU).

• Eat **garlic**; it tends to normalize blood pressure. Raw garlic is a good friend, whether you have high or low blood pressure.

• **Ginger** tea helps those with low blood pressure. **Ginseng** helps normalize blood pressure, both high and low. **Sage** invigorates and stimulates suprarenal glands. **Rosemary** is a general invigorator. **Thyme** invigorates and helps recovery from physical exhaustion. **Winter savory** is a nervous system invigorator. **Hawthorn** normalizes blood pressure. **Lily of the valley** is a heart invigorator. **Camphor tree** stimulates respiratory and cardiac activity nervous centers.

• Obtain adequate **rest** at night.

• You may want to do the morning **temperature test** to determine whether you are hypothyroid. *See Hypothyroidism (549).*

ENCOURAGEMENT—Those who are filled with the love of Christ will not seek to hide their connection with Him. They will openly rejoice in all He has done and tell others how He can answer their needs also. Jeremiah 24:7.

HYPERTENSION
(High Blood Pressure)

SYMPTOMS—There may be no symptoms; but, if they occur, they may include headache, difficulty in breathing, blurred vision, rapid pulse, or a feeling of dizziness.

Overweight, a ruddy complexion, and apparently robust health may be the only outward manifestations in a man 50 or 60, who may have systolic pressure as high as 200 or more.

Hypertension is called the "silent killer" because it rarely reveals early symptoms.

CAUSES—High blood pressure is just that: The pressure of blood flow through the arteries is higher than it should be; and that pressure consistently re-

mains higher.

A blood pressure gauge (sphygmomanometer) registers two readings: The first and higher one is the *systolic*; the second and lower one is the *diastolic*.

The *diastolic* pressure occurs just before the heart beats, and is less important for determining blood pressure. But the *systolic* pressure reveals the pressure built up as the heart pumps blood out of the heart into the aorta (and thence through the arteries). High systolic pressure indicates that the cell walls are hardened and/or plaques are forming in the arteries, which are narrowing the passageways.

Average normal systolic blood pressure in an adult varies between 120 and 150 millimeters of mercury, and tends to increase with age. The arteries of older people tend to harden and thicken with age; and this produces the higher readings in later life.

The age, in relation to the figures, tells a lot: Systolic readings of 140-150 at 55 to 70 years of age need not be considered high; but, occurring in a man of 30, it points to a definite problem which needs attention.

Normal blood pressure readings for adults vary from 110/70 to 140/90 while readings of 140/90 to 160/90 or 160/95 indicate borderline hypertension. Any reading over 180/115 is far too elevated.

The hardening and clogging produce changes in the arteries, resulting in hypertension that is caused by **aging, emotional stress, food, overeating, and heredity. Tobacco** is another cause of hypertension, as is the taking of **oral contraceptives**. Drinking **coffee or tea, drug abuse, and high sodium intake** are other causes.

Hypertension can result in coronary artery disease, enlargement of the heart, or strokes. The acute infections (such as tonsillitis, scarlet fever, and typhoid fever) or focal infections from tonsils or teeth sometimes lead to Bright's disease (a kidney disease), which is accompanied by high blood pressure. Sudden attacks of convulsions in pregnant women (eclampsia), and other kidney diseases of pregnancy, usually cause high blood pressure.

Primary hypertension (about 90% of the cases) is not caused by other diseases. Diet is an extremely important factor in producing high blood pressure. Sixty million Americans have this disease. At any one time, about 10% of the people in America have primary hypertension. It affects over half of all people in the U.S. over 65. African-Americans have it over a third more often than whites; and those 18-44 have it 18 times more frequently than whites. Women have hypertension less often than men until menopause is over; then, soon after, they have it as often.

Heavy snorers are more likely to have high blood pressure than silent sleepers.

Julian Whitaker, M.D. (Newport Beach, CA), says, "Volumes of scientific research show that dietary changes can eliminate high blood pressure in most patients."

NATURAL REMEDIES

DIET

• Only drink **distilled water**. Another quote from Dr. Whitaker: "Drink 15 glasses of water a day. Almost all the blood pressure medications mimic the effects of increased water intake." They usually do that by thinning the blood. Drink water and it will do it naturally.

• Eat a **high-fiber diet of vegetables, fruits, nuts, and whole grains**. Eat **oat bran**; it appears to be the very best type for the purposes you have in mind. For oil, take 2 tablespoons **flaxseed oil** daily.

• Eat a diet rich in **potassium** (mostly fresh fruits and vegetables) because it helps the body get rid of excess sodium. Eat potato peeling soup (the potassium is richest just under the peeling of the white potato). Only eat **unsalted natural foods**.

• Raw **Garlic** is a vasodilator and normalizes blood pressure, whether it be too high or too low. If you take a commercial garlic preparation, make sure it has a dosage equivalent to 4,000 mg of fresh garlic.

• Include supplemental **calcium** in your diet.

• **Grapeseed extract** contains *oligomeric proanthocyanidins* (OPCs) and tends to lower high blood pressure, which can cause heart disease.

• **Tomatoes** contain the compound gamma-amino butyric acid (GABA), which reduces blood pressure and helps strengthen the heart muscle. There are a number of other vegetables (including **garlic, onions, and celery**) which also contain GABA. (The herb, **valerian**, contains *valerenic acid* which inhibits an enzyme that destroys GABA in the body. So also drink this herb.)

• Eating 4 stalks of **celery** has been shown to lower blood pressure measurably.

• **Broccoli** has 6 chemicals that reduce blood pressure. **Carrots** contain 8 compounds that lower it.

• Antioxidants help prevent artery-clogging plaque from being deposited on coronary artery walls. Foods with it include **asparagus, broccoli, cabbage, cauliflower, potatoes, tomatoes, avocados, oranges, grapefruit, and peaches**. The National Research Council urges Americans to "strive for five"; that is, get at least five servings of fruits and vegetables each day. Many nutritionists say eight or nine servings is even better. (Only 10% of Americans get even five.)

• **Apple pectin** tends to lower blood pressure.

NUTRIENTS

• Antioxidant-rich vitamins include **C, E, folic acid, and the carotenoids**. Many studies have shown that, as consumption of these nutrients increases, risk of heart attack falls by up to 40% (and cancer risk drops 50%).

• **Vitamin C with bioflavonoids** (1,000-5,000 mg) to maintain the health of blood vessels and improve the potassium ratio by helping to excrete sodium.

• **Vitamin E** (gradually increase monthly to 400 IU)

to decrease the need for oxygen, thus improving heart function.

• **Lecithin** is rich in the B vitamins choline and inositol, which decrease blood pressure, by dilating blood vessels and preventing fatty deposits in the arteries.

• Too little **vitamin D** may contribute to high blood pressure. A 10-year study of patents 40-60 years of age showed a connection between low blood levels of the vitamin and higher blood pressures. Each day take 400 IU.

• **Coenzyme Q_{10}** is frequently deficient in those with hypertension. When they take supplements of CoQ_{10} (50 mg twice a day), blood pressure goes down significantly.

• **Taurine**, an amino acid, has been used to lower blood pressure (at 6 g per day).

AVOID

• **Habitual overeating**, even of good food, will lead to hypertension. A person does not tend to overeat on healthfully prepared natural foods.

• **Excessive protein food, sweets, rich pastry, and desserts** must be omitted; but the reduction in quantity of all foods is especially important.

• Do not use **salt**! Stopping it is essential for lowering blood pressure. Read the labels. Many foods contain **sodium**. Look for "salt," "sodium," "soda," or "Na" on the label. Also avoid **MSG** (monosodium glutamate), **baking soda, saccharin, soy sauce, diet soft drinks, preservatives, meat tenderizers, and softened water**. Excess sodium causes fluid retention, which exerts pressure on blood vessel walls and thus increases hypertension.

• Do not eat **meat**; and do not eat **canned vegetables**. Eliminate all **dairy products**; for they are high in sodium.

• Do not eat any **animal fat, grease, unsaturated fat, butter, margarine**, or any product containing them. Avoiding all of them will also lower hypertension.

• Do not eat **chocolate, alcohol, avocados, aged cheeses, or yogurt**.

• Avoid more than 400 units of **vitamin D** daily. Do not take supplements containing the amino acids **tyrosine** or **phenylalanine**.

• Do not take **antihistamines**.

• **No late meals**. Do not eat later than several hours before bedtime.

• **Stress, fear, anger, and pain** increase blood pressure. **Exercise** helps reduce the effects of stress.

• Noise raises blood pressure. Eliminate loud and sudden noises.

• Smoking is dangerous. Chemicals in **tobacco** can tighten your arteries, raising your pressure; it can also damage your lungs and other organs.

• Do a **pulse test** in order to ascertain offending foods you are allergic to *(see Pulse Test, 575)*.

HERBS

• **Hawthorn** extract can dilate (widen) blood vessels, especially the coronary arteries. It has been used as a heart tonic for centuries. Make a tea from 1 tsp. of the dried hawthorn herb, per cup of boiling water, and drink up to 2 cups daily.

• Research studies also show that **kudzu** contains *puerarin*, which decreases blood pressure 15% in lab animals and in humans. Puerarin has 100 times the antioxidant activity of vitamin E, and helps prevent heart disease and cancer.

• **Saffron** contains *crocetin*, which lowers blood pressure. Make a tea of it or use it in your cooking.

• **Fennel** contains 10 compounds that lower blood pressure. **Oregano** has 7; **basil** and **tarrago** have 6.

• To reduce blood pressure, make a tea from either the seed or herb of **yellow dock** and drink it.

• Research findings reveal that **black cohosh** tends to lower blood pressure. **Cayenne** also lowers it.

• Dozens of studies, especially in Germany and Russia, have found that the major constituents of **valerian root**, the *valepotriates*, is the cause of its lowering of blood pressure. Unlike many other herbs, valerian root has no side effects, even at rather high doses.

• Here is a formula for high blood pressure: Mix 2 parts each of **chamomile and peppermint**. Combine with 1 part each of **fennel, anise, caraway, and milfoil**. Steep 1 tsp. in ½ cup boiling-hot water. Take 1-1½ cups daily, in mouthful doses.

Dr. Shook was a famous Canadian herbalist. Here is his high blood pressure formula: Mix 15 tsp. **buckthorn** and 6 tsp. **Indian senna fruit** with 1½ tsp. each of **black cohosh, poke root, cassia bark, Indian senna fruit, European goldenrod, and sassafras bark**. Use 1 tsp. per cup of boiling hot water, simmer 2-3 minutes, then steep 10 minutes. Strain, sweeten to taste with honey, cool, bottle, and leave in a cool place. Drink 1 cup 3 times daily, before or after meals.

OTHER HELPS

• You urgently need daily **outdoor exercise**. (Those who maintain their physical fitness are 34% less likely to develop hypertension.)

• Obtain sufficient **rest** at night.

• **Check your blood pressure** regularly, especially if you have a blood pressure problem or are pregnant.

• Keep your **weight** down! Loss of weight lowers blood pressure. If you are overweight and have high blood pressure, you would do well to fast one or two days a week.

IN ADVANCED CASES

When the situation is critical, special care must be given to produce successful recovery. **Adequate rest**, both physical and mental, is needed. Even the visits of friends and relatives may have to be restricted or prohibited for a time.

• Gradually start **mild exercise**. Walk outdoors and gradually (slowly!) build up the amount of time spent in outdoor walking.

• All blood pressure **medications** tend to have negative effects. **Moderate exercise, rest, sleep, and proper diet** will provide better help than drugging yourself.

• No vigorous or tonic hydrotherapy, or even mas-

sage, should be used. The **neutral bath** and complete bed rest are needed.

• One recommended program is **fruit and brown rice**, alone, for 1-2 weeks.

—Also see Lowering Triglycerides (434), High Cholesterol (435), Hypertension (429), Stroke (below), and Heart Problems (419).

ENCOURAGEMENT—God can help you overcome the sins which so easily beset you. He can give you enabling grace to obey His Ten Commandments and remain true to Him, in spite of the compromise and wickedness in our world. Jeremiah 3:12, 22.

FACTS ABOUT BLOOD PRESSURE

Because it is so important and affects so many people adversely, here are several facts about blood pressure which you should be aware of:

Undetected and uncontrolled hypertension (high blood pressure) can lead to heart attacks *(419)*, heart failure *(419)*, strokes *(432)*, and renal (kidney) failure *(397)*. Most individuals with hypertension do not have symptoms indicating they have the problem. It is a blood pressure check that reveals the difficulty and its extent. Early recognition and management are essential in preventing permanent damage, especially to the brain, eye, heart, or kidney.

There is a direct correlation between an increase in blood pressure and the rate at which arteriosclerosis *(427)* and atherosclerosis *(427)* develop.

A blood pressure reading involves the obtaining of two numbers. The first is the systolic (the systolic arterial blood pressure) and is always the higher number. This is the pressure existing in the large arteries at the height of the pulse wave. It is also called the systolic intra-arterial pressure.

Systolic pressure is the highest point caused by the contraction of the heart (generally 120 to 145 mm [millimeters of mercury]).

The second is the diastolic, which reveals the lowest point that the arterial pressure drops between beats. Diastolic pressure is the lowest point between beats (60 to 90 mm average in adults).

Blood pressure, which is the amount of pressure exerted by the blood on vessel walls, reaches its highest values in the left ventricle during systolic. It is successively lower in the left arteries, capillaries, and veins. The systolic arterial blood pressure normally rises during activity, or excitement, and then falls during sleep.

Normal blood pressure would be something like this: It should show a high systolic pressure of about 145 mm, with less for women. Normal diastolic pressure would be 60 mm to 90 mm.

At the age of 20, normal diastolic would be 120 mm, with ½ mm for each year after that age; this would give 135 mm as normal systolic pressure for a man of about 50.

With exceptions keyed to age differences, in general, the following conditions are considered abnormal: a systolic pressure persistently above 150 and a diastolic pressure persistently above 100.

Blood pressure is lower in childhood and in women. It is higher in men, during stress, and with advancing age.

A blood pressure reading of 160 mm systolic is generally thought to be the beginning of the high blood pressure. It may run well-above 200—or even as high as 250. Persistent high blood pressure can result in heart failure.

Hypertension is one of the most prevalent chronic physical problems receiving treatment in the Western world. People between 30 and 70 have it the most; and blacks have it more than whites.

All of the following are considered to have a part in causing high blood pressure: Overweight. Birth control pills. Extrogen supplements. Medications with sodium-retaining properties. Eating animal grease or saturated oils. Too much salt (table salt) in the diet. The use of tobacco. Lack of physical activity. Inadequate rest. Caffeine intake. Stress and tension. Genetic factors. Nitrites, nitrates, cadmium, or copper in drinking water. "Soft" water and chlorinated water tend to raise blood pressure.

ENCOURAGEMENT—In order to gain the victory over every besetment of the enemy, we must lay hold on a power that is out of and beyond ourselves. We must maintain a constant, living connection with Christ, who has power to give victory to every soul that will maintain an attitude of faith and humility.

STROKE
(Apoplexy)

SYMPTOMS—Light headedness, fainting, stumbling, blurring of vision, slurred or loss of speech or memory, numbness or paralysis of part of the body, difficulty swallowing, a coma for short or long periods. Symptoms may take minutes, hours, or days to develop.

CAUSES—A stroke is not a heart attack, but a brain attack. An artery to the brain is obstructed or small blood vessels inside the brain burst. Only heart disease and cancer kill more Americans than stroke. The incidence rises steeply with age and is higher in men than in women.

Strokes are caused by atherosclerosis (cholesterol plaques clogging the arteries of the neck and brain) or high blood pressure, which causes blood vessels in the brain to burst. There are four possible patterns which can result in a stroke:

An *embolism* is a clot that breaks loose and travels on up toward the brain, where the clot gets stuck in a smaller artery leading to the brain. This briefly cuts off blood flow to a portion of the brain.

A *thrombus* is a clot inside the brain which blocks

the flow of blood to the brain.

An *aneurysm* is a portion of an artery that balloons outward. Filled with blood, this weak spot bursts.

A *hemorrhage* is a damaged artery within the brain which bursts.

A tumor: Sometimes a tumor, not a clot, is blocking an artery supplying the brain.

Whatever the cause, the result is local brain tissue death from lack of oxygen and food. Of all strokes, 40%-50% are caused by a thrombus, 30%-35% by an embolus, and 20%-25% by a rupture of a blood vessel.

If the damaged area is small enough, the brain will reroute the affected brain functions to other areas of the brain, as a period of relearning and compensation occurs. Surgery will be required for existing aneurysms.

About a third of all strokes are small or tiny strokes (transient ischemic attacks) which generally result in a full recovery within 24 hours. Another third cause weakness and paralysis (hemiplegia). The final third are fatal. Of the 4 million stroke survivors in the U.S., many suffer from speech problems, paralysis, and diminished mental capacity. Second strokes are very common. The inactivity following a stroke might lead to osteoporosis, a loss of calcium from the bones.

NATURAL REMEDIES

A STROKE OCCURS

Call 911 or have someone take you to the nearest hospital emergency room, if you experience the following symptoms: numbness or weakness on one side of your body (face, arm, or leg), vision problems, dizziness or loss of balance, confusion or trouble speaking, severe headaches that come on for no apparent reason.

Assuming you are nowhere near a physician or hospital, here are three of Dr. Christopher's herbal treatments for stroke:

• Place ½ tsp. cayenne powder and ½ tsp. mustard powder in hot bathwater. Let the person soak in bath water as hot as possible, until he sweats profusely. Watch him so that he does not faint and his head slips down into the water.

• Mix 1 oz. each of fluid extract of black cohosh and wood betony, and 1 tsp. cayenne tincture. Give 1 teaspoon every 30 minutes, until patient improves; then continue every 1-2 hours as his condition warrants.

• Give him a footbath in hot water with mustard and cayenne. Ring out a piece of flannel soaked in hot water, with mustard and cayenne. Wrap this around a hot-water bottle and place it on his feet. To help equalize his circulation and remove pressure from the brain, give him an enema of the following: ¼ tsp. each of tinctures of lobelia, skullcap, and cayenne in ¾ pint warm water. If the enema does not evacuate the bowel, repeat it. He should perspire freely.

PREVENTION

• The best way to prevent a stroke is to **lower blood pressure** and fat intake in the diet.

• **Alpha-linolenic acid** is one of the group of omega-3 fatty acids. It helps to lower the risk of strokes in middle-aged men who are at high risk for cardiovascular disease. It does this by lessening the likelihood of clot formation. Walnuts and soybeans are sources; but the best is **flaxseed oil**. Total fat intake should be 30% of calories or less.

• **Bromelain** (a digestive enzyme in pineapple) can help dissolve a blood clot, preventing a second stroke. Starting no sooner than one day after the stroke, before meals take 1,500 mg 3 times a day. (If taken sooner, it could cause mild bleeding in the brain.)

• **Ginkgo** can help you recover from a stroke and prevent a second one by improving blood flow to the brain. Take 180-240 mg daily of a standardized 24% extract of the herb.

• By helping to open and repair arteries and strengthening the heart, daily amounts of certain nutrients help reduce the probability of a second stroke: **Vitamin C** (3,000 mg), **vitamin E** (400-600 IU), **Omega-3** (1 Tbsp. flaxseed oil). **Coenzyme Q_{10}** (30-100 mg).

• So many toxins flow into the bloodstream when the bowel is constipated, that Chinese medical practitioners prevent strokes and also treat them by eliminating **constipation** (see *Constipation, 367, 723*).

• Aneurysms are often caused by **copper** deficiency which results in weakened elastic fibers. Once the damage occurs, supplementation with copper cannot repair it; but the copper (2-4 mg/day) can help prevent aneurysms from occurring.

• **Oxygen** is powerful. Breathe deeply as much and as often as you can. An alternative is a hyperbaric oxygen chamber, in which the atmospheric pressure is artificially raised and you are breathing pure oxygen. This can help with stroke recovery. There are areas of the brain which are not dead, but only sleeping. The oxygen can awaken them and increase the speed of repair.

• The varied causes and suggested treatments of clots, artery problems, high blood pressure, and related problems resulting in strokes are explained in some detail in the following articles: Lowering *Triglycerides (434), High Cholesterol (435), Hypertension (429), Arteriosclerosis (427), Atherosclerosis (427),* and *Heart Problems (419).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR STROKE AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DURING ATTACK—Rest, with head and shoulders raised, **Cold Compress** to head, Tepid **Enema**, warm extremities by Hot-Water Bottles or **Hot Pack. Ice Collar**.

AFTER ATTACK—Cold Mitten Friction twice daily, well-protected **Hot Abdominal Pack** night and day, carefully graduated **Cold Baths**, prolonged **Neutral Bath, Wet Sheet Pack**. Later, carefully begin graduated **exercises**, massage, and Cold or **Alternate Douche** to affected muscles.

ENCOURAGEMENT—Be faithful, and God will give you a crown of life. Study the Bible, obey it, and do all in your power to be an encouragement and help to others. 2 Corinthians 6:16.

THROMBOSIS

SYMPTOMS—Symptoms vary, depending on which blood vessel is blocked. If blockage affects blood supply to the legs, symptoms may develop within a few hours and may be more severe if there is already a chronic reduction of blood to this region. Symptoms include pain in the legs (even at rest), pale and cold feet.

If the arteries supplying the intestines are affected, symptoms may include severe abdominal pain, vomiting, fever.

CAUSES—Obstruction of blood flow in a vessel with a blockage that has formed in that vessel or has traveled from elsewhere in the body.

Risk factors are primarily smoking, a high-fat diet, lack of exercise, and excess weight. Thrombosis is more likely to occur when there is an increase in the natural tendency of the blood to clot. Oral contraceptives can increase that tendency.

This can be a potentially fatal condition. Left untreated, the reduction in blood supply may eventually result in tissue death and may be life-threatening. The affected area will change color over several days, eventually becoming black.

NATURAL REMEDIES

Immediately go to the hospital.

• Certain herbs enhance blood circulation and make it more fluid, thus exerting a possible preventive action on this disorder: **garlic, mistletoe, lemon tree, sesame, linden.**

• Herbs and remedies which lower cholesterol levels are also useful in the prevention of thrombosis. *See High Cholesterol (435).*

—For much more, see Heart Attack (419), Heart Problems (419), Arteriosclerosis (427), and Hypertension (429).

ENCOURAGEMENT—As those who hope to receive the overcomer's reward, we must press forward in the Christian warfare, though at every advance we meet with opposition. As overcomers, we are to reign with Christ in the heavenly courts, and we are to overcome through the blood of the Lamb and the word of our testimony. "Him that overcometh will I make a pillar in the temple of my God."

LOWERING TRIGLYCERIDES

PROBLEMS—The two major sources of fat in your bloodstream are cholesterol *(435)* and triglycerides. Both are necessary. Cholesterol helps build strong cells; and triglycerides provide energy.

But if either is too high, problems develop.

High cholesterol levels clog arteries. High triglycerides also cause vascular disease, if they are associated with low levels of HDL cholesterol (the good cholesterol). You then have fat particles in your blood which can ultimately be bad for your heart. The condition is called hypertriglyceridemia.

Triglycerides (TGs) are composed of three fatty chains linked together. People with **diabetes** *(524)* often have elevated TG levels. Successfully dealing with diabetes will often reduce TGs. The second primary cause of high TGs is drinking **alcohol**. **Sugar** also increases them. **Smoking or chewing tobacco** is another significant cause. **Obesity** also causes it.

NATURAL REMEDIES

You can control your triglyceride level; and you want to keep it below 150. Here are several ways to do it:

DIET

• Reduce **the amount of fat** in the food you eat each day. Reduce total fat intake to less than 30% of daily calories; but, even better, reduce it to 20%. Reduce saturated fats to 10%. This can only be effectively done when you stop eating meat and dairy products.

• Eat a lot of **complex carbohydrates**. Racial groups doing this do not have a triglyceride problem. Cook rice, beans, and other grains **without including fat** in the cooking or the serving.

• Do not eat **candy, sweets, and sugar**. Eating such simple carbohydrates in the diet is a significant factor in raising the triglyceride levels very high.

• Include **fiber** in the diet. A low fiber, high sweet diet is even worse than high sweets alone. Water-soluble fibers, such as *pectin* in **fruit** and *beta-glucan* in **oats,** are especially helpful in lowering triglycerides. **Psyllium seed** also lowers triglycerides.

• **Omega-3** fatty acid (richest in raw **flaxseed oil**) lowers triglycerides. Take 3,000 mg per day. Do not take **cod liver oil**; for it contains too much vitamins A and D.

• Taking **garlic** also lowers triglycerides. Taken over a 1-4 month period, garlic can reduce them by 8%-27%. Garlic tablets, standardized for *allicin* content, can be taken in the amount of 900 mg daily (providing 5,000 mcg allicin). **Carnitine** is another supplement which has lowered triglycerides.

• Go on a **brown rice diet** for a couple days. In 1944, Dr. Walter Kempner discovered that a rice diet would dramatically lower triglycerides. This is a diet of **rice and fruit alone**, and no other food, for 2-3 days or as long as you can stand to remain on it. The diet is not appetizing; but it really works. One patient went down from 1,000 mg/dl to 117 mg/dl in a couple of months. In just 2-3 days, triglycerides will go down a fair amount. You can do it again later for another couple of days. By the way, when you do this, you will lose some weight also. The rice / fruit diet is practically fat-free. But do

not remain on a rice diet! It does not provide adequate nutriments when eaten alone.

OTHER HELPS

• Lose **weight**. Even losing 10 pounds can reduce triglycerides in those who are 20%-30% overweight. Ultimately, try to maintain a weight that is not over 5%-10% above what is normal for your age-weight range.

• Do not drink **alcohol**; it decidedly increases triglycerides. Using **tobacco** does also.

• **Exercise** is very helpful in lowering triglyceride levels. Studies reveal that it does this even when weight is not lowered in the process.

• Herbs which reduce triglycerides include **wild yam, fenugreek, and reishi** (a type of mushroom).

—Also see High Cholesterol (below).

ENCOURAGEMENT—Do not dwell on your difficulties, so they get bigger and bigger. Instead, think on the love of Christ and plead with Him for the help you need. Be trustful and obedient, and He will give you the best answers. Hosea 14:4.

HIGH CHOLESTEROL

SYMPTOMS—High cholesterol is an invisible risk; because it has no direct, outward symptoms. The symptoms would be those of atherosclerosis *(427)* and hypertension *(429)*.

CAUSE—Cholesterol is a fatty, wax-like substance found naturally in all body cells. It is used to build cells, make hormones, and aids in food digestion. Your liver can manufacture all you need. But it is also found in animal foods (including dairy products), lard, and hydrogenated oils. Excess cholesterol collects in fatty deposits along the inner linings of the arteries. These slowly build, along with clotted blood and scar tissue, to form fibrous plaque. The result is atherosclerosis.

Here are some facts about cholesterol, to help you understand the situation:

Dietary cholesterol is in the food you eat. Most of it is found in eggs and meat. One egg has 275 mg and an apple has none.

Serum cholesterol is in your bloodstream. This is what your physician measures. Ideally, it should be under 200. There are two types of serum cholesterol:

HDL (high-density lipoprotein) cholesterol cleans the arteries and is good for you. The higher it is, the better.

LDL (low-density lipoprotein) cholesterol clogs the arteries and is bad for you. The lower it is, the better.

There are several natural ways to lower the amount of LDL cholesterol in your blood.

For every 1% drop in cholesterol levels, there is a 2% decrease in heart attack risk. The total cholesterol level of the average American is above 200 mg per deciliter (mg / dl) of blood. Heart attack risk rises sharply above that level. So most people in our nation are in danger of an eventual heart attack. Yet the problem can be solved.

The ideal cholesterol range is 170-190 mg/dl. Below 150, there is an increased risk of death from other causes, including liver cancer, lung disease, and certain kinds of strokes.

NATURAL REMEDIES

DIET

• Do not eat **saturated fat**. This is the kind in **meat, butter, cheese, and hydrogenated oil**—which is the worst kind of oil or fat, since it raises blood cholesterol the most.

• Only include **polyunsaturated fat** in your meals. It lowers blood cholesterol. This kind is only found in certain vegetable oils, such as **corn oil, soy oil, wheat germ oil, and flaxseed oil**. Only buy cold-pressed oil—never, never use hydrogenated oil (even partially hydrogenated oil). The kind of vegetable oils in most stores are often hydrogenated. Never put **cottonseed oil** into your body.

• Eating **large meals** stimulates the production of an enzyme which increases the liver's output of cholesterol. Eat smaller meals.

• Eat nothing that is **fried**. Even worse, eat nothing **fried in fat** (which is most frying). Beware of fast-food restaurants.

• Drink at least 8 glasses of **water or juice** daily. It is needed to keep cholesterol-absorbing fiber flowing through the body.

• **Lecithin** is outstanding for emulsifying fats and cholesterol so they can be utilized by the body or flushed out. Take some (in the form of granules) every day. Each day put 1-3 Tbsp. on your cereal.

• The very best oils for your health are **wheat germ oil and flaxseed oil**. Prepare your meals without oil, fat, or grease. Then add a spoonful or two of wheat germ oil or flaxseed oil to the food after it has been dished onto your plate. In this way, you can carefully measure how much you get; and you ensure that the oil was not cooked.

• It is safe to use **monounsaturated oils**. It is now known that they also lower blood cholesterol. These include **olive oil** and certain other foods, such as **nuts, avocados, and peanut oil**. (There are questions about canola oil, so it is not recommended in this *Encyclopedia*.) Monounsaturated oils lower cholesterol faster than low-fat diets do; and the type they selectively lower is the bad LDL. **Avocado** is one of the highest fat foods; yet it tends to lower cholesterol!

• **Nuts** reduce cholesterol somewhat, especially **walnuts**. **Soybeans** and other **beans** are also good.

• Do not eat **fried food, fatty food, meat, or vegetable loafs**, etc. Do not eat **processed or junk food**. Do not eat **regular peanut butter**. The peanut oil has been taken out; and cheap, hydrogenated oils (sometimes lard) are put in its place. Only buy peanut butter from a health-food store. You can open the lid and smell the difference. Learn how to smell good food. Do not eat **corn chips, crackers, and other snack foods**.

• **Eggs** contain a lot of cholesterol (275 mg per egg);

yet studies reveal that, in most people, they do not appreciably raise cholesterol levels. This is because egg yolk is rich both in cholesterol and the lecithin needed to dissolve it.

• Eat more **fruit and beans**. Both have pectin, which surrounds cholesterol and takes it out of the body. Pectin is in all kinds of beans and fruit. **Carrots** also help lower cholesterol, because of their pectin content. **Cabbage, broccoli, and onions** have calcium pectate.

• You need 6 grams of water-soluble **fiber** every day. **This kind of fiber is found in fruits, vegetables, whole grains, legumes, and nuts. Corn, rice, and oat bran** helps lower LDLs, without reducing helpful HDLs. **Wheat bran**'s insoluble fiber protects against colon cancer, but does not lower cholesterol. **Oat bran** lowers cholesterol in the same way that pectin does it. Make oat bran muffins; and eat one or two every day. **Oatmeal** is good.

• Fresh **garlic** lowers cholesterol (and also high blood pressure), but not cooked or deodorized garlic. It is said that Kyolic may lower cholesterol. The essential oil found in both **garlic and onions** are reported by researchers as lowering serum cholesterol levels and stimulating fibrinolytic activity. Taking 600-900 mg of **garlic powder** capsules every day for 3-4 months lowered cholesterol levels by 14%-20%, and triglycerides by 18%-24%.

• **Psyllium seed** lowers cholesterol. **Celery juice** significantly lowers it.

• All plants contain *phytosterols*, which reduce cholesterol. **Sesame seed** has the most. Other foods with high amounts include **sunflower seeds, lettuce, asparagus, okra, cauliflower, figs, strawberries, onions, squash, apricots, tomatoes, and celery**.

• **Vitamins C, E, and niacin** also lower cholesterol, along with **calcium**.

• **Vitamin C** (1,000-4,000 mg) reduces the oxidation of LDL and prevents heart disease. Also good for this purpose is **vitamin E** (800 IU) and **selenium** (200 mcg). **Zinc** (30 mg) and **copper** (1-2 mg) increases HDL and reduces LDL.

• Taking 30 mg of B_{15} (pangamic acid) 3 times a day for 20 days reduced cholesterol levels for 90% of those tested. **Niacin** (1,500 mg in the form of niacinamide) lowers LDL cholesterol; but you must be careful and not take too much of it.

OTHER THINGS

• **Exercise** also lowers bad cholesterol. Vigorous exercise raises HDL and lowers LDL levels.

• Do not use **coffee, tobacco, or liquor**. They increase the harmful LDLs. Carbon monoxide damages artery walls, so plaque can build up. Avoid **drugs** of all kinds.

• **Guggul** is an herb from India which lowers cholesterol so well that you should only take 3 doses totalling 900 mg daily. After your levels are normal, reduce it to 300 mg per day.

• Here are other things found to lower cholesterol: **ginger, fenugreek, barley, spirulina, and lemon-grass oil.**

• When taken with a low-fat diet, **psyllium** (a soluble fiber from the seed husks of plantain) raises HDLs and lowers LDLs. One experiment (1 tsp. in 8 oz. water, 3 times a day) resulted in a 35% drop in total cholesterol in 6 months.

• **Activated charcoal** will powerfully lower LDL levels (40%) and raise HDLs (8%), when ¼ oz. is taken 3 times a day, an hour before or after meals. But it absorbs other things as well!

• **Sunlight** helps your body control cholesterol.

—Also see Triglycerides (434), Heart Problems (419), and Atherosclerosis (427).

ENCOURAGEMENT—We are to love God, not only with mind and heart but, with the strength also. We are to treat our bodies carefully; for we belong to God. Jeremiah 30:22.

PHLEBITIS AND THROMBOPHLEBITIS

(Milk Leg, Phlegmasia Alba dolens)

SYMPTOMS—*Phlebitis:* Reddening and cord-like swelling of the vein, increased pulse rate, slight fever, and pain accompanying movement of the afflicted area.

Superficial thrombophlebitis: The affected vein can be felt; it feels harder than normal veins. It may appear as a reddish line under the skin, possibly accompanied by pain, localized swelling, and tender to the touch.

Deep thrombophlebitis: Pain, warmth, and swelling, with possible bluish discoloration of the skin of the limb it is in. Sometimes there is fever and chills. The pain frequently feels like a deep soreness that intensifies when standing or walking; and it lessens when sitting or, especially, when the legs are elevated. Very often the deep vein in the thigh is involved.

CAUSES—*Phlebitis* is the inflammation of a vein wall. It usually occurs in the legs and more often in women than men. It can be a complication of **varicose veins** *(438)* or caused by **childbirth, infections resulting from injuries to the veins, and operations**. Infections in the legs, feet, and toes must be given immediate attention (especially if a fungal origin is involved). If the inflammation is associated with the formation of a blood clot (called a *thrombus*) in the vein, the condition is called thrombophebitis.

There are two types of *thrombophlebitis*. The first is *superficial thrombophlebitis*, which affects a subcutaneous vein near the surface of the skin. This is generally not serious; and many experience it. But if there is widespread vein involvement; the lymphatic vessels may also become inflamed and fluids may collect.

The superficial type can result from **infection, lack of exercise, standing for long periods, and intravenous drug use**.

Obesity, varicose veins, pregnancy, allergies, environmental chemicals, injury, and smoking can increase the risk.

Deep thrombophlebitis, also known as deep venous thrombosis (DVT), is more serious. It affects muscular veins far below the surface, which are much larger. This can occur after confinement. The reduced blood flow can produce chronic venous insufficiency, evinced by pigmentation, skin rash, or ulceration. But sometimes there are no symptoms. The risk of DVT rapidly increases after the age of 40; it triples with the passing of each decade after it.

Even though the person remains in bed until the swelling subsides, it will return slightly when he gets out of bed. Very little standing or exercise should be permitted while any swelling persists.

If the opening in the vein, in the thigh, is narrowed too much by the phlebitis (and nearly always if it is entirely clogged), varicose veins will appear lower down on the leg.

Blood Clots: Blood clots can be very dangerous. The origin of a clot is generally unknown. But it can form following an injury to the inside lining of a blood vessel. This initiates clotting, which is part of the repair process. Blood platelets clump together to protect the injured area. Fibrogen arrives and entraps blood cells, plasma, and more platelets; this process makes a blood clot to protect the weakened wall.

If a clot forms, it can break off and travel to a vital organ. Massage or rubbing may cause part of the clot to be dislodged and pass to other parts of the body, especially the lungs, causing serious damage or death. If there is any possibility that the person might have blood clots, he should not receive massage.

NATURAL REMEDIES

If a swollen, painful vein does not disappear within 2 weeks, consult a physician.

DIET

• Include **niacin** in the diet. This B vitamin helps prevent clotting. **Vitamin C** helps strengthen the walls of veins and arteries. **Vitamin E** (two 400 IU daily) dilates and strengthens blood vessels, reducing the formation of varicose veins and phlebitis.

• Eat a good nourishing diet of **fruits, vegetables, raw nuts, seeds, legumes, and whole grains.**

• Include enough **fiber** in the diet, so you do not have to strain at the stool. Straining increases venous pressure on the legs.

• Maintain a **low-fat diet** and drink enough **water.**

• Drink fresh **carrot juice** daily.

Mix **lecithin granules and brewer's yeast;** and take 2 Tbsp. daily.

• It is now known that **food allergies** can be involved. Search them out and eliminate them.

FOODS TO AVOID

• Do not eat **fried, salty, processed food, dairy products, or hydrogenated vegetable oils.** Do not eat **meat.**

• Avoid a **high-protein diet;** for it increases blood-clotting factors.

OTHER HELPS

• Superficial phlebitis inflammation generally is reduced within 7-10 days; but it may take 3-6 weeks for the problem to be entirely gone. It can be treated by **elevating the leg** and applying **warm, moist heat** to the area. It is not necessary to rest in bed; but, every so often, rest with the leg 6-10 inches above the heart. This speeds the healing process.

• Get regular moderate **exercise.** This is important. Walking is the best. Regular exercise increases the body's ability to dissolve clots.

• Avoid **dangling the feet.** Pressure against the popliteal vessels may cause obstruction of blood flow. Do not cross your legs.

• **Deep breathing or singing** helps empty out the large veins, thus increasing venous circulation.

• Quit **tobacco.** If you smoke, and seem to keep having recurring phlebitis, you may have Buerger's Disease *(285).* Its symptoms are severe pain and blood clots, usually in the legs (and can lead to amputations!). Smoking constricts the blood vessels.

• Take alternating **hot and cold sitz baths** or apply alternating **hot and cold compresses.**

• Lie on a **slant board** with your feet higher than your head for 15 minutes a day, especially if you stand on your feet a lot.

• **Wear nothing tight** about the waist. Also do not wear bands on the legs.

• When traveling a distance by car, **stop and walk around** every so often. Do not let the circulation become sluggish. When it enters a low-flow state, that can lead to a clot. Beware of "economy class syndrome." A remarkable number of people who fly in the cramped economy class seats of jets develop thromboplebitis. You are confined to your seat more on planes than in cars or boats. So request an aisle seat and get up every 30 minutes and walk up and down the aisles.

• Wherever you may be, **do not sit more than an hour at a time,** without getting up and walking around.

• Better yet, **every hour exercise the legs** for 2 minutes, as if you are riding a bike (lifting the legs), and breathe deeply, in and out, 15 times.

• **Walking barefoot** improves venous blood flow.

• If they help you feel better, use **elastic stockings** (anti-embolism stockings).

• **Do not squat** (sit back on your heels), except momentarily.

• If you have a history of phlebitis or blood clots, do not take **birth control pills.** They will increase the likelihood of deep vein thrombophlebitis by 3-4 times.

• **Fasting** decreases blood coagulation. It can be beneficial when needed.

• If you have to lie in bed for a time, **move your legs** every so often, to increase circulation. **Elevate the foot of your bed** several inches, to reduce venous pressure in your legs. This also reduces edema and pain. Do not use **pillows** under the legs; for doing so elevates the knee above the digestive organs and reduces circulation, unless head is raised above the knees.

• The herb **gotu kola** helps restore normal elasticity to veins.

• **Butcher's broom** and **bilberry** are also veno-

tonics; that is, they help strengthen veins and reduce inflammation. To prevent a recurrence of phlebitis, take 100 mg butcher's broom, once a day, and two 80 mg capsules of bilberry 3 times a day.

• Apply herbal compresses of **yarrow, calendula flowers, or St. John's wort** to the legs.

• Should you **massage a leg** with phlebitis? Yes and no. If you are certain there are no blood clots in the leg, you can gently but firmly knead each leg from your ankle to your mid-thigh once or twice a day. But no, if there is any possibility of clots, *do not do it!* It can result in paralysis or a stroke.

TENDING TO THE LIVER

The weakness in the veins that causes phlebitis is a sign that the liver has not been working properly. If the liver is clogged with toxins, the veins cannot flow as easily into it. The result is a backup of blood, which dilates the veins in the legs and weakens them.

• Turn to the **section on the liver** for ways to improve its function *(357-361)*.

• Lie on your back on the floor and **put your feet and lower legs on the seat of a chair**. This will help move blood out of the veins into your liver. Do this once a day, staying in the position for 5-10 minutes.

Once you have had phlebitis, or clots of any type, you can have it again. Surgery or prolonged bed rests increase the likelihood that you will have another attack. Keep that in mind when you consider elective surgery.

—*Also see Varicose Veins (below).*

ENCOURAGEMENT—Thank God everyday for the many blessings you have. Determine that you will remain true to Him. By His enabling grace, resist temptations and obey His moral law. Leviticus 26:12.

VARICOSE VEINS
(Varicosities)

SYMPTOMS—Visibly distended veins, especially in the calves and inner thighs of the legs. They are enlarged, bulging, bluish, and lumpy. Small ones can appear red and spidery. There may be aching or tiredness, a feeling of fullness in the limbs. The skin may have a tense or burning sensation. Muscle cramps may occur, especially at night. Hemorrhage under the skin may cause the skin to discolor (light brown to bluish). Veins may be abnormally large, bulging, and lumpy looking.

CAUSES—The vaives of the veins no longer function properly. They have become stretched from excess pressure. The valves in the veins that prevent blood from flowing backward do not work properly. The deep veins are surrounded by muscles which keep them in shape. It is those close to the surface (saphenous veins) which develop these problems. So much blood collects that it leaks out into surrounding tissue.

Contraceptive medications can induce varicose veins, as well as **hormonal vasodilation** just prior to menstruation. They can occur during **pregnancy** (especially during the first 3 months). About 15% of Americans experience the problem; most of these are women. **Overweight** individuals are at the greatest risk. **Heavy lifting** is another causal factor.

When varicose veins occur in and around the anus, they are called hemorrhoids. **Straining** at the stool, because of a lack of dietary fiber, causes constipation and can result in varicose veins, diverticulosis *(375)*, hemorrhoids *(378)*, phlebitis *(436)*, and hiatus hernia *(347)*.

Spider veins are unsightly, but cause no problems.

NATURAL REMEDIES

• Important: Follow the lengthy suggestions given under *Phlebitis and Thrombophlebitis (436)*.

HERBS

• An herbal wash that relieves varicose veins: Mix equal parts **sweet flag root, thyme leaves, nettle leaves, horse chestnut leaves, and fruit**. Add 3 Tbsp. to 1 quart cold water, bring to a boil. Add ½ tsp. salt and bathe the legs with the tea.

• **Horse chestnut seeds** have been used to treat varicose veins and hemorrhoids for years in Germany. The active ingredient, *aescin*, strengthens capillaries and reduces fluid leakage. Use the standardized extract.

• **Witch hazel** is an outstanding herbal wash. It is a soothing astringent which strengthens blood vessels. **White oak bark** is another useful astringent herb.

• Applying **aloe vera** gel is soothing to the veins.

• Apply fresh **wood sorrel** leaves to the area with extended veins. Cover with large **cabbage leaves**, and fasten with an ace bandage.

• Taking **bromelain** reduces risk of clot formation.

• Here are more useful substances: **Lemon peel** contains flavonoids, including rutin, which reduce blood vessel permeability. **Bilberry** stimulates new capillary formation. **Ginkgo** improves circulation.

• Both **violet and pansy flowers** contain rutin and are safe to eat. Add them to your salads.

• Drinking **dandelion** or **corn silk** tea helps the kidneys eliminate excess fluid, thus reducing tissue swelling.

• Dr. Christopher recommends making a tea of **sassafras**, drinking it, and using it to wash the legs.

• Apply hot applications of **tansy** tea on large veins. Replace when they become cool. Cover with wool or plastic to keep them wet and hot.

DIET

• Drink at least 48 oz. of water daily.

• Take **vitamin C** (500-1,000 mg 3 times daily), **vitamin E** (200-400 IU daily), **flaxseed oil** (1 Tbsp. daily).

• Include enough **fiber** in your diet, which should be **low in fat and refined starches**. Eat lots of fresh **fruits and vegetables**. Avoid **animal products**. Eat **whole grains, nuts, and legumes**.

• If you are **overweight**, you need to reduce.

OTHER HELPS

• Avoid wearing **garments** which constrict blood flow. But moderate pressure on the veins (**elastic stockings**) is helpful.

• **Never cross your legs**. It adds pressure to the veins.

• **Elevate your feet** while reading or watching TV. At least once a day, elevate your legs above your heart for 20 minutes.

• **Walking** is the best exercise for your legs.

• On lengthy trips, **walk around** every so often.

• **Do not stand in one place** too long. If you have to do so, rise up on your toes occasionally, wiggle your toes, and move a little from time to time.

• **Sleep with your feet raised** slightly above the level of the heart. But do not do this if you have heart problems.

• If you are confined to a bed, **move your extremities** frequently to improve general circulation.

• In the morning, go out and **walk barefoot** on the cool, wet grass. Quickly dry and put on socks and shoes.

• Do not scratch the itchy skin above varicose veins. Doing so can lead to bleeding and surface ulcers.

ENCOURAGEMENT—God does not accept men because of their capabilities, but because they seek His face, desiring His help. God sees not as man sees. He judges not from appearances; but He searches the heart. Only with His help can you have purity of life; and this you must do. Leviticus 26:12.

"I will look unto the Lord, I will wait for the God of my salvation; my God will hear me." Micah 7:7.

"He that putteth his trust in Me shall possess the land, and shall inherit My holy mountain." Isaiah 57:13.

"The Lord redeemeth the soul of His servants, and none of them that trust in Him shall be desolate." Psalm 34:22.

With such promises as these, what need is there to fear in this earthly life?

CARDIOVASCULAR - 3 - BLOOD

POOR CIRCULATION AND CHILLS

SYMPTOMS—Cold fingers, hands, and feet. Also numb tingling fingers and toes. A general sense of chilliness when others are warm. Frequent bruising, infection, numbness in joints and digits.

CAUSES—Poor circulation can be caused by **cardiovascular disease, low thyroid, vitamin E deficiency, or low blood pressure**. Other causes include a **high-fat and high-cholesterol diet, atherosclerosis, cigarette smoking, lengthy periods of standing or sitting, lack of exercise, poor posture, diabetes mellitis, high blood pressure, prolonged muscle tension, inflammation, or being inadequately clothed**.

In some instances, poor circulation can lead to claudication *(530)*, gangrene *(283)*, blindness, senility *(487)*, heart attack *(419)*, and stroke *(432)*. Using nicotine can result in Raynaud's disease *(284)* and eventual amputation. Alcohol *(775)* also restricts blood flow.

NATURAL REMEDIES

DIET

• Take 800-1,200 IU of **vitamin E** daily. Take **vitamin C** to bowel tolerance. Also needed: **niacin, RNA**, and **folic acid**.

• Purifying the bloodstream will help in restoring proper circulation. This would include **enemas** or colonics, **juice fasting** for a day or two, followed by a **nourishing diet**.

• **Do not eat meat, cheese. No fatty, processed, or junk foods**. Avoid **cold foods, sweets, ice cream**. Do not use **nicotine, alcohol, or caffeine**.

• Foods which increase the circulation include **lentils, beets, buckwheat, citrus peel, soybeans**. **Cayenne** is especially helpful; but only take in moderate amounts (or you can damage your kidneys).

OTHER HELPS

• Take **cool morning showers** or **alternating hot and cold showers** for 5 to 15 minutes, morning and evening. **Exercise afterward** and make sure you are warm. If you are not warm afterward, you did not gain.

• **Exercise** outdoors and practice **deep breathing**.

• Drink **red clover, sassafras, and burdock** teas in order to clean the blood.

• Other helpful herbs include **ginkgo, hawthorn, lily-of-the-valley, lavender, rosemary, scotch pine, and cayenne**.

• *In an emergency*, swallow some **cayenne** in water to warm a person up. **Goldenseal** is also helpful. Take 1 part each of **cayenne, skullcap**, and ½ part **goldenseal**.

• *Kloss recommends the following:* A high **enema**. **Breathing exercises** every day. **Cold towel rub** every morning followed by **rubbing with a dry, coarse towel**. Lots of **outdoor exercise** while breathing deeply.

—Also see Chills (224). If you are chronically cold, you are likely to have hypothyroidism (549).

ENCOURAGEMENT—No sooner does a child of God approach the mercy seat in the Sanctuary in heaven, where Jesus is, than he is received. Pray, earnestly; pray for the help that you so much need. God loves you and

will answer your prayers in the very best way. How very thankful we can be that God not only shows us what He wants us to do, but (by the grace of Christ) gives us the power to do it. Hebrews 8:10.

CHLOROSIS
(Green Sickness, Chloremia)

SYMPTOMS—The person has a greenish cast to his or her skin, plus indications of continual fatigue.

CAUSES—This condition is characterized by a great reduction in hemoglobin, which is much greater than the decreased number of red blood cells. It is a type of chronic hypochromic microcytic (iron deficiency) anemia. Women, from puberty to the third decade of life, are the ones who primarily have this problem. The cause is **a diet deficient in iron and protein**.

Other names for this condition include chlorotic or asiderotic anemia, chloremia, chloroanemia, and green sickness.

—*See Anemia (440)*

NATURAL REMEDIES

• The diet needs to be improved. Instead of snacking on junk food and soft drinks, eat nourishing meals of **fruits and vegetables, plus whole grains, nuts, and legumes**.

• Eat at least 1 tablespoon of **blackstrap molasses** each day (1 teaspoon for a child).

• *For additional information on the richest foods and herbs in iron, read Anemia (above).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHLOROSIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

Chlorosis is a form of anemia in adolescent girls, generally due to faulty diet during puberty. It is also called "green sickness."

CORRECT ENTEROPTOSIS—Abdominal supporter, abdominal massage, **corrective exercises**, **Cold Douche** to abdomen.

INCREASE VITAL RESISTANCE—General **graduated cold procedures** (Tonic Frictions) twice daily.

COMBAT AUTOINTOXICATION—**Aseptic diet**, sweating bath (**Hot Full Bath**) to begin perspiration, Radiant Heat Bath or **sunbath**, followed by **short cold** application.

VASOMOTOR SPASM—General **Revulsive Douche**. Alternate **Full Bath** at 105°-110° F., 30 seconds, and then into one at 80°-90° F., for 15 seconds. Simultaneous **Revulsive Douche**.

VISCERAL ANEMIAS—**Douches** to visceral (trunk) areas. Alternate Douche or Revulsive Douche, with short percussion for either; **Alternate Compress** over the afflicted part, followed by a well-protected **Heating Compress**. Protected (plastic covered) Hot **Abdominal Pack** at night. Cool **Enema** at 75°-68° F., 1-3 pints, daily.

ENCOURAGEMENT—By studying with greater earnestness and care the life of Christ, you may see the victories which you have to gain that you may win the precious white robe of a spotless character, and stand at last without fault before the throne of God. As you plead for help, Christ's empowering grace will enable you do all that God requires of you.

ANEMIA
(Simple Anemia, Iron Anemia)

SYMPTOMS—Easy tiring, dizziness, headache, rapid heart rate, shortness of breath or exertion. Pale skin, nails, and lips. A sensitivity to cold. Poor appetite and cravings for clay, ice, or starch.

Other symptoms include white or coated tongue, pale tissue beneath fingernails, and white skin inside the lower eyelid (when it is pulled down).

CAUSES—There are several types of anemia (simple, pernicious, sickle-cell, folic acid, copper). This article will deal only with simple anemia, which is by far the most common.

Millions of people are anemic. The cause is usually a reduction in the number of red blood cells or the amount of hemoglobin in the blood. In either case, not enough oxygen is carried throughout the body.

Iron deficiency anemia is the most common type of anemia; and it occurs when there is not enough **iron** in the body.

This can occur when the body is **not absorbing enough iron from the food, during chronic blood loss, pregnancy, menstruation, hemorrhoids or ulcers, diverticular disease, liver damage, surgery, repeated pregnancies, periods of rapid growth, and aging. Infections, hemorrhage, and nutritional deficiencies** can also cause it.

Infants and young children on a **milk diet, without minerals and essential fatty acids**, are prone to anemia. Others include the elderly who eat narrowed diets and pregnant women because of their increased nutritional needs.

Red blood cells (RBCs) are called *erythrocytes*; they are tiny discs which are concave on both sides. These cells contain hemoglobin, which is bright red because of the iron in it. About 60%-70% of the iron in your body is in the hemoglobin of your blood. (About 30%-35% of the iron is stored in the liver.) The percentage of RBCs in the blood is called the *hematocrit*. The primary function of the RBCs is to carry oxygen to the cells.

Following birth, the bone marrow of the infant, child, and adult makes the red blood cells. Aging causes RBC formation to lessen. An average RBC wears out in 120 days or less, so your body must keep making more.

Those who are anemic tend to have sore mouths or tongues, generally have poor blood circulation, and are cold. They need special care in regard to these matters. Of those suffering with anemia, 20% are women and 50% are children.

Peek incidence of anemia in children occurs between 6 months to 2 years, then declines, and rises again

during adolescence (especially in girls). Low birthrate infants are at a greater risk for anemia. Some children are allergic to cow's milk and develop gastric bleeding which, over a period of time, results in the loss of considerable blood. The American Academy of Pediatrics recommends that children under the age of 1 year *not* (!) drink cow's milk. Milk can cause anemia by interfering with iron absorption and possibly causing internal bleeding.

Some children have a pallor of face and dark shadows under the eyes, which is caused, not by anemia but, by food allergies (especially, free fats of margarine, mayonnaise, fried foods, cooking fats).

Women with **menorrhagia** (*647*, heavy or prolonged menstrual bleeding), or who use intrauterine devices for contraception are at higher risk of blood loss. Anyone who takes aspirin or ibuprofen are also at risk, because they cause blood loss through the walls of the digestive tract.

NATURAL REMEDIES

THESE INCREASE IRON ABSORPTION

• Eat at least 1 tablespoon of **blackstrap molasses** each day (1 teaspoon for a child). This is, by far, the richest source of food iron. And it is a safe iron. Much of the iron in supplements is not safe.

• **Broccoli, lettuce, and tomatoes** help iron regeneration.

• **Avoid spicy foods, tea, or coffee**. They decrease absorption. **Do not smoke;** and avoid secondhand smoke.

• **Whole-wheat flour and oatmeal** are effective in increasing hemoglobin regeneration. **Yeast and wheat germ** are high in iron. Also good are **beets, beet greens, cabbage, whole grains, barley, peas, seeds, nuts, celery, parsley, cherries, dates, figs, and pears**. Good sources are **sesame seeds, sunflower seeds, pistachios, pecans, almonds.** Also vegetables, such as **Swiss chard and kale**. Others include **blueberries, carrots, celery, cranberries, grapes, and prunes**.

• Herbs rich in iron include **alfalfa, comfrey, dandelion, fenugreek, mullein, nettle, Chamomile, and red raspberry. Garlic extract** has been shown effective in treating anemia.

• There should be **sufficient stomach acid** to absorb the minerals. If there is not, take some **lemon juice.** Squeeze the juice of half a lemon, put it into a glass of water, and drink it before meals. An alternative is taking 1,000-2,000 mg **vitamin C** with each meal. (Vitamin C is also very acid.)

• **Orange juice** increases iron absorption.

• Do not take **calcium, vitamin E, or zinc** at the same time as iron supplements. They interfere with each other's absorption.

• Use a diet high in **fresh, raw fruits and vegetables** which are high in **vitamin C** (which is necessary for iron absorption). These include **citrus fruits, leafy green vegetables, and broccoli**.

• Each day drink ¼ cup **beet juice**, added to some **carrot juice**. The juice of fresh beets has been a successful remedy for anemia for many years.

• **Bananas** are moderately helpful in increasing iron absorption.

• Raw or lightly steamed **greens (or cooked asparagus, beets, broccoli, or brussels sprouts)** supply the folic acid needed for the absorption of iron.

Increase your intake of calcium-rich foods (**leafy green vegetables, beans, peas, soybeans, and sesame seeds**) to make up for the lack of milk (see below).

• **Cooking acidic food (tomatoes, apple sauce, etc.) in iron pots** increases the iron content of the food.

• Those with poor blood-making organs may need eggs in the diet (MH320; CDF 365).

• Water from **deep wells** has more iron than city water.

• **Exercise** stimulates the production of blood.

• **Short, cold baths** *powerfully* increase blood production and circulation.

• A **cold mitten friction** is a useful way to increase metabolism and blood production.

• Men need 10 mg of iron daily. Women of childbearing age, who lose blood each month, should get 15 mg. After menopause, they only need 10 mg. (To reduce heavy flow in menorrhagia *(647)*, take **shepherd's purse**, which aids blood clotting. **Goldenseal** contains *berberine*, which helps calm the uterine muscles.)

• To strengthen the liver, so it can absorb iron better, take **yellow dock, turmeric,** or **milk thistle**. A healthy liver breaks down estrogen, which is important in preventing anemia; since excess estrogen can cause heavy bleeding.

THESE REDUCE YOUR IRON

• **Avoid milk and other dairy products**; since these decrease iron absorption from other foods.

• Avoid foods **high in oxalic acid foods**. The worst is **poke and rhubarb**. The others include **spinach, sorrel, Swiss chard, chocolate, cocoa, cashews, and soda**.

• **Avoid bran** as a source of fiber. It tends to link with iron and carry it out in the stool. (However, you may need bran to prevent other physical problems far worse than a mild case of simple anemia.) *Phytates* in **high-fiber foods** bind with some of the iron so the body cannot absorb it.

• *Phosphate* additives in **bakery goods, soft drinks, candy, beer, ice cream, and many packaged foods** reduce iron absorption, as does the *cadmium* in **tobacco**.

• *Polyphenols* in **coffee** and *tannins* in **black tea** reduce the amount of iron assimilated from foods by 70%.

• Many **medicinal drugs** destroy vitamin E and cause anemia. Some **insecticides** destroy bone marrow, so new blood cells cannot be made.

• Do not use **food additives** or **artificial sweeteners**.

• **Alcoholic beverages**, as well as **sugar**, deplete the body of B-complex vitamins and some minerals, which can intensify anemia.

• Caffeine products (**coffee, black tea, soft drinks,**

chocolate, etc.) make it more difficult for the body to absorb iron.

• Taking aspirin tablets causes bleeding from the stomach and the loss of iron.

• It is true that **raw liver** contains iron; but it also contains large amounts of waste products that was about to be excreted before that animal was slaughtered.

IRON SUPPLEMENTS

• Have a complete blood test taken, so you will be certain whether or not you have iron anemia. **Too much iron can damage** the heart, liver, pancreas, and immune cells' activity. It has also been linked to cancer.

• If you do not need them, **avoid iron supplements. Ferric sulfate, ferrous sulfate,** and **other iron compounds** are often given to reduce anemia; but they definitely have toxic effects which you should be aware of: They destroy carotene and vitamins A, C, and E. They increase the need of the body for oxygen and damage unsaturated fatty acids. They also damage the liver, especially when the person has a poor appetite and is not eating very much. **Ferrous sulfate** also irritates the stomach and lymphatic system. Yet it is the kind of iron in most multi-vitamin food supplements. Liquid iron supplements stain the teeth. Iron compounds cause damage to the liver, miscarriages, premature birth, or prolonged pregnancy. Some suggest they may cause birth defects. Too much iron stored in the body leads to increased risk of cancer.

• In contrast, **ferrous gluconate, iron gluconate, and iron picolinate** are easy for the body to digest and absorb. They are less likely to irritate the stomach. Unfortunately, many the labels of most food supplements only list "iron," without telling what kind it is.

• **Iron salts** taken during pregnancy are especially dangerous! They can increase the fetus' need for oxygen and induce miscarriage or premature and postmature births. Some infants have malformations or mental deficiencies because their mothers took iron supplements before birth. Young women, beware!

• Normal people do not need iron supplementation; for there is lots of iron in most real (real) food. The iron in unrefined food is *never* toxic. *Nearly all* iron supplements cause stomach or intestinal irritation.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SIMPLE ANEMIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INCREASE BLOOD-MAKING PROCESS—Graduated **cold applications**. The Radiant Heat Bath is especially valuable as a means of heating before giving the general cold applications. **Have aseptic dietary** (a nourishing diet), **rest** in bed (if he is emaciated), **outdoor life**, cold-air baths, **sunbaths**, sea bathing, massage, oxygen inhalation.

GENERAL METHOD—Cold water is the most valuable of all measures in treating anemia. Apply twice daily, graduating carefully. Autointoxication, arising from dilation, prolapse of the stomach, or chronic constipation, is often an important factor.

—Also see Chlorosis (440) and Pernicious Anemia (below). Also see Poor Circulation and Chills (439).

ENCOURAGEMENT—We are to have a spirit of pity and compassion toward those who have trespassed against us. Pray for them, that they may come to Jesus. Unselfish ministry is the hallmark of the genuine Christian. Matthew 26:33, 1 Kings 8:50.

PERNICIOUS ANEMIA

SYMPTOMS—Weakness, slight yellowing of the skin, tingling of the extremities, and gastrointestinal disturbances causing a sore tongue. There can be partial loss of coordination of the fingers, feet, and legs. Some nerve deterioration may occur. Diarrhea and loss of appetite may also be present.

CAUSES—Pernicious anemia is caused by a **deficiency of vitamin B_{12}**. This is a severe form of anemia in which the bone marrow fails to produce mature red blood cells. Other causes include eating **junk food, malabsorption** problems, **Crohn's disease** *(374)*, **gastric surgery**, **drugs** which have destroyed the ability of the large bowel to produce B_{12}.

The stomach has to be able to produce, what is known as, *"intrinsic factor"* in order for vitamin B_{12} to be absorbed by the intestines. Pernicious anemia rarely occurs under the age of 30; but it becomes more common afterward. Without treatment, pernicious anemia may be fatal.

In some instances, B_{12} deficiency can be diagnosed by a physician who uses a Schilling test, a special blood test which evaluates B_{12} absorption.

NATURAL REMEDIES

• Persons with pernicious anemia must take B_{12} sublingually (dissolved under the tongue), by injection, or by a retention enema. Take 50-100 mcg injections of **vitamin B_{12}** daily. Unless the underlying cause can somehow be corrected, this treatment must be continued for the rest of your life.

• Here is a second recommendation: Take methylcobalamin (active vitamin B_{12}, 1,000 mg twice daily for at least 1 month, followed by a daily intake of 1,000 mcg).

• Eat a highly **nutritious diet** that is rich in **protein, calcium, vitamins C and E, and iron**.

• Take supplements of the entire **B complex**, to aid in B_{12} absorption.

• (Important exception: Folic acid should not be taken in amounts greater than 0.1 mg daily.) Folic acid has the effect of concealing the symptoms of pernicious anemia and permitting the unseen destruction of the

nervous system to continue until irreparable damage has occurred.

• There should be sufficient **stomach acid** to absorb the minerals. If there is not, take some lemon juice *See Achlorhydria (351).*

—Also see Anemia (440, 723) and Megaloblastic Anemia (below).

ENCOURAGEMENT—A lamp, however small, if kept steadily burning, may be the means of lighting many other lamps. Our sphere of influence may seem narrow, our ability small, our opportunities few; yet God can work through us to help many others.

MEGALOBLASTIC ANEMIA
(Folic Acid and B_{12} Anemia)

SYMPTOMS—The initial symptoms are fatigue and a feeling of faintness, pale skin, shortness of breath on mild exertion. Symptoms may worsen over a period of time.

CAUSES—Megaloblastic anemia occurs when large, abnormal red blood cells (megaloblasts) are produced by the bone marrow and the production of normal red blood cells is reduced. The blood gradually becomes unable to carry enough oxygen to the cells.

The cause is deficiency of two important B vitamins: **B_{12}** and **folic acid**.

Folic acid deficiency is usually due to a poor diet. Drinking alcohol intensifies the problem, because alcohol interferes with absorption of folic acid. Pregnant women have a higher risk, because their folic acid needs are greater. Taking certain drugs (such as anticonvulsants and anti-cancer drugs) can also cause it.

Lack of folic acid does not produce any other symptoms than those listed above.

B_{12} deficiency may be due to a lack of B_{12} in the diet or an autoimmune disorder may be the problem. Antibodies are produced which damage the stomach lining and prevent it from forming *"intrinsic factor"*; this is needed for absorption of B_{12}. Intestinal disorders, or surgery on the stomach or intestines, can also interfere with B_{12} absorption.

Lack of B_{12} can later result in more severe symptoms, which are tingling in the hands and feet, weakness and loss of balance, loss of memory and confusion. *—For more on B_{12} anemia, see Pernicious Anemia (442).*

NATURAL REMEDIES

• When external cuts are bleeding, cover the cut with cayenne powder.

• Take 400 mcg of **folic acid**, twice a day. Folic acid should not be taken in amounts greater than 0.1 mg daily. *See Pernicious Anemia (442) for explanation.*

• Take 50-100 mcg injections of **vitamin B_{12}**.

—For other principles, see Pernicious Anemia (442) and the large section on Anemia (440, 723).

ENCOURAGEMENT—We may have joy in the Lord only if, through the strengthening grace of Christ, we keep His commandments and do that which is pleasing in His sight. If we indeed have our citizenship above, and a title to an immortal inheritance, an eternal substance, we have that faith which works by love and purifies the soul. We are members of the heavenly family, children of the heavenly King, heirs of God, and joint heirs with Christ. At His coming we shall have the crown of life that fadeth not away.

THALASSEMIA

SYMPTOMS—Mild symptoms occur in most people; but, if the disease was inherited from both parents, they can be more severe and appear between 4-6 months of age. Symptoms may include pale skin, shortness of breath on mild exertion, swelling of the abdomen due to an enlarged spleen and liver. Affected children have slow growth, sexual development is delayed, the bones of the skull and face may thicken.

CAUSES—An **inherited genetic defect** prevents the normal formation of hemoglobin. The body tries to compensate by producing additional red blood cells, which causes a thickening of the bones (and may include those of the skull and face). The liver and spleen may become enlarged. Thalassemia primarily occurs in people from the Mediterranean, Middle East, Southeast Asia, and Africa. Those with mild symptoms can lead a fairly normal life.

NATURAL REMEDIES

• Blood tests can confirm whether a person has this problem. He should remain on a **nourishing diet**, which should include **folic acid** supplements.

ENCOURAGEMENT—The Monarch of heaven would have you possess and enjoy all that can ennoble, expand and exalt your being, and fit you to dwell with Him forever—your existence measuring with the life of God. What a prospect is the life which is to come! What charms it possesses! How broad and deep and measureless is the love of God manifested to man!

SICKLE-CELL ANEMIA

SYMPTOMS—Symptoms are highly variable, even within the same family. In children and adults, they may include those common to all anemias: fatigue and a feeling of faintness, pale skin, shortness of breath on mild exertion. There are also "sickle-cell crises," which are explained below.

CAUSES—The amount of hemoglobin within the red blood cell (RBC) becomes smaller. This causes the RBC to become distorted into a curved sickle shape. This deprives the body of oxygen. Those with this problem are more susceptible to serious infections, such as pneu-

monia. Other effects include gallbladder problems, leg ulcers, kidney damage, stroke, and miscarriage.

"Sickle-cell crises" occur from time to time, in which the oddly shaped blood cells clump together inside small blood vessels, causing blocking of the blood supply to body tissues. These crises may be triggered by infection, dehydration, strenuous exercise, or high altitudes. The symptoms of a crisis are severe pain and swelling around the bones and joints, especially in the hands and feet of children. Also abdominal pain, chest pain, and shortness of breath. A severe crisis can be fatal; so you may want to contact a physician.

This is a genetic problem, occurring most frequently in persons of African ancestry; it is less common in people from countries around the Mediterranean.

NATURAL REMEDIES

• Folic **acid** is necessary for the production of RBCs. Take **folic acid** (800 mcg), **vitamin B_6** (100 mg 2 times daily), **zinc** (20 mg daily), and **vitamin E** (400 IU 2 times daily).

• It is vital that you **keep drinking enough water**, in order to avoid a crisis. The blood must be able to flow easily through your capillaries.

—For more information on general nutrition and ways to avoid anemic problems, see Anemia (440, 723).

ENCOURAGEMENT—The privileges granted to the humble, obedient children of God are without limit: To be connected with Jesus Christ, who, throughout the universe of heaven and worlds that have not fallen, is adored by every heart, and His praises sung by every tongue; to be children of God. To bear His name. To become a member of the royal family. To be ranged under the banner of Prince Immanuel, the King of kings and Lord of lords!

BLEEDING (EXTERNAL)

SYMPTOMS—Bleeding from a surface wound.

CAUSES—When a blood vessel is cut, bleeding (external bleeding) or hemorrhage (internal bleeding) begins. If an artery is cut, the blood spurts and flows fast; it is usually bright red. If a vein is cut, the blood is darker and flows more constantly and slowly.

NATURAL REMEDIES

HERBS

• When external cuts are bleeding, cover the cut with powdered **cayenne**; and it will stop the bleeding immediately. When an artery or vein is severed, apply powdered cayenne immediately. Then apply direct pressure, seek a physician, or go to a hospital. Cayenne powder or tea is also a good drink for internal bleeding. Cayenne has astounding styptic (blood stoppage) action. A tiny amount on a cut will stop bleeding. A very small amount (1/8 tsp. in a large glass of water) will tend to stop internal bleeding—bleeding occurring inside your body.

• Although it will sting, squeezing **lemon juice** on a wound will immediately stop the bleeding, even when ice and other herbs have failed. In earlier times, midwives used diluted lemon juice to stop uterine hemorrhage after delivery.

• If outdoors, mash green **juniper berries** on the bleeding wound.

• Dampen **plantain** (powder or leaf) and apply to the wound. Or use **marigold**.

• Make a tea of the whole plant of **shepherd's purse**, a common weed. Drink it and apply it to the wound as a poultice. Or add it to bathwater.

• Other hemostatic (stop bleeding) herbs include **goldenseal, hazelnut, smartweed, burnet, grapevine, milfoil, horsetail, pau d' arco, bilberry, comfrey root, turmeric, and bistort**. **White oak bark** and **witch hazel** are especially good.

• Drink **red raspberry** leaf tea during pregnancy and at the time of delivery, to avoid bleeding.

OTHER HELPS

• Put **citrus peel** directly on the wound. Sprinkle **alum** powder on the wound.

• As a preventive, take 100 mcg of **vitamin K**, 3 times daily.

• If the wound is on the **arm, hold it up** over your head. If the wound is serious enough, and you do not know what else to do, **apply direct pressure** to a vein or artery. Use **cold cloths or ice packs**. Sprinkle **alum powder** on the wound. Get to a physician and treat for shock.

• If you are at risk for internal hemorrhaging, **do not use aspirin** or other blood-thinning drugs (such as Heparin).

—Also see Wounds (245, 751), Hemorrhage (below), # Water Therapies which Control Bleeding (445).

ENCOURAGEMENT—True happiness does not consist in the possession of wealth or position, but in the possession of a pure, clean heart, cleansed by obedience to the Word of God. How thankful we can be that God can enable us to obey His laws and resist temptation to sin. Isaiah 41:10.

HEMORRHAGE
(Internal Bleeding)

SYMPTOMS AND CAUSES—*Bleeding in the stool*, which indicates stomach ulcers (black blood stool), ulcerative colitis (bloody mucus in stool), colon cancer (bloody mucus in the stool), and hemorrhoids (bright red blood). *Coughing blood* indicates lung cancer or tuberculosis.

NATURAL REMEDIES

• External bleeding *(444)* is bleeding from surface wounds. Hemorrhage is bleeding inside the body. Natural healers today use one or a combination of four methods to stop hemorrhage: very **hot applications**, very

cold applications, **cayenne**, or **astringent herbs**.

• ***Hemorrhage of the lungs***—Tell him to cough as little as possible. Give a **hot footbath**. Give him a pinch of **cayenne** to swallow. It will stop the bleeding almost immediately. Also good: a tea made from **white oak bark** or **witch hazel**.

• ***Hemorrhage of the stomach***—Briefly apply ice over the stomach. Have him swallow small bits of ice rapidly for a short time. Give him a cupful of **shepherd's purse** tea. A tea made from **white oak bark** or **witch hazel** is equally good. Other herbs which stanch internal bleeding include **red raspberry, bistort root, wild alum root, yarrow, or sumach**. How to make the tea: Steep a tsp. of the herb in a cup of boiling water 30 minutes, strain, and drink it.

• ***Hemorrhage from the uterus***—Have patient lie down and elevate the feet. Give a hot douch of herb tea. It can be **bayberry bark, bistort root**, or one of the above-mentioned herbs. Steep 1 Tbsp. of the powder in a quart of boiling water for 10 minutes. If the herb is granulated, use 2 Tbsp. to 1 quart boiling water; steep 20 minutes. Let settle, strain, and apply as hot as possible.

• ***Hemorrhage of the bowels***—Patient should lie down. Inject a tea made of one, or a mixture of several, of the **astringent herbs** (such as **red raspberry, white oak bark or wild alum root**). Inject 2-3 oz. with a small syringe. Retain as long as possible; then repeat. Have him drink the same tea.

• ***Hemorrhage of the nose***—*See Nosebleed (318).*

• It is of interest that, for all of the above internal bleeding problems, R.T. Trall, M.D., used **cold applications (water and ice)** alone to stop the bleeding.

• For chronic hemorrhage, Dr. Christopher recommends the following formula: Prepare an infusion of hops tea. Stir 1 tsp. **tormentil** root powder into 1 cup of the **hops** infusion. Drink 1 cup 4 times daily.

• For hemorrhage, he recommends giving 2 fl. oz. of **tormentil** tea as an infusion every ½ hour until the excessive discharges are checked.

—Important: see # Water Therapies which Control Internal Bleeding (below) and External Bleeding (444).

—Also see Peptic Ulcers (354), Colitis (373), Cancer (611-626), Hemorrhoids (378), Tuberculosis (412), Noseblood (318), Menstrual Disorders (644).

ENCOURAGEMENT—The consciousness that you are doing those things which God can approve will make you strong in His strength; and, by copying Christ the great Pattern, you can be the blessing He intends for you to be in this world. Romans 5:10, 17.

WATER THERAPIES WHICH CONTROL BLEEDING

NATURAL REMEDIES

Hemostatic effects (stopping of bleeding) may be obtained either directly by application to the bleeding area or indirectly through **applications to a reflex area**.

To obtain direct effects, either very hot (110°-115° F.) or very cold (32°-40° F.) applications must be used. The most valuable hot application is the **hot compress**. A **jet of hot vapor** has also been used successfully. Here are some examples of hot applications: **hot nasal spray** and **sponging the face with very hot water** for nose bleed, **hot vaginal douche** for menorrhagia, **hot uterine irrigation** in metrorrhagia and postpartum hemorrhage.

The most convenient cold applications are **ice and ice compresses**. These should be applied directly to the bleeding area or (as a proximal compress) across the trunk of a main artery supplying the bleeding part. An example of this would be an **ice collar** (ice cravat) for nosebleed.

ENCOURAGEMENT—In place of the tinsel of the world, God wants to give you (for a life of obedience by faith in Christ) the kingdom under the whole heavens. He will give you an eternal weight of glory and a life that is as enduring as eternity.

HEMOPHILIA

SYMPTOMS—When a wound occurs, blood does not clot normally.

Early warning signs of internal bleeding include a bubbling or tingling sensation, a feeling of warmth, tightness, or stiffness in the hemorrhaging area.

Headache, confusion, drowsiness, or a blow to the head may indicate bleeding in the head.

If your hemophiliac child cries for no apparent reason, refuses to walk, use his arm or leg, or seems to have a swelling or unusual bruising, go to an emergency room.

CAUSES—Hemophilia is **hereditary**. It primarily affects males and is passed down through females (who are carriers). Children of carriers have a 50% chance of inheriting the defective gene. If they inherit it, the boys will be hemophiliacs and the girls will be carriers. The sons of hemophiliacs will not give the problem to their sons; but the daughters will always be carriers.

As many as two-thirds of all hemophiliacs in America have HIV. They contracted it from contaminated blood transfusion sources in the early 1980s. About 450 babies are born with hemophilia each year.

The blood of hemophiliacs does not clot properly; yet minor bleeding is not serious. It is the internal bleeding that can be fatal, if not treated.

Bleeding frequently occurs in the knees, which causes painful swelling. Repeated swelling destroys the knee cartilage and results in a permanently stiff knee (called hemophiliac arthritis). Other joints and body parts, including the brain, can also be affected by internal bleeding.

The hemophiliac is periodically given blood transfusions to provide the missing blood factors.

Wear a bracelet which gives your name, address, phone number, and the fact that you are a hemophiliac. Be continually on the alert to possible signs that internal bleeding has started.

NATURAL REMEDIES

• Eat a diet high in **vitamin K**. Foods rich in K and other essential clotting factors include **alfalfa, broccoli, egg yolks, kale, and all green leafy vegetables**.

• Drink **green drinks**, consisting of pineapple juice and one or more of the above green vegetables.

Take **vitamin K** (300 mcg daily).

• Other nutrients essential for clotting include the **B complex**, extra **niacin or niacinamide**, **vitamin C** (3,000 mg daily), **calcium** (1,500 mg daily), and **magnesium** (1,000 mg daily).

• Never take **blood-thinning drugs**, such as **aspirin** or **warfarin**. They eliminate clotting factors in the blood, and thus intensify the problem.

ENCOURAGEMENT—To go forward without stumbling, we must have the assurance that an all-powerful hand will hold us up and an infinite pity be exercised toward us if we fall. God alone can, at all times, hear our cry for help. Isaiah 63:9.

BLOOD POISONING
(Septicemia)

SYMPTOMS—Swelling, severe localized pain and discoloration. Red streaks from the wound which extend up the veins toward the heart. Sores which do not heal. High fever, chills, and violent shivering.

If not treated immediately, the bacteria can produce toxins which damage blood vessels, causing a drop in blood pressure and tissue damage. This is called septic shock; the symptoms are faintness, cold and pale hands and feet, restlessness and irritability, rapid and shallow breathing. Soon this leads to delirium and loss of consciousness.

Whenever a sore, cut, or abrasion becomes red and infected, it could produce blood poisoning.

CAUSES—Septicemia is a potentially fatal condition in which bacteria multiply rapidly in the bloodstream. They are normally killed by the white blood cells; but sometimes there are so many bacteria from a major source of infection (such as kidney infection), they threaten to overwhelm the body's defenses. Septicemia can develop as a complication of almost all types of serious infectious diseases.

People with reduced natural immunity are the most susceptible. This includes those who have diabetes mellitus, HIV, chemotherapy, or immunosuppressant drugs. Young children, the elderly, and intravenous drug users are also more susceptible.

NATURAL REMEDIES

• Contact a physician.

• Apply two **hot fomentations** and then place a **cold towel** over the affected area. Continue this alternate application until the red lines disappear.

• Apply a poultice of **lemons** or **charcoal**. Or crush l one or more of the **herbs** listed later in this article.

• Take a high **enema**.

• Drink as many cups of **echinacea** tea a day as p possible.

• Keep the temperature in the room evenly warm, r have enough air, and give a little **cayenne** in water when t he feels chilly.

• Drink **charcoal** water.

• If there is a wound, wash it thoroughly with **boric** s solution. If the discharge from the wound is thin, apply p powdered 50-50 **myrrh and goldenseal** directly to the s wound.

• Go on a cleansing program of **juice fasting** for a s time, followed by rebuilding on a good, **nourishing diet**.

• Drink a tea of **chickweed, plantain, goldenseal, and myrrh**.

• For blood poisoning, Dr. Christopher recommends s mixing 4 parts **bayberry root bark**, 2 parts each of **cayenne** and **cloves**, 1 part each of **ginger** and **pinus bark** (or **hemlock spruce**). Put 1 Tbsp. of the mixture in 1 pint boiling hot water, cover and steep until cool, strain. Drink 2 Tbsp. or more 3 times daily.

ENCOURAGEMENT—It is a solemn thought that the removal of one safeguard from the conscience, the failure to fulfill one duty, the formation of one wrong habit may result in the ruin of another, not only in our own ruin. James 1:22-27.

BLOOD PURIFIER

Here are three herbal formulas for purifying the blood:

• Mix 4 Tbsp. each of yellow dock and burdock root, and 1 Tbsp. of blood root. Put them in 1½ quarts boiling water. Simmer and reduce to 1 quart. Strain, sweeten with honey and 1 pint of glycerine. Mix well. When cool, bottle and keep in a cool place. Take 2 fl. oz. 3-4 times daily.

• Mix ½ oz. each of red clover, yellow dock, burdock root, blue flag. Combine with ¾ oz. sarsaparilla and 1 tsp. wild giner or Canada snake root. Simmer the herbs in 3 pints of water until it reduces to 2 pints. Strain, sweeten with honey, let cool, bottle and store in a cool place. Take 3 Tbsp 3 times daily.

Mix 1 oz. each of licorice root, cleavers, burdock root, sarsaparilla root, fumitory, and guaiac chips. Pour 3½ quarts of boiling-hot water over the herbs and simmer down to 2 quarts. Strain, sweeten with honey, allow to cool, then bottle and store in a cool place. Take ½ cup 3-4 times daily before meals.

ENCOURAGEMENT—All who resolutely cling to Christ will stand before Him as chosen and faithful and true. Satan has no power to pluck them out of the hand of the Saviour. Not one soul who in penitence and faith has claimed His protection will Christ permit to pass under the enemy's power.

NEURO-MENTAL

NEURO-MENTAL - 1 - MISCELLANEOUS

INSOMNIA
(Sleeplessness)

SYMPTOMS—Inability to get to sleep, night after night.

CAUSES—If it only happens once in a while, it is sleeplessness; if it happens for weeks or months, it is insomnia. It is said that, to one degree or another, 100 million Americans have insomnia and take 600 tons of sleeping pills each year to avoid it. About seven times as many women as men experience the problem. Sleeping pills are second only to aspirin sales in the U.S.

Side effects from sleeping pills include anxiety, depression, skin rashes, irritability, loss of appetite, poor coordination, digestive disturbances, difficulty with vision, confusion, dizziness, high blood pressure, circulatory and respiration disorders, breakdown of parts of the blood (such as the white blood cells which fight infection), damage to the central nervous system, memory problems, and liver and kidney damage.

The experts tell us that if you go to bed on time, have a current of fresh air in the room, and lie there quietly—you will get enough rest even though you do not seem to fall asleep as quickly as you might wish. Many people who report not getting to sleep at night actually slept quite a bit without realizing it.

Many people have a hard time getting to sleep at night because of *restless leg syndrome (527)*. These people are awakened by **legs which twitch** or kick.

Overeating, eating too close to bedtime, and eating bad food can produce sleeplessness or insomnia. Systemic **disorders in the heart, liver, kidneys, pancreas, lungs, digestive organs, endocrines, and brain** can all affect sleep.

NATURAL REMEDIES

DIET

• Eat **nutritious food**, and let breakfast and lunch be your main meals. Only **eat lightly in the evening**, several hours before bedtime.

• Foods with the amino acid, **tryptophan**, promote sleep. These include figs, dates, and whole grain crackers.

• Take **calcium** (2,000 mg) and **magnesium** (250 mg). A lack of them can cause you to wake up after a few hours and be unable to return to sleep.

• Take **B complex, vitamin B_6** (50 mg), **pantothenic acid** (100 mg), **niacinamide** (500 mg), **inositol** (600 mg), and **vitamin C** (1,000 mg in divided doses)

• Avoid **complicated and indigestible foods (including meat)** before bedtime. Better yet, keep those junk foods entirely out of your diet. Do not eat **eggplant, potatoes, sugar, spinach, or tomatoes** before retiring. They contain tyramine, which increases the release of *norepinephrine*, a brain stimulant.

• Other foods which keep people awake include **fatty foods, sugar, white flour, salt, monosodium glutamate (MSG), chemical preservatives, additives, and allergenic foods**.

• Stop eating **cheese, bacon, chocolate, ham, sausage, and wine.**

• **Alcohol, barbiturates, and hypnotics** do not solve the sleep problem, but only worsen it. Alcohol disrupts sleep later in the night. Nicotine appears to be calming, but it is actually a neuro-stimulant.

• The following substances, taken during the day, excite the brain and prevent good sleep at night: **caffeine, alcohol, tobacco, and aspartame** (NutraSweet). **Meat** eaten for supper will keep you awake.

• Do not take **nasal decongestants and other cold medications**. They stimulate many people and keep them from getting to sleep.

• The following **drugs** will keep you awake at night: Anacin, Exedrin, Triaminic, antidepressant drugs, some birth-control pills, many asthma drugs, Dopar (for Parkinson's), steroids, chemotherapy, tranquiliz-

EMERGENCIES: (750-757)

ers, drugs for high blood pressure, and amphetamines.

• **Sunlight** during the day helps you sleep at night. Upon awakening, open the shades and let the sunlight in. Eat breakfast near a sunlit window. Avoid dark glasses in the morning and late in the day.

• Studies reveal that, in countries where people regularly **nap during the day**, there are fewer accidents and productivity is higher. The important factor here is consistency. Be regular in your hours for sleep at night. If you nap during the day, be regular in that. Naps before meals are better than naps afterward.

• If you are wakeful one night: **Do not nap the next day**, and you will be more likely to go right to sleep that night. If you find yourself very sleepy, go to bed early.

BEFORE BEDTIME

• Take a **hot bath** (instead of a shower) an hour or two before bedtime.

• Before bedtime **go outside and walk** around quietly in the fresh air for 30 to 45 minutes.

• Some people need to have the bedroom **quiet**. Others need some sound to mask background noise. In such cases, having a **fan** turned on works well.

• Trust in God. He promises to give His beloved rest.

• For some people, **daytime naps** make it more difficult to sleep at night. But, for some older people, a little rest before mealtime during the day helps them; so that any sleeplessness at night never fatigues them.

• Some take **melatonin or calcium** to help them go to sleep. Both promote sleep. Taking melatonin products continually can stop production of your own melatonin!

• Do not take **sleeping pills**. They contain pain relievers, such as bromides, antihistamines, and/or scopolamine. These are ineffective. They produce unpleasant side effects and interfere with normal brain functioning, causing poor-quality sleep. They can produce a hangover, so you cannot work as well the next day. The brain quickly adapts to the drug; so, after 4-6 weeks they are no longer effective, unless you take more. The easiest way to overcome the habit of taking sleeping pills is go on herb teas at the same time.

HERBS BEFORE BEDTIME

• Excellent herbal teas which help increase sleepiness include **hops, catnip, and skullcap**. But do not rely on herb tea to help get you to sleep every night. Lemon balm is both a sedative and stomach soother.

• Drink **valerian** tea (1-2 tsp. per cup of water or 150-300 mg of the valerian extract) about 30 minutes before bedtime. In Britain, it works so well; over 80 drugstore valerian preparations for sleeplessness are sold. **Passionflower** tea works equally well.

• Another English remedy: Hospitals put **lavender oil** in the evening bathwater or sprinkle it on the sheets. (Never drink any essential oil.)

• One old remedy to help a nervous person sleep is placing compresses of **wormwood, balm, chamomile, and lavender** on the head.

• Herbal teas to help you go to sleep: Mix 3 parts **hops** and 2 parts **valerian**. Steep 1 tsp. in ½ cup boiling water. Take ½-1 cup a day, unsweetened, in mouthful doses. Do not take it for more than 2 weeks, without interruption.

• An outstanding herb tea: Mix equal parts **valerian** root, **hops**, **skullcap**, and **passionflower**. Put the dried herb mixture into capsules. Take 2 one hour before retiring, and another 2 upon retiring.

DURING THE NIGHT

• **Regularity** in your habits is important. This is vital to good sleep. Always go to bed at the same time and get up at a definite time. The body has normal rhythmic cycles. People with regular habits have faster reaction time and are happier than those with irregular sleeping times. Getting up each morning at the right time will help you go to sleep at the right time each night. Sleeping in, on weekends, disrupts the biological clock. If you want sleep problems, stay up late every so often.

• The **bedroom temperature** should be 60°-65° F. If the room is too warm, you are likely to move about more and awaken frequently. The problem is a lack of air.

• If you want a restful night's sleep, make sure a little **current of air** is passing through the room, even in winter. You cannot sleep well when it is stuffy.

• If you cannot sleep, you can **just lie there, relax, and rest**. This is nearly as good as sleep.

• In the **middle of the night**, you can get up and do something quietly and calmly for a short time—and then go back to bed and to sleep. One excellent method is to go outside and breathe the fresh air, look up at the stars, breathe some more fresh air. Be thankful for your blessings—and then go back to bed and sleep.

• *Restless leg syndrome (527)* at night can be a problem. **Calcium** (2,000 mg), **magnesium** (250 mg), **potassium** (5,000 mg), **and zinc** (30 mg) supplements help eliminate that problem. In addition, make sure you are not anemic. *See anemia (440).*

OTHER HELPS

• Obtain enough **exercise** during the day, with some of it being outside. Exercise regularly in the late afternoon or early evening, but not right before retiring.

• Make sure you have a **good mattress** on which to sleep.

• Keep your thoughts heavenward, and you will find it much easier to go to sleep at night.

—Also see Sleep Apnea (450).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR INSOMNIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-156 / Hydrotherapy Disease Index: pp. 209-211)*

TO RELIEVE BRAIN CONGESTION—Neutral Douche, 3-5 minutes at bedtime. **Cold Douche. Hot Leg Bath**. Footbath under running water. Heating **Wet Sheet Pack**, followed by **Wet Sheet Rub. Hot Abdominal Pack**, warmly covered and protected with plastic. **Heating Leg Pack**. Dry heat to the legs and feet. **Hot Leg Pack.** Follow with

Cold Mitten Friction to the legs. **Heating Compress** to legs or Leg Pack at bedtime, to be prolonged during the night. **Hot Abdominal Pack** and **Leg Pack** through the night. Revulsive Douche to the legs at 102° F. for 2 minutes; then 60° F. for 15 seconds. **Neutral Douche**, 3-5 minutes. Downward stroking of head and neck [to eliminate phlegm and aid lymph flow].

RELIEVE IRRITABILITY OF THE BRAIN CELLS—**Prolonged Neutral Bath** at bedtime. **Neutral Wet Sheet Pack. Enema**, if constipation or flatulence is present.

IRRITABILITY OF SOLAR PLEXUS OR LOWER BACK NERVES—Abdominal **Fomentation.** Follow by abdominal **Heating Compress**, changing every 6 hours. Avoid eating anything but fruits after 4 p.m. Copious **water** drinking. **Colonic**, especially if the bowels are inactive. Constipation is a frequent cause of insomnia by producing irritation of the abdominal sympathetic nerves.

EXCESSIVE CARDIAC ACTIVITY—**Ice Bag** over heart.

FIDGETINESS OR RESTLESSNESS—**Warm Pail Pour** to spine, at 95°-98° F. **Tepid Sponging** with rubbing of limbs, rubbing of spine, and massage of head.

GENERAL IRRITABILITY—Neutral **Wet Sheet Pack. Neutral Full Bath.** Neutral Fan Douche or Shower, for 2-4 minutes.

GENERAL METHOD—There may be said to be three forms of insomnia: Sleeplessness may be due to (1) congestion of the brain, (2) irritability of the brain cells, or (3) a combination of these two conditions. Here is how to go to sleep: (1) Come to God; and, in peace of heart, trust in Him. (2) Relax and let your mind rest; do not try to problem-solve, you just gave them all to Jesus. (3) Check the temperature and air; it is more difficult to go to sleep in a room that is too hot, too cold, too drafty, or one lacking fresh air. (4) With your nerves and muscles relaxed and cheerful in the thought of Jesus' love, concentrate on breathing slightly deeper and go to sleep.

ENCOURAGEMENT—Every faculty with which the Creator has endowed us should be cultivated to the highest degree of perfection, that we may be able to do the greatest amount of good of which we are capable. Matthew 25:14-29.

NARCOLEPSY

(Chronic Sleeping Disorder)

SYMPTOMS—A person can suddenly fall asleep, with almost no advance warning, as often as eight or more times a day. The deep sleep may continue for an hour or two. Although refreshed upon awakening, the person may fall asleep again soon afterward. While sleeping, they can be easily awakened. During the sleep, the person may experience complete loss of muscle control. Symptoms vary.

CAUSES—A chronic neurological sleep disorder involving sleep-wake mechanisms in the brain. There are two main types: dopamine dependent depression (DDD) and a type involving a deficiency of vitamin B_6 in the dopaminergic system. Also there is poor use of body oxygen.

NATURAL REMEDIES

• Obtain **an excess of rest. Lay down and rest before or after meals, and at other times through the day.** Retire early at night, even though you do not seem to be fatigued. Just lay there and rest.

• Eat only the most **nourishing food**. Take **vitamin-mineral supplements**.

• The diet should be low in **saturated fats** and **clogging foods**, including **dairy** products and **animal protein**. Search out your **allergenic foods** *(576)*.

• **Avoid stressful situations**; and, when you feel tired, **stop and rest.** Maintain **strict regularity** in your hours for rest. **Never stay up late** at night.

• Do not use **tobacco, alcohol, caffeine, or any drugs** you can avoid.

• Make sure your **workplace is well lit**, preferably by full spectrum lighting. The brain makes melatonin to help you go to sleep; but bright light suppresses the production of that chemical.

ENCOURAGEMENT—Thank God every day of your life that, through the enabling grace of Jesus Christ your Lord and Saviour, you can do all that God asks.

SLEEP APNEA

SYMPTOMS—Frequent and abnormal cessations of breathing occur during sleep. They are followed by brief awakenings as the sleeper gasps for air.

The first obvious symptom is loud snoring. If it is so loud that it awakens anyone else in the room or elsewhere, and is interrupted by pauses and then gasps for air, sleep apnea is probably the cause. Frequent daytime drowsiness is another indication. Depression, forgetfulness, irritability, anxiousness, or difficulty in concentrating are other signs.

CAUSES—The word, apnea, means "interrupted breathing." While sleeping, the person intermittently stops breathing. He is usually unaware that his rest has been disturbed, but it has. Each apnea episode lasts about 20 seconds; but as many as 400-500 can occur during a single night. So he spends more time awake than asleep. But unaware of what has happened, the person cannot understand why he is so tired out after sleeping all night. He tends to be overweight.

Sleep apnea is also a risk factor for heart attacks, stroke, high blood pressure, right-and-left ventricular heart dysfunction, and heart failure. Sudden death sometimes occurs.

These people also have a higher incidence of emotional and psychotic problems.

NATURAL REMEDIES

• **Lose weight.** Excess weight is linked to this disorder. Even a 10% weight loss will produce decided improvement in the number of nightly episodes.

• **Sleep on your side** to avoid snoring. The gasping episodes are associated with snoring.

• **Alcohol, tobacco, and sleeping pills** cause the

airway to more easily collapse during sleep, making each episode longer in duration.

• Special mouth guards can be worn at night, which prevent gasping episodes.

—*Also see Insomnia (448).*

ENCOURAGEMENT—We will hide in Jesus Christ. We will trust in His love. We will believe day by day that He loves us with a love that is infinite. Let nothing, nothing discourage you, and make you sad. Think of the goodness of God. Recount His favors and blessings.

VERTIGO
(Dizziness)

SYMPTOMS—Dizziness, faintness, or light-headedness. The person may feel that he is falling or sinking or that the room is moving around him, sometimes even spinning. There may be ringing in the ears. This sensation is usually accompanied by nausea, vomiting, perspiration, headache, or hearing loss.

CAUSES—Vertigo is caused by an **impaired sense of balance and equilibrium**, and is generally due to an **inner ear disorder** (labyrinthitis). Older people have it more often than those younger. *See Mènière's Syndrome (325).*

If the original cause is **concussion, skull fracture, or injury to the inner ear**, the dizziness may occur long after the injury supposedly healed.

Other causes are **anemia, brain tumors, high or low blood pressure, psychological stress, lack of oxygen or glucose in the blood, nutritional deficiencies, viral infection, fever, changes in atmospheric pressure, the use of certain drugs, middle-ear infections, excess wax in the ear, or blockage of the ear canal or eustachian tube.**

Lower **oxygen levels at higher altitudes** can also cause it, as well as **vitamin B_6 and niacin deficiency.**

You can expect that you may temporarily experience it if you engage in certain activities, such as **amusement park rides, sailing, or virtual reality games.**

WARNING: Be aware that dizziness can be ***a warning sign of a coming heart attack or stroke.*** It can also indicate that a **concussion or brain damage** has just occurred.

Dizziness is not the same as vertigo. From time to time, anyone can experience some dizziness or faintness. Those with **low-blood pressure** will frequently experience this when standing up suddenly.

Chronic vertigo can be caused by **atherosclerosis** *(427)* or **high blood pressure** *(429);* and it may recur frequently. *Senile vertigo* can result from **atherosclerosis** *(427).*

NATURAL REMEDIES

• Immediately, **sit in a chair with your feet flat on the floor** and **stare at a fixed object** for a few minutes.

• When an attack occurs, **restrict your head movement** and keep your eyes fixed on a stationary object a great distance from you. Or **lie down, with your unaffected ear against the floor, and look in the direction of the affected ear.**

• If the cause is an inner ear disorder, the underlying disorder needs to be treated.

• But, if the cause is *low blood pressure*, **lower your head** while the blood gets up there.

• Eat a nutritious diet which includes the entire **B complex. Especially niacin, B_6** (200 mg), **B_1** (200 mg), **B_2** (200 mg), **and pantothenic acid** (50 mg). **Vitamin C** (1,000 mg), **vitamin E** (400 IU), and **lecithin** (1 tsp. per meal) are also needed.

• Do not take over 2,000 mg of total **sodium** per day. Too much sodium disrupts the operation of the inner ear.

• Avoid **nicotine, caffeine, alcohol, and fried foods.**

• The problem may be *low blood sugar*, not enough glucose. Solve this by increasing intake of **fiber** and decreasing simple carbohydrates (**white sugar and white flour**). Drink a glass of **orange juice** to overcome brief dizziness. But snacking on **refined carbohydrates or candies** may intensify it.

• A calorie-reduced diet **low in sugar and fat** can eliminate repeated dizziness. Sometimes **low-protein** diets cause the problem.

• If vertigo begins after taking some new **drug**, stop using it immediately.

• If vertigo seems to be *chronic*, **search out the causes.** You may need professional help.

HERBS

• In Europe, **ginkgo** (60-240 mg daily) is prescribed for vertigo. In one French study, people with chronic vertigo showed 47% improvement.

• For thousands of years, sailors on the open sea chewed **ginger** for seasickness. Research by the U.S. Navy found it reduced dizziness by 38%. Swallow 2 capsules 30 minutes before departure; and swallow another 1-2 capsules when symptoms begin. In another study, 1 gram of ginger relieved vertigo better than the standard drug.

• The Chinese use **celery seed** for dizziness.

• Dizziness, caused by low blood pressure, can be relieved by **licorice.**

• **Catnip** tea will help.

• **Black cohosh** or **garlic** will lower blood pressure.

—*Also see Mènière's Disease (325) and Motion Sickness (220).*

ENCOURAGEMENT—When you live a life dedicated to helping others, yours is a life full of satisfaction and happiness. This is the will of God for you, even your sanctification. Obey God's laws. Find ways to bless others, and you will best fulfill your earthly probationary life. Thank God every day for the gift of His Son, Jesus Christ, who, by His grace, enables us to obey the ten commandments and live good, clean lives. 2 Corinthians 4:6-18.

NEURASTHENIA
(Nervous Exhaustion)

SYMPTOMS—The symptoms vary greatly. Most frequently there is easy fatigue, a sense of great weariness after slight exertion, or inability to perform a normal amount of mental or physical labor.

There may be mental depression, impaired memory, and inability to concentrate. There may be a sense of fullness, pressure, or pain in the head. Pains in the neck, shoulders, back, and limbs. Tender spots on the spine. Dizziness, ringing in the ears, attacks of palpitation and distress about the heart. Cold feet, clammy hands, hot flashes about the head. There is generally constipation, a disturbed digestion, and sleeplessness.

CAUSES AND NATURAL REMEDIES

• A variety of causes may, and probably are, involved. For example, the person may be hypothyroid and fears to exert himself. Yet **vigorous outdoor activity** is probably what he needs, along with **fresh air and sunlight**.

• The orthodox approach is to prescribe rest and quiet. But it may be that **getting outside and walking around** is a better solution during part of the day. **Find someone else who needs help** and help them.

• Start taking on small challenges, and then expand them. Begin by washing the dishes and sweeping the floor. Do something useful, and thank God that you can.

• Eat **nourishing food**—and nothing else. Include **niacin** and the entire **B complex**. Do not eat between meals. Chew your food well. Do not overeat. Do not go on binges.

• Stop consuming all **fried, processed, junk foods and drinks**. Stop **alcohol, tobacco, caffeine, and hard medicinal drugs**. Avoid **chemicals** in the food, air, and water.

• Take a **cool shower**; jump out and dry off in the cooler air.

• Run down the road a few yards. Go in and **lie down and rest. Go outside and run again**. Within good reason, keep pushing yourself; get yourself built up.

• Avoid **enervation and practices that cause it**. Think positive. Be thankful for what you have and what you can do.

—Also see Debility (213), Emotional Fatigue Syndrome (213), Chronic Fatigue (214), and Epstein-Barr Syndrome (214).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR NEURASTHENIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

NOTE—Neurasthenia (nervous exhaustion) is not a distinct pathological entity, but a group of symptoms due to various etiological influences and connected with various morbid states.

BASIC ASPECTS—Rest cure for those who have been overworked, nervously and physically, and for those who are mentally and nervously tired.

COMBAT AUTOINTOXICATION—Aseptic diet. **Fruit diet**. Daily **Neutral Baths**, 1-3 hours. **Sweating procedures** of short duration (3-6 minutes), followed by suitable **cold applications**. Hot **Enema** daily. Copious **water** drinking. **Outdoor life**.

COMBAT EXHAUSTION—Rest for the overworked. **Improve digestion** by proper diet; in cases of starved dyspeptics, by appropriate measures. Tonic **cold applications** carefully graduated—especially Percussion Douche to spine.

CHECK EXHAUSTING DISCHARGES—Apply appropriate measures. See under "Menorrhagia," "Leukorrhea," and "Spermatorrhea."

RELIEVE REFLEX IRRITATION—If sexual, rectal, prostatic, or urethral irritation: Employ Revulsive **Sitz Bath**, Prolonged Neutral Sitz Bath, **Hot Footbath**, **Hot Pack** over pelvis. For ovarian irritation, in addition to above, hot vaginal irrigation for 15-20 minutes.

IRRITATION OF SOLAR PLEXUS AND SYMPATHETIC NERVES—Fomentation over abdomen, 3 times daily. During intervals, **Heating Compress**. Abdominal supporter.

IMPROVE GENERAL NERVE TONE—Graduated **cold applications**. The Cold Percussion Douche to spine is the most efficient of all measures. General Cold Douche. Very Hot Douche at 110° F. for 30 seconds, followed by Graduated or Cold Douche.

HEADACHE—Hot and Cold Compress. Revulsive Compress. To spinal area, give **Alternate Compress** or Sponging. **Hot Footbath**. Footbath under running water.

FRONTAL HEADACHE—Revulsive Compress to forehead and eyes. **Hot and Cold Trunk Pack**. Derivative applications to feet and legs.

CONGESTIVE HEADACHE—Ice Bag to back of head and **Cold Compress** to face. Ice Collar, **Hot and Cold Compress** to head, Hot Footbath, **Hot Leg Pack**, **Heating Compress** to legs, **Cold Footbath** under running water. **Alternate Footbath**, and **wear felt shoes**.

OCCIPITAL HEADACHE [on back of head]—Hot Compress or Sponging to upper spine and occipital region. **Revulsive Compress**, **Hot and Cold Compress** to head. [The occipital region is the area around the bump on the back of your head].

NERVOUS HEADACHE—Fomentation to seat of pain, with simultaneous **Hot Footbath**. Daily **Cold Enema**, to relieve constipation if present. Special attention to the diet. A **dry aseptic diet** is indicated, avoiding milk.

SENSATION OF BAND AROUND HEAD—Hot Sponging or **Hot Compress**. **Alternate Sponging** of neck and upper spine, massage to head.

SENSATION OF PRESSURE AT VERTEX [top of head]—Hot Footbath, **Cold Compress** to head, **Ice Collar**, sleep

with head elevated, heat to feet and legs if cold.

PAIN IN EYES. INTOLERANCE TO, OR USE OF, LIGHT IN READING—Light, warm (not hot!) **Fomentation** over eyes and forehead, but never over naked eyeball. Close eyelids and lay gauze or thin, dry cotton cloth over it, beneath the Fomentation. Protect eyes from bright light. Facial massage and massage to eye. An oculist should be consulted; for eyeglasses may be needed, temporarily or permanently.

BACKACHE—**Fomentation** to abdomen, **Hot Abdominal Pack**, abdominal supporter, Alternate Spinal Sponging or **Alternate Compress**, Revulsive Douche to spine, **Revulsive Sitz Bath**.

VERTIGO—**Fomentation** to stomach, followed by **Hot Abdominal Pack**. Bathe face or top of head with very hot water or Hot Compress for 2 minutes. Follow by **Cool Compress** for 15 seconds. Heat to back of neck in anemia of the brain.

ANOREXIA—**Hot-Water Bottle** (containing hot water) over stomach for half an hour before meals with Cold Compress or **Cold-Water Bottle** (containing cold water) to area, front and back, and opposite stomach. Cold Mitten Friction or **Cold Towel Rub**.

MUSCULAR WEAKNESS, ESPECIALLY IN LEGS—**Cold Percussion Douche** to spine. **Alternate Douche** to legs.

MENTAL DEPRESSION—**Sweating Bath**, followed by short general **Cold Douche**. **Neutral Bath** for 1 hour daily. Neutral Pack. **Cold Percussion Douche** to spine. **Alternate Sponging** to spine or Alternate Douche to spine.

FIDGETINESS—**Fomentation** to abdomen, followed by **Hot Abdominal Pack**. Empty colon, if loaded, by Enema. Abdominal supporter. **Revulsive Sitz Bath**, **Neutral Pail Pour** to spine.

DREAMS—**Neutral Bath** for half an hour before going to bed. **Hot Abdominal Pack**. Evaporating head cap. Elevate head of bed. Avoid eating after 4 p.m., except fruit.

COLD EXTREMITIES—**Revulsive Douche** to legs and feet, followed by standing Shallow Bath. **Fomentation** to abdomen twice daily, followed by heating compress during the intervals between. **Alternate Footbath**, massage to feet and legs, **Cold Mitten Friction**.

GENERAL METHOD—While not recognizable as a distinct malady, it is convenient from a practical standpoint to consider neurasthenia (general exhaustion) as a disease. The tonic effects of cold water are essential in the treatment of neurasthenic conditions. The management of cold applications in such a way as to secure the desirable tonic effects without aggravating any of his symptoms is a problem which taxes, to the utmost, the skill and experience of the hydrotherapist. Special attention must be given to the digestion, improvement of nutrition, regulation of the bowels, and the relief of prominent and distressing symptoms by suitable palliative measures.

CHOREA

(St. Vitus' Dance, Sydenham's Chorea, Nervous Twitching)

SYMPTOMS—For a few days before an attack, the patient is irritable in the daytime and sleeps poorly. Then irregular jerky movements begin, usually in one hand and arm; but they soon spread to the other hand and arm, the face, and the lower limbs. The jerky movements are constant during the waking hours, cannot be controlled by the person, and are increased by excitement or embarrassment; but, they usually cease during sleep. He shrugs his shoulders, makes faces, and may not be able to feed himself. In severe cases there is marked weakness and fever. Speech is disturbed, jerky, or impossible; and there is difficulty walking.

CAUSES—Chorea is an acute infectious disease; but it is not contagious. Its most prominent symptoms are those which concern the nervous system. It is common from 5 to 15 years of age, and most likely to occur in high-strung, nervous children, especially girls.

Chorea is a complication of **acute endocarditis and acute rheumatic fever**, or from **inflammation of the meninges from a steptococcal infection** that usually begins in the throat (and could spread to the heart (causing endocarditis and/or acute rheumatic disease). Acute disease of the heart is often present, resulting in inflammatory growths on the edges of the heart valves, followed by scarring, distortion, and leakage when healing occurs.

Most attacks last 1-6 months; but artificial fever treatments materially shorten the course. The person nearly always recovers; but the disease may recur. And the damage to the heart valves is liable to be permanent. The disease is more severe in pregnant women than in anyone else.

A variant form is Huntington's Chorea, which is a rare hereditary disease appearing in middle life and continuing for 10-15 years; it usually ends fatally.

NATURAL REMEDIES

• **Apply colloidal silver, echinacea, goldenseal, and garlic** for 30 days (alternating every 7 days between echinacea and goldenseal). The earlier you begin, the better.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHOREA AND ITS COMPLICATIONS ***(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)***

BASIC FACTORS—Combat anemia and improve general nutrition by **graduated tonic applications** (Tonic Frictions), copious **water** drinking, large **Enema** or Colonic, **Fomentation** to abdomen morning and night, **Heating Compress** during intervals between. Secure mental quiet by isolation, if necessary. He should be kept in the open air as much as possible. **Outdoor life** and rhythmical **gymnastics** are especially useful.

INSOMNIA—**Prolonged Neutral Bath** or Neutral Douche, **Hot Abdominal Pack**.

AGITATION—**Neutral Pail Pour** to spine, **Wet Sheet Pack**.

IRREGULAR MOVEMENTS—**Neutral Pail Pour** to spine daily, prolonged **Neutral Bath**, special exercises.

ENDOCARDITIS—**Ice Bags** over the heart.

GENERAL METHOD—Improve the nerve tone by tonic measures and careful attention to nutrition. Train him to better mental and moral control and to combat choreic

movements by systematic gymnastic training.

ENCOURAGEMENT—God gives us strength and time to build characters which He can improve. By the enabling grace of Christ, put away sin from your life and live to bless others. 2 Kings 17:39.

SHOCK

SYMPTOMS—Shock may not develop until hours after the injury or illness. But, as soon as blood pressure falls, the symptoms suddenly develop. These may include cold, clammy skin and sweating. There is contusion or agitation, rapid and shallow breathing, fast heartbeat, and loss of consciousness.

CAUSES—Shock is a severe reduction in blood pressure, causing poor blood supply to major organs. This cold, pale, collapsed state may develop as a result of **any situation in which the heart cannot pump blood effectively or in which there is too little blood for the heart to pump**. The usual cause is serious injury or illness.

It is a potentially life-threatening condition that necessitates immediate medical attention.

(This condition is not the mental or emotional distress, commonly called "shock," which follows a startling experience.)

It may result from **serious blood loss, such as bleeding from the digestive tract or from a serious injury**. The blood volume may also be reduced by **fluid loss due to severe burns or profuse diarrhea**.

An **allergic reaction** *(Anaphylaxis, 574)* or serious **blood infection** *(Septicemia, 446)* may cause the blood vessels in the body to widen, resulting in a severe drop in blood pressure and shock.

NATURAL REMEDIES

Take him to the emergency room immediately. Once the cause is ascertained, they will provide suitable treatment.

• For emergency measures which can be done until medical help arrives, turn to the section on Emergencies: *Shock (454, 753), Heart Attack Signals, How to Give CPR (753), How to Do Rescue Breathing (755).*

ENCOURAGEMENT—All who have a sense of their deep soul poverty, who feel that they have nothing good in themselves, may find righteousness and strength by looking unto Jesus.

TRANSIENT ISCHEMIC ATTACKS

SYMPTOMS—Loss of vision in one eye or blurry vision in both. Feeling of unsteadiness and general loss of balance. Slurred speech. Difficult finding the right words. Problems understanding what other people are saying. Numbness on one side of the body. Weakness or paralysis on one side of the body, affecting one or both limbs. Loss of consciousness.

CAUSES—Transient ischemic attacks (TIA) consists of episodes of temporary loss of function in one area of the brain, resulting from a reduced blood supply to the brain.

Part of the brain suddenly and briefly fails to function properly because it is temporarily deprived of oxygen by blockage of its blood supply. This can last 1 second to 1 hour and has no aftereffects. If the symptoms last longer than an hour, it is called a stroke *(432)*.

In the U.S., about 1 in 600 people after the age of 45 has a TIA. Attacks are three times more likely in men. If the underlying problem is not solved, about 1 in 3 later has a stroke. So a TIA should not be ignored!

A thrombus usually forms in blood vessels that are affected by **atherosclerosis** *(427)*, a condition in which fatty deposits build up in blood-vessel walls. Those at increased risk are **smokers** *(773)* and those on a **high-fat diet**. Other risk factors are **diabetes mellitus** *(547)*, **high blood pressure** *(429)*, and **sickle-cell anemia** *(443)*.

NATURAL REMEDIES

• When a TIA is identified, it is urgent that the person immediately stop eating all **meat products, saturated fats, and foods** containing meat or saturated fats. Stop eating all **white-flour and white sugar** products. Stop using all forms of **tobacco, alcohol, and caffeine**.

• Turn to the sections which apply to your case, and make needed changes: **Atherosclerosis** *(427)*, **Tobacco Withdrawal** *(773)*, **Diabetes Mellitus** *(547)*, **High Blood Pressure** *(429)*, and **Sickle-Cell Anemia** *(443)*.

ENCOURAGEMENT—If you will come to Jesus just as you are, weak, helpless, and despairing, our compassionate Saviour will meet you a great way off and will throw about you His arms of love and His robe of righteousness.

WERNICKE-KORSAKOFF SYNDROME

SYMPTOMS—Symptoms may start slowly or suddenly, sometimes after heavy drinking, and are frequently mistaken for a drunken stupor. Symptoms include unsteadiness when walking, confusion and restlessness, and abnormal movements of the eyes which often result in double vision.

CAUSES—This condition (WKS) is a brain disorder caused by severe **vitamin B_1 deficiency**; it is usually the result of chronic drinking of **alcohol**.

NATURAL REMEDIES

• The medical treatment is to immediately give him intravenous **injections of vitamin B_1**. Once treated, many of the symptoms may be reversed within days; but memory loss may persist. If untreated, the condi-

ion is fatal.

• Stop drinking **alcohol**. Begin eating an extremely nourishing **diet**, including the entire **B complex**, plus 1,000 mg of B_1 for 5 weeks, followed by 500 mg. daily.

• Stop all habits which tend toward alcoholism, including **spices, soft drinks, caffeine, and hard drugs**.

—Also see Alcohol Withdrawal (775) and Delirium Tremens (608).

ENCOURAGEMENT—When God gave His Son to our world, He endowed human beings with imperishable riches—riches compared with which the treasured wealth of men since the world began is nothingness.

NUTRITIONAL NEUROPATHIES

SYMPTOMS—The tips of the fingers and toes are affected first. Symptoms appear gradually over several months or years, slowly progressing up the limbs to the trunk. Symptoms may include sensation usually referred to as "pins and needles" or loss of sensation. Pain in the feet and/or hands. Walking may be clumsy as a result of loss of sensation in the feet and legs.

CAUSES—The peripheral nerves, which branch from the brain and spinal cord, are damaged by deficiencies of essential nutrients, especially those of the vitamin B complex.

In developing countries, the cause is generally lack of proper nutrients; in developed countries, alcoholism *(775)* is usually the cause. Not only do alcoholics not eat as well, but alcohol can directly damage the peripheral nerves. The risk increases greatly in those who have been drinking for 10 years or more.

Other causes include anorexia nervosa *(381)* and intestinal malabsorption problems *(364)*.

NATURAL REMEDIES

• Stop eating **processed and junk food**; only eat nutritious foods consisting of **fresh fruits and vegetables, whole grains, nuts, and legumes**.

• Take full-spectrum **vitamin-mineral supplementation**, including **B vitamins** and $\mathbf{B_1}$ (1,000 mg).

• Stop drinking all **alcohol** products. Stop using **tobacco, caffeine, and hard drugs**.

—Also see Alcohol Withdrawal (775).

ENCOURAGEMENT—If we lose everything else, we should keep conscience pure and sensitive. When asked to go where there is the least danger of offending God, doing that which you cannot do with a pure conscience, do not fear or hesitate. Look the tempter firmly in the face and say, "No, I will not imperil my soul for any worldly attraction. I love and fear God. I will not venture to dishonor or disobey Him for the riches of the world or the love and favor of a host of worldly relatives. I love Jesus who died for me. He has bought me. I will be true to Him."

NEURO-MENTAL - 2 - STRESS, ANXIETY, PAIN

Also: Claudication (530), Intestinal Cramps (364), Muscular Cramps (527)

STRESS AND ANXIETY

(Nervousness)

SYMPTOMS—Depression, anxiety, irritability, chronic fatigue, low-stress tolerance, nervous exhaustion, unable to cope, insomnia, panic attacks, unable to relax, or diseases caused by immune problems.

Tightening of stomach muscles which causes nausea or digestive problems. Increases in blood pressure, sweaty palms, nervous twitches, tooth grinding, trembling when not cold. Tense muscles, especially shoulder muscles.

Poor concentration, cannot retain information, negative thoughts, loss of sense of humor, demanding attitude, critical attitude, or becoming withdrawn.

CAUSES—Here are a few of the many causes: **deadlines, pressures, problems at home or work, special occasions, crowds, noise, pain, traffic, temperature extremes, overwork, lack of sleep, smoking, alcohol, a worrywart attitude**.

Researchers estimate that stress is significant in 80% of all major illnesses, including cancer, back problems, endocrine, cardiovascular, skin, and infectious diseases.

The adrenals especially suffer from stress. This results in a lowering of the immune system's ability to protect you from infection and cancer. It also disrupts the function of your entire endocrine system.

Everyone experiences stress from time to time. But frequent stress is more serious; and long-term stress wears out the body.

Some people can handle stress better than others. Some individuals work in hospital emergency rooms and thoroughly enjoy the excitement and challenge of every new crisis which comes along. Others burn out and have to transfer within a year.

NATURAL REMEDIES

BASICS

• **Find out what your ongoing problems are and solve them**. Problems are like a wall; you can go through them, go over them, or go around them. You go through a problem when you eliminate it. You surmount an immediate problem when you figure out a way to sidestep it and still do what is needed. You go around it when you learn to live with an ongoing situation you cannot solve. You stop worrying about it or letting it bother you, and turn your attention to other things.

Here are several basic suggestions:

• **Think positive** in every situation. See a good side to this; and learn to make the best of it. See it as

an interesting challenge to solve difficulties. Trust in God to help you weather every crisis and carry on through to the end.

Think about something else for a time. That will help your brain to rest and your emotions to calm down. Gradually answers will come to mind.

• **Counsel with a good friend.** If it is a problem with your husband, counsel with a woman, not with a man. The same holds true for a man.

• The primary problems in a person's life are employment, spouse, money, children, deadlines, and guilt.

• Sometimes you need to **temporarily leave** a threatening situation, get away, and calm down. Take time to pray and rest your mind.

• **Avoid situations** which bring tension.

• **Learn to laugh** at some problems. **Learn to cry** over others. Both can relieve tension.

• **Stretching your muscles** can help move a circulation made sluggish by the situation, so you can think better. Massage muscles which have tensed up. Drop your jaw and move it left to right. This helps relax the jaw muscle.

• Take a relaxing **hot bath**, so you can start thinking constructively again.

• **Go outside and walk** in the open air. Hold your head up, breathe deeply, and relax.

• **Deep breathing**, wherever you are, refreshes the mind and helps you through a crisis.

• Get **extra rest.** It can help strengthen your mind and nerves to handle the problems you must deal with.

• Many times the underlying need is to **go to God and ask forgiveness**, obey His Ten Commandment law, and start living a clean life. **Make things right** with those you have wronged.

• Believe that, with God's help, the situation can be dealt with. **Keep trusting Him** as a little child trusts his parent to lead him by the hand across a busy street.

• A **change in diet** is needed to help restore a sickly immune system. **Fresh fruit and vegetables**, especially raw vegetables. Eating a diet of 60%-70% raw fruits and vegetables will really help you. Kelp or dulse and raw seeds or nuts. Be sure to take enough **vitamin C** (500 mg), as well as a full range of supplementary vitamins and minerals. **Calcium** (1,000 mg) and **magnesium** (500 mg) will help relax your muscles. The **B complex** vitamins nourish the nerves.

• Do not eat high carbohydrates (**white-flour and sugar products**) and **saturated fats**. Indulging in them can hasten burnout. Instead, eat the slower burning **proteins** and quality oils (**flaxseed oil**). Avoid **coffee, chocolate, strong spices, artificial sweeteners, MSG** (monosodium glutamate), **tobacco, and liquor.**

HERBS

• The following **herbs** are helpful: **ginkgo, echinacea, dong quai, gotu kola, bilberry, milk thistle, catnip, chamomile, hops, skullcap, and valerian.** Take them separately or mix 2-3 together; and take as a tea.

• Once in a while, but not too often, take a little **valerian** tea. This powerful remedy will relieve nervous attacks. Add bruised **cloves**, or very small amounts of **cumin oil**, to any tea to relieve nervous irritability.

• To reduce tension and calm anxiety, mix equal amounts of **valerian root, wood betony, black cohosh root, hops, skullcap, passionflower, and ginger root.** Take 2-3 capsules every four hours, as needed.

• Drink **chamomile** during the day and at bedtime to reduce fatigue and nervousness. This gentle tea can be used even for infants.

• Linden flower tea quiets the nerves and promotes sleep. Siberian ginseng helps the body cope better with stress, by strengthening adrenal function.

ENCOURAGEMENT—If you would find happiness and peace in all you do, you must do everything in reference to the glory of God. Seek earnestly to imitate the life of Christ, so others will be helped toward the pathway to heaven. Proverbs 16:7.

HEADACHE
(Nervous Headaches, Cluster Headaches)

SYMPTOMS—A pain or ache in any portion of the head. (Symptoms of 12 different kinds of headaches are on pp. 457-458.)

Cluster headaches: Often occur as a one-sided headache which comes on suddenly, causes debilitating pain, and comes and goes in severity.

CAUSES—Over 45 million Americans repeatedly have headaches. About 18 million have migraines.

Common causes of headaches include **eyestrain, tension, poor ventilation (lack of fresh air), sinus pressure, constipation, allergies (food, pollens, chemicals, etc.), stress, anxiety, muscle tension, infection, anemia, hunger, fever, hormonal imbalances, trauma to the head, nutritional deficiencies, sinusitis, alcohol, drugs, tobacco, spinal misalignment, temporomandibular joint syndrome, airborne pollutants, and chemicals (perfume, industrial fumes, etc.).** Other causal factors include **diseases of the eyes, nose, or throat. Nutritional deficiencies (niacin, pantothenic acid, B vitamins)** or an **overdose of vitamin A. Disturbances of the digestive or circulatory system. Birth control pills** cause headaches by causing a vitamin B_6 deficiency.

The headache may be caused by a reaction to a certain food, such as **chocolate, wheat, sugar, monosodium glutamate (MSG), dairy products, hot dogs, luncheon meats, citric acid, vinegar, or marinated**

foods. Sulfites, found in certain foods, can do it. **Fermented foods, such as sour cream, yogurt, and cheeses** can do it also.

Headaches can be caused by **nitrites in hot dogs, sausages, and other processed meats.** They can be caused by too much **salt** in a meal, **ice cream** (chilling the roof of the mouth), **hunger**, and **cleaning fluids**.

TYPES OF HEADACHES—There are two important subtypes of headaches. Emotional stress is an important cause in all of them:

Nervous headaches. These are muscle contraction headaches. The experts tell us that 90% of all headaches are caused by **tension, worry about problems, conflicts with others**, etc. Nervousness causes the muscles to tighten up.

Cluster headaches. These are severe, recurring headaches. Called histamine headaches, they are related to **allergic reactions. Inhalant allergens** may be a cause (including **perfume, house dust, cigarette smoke**, etc.). They may occur by themselves or be associated with other problems and diseases, including chronic fatigue syndrome *(214)*. Keep a diet diary. Ninety percent of those with cluster headaches are men.

NATURAL REMEDIES

• Consider the causal factors, above, and see what you can change.

• Sometimes repeated headaches are a symptom of a serious disorder. If any of the following symptoms occur with the headache, the situation may be more serious and you may want to consult a professional: fever and stiffness in the neck, sensitivity to light, loss of speech or confusion, throbbing of the head and temples, pounding heartbeat, pressure in the facial sinus area, visual color changes, or a feeling that your head may explode.

• The treatment for headache depends on the underlying cause. Headaches caused by a certain problem frequently return. So identify what is causing them and many future headaches can be staved off.

• What are sometimes thought to be sinus headaches are actually tension headaches, migraines, or cluster headaches. When the headache is recurring, it is probably not sinus trouble.

HYDROTHERAPY

• When a headache comes, apply **cold compresses** to the place where the pain seems to be originating. This reduces muscle spasms and constricts blood vessels. Leave a damp washcloth in the refrigerator for 10 minutes or dip the cloth in water with ice cubes, wring it out, and apply. Also take an **enema**.

• Place a **heating pad, hot towel, or hot-water bottle** on the shoulder muscles, and possibly on the neck. Do that which helps you best.

• Take a neutral temperature **full bath** to get rid of a headache. Try taking a hot **footbath**. For more on water therapy, turn to *pp. 153-211*.

DIET

• **Do not overeat.** Include enough **fiber** in your meals and take an **enema** weekly.

• Make sure you are taking enough **B vitamins**, especially **niacin** (2,000 mg) and **pantothenic acid** (50 mg). **Vitamin A** (get beta-carotene in green and yellow vegetables) and **iron** are also important (but be sure to get your iron from food, such as **blackstrap molasses**, not from chemical supplements).

• People with regular **magnesium** deficiency tend to have tension headaches. Take 600 mg daily.

• **Eat on time** and do not eat **problem foods**.

• Do not use much **salt**.

• If you think that **something you just ate** might bring on a terrible headache, take 5 charcoal tablets within an hour; and, as soon as you can, take an **enema**. (But do not take charcoal tablets daily.)

OTHER HELPS

• Regular **exercise** can help prevent tension headaches. Exercise when it occurs, but do not exercise if it is severe.

• Get enough **sleep**; but do not oversleep.

• **Stand tall; sit tall.**

• **Breathe** deeply.

• **Bright light** can cause squinting, eyestrain, and headaches.

• Do not **chew gum**. The repetitive chewing can bring on a tension headache.

• Do not **overdo**. Learn to live within your limits.

• When you have to face **high altitudes**, take additional vitamin C (plus ginger), to avoid a high-altitude headache.

• Keeping a **diary** will help you determine the cause of the headaches. Note date, time of day, where the pain is felt, and any comments about what you think might be possible causes.

HERBS

• Helpful **herbs** include valerian, feverfew, balm, fleabane, cowslip, lavender, and white willow.

• **Evening primrose** contains *phenylalanine*, a pain-relieving compound. **Ginkgo** increases blood flow, which reduces a headache. Rub diluted **peppermint oil** or **lavender oil** on the temples to alleviate a headache.

• Any of the **willows** will help reduce headache pain. They, along with **cayenne**, contain *salicylates*, which help stop headaches.

• **Turmeric** and **ginger** (combined or separate) are good for headaches.

• Drink a capsule of **hops** with water. **Skullcap** is antispasmodic and helps relax your nerves. **Periwinkle** increases the flow of oxygen in the brain.

• For severe headaches, fast with **juice and green drinks**, and take herb laxatives (**cascara sagrada or senna**).

TWELVE TYPES OF HEADACHES

There are many types of headaches. Here are twelve of them:

• ***Nervous tension headaches:*** Continual pain in one area or many, with sore muscles in neck and upper back, plus lightheadedness and dizziness. Treat-

ment of this most common of headaches includes application of **ice packs** on neck and upper back. Take extra **vitamin C and bioflavonoids. Avoid sugar, caffeine, food allergens, stress.** Get enough **exercise.**

• ***Cluster headaches:*** Strong, throbbing pain on one side of head, tearing of eyes, flushing of face, congestion of nose. May occur 1-3 times a day for weeks or months. Take enough **protein**, avoid **inhalant allergens**, and keep a diet **diary.**

• ***Hangover headache:*** This headache has throbbing pain; it is caused by drinking liquor. Put **ice** on the neck and drink lots of **water and fruit juices.** Stop drinking **alcohol.**

• ***Exertion headache:*** This headache is caused by physical exertion or sexual excess. Apply **ice packs** to the point of pain, improve the **diet**, and stop the **excesses.**

• ***Caffeine headache:*** It is a throbbing pain that happens when you try to quit your **coffee** addiction too fast. Drink a small amount of coffee, to stop the headache; and then gradually reduce the amount and frequency, to get away from this addiction.

• ***Sinus headache:*** A nagging pain to the right and left of the nose and over it. Apply **moist heat**, to reduce sinus trouble *(295)*, and take more **vitamin C.**

• ***Bilious headache:*** The temples throb, and there is a dull headache in the forehead. It is caused by **overeating, wrong eating, and inactivity.** Take an **enema**; then change your **diet** and get more **exercise.**

• ***Menstrual headache:*** A headache which feels like a migraine *(459)*; it occurs at menstruation or during ovulation. Take **potassium, magnesium, and vitamin B_6.**

• ***Hunger headache:*** A general headache which occurs just before mealtime, and is caused by skipping meals or excessive dieting. Eat **better meals**, which include **complex carbohydrates and protein**, to help carry you to the next meal.

• ***Eyestrain headache:*** Pain in the frontal lobes, just behind the eyes. Many think this is caused by uncorrected vision problems; but it can also be caused by too much brain work at late hours. **Change** your way of life; perhaps you need a change in eyeglasses.

• ***Arthritis headache:*** Pain at the back of the head or neck, which increases with movement. **Feverfew** herb teas are recommended, but not during pregnancy.

• ***Hypertension headache:*** A dull pain over much of the head, increased by movement. You need to reduce your **blood pressure.**

—Also see Migraine (459) for more information.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR 28 DIFFERENT HEADACHES *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

NOTE—The following grouping of headaches is made for practical convenience. Because each type has a different cause, it has a different treatment.

HYPEREMIC HEADACHE (caused by excess of blood in the head)—**Rest**, head and shoulders elevated; heat to feet and legs by means of a **Footbath**, Leg Bath, Leg Pack, Revulsive Douche. **Cold** to head and neck, accompanied by **Neutral Enema** at 102° F. **Hot Abdominal Pack**, with well-protected plastic covering. **Wet Sheet Pack.** Neutral spray Douche, given for 24 minutes.

ANEMIC HEADACHE (caused by a lack of blood in the brain)—**Hot-Water Bottle** to back of neck, **Fomentation** over painful part, rest in bed with head low. General treatment for Anemia.

HIGH PRESSURE HEADACHE (head will feel as though it has a great pressure within it)—Abstemious **aseptic diet.** Prolonged **Warm or Neutral Bath** daily, with **Cool Compress** to head. Hot Footbath or, better, **Hot Leg Bath. Revulsive Douche** to legs, **Heating Compress** over heart.

DYSPEPTIC HEADACHE (a headache more directly traceable to indigestion)—(1) The immediate pain: **Hot and Cold Compress** to head; avoid sleeping soon after eating, though a very brief nap is sometimes beneficial. (2) If it keeps repeating, use an **enema** if constipated. **Dry aseptic diet, two meals a day** or only fruit at night.

HEADACHE DUE TO PROLAPSE (of the intestinal or abdominal organs)—(1) The immediate pain: **Alternate Sponging to spine** or Alternate Compress over spine, **Hot and Cold Compress** to head. (2) If it keeps repeating: **Abdominal** supporter, **Hot Abdominal Pack** at night, abdominal massage, **Cold Douche** to abdomen.

TOXIC HEADACHE (caused by an excess of uric acid, oxalic acid, urea and other wastes, or as a result of decomposed products absorbed through the alimentary canal)—**Sweating baths**, followed by a Cold Douche, **Wet Sheet Rub**, or Shallow Bath. Copious **water** drinking. **Enema** or Colonic daily or three times weekly. **Outdoor life. Aseptic diet.**

PERIODIC HEADACHE, NERVOUS HEADACHE, BILIOUS HEADACHE, MIGRAINE, OR LACK-OF-AIR HEADACHE—Dry, abstemious, **aseptic diet. Outdoor life**, air bath, large **Enema** the day before the attack is due. **Tonic Frictions** to build up the body, **Hot Abdominal Pack.** Abdominal supporter, if a prolapsed condition exists.

RHEUMATOID HEADACHE (a headache related to the presence of rheumatism)—**Sweating bath** daily. Hot Footbath or Hot Leg Pack, **Fomentation** to the painful part for 10-15 minutes, followed by **Heating Compress** *(see also "Uric Acid Diathesis).*"

NEURASTHENIC HEADACHE (caused by nervous exhaustion)—**Hot and Cold Compress**, Revulsive Compress, Alternate Compress to spine or Sponging to spine, **Hot Footbath**, Footbath under running water.

FRONTAL HEADACHE (often related to fatigue of the eyes or brain)—**Revulsive Compress** to forehead and eyes, **Hot and Cold Trunk Pack**, derivative applications to feet and legs (such as Hot Footbath or, better, **Hot Leg Bath**).

CONGESTIVE HEADACHE—**Ice Bag** to back of head, with a **Cold Compress** to the face. Ice Collar, **Hot and Cold Compress to the head, Hot Footbath**, Hot Leg Pack, **Heating Compress** to the legs, **Cold Footbath** in flowing water, Alternate Footbath.

OCCIPITAL HEADACHE (a headache centered on or near the bump at back of the head)—**Hot Compress** or Hot Sponging to the upper spine and, at the same time, to the area around the occipital region. **Revulsive Compress, Hot and Cold Compress** to the head.

NERVOUS HEADACHE (a form of headache accompanied by a feeling of nervous tension)—**Fomentation** to the seat of the pain, with simultaneous **Hot Footbath** and daily **Cold Enema**, to relieve constipation, if present. Special

attention to the diet. A **dry aseptic diet** is advocated. Avoid milk.

BAND-AROUND-THE-HEAD HEADACHE (a form of an anemic headache)—Hot Sponging or **Hot Compress** to head, **Alternate Sponging** on neck and upper spine, **massage** to head.

VERTEX HEADACHE (a headache characterized by a pain at the top of the head)—**Hot Footbath, Cold Compress** to head, Ice Collar, sleep with the head elevated. Heat to the feet and legs, if they are cold.

EYE HEADACHE (pain in or near eyes, made worse by light)—Gentle (not hot!) **Fomentation** over eyes and forehead. **Protect eyes** from bright light, facial massage, and massage to eyes. Consult an optometrist; for eyeglasses may be needed, temporarily or permanently.

CLAVUS HEADACHE (This headache feels like the sharp pain of a nail being driven into the head.)—Very **Hot Footbath**, with **Fomentation** over painful point for 10 minutes, repeated every 2 hours. **Heating Compress** at night. Protect him from the cold during the day. Begin a series of carefully **graduated Cool Baths**, to build him up.

RENAL HEADACHE (This headache is caused by a kidney problem.)—Copious **water** drinking, **Enema, Hot Bath, Ice Bag** over lower sternum, with **Hot and Cold Compress** to head *(see Nephritis, 400)*.

HEPATIC HEADACHE (a headache due to a weakened liver)—(1) For the immediate pain: **Revulsive Compress** to the head, **Hot and Cold Compress** to the head, with derivative applications to the legs (Hot Leg Bath, etc.). **Graduated Tonic Frictions.** (2) If it keeps repeating, need aseptic diet, **fruit diet, water** drinking, graduated **Enema. Fomentation** over liver twice a day for 15 minutes, with **Heating Compress** over it during the intervals between. **Outdoor exercise**, air bath, **breathing** exercises, massage to abdomen.

ORGANIC HEADACHES (caused by tumors, inflammation, abscesses, trauma, general paralysis, syphilis)—Very hot and frequently repeated derivative applications to legs (Hot Footbath or, better, **Hot Foot and Leg Bath**) with short, often repeated **Revulsive Compress** to the head. Follow by **Cold or Heating Compress** to the head.

INFECTION HEADACHE (headache caused by infection or disease of the eye, ear, nose, or teeth)—(1) For the immediate pain: **Hot Footbath** or Hot Leg Bath, with **Revulsive Compress** over the painful parts. (2) Longer term care: The problem causing these headaches should receive proper attention.

VARYING HEADACHE (with a sense of coldness, numbness, pressure, band sensation, etc.)—(1) For the immediate pain: **Massage** the head and neck. **Revulsive Compress** to the spine, head, and face. **Hot and Cold Compress** to the head. (2) Longer term care: Improve tone of the nerves by **Tonic Frictions** *(see also "Neurasthenia")*.

SUPRA-ORBITAL HEADACHE (This is a headache felt as a strong pain above the eyebrow.)—(1) For the immediate pain: **Hot Footbath** with **Revulsive Compress** above the eyebrow, but not covering the eye. Avoid exposure to cold. Rest the eyes, protecting them from the light. **Hot Footbath** or Hot Leg Bath. (2) Longer term care: Begin a series of carefully **graduated Tonic Frictions.**

TEMPORAL HEADACHE (This is a pain over the side of the head, to the right and left of the forehead.)—(1) For the immediate pain: **Fomentation** over side of head, face, and ear for ten minutes. Follow by warm **dry Compress**, repeated every 2 hours. **Massage** to the area of the pain. (2) Longer term care: Between attacks give **Tonic Frictions**, to build the body so that the headaches will stop repeating. A nourishing, strengthening diet that **avoids all meat** is needed. *Also see Lithemia (397).* (Lithemia is an excess of uric acid in the blood.)

MASTOID, OR POST-AURICULAR, HEADACHE (This is a headache felt as a pain just below the ear.)—**Fomentation** for 10 minutes to side of head followed by cotton poultice or well-covered **Heating Compress**, repeated every 2 hours. *Pain in the mastoid process must be given immediate attention* or major ear infection can result! If pain does not subside fairly quickly, see your doctor.

CERVICO-OCCIPITAL HEADACHE (This is a headache showing itself in a pain extending from the back of the neck, on up to the occipital bump on the back of the head.)—**Revulsive Compress** to the back of the head and neck. **Fomentation** over the painful area for 10 minutes. Follow by a **warm, dry Compress** over it.

—Also see Neurasthenia (452) for more additional help in building up the nervously exhausted body.

UTERINE HEADACHE (This is a pain or pressure at the very top of the head, caused by uterine problems.)—(1) For the immediate pain: **Hot and Cold Compress** to the head, massage of the head. (2) Longer term care: **Revulsive Sitz Bath**, abdominal supporter, **Hot Abdominal Pack.** Correct any ovarian or uterine disease that is present.

FEVER HEADACHE (a headache caused by a raised body temperature or fevered condition)—(1) For the head pain: Ice Cap or **Cold Compress** to the head. Ice Collar. (2) To lower the fever: **Ice Bag** to the heart. **Cooling Wet Sheet Pack, Prolonged Neutral Bath.** See also under the specific disease causing the fever.

—See Migraine (below) for more information.

ENCOURAGEMENT—True happiness comes from an entire surrender of the will to God. It is living by every word that proceeds from the mouth of God. It is doing the will of our heavenly Father. It is trusting God in trial and in darkness as well as in light. It is relying on God with unquestioning confidence. It is resting in His love. 1 Peter 1:5-7.

MIGRAINE

SYMPTOMS—Generalized or one-sided head pain and possibly nausea, vomiting, and visual disturbances (light sensitivity, bright spots and patterns before the eyes). It might last for days. The first sign is frequent flashes of light or tingling. There may be nausea, vomiting, diarrhea, and cyanosis (blueness) of the fingers from lack of circulation and oxygen. The pain is most common in the temple, but may occur anywhere on the head, face, or neck. The pain is frequently on one side; but it may change to the opposite side, alternate sides, or be on both sides.

IS IT A MIGRAINE?—*Migraines* will tend to be on one or both sides of the head, last 4-72 hours, and usually be severe (but may be mild)

In contrast, *tension headaches* will be on both sides of the head, only last 2 hours to a day or so, and

only have mild or moderate pain. *Cluster headaches* will only be on one side of the head, and last 30-90 minutes at a time (yet they can recur many times during the day).

Migraines will be accompanied by nausea and sensitivity to sound, light, or smells; this will produce red and/or and watery eyes or runny nose. These symptoms will not appear in tension or cluster headaches.

CAUSES—These are caused by a disturbance in the blood circulation. The name comes from the Greek word, *hemikrania*, or "half the head"; this describes the location of most migraines (around the forehead, temple, ear, jaw, or eye). There is **alternating constriction and dilation of the blood vessels in the brain**; it occurs between the ages of 10-30, more often in women (70%) than men. **Food allergies** are frequently the cause. Search them out. Here are six of the most common causes: **food allergy, low blood sugar, tension, depression, water retention, menstruation, changes in barometric pressure, liver malfunction, too much or too little sleep, emotional changes, hormonal changes, sun glare, flashing lights, lack of exercise, dental problems, low blood sugar.** There often are no migraines during the second and third trimester of pregnancy or after menopause is past.

Migraines can disappear for years and then reappear. They usually decrease after middle age.

Over 50% of those with migraines report that one or both parents also had the problem.

NATURAL REMEDIES

EARLY WARNINGS

• Know the early signs of a coming attack, so you can take immediate measures to avoid or lessen it:

1 - A day earlier, there may be problems with memory, the five senses, or your mood.

2 - Just before it begins, you may see flashes or patterns of light, or feel numbness in hands or mouth. These indications are called an "aura."

AVOIDING AND REDUCING THEM

• Exposure to **sunlight** triggers migraines in some people. They cannot take the bright light in their eyes. Staying in the shade on bright days greatly helps them.

• Resting **in a darkened room with an ice cap** or **ice compress** to the head is helpful. There may first be an increase of pain; but, within three minutes, the symptoms may disappear, except for a mild headache. To increase the effect, take a **hot footbath** at the same time. This will help abort a migraine at its first indication.

• As soon as one begins, if possible, take an **enema**. This will help stop the attack.

• When an attack begins, try wrapping something **tight about the head**.

• When it is a throbbing pain, place **light pressure on the arteries of the neck** for a few seconds at a time.

• Vigorous daily **outdoor exercise** helps decrease attacks. Do not do vigorous exercise during an attack.

• Maintain a **regular schedule. Too much sleep, too little sleep, missed meals**, etc., may trigger an attack. Do not sleep in late. Some people must avoid naps during the day.

• Exposure to **smoking** increases the attacks; so does taking **birth control pills**.

• **Chills** can induce migraines. **Tiredness, anxiety, or eating late** also can. Other causes include **antibiotics, odors and inhalants, caffeine, emotional stress and resentment, and allergy shots**.

• Do not sleep in cramped, awkward positions. Even sleeping on your stomach can tighten and contract neck muscles. Learn to **sleep on your back**.

DIET

• Eat foods which will help you **keep your blood sugar stabilized**. This would be **fresh fruits and vegetables, whole grains, nuts, and legumes**. Stay away from fast-acting carbohydrates: **sugary foods and drinks, all white-flour products and processed foods.**

• Take 1 comprehensive **B complex** tablet daily, **vitamin C** (2,000-6,000 mg in divided doses), **rutin** (200 mg of this bioflavonoid), **calcium** (2,000 mg), and **magnesium** (1,000 mg).

• Migraine sufferers have lower levels of **magnesium** than other people. Magnesium helps calcium (which relaxes and reduces pain) do its work. In research studies, intravenous magnesium injections have relieved some migraines within minutes. Taking as little as 350 mg of magnesium daily decreases attacks. Better yet, take 1,000 mg when the problem gets worse.

• Also important are high doses of **calcium** (1,000-2,000 mg daily). Calcium and **vitamin D** (400 IU daily) have been found to reduce migraine attacks.

• A research study found that high daily amounts of **vitamin B_2** (400 mg) helped most patients.

• It is thought that 25% of migraines trace their cause to **food allergies**. *See Allergies (576).* Various studies have identified the following as possible causes: **cola drinks, chocolate, pork, corn, onion, garlic, eggs, tea, citrus, wheat, coffee, cane sugar, yeast, beef, alcohol, cheese, fried foods, seafood, mushrooms, peas, high-salt diet, caffeine, refined carbohydrates, fatty fried foods, and tobacco smoke.**

• Eliminate **tyramine** foods. The amino acid, **tyrosine**, produces a breakdown product, called *tyramine*. Tyramine is a significant cause of migraine headaches. It does this by releasing *norepinephrine* from brain tissue, which causes constriction of scalp and brain blood vessels. Any substance which has undergone bacterial decomposition has high levels of tyramine. Such foods include **plums, oranges, bananas, raspberries, avocados, ripened or aged cheese, beef and chicken livers, sour cream, eggplant, salami, meat**

tenderizers, chocolate, wine, caffeine products, and soy sauce.

• **Tryptophan**, another amino acid found in protein-rich foods, is converted to serotonin, a substance which might make some migraines worse. For this reason, **low-protein diets** have been used, with some success, to reduce the frequency of migraine attacks.

• Eliminate any **suspected food** from your diet, for five days, and see if that helps solve the problem.

• Stop using all **alcoholic** beverages and MSG (monosodium glutamate) foods; these trigger attacks.

• **Cured meats** contain **nitrates** and other preservatives which dilate blood vessels and give a headache.

• If you wake up in the morning to a headache, it may be **low blood sugar**. Drink a glass of **lemon or fruit juice** on arising. Schedule smaller, more frequent meals. Avoid **sugar** and **processed starchy foods**. Studies show that blood sugar levels are low during a migraine attack; the lower the level, the worse the attack.

HERBS

• **Bay, feverfew,** and **tansy** contain *parthenolides* which help prevent migraines.

• **Feverfew** is widely used in England, to reduce migraines. Take 3-9 grams; but do not use when the migraine results from a weak, deficient condition.

• **Ginger** is used in Asia to prevent migraines.

• Steep **fenugreek** 5-15 minutes; take 1 cup during the day, hot or cold.

• **Garlic** and **onions** help prevent migraines.

• **Lemon Balm** is another herb used to treat migraines.

• **Chamomile** tea is extremely soothing to ease pressures that trigger headaches. It helps take the sense of tightness out of your head.

• Take **peppermint** in fluid extract form, ½-2 tsp., 3 times daily. In infusion form, steep 5-15 minutes; take 6 oz. 3 times daily.

• Dilute 1 part **rosemary oil** in 10 parts vegetable oil; rub on forehead and temples. Also use as a nasal vapor inhalation. You can also steep the **powdered** herb 5-15 minutes; take 2 oz. 3 times daily.

• A combination of **valerian-lavender** tea is soothing and eases stress accompanying migraine. Relaxes vascular contractions.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MIGRAINE AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

PREVENT FORMATION OF URIC ACID—Avoid use of meats, tea and coffee. Aseptic dietary and outdoor life is important.

ELIMINATE URIC ACID—**Hot Baths**, especially moderately **prolonged sweating baths**. Follow by **short Cold Baths**, Radiant Heat Bath, Wet Sheet Pack, Steam Bath, **prolonged Neutral Bath**, **water** drinking.

LOWER ARTERIAL TENSION—**Hot Full Bath** at 102° F., for 5-10 minutes. Hot Leg Bath or Hot Leg Pack. **Hot Enema**. Rest in bed in a darkened room.

PAIN—Hot Footbath, **Alternate Compress** to spine or sponging of spine. **Revulsive Compress** to seat of pain, local application of Ice Bag in some cases. **Hot Leg Pack**. **Protect the eyes** from light.

NAUSEA AND VOMITING—Ice pills, **ice to stomach and the spine** opposite the stomach.

CONSTIPATION—**Colonic**.

TO PREVENT ATTACK—**Fruit diet**, large **colonic**, **water** drinking.

TO RELIEVE HYPERESTHESIA OF LOWER BACK NERVES—**Fomentation** over abdomen, twice daily. Continuous **Heating Compress** during the interval between. Abdominal supporter.

GENERAL METHOD—Every case is curable by sufficiently prolonged treatment, carefully managed. The general nervous system must be built up by measures essentially the same as those indicated for neurasthenia and other conditions requiring tonic treatment. The causes must be removed, especially autointoxication and morbid reflex influences arising from dilation of the stomach, enteroptosis, and indigestion.

—Also see Headache (456).

ENCOURAGEMENT—We must take hold of divine power; and, with determination, we must resist the temptations of Satan. Through the enabling strength which Christ provides, we can be more than conquerors in the battle with evil. Jude 24.

NECK PAIN
(Stiff Neck)

SYMPTOMS—A pain in the neck.

CAUSES—Working in a hunched-over position for long hours is a frequent cause. Working so that you must lean your head forward, to better see what you are doing. But an injury may also have occurred. A common cause is stress, insomnia, or arthritis.

NATURAL REMEDIES

IMMEDIATE

• Place an **ice pack** on the back of the neck or apply ice, wrapped in a towel.

• Then place **heat** on the painful area. This can be a **heating pad** or a **hot shower**.

• Wrap a rolled-up **towel** around your neck and fasten it snugly with a safety pin. It will support your head and reduce painful movements.

PREVENTIVES

• Do **neck exercises** each day, to stretch your neck muscles and strengthen them.

• To **stretch those muscles**, slowly tilt your head forward, back, and from side to side.

• To **strengthen muscles**, put your hand on the side of your head and push. Then do the other side, and then the back and front. Hold light weights (3-5 pounds) in your hands, keeping your arms straight while shrugging your shoulders.

• Or do this: Lift your **shoulders** easily and let them flop down a couple times. Do not push them down.

• **Sit in chairs** which give you good back support.

• **Sit up**, not forward. Keep your **head level** and

pull in your chin. Arrange your work so you can **look forward**, and not downward, most of the time. Do not sit in any one position too long.

• Stop every so often and **take a break**. Get up, stretch, and do a few simple neck exercises.

• Your **car seat** should be high enough so you can comfortably look forward.

• Do not compensate for your **height**. If short, do not lift your shin up; if tall, do not slump.

• Do not sit with most of your weight on the back of your neck.

• Always **carefully lift** heavy things with the legs and not the back.

• Sleep on a **firm** (orthopedic) **mattress**.

• **Sleeping position** is important. Do not sleep on your stomach, but on your side or (best) on your back.

• Keep your **neck warm** when you are outside in the cold. Avoid letting a **draft** chill it while sleeping.

• You may do better with a smaller **pillow** or no pillow at all. Do not sleep on thick, hard pillows.

• Avoid talking on the **phone**. It develops neck tension, because you tend to tilt your head to the phone instead of keeping the head balanced and upright.

• When you **brush** your hair, keep your head straight; do not bend it to the comb.

If there is numbness in your hands, arms, or legs, consult a physician.

ENCOURAGEMENT—Thank God that there is hope for each one of us! In Christ we can have the victory over every temptation and come off more than conquerors. Trust in Him and He will carefully guide you step by step. 2 Peter 1:10.

PAIN CONTROL

Here are hydrotherapy prescriptions for reducing levels of pain in various parts of the body:

WATER THERAPIES WHICH RELIEVE PAIN AND NERVOUS IRRITABILITY - Hydrotherapy applications can greatly help in this area also *(how to give these water therapies: pp. 153-208 / Contents: pp. 153-154 / Hydrotherapy Disease Index: pp. 129-211).*

The general **neutral bath** is very effective in relieving nervous irritability, inducing sleep in insomnia, delirium, and even acute fevers. **Moist abdominal bandage**. Cool **head cap**. **Heating spinal compress**, in certain cases. For relieving localized pain and irritability, the hot **Fomentation** and the **heating compress** are both good. The **cold compress** and **ice compress** are both valuable in those instances in which the pain is in superficial (near the surface) parts and the applications can be made directly to the area of pain.

ENCOURAGEMENT—The love of God in our hearts is manifested in kindness, gentleness, forbearance, and long-suffering. The countenance is changed. Christ abiding in the heart shines out in the faces of those who love Him and keep His commandments.

NEURALGIA
(Neuropathy)

SYMPTOMS—Pain which comes on suddenly, followed by intervals of freedom from pain. The pains are severe and seem to shoot along the course of the affected nerves. The nerve trunks become tender to pressure. In severe cases, there is twitching of the muscles of the affected part, with burning and tingling sensations in the skin. The attacks are rarely on both sides of the body at the same time. They generally continue from a few minutes to a few days, and may occur frequently for months. As time passes, the attacks tend to become more severe.

CAUSES—Neuralgia is nerve pain; whereas neuritis *(467)* is nerve inflammation.

Neuralgia is an irritation of a nerve which can be caused by many factors, including **trauma, herpes, shingles, diabetes, multiple sclerosis, or alcoholism.**

Another cause is **nutritional deficiencies;** these include the **B complex (especially B_1, B_6, folic acid, pantothenic acid, and B_{12}).**

Other causes include **decayed teeth, wrong diet, constipation, tension, insomnia, fatigue, exposure, lack of exercise, sinus infections, and eye strain.**

A frequent cause of the problem is **chilling of part of the body** over a period of time while the rest of the body is relatively warm. This may occur in the winter months, when you are in bed sleeping. A current of cold air is passing across your face or shoulder and the rest of your body is tucked under the covers. The result is tic douloureux *(464)* or Bell's palsy *(463)* on the face or neck. If the shoulders are uncovered, for instance, there is neuralgia of the shoulder.

The cause can also occur as a result of regular commute driving. A window is kept open slightly to provide fresh air; but a slight chilling breeze blows on the face for a lengthy period of time.

The formula for trouble is (1) a chilling draft to part of the body while the rest is warm (2) over a lengthy period of time, (3) day after day.

NATURAL REMEDIES

• Give attention to the causal factors mentioned above and try to solve them. Give close attention to the conditions you place your body under each day. You will learn some interesting facts. Avoid unnecessary **drafts** on part of your body while other parts are warm.

• Give a high **catnip** herb enema. It should be as warm as can be taken.

• Put alternate **hot and cold** applications over the painful area. The cold should be very short! This can be done for several hours at a time.

• **Fomentations** wrung out of **mullein, lobelia, or chamomile** tea are also helpful.

• Place the hand and arm (which are on the opposite side of the body from where the head and neck

pain are located) in very **hot water** for 20 minutes.

• Make sure the diet includes **lecithin** (1 tsp.) and enough **calcium** (1,000 mg) and **magnesium** (500 mg).

• Get **sunshine, fresh air, and exercise.**

• Helpful herbs include **mullein, sage, hops, plantain, valerian root, skullcap, nettle, lobelia, black cohosh, poplar bark, and mint.**

• The Chinese rub fresh, sliced **lemon** on neuralgic areas to relieve pain.

• Crush **juniper** berries and place them to the area in pain, and you will obtain relief.

• **Bilberry** contains flavonoid compounds *(anthocyanosides)* which relieve pain when applied. Use a bilberry extract dosage of 160-480 mg daily

• Place powdered **chamomile** in several small bags. Steep them in ½ cup boiling water; and apply them as hot as possible to the area in pain.

• *Capsaicin* in **cayenne**, when applied to the painful area, stimulates and then blocks small-diameter pain fibers. Many research studies have supported this.

• Scrape **horseradish** and apply the scrapings directly to the affected area.

• **Ginkgo biloba**, when given to patients, significantly decreased pain and sensitivity in the painful area.

• Dried **coltsfoot** can be soaked in boiling water. When cooler, dip a cloth in the hot water and place it on neuralgic pains.

—Also see Bell's Palsy (463), Neuritis (467), and Brachial Neuralgia (466).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR NEURALGIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

COMBAT TOXEMIA WHEN PRESENT—**Sweating bath** followed by appropriate general **Cold Bath**, 3 times a week. The Radiant Heat Bath, Steam Bath, and **sweating Wet Sheet Pack** are especially helpful. Copious **water** drinking, **aseptic dietary**, **dry friction** of skin or oil rubbing daily after short **sweating bath**. Follow by **tonic cold** application.

COMBAT ANEMIA AND GENERAL WEAKNESS—**Graduated cold applications**. Avoid the increasing pain preceding or accompanying the Cold Bath by a hot application to the affected part; cover or avoid the part during the cold application.

PAIN—**Fomentation** or Revulsive Compress to the seat of pain. **Revulsive Douche** or Alternate Douche; **Ice Bag** is sometimes more effective than heat. This is often the case when the parts are congested as shown by redness of the skin, throbbing sensation, and when the nerves are extremely superficial.

REFLEX NEURALGIAS—**Fomentation** to abdomen, twice daily. **Hot Abdominal Pack** during intervals between, abdominal supporter. After baths, avoid chilling and general prolonged **cold applications** (such as Full Baths, Shallow Baths, and Wet Sheet Packs).

NEURALGIA OF THE HEAD—Employ derivative measure (such as **Hot Sitz Bath**, Hot Leg Bath, Hot Pack to legs, **Hot Footbath**, **Cold Footbath** under running water, Heating **Wet Sheet Pack**, Fan Douche to head, **Hot and Cold Compress** to head, heat over primary area of pain). **Fomentation** to the abdomen twice daily. Follow by **Heating Compress** and very hot application to forearm of opposite side.

SPINAL NEURALGIA AND LUMBAGO—**Fomentation** to spine, 2-3 times a day. During interval between, apply **Heating Compress**, Hot and Cold Pack to spine, Alternate Compress, Revulsive Douche, **Hot Trunk Pack**, Hot Half Blanket Pack, **Fomentation** to spine with **Hot Leg Bath, rest.**

GENERAL NEURALGIC PAIN—**Hot Full Bath** 4-5 minutes. Follow by Prolonged **Neutral Bath** at 95° F. **Hot Blanket Pack**, Radiant Heat Bath, Steam Bath or Sweating Wet Sheet Pack. Follow by **Dry Pack.**

NEURALGIA DUE TO CHRONIC NEURITIS—**Alternate Compress** and/or Alternate Douche. Revulsive Douche for persistent nerve stretching in sciatica.

NEURALGIC AFFECTIONS OF OVARIES, UTERUS, RECTUM, BLADDER, AND COCCYX—**Revulsive Sitz Bath**, **Hot Pack** to pelvis. Follow by **Cold Mitten Friction**, **Hot Enema**, **Hot and Cold Pelvic Pack**, hot vaginal irrigation, **Revulsive Compresses** over affected parts.

GASTRALGIA—Very hot **Fomentation** over stomach and abdomen. **Hot Trunk Pack. Revulsive Compress** for 10-30 minutes over stomach, repeated every 2 hours or as often as needed. **Hot Leg Pack**, hot **water** drinking, **Hot Enema**. Withhold food until pain is relieved. Aseptic diet. If necessary, **liquid diet** for a few days.

ENTERALGIA—Abdominal **Fomentation** for 15 minutes every hour. **Hot Enema. Heating Compress** applied at 60° F. during interval between. **Graduated Tonic Frictions.**

ERYTHRO-MELALGIA (RED NEURALGIA)—**Rest** and elevation of the affected part. **Cold Compress** changed every 20-30 minutes. Graduated **Tonic Frictions.**

HERPES ZOSTER—During eruption, **need Dry cotton Pack** several times daily; but do after **Revulsive Compress. Heating Compress** during the interval between.

CONTRAINDICATIONS—Cold applications increase pain unless very carefully graduated, but are usually necessary for permanent results.

—Also see the three most common forms of neuralgia: "Bell's Palsy" (also called facial palsy, 463), "Sciatica" (465), and "Tic Douloureux" (also called trigeminal neuralgia, 464).

ENCOURAGEMENT—There is no happiness to be gained from living in indulgence for self. Your happiness will be found in helping those around you and obeying the Word of God. Here, alone, you will find true happiness. Acts 2:39.

BELL'S PALSY
(Facial Palsy)

SYMPTOMS—There is pain in the temples and/or neck. Only one side is usually affected. There is weakness, pain, and a sensation of pricking, tingling, or creeping on the skin. One side of the face can droop.

Partial or complete paralysis of the muscles on one side of the face. Pain behind the ear on the affected side. Drooping of the corner of the mouth, sometimes with drooling. Inability to close the eyelid on the para-

lyzed side, plus watering of the eye. Impairment of taste.

CAUSES—Bell's palsy is a type of paralysis on one side of the face, characterized by distortion of the face, due to a lesion of the facial nerve.

It is usually the result of a **viral infection** that attacks the facial nerve (forehead, cheek, eye, and mouth). It may be caused by **injury, irritation of a sensory nerve or nerve root.** A **decayed tooth** may be the cause. **Chilling** of the face at night while one is sleeping can also produce it; the blood has been chilled back from the area. Sometimes Bell's palsy follows a **respiratory infection. Meat-eaters** are far more likely to develop this problem; vegetarians seldom do.

Bell's palsy is often mistaken for a stroke, because it comes on suddenly and results in numbness and partial, or total, loss of muscular control on the affected side. Yet it is not a stroke.

Treated properly, there can be as much as 80% chance of significant recovery. All those with partial palsy, and three fourths of those with complete palsy, recover with no treatment of any kind. Because most of those with this problem recover spontaneously, they should not be given drugs or surgery.

But severe taste impairment and/or reduced tearing of the eyes are bad signs, especially in older people, that the condition may continue.

Bell's palsy can occur in anyone at any age; but it most frequently occurs between 20 and 40, often in the summer months (especially August). The younger the person is, the more likely he will have a full recovery. With appropriate treatment, facial palsy usually improves in about 2 weeks. However, full recovery may take up to 3 months. Some people are left with weakness; and facial palsy may then recur.

NATURAL REMEDIES

• *See Neuralgia (462) for detailed information.*

• Take B_{12} (1,000 mcg per day) for a total of 20,000 mcg. Also **calcium** (2,000 mg per day), **magnesium** (800 mg per day), and essential fatty acids (2 Tbsp. **flaxseed** daily).

• Make sure, when he goes to bed at night, that a decided current of **cold air** is not blowing across his uncovered face while the rest of his body is under the blankets. When this happens, the chilled part does not receive adequate rest. A nerve in the face or neck can become chilled and cause problems.

• Apply **warm, wet washcloths** twice a day, for 20 minutes at a time, to relieve pain and tenderness. Follow with gentle massage, both backward and upward.

• *If an eye is affected,* apply pure **water** to the affected eye 4 times a day, to keep it moist and free from dust. Wearing **sunglasses** will reduce evaporation from that eye. Occasionally **close that eye** with a finger, to rest it. Wear an **eye patch** at night to protect it.

• Later, as the muscles begin functioning again, he should **exercise** his facial muscles: Standing before a mirror, wrinkle the forehead, close the affected eye, purse the lips, move the mouth to one side and then the other, blow out the cheeks, and try to whistle.

• Until the problem clears up, place **charcoal** poultices over the weakened nerve area at night and maintain a low-salt diet. This will help eliminate fluid released by the nerve.

• Prednisone is a drug often given; but it has negative side effects.

—Bell's palsy is a form of neuralgia; see Neuralgia (462) for additional helpful information.

ENCOURAGEMENT—Through defects in the character, Satan works to gain control of the whole mind; and he knows, that if these defects are cherished, he will succeed. It is urgent that you cling to Christ, plead for help, and earnestly seek to do that which is pleasing in His sight. Isaiah 54:13.

TIC DOULOUREUX
(Trigeminal Neuralgia)

SYMPTOMS—There is sudden darting pain which is severe. This is accompanied by spasms of the muscles of the face, with tingling and burning of the skin. A slight redness and swelling of the affected side will be seen, along with an increased flow of saliva and tears.

The affected nerves and skin become very tender; and movements of the face, speaking, and chewing may provoke violent pain.

CAUSES—Tic douloureux is a common form of neuralgia. It generally occurs in winter.

There are three divisions of the sensory nerve of the face most likely to be affected. The first is in the eyeball and over the forehead. The second is in the side of the face, the cheekbone, and the upper teeth. The third is inside the mouth and in the lower teeth.

The cause of the problem is **chilling of the face** over a period of time, when the rest of the body is relatively warm. The formula for trouble is (1) chilling draft to part of the body while the rest is warm (2) over a period of several hours, (3) day after day. *For more on tics, see 699; also see Neuralgia (462).*

NATURAL REMEDIES

• Keep the affected area **warm.** Immediately apply **hot Fomentations** to it. **Bed rest** is helpful, depending on the severity of the problem. Later apply **warm Fomentations** (or warm **whole baths**) several times a day.

• A cleansing **fruit juice fast** for several days will

enable the body to more efficiently solve the problem. But keep in mind that a nerve was damaged by chilling over a lengthy period of time; so healing may not always come immediately.

• Eliminate **chilling drafts** on parts of the body.

The medical route is to operate on the face and destroy a nerve. This eliminates the pain and also permanently numbs part of the face. Some operations result in paralyzing part of the face; you cannot know, in advance, what the operation may do to you.

ENCOURAGEMENT—Upon obedience depends life, happiness, health, and joy in this brief probationary life. God alone can answer your problems and give you that which is for your best good. Trust Him, and you will be safe. Acts 16:31.

SCIATICA

SYMPTOMS—Pain is noted down the back of the thigh, the outer side of the calf. Perhaps it is along the outer side of the foot, on the top of the foot that is in line with the big toe. The person compensates by placing more weight on the other leg and foot. The pain is often worse at night. Coughing, walking, heavy labor, or sneezing increases both the pain in the back and in the sciatic nerve.

Later still, the area, where the pain may be felt, may feel numb when the hand is rubbed over it.

Still later, a wasting of the muscles of the calf and a weakness in running and even walking may be noticed.

CAUSES—The sciatic nerve is the largest nerve in the body. This nerve comes out of the spine. A branch of this runs down each leg, along the back of the thigh of each leg, and down the inside of the leg to the ankle.

There are two primary causes of sciatica:

The first is **chilling the thigh** over a lengthy period of time. Sciatica usually begins as a neuralgia of the sciatic nerve. If you **sit on cold surfaces** a lot (steel-folding chairs in cool rooms, steel-tree chairs while hunting, or steel-boat seats while fishing, etc.) for lengthy periods of time, you can irritate the sciatic nerve and produce sciatica. A less recognized example is sitting on deep foam cushions, which never sufficiently warm up, for hours while watching exciting television dramas that cause you to be tense.

Fortunately, this form of sciatica is rather easy to solve: Apply neuralgia-type treatments; and only sit on warm surfaces or surfaces your body can heat relatively easily. Do not use chairs with foam that are too deep to easily warm up within a short time (say, 8 inches).

On your favorite chairs, place a folded, wool blanket or a piled thinner blanket. That is something you can warm up. Experiment and see what works best for you. If your body does not begin warming it up in a few minutes, lay something down that will.

Unfortunately, there is a second, and much more serious, cause:

The second cause of sciatica is **damage to the lower spine**. There may be a history of an **accident**, a **fall**, the **lifting** of a heavy weight, or a twist under some tension. Some men derange their lower back by the simple method of always carrying a **thick wallet** in one of the back pockets of their pants. The mechanical **vibration** of long hours behind the wheel of a car or truck, or work requiring repetitive **lifting**, may bring on sciatic attacks.

It is significant that *the pain is first felt in the lower back*. Later (weeks or even years later) pain begins to be felt at one or more places along the entire course of the sciatic nerve—back of the thigh, outer side of the calf, or in the top of the foot to the big toe.

One of the cartilaginous plates (disks, also spelled discs) in the lumbar region of the lower back has been damaged. The cartilage bulges and later breaks, creating pressure backward against a nerve root. (It is also possible for a tumor to develop and press against the sciatic nerve; but this is far less likely.)

Other important facts are these: (1) The person probably was not maintaining a **nourishing diet**, with supplemental **calcium, magnesium, vitamin D**, and other bone-building factors. (2) He may have been overworking his body in running, weight lifting, etc. (3) He was not lifting objects properly. (4) He was working at an occupation such as lifting heavy patients in a nursing home, which can be hazardous.

In older people who do not obtain enough bone-building materials in their diet, degenerative problems can occur in newly formed spicules, or ridges, of bone. These may press on a nerve root.

NATURAL REMEDIES

• Read again the above causal factors and try to correct those which apply to you.

• **Rest the painful limb** in as comfortable a position as possible.

HYDROTHERAPY

• *For pain in the leg from the sciatica:* Apply **hot, wet applications** to the affected leg, for the relief of pain and inflammation.

• *For pain in the back:* At the onset of a back attack, apply an application of **ice** for 10-20 minutes. This will deaden pain, relieve spasms, and minimize swelling.

• For the sciatica in the leg, give prolonged applications of **dry heat** in any form (**hot-water bottles, radiant heat, or electric heating pads**).

• Apply heat in the form of **hot Fomentations**, 3 times a day, omitting any use of ice or cold water.

• After each application of heat, **rub the limb** to increase circulation.

• Add 2 cups of **salt** to a boiling quart of water. When quite warm, apply with a cloth to the affected area until relief comes.

STRETCHING EXERCISES

• *Carefully* apply **stretching exercises**; *but always*

stop before there is pain or it becomes too uncomfortable. Do each exercise 3 times, 2-3 times a day, increasing the number as improvement occurs:

• **Pull the knees up** as close to the chin as possible. You will feel a pulling sensation in the lower back.

• Sitting in a chair, **reach down** under it as far, as possible, and bend from the hip only.

• While lying on the back, the **leg is raised** with the knee straight. Someone else raises the leg, bending it from the hip only. This stretches the sciatic nerve and the hamstring muscles.

OTHER HELPS

• If the attack of pain lasts so long that the leg muscles have lost considerable strength, **massage and a daily hot and cold leg bath** (cold after the painful period is over) will help to restore circulation and strength.

• There are times when a **back adjustment** helps. If the back is out of adjustment, pain can occur. You will want to weigh this possibility carefully before doing it.

• **Fast** one day a week and eat only **raw food** for a month.

• Have a good **foot massage** every 3 days and especially around the Achilles tendons, up the back of the ankles.

• Get **fresh air, sunlight**, and (if possible) moderate **exercise**.

• Low-impact activities, like **swimming and walking**, are good for the back. But jogging, jumping, or twisting can damage bones and muscles. Gradually build stronger muscles and bones, but without pain.

HERBS

• **Dang quai**, the herb that is so helpful for female problems, is also good for sciatica.

• **Willow bark** contains *salicin*, which effectively relieves pain. Begin with a low dose of ½ tsp. of dried herb; and gradually increase it until you have effective pain relief. But long-term use can cause stomach distress and even ulcers.

• Take **wintergreen** internally, and apply it externally to the painful area. It contains *methyl salicylate* (similar to *salicin*, above).

• Mix 2 Tbsp. grated **ginger** with 3 Tbsp. **sesame oil** and 1 tsp. **lemon** juice. Rub this into the painful area. This remedy has been used in Egypt for centuries.

• Compresses of **Mistletoe** leaves alleviate sciatic pains.

OTHER HELPS

If you identify the problem early on, there is greater likelihood of eliminating it.

• Taking vitamin **B complex** is very important for healthy nerves. Take supplemental **calcium** (1,000 mg), **magnesium** (500 mg), **vitamin D** (1,000 IU), **vitamin E** (400 IU), **zinc** (30 mg), and **vitamin B_{12}** (1,500 mcg.).

• **Be careful** of your back when you work! Do not attempt something you know you should not do. Avoid accidents and falling.

If no improvement results from home treatments, you may wish to consult a specialist. He is likely to tell you that an **operation** is necessary. Should you have an operation on your spine? *Carefully read the article, Backache (537) and Strengthening the Bones (505) for additional information on the entire subject.*

—Also read Neuralgia (462); because sciatica is a form of it.

ENCOURAGEMENT—The Saviour overcame, to show man how he may overcome. Christ met all the temptations of Satan with the Word of God. By trusting in God's promises, He received power to obey God's commandments. So it is to be with us.

BRACHIAL NEURALGIA
(Thoracic Outlet Syndrome)

SYMPTOMS—There is a sense of pins, needles, numbness, and pain in one or both hands, 1-3 hours after falling asleep. The discomfort generally awakens the person. There may be wasting in the small muscles in the hands, as well as coldness or swelling. It generally occurs among adults, not children.

The symptoms can eventually include the lower arm, upper arm, and even the shoulder. This is generally worse after a day of heavy lifting.

During the day few symptoms are present, unless heavy lifting occurs.

CAUSES—This is to the shoulder what sciatica is to the leg. A nerve, leading to the shoulder, is **pinched** in the spine.

But it can also be caused by **overworking** of the arms, carrying excessively **heavy weights, poor posture**, and letting the **arms and hands get cold** at night. More rarely, there may be an abnormality in the seventh cervical rib.

The lower branch of the brachial plexus of nerves exits from the lower cervical vertebrae, then passes underneath the clavicle and on into the arm. If this somehow experiences compression, the nerves to the arm and hand will be affected.

It is best to eliminate this disorder; otherwise it is likely to keep getting worse.

A similar affliction is called the *cervical rib syndrome.* But it occurs more often in younger people; and it produces pain or numbness soon after heavy lifting, wearing a heavy coat, etc. The symptoms occur in the day, not at night.

NATURAL REMEDIES

• **Back adjustments** by a competent chiropractor may be the solution.

• Keep the **hands and arms warm** at night, especially if there is a cool draft on the body.

• Improve the diet. A good, nourishing diet which

will build the nerves and bones is important. **Raw green vegetables are needed,** along with daily **vitamin / mineral supplements**. A diet similar to that used in treating arthritis *(513)* is helpful.

• Maintain an ongoing **exercise** program, to strengthen the muscles of the shoulders and arms and improve the posture: **arm lifts, neck exercises, shoulder shrugs, horizontal upper trunk push-ups**, etc.

• Avoid heavy **lifting**. When you have to lift, first take several deep breaths to strengthen your muscles, shrug your shoulders, and remain in a semi-shrugged position while you lift. This will ward off nerve compression.

—Also see Sciatica (465), Neuralgia (462), Bell's Palsy (463), Neuritis (467).

ENCOURAGEMENT—The rainbow of promise encircling the throne on high is an everlasting testimony that God loves you. He will never forsake His people in their struggle with evil. We have the assurance of strength and protection. But we can always choose to leave Him; and therein lies our danger.

NEURITIS

SYMPTOMS—There may be pain, tenderness, tingling, and loss of the sensation of touch in the affected nerve area along with redness and swelling. Pain is not always a prominent symptom of true neuritis. But the numbness, burning, tingling, crawling, with possible pain, tends to occur in spells. Weakness, and even paralysis and loss of sensation, are common. In serious cases, convulsions may occur. The affected muscles may shrink in size.

CAUSES—The symptoms can vary with the cause, which can include an **injury to a nerve, infection involving a nerve, or a disease (gout, diabetes, leukemia**, etc.). **Poisons inhaled or swallowed (mercury, methyl alcohol, or lead)** can cause nerve trouble. A lack of the vitamin **B complex**, especially **thiamine** in the diet. A **degenerative illness** can produce neuritis as a side effect.

Men between the ages of 30 and 50 are the most likely to experience neuritis.

Foot-drop, due to **sitting with knees crossed**, occurs when ankle or foot muscles weaken, causing the toes to drag as one walks. Wrist-drop is caused by pressure in the armpit from a **crutch** or other support. Optic neuritis occurs when inflammation affects the optic nerve in the eye. This can produce gradual, or sudden, blurring and loss of vision. Blindness can occur in severe cases. However, it is usually temporary if prompt treatment is given.

NATURAL REMEDIES

• A **well-balanced diet**, including a full spectrum of **vitamins and minerals**, is vital. The entire **B complex** is very important. If the problem is not too far advanced, administration of enough B complex and **thiamine** (200 mg) can bring great improvement within 3-4 days.

• If **poisoning** is a factor, the source of contamination must be avoided and eliminated. Obtain an abundance of **fresh air**.

• Treatment for neuritis includes **rest** and **good diet**; and, after the pain subsides, do **massage** and careful **exercise**. Identify the cause and solve it.

• A **fruit and vegetable juice fast** for a day or two may help eliminate toxins and thus strengthen the body to more rapidly heal the affected nerves.

• **St. John's wort** helps regenerate nerve tissue. **Hawthorn** strengthens circulation.

• Dr. John Christopher recommends the following formula for neuritis: 1 oz. each of **Lady's slipper** and **skullcap**, ½ oz. each of **wild yam, ginger, and damiana**. Pour 1 quart boiling hot water over the herbs, cover tightly, let stand until cool. Strain, sweeten to taste, and drink 2 fluid oz. every 3-4 hours.

• Avoid **caffeine, tobacco, alcohol, and drugs**.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR NEURITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

IMMEDIATE—**Rest** of the affected parts until the acute stage is over.

COMBAT TOXEMIA—**Sweating bath** 2-3 times a week, preferably the Radiant Heat Bath. Follow sweating bath by a suitable **cold application**.

COMBAT INFLAMMATION—Local **Revulsive Compress** for 15 minutes every 2-4 hours. Follow by **Heating Compress** during intervals between. Suitable derivative applications.

PAIN—**Revulsive Douche** (spray). Steam Bath. Follow by graduated **Fan Douche**, gradually lowering from 100° to 80° F. Protect by Dry cotton Pack or **Heating Compress** that is covered with plastic.

PARALYSIS—**Alternate Compress**. Alternate Douche, **Percussion Douche** to spine and affected parts.

—Also see Multiple Neuritis (467) and Strengthening the Nerves (468).

ENCOURAGEMENT—Where can we find a surer guide than the only true God? Where is a safer path than that in which the Eternal leads the way? When we follow Him, we have powerful guidance. The path of obedience to God is the path of virtue, of health, and happiness. Proverbs 3:5-10.

"Receiving the end of your faith, even the salvation of your souls . . Gird up the loins of your mind, be sober, and hope to the end of the grace that is to be brought unto you at the revelation of Jesus Christ." 1 Peter 1:9, 13. Thank God for such sweet promises. They are such a comfort to our souls!

MULTIPLE NEURITIS

SYMPTOMS—Symptoms will be like those for neuritis *(467)*, except that the pain is felt in several locations.

CAUSES—Multiple neuritis is indicated by pain occurring in two or more locations instead of just one. It is inflammation of more than one nerve at the same time. *See Neuritis (467) for much more information.*

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MULTIPLE NEURITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

BASIC—Rest in bed while the disease is rapidly progressing.

COMBAT TOXEMIA—Prolonged Neutral Bath 1-2 hours, daily. **Aseptic dietary**. Avoidance of tea, coffee, tobacco, alcoholic liquors, and all excesses. **Sweating**, especially by Radiant Heat Bath, 10-20 minutes. Follow by **Cold Mitten Friction**.

COMBAT LOCAL INFLAMMATIONS—Revulsive Compresses, then **Heating Compress** or packing in dry cotton (Dry Pack). **Fomentations** to spine. Follow with **Heating Compress**. When affecting the lower extremities, **Hot Footbath** or Hot Leg Bath. Hot Leg Pack, complete rest of the affected part.

IMPROVE THE GENERAL NUTRITION—by **Graduated Cold Baths**, massage; **outdoor air** with careful protection, **sunbaths**, **aseptic diet**.

ATROPHY—Alternate Douche, massage.

CONTRAINDICATIONS—During acute stage, carefully avoid cold applications unless very short and preceded by heat. Avoid percussion applications, when tenderness exists; that is, all forms of the Douche. Avoid especially Cold Full Baths and very prolonged Hot Baths.

—Also see Neuritis (467).

ENCOURAGEMENT—The followers of Christ are to become like Him—by the grace of God to form characters in harmony with the principles of His holy law. This is Bible sanctification.

STRENGTHENING THE NERVES

NATURAL REMEDIES

BUILDING UP THE NERVES—Good blood, healthy nerves, and strong bones and joints are needed for outstanding health. Brain cells cannot properly function without proper nutrients and a healthful way of life.

Here are several suggestions to help you strengthen your nerves. This is a building program:

NUTRIENTS

• The vitamin **B complex** (100 mg per day; best taken as 50 mg twice a day) is especially important in maintaining good nerve action and response. Deficiencies of the B complex are common among people eating modern, devitalized, processed, and assorted junk foods. Take a good **vitamin / mineral supplement** at least twice a day. It should include all the B vitamins.

• **Vitamin B_1**, also called thiamine (100 mg, twice a day), is especially needed for neuritis.

• **Vitamin B_3** (niacin, 50 mg twice a day). Do not take more than 100 mg of niacin a day. **Niacinamide** is equivalent to niacin and does not produce the flushed face which niacin does.

• **Vitamin B_{12}** (2,000 mcg, twice a day).

• **Vitamin B_6** (250-500 mg, 1-2 times a day), especially for carpal tunnel syndrome.

• **Folic acid** (400-800 mcg, daily).

• **Inositol** (1,000 mg, 1-2 times a day), especially for diabetic neuropathy.

• In addition to the above B vitamins, also take **vitamin C** (3,000-6,000 mg daily, when you have a nerve crisis) with **bioflavonoids** (100 mg daily).

• **Vitamin E** (400 IU, 2-3 times a day), especially with post-herpes syndrome.

• **Vitamin A**. It is best to take vitamin A in the form of beta-carotene (in carrot juice and fresh green and yellow fruits and vegetables).

• Minerals include **calcium** (400 mg, 2-3 times daily), **magnesium** (200 mg, 2-3 times a day), **zinc** (30 mg daily, not to exceed 100 mg daily from all supplements), and **iodine**.

• **Essential fatty acids**, obtained from 1-2 Tbsp. cold-pressed oils daily. Never put it into your cooking; instead, put it on your food after the plate is served. **Flaxseed oil** and **wheat germ oil** are the best sources.

• **Fresh and steamed vegetables** are rich in minerals which are needed for the nervous system and brain. Eat **whole grains, nuts, and legumes**.

• **Brewer's yeast, kelp or dulse, and lecithin** are very helpful. Eat regularly, chew slowly, and do not overeat.

• *Octocosanol* is found in **wheat germ oil**. It helps the neuron membranes.

OTHER HELPS

• Increase your **fluid** intake.

• Obtain enough **rest** at night and avoid sexual **enervation**. Medical professionals know that such enervation is one of the quickest ways to produce weakened, degenerate, and diseased nerve tissue.

• A good balance between **exercise and rest** has a powerful effect in building the body, if a **nutritious diet** is maintained.

• Avoid **stimulants** and **all processed, refined, and junk foods**.

• Cool and cold **water treatments** will help tone and strengthen the nerves.

• The nervine herbs include **skullcap, hops, chamomile, valerian, dong quai, wood betony, passionflower, lady's slipper, mistletoe,** and small amounts of **lobelia**.

Here is additional information about the close re-

lationship of nutrients to the brain and nerves:

ADDITIONAL FACTS ABOUT NUTRIENTS

• Deficiencies of the **B complex** and **vitamin C** decrease the metabolic rate of the brain. Lack of **niacin** can produce deep depression, often seen in psychosis. Symptoms of a severe **vitamin B_6** deficiency are headache, irritability, dizziness, extreme nervousness, and inability to concentrate. A **thiamine** deficiency results in a lack of energy, constant fatigue, loss of appetite, and irritability; if this continues too long, there are emotional upsets and overreaction to normal stress. **Pantothenic acid** (a B vitamin) is needed to handle stressful situations. Lack of **vitamin C** leads to irritability.

• Vitamin **B complex** (especially **B_3, B_6, B_{12}, and folic acid**) reduces excess estrogen from the liver and prevents it from causing mental troubles.

• It is vital to obtain enough **oxygen**, if you want a clear mind which functions properly. **Vitamin E** helps the brain obtain enough oxygen, from the amount supplied to the lungs.

• Adequate **calcium** in the diet is vital. See *Strengthening the Bones (505)* for ways to maintain enough calcium in the body. Inadequate calcium results in insomnia, tenseness, and fatigue.

• **Calcium** works with **magnesium** to protect the nerves from damage.

• A person with a **magnesium** deficiency tends to be uncooperative, withdraws, is apathetic or belligerent.

• Too much **copper** in the body occurs in schizophrenia; it can be reduced by dietary intake of **zinc** and **manganese**. **Vitamin C** deficiency can cause copper retention which accumulates in the brain and liver.

• Many of the schizophrenias, autism, abnormal behaviors, and subsequent learning disorders are caused by too much **lead or copper** in the body. Check your plumbing pipes. Plastic water pipes are the safest.

ADDITIONAL FACTS ABOUT FOODS

• There is a direct relation between the **transverse colon** and the brain. When the colon is clogged, mental illness is triggered in some and an attack of epilepsy *(473)* in others. Eliminate the **"glue foods"**; these tend to clog the colon, produce a buildup of mucus and toxins in it, and lead to mental problems. Such foods include **white flour, sugar, eggs, meat, peanuts, and dairy products**.

• A **whole grain diet** stimulates the amount of tryptophan in the brain and produces a calming, peaceful feeling.

ADDITIONAL FACTS ABOUT HORMONES

• A lack of **thyroxine**, the hormone from the thyroid, results in a slowing of physical and mental functions. Hyperthyroidism is related to emotional disturbance, forgetfulness, slow thought processes, and irritability.

• When the **adrenals** do not function properly, depression and other forms of mental illness may result.

• **Exercise** (especially outdoors in the **fresh air**) combined with **relaxation** helps rejuvenate the body and mind.

• In addition to some other herbs, **ginkgo biloba** improves brain function and cerebral circulation and enhances memory.

ENCOURAGEMENT—We have been bought with the precious blood of Christ as of a lamb without blemish. What a price has been paid for us! Now Christ invites you to come and accept the salvation which He alone can work out in your life. He can strengthen you to obey all that He asks of you.

SEASONAL AFFECTIVE DISORDER (SAD)

SYMPTOMS—Withdrawal, social isolation, depression, cravings, weight gain, loss of energy, oversleep, decreased sexual desire.

CAUSES—This condition, also called the "winter blues," is caused by several factors:

The **winter months** bring **dark and dreary overcast days**; this emotionally bothers some people more than others.

The winter months have **shorter hours of daylight** and more overcast skies during the daytime, resulting in less light entering the eyes. This light deficiency sends signals to the pineal, pituitary, and hypothalamus glands; and they do not function as fully as usual.

There is often more **stress** and greater **nutritional deficiency** in the winter. Less fresh fruit and vegetables may be available.

All this combines, in some, to produce seasonal affective syndrome. In our waking hours, we need sunlight every so often. We have a friend who, moving to Labrador, on the eastern Canadian coast, could not tolerate the incessant dreary fog and moved away within a year.

Women have this problem 4 times as often as men.

NATURAL REMEDIES

• In most cases, an **improvement in diet** will greatly help. Foods rich in the **B complex** are needed, along with **fresh fruit and vegetables**. The nervous system needs to be built up with better food.

• Negative attitudes are also powerful. Train your mind to **be thankful** for the blessings you have.

• If possible, obtain a **full-spectrum light** for your dining room, living room, and work area.

• Spend more time **outdoors** on sunny or bright days.

• Build a **"light box."** It is about 2 feet long and 1½ feet high, with white fluorescent bulbs behind a plastic screen. It should deliver 2,500-10,000 lux (a measurement of intensity of light). Ten minutes a day in front of the light box may be all you need at the beginning of winter, but 45 minutes daily may be needed in the heart of winter. Sit 1-3 feet from it, facing it, and looking down. Read, do writing, do paperwork. Or just

sit (without looking directly at the light) and listen to music. If you are getting headaches or eyestrain, reduce the time before it.

• **St. John's wort** is a helpful antidepressant. Take 300 mg, 3 times a day.

• Take the bioflavonoid, **quercetin** (100 mg), and **bromelain** (500 mg). Take **calcium** (1,000 mg), **magnesium** (500 mg), and **zinc** (30 mg).

• Each morning and evening, take a **hot and cold shower** and do gentle **muscle stretches**. Each day, go outside, **breathe deeply**, and **walk vigorously** for awhile.

ENCOURAGEMENT—To those who love God, it will be the highest delight to keep His commandments and to do those things that are pleasing in His sight. Isaiah 30:18, 1 John 5:23.

TENNIS ELBOW

SYMPTOMS—Tenderness and pain in the elbow, weakness in the hand.

CAUSES—Tennis elbow is an occupational and recreational problem. Those who do a lot of **hand-gripping** can have this disorder. This would include **golfers, carpenters, factory workers, housewives,** and even **politicians** who shake hands a lot.

The weakness occurs when gripping an object; it is not a true muscle weakness. The tendons are involved. This is a form of neuritis.

NATURAL REMEDIES

• For 3-4 days, **do not do those activities** which cause the pain.

• Apply **cold or hot to the affected area**, according to that which helps you best. Apply **ice** on the affected area for 30-90 minutes each day; the more the pain, the longer the application. Or apply **heat**, especially after the first few days.

• Careful **exercise** is also needed, to eliminate tennis elbow; **rest** is not enough. The tendons and the muscles supporting them need to be strengthened. Purchase a hand gripper at a sporting goods store and slowly increase your usage of it until you are using it 5-10 minutes, 4 times a day. When you use it, the elbow should be straight and the wrist bent. This will stretch the extensor tendons and help strengthen the fibrous tendons.

• **Other exercises** are also helpful. Place your forearm on a table (palm down) and grip a 3-pound dumbbell. Flex the wrist upward slightly, hold for 5 seconds, lower, and rest for 3 seconds. When you can easily do this 15 times, increase the weight by 1 pound. Over a period of 4-6 weeks of doing this everyday, you may be able to lift up to 8-10 pounds without pain. Fourteen of 18 patients, on a four-week program with this exercise, obtained complete pain relief.

• Athletes sometimes place a **band** several inches wide around the forearm near the elbow and another just above the wrist. Be sure they are not too tight.

• Avoid **cortisone** injections; for these can produce tendon atrophy or even dissolve the tendon!

—Also see Carpal Tunnel Syndrome (below).

ENCOURAGEMENT—Satan and his evil angels are watching at every avenue leading to the human heart seeking to force souls to accept evil suggestions. He presents us with bribes as he bribed Christ, pretending that he will give us the world if we will obey him. But, in the strength of Christ, we can resist him. Luke 1:77-79.

CARPAL TUNNEL SYNDROME

SYMPTOMS—Mild numbness and faint tingling, maybe excruciating pain; but there is generally only burning, tingling, or numbness in the thumb and first three fingers. Crippling atrophy of the thumb can result.

Symptoms are often worse at night or in the morning. The pain may eventually spread to the arm and shoulder. Symptoms normally affect only one hand, but may be present in both.

CAUSES—Carpal tunnel syndrome (CTS) is a cumulative trauma disorder that develops over time, due to **repeated stressful movements of the hands and wrist.** It affects 23,000 workers a year. The median nerve in the wrist is compressed or damaged. This nerve controls the thumb muscles and sensation in the thumb, palm, and first three fingers. The median nerve passes through a very small opening, about a quarter inch below the top of the wrist.

Either **compression or injury to this nerve** can cause problems: pressure from **bone spurs, inflammatory arthritis or tendonitis, swelling due to pregnancy or water retention.**

Other causes include **repeated stressful motions, such as writing, typing, or hammering. Bookkeepers and checkout clerks can develop it; so can hairstylists, musicians, writers, drivers, athletes, restaurant servers, and jack hammer and chain-saw operators.** The occurrence of CTS has greatly increased since the 1980s, when personal computers came into use. The **tendons swell and compress the median nerve** that runs to your hand, causing great pain. A common pattern is **rapid and continuous use of the fingers**, producing a **repetitive wrist motion injury.** Women between 29 and 62 experience CTS more often than anyone else.

Raynaud's disease, pregnancy, hypothyroidism, diabetes, and menopause increase the risk of developing CTS.

Other disorders, especially arthritis in the neck, have similar symptoms. But, *if the first three fingers in one or both hands are affected* by the pain, then it is probably CTS.

NATURAL REMEDIES

HAND EXERCISES

• As soon as the tingling begins, begin doing some

gentle hand exercises. **Rotate the wrist in a circle** for 2 minutes. This exercises all the muscles of the wrist, restores circulation, and gets your wrist out of the position that usually causes the trouble.

• Raise your hands above your head and **rotate your arms** while rotating your wrists at the same time. Also do some **neck turns**; look over your right, then left, shoulder. Learn to exercise and relax as you work.

DIET

• **Vitamin B_6** (100 mg, twice a day) is especially important in solving this problem! In one study, two thirds of those taking B_6 reported improvement. Do not take larger dosages.

• Eat part of a fresh **pineapple** daily, for 1-3 weeks. The bromelain in it will reduce swelling and pain. **Niacinamide** (2,000 mg) will increase circulation.

• **Vitamin C** (500-1,000 mg, 3 times daily), **vitamin E** (400 IU daily), and **flaxseed oil** (2 tsp. daily).

• Eat only moderate amounts of **oxalic acid foods** (beets, beet greens, sorrel, Swiss chard, cabbage family, parsley, asparagus.). Avoid spinach, and especially rhubarb. Fish have oxalic acid also. Oxalic acid blocks calcium absorption.

• Avoid **salt** and all sodium foods; for they promote water retention.

HERBS

• **Aloe vera, yarrow, and yucca** help restore flexibility and reduce inflammation. **Skullcap** relieves muscle spasms and pain. **Wintergreen oil** reduces pain and aids circulation to the muscles. **Turmeric** contains *curcumin*, a potent anti-inflammatory chemical. **Cumin** contains anti-inflammatory, pain-relieving, and anti-swelling chemicals. **Ginkgo biloba** extract (2-3 times daily) will increase circulation.

Willow contains *salicylates* which relieve pain and reduce inflammation. Steep 1-2 tsp. dried, powdered bark or 5 tsp. fresh bark for 10 minutes, strain, add lemonade (to mask the bitter taste), and drink 2-3 cups a day.

OTHER HELPS

• Place an **ice pack** on your wrists to reduce pain. Do not use heat; for that will increase the swelling.

• Try to **reduce the impact** of repetitive mechanical tasks on your wrists and hands. If possible, stop all such movements for several days and see if improvement occurs. If so, try to do these functions less frequently. If possible, rotate your duties, so you do not do those repetitive tasks daily. It is repeatedly flexing your wrists under the pressure of pushing or pounding that causes CTS.

• Keep your **weight** down. Extra weight puts more pressure on the carpal tunnel.

• Keep your **arms close** to your body and your **wrists straight** while sleeping. For example, if you let your hand drop over the side of the bed while you are sleeping, the pressure on the median nerve is increased.

• You might wish to temporarily wear a **wrist splint** at night. This helps to keep the wrist straight.

• **Do not wrap** your wrist in an Ace bandage. This could cut off the circulation.

• If you have to **carry** something, make sure the handle is the right size. If it is too small or large, it could hurt your wrist.

PREVENTION

• Carpal tunnel syndrome is an increasing problem in our time. Here are several suggestions for avoiding its occurrence:

• Use a **tool** instead of flexing your wrists forcibly.

• Keep your **wrists** essentially straight (your forearms and hands are on the same plane) when you exert force with the hand.

• Use your **whole hand** and all your fingers when you grip an object.

• In doing a task, use your **whole arm**, not just your wrist. For example, when hammering, swing your arm rather than just your wrist.

• Select a **pair of scissors** with angled blades. **Do not wring** wet laundry by hand. **Musicians** (especially piano players) should not have a chair that is too low, so their wrists are crooked.

WHEN TYPING

• When typing, writing, or working with papers at a desk, maintain good **posture** and keep your **elbows bent**.

• Typing is the special problem. What is **the ideal position**? Cock your wrist back slightly, so that your thumb is parallel to your forearm. Your hand should be in approximately the same position as if it were holding a pen. This position keeps the carpal tunnel as open as possible. Place a wrist pad on the table, just in front of the keyboard.

• In order to do this, the **height** of your chair and the height of the desk (with your keyboard and mouse on top of it)—are both very important.

• Ideally, the **mouse** should be located very close to your body, so you do not have to reach for it. Carefully plan your **desk** arrangement. If necessary, ask the boss if you can bring in your own desk. Then have one made to exactly fit your specifications.

• Make sure the office **chair** is the right height. Use a chair with **armrests**. When your arm is on the armrest, the hands can rest; then lift off the armrests a little, with wrists straight, to work the keyboard.

• When operating the **mouse**, your arm can rest again on the armrest and the hand can reach a few inches to the front and side to the mouse while the wrist remains straight. (That is how the author is typing right now.) The key to avoiding CTS while typing is keeping the wrists straight.

• The computer **screen** should be about 2 feet away, and just below your line of sight.

• **Before starting** handwork, **exercise** the fingers and wrists for a couple of minutes, to warm them up. **Take a break** from handwork every hour. **Shake out** your hands every so often throughout the day.

—Also see Tennis Elbow (470).

ENCOURAGEMENT—The wrath of God will not fall upon one soul that seeks refuge in Him. God cares for His children who trust in Him. They may have trials in this life, but their life is secure; they will live with their Maker in heaven. John 1:12.

NEURO-MENTAL - 3 - CONVULSIONS

CONVULSIONS

(Spasms, Seizures, Fits)

SYMPTOMS—Paroxysms of involuntary muscular contractions and relaxations occur most frequently in children.

CAUSES—Convulsions are uncontrolled body movements set off by an electrical malfunction of the brain.

Convulsions can be caused by **epilepsy, meningitis, tetanus, uremia, hysteria, or eclampsia**. They can also be induced by **poisoning from camphor, cyanide, strychnine, santonin, brucine, or aspidium**.

In children the cause is often **wrong diet, rickets, syphilis, malaria, toxemias, or acute infectious diseases**. **High fevers** of 104°-105° F. are often a cause of convulsions in children.

In adults, the cause is often **epilepsy, heat cramps, strychnine, or food poisoning**.

Convulsions, due to tetanus and hydrophobia, are easily distinguished and, for the most part, involve a small portion of the voluntary muscles. Strychnine poisoning causes spasms which involve the whole body.

NATURAL REMEDIES

• Loosen the **clothing** and give plenty of **fresh air**. If the cause is undetermined, keep him from injuring himself. Place a **soft pad** between his teeth, to avoid biting his tongue or cheeks.

• If an infant, put him in a **bath** of 95° F. or in **mustard and water bath** at 85° F. **Cold** should be applied to the head. The cause must first be found, or injury may result from the bath. *If fever* is present, it should be a **tepid or cool bath**.

• Produce **vomiting** by placing the finger down the throat. *If gums are hot and swollen*, give **cold water** and **rub gums** with a cloth that has been held on ice.

• The bowels should be emptied immediately with an **enema**. Take some **laxative herbs**, to clean out the small intestine. **Fast** on fruit juices, water, or nervine herb teas (listed below) until all symptoms subside. Keep the body **warm**. **Lobelia** tincture should be rubbed well into the neck, chest, and between the shoulders. It is extremely relaxing.

• Helpful herbs include **catnip, skullcap, and peony**. Two cups of **valerian** root may be taken every 2 hours after the convulsions. **Antispasmodic tincture** *(242, 474)* is best and works faster.

• Other useful herbs include **rue, black cohosh, valerian, vervain, peppermint, chamomile, wild cherry bark, goldenseal, and a little cayenne**.

• Give weak **chamomile** tea in small doses several times a day. Give a warm chamomile tea enema.

• After this, **rest** absolutely quiet in bed; give careful diagnosis without disturbing him.

• One successful method of therapy has been the injection in 1 large dose of 600,000 IU of **vitamin D**. This helps the utilization of calcium, which relaxes the muscles.

• Take **calcium** (2,000 mg. daily) and **magnesium** (1,000 mg. daily) supplements. Also B_6 (100 mg. twice a day) and **chromium** (75-100 mcg. 3 times a day).

SPECIAL PROBLEMS

• *Parasites and constipation:* Parasites are the primary cause; constipation is less frequently a cause. Most frequently occurs in countries the most heavily infested with parasites, and there is poor personal cleanliness. Put the person on a cleansing and building program (**fresh fruits and vegetables, whole grains, nuts, and legumes**), discarding all **meat eating** and requiring that he never return to it (so he will not again become infested with worms).

• *If parasites* are the cause, use **garlic** enemas, plus eating garlic. *See Worms (588) for more information.*

• If the child or adult is *constipated*, immediately give a warm **catnip tea enema**.

• There is a definite possibility, especially in children, that a *food allergy* is involved—very possibly accompanied by malnutrition (maybe partially caused by being fed too much junk food and soft drinks). After the convulsion is past, begin testing with pulse tests for food allergies. *See Pulse Test (575).*

• If it should be a spasm of *asthma*, take 8 drops of **antispasmodic tincture** *(242, 474)* or inhale eucalyptus oil.

• If it is a *muscle spasm*, wring a **towel** out of hot water and lay it on the area.

• A *coughing spasm* can be relieved by the **antispasmodic tincture** or an **emetic**.

—Also see Antispasmodic Tincture (242, 474) and Epilepsy (473).

ENCOURAGEMENT—The psalmist says, "The law of the Lord is perfect." How wonderful, in its simplicity and comprehensiveness, are the Ten Commandments! In Christ's strength we can obey them; whereas, apart from Him, we cannot. John 15:4-5.

EPILEPSY

SYMPTOMS—There are several types of, what are called, seizures:

Absence (petit mal): A blank stare lasting about half a minute and the person is unaware of his surroundings. Most often in children.

Complex partial (temporal lobe): A blank stare, random activity, and a chewing motion. No memory of this seizure afterward. An aura, or warning indication, may occur before. It may be a certain odor, sound, thought, etc. No after memory of the seizure.

Myoclonia: Brief, but massive, muscle jerks.

Simple partial (Jacksonian): Jerking begins in the fingers and toes, and progresses throughout the body. The person remains conscious.

Simple partial (sensory): Things that do not exist are seen, heard, or sensed. A general seizure may follow.

CAUSES—Epilepsy is defined as an episodic disturbance of consciousness, during which generalized convulsions may occur. There are recurring seizures, generally one of seven patterns (listed above). This is caused by electrical disturbances in the nerve cells, in a portion of the brain.

Electroencephalographic studies reveal a direct relationship between changes in electrical brain potentials and the occurrence of seizures.

Epilepsy is the most common form of seizures, also called convulsions or fits. Epilepsy can be caused by **injury to the head, neck, or spinal cord** (especially before or during birth). **High fevers** during early childhood or **infectious diseases** can also cause it. Heredity can be involved. **Oxygen deprivation** at birth or a later **head injury** may be causal factors.

A variety of factors may trigger the onset of a seizure. Oddly enough, an important one is **constipation in the transverse colon**. Eating bread, especially **soft bread**, is known to lead to seizures among epileptics.

An improperly functioning **ileocecal valve** is a possible cause. This permits powerful toxins to return into the small intestine and enter the bloodstream, affecting the delicate nervous system and brain.

During a seizure, the person may fall during the attack, often injuring himself; he may bite his tongue, pass urine, and awake to realize that, because of muscular soreness, something has happened.

There is a tendency to sleep following the attack. Sometimes attacks occur only during sleep.

Some seizures take the form of antisocial or unnatural conduct.

On recovery, amnesia is generally complete, so no effort is made to hide what happened. The epileptic may gradually deteriorate.

NATURAL REMEDIES

IMMEDIATE TREATMENT

• During the attack, arrange the **head** to facilitate breathing. Prevent the **tongue** from being bitten or from obstructing the windpipe. Place a **pad** between the teeth during the attack. Afterward allow him to **sleep**.

• Here is an herbal formula, used for over a hundred years. Prepare the following powdered herbs in advance, for use when an attack occurs: Mix 2 oz. **skullcap**; 1 oz. **valerian** root, and ¼ oz. each of **cayenne** and **lobelia**. Sift the herbs. When an attack occurs, give 1 tsp. in a cup of hot water, every hour if necessary.

See Convulsions (472) for more information on dealing with them.

DIET

• Maintain a well-balanced, **nutritious diet. Do not overeat!** Do not eat **excessive amounts** of food or fluid at one time.

• Do not eat **soft bread**; better yet, do not eat any bread. You may find that you should not eat mush either.

• Drink fresh **fruit and vegetable juices**.

• Include **raw vegetables** in your diet.

• **Check your diet** with pulse and other tests, to see which foods are a problem. Use rotation diets to this objective. *See Allergies (576) and Pulse Test (575).*

• **Vitamin B_6** deficiency has been linked as a factor in some cases of epilepsy. When given to some babies in their formula, the epilepsy ceased.

• Do not be deficient in **vitamin A** (in the form of carotenes: carrot juice and yellow and orange fruits and vegetables), **vitamin D** (1,000 mg), **folic acid** (5 mg), **zinc** (30 mg), **and aurine** (an amino acid).

• Take **manganese** supplementation (25 mg). A lack of it can produce epilepsy. Women who lack it can give birth to epileptic children.

• **Magnesium** (1,000 mg) deficiency may cause muscle tremors and convulsive seizures. Epileptics have a lower than normal amount of this mineral. Infants with excess calcium intake had a magnesium loss. Yet other studies revealed that calcium was also important.

AVOID

• Avoid **white sugar and white-flour** products. Avoid **fried foods, animal protein, and artificial sweeteners.**

• Avoid **alcohol, caffeine, pesticides, and aluminum cookware**. High levels of aluminum have been found in the brains of those with epilepsy. Aluminum is a conductor of electricity; and trace amounts in the brain may trigger seizures.

• **Toxic metals (lead, copper, mercury, and aluminum)** are known to cause seizures. **Lead** is in old water pipes and wall paint. **Mercury** is in amalgam dental fillings. *See Lead Poisoning (600), Copper Poisoning (599), Mercury Poisoning (601), Aluminum Poisoning (598), and Heavy Metal Poisoning (596).*

• The artificial sweetener, **aspartame** (NutraSweet), has been linked to seizures, as well as other disorders.

• Avoid the herb, **sage**. This herb should not be used by anyone with a tendency to seizures.

• **Allergies** cause seizures in some. This includes **chemicals, pesticides, food additives, or common foods such as peanuts**.

• Doses of **folic acid**, in excess of 400 mcg per day, can trigger seizures.

OTHER HELPS

• Keep the **colon** clean. Take enemas or colonics weekly if necessary. Pressure from a clogged colon can press against the ileocecal valve and release toxins which are absorbed by the bloodstream.

• If the bowels do not move each day, take a **lemon enema** (juice of 2 lemons in 2 quarts water) before going to bed that night.

• **Hypoglycemia** *(544)* is linked to convulsions. Serum glucose levels fall just before a seizure.

• Have a **hair analysis** done, to see if metal toxicity could be involved as a causal factor.

• In some instances, a **ketogentic diet** is prescribed; but, if used, it should be under the guidance of someone who understands how to apply it. This diet is keyed to restricting protein and carbohydrate intake, increasing fat intake, and producing acid levels in the bloodstream which act to inhibit brain stimulation of seizures.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR EPILEPSY AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

BASIC FACTORS—Abstemious, **dry, aseptic dietary**. Chiefly fruits and grains. Daily do **vigorous outdoor exercise** to the extent of fatigue. Prolonged **Neutral Bath,** daily. **Sweating process,** 2-3 times a week. Graduated **cold procedures** (Tonic Frictions), avoiding prolonged and intense applications. [**Avoid constipation in the transverse colon**: This is a key factor in avoiding attacks. Avoid doughy foods that tend to constipation.]

WHEN ATTACK IS THREATENED—Colonic twice daily, copious **water** drinking, **Neutral Pack, ice** to head, **rest** in bed. Seizure may sometimes be averted by placing the person in cold water.

AFTER ATTACK—Rest, cold to head, Cold Mitten Friction or **Cold Towel Rub, Half Bath, Revulsive Douche** (spray) to legs, and **Percussion Douche** to spine.

GENERAL METHOD—Train him to a vigorous regimen, a simple abstemious dietary, abundance of outdoor exercise, the daily employment of the Prolonged Neutral Bath. Follow by short, moderate cold applications. Copious water drinking, regulation of all the vital functions, avoiding all sources of nervous irritation and exhaustion.

—See Convulsions (472) and Antispasmodic Tincture (242, 474).

ENCOURAGEMENT—Unless we depend on a power outside of ourselves, Satan will succeed in accomplishing our ruin. In looking to Jesus and obeying His Word, you will be safe. How thankful we can be, every day of our lives, for the love of God in Christ! Proverbs 20:13.

ANTISPASMODIC TINCTURE

It is best to use herb teas; but they have to be made fresh at the time. However, there are times when emergency help is needed fast, because a person is having another attack. At such times, an herbal tincture is superior, because it is instantly available.

A tincture is an extract made from herbs by soaking them in vinegar or alcohol. (Only grain alcohol should be used for internal use; wood alcohol, such as rubbing alcohol, will cause blindness.) The resultant mixture does not spoil.

When a spasm occurs, an extremely small amount of the antispasmodic tincture is given to the person (often a few drops), and he usually pulls out of the crisis quickly.

Antispasmodic tincture is used for all spasms or attacks such as those of the heart, asthma, cough, epilepsy, or shock.

The formula for this preparation, originally given by Jethro Kloss, is the one described here. This formula has been used for decades by veteran naturopaths with great success. Here is the formula:

ANTISPASMODIC TINCTURE

One-half ounce **cayenne** and 1 ounce of each of the following herbs: **skullcap, skunk cabbage** root or seed, **gum myrrh, lobelia** seed (or the plant if the seed is not obtainable), and **black cohosh** root.

Mix each of the above together while dry and put into a large-mouth jar. Add 1 pint pure grain alcohol of 70-100 proof. Eighty proof Vodka works fine because it is tasteless. (An alternative to alcohol is, instead, to use 1 pint of apple cider vinegar. Store in the same manner.) *—Go to p. 242 for a non-alcoholic mix.*

Let this stand for 10-14 days, tightly covered, and shake well. Also shake this well everyday.

At the end of that time, strain it through a very fine cloth and squeeze out all the sediment that you can. Store most of it in a tightly capped bottle. But put some into a small dropper bottle.

In a crisis, it is given in 8-10 drop doses. It can be squirted into the mouth or taken in a tablespoon of water. (If stored in vinegar, give in teaspoonful doses, not drops. Its effects will not be quite as rapid.)

Jethro Kloss mentions a man who was released from clenched **lockjaw** by a small application of antispasmodic tincture.

When the case is severe, especially with an infant, the tincture can be rubbed onto the chest, neck, and between the shoulders. Place 2-3 drops in the mouth, and wash down with teaspoon doses of warm water while the person is kept in bed. If necessary, repeat every 1-2 hours.

There are six herbs in the formula. The **lobelia** is the active agent in relaxing the muscles and normalizing breathing. The **cayenne** warms, stimulates, and reduces inflammation. The **skullcap** and **valerian** soothe the nerves and keep small vessels from rup-

turing. The **skunk cabbage** and **gum myrrh** aid in reducing infection. —*Go to p. 242 for more on this.*

COUGH SYRUP

As a cough syrup for children, prepare it in this way: Pour 1 quart water over the **herbs** mentioned above, in the same amounts. (No vinegar or alcohol is added.) Let it stand for 1 hour, then strain. Add 1 pint **honey**. Place it over low heat and let it evaporate to the equivalent of 3 cupfuls. Pour this hot syrup into hot baby-food jars and seal for future use. Give it in teaspoonful doses for **cough, asthma, convulsions, or insomnia**.

ENCOURAGEMENT—Our Lord is pleading for us in the presence of the Father, at the throne of grace in heaven. He is our only hope. Our faith looks up and grasps Him as the One able to save to the uttermost; and we are accepted by the Father. Psalm 18:30.

NEURO-MENTAL - 4 - PARALYSIS

LOU GEHRIG'S DISEASE
(Amyotrophic Lateral Sclerosis)

SYMPTOMS—Progressive muscular weakness and atrophy, weakened respiratory muscles (which can result in pneumonia), difficulty chewing and swallowing, stiffness, cramping, and involuntary quivering of small muscles.

CAUSES—Amyotrophic lateral sclerosis (ALS) is the most common motor neuron disease, resulting in muscular atrophy.

Causes include **heredity** (10% of the cases) or **strenuous physical work** in one's occupation, combined with **nutritional deficiencies** (especially **vitamins B complex, E, F, and C**). Other factors include **viral infections, physical exhaustion, and trauma**.

Heavy metals, ingested or inhaled, can also induce damage to the nervous system.

NATURAL REMEDIES

- A nourishing diet, which includes **complete vitamin / mineral supplementation, plus fresh fruits, vegetables, and vegetable juices**.
- A **vitamin E** (800 IU) deficiency is a special factor inducing ALS.
- **Calcium** (2,000 mg), **magnesium** (1,000 mg), and **potassium** (5,500 mg) are also needed.
- **Flaxseed** (or, secondarily, wheat germ oil) is essential.
- Avoid **dairy products, meat, sugar, and white-flour products**. Doing so will accelerate healing.

— *Also see Convulsions (472), Strengthening the Nerves (468), Antispasmodic Tincture (242, 474).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR AMYOTROPHIC LATERAL SCLEROSIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

BASIC APPLICATIONS—Prolonged Neutral Baths, 1-3 hours, daily. And massage.

GENERAL METHOD—Build up the general health by gentle **tonic measures** which are slowly increased in intensity, suppressing the formation of toxic substances and promoting their elimination by a suitable **dietary**, improvement of digestion, and the employment of the other measures indicated above.

By the suppression of the active causes of the disease and the adoption of better means for the **improvement of general nutrition—and especially of the nutrition of the spinal cord**—it is usually possible to arrest the disease; and, not infrequently, a considerable degree of improvement may be secured. Therapeutic measures must be most thoroughly and perseveringly employed. The progress of the disease may be delayed, even when it cannot be altogether arrested.

ENCOURAGEMENT—God's Ten Commandment law is so brief that we can easily memorize it; yet so far-reaching as to express the whole will of God for our lives. Thank God that there is a moral standard in our world, whether men like it or not. Psalm 19:7-14.

LOCOMOTOR ATAXIA
(Tabes Dorsalis)

SYMPTOMS—This is a type of brain damage in which a person cannot seem to move, or his arm or leg may be placed in a certain position and he is unable to move it.

CAUSES—Locomotor ataxia is a progressive damage to the rear portions of the spinal column. This condition is caused by earlier diseases, primarily syphilis. A man, perhaps in the prime of life, begins to have abdominal pains which he cannot account for. They increase in severity, resembling a girdle-like constriction about the trunk. Excruciating pains shoot through his legs and body. He soon finds that he cannot walk well in the dark. He loses control of his legs. He cannot control the discharges from his bladder and bowels. He becomes a helpless invalid for the rest of his life. Yet he may live on for years.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR LOCMOTOR ATAXIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

IMPROVE GENERAL NUTRITION—Careful Cold Mitten Friction or **Cold Towel Rub**. Very carefully **apply Graduated Cold Baths** and **Wet Sheet Pack**, protecting the spine by a dry towel. Follow by **Cold Mitten Friction** and Pail Pour or **Half Bath** at 85° F.

COMBAT TOXEMIA by **short sweating baths**, followed by appropriate **Graduated Cold Baths**. **Prolonged Neutral Bath**, beginning at 96° F. and daily lowering the temperature to 90° F. Increase duration from 30 minutes to 2-3 hours, daily. Copious **water** drinking and **colonic** daily.

IMPROVE NUTRITION OF SPINAL CORD—Fomentation to the spine at 110°-120° F., twice daily, with **Heating Compress** during the interval between. Thorough massage of the back, suspension or spine-stretching by flexion of the trunk upon the thighs or flexion of the thighs upon the trunk.

ATAXIC MOVEMENTS—Special exercises in small movements of each of the affected muscular groups.

LIGHTNING PAIN—Prolonged **Warm Fan Douche** to spine at 95°-100° F., 2-3 times a day (with pressure at 2-5 pounds).

GASTRIC CRISES—Very hot **Fomentation** to the abdomen several times a day, followed by **Heating Compress** when nerves of lower back are sensitive. Continue for several weeks. **Revulsive Compress** to stomach.

LOCAL PAINS—Revulsive Compress and Revulsive Douche, followed by **Heating Compress**.

RECTAL PAIN—Very hot **Anal Douche** at 115°-122° F., with little pressure. **Revulsive Sitz Bath**, **Fomentation** over buttocks, Hot **Colonic**.

PARESIS OF BLADDER—Daily **Colonic**. Cold **Plantar** (bottom of foot) **Douche**.

TROPHIC CHANGES - CHARCOT'S JOINTS—Fomentation to the parts when painful, 3 times a day, with **Heating Compress** during the intervals between. Apply mechanical support when necessary.

CONTRAINDICATIONS—Cold baths, cold applications to spine, general cold douche, very hot applications.

GENERAL METHOD—Build up his general health by gentle tonic measures, carefully avoiding such applications of cold water as are found to increase pain or aggravate other symptoms; combat the local morbid process in the spine by the above indicated measures. And restore the power of co-ordinated movement in the affected muscular groups by special gymnastic training.

ENCOURAGEMENT—Difficulties will be powerless to hinder him who is determined to seek first the kingdom of God and His righteousness. Looking to Jesus, the believer will willingly brave contempt and derision.

MENINGITIS

SYMPTOMS—Symptoms vary considerably, but usually include a sore throat, fever, headache, stiff neck, and vomiting. Children and adults can become critically ill in 6-24 hours after the first appearance of the symptoms. *This condition requires rapid diagnosis and initiation of treatment.* Take him to the emergency room immediately! Demand immediate help!

Symptoms include sore throat, red or purple skin rash, fever, chills, malaise, headaches, vomiting, sensitivity to light, nausea, delirium, stiff neck, and convulsions.

In infants: vomiting, fever, difficult feeding, irritability, a high-pitched cry, a bulging fontanel (soft spot on top of the head). Changes in temperament and extreme sleepiness indicate dangerous changes in cerebrospinal fluid.

Warning: A child with this condition can be injured when he is picked up.

CAUSES—The meninges are three membranes that cover the brain, separating it from the skull. Other membranes cover the spinal column. Meningitis is an inflammation of either one or both of them (cerebral meningitis and spinal meningitis). It is a contagious disease.

Causes include several different **viruses** (including those causing **polio, measles, rubella, fungi, yeast infection**) and several types of **bacteria**.

Infection can spread from the nose and throat to the meninges. A depleted **immune system** (along with **nose and throat trouble**) can cause it to enter the bloodstream and go to the brain.

If not properly treated, a case of **flu (an ear, nose, and throat infection)** can develop into meningitis.

Eating **heavy meals or taking drugs while sick** can cause an infection to drive deeper into the system and enter the brain area.

Other factors aiding in the development of meningitis are **alcoholism, brain surgery, brain cancer, exposure to chemical agents, head injury, pneumonia, Lyme disease, syphilis, tuberculosis**, or anything that weakens the immune system (**chemotherapy, radiation treatment, steroid therapy, HIV infection, and certain types of cancer**).

Of the three main types of meningitis, *viral infection* is more common and produces milder symptoms, such as malaise and headache, which generally clears up on its own in a week or two.

But the *bacterial type* requires prompt, aggressive treatment—or brain damage or death can result. (Any time a bacterial infection in the head or throat occurs [such as **strep throat or an ear infection**], eliminate it; do not ignore the problem.)

Fungal meningitis progresses more slowly, but also requires medical care.

Do not guess! Call a physician!

Meningitis is more common in children than adults.

If there are no complications, recovery usually takes three weeks under a physician's care.

Remember: Meningitis is contagious. Those caring for a person with this disease must be very careful to be sure to obtain adequate rest.

NATURAL REMEDIES

Meningitis can progress quickly and become life

threatening in 24 hours for adults, and even quicker for children. Call a physician. If untreated, permanent brain damage and possible paralysis can result.

• *If cerebral meningitis:* Immerse back of head in warm **epsom salts solution** several times daily to draw out inflammation. Alternate **hot and cold packs** on the neck and back of the head to stimulate circulation to the area, plus Fomentations to the liver and abdomen.

• *If spinal meningitis:* Give Fomentations to the spine, liver, and abdomen.

• **Rest** in bed (with a very **dim light, at the most**) **in a well-ventilated** room, with no visitors. Drink plenty of clean **liquids**.

• **High enemas** are very important. The bowels must move 2-3 times a day. Use an herbal laxative if necessary. *See Herbal Laxatives (377).*

• If there is fever, take **cool sponge baths**. Use **catnip tea enemas** to reduce fever. The tea can also be sipped.

• Thorough **massage** will do a great deal to hasten recovery.

• Get some fresh **air** and early morning **sunshine** each day. Get plenty of **rest** during healing.

• **Goldenseal** and **Echinacea** are both antibiotics. But do not take either one for more than a week; you can shift from one to the other. Take 6-8 **garlic** tablets daily. *See Antibiotic Herbs (228).*

• To strengthen the nerves, take **skullcap** tea and **gotu kola**.

DIET

• It is best **not to eat food** during the acute phase. Eating food stops the elimination of toxins from the tissues, so that digestion of the food can take place. This causes toxins to be thrown still deeper into the system.

• Drink **citrus juices**, from lemons, oranges, and limes.

• When the acute phase is ended and recovery is beginning, eat a **nourishing diet of fresh fruits, vegetables, whole grains, nuts, and legumes**. Fresh **pineapple** helps reduce the infection.

• **Niacinamide** (100-500 mg daily), **vitamin A** (400 IU for children; 5,000 IU for adults), **B complex**, **vitamin B_6** (100 mg), vitamin B_{12} (2,000 mcg.), **choline** (500 mg). **Vitamin C** (½ tsp. every hour during acute phase; reduce by ½ for maintenance until remission).

• Avoid **meat, dairy products, caffeine, and salt.** Avoid **processed, sugared, and white-flour foods**.

• Avoid **aluminum** cookware, deodorants, and other alum-containing products.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MENINGITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL—Careful Cold Mitten Friction, 2-4 times daily.

COMBAT CONGESTION OF THE BRAIN AND SPINAL CORD—Ice Cap, Ice Collar, **Cooling Compress to the head**, **Ice Bag to the spine**, general derivative treatments (such as **Hot Hip Packs and Hot Leg Packs**), Hot Blanket Pack, **Hot Full Bath** at 102° F. The head should be protected by the **Ice Cap** or Ice Collar during all hot applications. **Fomentation to the spine** every 2 hours. **Spinal Ice Bag** during intervals between. Vigorous skin circulation must be maintained, with **Cold Mitten Friction**.

PREVENT BRONCHITIS—Fomentation to the chest, twice daily. Well-protected Heating Compress during interval between. Keep shoulders dry and well-protected while in bed. In Cold Bath, see that the water covers the shoulders. The Chest Compress must cover the shoulders.

HEADACHE—Fomentation to the back of the neck, **Ice Compress** to head and neck. Hot and Cold Head Compress.

PAIN IN BACK AND LEGS—Fomentation to back. **Hot Hip Pack**. Repeat every 4 hours or more often. Heating Compress or Ice Bag during interval between.

VOMITING—Ice Bag over stomach. **Hot and Cold Trunk Pack**.

DIARRHEA—Enema at 95°F. after each movement. During interval between, give **Cold Abdominal Compress** at 60° F., renewed every 15 minutes with **Fomentations** to the abdomen for 15 minutes, every 2 hours.

MUSCULAR RIGIDITY—Hot Blanket Pack. Hot Full Bath. Hot Fomentation, followed by well-protected **Heating Compress**.

HYPERESTHESIA—Neutral Bath at 94°-96° F.

DELIRIUM OR MANIA—Prolonged **Wet Sheet Pack**, Ice cap, or Ice Collar.

MUSCULAR SPASM—Hot Full Bath at 102° F. for 15-30 minutes, with Ice Cap and Ice Collar. Prolonged **Neutral Bath**. Heating Spinal Compress.

CONTRAINDICATIONS—Do not use Cold Full Baths and other general cold procedures.

GENERAL METHOD—The object to be sought, by treatment, is to relieve congestion of the brain and spinal cord by diverting as much blood as possible into the skin; hence the skin must be kept constantly warm. General cold procedures, such as the Cold Full Bath and the Cooling Pack must be avoided. Undue excitement of the brain and spinal cord during hot applications is prevented by protecting these parts by Ice Compresses and the application of an Ice Bag over the heart. Partial cold applications, as Cold Mitten Friction, should be administered several times daily to maintain vital resistance. Care should be taken to maintain surface warmth by the application of heat to the spine, legs, or other parts during the treatment so as to avoid retrostasis.

ENCOURAGEMENT—Christ calls to you, "Choose you this day whom ye will serve." There is necessity for a decided choice; for Jesus said, "You cannot serve God and mammon." We cannot have divided service, part for God and part for the devil. Give your life to God. Matthew 6:24.

MENINGOCELE
(Spina Bifida)

SYMPTOMS—A severe birth defect.

CAUSES—Technically, this is a protrusion of the membranes of the brain or spinal cord through a defect in the skull or spinal column. This severe birth defect results in exposure of the brain or spinal cord and its coverings (meninges) because of the improper formation of the vertebrae. In simple words, this means that part of the brain (or spinal cord) tissue is sticking through an opening that should not be there in the skull (or spinal column).

Death may result. Medical treatment is limited to surgery.

We cannot provide you with solutions once this has occurred. We can only tell you what would have prevented it.

NATURAL REMEDIES

PREVENTION—This birth defect is **caused by a deficiency of folic acid, B_{12}, zinc, or vitamin A** during early pregnancy.

These deficiencies may be the result of poor and inadequate nutrition or intestinal malabsorption problems in the mother.

Millions of dollars are spent on advertising junk food while the government keeps telling people they can get all the nutrients they need from the food they eat.

ENCOURAGEMENT—Christ's glory is concerned in our success. When (by faith in Him) we live for Him and obey Him, we honor and glorify Him. What a thought is this! He is our sympathizing Saviour. Yield Him your life. Psalm 147:7-8.

MENKES' SYNDROME

SYMPTOMS—Kinky, sparse, and brittle hair. Loss of hair color, arterial aneurysms, scurvy-like bone disease (ostosis), and progressive brain degeneration.

CAUSES—The current theory is that it is a genetic disease; but it is actually a malabsorption problem in early infancy.

NATURAL REMEDIES

• Give this vital trace mineral, **copper**, to the child (copper IV, at 200 ug /kg / day).

• In addition, deal with the malabsorption problems by **taking the infant or child off wheat, cow's milk, and soy milk**.

• Give **copper** orally at 1-2 mg per day, after elimination of symptoms.

Celiac disease can produce a copper deficiency, along with other deficiencies. Celiac disease is primarily caused by feeding the infant wheat products (cereal, etc.) at too early an age. *See Celiac Disease (382).*

ENCOURAGEMENT—If the sinner's heart is filled with love for Christ, it will be shown that He is stronger than the passions which have ruled him in the past, whose indulgence undermined noble impulses and left the soul to the mercy of Satan's temptations. When the heart of the sinner is touched, he yields his will to God's will. 2 Thessalonians 3:16.

MULTIPLE SCLEROSIS

SYMPTOMS—Earlier stages: occasional dizziness, mood swings or depression, numbness in the fingers and feet, weakness in the hands and feet, loss of balance, nausea and vomiting, muscular stiffness, tremors, slurred speech, and difficult breathing.

Later stages: difficulty in walking, a staggering gait. Later still: spastic movements, paralysis, extreme fatigue, and bowel and bladder incontinence.

Symptoms flare up and then nearly disappear for a time. Yet the problem keeps worsening, over a matter of weeks, but sometimes slowly over decades.

CAUSES—Multiple sclerosis (MS) is a progressive, degenerative disorder of the central nervous system. The nerves are covered with a coating called myelin. MS destroys this covering, leaving scar tissue (called *plaques*) in its place. Eventually the nerves themselves become sclerotic (hardened) and stop functioning.

Possible causes include an **autoimmune** attack on the white blood cells of the myelin sheaths, **malnutrition or poor diet, stress, possible food allergies (dairy products or gluten), metal poisoning (lead, mercury, etc.), chemicals (industrial chemicals, pesticides, etc.), toxins from bacteria and fungi in the body, and vaccinations**.

Diet appears to be a primary factor: heavy consumption of **meat, sugar, refined grains, and rancid oils**.

Overwork, emotional stress, fatigue, pregnancy, acute respiratory infections, chemical poisoning, and poor diet are known to precede the onset.

MS usually begins between 25 and 40; it is twice as often in women more than men. In America alone, 350,000 people have MS. It is the most common acquired disease of the nervous system in young adults.

There is no known cure; but suggestions, below, will help retard (and possibly halt) the progress of the disorder.

NATURAL REMEDIES

• Give attention to solving as many of the above possible dietetic and environmental causes as possible.

• Eat a **nourishing diet** with supplemental **vitamins and minerals**. **Fruit and vegetable juices** are important.

• Each day take **beta-carotene** (15-30 mg), **thiamine** (1.5 mg), **riboflavin** (1.8 mg), **vitamin B_6** (2-10 mg), **vitamin C** (100-500 mg), and **vitamin E** (400 IU).

• Avoid **meat, milk, eggs, dairy products, and caffeine**. Do not drink **alcohol**.

• Avoid **sugar, excess fat, white-flour, rancid oils, fried foods**—all of these destroy nerve cells.

• The **mercury fillings** in your teeth may be a factor. The levels of mercury in people with MS are seven

times higher than those in other people. Get rid of your mercury fillings, if you have any symptoms of MS.

• **Massage** and regular **exercise** are helpful. Keep **mentally active**.

• Avoid emotional **stress, anxiety, and excessive fatigue**; they can bring on attacks. Avoid **smoking** and secondhand smoke. You need oxygen.

• Short **fasts** are helpful.

SPECIAL HELPS

• Roy Swank, M.D., spent 20 years studying the problem and found that a **high-saturated fat diet** makes the problem worse. It is important you only maintain a low-fat, unsaturated fat diet (2 Tbsp. daily of raw **flaxseed oil**, and no other oil). Also take 1 tsp. granulated **lecithin** daily.

• Take **magnesium** (375 mg daily). **Purslane** is the herb richest in magnesium (2% on dry weight basis), followed by **poppy seeds** and **cowpeas**. Steam purslane or eat it raw in salads.

• **Black currant oil** contains *gamma-linolenic acid* GLA), useful in treating MS. GLA is good for all autoimmune disorders *(584)*. GLA is also in **borage** and **evening primrose oil**. Evening primrose oil is very good for MS.

• **Blueberries** contain *oligomeric procyanidins* (OPCs), which help prevent myelin sheath destruction. They also relieve anti-inflammatory activity in MS.

• **Pineapple** contains *pancreatin* and *bromelain*, two enzymes which break up protein molecules in the stomach so they can be digested better. These enzymes also reduce *circulating immune complexes* (CICs), which occur in several autoimmune diseases. The CICs activate the immune system to attack the body.

• **Ginkgo biloba** contains several unique terpene molecules *(ginkgolides)* which reduce MS, inflammation, and allergic processes in autoimmune diseases. Take ginkgo biloba extract (24% concentrate; 40-80 mg. 3 times daily).

• **Chelation therapy** *(596)* may be able to help multiple sclerosis.

• **Hyperbaric oxygen therapy** has been used successfully in some other countries (outside the U.S.).

• Here is folk medicine which has helped many people: They find **stinging nettle** plants and, handling them with gloves, slap it against exposed skin. This places the tiny, hair-like stingers into the skin and gives microinjections of several beneficial chemicals, including histamine (the chemical that often induces allergies such as hay fever). Another method is to get stung by **honey bees**. Both methods include similar helpful chemicals which can help the condition, but will not cure it. The nettles keep regenerating new leaves.

• Take **sunbaths** and **vitamin D**. The disease occurs more frequently in localities farther away from the equator (northern Europe has more cases than southern Europe).

• Other helpful herbs include **ginkgo, suma, gotu kola, kelp, hops, chamomile, skullcap, and valerian.**

• Some researchers believe **mercury** poisoning is a significant cause of MS. Get rid of your **amalgam** dental fillings.

ENCOURAGEMENT—There is no mystery in the law of God. All can comprehend the great truths which it embodies. Everyone can grasp its rules. Obedience to the law is essential for our own happiness and the happiness of all with whom we are connected, not only for our salvation. But only in Christ's enabling strength can we render that obedience.

MUSCULAR DYSTROPHY

SYMPTOMS—Weakness of the muscles, scoliosis (curvature of the spine), enlargement of certain muscle groups (calves, trapezius, etc.) to compensate for loss of major muscle groups. The muscles gradually shrivel and weaken. The muscles in the trunk are especially affected. All muscles eventually become involved.

CAUSES—Muscular dystrophy (MD) produces a weakening and wasting of muscle tissue which is not noticed (because of replacement of muscle tissue with fat and fibrous scar tissue) until there is substantial damage.

Animals given a **vitamin E**-deficient diet develop muscular dystrophy. It is believed that MD could be wiped out if vitamin E were given to all expectant mothers and bottle-fed babies. **Mother's milk** has six times as much vitamin E as cow's milk; and this is almost twice as much **selenium**.

There may be a hereditary factor; but diet is still the crucial issue.

NATURAL REMEDIES

• **Vitamin E** and **selenium** should be given orally, intramuscularly, and intravenously at the very outset of the disorder in order to arrest it. Vitamin E: intramuscularly at 80 mg per day; orally at 800-1,200 daily. Selenium: orally, intravenously, and intramuscularly at 50-1,000 mcg per day, based on weight.

• **Essential fatty acids** are needed (5 gm daily; 2 Tbsp. flaxseed oil). Also **choline** or soy **lecithin**, at 10-20 gm per day.

• Avoid **food allergens** and **excessive fats**; no more than 20% of daily calories should be in fat.

• Avoid **exercise** for one month during initial treatment period, to avoid undue injury to already weakened muscles.

—Also see Birth Defects (687-689).

ENCOURAGEMENT—Battles are to be fought everyday. A great warfare is going on over every soul, between the prince of darkness and the Prince of life. And you and I are in the middle of it. We must stand true to God; and we do this by continually choosing to remain submissive to His will. No one but your own choice can remove you from Christ's protection.

MYASTHENIA GRAVIS

SYMPTOMS—Muscular weakness, fatigue, emotional stress, and droopy eyelids. Difficulty in breathing, swallowing, and speaking.

The onset is gradual; and the symptoms are worse in the evening. The person complains of difficulty in chewing, swallowing, and talking.

CAUSES—Myasthenia gravis is a disease characterized by great muscular weakness (without atrophy) and progressive fatigability. The name means "muscle weakness."

Adolescents and young adults, especially women, are the most likely to have this problem. But it sometimes occurs in newborn infants and adults over 40. In the latter case, a **tumor in the thymus** is involved. It rarely occurs past 50.

The muscles of the face and neck are primarily involved; but those in the trunk and extremities may also be involved. Some cases are mild; others rapidly become fatal. When the respiratory system is involved, death is much more likely to result from this disease. Progress of the disorder is variable; and prolonged remission may occur.

It is thought to be an autoimmune disease that causes malfunctioning of an enzyme *(acetylcholine)* which is responsible for inducing muscles to contract. (It is conjectured that there may also be an excess of *cholinesterase* at the myoneural junction, causing nerve impulses to fail to induce normal muscle contractions; but this is less likely.)

There is a failure in transmission of nerve impulses at the neuromuscular junction. Either the acetylcholine release is not adequate or the muscle response to the acetylcholine is not sufficient. An autoimmune factor may be involved (*i.e.*, there are so many toxins in the body, that the system interferes with normal functions.)

Autointoxication may thus be a primary cause. **Toxins** accumulate in the bloodstream from **chemicals, chronic constipation, etc**. They destroy the muscular system or trigger other body systems to do so.

Chronic **constipation** can cause the cecum to press against the ileocecal valve, releasing poisons of the colon back into the small intestine. This is a dangerous situation, since toxins in the small intestine are absorbed into the blood far more quickly than when they are in the colon.

NATURAL REMEDIES

• Clean out the colon, by means of **colonics or high enemas**. Go on a **fruit / vegetable juice fast** for several days.

• Begin eating a **nourishing diet, not overeating**, and always including an abundant amount of **roughage** (to aid in preventing constipation). Drink enough **fluids**.

• A deficiency in **vitamin A** can produce muscular and spinal cord degeneration. It is best taken in the form of carotenes (carrot juice, and green and yellow vegetables). Also important for the nerves and muscles are vitamin B complex, vitamin C (1,000 mg), vitamin E (400 IU), Calcium (2,000 mg), magnesium (1,000 mg), potassium (5,500 mg), manganese (50 mg), and zinc (30 mg).

• **Lecithin** is very important for good nerves, as well as chlorophyll.

• Good foods include **buckwheat, millet, rye, and red potato peeling broth**.

• Avoid the solanaceous crops; for they contain *solanine*, which interferes with the neurotransmitter, *acetylcholine*. These foods include **tomatoes, white potatoes, green and red peppers, eggplants, and tobacco.**

• Avoid the glue foods, such as **white flour and dairy products**. Stay away from **fried foods, meat, all animal fats, cheese, and eggs**.

• **Do not overwork**. Learn to relax; learn to work at a more moderate pace and stop more frequently to rest.

• **Walk** a little outdoors and gradually build up. But do not overdo. A little walking is good; too much of any exercise might not be.

• Helpful herbs include **slippery elm, comfrey, oatstraw, and the nervine herbs: skullcap, hops, chamomile, valerian, dong quai, wood betony,** and small amounts of **lobelia**.

—Also see Parkinson's Disease (below).

ENCOURAGEMENT—The world that Satan has claimed and has ruled over with cruel tyranny, the son of God has, by one vast achievement, encircled in His love and connected again with the throne of God. Thank your heavenly Father for what He offers you! And accept it now, right now. Colossians 3:15.

PARKINSON'S DISEASE
(Shaking Palsy, Paralysis Agitans, and Parkinsonism)

SYMPTOMS—Initially: mild to moderate tremor of the hand or hands while at rest, a feeling of being slow and heavy, tendency to tire more easily, muscular stiffness, loss of skill in the fingers and thumb (writing, buttoning and unbuttoning, playing the piano, etc.)

Later: depression, loss of appetite, muscular rigidity, permanent rigid stoop, shuffling gait, drooling, tremors, fixed facial expression, and impaired speech. Ability to maintain balance may be affected.

The body gradually becomes rigid as limbs stiffen. Dementia may occur.

Principal signs are tremor at rest, muscle rigidity, and slow or retarded movement. Tremors and slowness generally begin in one limb, then progress to the other limb on the same side; later still to the other side. Usually the hands are affected before the feet.

CAUSES—Parkinson's disease is a gradual degeneration of the nervous system. The nerve cells in the basal ganglion of the brain are gradually destroyed.

Parkinson's disease is one of the most common debilitating diseases in the United States (over 450,000 have it). But actual disability usually does not occur for 10-15 years after onset of symptoms. Most of those with it are over 60. More men have it than women.

Although the underlying cause is not known, symptoms appear when there is a lack of *dopamine* in the brain. Dopamine is made by the body; it carries messages from one nerve cell to another. Normally, another neurotransmitter, *acetylcholine*, is made, to keep dopamine in balance. When there is not enough acetylcholine, myasthenia gravis *(479)* occurs; when there is not enough dopamine, the result is Parkinson's disease.

In Parkinson's, the problem generally is destruction of the cells which make dopamine. But sometimes the cause is blockage of the dopamine receptors in the brain.

One possible cause of this disorder is that too many **toxins** have been released in the body for the blood to filter out through the liver. An excess of **chemicals, drugs, toxins in meat eating**, etc., are thought to be involved. It is known that one of the chemicals in **heroin** directly destroys the key brain cells which prevent Parkinson's. A **chronic poor diet**, over many years, is also considered to be a significant factor.

NATURAL REMEDIES

• It is very important that the person afflicted with Parkinson's disease **keep active**. Muscles which are not used atrophy more quickly. The person's own determination and faithfulness in an **exercise program** will forestall the progress of the disease better than almost anything else. Every exercise keeps the muscles more useful. Use a wide variety of simple exercises! Buy a book on weight lifting; but, of course, use much smaller weights. Swing the arms forcefully when walking. Exercises involving **joint movements** (including the neck) are very important.

• Keep the feet a distance apart, when **walking**, and take short steps when turning.

• **Typing, writing, working with clay**, etc., helps the fingers.

• **Breathe deeply** in and out.

• Take frequent **rest** periods.

• **Read aloud**, to keep the mouth muscles in good condition.

• **Any act difficult to perform** should be done daily.

• **Overweight** is a problem; take the extra off.

• **Chelation therapy** *(596)* may be able to help Parkinson's.

DIET

• A **nutritious diet**, adequate rest, exercise in the open air, enough **fluids**, and **sunlight** help slow the effects of Parkinson's disease.

• *Octocosanol* is found in **wheat germ oil**. It helps the neuron membranes.

• Eat foods and take supplements containing **antioxidants** *(104)*. The most important of these is **vitamin E** (3,200 IU daily!) and **vitamin C** (3,000 mg daily!). This can slow the progression of Parkinson's disease by 2-3 years! Theoretically, a person who takes significant dosage levels will never contract Parkinson's disease in the first place. It appears that free-radical damage may be a major cause of damage in dopamine-producing brain cells.

• Take **coenzyme Q_{10}** (200 mg), **thiamine** (5,000 mg), **zinc** (30 mg), and **vitamin B_{12}** (100 mcg).

• **Iron** supplementation seems to help in some cases. The production of tyrosine, an enzyme involved in *dopa* production (the precursor of dopamine), is stimulated by iron supplementation in the diet.

• Here are some additional helps and dosages of worthwhile natural substances: **octocosanol** (300 mcg, three times a day), **Neuro-Gen leucine** (10 gm / day), l-methionine (5 gm / day), **essential fatty acids** (1 Tbsp, twice a day), **l-tyrosine** (100 mg / day), **dl-phenoalanine** (100 mg, three times a day), **vitamin B_1** (200 mg, 3 times a day), **vitamin B_6** (100 mg, 3 times a day), **betaine HCl** (75-200 mg, 3 times a day before meals).

• **Fava beans** *(vicia faba)* have more natural L-dopa than any other plant food. It takes about a 16-oz. can of fava beans to provide enough L-dopa to have a physiological effect on Parkinson's. It has recently been discovered that **fava bean sprouts** contain ten times more L-dopa than the unsprouted beans. Begin eating them at the earliest stages of the disease!

• **Velvet beans** (*Mucuna*, various species) also contain large amounts of L-dopa.

HERBS

• **Ginkgo biloba** is widely used in treating Alzheimer's, stroke recovery, and also useful for Parkinson's.

• **St. John's wort** inhibits an enzyme which interferes with the release of dopamine in the brain. Take 20-30 drops St. John's Wort tincture daily.

• **Passionflower** contains two reportedly effective anti-parkinson's compounds: harmaline and harmine alkaloids. Take 10-30 drops 3 times daily of the standardized tincture.

• **Evening primrose oil** (EPO) improved Parkinson's-induced tremors in 55% of those who took 2 tsp. a day for several months.

• Put 20 grams of **Larkspur** in 4 cups boiling water. Drink mouthfuls at a time, but not over 3 cups daily.

• **Lady's slipper** reduces tremors and depression. Take 3-9 grams of the tincture. Combine **skullcap** with lady's slipper for better results.

• Ingestion of **aluminum** is a factor in Alzheimer's disease; and it may also be involved in Parkinson's

disease. Do not use **aluminum cookware** or **deodorants** containing it (**alum** is aluminum). Also avoid **lead**. Some people with Parkinson's disease have high levels of lead in their brains.

• Avoid **processed food, coffee, caffeinated tea, sugar, and tobacco.**

L-dopa *(L-dihydroxyphenylalanine)*, in the form of the drug brand, Levodopa, is a synthetic dopamine which is given to patients to supply the missing dopamine. Intriguingly enough, actual dopamine (from animal sources) cannot be given, because there is a blood-brain barrier rejecting it. So Levodopa is given, which is accepted (through conversion to dopamine in the basal ganglion). But two facts should be noted: (1) **Vitamin B_6** reverses the effects of Levodopa, so efforts must be made to eliminate B_6 from the diet. (Eat in moderation bananas, oatmeal, peanuts, whole grains, potatoes, meat, and fish; and only eat protein foods in the evening.) (2) Levodopa usually produces side effects, such as nausea, vomiting, insomnia, mental confusion, and agitation, as well as liver and kidney damage. L-dopa and carbidopa can aggravate and speed up the progress of Parkinson's disease in many cases; they are said to have little beneficial effect in over half the cases.

ENCOURAGEMENT—Man's happiness must always be guarded by the law of God. That law is the hedge which God has placed about His vineyard. By it those who obey are protected from evil. But only through Christ's enabling merits can you be empowered to obey the Ten Commandments. John 14:27.

POLIO

(Poliomyelitis, Infantile Paralysis)

SYMPTOMS—Fever, nausea, diarrhea, headache, and irritability.

Incubation is generally 2-7 days; and the onset is often abrupt. There may be digestive disturbance, plus a slight elevation of temperature, usually for not more than 3 days. Then paralysis may, or may not, develop.

Bend the person's neck forward, down toward the chest. If it aches, polio may be coming on.

CAUSES—Poliomyelitis means "gray marrow," and is inflammation of the gray matter of the spinal cord. The condition is not confined to infancy, nor is paralysis always involved. Polio is a viral infection of the spinal cord which destroys the nerves controlling muscular movement, often resulting in paralysis of certain muscles.

The first of two stages of polio is the infectious stage, when the virus is active. The second is the non-infectious stage, when recovery may occur.

Paralysis may be confined to a small part of the body—or much, or nearly all of it. But muscle atrophy may also occur. Death generally occurs only in bulbar and respiratory cases. Aside from bronchopneumonia, other complications are relatively few.

Epidemics, when they occur, usually reach their peak during the warmest months (July and August).

In the late 1940s, Benjamin Sandler, M.D., was interviewed on the radio in the spring, just before the summer polio season. He declared that if **sugar foods**—and especially **cola drinks and other soft drinks**—were avoided, polio would not be contracted. This went into the newspapers; and the East Coast area covered by the announcement had very little polio that summer. Later, Sandler wrote a book detailing his concept.

Sugar injures the nerves. Calcium is needed by the nerves; but highly ***acid*** substances remove calcium. ***Phosphorous*** locks with calcium and carries it off, making it unavailable. **Coca Cola-type drinks** combine all these special qualities! The liquid in Coke is more acid than vinegar; yet it is not noticed because of the very high sugar content. Coke is phosphoric acid. So the sugar and acid eat away the calcium; and the phosphorus immediately locks into it. A tooth, dropped in a glass of Coke, will entirely melt away in a matter of hours.

Another factor is being **cold**. People drink Cokes and other soft drinks at swimming pools, then jump in and vigorously swim in the cold water. Because many people contract polio at swimming pools in the summer, it is suspected that there must be something in the pool water. But the problem is the soft drinks, not contaminated pool water. The body is adapted to the intense heat of mid-summer; but poor diet plus soft drinks weaken it, then the cold plunge intensifies the effects.

Franklin D. Roosevelt was very athletic. He fought a forest fire near his home, ate some junk food, and jumped in an ice-cold river to cool off. He then came down with polio.

Because it was so dangerous to the health, Coca Cola was banned from interstate commerce by the original Food and Drug Administration early in the 20th century. That is why, to this day, Cokes and Pepsi's are made in local bottling plants. Only the syrup is shipped interstate. At the local plant the syrup and water are poured into bottles.

PREVENTIVES

• Do not drink cola drinks. Do not drink other soft drinks. Avoid sugar foods. Only eat nutritious food. Do not become chilled when fatigued from work or play.

• Medical history reveals that people who rarely contracted polio were vegetarians, did not eat junk foods, drink soft drinks, avoided polio vaccines, and lived clean lives.

NATURAL REMEDIES

• As soon as a person comes down with polio, the standard medical routine is to place him in bed and observe him to see if polio develops. —But, what should be done is to **place him immediately in a warm, full bathtub**, or better, give him the **"Kenny packs."**

• Nurse Kenny (called Sister Kenny, because nurses in Australia are called "sister") applied **hot packs** to

polio patients (covering parts, or all, of their bodies), and eliminated polio with few or no aftereffects. But this water therapy method was not permitted in America. Only the medical association knows why.

Other factors:

• During the infectious stage, **keep the diet high in protein and potassium**, to replace that which is lost because of tissue destruction.

• **Fluid, caloric, and sodium intake** should also be increased because of the fever. Additional **B vitamins** are needed, along with **vitamin A (carrot juice** and/or 5,000 IU vitamin A), and **vitamin C** (2,000-5,000 or more mg.)

• Give antispasmodic tincture *(242)* doses (according to age) of 8-15 drops in ¼ glass of hot water.

• Helpful herbs include **prickly ash berries, wild cherry bark, valerian root, skullcap, goldenseal, black cohosh, red clover, catnip, and yellow dock**.

• Dr. Salk, himself (developer of injectable polio vaccine), warned against the serious dangers in taking oral polio vaccine! **Beware of oral polio vaccine**! In the latter part of the 20th century, oral polio vaccine has produced more cases of polio than any other agency.

• In addition, there is extreme danger in handling the bowel movement of an infant who has received the oral polio vaccine! You can get crippling polio from doing so.

ENCOURAGEMENT—The way of salvation has been opened to the fallen race on Planet Earth. That salvation is offered to you, right now. It is yours to claim as you accept Christ and let Him strengthen you, to obey the precepts in the Bible. Psalm 86:5, 7.

POST-POLIO SYNDROME

SYMPTOMS—Difficulty in swallowing, which could produce a risk of choking. A progressive muscle weakness.

CAUSES—More than 125,000 Americans have post-polio syndrome.

NATURAL REMEDIES

• A **cleansing diet**, followed by a **rebuilding, nourishing diet**. Avoid all the junk foods.

• Eat foods high in **fiber** and **vitamin / mineral** supplementation. **Calcium** (2,000 mg), **magnesium** (1,000 mg), **potassium** (5,500 mg) are important. **Selenium** (500 mg) **and zinc** (30 mg), **along with vitamins A** (5,000 mg), **C** (2,000 mg), **D** (1,000 IU), **and E** (400-600 IU) are antioxidants. The **B complex** is important for strengthening the nerves.

• A regular **exercise** program.

—Also see Polio (482) and Strengthening the Nerves (468).

ENCOURAGEMENT—There are many battles to be fought, but our part is to cling to Christ as little children, pleading for His help. He will enable you to come off more than conqueror in the battles with temptation and sin. Trusting in Him, we can do all things through Christ who strengthens us. Matthew 6:26.

CREUTZFELDT-JACOB DISEASE

(Mad Cow Disease, Kuru)

SYMPTOMS—Ataxia (balance problems) and decreased coordination progressing to paralysis, dementia, slurring of speech, and visual disturbances.

CAUSE AND PREVENTION—Creutzfeldt-Jacob Disease (CJD or Kuru) is a slow, progressive, fatal viral infection of the central nervous system. The incubation period may be 7 to 30 years; but death usually occurs within months of the onset of symptoms. This is also called Mad Cow Disease.

There are only four classes of people who contract kuru: (1) cannibals, particularly in the central New Guinea highlands. (2) Those who submit to **transplant surgery**. (3) Those who take **raw hormones or glandulars**. And (4) **those that eat beef, pork, chicken, or fish which has been fed regular animal feed** (which contains dead, diseased animals and/or animal blood). **IMPORTANT: *Read page 747. The problem is that livestock in America, Britain, and some other nations, are regularly fed rations containing dead, diseased animals—thus causing the cows, etc., to become cannibals. We eat them and the prions (cause of Kuru) are passed on to us.***

The condition is frequently (erroneously) diagnosed as being Alzheimer's Disease, so a reading of that disorder *(485)* will provide you additional symptoms. — *See Mad Cow Disease (747) for much more information. Also see the author's book, International Meat Crisis, for extensive facts.* Once contracted, there is no cure for this condition.

ENCOURAGEMENT—We owe to Christ all that makes life desirable; and He asks of us the affections of the heart and the obedience of the life. His precepts, if obeyed, will bring happiness into the home life, happiness to every individual. John 17:15.

NEURO-MENTAL -

5 - MEMORY PROBLEMS

 # MEMORY IMPROVEMENT

NATURAL REMEDIES

IMPROVING YOUR MEMORY

Here are several suggestions to help you remember (if you can remember them long enough to try them):

• The **attitude** toward remembering is important.

As we get older, it is easier to become lazy about trying to learn.

• **Pay attention** to what you want to remember. Sometimes we are too busy or indolent to really give our attention to what we need to remember.

• An outstanding way to remember something is to **say it out aloud** to yourself. When you do this, you both speak it and hear it. If it is written down and you do this—you see it, speak it, and hear it.

• An equally outstanding way to memorize something (or teach it to children) is to **say it over several times**. Saying it, speaking it, hearing it, and repetition are powerful ways to learn math tables and other things.

Here are additional suggestions:

• **Categorize the items** you want to remember. List what you need to remember under their logical categories, and you will be more likely to remember the main points and the subsidiary ones.

• When you set your glasses down on a table where you do not usually place them, **take a good look at them and think** about what you have done.

• As you walk away from your car in a mall parking lot, **say (out loud to yourself) aspects of the location**, so you can return to it.

• When trying to remember someone's name, **take a good look at their face** as you think of, or **speak, their name**.

• When trying to remember numbers, **put them into units or chunks**. It is harder to remember 6-8-7-2-5-0-9 than it is to recall 687-2509.

• If you are trying to memorize a new word (or how to spell it), **learn the meaning** of the word and make it part of your everyday vocabulary. Or **write it down** several times.

• **Associate** a new word or name with a similar word or an object.

• **Select** the most important things to remember and skip the rest.

• Quiz yourself on what you are supposed to remember before you come to the time when you have to use that knowledge.

• **Avoid stress**. When you are under tension or in a time schedule, it is harder to remember things.

• Of course, you can also **jot down lists** on paper. Some people quickly write notes on the palm of their hand.

• And, of course, make sure you are eating a **good diet**, skipping the **junk food**, getting **fresh air** and **exercise** everyday, and getting enough **rest** at night.

• **Ginkgo** is the best single herb for improving memory and safeguarding brain power. **Blue cohosh, gotu kola, ginseng, blessed thistle, and mullein oil** also increase brain and memory function.

• **Valerian** (taken at bedtime) improves sleep. **Melatonin** (taken 2 hours or less before bedtime) also does.

• There are other nutrition and lifestyle factors which also affect your memory. *See Strengthening the Nerves (468) and Memory Problems (below).*

ENCOURAGEMENT—How much should those rejoice who are the objects of such amazing love! Christ loved you, or He would not have died to forgive your sins and enable you to obey His Father's law. Accept His great salvation for you; and rejoice that your name is written in heaven. Ephesians 2:18.

"He became the author of eternal salvation unto all them that obey Him." Hebrews 5:9. Those who obey the Word of God will inherit eternal life.

MEMORY PROBLEMS
(Forgetfulness)

SYMPTOMS—You find you are forgetting too many things.

CAUSES—People fear memory problems, because it might indicate the onset of Alzheimer's disease *(485)*. Alzheimer's generally begins gradually in the mid-40s, and is fairly common among many older people; so folk have reason to be concerned.

But two facts stand out: Some memory loss does not have to mean Alzheimer's; it is possible to keep the mind in good shape, even into advanced age.

Alcoholism, aging, candidiasis, stress, allergies, thyroid problems, hypoglycemia, diabetes, and poor circulation are factors in memory loss. Others are cited below.

• Memory loss can also be caused by senile dementia *(487)*, Korsakoff's Syndrome *(485)*, Alzheimer's disease *(485)*, allergies *(576)*, or alcoholism *(608)*.

NATURAL REMEDIES

• Avoid the problems listed above.

DIET

• Eat a **nourishing, balanced diet** and skip all the **junk, processed, and fried foods**. Good food is needed to nourish the brain.

• Nutritional deficiencies, especially of the **B complex** and **amino acids**, add to memory loss. Obtain your protein from **brewer's yeast, brown rice, millet, nuts, soy, and whole grains** rather than from meat sources.

• Maintain an even amount of blood sugar. This is best done by eating **complex carbohydrates** (cereals and bread instead of sugar foods) at mealtime. And **no food between meals**.

• Avoid **greasy and high-cholesterol foods**; both interfere with passage of food through the blood to the brain.

• Avoid **free radicals** in the diet; these can greatly damage brain memory. *See Antioxidants (104).*

• Avoid **refined sugars**; these reduce brain power.

• For some people, **dairy and wheat products** cause memory reduction. Try cutting them out for a month and see if there is improvement.

• Drink enough **water**. Get enough **rest** at night. **Exercise** regularly.

• Stop using **liquor, drugs, caffeine, and tobacco**. Alcohol does an excellent job of destroying the brain.

HERBS

• **Ginkgo biloba** increases blood flow to the brain. Other helpful herbs include **ginseng, anise, and blue cohosh**.

• **Boron** (3 mg daily) improves memory function. **Pycnogenol** (60 mg, 3 times daily) and **selenium** (200 mcg daily) protect brain cells from free-radical damage. **Melatonin** (2-3 mg daily, taken 2 hours or less before bedtime) improves sleep and brain function.

—Also see Memory Improvement (483), Korsakoff's Syndrome (below), and Alzheimer's Disease (485).

ENCOURAGEMENT—We owe to Christ all that we have. In requiring obedience to the laws of His kingdom, God gives His people health, happiness, peace, and joy. The more fully we obey, through faith in Christ, the happier we shall be. Galatians 6:14.

KORSAKOFF'S SYNDROME
(Recent Memory Loss, False Alzheimer's Disease)

SYMPTOMS—Inability to keep new events or facts in the memory, although earlier data already in the memory is still there.

CAUSES—This is a type of "amnesia" which can result from **chronic alcoholism, a blow to the head, or vitamin B_1 deficiency**.

Because of embarrassment, people with this problem tend to make up stories and invent "facts," to satisfy others.

If caused by a blow to the head, recovery is much easier; but the problem is less likely to be reversed if **alcoholism** or **B_1 deficiency** is the cause.

Memory loss can also be caused by senile dementia *(487)*, Alzheimer's disease *(below)*, allergies *(576)*, or alcoholism *(608, 775)*.

NATURAL REMEDIES

• Three times a day, take **vitamin B_1** (100 mg), lecithin (2,500 mg), **chromium / vanadium** (50-200 mcg), **selenium** (200-1,000 mcg), and **betaine HCl**.

• Obtain adequate **rest, exercise, water, and fresh air**.

• Do **pulse tests** *(575)*, to determine allergies. Avoid **sugar and alcohol**.

ENCOURAGEMENT—Christ will be with you in the daily battle with self, that you may be true to principle. The appetites and passions may be controlled as you rely on Him for help. Jesus has been over the ground; and He knows the temptations you must meet. He knows how to guide you through them.

ALZHEIMER'S DISEASE

SYMPTOMS—Disoriented perceptions of space and time, inability to concentrate or communicate, and memory loss.

This produces depression, agitation, withdrawal, insomnia, irritability, memory loss, personality changes, severe mood swings, and senility.

An intriguing early warning sign has been discovered at the San Diego Medical Center: As much as 2 years before mental decline, those with Alzheimer's begin to lose their sense of smell. The rate at which the ability to distinguish strong odors is an indicator of how rapidly an individual will lose mental functioning. (But smokers have already lost part of their sense smell; so the diagnostic test does not work as well when applied to them.)

CAUSES—Alzheimer's disease is a progressive mental deterioration. Memory and thought processes are weakened and disoriented. First described by Alois Alzheimer in 1906, it is a condition of gradual deterioration of the ability to think. It is a slow, progressive wasting of the brain. It gradually shuts off production of vital neurotransmitters such as acetylcholine, serotonin, dopamine, GABA, noradrenalin and glutamate.

Nerve fibers, leading into, and out of, the hippocampus in the brain become tangled and short circuited. As a result, information is no longer carried to, and from, the brain. New memories cannot be gained and old memories cannot be retrieved.

In addition, plaques of a certain protein *(beta-amyloid)* build up in the brain, damaging nerve cells.

One form of Alzheimer's occurs between 36 and 45; it is quite rapid. The more gradual form develops in those who are 65 or 70. Alzheimer's strikes about 5% of those who reach 65 and over 20% of those who reach 85.

Simple forgetfulness is not Alzheimer's. If you do not remember your wife's name, that is forgetfulness; if you forget you have a wife, that is dementia (of which Alzheimer's is a form).

There are other disorders which produce similar symptoms: a series of minor strokes *(432)*, hypothyroidism *(549)*, advanced syphilis *(630)*. Arteriosclerosis (*427*, hardening of the arteries) slowly reduces blood flow to the brain. Some of those with **Down's Syndrome** *(689)*, who live to be in their 30s or 40s, develop Alzheimer's.

NATURAL REMEDIES

The following suggestions deal with ways to prevent Alzheimer's, which will also help retard its development:

• Many elderly people are taking 8 or 10 **medici-**

nal drugs. This drugging will surely affect the brain. You can see the effects in nursing homes across the continent. Add to this a devitalized diet of **fried, processed, and junk foods**. Include plenty of **fiber**.

DIET

• **Folic acid** (5 mg daily) helps control homocysteine levels (which become too high in Alzheimer's).

• Adequate intake of **calcium** (1,500 mg daily) reduces aluminum absorption. **Magnesium** (800 mg daily) works with calcium.

• **Vitamins A and E** are antioxidant vitamins which are also important. In addition to shielding neurons from free radicals, **vitamin E** (400-800 IU) also regenerates areas on neurons where neurotransmitters enter. (*Neurotransmitters* are chemicals that relay messages from one neuron to another.) Vitamin C (500-1,000 mg daily) and Flaxseed oil (1 Tbsp. daily) is needed.

• Those with Alzheimer's have low levels of **vitamin B_{12}** and **zinc** (30 mg) in their bodies. All the **B complex** vitamins are important. Take thiamine (3-8 grams daily).

• Those who undergo a trial of intensive **nutritional therapy**, especially **B_{12} injections**, may ward off the developing problem.

• **Coenzyme Q_{10}** (200 mg daily) is vital for producing energy in neurons and throughout the body.

• Those with Alzheimer's tend to have a strong craving for **sweets**. But such a craving is frequently an indication of a food hunger for **vitamins and minerals, especially calcium**.

• **Free radicals** are another factor. Avoid foods which contain them.

HEAVY METALS

• Other causes include **heavy metals** in the body. One in particular stands out: When you hear the words, "Alzheimer's disease," think of it as "**aluminum** disease"; for this is what it often is. Autopsies on persons who died with Alzheimer's reveal accumulations of up to 10 times the normal amount of aluminum in the nerve cells of the brain (up to 50 times in certain parts). Significantly, especially high concentrations are in, and around, the hippocampus. Rats given aluminum develop identical symptoms to Alzheimer's. *See Aluminum Poisoning (598) for more information.*

• Do not use **aluminum cookware**! Use stainless steel or glass. Do not use **aluminum foil** on food. Do not take **buffered aspirin and certain antiacids**; both are extremely high in aluminum! Drink **distilled water** instead of tap water (which may contain aluminum).

• But those with Alzheimer's also have high levels of **mercury** in their brain. Beware of **amalgam** dental fillings. Mercury from the fillings gradually passes into the body and, over a period of time, accumulates in the brain.

• **Zinc** may be another problem mineral. Recent lab research indicates that zinc, alone of 26 metals tested, made human proteins clump together and form *amyloid*, the destructive substance that builds up in the brains of Alzheimer's patients.

OTHER POINTS

• Stop using **alcohol, tobacco, and nicotine.** Smoking doubles the risk of getting Alzheimer's.

• Women with Alzheimer's have lower **estrogen** levels than normal.

• **Docosahexaenoic acid** (DHA) is a fat which helps retain brain function. (Do not mistake it for DHEA, a hormone.) Take 100 mg of DHA (which is manufactured from microalgae) daily.

• **Chelation therapy** *(596)* may be able to help Alzheimer's patients.

HERBS

• **Ginkgo biloba** is one of the best herbs for preserving memory. *See Memory Improvement (483) and Memory Problems (484).* Many studies have been done on ginkgo biloba extract. It helps delay mental deterioration in the early stages of Alzheimer's; but, in later stages, it has been found to be of little value.

• The Chinese use **Asian ginseng** (100-200 mg daily of the standardized extract), **Siberian ginseng** (2-3 grams daily of the dried root or 300-400 mg of solid extract), and **astragalus** (2-3 500 mg capsules, 3 times a day) for maintaining memory functions.

• **St. John's wort** helps calm people who anger easily, which sometimes occurs in later stages of Alzheimer's.

—Also see Memory Problems (484) and Senility (487).

ACETYLCHOLINE

In the early 1990s, it was discovered that Alzheimer's can be slowed if a chemical, *acetylcholine* (normally in the brain) is kept from being destroyed. This chemical is a neurotransmitter important for memory in the brain. The drug used to preserve that chemical damages the liver. But several herbs help protect acetylcholine.

• **Rosemary** not only contains several compounds which attack free radicals, but also some which prevent the breakdown of acetylcholine. Rosemary has, for a long time, been used as a "memory enhancing" herb.

• The Chinese herb, **club moss**, contains *huperzine A*, which blocks the breakdown of acetylcholine.

• **Horsebalm** *(Monarda, various species)* contains carvacrol, which helps keep acetylcholine in the brain. In addition to swallowing it, some recommend rubbing it on the scalp.

• **Choline**, a B vitamin, is one of several important building blocks for acetylcholine. The richest sources of choline are **blackstrap molasses** and **lecithin**. Levels of **choline** and **ethanolamine** are lower in those with Alzheimer's.

IMPORTANT !! —There is now evidence that eating **beef, pork, chicken, or fish which have been fed regular animal feed** (which contains dead, diseased animals) can produce ***Creutzfeldt-Jakob disease***, the symptoms of which are *essentially identical* to those of Alzheimer's. **IMPORTANT: *Read pages 744, 747.***

LIVING WITH ALZHEIMERS

• Maintain simple routines. Avoid unscheduled changes. Frequently reassure him that everything is all right and of your concern for him. Be calm, patient, and understanding. Provide him with a safe environment. Your touch, smile, tone of voice, and frequent eye contact reassures him, even when he cannot understand your words. Do not show anger. Express only one idea at a time, and in simple sentences. Speak in a clear, low-pitched voice. If he does not grasp it, speak the same simple words again. Demonstrate what you want (gesture toward the street he should go to, etc.). Be punctual, so he doesn't wait. If he is doing something inappropriate, distract him with a different activity. In case he may wander off, sew name and address labels in his clothing. If a person is developing Alzheimer's, he should be told early on, so he can prepare for the future and settle his affairs.

ENCOURAGEMENT—How can we be in doubt and uncertainty, and feel that we are orphans? God gave all heaven in Christ; and, as we come and claim the great Gift, heaven begins here. Rejoice, rejoice. If you will cling to Christ, your future is very bright.

SENILITY
(Senile Dementia, Cerebrovascular Disease)

SYMPTOMS—Memory loss and an inability to reason properly (in the older years) interferes with the home and employment. It also causes depression.

CAUSES—Also called Dementia, this occurs in old age; yet it is not widespread. Most older people do not have this problem. Many people in advanced age are quite clear in their thought processes.

There are actually two types of dementia: *Primary dementia* comes on gradually, without apparent cause. *Secondary dementia* comes on suddenly from brain injury, operation, drugs, or diabetic coma; it is usually reversible. Senility and Alzheimer's are examples of primary dementia.

Common causes of senility include **poor blood circulation** to (and in) the brain, **cerebral arteriosclerosis, heavy metal toxicity, prolonged nutritional deficiency, prolonged use of medicinal drugs, and lack of exercise and fresh air.**

Calcification and fatty cholesterol deposits in the middle cerebral artery reduces the main blood supply to the brain, resulting in a poor oxygen supply to it. This produces a loss of memory and typical "senile" changes.

The experts tell us that, over a matter of years, wearing **uncomfortable collars and neckties** tend to cause eddies in the carotid arteries, contributing to the deposition of cholesterol.

Many of those diagnosed as senile are actually suffering from the effects of **medicinal drugs**. If you want a happy old age, avoid drugs throughout your life. **Hearing, thyroid, liver, or kidney problems** can also produce apparent memory loss. There is the possibility of **brain tumors**, as well as **stroke**, and various problems with the nervous system.

A combination of **nutritional deficiencies** is often the underlying cause.

NATURAL REMEDIES

• Try to eliminate **causal factors**, mentioned above.

• Reduce **vitamin D** intake to a maximum of 400 units a day; because an excess works with cholesterol to cause blood vessel problems. Vitamin D is angiotoxic; that is, toxic to blood vessels.

• Each day, taking both **Choline** (500 mg) and **lecithin** (1 tsp.) is important. Also take **vitamin C** (1,000 mg) to bowel tolerance, as well as **vitamin E** (400-800 mg). The **B complex** vitamins are important for the nervous system and brain. **Flaxseed oil** (1 Tbsp.).

• A New England hospital successfully treated senility by giving **niacin** (2,000 mg) and a high-potency vitamin supplement. This opened up the narrowed blood vessels. Niacin has a vasodilatory effect on the body. That is why, when taken, it temporarily causes the face to flush.

• Eat lightly of **nutritious food**. Mainly eat **raw or slowly cooked foods. Raw seeds and nuts** help the brain, but eat in moderation. **Millet and buckwheat** are good. Eat **garlic** every day (or take capsules).

• Increase intake of **fiber**-rich foods **(fruits, vegetables, grains, legumes, raw nuts, and seeds)**.

• Avoid **fatty foods, fried foods, and saturated fats**.

• **Ginkgo** may help prevent further deterioration of mental capacities; it is the best single herb for this. **Blue cohosh, gotu kola, ginseng, blessed thistle, and mullein oil** increase brain and memory function.

• **Valerian** (taken at bedtime) improves sleep. **Melatonin** (taken 2 hours or less before bedtime) also does.

• Here is a special formula for avoiding senility: Mix equal amounts of powdered **peppermint, skullcap, Siberian ginseng, wood betony, gotu kola, and kelp**. Adults, take up to 12 capsules per day. For acute conditions, 3-4 capsules, 3 times daily.

• Daily **exercising**, to the point of breathlessness, is vital to good circulation. But do not overdo! Only go up to the point of breathlessness, not beyond. Too much can lead to a heart attack. Achieve ideal body **weight**.

• Avoid **constipation**.

• **Heavy metals** must be avoided. Never use **aluminum cookware** or other aluminum products. Do not use **canned goods** any more than necessary.

• Do not **smoke**, or drink **alcohol** or **coffee**.

—Also see Organic Brain Syndrome (488), Aging (241), Alzheimer's Disease (485), Memory Problems (484).

ENCOURAGEMENT—The spirit of unselfish labor for others gives depth, stability, and Christ-like loveliness to the character. It brings peace and happiness to

its possessor. Every duty performed, every sacrifice made in the name of Jesus, brings an exceeding great reward. Galatians 1:4.

"I will rejoice over them to do them good, and I will plant them in this land assuredly with My whole heart and with My whole soul." Jeremiah 32:41. God's plan for all of us, regardless of age, is the same: eternal life to those who will accept Him as Lord and God.

ORGANIC BRAIN DISORDER
(Chronic Brain Syndrome)

SYMPTOMS—Errors in judgment, lack of reasoning ability, short-term memory loss, disorientation, poor intellectual function, neglect of personal hygiene.

Severe symptoms include hallucinations, incoherent speech, agitation, and restlessness.

CAUSES—Malnutrition can induce the symptoms of organic brain syndrome. **Chemicals** and **other toxins** can influence it also, as well as **food allergens**.

NATURAL REMEDIES

- Eat a **nutritious, balanced diet.**
- **Niacin** (2,000 mg), **vitamin B_1** (200 mg), **vitamin B_{12}** (1,000 mcg), **folic acid** (5 mg), **chromium** (50 mg), and **zinc** (30 mg). Essential fatty acids are also needed. **Vitamin E** (400 IU) repairs brain damage. **Manganese** (1,000 mg) improves memory. The brain also needs **calcium** (2,000 mg) and **magnesium** (1,000 mg). **Lecithin** (1 tsp.) helps clean plaques from the arteries.
- Include enough **fiber** in the diet. A congested colon weakens the blood supply to the brain.
- **Avoid overcooking** and too many cooked foods.
- Avoid **alcohol, lead poisoning, and mercury** poisoning (found in dental amalgam).
- Do a **pulse test**, to determine if food allergens are part of the problem.
- Do a six-hour **glucose tolerance test**, to see if diabetes or hypoglycemia is involved.
- **Hydrochloric acid** (Betaine HCl) supplementation may be needed, to increase food absorption.
- Herbs which help include **capsicum, burdock, echinacea, garlic, ginkgo, psyllium, and gotu kola.**

ENCOURAGEMENT—He who has given His precious life, because He loves you and wants you to be happy, will be a Captain who will always be mindful of your interests. By faith in Christ and obedience Him, in the very act of fulfilling your duties, God will bring you a blessing. Jesus does not release us from the necessity of effort; but He teaches that we are to make Him first and last and best in everything.

How thankful we can be that, in the enabling strength of Christ, we can fulfill God's will for our lives, and live forever with Him in heaven!

ATTENTION DEFICIT DISORDER (ADD)

SYMPTOMS—Some of the following: Learning disabilities. Lack of concentration. Easily distracted. Procrastination. Lack of goals. Cannot concentrate. Difficulty in solving problems. Impulsive and sloppy workmanship. Cannot manage time. Cannot remember sequences or events. Mood swings. Forgetfulness. Sleep disturbances. Loses things easily. Lack of goals. Absentmindedness.

CAUSES—Attention Deficit Disorder (ADD) and Attention Deficit Hyperactivity Disorder (ADHD, *the next disorder, 489*) are closely related. The difference is that ADD is a general foggy mindedness; whereas ADHD may or may not be foggy minded; but it is hyperactive and possibly disturbing to others. They have had multiple labels in the past, including hyperactivity and learning disability. Residual attention deficit disorder (RADD) is the name given to individuals, 18 or older, who have ADD. Boys are far more likely than girls to be classified as ADD or ADHD.

Many child experts believe there is no such thing as ADD or ADHD; and that both "disorders" were invented to provide more employment to psychologists and psychiatrists.

Because so many parents are frightened over the possibility that their child may have ADD or ADHD, when they take them in for a checkup, they are frequently told that the child has a terrible disorder, called ADD or ADHD; and he needs to take drugs. Some of those drugs are dangerous.

Well then, what are the real causes of these problems? *First*, the symptoms for ADD and ADHD would apply to nearly every child in the world! Actually, according to the symptoms, we all have ADD or ADHD! Should we then all start taking powerful mind-altering drugs?

Second, a frequent reason that many children today are overactive or absent-minded is our present "civilized" way of life. They eat lots of **processed foods** at home and lots of **junk foods** away from home. They ride **long hours on school buses** and sit in **classrooms** where teachers are not allowed to discipline. So children run wild, are not permitted to learn how to **work** (because of "child labor laws"), grow up on vicious **television dramas**, and then go outside and learn about **street drugs**. In addition, many of them live in **quarreling** homes, **alcoholic** or **street drug** homes, or **one-parent** homes with no one home much of the time. Little wonder that the symptoms of ADD and ADHD are becoming epidemic.

The drug, prescribed by the physician or psychia-

trist for ADD or ADHD, is generally *methylphenidate* (sold under the brand name, Ritalin). This powerful chemical compound is so nearly identical to cocaine that the two are used interchangeably in medical research. Ritalin helps the child focus—by turning him into a narrow-brained robot. The drug destroys his curiosity, imagination, sociability, and vitality.

NATURAL REMEDIES

BASIC

• Many of the symptoms will be reduced when the child is given a **nourishing diet, loving care, proper rest at night, and opportunity to do worthwhile and appreciated work assignments, especially those that help someone else.**

• **Believe in the child, listen to him, do things with him. Take time to be with him.**

• Feed the child a very nourishing diet of **fresh fruits and vegetables,** plus **vitamin-mineral supplements** and **carrot juice.**

• There should be an **orderly routine** in the home, with **duties he is in charge of** (and warmly thanked for) each day. This imparts a sense of security and self-respect.

OTHER POINTS

• Instead of Ritalin, each day give the child **high-B complex, thiamine** (25 mg), **vitamin B_6** (100 mg), **pantothenic acid** (50 mg), **folic acid** (400 mcg), **beta-carotene (in carrot juice), vitamin C** (1,000 mg), **vitamin E** (400 IU), **calcium,** (500-1,000 mg), **magnesium** (100-400 mg), **and zinc** (15 mg). The calcium and magnesium will help calm him.

• A diet of **unsaturated fatty acids** reduces ADD and ADHD. Give him 4 tsp. of **flaxseed oil,** daily .

• Give him complex carbohydrates (whole grains) instead of simple sugar foods.

• He might have a milk (or some other) **food allergy**. If a food makes him excitable, cut back on it awhile and see if that helps.

• Eliminate all **junk, sugary, processed, and fried foods** from his diet. No more **soft drinks** or **coffee.**

• **Valerian** root extract produces good results.

• ADD and ADHD children often have an excess of **heavy metals** in their body. *See Heavy Metal Poisoning (596).* Take steps to identify and eliminate them.

• "I refer parents to Dr. William Crook's book, *Help for the Hyperactive Child* (Professional Books) or any of the excellent books on ADD and hyperactivity written by Dr. Doris Rapp. Also Meridian Valley Clinical Laboratory (206-859-8700) and National Biotech Laboratory (800-846-6285) offer a food allergy test that measures both IgE and IgC antibodies, tests for over 100 different foods which come with detailed dietary instructions and is reasonably priced at about $20."—*Michael T. Murray, Encyclopedia of Nutritional Supplements, p. 427.*

—See Memory Improvement (483) and Memory Problems (484) for additional suggestions. Also see Hyperactivity (489), Dyslexia (490).

ENCOURAGEMENT—The blessing comes when by faith the soul surrenders itself to God. Then that power which no human eye can see creates a new being in the image of God.

ATTENTION DEFICIT HYPERACTIVITY DISORDER (ADHD)

SYMPTOMS—Some of the following: A tendency to disturb other children. Impatience. Difficulty waiting. Not able to sit still very long. Difficulty in adapting to new things. Easily frustrated. Impulsive, unpredictable, or daring. Self-destructive behavior. Temper tantrums. Clumsy or awkward. Talks too much. Blurts out answers before hearing the entire question. Disruptive in the classroom. Low stress tolerance. Failure in school in spite of normal intelligence.

CAUSES—Carefully read the article on ADD, *just above.*

NATURAL REMEDIES

• The natural remedies for ADD *(488)* apply equally to ADHD.

—Also see Hyperactivity (489), Attention Deficit Disorder (489), Dyslexia (490).

ENCOURAGEMENT—What love! What amazing condescension: that Christ would die on Calvary to save us from sin and enable to obey the laws of God.

NEURO-MENTAL -

6 - EMOTIONAL, MENTAL

HYPERACTIVITY

(Hyperkinesis)

SYMPTOMS—Cannot sit still, short attention span, impulsive acts before one thinks, runs rather than walks, forgets easily, moody, temper tantrums, irritated and indifferent when disciplined, determined to get his own way.

Sleep disturbances, clumsiness, head-knocking, bothers other children, speech and hearing disorders, extreme distractibility, absent-mindedness, unable to follow a series of instructions.

Not all symptoms are found in any one child. The symptoms are not limited to children, but are also found in some adults.

Keep in mind that most children display some hyperactive symptoms at times.

CAUSES—Hyperactivity primarily occurs in children; it produces a variety of learning and behavior problems. It is closely related to Attention Deficit Disorder

(488) and Attention Deficit Hyperactivity Disorder *(489)*.

NATURAL REMEDIES

Some of the above symptoms can be alleviated or eliminated through other methods. Some other causes which can be corrected include:

• Provide the child with a **nourishing diet**, as discussed elsewhere in this book. This is important.

• **Foods that irritate the stomach or inflame the nerves** must be removed from the child's diet. Avoid all **refined, sugary, fried, and junk foods** from the diet. This includes **soft drinks**. Eliminate **artificial flavorings, colorings, and preservatives**. Do not attempt to only change the diet partway. Nourishing food, and only nourishing food, must become a way of life. It will help all in the home. It will be easier for the child to accept the new regime if the mother (and hopefully, father) does also.

• **Food allergies** to milk, wheat, chocolate, yeast, food additives, oranges, and antibiotics. Locate and eliminate food allergies. *See Allergies (576) and Pulse Test (575).*

• **Lead poisoning** can be a significant factor.

• Eating too much **sugar or sugary foods.**

• Artificial **food additives, preservatives,** and foods containing **salicylates**.

• A diet that is too low in **protein**.

• **Emotional problems** and inadequate, inconsistent, or ineffective **discipline** in the home. Hyperactive children often control the situation in the home more than the parents. Because parents are too yielding, children find they can scream their way to dominance and become uncontrollable. When spoiled children enter school, they sometimes try to use overactivity to control their new environment.

• The parent must learn to control the situation, by training the child to obedience and self-control. This is vital. Teaching the child to obey you causes him to learn to control himself. This enables him to organize, and better manage, his mental discipline and his entire life.

• Regularity in rising, eating, bedtime, and other daily schedules is important.

• Hyperactive children often have **learning disabilities**.

• Certain types of **fluorescent lights** are overstimulating. Research studies reveal that children sitting beneath the end of those lights receives X-rays.

• Overstimulation from **television, competitive games, violent TV programs,** and **nutritional deficiencies** are major factors.

• Children from **broken homes** are more likely to have this problem. A strong link has been established between learning disabilities and juvenile crime. Try to solve the problems early.

• **Smoking during pregnancy, oxygen deprivation at birth, prenatal trauma**. Mothers who smoke are more likely to give birth to brain-damaged or hyperactive children.

—Also see Dyslexia (below).

ENCOURAGEMENT—A strong, helpful grasp of the hand of a true friend is worth more than gold or silver. Christ has been such a friend to you. He asks that you be such a friend to others. Rejoice in all that He is to you! 1 John 3:2.

DYSLEXIA

(a disturbance of the ability to read)

SYMPTOMS—Difficulty in reading as a result of a brain lesion. Similarly shaped letters cause the victim to transpose ("pot" for "top") or reverse ("b" for "d").

CAUSES—Dyslexia is sometimes called hyperactivity *(489)*; but there is a partial difference. Dyslexia is a complex syndrome rather than a simple disorder.

In some instances, a true organic or biochemical brain injury has occurred. But most of the time, the problem is more easily treatable.

Food allergies are often a key problem.

NATURAL REMEDIES

• **Food allergies** should be located and eliminated. Food sensitivities can produce learning disabilities which may appear to have organic origin. Especially beware of **sugar, wheat,** possibly certain other grains, **milk products, and meat**. One or more (often several) of these may be the problem. Carry out the *pulse test (575)*, to determine possible causes and eliminate offending foods. *See Food Allergies (576).*

• Sometimes, taking **hydrochloric acid** (betaine HCl) and **digestive enzymes** may be necessary for awhile.

ENCOURAGEMENT—In all His dealings with His creatures, God has maintained the principles of righteousness by revealing sin in its true character. It is obvious that the wages of sin is misery and death. The unconditional pardon of sin never has been and never will be. God saves us from sin, not in sin.

NIGHTMARES

SYMPTOMS—Unpleasant dreams while sleeping.

CAUSES—In most cases, nightmares can be solved. They sometimes occur because of illness, excessive fatigue, or stress. A sudden, loud noise may initiate one. Some medications are known to induce them. The simple remedies, listed below, clarify many of the causes.

NATURAL REMEDIES

• The primary cause of nightmares is eating a meal that is not digested before retiring for the night. **Do not eat** less than 4 hours **before bedtime**. Eat a **light supper** of fruit and toast.

• **Food allergies** are another prime cause. Search them out and eliminate them. *See Allergies (576) and*

Pulse Test (575).

• **Hypoglycemia** is another significant cause. The low point of low blood sugar level occurs at 4 to 4½ hours after food is eaten, especially sugar foods and drinks (cookies and milk, etc.).

• Include **chromium** in the diet.

• Avoid **caffeine**.

• **Liquor** drinking and **hard drugs** induce nightmares.

• Sometimes the problem is **emotional**; a parent that is mean to the child, a terrifying incident that a person has had, etc. Go to God with these problems; only He can bring peace of heart.

• Before bedtime, go outdoors and **walk in the cool night air, breathe deeply, and relax**.

• Some take a whole, **warm bath** before bedtime, to relax.

• Avoid **enervation** of any kind. Do not **overwork**.

• To prevent nightmares, mix equal parts **anise** and fragrant **valerian** root. Simmer 1 tsp. of the mixture in ½ cup water for 15 minutes. Let cool, strain, add enough water to return it to ½ cup of fluid. Drink before bedtime.

• **Sleeping on the back** is said to be the cause of nightmares.

CHILDREN

Children can have nightmares as early as the age of two. In order to avoid them, there should be vigorous outdoor activities during the day.

The evening meal should be light and several hours before bedtime. Evening activities should be calm and non-stimulating. Avoid exciting television. Better yet, throw it away and teach your child Bible stories and lessons drawn from them. There is very little morality in television.

A regular bedtime routine should be followed. This may include a 20-minute warm or neutral bath, story time, bedtime prayers, and tucking in by the parent.

If the child awakens in the night from a nightmare, comfort him in his own bed. Remain calm and softly reassure him you are there to protect him and the nightmare is not real. *Also see Night Terrors (700).*

ENCOURAGEMENT—It would fill the unfallen worlds with consternation if God were to take men, who love and revel in sin, to heaven. Thank God, there is power in the blood, to cleanse from sin and defilement. There is strength in the atonement, to enable man to fulfill the will of God in his life.

PHOBIAS AND PANIC ATTACKS
(Irrational Fears, Agoraphobia, Claustrophobia, etc.)

SYMPTOMS—An irrational fear of something, by which ordinary people are not bothered. The experts call it an irrational, involuntary, inappropriate fear reaction that generally leads to an avoidance of common everyday places, objects, or situations.

Symptoms include attacks of tension, panic, dizziness, tightening of the throat, inability to swallow, muscle twitching, sweating, depression, nausea, and obsessions. Feeling of being outside the body.

The heart starts beating faster; the person feels nauseous, shaky, as if about to faint.

CAUSES—There are three types of ***phobias***: *simple phobias, social phobias,* and *agoraphobia.*

Those with simple phobias dread a certain situation, place, or object.

Social phobics are those who do not like to be in public situations, such as a party. They fear doing something which may embarrass themselves.

Agoraphobics fear being alone, being in public places, or being in strange places. It is a fear of being away from a safe person or place. This is the phobia that people most frequently talk to professional counselors about. Most agoraphobics are women who develop it between 15 and 35.

Panic attacks are closely related to phobias and strongly held anxieties.

The body has a natural fight-or-flight mechanism. When more adrenaline is produced, it causes the body to increase metabolism of proteins, carbohydrates, and fats, so the body will have more immediate energy. Muscles become tense; heartbeat and breathing become more rapid.

But when this mechanism occurs without a reasonable cause, the result is a panic attack.

The problem often develops suddenly after a major problem, such as a severe illness, accident, or mental depression.

The attack may occur suddenly, perhaps while standing in line at the checkout counter. The worst thing such people can do is to go home and stay there, in order to avoid facing the problematic situation. This prevents the formation of coping skills and only intensifies the problem.

Some people can only go outdoors if they have a certain friend or trusted dog with them. Some can move freely about in a feared area only if it is dark (or light).

Hot weather, fatigue, or illness often makes the symptoms worse. **Post-menstrual syndrome** is another cause. It is now known that people with **inner ear problems** (where the sense of balance is located) tend to have phobias and panic attacks.

NATURAL REMEDIES

DIET

• Panic attacks and **calcium** deficiencies go hand in hand. Calcium protects the nerves and prevents toxins from irritating them. Calcium, **magnesium**, and **potassium** are depleted by stress. The **B vitamins** are also important in resisting stress. **Selenium** elevates mood and decreases anxiety.

• Take **chromium** (200-300 mcg. daily), **B_6** (100 mg, 3 times each day), **B_3** (450 mg, 3 times each day), **B_1**, **B_2**, **B_6** (50 mg, 3 times each day), **tryptophan** (10 gr, 3 times each day), **calcium** (2,000 mg daily), **mag-**

nesium (800 mg daily), **potassium** (5,500 mg), and **selenium** (500 mg).

• Eat a rounded balance of **amino acids**; but, of course, do not consume too much protein.

AVOID

• Phobics often eat lots of **sweets**. They should be eliminated from the diet.

• **White flour** should also be eliminated. Only eat whole grains.

• Avoid **caffeine** in every form (including **chocolate**) if you have panic attacks. Do not drink **alcohol**. **Medicinal drugs** can be a cause.

• **Food allergies** can be the cause (cow's milk, corn, etc.). Keep a food diary and gradually, over a period of time, determine which foods are bothering you. Do pulse tests *(575)*.

• Rebound anxiety and panic attacks can occur when **Valium, Xanix, or Prozac** is taken to ward them off. Xanix can be addictive!

• **Chemical fumes** (such as formaldehyde from newly purchased clothes or carpets) can induce panic attack feelings.

OTHER HELPS

• A severe hypoglycemic **(low blood sugar) reaction**. Professionals call this a "crash and burn" curve because the down slope on the glucose curve is almost vertical. **Diabetes** can be involved here. *See Hypoglycemia (544) and Diabetes (547).* Do a six-hour glucose tolerance test.

• Get regular **exercise** outdoors. Adequate **rest** is important.

• When you have a problem, **have a friend** you can talk it over with.

• Avoiding your fear keeps you from overcoming it. **Face your fear** and, slowly, reason with yourself that it is nothing to be worried about. One individual feared allowing a small bird on, or near, her. She overcame it by slowly placing her finger near a tame canary in a cage, which hopped on it and sat quietly. After doing this for several days, the fear was overcome.

• **Think** to yourself, "That person (object, place) cannot hurt me." It is the truth; and keep telling it to yourself. Shift, from negative thoughts toward it, to positive thoughts.

• **Recognize** the attacks for what they are. You have had them before; so you know you are not going to die. You have left the house before, and you know you can do it again. You can do it.

• Be easy on yourself, but keep pushing forward. Even if an attack comes on, tell yourself how you succeeded and keep at it. **Do not give up**.

• **Start out slowly**; and expose yourself to the unpleasant environment a little every week. Set goals for yourself: one-week goals, 8-week goals, etc. Push forward and accomplish them.

• You will notice that sometimes the fear is stronger than at other times. **Determine what causes it to increase**: a dietary problem, not enough rest, etc.

• When an attack comes on, you have an excess of adrenaline. So do not sit still. Instead, **move about** and do something; this will help use it up. Walk around or exercise during the attack. If the situation is such that you cannot move about (you are standing in line, etc.), then play a game at alternatively tightening and loosening various muscles in your body. Tighten the large muscles in your upper legs, then release them.

• When an attack seems to be coming on, **breathe deeply**. Take repeated deep breaths. This relaxes the mind and helps the whole system brace against the intruding fear. When an attack begins, phobics tend to take short, rapid breaths. The body is not receiving enough oxygen and is losing too much carbon dioxide, the heart begins beating faster, and there is a sense of air hunger. Instead, breathe slowly and deeply.

• Women who wear **tight-fitting clothes** tend to become chest breathers and are more likely to have panic attacks. Men should wear suspenders. It is important to be able to easily inhale and exhale enough air.

• Maintain good **posture**. Practice **deep breathing** every so often.

• When an attack begins to occur, or if even the thought of the feared item begins to come to mind, **tell yourself "stop!"** If necessary, say "Stop!" out loud. Then consciously **change your thoughts** to something else, something pleasant. Keep doing this. By doing "thought-stopping," you will see excellent progress in as little as four weeks.

• When you are completely relaxed and in a pleasant environment, **think casually** about the feared item. Candidly tell yourself that it does not amount to anything. Then change the thought to something else.

• **"Flooding"** occurs when the person goes into the feared situation (such as a shopping mall) and stays there until the fears leave. This generally takes 8 to 12 hours.

• **Reinforcement** takes place when you write the shopping list until it no longer bothers you. Then you put on your coat and go to the door. Then you go outside to the car. Then, when this no longer bothers you, go to the store and walk up to the door. Later, you go on in and buy the groceries. You keep doing the feared thing until it becomes commonplace.

• **Pray to God for help.** He can give you the strength you need to meet your needs. Thousands have come to Him and obtained the help needed to win great victories in their lives. It is a sweet experience to have peace with God.

• Herbs to help strengthen the body include **dong quai, gotu kola, kelp, ginkgo, passionflower, slippery elm, suma, valerian, and lady's slipper**.

—Also see Anxiety Disorder (493), Post-Traumatic Stress Disorder (493), Hyperventilation (493), and Strengthening the Nerves (468).

ENCOURAGEMENT—God is the lifegiver. From the beginning, all His laws were ordained to life. But sin broke in upon the order that God had established, and discord followed. It is only because the Redeemer died on our behalf, that we can be enabled to return obedience to the King of the universe. Psalm 31:19.

ANXIETY DISORDER

SYMPTOMS—Heartbeat and breathing become more rapid, as more adrenaline is produced. There is a continued state of worry and stress. There can be shortness of breath, dizziness, hot flashes, chills, trembling, sweating, or nausea.

CAUSES—This is a complex, involuntary physiological response in which the body prepares itself to deal with an emergency situation—when none may actually exist. Stress causes the body to produce more adrenal hormones, especially adrenaline. Muscles tense up and metabolism increases, so the body can resist a crisis or threat of some kind. A tendency to anxiety disorder may, to some extent, be hereditary.

NATURAL REMEDIES

Each day, take these nutrients:

• Take **calcium** (2,000 mg) daily, along with **magnesium** (1,000 mg). A **multivitamin supplement** is important.

• The **B vitamins** are needed for healthy nerve and brain activity. **Vitamin B_1** (200 mg) helps reduce anxiety and calm the nerves. **Vitamin B_2** (200 mg) works closely with it; it reduces anxiety and energizes the system. **Niacinamide** (300 mg) helps in the production of needed brain chemicals. Do not take niacin in large doses.

• **Vitamin C** (1,000 mg) strengthens proper functioning of the adrenals, so they do not wear out. In large doses (2,000-5,000 mg in divided daily amounts), it has a calming effect on the system.

• **Vitamin E** (400-800 IU) helps transport oxygen to the brain and nerve cells, protecting them from free-radical damage.

• **Zinc** (30 mg) calms the nerves. Do not take over 100 mg daily.

• **Flaxseed oil** (2 tsp.) for proper brain functioning.

• Relaxing herb teas include **catnip, hops, skullcap, chamomile, St. John's wort**, and **motherwort**.

—Also see Phobias and Panic Attacks (491).

ENCOURAGEMENT—We must put on the whole armor of righteousness. We must resist the devil. And we have the sure promise that, if we will humbly plead with God for help, Satan will be put to flight.

POST-TRAUMATIC STRESS DISORDER

SYMPTOMS—A set of emotional problems after experiencing an extremely difficult situation. Here are typical symptoms: flashbacks, in the form of frequent thoughts, feelings, or memories of the traumatic event. Physical problems such as difficulty digesting food. Depression which causes the person to feel numb and uninterested in life. Hypervigilance is when he is anxious. He is continuously alert, especially near things or places reminding him of the event.

CAUSES—An example of this is the person who accidentally drives off the side of the road and hurtles down a steep bank. Afterward, even though he may not be injured, he has a difficult time readjusting.

After undergoing an extremely difficult situation, if you find you are experiencing any of the above symptoms, then start working to ease and gradually eliminate them.

NATURAL REMEDIES

• Carefully read the section on phobias and panic attacks *(491)*. It is full of helpful suggestions.

• Sit down with someone you trust and discuss the matter with him. **Talking it out** is very helpful. Discussing the matter with someone who has also experienced a difficult event is extremely helpful; for he can be even more understanding.

• Maintain **daily, careful routines**. Doing so brings reassurance that you are in control of the situation. Eat your meals on time. Go to bed on time. Get enough sleep at night.

• **Be cheerful and thankful** to God for your blessings.

• **Find someone you can help**. We forget our own problems as we help others.

HERBS

• Take **chamomile** (350 mg capsules, 2 times daily) or steep a heaping Tbsp. of chamomile flowers in a cup of water for 10 minutes. Drink a cup 3 times a day.

• Take powdered **valerian** root extract (150 mg capsule, 2 times daily). Take 400 mg at bedtime. Do not take valerian during the day if it causes you to become sleepy.

A calming herb can lose its effectiveness after several weeks, as the body becomes adapted to it.

ENCOURAGEMENT—Not one soul who in penitence and faith, pleads for His protection will Christ permit to pass under the enemy's power.

HYPERVENTILATION

SYMPTOMS—Pounding heart, fingers which are tingling, and palms which are sweaty.

CAUSES—Hyperventilation is **excessive breathing** (also called overbreathing). It can be induced by stress. When some people are frightened, they start breathing very fast—both rapidly and deeply, even though they do not need the extra oxygen. This causes them to exhale a lot of carbon dioxide, which in turn causes the blood to become somewhat alkaline. That results in the symptoms of a panic attack *(491)*.

Episodes of hyperventilation can last for hours, but generally for only 20-30 minutes. But, for the one going through it, the experience can be quite difficult.

NATURAL REMEDIES

• When this happens, people often go to the emergency room of the hospital. And what do those experienced nurses do? They may hand the sufferer a **paper sack and ask him to breathe into it** for a short time. This replenishes the carbon dioxide in the body and brings him back to normal. People who know they might experience hyperventilation attacks, from time to time, sometimes carry a paper sack with them.

But there is a danger here: The person might be having, not a hyperventilation problem, but a real heart attack *(419)*. In this article, we will assume that heart trouble is not the problem. But you may want to check our various sections under heart problems *(419-426)*.

• **Exercise** also helps. It not only reduces anxiety, but exercise requires more oxygen—so faster breathing just then is just fine.

• Do not **smoke**. This only adds to the problem; for nicotine is a stimulant and can aid in triggering attacks. Caffeine is another stimulant to avoid.

• **Practice** calm, relaxed breathing. The average you should strive for is one moderate breath every 6 seconds or 10 every minute. Ordinary people need never concern themselves with how often they breathe; but, if you have this special problem, you may want to practice doing it the right way every so often.

• The more tense you are, the faster you will breathe; so be calm and **think** about breathing slower.

• **Think about someone else** beside yourself; and do something to help them. We can focus on our fears so much that they become magnified out of proportion.

• **Avoid situations** which tend to make you overly nervous. For example, for some people this occurs when they are required to stand in crowds.

—*Also see Phobias and Panic Attacks (491).*

ENCOURAGEMENT—Christ says, "Ye are the salt of the earth: but if the salt has lost his savour, wherewith shall it be salted?" How careful we must be that we live like Jesus, so we do not become worthless salt. Matthew 5:13-14, Psalm 25:14.

"Thou wilt shew me the path of life: in Thy presence is fulness of joy; at Thy right hand there are pleasures for evermore." Psalm 16:11.

"Blessed is the man that feareth the Lord, that delighteth greatly in His commandments." Thank the Lord every day for the gift of His Son, Jesus Christ, our only hope of help and salvation." Psalm 112:1.

DEPRESSION

SYMPTOMS—Decreased energy and appetite, chronic fatigue, sleep disturbances, headaches, backaches, weight loss, slowed movement, purposeless thinking, irritability, quickness to temper, and feeling like doing nothing.

CAUSES—Depression may be caused by the **loss of a loved one or a job, food allergies, hypoglycemia, environmental problems, or post-menstrual syndrome. It could be anything that disrupts a person's sense of worth, stability, security, or effectiveness.**

Forty percent of those with this problem have one or both of their parents who suffered it also.

Depression during the dark, dreary winter months is called seasonal affective disorder *(469)*.

Individuals with **severe viral illness, hepatitis, endocrine problems, or stroke** can have it.

An alternate type is bipolar depression (manic depression), in which a person varies between episodes of depression and mania (over-excitedness). *See Manic Depression (495)*.

Depression is twice as common in women as in men.

NATURAL REMEDIES

DIET

• **Eat meals on a regular schedule**; and only eat **nourishing food**.

• **Low blood sugar** induces depression. And eating a **high-sugar diet** also produces depression. Learn to eat nourishing **fruits, vegetables, whole grains, nuts, and legumes**. All are fiber-rich foods which help reduce depression. They are also filled with nutrients.

• Eating **complex carbohydrates** increases the amount of the amino acid, tryptophan, that is ingested. This, in turn, increases the amount of serotonin made by the brain, which calms and relaxes the whole system. (In contrast, high-protein foods promote the production of dopamine and norepinephrine, which increases alertness.)

• Increase intake of fiber-rich foods.

• **Omega-3** helps reduce depression. The richest plant source is flaxseed oil (2-4 tsp. daily).

• Each day take **vitamin C** (1,000 mg), **vitamin E** (400 IU), and **calcium** (1,000 mg).

• Take **vitamin B_{12}** (1,000 mcg). Deficiencies can produce depression, even in the absence of macrocytic anemia. B_{12} injections by a physician may be needed, prior to going on a daily taking of the B_{12} dosage.

• Take **folic acid** (5 mg daily). Many depressed people are low on folic acid. Make sure you are also taking adequate amounts of vitamin B_{12}.

• **Niacinamide** (2,000 mg daily), a form of vitamin B_3 (niacin), also helps reduce depression.

• **Vitamin B_6** (20 mg, twice a day) helps reduce depression.

AVOID

• Avoid **processed and junk foods**; they are a great source of emotional depression.

• **Caffeine and tobacco** both are known to induce depression.

• **Food allergies** are very significant. Locate and eliminate them. *See Allergies (576) and Pulse Test (575).*

• Over 200 different **medicinal drugs** are reported to cause depression! You might consider throwing out your medicine chest.

• Beware of **antidepressant drugs**! They lead to a wide variety of physical and mental damage!

• Beware of **eating or shopping binges**, to help you feel better. Neither accomplish the intended purpose.

• Avoid the following drugs: **Birth-control pills** cause a wide variety of mood responses, including depression. **Corticosteroids**, especially **steroids**, can produce severe depression. They are used to treat rheumatoid arthritis, lupus, and severe asthma. **Diet pills** initially boost mood, but later depress it.

OTHER HELPS

• **Gotu kola** reduces mental fatigue, which is common in depression.

• **Ginseng** stimulates the entire body, counteracting depression.

• **St. John's wort**, taken regularly (in capsules, tablets, or tincture) will usually improve sleep, appetite, energy levels, and physical well-being within a week. By the end of the second week, anxiety and stress levels should reduce. Start with 300 mg a day; a few days later, increase to 600 mg. A few days later, increase to the maximum of 900 mg daily. Always divide the doses into thirds, taking them morning, noon, and night.

• **Ginkgo** biloba helps strengthen the mind.

• **Valerian** root reduces depression caused by anxiety; but it can make you sleepy.

• **Siberian ginseng** consistently increases a sense of well-being during depression and neurosis.

• The supplement **5-hydroxytryptophan** (5-HTP) increases levels of serotonin, a brain chemical which fights depression. Othniel Seiden, M.D., recommends this: Start with 100 mg at bedtime. If you are not feeling better in 3 days, increase it to 100 mg in the morning and 100 mg at night. If still depressed after 3 more days, increase it to 200 mg in the morning and 200 mg at night. If still depressed, stop taking it entirely; for it will not help you. If you are being helped, continue the dosage for several weeks; then taper off gradually and stop taking it. (Tryptophan, an amino acid, helps produce serotonin, a neurotransmitter which helps you feel more positive. A diet rich in corn and low in other protein sources will increase depression in some people. This is because corn is extremely low in tryptophan.)

• **Tyrosine**, an amino acid, also significantly reduces depression. Take 7 grams daily for 12 weeks. It converts into *norepinephrine*, a neurotransmitter that affects mood. Women taking oral contraceptives have lower levels of tyrosine.

• **L-phenylalanine**, another amino acid, converts to positive mood-affecting substances. Take 3-4 grams per day for one month. Even low dosages (75-200 mg) are helpful.

• **Go to bed on time** at night and maintain **regularity** in your daily schedule.

• Maintain a regular **exercise** program in order to increase feelings of well-being and cheerfulness. Purposeful outdoor exercise, such as gardening, is ideal. Practice **deep breathing outdoors**, twice a day. This reduces a sense of gloom.

• **Sunlight** is beneficial for depression; since it suppresses melatonin production.

• Keep your weight down; and, if you are overweight, go on a gradual **weight reduction** program.

• Do something active. Forget yourself and find happiness in **purposive activity**. Do something worthwhile that helps others. It may be washing the dishes; it may be going out and helping a sick person.

• **Talk it out**; you may find that many of your problems really do not amount to much.

• Have a good cry. **Crying** releases tension and worry.

• **Be respectful and kind** to others. Making others miserable will only add to your own misery. Being kind to others helps you feel better yourself.

—See Manic Depression (below), Strengthening the Nerves (468), and Chronic Fatigue Syndrome (214).

ENCOURAGEMENT—If you would have broad views, noble thoughts and aspirations, choose associations that will strengthen right principles. Let every thought and the purpose of every action bend to the securing of the future life, with the eternal happiness it will bring you. Psalm 103:11.

MANIC DEPRESSION

(Bipolar Disorder)

SYMPTOMS—Extreme pessimism, withdrawal from society, changes in sleep patterns. A sudden loss of interest and failure to complete projects started with enthusiasm. There is chronic irritability, sudden attacks of rage when crossed, and loss of inhibition. More symptoms are given below.

CAUSES—Mania is a mental state characterized by excessive excitement. Depression is a mental state characterized by dejection, lack of hope, and absence of cheerfulness.

Both of these qualities are strikingly observed in manic depression. Manic depression is cyclic, a circular affective psychosis in which there are alternating moods of depression and mania. Ordinarily there is a series of periods of psychotic depression or excessive well-being, appearing in any sequence and alternating with longer periods of relative normalcy.

Though intensity may vary greatly, the manic shows an elevated though unstable mood, a flight of ideas, and great physical activity. The case of primary depression finds one thinking that all exertion is exhausting. There is difficulty in thinking or acting and the person is very unhappy.

Manic-depressive disorder is also called bipolar disorder. It typically begins as depression and then develops into alternating periods of depression and mania.

Both mania and depression can vary in intensity and length of the cycles (a few days to many months). During the depression phase, some do nothing while others go through the motions of everyday work while always feeling depressed.

Hypomania is a burst of energy and activity; but full-blown manic psychosis includes delusions of grandeur, invincibility, or persecution, and may result in day and night activity without sleep.

Factors inducing manic depression include an overgrowth of **yeast** in the intestinal tract *(215)* and certain diseases: **hypothyroidism** *(549)*, **hyperthyroidism** *(552)*, **diabetes** *(547)*, **Alzheimer's** *(485)*, **multiple sclerosis** *(478)*, **Parkinson's disease** *(480)*, **food allergies** *(576)*, **environmental toxicity** *(598)*, **hypoglycemia** *(544)*, **and hyperglycemia** *(544)* are major causes.

NATURAL REMEDIES

• A good **nourishing diet** is very important, omitting all **junk foods**.

• Avoid **processed, sugary, and fried foods**.

• Locate **allergy foods** and eliminate them. *See Allergies (576) and Pulse Test (575).* Foods which are common offenders include **cow's milk, corn, wheat, rye, soy, and sugar**. Solving the manic-depressive problem can require weeks of careful diet and elimination of offending factors.

• But also consider **house dust, perfume, formaldehyde, and cosmetics** as allergenic factors to be avoided.

• To test for glycemia, take a 6-hour **glucose tolerance test**. During the test, someone must stay with the person and record his emotions and events. (Is he on an up, down, or both?)

• **Folic acid** supplement improves the effects of lithium in treating manic-depressives.

• To normalize and strengthen nerve function, high doses of **B-complex** are important. The **minerals** found in nourishing food are also needed.

• **Chromium** and **vanadium** (500 mcg, 4 times a day), essential **fatty acids** (5 gm, 3 times a day), **niacin** (450 mg, 4 times a day), **vitamin B_1** (200 mg), **vitamin B_5** (50 mg), **vitamin B_6** (200 mg).

• Avoid the amino acids, **ornithine**, and **arginine**. Some say these and **choline** may make symptoms worse. Others say that choline is needed. Still others say that choline should only be taken in normal amounts with other B vitamin supplements. Researchers at Massachusetts Institute of Technology found that choline helped reduce manic depression. So do as you think best regarding choline.

• Obtaining sufficient amounts of balanced amino acids, especially **tyrosine** and **taurine**, are important.

—Also see Depression (494), Strengthening the Nerves (468), and Mania (below).

ENCOURAGEMENT—We must accept Christ as our personal Saviour; and, as we do, He imputes to us the righteousness of God. He enables us to obey the Bible. "Herein is love, not that we loved God, but that He loved us, and sent His Son to be the propitiation for our sins." 1 John 4:10, Psalm 26:1.

MANIA

SYMPTOMS—This psychosis is characterized by excessive excitement, exalted feelings, delusions of grandeur, elevation of mood, and psychomotor overactivity.

CAUSES—Causes include taking of **medicinal or street drugs, guilt** from wrongdoing, **bad diet** for years, and **alcoholism**.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MANIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

FOR MALNUTRITION—Graduated Tonic Baths and generous **aseptic diet**.

TO INCREASE BLOOD PRESSURE—Hot Baths. Radiant Heat Bath. Hot Full Bath, at 100°-102° F., for 8-15 minutes. Hot Leg Bath or Hot Sitz Bath (either one at 108°-115° F. for 8-12 minutes). Follow by **Shallow Bath** (68°-74° F.), Pail Pour (75°-70° F.), or Percussion Douche (60°-50° F.) with duration of 20-40 seconds. **Ice bag** over heart for 15 minutes, every two hours.

TO DIMINISH CEREBRAL HYPEREMIA—Short **Hot Full Bath** or Shower, followed by **Douche** at 70°-60° F., 20-40 seconds; **Ice Bag** over heart for 15 minutes every 2 hours.

FOR AUTOINTOXICATION—Aseptic diet. If necessary, fruit diet. **Colonic** daily, for a few days. Long **Neutral Bath**, 30-60 minutes.

TO RELIEVE OR PREVENT EXHAUSTION—Rest in bed. **Tonic Friction,** twice daily.

FOR FEVER—Local fever-reducing measures, as may be indicated. **Neutral Bath. Cooling Pack**.

CONTRAINDICATIONS—Avoid very hot or prolonged cold baths; avoid cold to head when face is pale.

ENCOURAGEMENT—There is absolutely no safeguard against evil but truth. No man can stand firm for right in whose heart the truth does not abide. There

is only one power that can make and keep us steadfast—the power of God, imparted to us through the grace of Christ.

HYSTERIA

SYMPTOMS—There are a great variety of possible symptoms: The mental attitude (when not excited) is calm and somewhat aloof. There may be easy laughing, crying, and episodes of emotionalism (possibly without any apparent explanation) even occurring in sleep. The problem may, or may not, be psychotic in nature.

In some cases, fugues occur. These are episodes when the person takes on a different personality, name, etc., and leaves and goes somewhere else for a time. When the primary personality returns, there is a forgetting of the secondary state. But this problem is not the same as the psychotic condition, known as schizophrenia—in which there is a splitting in personality, incongruities, and confusion co-existing in a person at the same time.

CAUSES—There may be an emotional instability, various sensory disturbances, and a marked craving for sympathy which sometimes leads to unusual words, actions, and activities.

Hysteria can result from **post-menstrual syndrome, food allergies, hypoglycemia, prescribed or illegal drugs, or alcoholism**.

NATURAL REMEDIES

• Place the person on a **nourishing diet**, avoiding all junk foods.

• Test for **allergies**; *see Allergies (576) and Pulse Test (575).*

• Give a 6-hour **glucose tolerance test**.

• Keep a daily diary, to test for **PMS**. Look in a Physician's Desk Reference, to locate **drugs** which might be causing problems.

• Take the **vitamins and minerals** needed to build strong nerves. *See Strengthening the Nerves (468).*

• Place the person in a **quiet place**, devoid of spectators. Give **cold applications to the head, face, and neck**. Quiet, firm suggestions are important.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR HYSTERIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DIETARY AND LIFESTYLE—Tonic, reconstructive, and restful measures. **Graduated cold applications** (Tonic Frictions) are of the first importance and must be carefully managed at first; need short and intense application, twice daily. **Prolonged Neutral Bath,** in cases due to autointoxication. Also need **outdoor life, generous aseptic diet,** suitable moral and mental surroundings.

CONVULSIONS—Neutral Bath, Neutral Pack, Hot Blanket Pack, **Hot and Cold Compress** to spine or Sponging, **Hot Enema**, **Hot Half Bath** with **Tepid Pail Pour** to head and spine, **Heating Compress** to spine.

COMA—Alternate Compress or Sponging to spine, **Cold Mitten Friction**, Hot Half Bath, Cold or Hot **Compress** to head.

VOMITING—Hot and Cold Compress over stomach area. Dry diet. Rectal feeding. If necessary, ice to the area above the stomach. Ice pills.

ANOREXIA—Ice Bag over stomach half an hour before meals. **Alternate Compress** over stomach, twice daily. **Cold Douche** to spine and epigastrium.

COUGH—Fomentation to spine, sipping hot water, **Chest Pack**, **Cold Compress** to the throat, **gargling** hot water several times daily.

MUSCULAR PARALYSIS—Alternate Pail Pour or Alternate Douche, Alternate Compress, Cold Pail Pour, Cold Douche, massage.

CONTRACTIONS—Fomentations to affected parts. Follow with **Heating Compress** and **Revulsive Douche**.

TREMBLING—Neutral Pail Pour to spine at 92°-96° F., for 15 minutes.

INCONTINENCE OF URINE—Percussion Douche to spine. **Neutral Sitz Bath** for 15-30 minutes.

RETENTION OF URINE—Hot Sitz Bath, 5 minutes. Follow by **Cold Plantar Douche**, Cold Perineal Douche. Cold Douche to the lower back area, front and back, opposite the intestines and pelvic organs. **Cold Rubbing Sitz Bath**.

PARESTHESIA—Alternate Douche or **Alternate Compress**. Cold Percussion Douche to spine. Cold Hand Rub or Cold Mitten Friction to affected area. Do this after a hot **Fomentation** for 5-10 minutes.

HYPERESTHESIA (PAIN)—Hot Fan Douche, **Fomentation** followed by **Heating Compress**. Revulsive Compress. Cold Douche to the symmetrical part of the opposite side.

VISCERAL NEURALGIA—Very hot **Fomentation** over the affected part for 20 minutes, twice a day. Follow with **Heating Compress** during the interval between. Revulsive Compress, Revulsive Fan Douche.

MOTOR PARALYSIS—Alternate Douche, **Cold percussion Douche**.

HICCUP (also Hiccough)—Hot Trunk Pack, **Heating Compress** over stomach, sipping ice-cold water.

SYNCOPE—Heat to neck, **short cold application** to chest and face, **Alternate Compress** to spine, percussion of the chest with the hands dipped in cold water or with the end of a cold towel, vigorous centripetal friction, rhythmical traction of the tongue.

SPINAL IRRITATION—Fomentation to the spine twice a day, followed by continuous **Heating Compress** during the intervals between. Revulsive Fan Douche. **Fomentation.** Follow by **Pail Pour** for 5 minutes, 80°-85° F.

ANAL SPASM—Hot Anal Douche or **hot Shallow Sitz Bath** at 102°-106° F. General applications of massage and regular gymnastics.

APHONIA—Ice Bag to the throat with general **Cold Douche**.

GENERAL METHOD—Improve his general health by vigorous tonic measures continued during many months or even years. Improve the general nutrition by a nutritious, simple, unstimulating dietary. Combat special symptoms by the hydrotherapy measures indicated above, together with suitable mental and moral treatment.

—*Also see Melancholia (498).*

ENCOURAGEMENT—It is because of the love of God that the treasures of the grace of Christ have been

offered to men. What love is this! What unfathomable love, that Christ would die for us while we were still sinners! Look at the cross of Calvary. It is a standing pledge of the boundless love, the measureless mercy of the heavenly Father. Proverbs 13:25.

"For His great love wherewith He loved us." Ephesians 2:4. "Heirs of the kingdom, which He hath promised to them that love Him." James 2:5.

MELANCHOLIA

SYMPTOMS—A mental state characterized by marked depression, physical and mental apathy, brooding, mournful and doleful notions, and inhibition of activity.

CAUSES—Melancholia is a form of chronic depression which, at times, can switch to strong excitement and even hysteria.

Hysteria can result from **food allergies, hypoglycemia, prescribed or illegal drugs, post-menstrual syndrome, extremely impoverished diet for years, or alcoholism**.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MELANCHOLIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

FOR ANEMIA AND MALNUTRITION—**Fomentation** to abdomen. Followed by **Cold Mitten Friction,** twice daily. **Aseptic diet, water** drinking, air bath, Radiant Heat Bath, sunbaths, **rest** in bed, **massage**.

FOR CEREBRAL ANEMIA (which is usually present)—**Warm compress** at 98°-100° F. to back of neck for 15 minutes, 3 times daily.

TO DIMINISH BLOOD PRESSURE (which is usually excessive)—**Warm Full Bath**, 98°-100° F., 10-20 minutes, twice daily. **Heating Wet Sheet Pack**. Heating Trunk Pack, 30 minutes, twice daily. **Neutral Douche**, 94° F., pressure 10-20 pounds, duration 2-4 minutes.

CONSTIPATION—**Laxative diet, fruit, malted cereals**; Cool **Enema**.

MENTAL AND NERVOUS IRRITABILITY—**Neutral Bath** at 94°-96° F., 30 minutes to 2 hours. **Heating Wet Sheet Pack**, Hot Abdominal Pack, Heating Compress to spine.

CONTRAINDICATIONS—Avoid cold immersions and all very cold general applications which, by raising blood pressure and exciting the irritable cerebral structures, aggravate the condition.

GENERAL METHOD—A person suffering from melancholia requires essentially the same therapeutic measures as the neurasthenic, with the special moral treatment and control indicated.

ENCOURAGEMENT—Everyone who enters the pearly gates of the city of God will enter there as a conqueror; and his greatest conquest will, through the enabling grace of Christ, have been the conquest of self.

In Christ, God offers us all the best treasures of heaven. By faith in His enabling grace, we can obey all the law of God and live good, clean lives.

MÜNCHAUSEN SYNDROME

SYMPTOMS—Dramatic presentation of symptoms and their history. Highly emotional and argumentative behavior toward medical staff. Wide knowledge of medical terms and medical procedures.

CAUSES—Münchausen Syndrome is a rare condition in which a person claims to have symptoms of illness and may repeatedly need treatment from a number of different hospitals. Medical care is sought for nonexistent or self-induced symptoms.

Common symptoms that he complains of include abdominal pain, blackouts, and fever. It is thought that this is done as an attempt to escape from everyday life and be cared for and protected. The syndrome usually begins in early adulthood and is more common in men. Those affected often have had previous experience working in a medical-related profession. For this reason, their bogus claims may not be detected until shown by test results or exploratory surgery. Multiple surgical scars may be present.

A related problem is called Münchausen Syndrome by proxy; maybe it is a parent. Often the mother repeatedly claims her child is ill and in need of treatment.

Sometimes the cause is an addiction and the person wants narcotics.

As soon as the medical staff realizes the true nature of the situation, the person leaves and goes to another hospital or physician.

NATURAL REMEDIES

• The only practical solution is to make friends with the person and try to calmly discuss the matter with him. Lead him to Christ, the only one who can help us.

ENCOURAGEMENT— The work of conquering evil is to be done through faith. Those who go into the battlefield will find that they must put on the whole armor of God. The shield of faith will be their defense and will enable them to be more than conquerors. Nothing else will avail but this—faith in the Lord of hosts and obedience to His orders. Ephesians 6:11-12, 16.

MENTAL ILLNESS

SYMPTOMS—Depression, anxiety, delusions, nervousness, loss of interest in school or work, sleep pattern changes, irritability, withdrawal from society, sudden rages, lack of enthusiasm, and panic attacks.

CAUSES—It is important that we note that this article includes both neurotic and psychotic syndromes. Just because a person has one or more of the symptoms noted here—does not mean he is crazy. He may just be having a hard time dealing with life.

The experts divide mental illness into two main

varieties: mood disorders and schizophrenia *(500)*. Elsewhere in this *Encyclopedia*, you will find discussion of several episodic mood disorders: Depression *(494)*, Manic Depression *(495)*, Phobias *(491)*, and Hysteria *(497)*. Individuals with episodic problems generally return to normal between spells.

In this article, we shall overview a few primary factors in all mental illness. An important related article is *"Strengthening the Nerves" (468)*.

A person is no longer able to cope effectively with emotional or physical stresses, which others are normally able to handle. Women are twice as likely to experience mental illness.

NATURAL REMEDIES

• There may be heredity factors; but the **environmental factors and lifestyle** are very important! **Nutritional deficiencies** have a strong effect on mental health.

• **Autointoxication** and **constipation** are contributing factors in mental illness. Eliminating them can reduce symptoms ranging from mental sluggishness to hallucinations. Even schizophrenia *(500)* can be greatly lessened.

• There is a direct relation between the **transverse colon** and the brain. When the colon is clogged, mental illness is triggered in some and an attack of epilepsy *(473)* in others.

• Eliminate the "glue foods"; these tend to clog the colon, produce a buildup of mucus and toxins in it, and lead to mental problems. Such foods include **white flour, sugar, eggs, meat, peanuts, and dairy products**.

• Brain cells cannot function properly without proper nutrients. *See Strengthening the Nerves (468)*. It is known that many cases of mental illness are solved when a **simple nourishing diet**, including sufficient **fiber** and adequate **vitamins and minerals**, is given and the colon is cleaned out with **enemas** or colonics.

• **Food allergies** may produce edema (swelling) of certain areas of the brain, which can change the personality, reflexes, motor activity, or the function of the central nervous system. Allergy specialists successfully treat individuals with mental illness by isolating foods and chemicals in the environment which induce the mental problems. Allergic reactions may be a factor in criminal behavior. In some cases, the offending food does not cause mental reactions until hours after being eaten. This is called "masked food allergy." Do not under-rate the allergy factor! *See Allergies (576) and Pulse Test (575)*.

• A **whole grain** diet stimulates the amount of tryptophan in the brain; this produces a calming, peaceful feeling.

• **Exercise**, especially outdoors in the fresh air, combined with relaxation helps to rejuvenate the body and mind.

• Many persons with schizophrenia, autism, abnormal behavior, and subsequent learning disorders are caused by too much **lead** or **copper** in the body. Check your plumbing pipes. Plastic water pipes are the safest.

• Herbs which calm the brain and nerves include **hops, chamomile, skullcap, valerian, and wood betony**.

—Also see Schizophrenia (500) and Strengthening the Nerves (468).

ENCOURAGEMENT—There is a God in Israel, who can bring deliverance to all that are oppressed. He will draw near to you, right where you are, and minister to your needs. All you need to do is ask Him—just now. Psalm 37:6.

INSANITIES
(Post-Febrile, Post-Operative, Puerperal Confusional)

SYMPTOMS—Any mental disorder or psychosis, characterized by inability to distinguish between right and wrong, possession of delusions or hallucinations which prevent an individual from looking after his own affairs with ordinary prudence or which render him a menace to others, actions resulting from impulses of such intensity that they cannot be resisted.

NATURAL REMEDIES

Dr. John Harvey Kellogg recognized that a basic treatment could be applied to a number of insane conditions. Here are his recommendations:

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SEVERAL INSANITIES AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

MALNUTRITION—Rest, careful **Tonic Frictions**.

AUTOINTOXICATION—**Aseptic dietary, fruit diet** for 3-4 days, **warm Baths**, Radiant Heat Bath, **Sweating Wet Sheet Pack**. Follow by **short cold applications**, Wet Sheet Rub or brief Cold Douche, copious **water** drinking, **Colonic** daily for a week or two.

PUERPERAL LESIONS OR COMPLICATIONS—Hot **vaginal irrigation**, Neutral or tonic **Sitz Bath**.

FEVER—Absolute **rest** in bed. Prolonged **Tepid Bath** at 88°-92° F., for 30-60 minutes. Cooling **Enemas**, **Cold Compress** to head, copious **water** drinking.

ALCOHOLISM—**Withdraw alcohol** at once. **Withhold food for 3 days. Nutritive enemas.** Copious **water** drinking. Neutral **Colonic** daily for a week.

UREMIA—See under "Nephritis, Acute."

CONTRAINDICATIONS—The same as those of mania, when conditions coincide. Especially avoid all intensely exciting procedures.

GENERAL METHOD—In most cases essentially the same as for mania, giving special attention to the particular causal element which may be a prominent factor in the case. In certain cases, the symptoms are those of Melancholia; and the treatment must be modified accordingly.

ENCOURAGEMENT—It is a part of God's plan to grant us, in answer to the prayer of faith, that which He would not bestow did we not thus ask. Oh, please,

my friend, believe and know that God is your best Friend!

SCHIZOPHRENIA
(Paranoiac, Catatonic, Hebephrenic, Dementia Precox)

SYMPTOMS—Principal signs are moodiness, solitary habits, stupor and excitement, delusions and hallucinations.

Hallucinations are common, especially of hearing. Loss of emotion or, if shown, it is out of place. Actions are absent or inappropriate. There may be impulsive destructive acts and negativism. Extremities tend to be cold, blue, and edematous (puffy with fluids). Conscious, but takes little cognizance of what is going on about him. Delusions frequent but absurd, often of grandeur and persecution. May have attacks of tears or laughter. There may be excited activity. May remain in a stupor. Grimaces and mannerisms are frequent. Symptoms sometimes change form.

Schizophrenia affects about 3% of the population at some time in their lives.

CAUSES—This is the most important of the psychoses, and is characterized by a loss of contact with the environment and a disintegration of personality. The earlier name for it was dementia precox.

There are four primary types. A vague sense of being two personalities and "changed" occurs in all types:

1 - Simple schizophrenia: The person becomes dull emotionally, loses ambition, and tends to withdraw. Yet there is no serious intellectual impairment.

2 - Paranoid schizophrenia: The person develops extensive delusions of persecution. He believes people are plotting against him.

3 - Catatonic schizophrenia: The person may show stereotyped excitement or simulate a stupor. But, if he recovers later, he will clearly remember it.

4 - Hebephrenic schizophrenia: There are mannerisms, speech anomalies, hysteroid symptoms, delusions, hallucinations, and often a dreamy, ineffectual reaction.

Some believe schizophrenia is **hereditary**; others think that only **attitudinal, dietetic, and external factors** lead to it (**head injuries, complications during birth, reaction to a virus or medicinal drug, environmental poisons**).

A wide range of **medicinal drugs** can produce schizoid symptoms. It is known that many schizophrenics had **birth complications** or a **head injury in childhood**.

Being born in the winter in cities is more likely to produce schizophrenia. The lack of good nutrition of the mother and child is the likely cause.

NATURAL REMEDIES

When using orthodox psychiatric treatment, complete recovery is rare. The orthodox methods use various tranquilizers, all with severe side effects. These include electroconvulsive shock therapy and psychotherapy. Orthodox remedial substances deplete many essential vitamins, are highly toxic, damage brain tissue, and should be avoided.

Solutions are more likely when using natural remedies.

MINERALS AND HEAVY METAL POISONING

• Schizophrenia is linked to an **excess of copper** in the body. High copper levels cause vitamin C and zinc levels to drop. *See Copper Poisoning (599).*

• It is believed that a **zinc deficiency** may be a key factor inducing schizophrenia. A full 80% of those with this disorder have a deficiency of zinc and an excess of copper and iron in their body tissues. Supplementation of **zinc** (30 mg) **and manganese** (25 mg) are needed to correct this. Zinc deficiencies occur more frequently in the winter; and this is when this disorder frequently begins. It is now known that some individuals, who later in life are schizophrenic, had a prenatal zinc deficiency from their mother's diet and way of life. The pineal gland in the brain normally has high levels of zinc; and weakening of this endocrine gland may be a factor.

• **Magnesium deficiency** may also be involved, since schizophrenics have lower magnesium levels in their blood; and, when they recover from it, their magnesium levels are higher.

• An excess of **lead** or **mercury** in the body can also induce schizophrenic symptoms. *See Lead Poisoning (600), Mercury Poisoning (601), Heavy Metal Poisoning (596).*

DIET AND NUTRIENTS

• Eat a high-fiber diet, including plenty of fresh raw vegetables and quality protein. Complex carbohydrates in the diet are important for a normal blood sugar level.

• **High-quality food** should be eaten. **Mineral and trace mineral imbalances** exist in schizophrenics. A **nourishing diet**, along with **vitamin / mineral supplementation** is needed.

• Severe **vitamin B_3 (niacin) deficiency** (pellagra), with its characteristics such as nervousness, loss of memory, confusion, paranoia, insomnia, depression, and hallucinations—resembles schizophrenia so closely, that the two disorders probably are the same. Here is an interesting fact: When experiments were made on prisoners who were given no niacin for extended periods of time before they were again given normal diets, it required 60 times as much niacin to return them to normal in order to prevent pellagra.

• Go on a **fruit and vegetable juice diet** for a time. This will provide vitamins and minerals while keeping

the blood sugar normal during the fast. Repeat short juice fasts or one longer juice fast for 4-6 weeks. Overly sweet fruit juices should be avoided or diluted 50-50 with water.

• During this fasting time, give massive doses of niacin in the form of **niacinamide** (1,000-3,000 mg with each meal; often as much as 25,000-30,000 mg per day). An equal amount of vitamin C, B vitamins (especially pantothenic acid), and 3-5 Tbsp. of brewer's yeast should be given. Repeat: Do not give massive doses of niacin; instead, give niacinamide.

• After recovery, a large daily dose of niacinamide will have to be continued indefinitely.

• Severe deficiencies of other B complex vitamins can also produce schizoid symptoms. Severe **B_{12} deficiency** caused difficulty in concentration, poor memory, agitation, hallucinations, and manic or paranoid behavior.

• **Biotin deficiency** causes depression, lassitude, panic attacks, and hallucinations.

• Faulty **essential fatty acid deficiency** or metabolism is another factor leading to schizophrenia. The remedy is 2-6 Tbsp. of **flaxseed oil** in divided doses, given daily. Wheat germ oil or sunflower seed oil works just as effectively.

• **Hypoglycemia** appears to be frequently involved in schizophrenia. A good blood sugar level is vital, if oxygen is going to be regularly provided to the brain. Yet it is believed that an undersupply of oxygen is a key factor inducing the disorder. *See Hypoglycemia (544).*

AVOID

• Avoid all **processed, junk, and fried foods**. Do not use **white flour or sugary foods**. Stop eating **meat**. Avoid **alcohol, tobacco, and caffeine**.

• Schizophrenia is rare in areas of the world where little or no **cereal grains** are used; but it is more frequent where **wheat, rye, or barley** are common. Celiac disease *(382)* is especially caused by infants being fed wheat before six months of age. Schizophrenia is more common in celiacs. When a **gluten-free diet** brought improvement to celiac symptoms, the mental problems improved also (gluten is wheat protein). **Milk protein** (lactose) increases the deleterious effects of wheat gluten in some celiacs. In one study, schizophrenics placed on a **milk- and cereal-free diet** were released from the hospital in half the time. Gluten was found to be the key factor.

• A 1982 study noted that 80% of schizophrenics were allergic to **eggs**.

• **Caffeine** worsens symptoms of schizophrenia.

—See Mental Illness (498) and Strengthening the Nerves (468) for additional information. Also see the vitamin dosage section of this book for high dosage amounts.

ENCOURAGEMENT—Serving Christ will place upon you no restriction that will not increase your happiness. In complying with His requirements, you will find a peace, contentment, and enjoyment that you can never have in the path of sin. Psalm 31:20.

AUTISM

SYMPTOMS—Symptoms are very obvious before the age of Three: A marked unresponsiveness to people and surroundings, indifference to affection, and withdrawn into oneself.

Sometimes strange actions, such as pounding feet while sitting, continual rocking back and forth, silent sitting for long periods of time, bursts of hyperactivity while he bites or pounds on his body.

Key early symptoms: Does not babble at 1 year of age. Begins developing language, then stops abruptly. Does not respond to his name, but has normal hearing. Does not point to things to direct his mother's attention. Avoids eye contact and cuddling.

CAUSES—There are about 100,000 autistic children in America. They look normal in appearance; but they have weak contact with reality. In addition to the above symptoms, they have learning disabilities and are often mentally disabled. A rare few have astounding abilities in mathematics or music.

Nutritional improvement appears to be the best route for natural treatment.

In some instances, autistic children have recovered, usually during adolescence. Some progress well; but later they lose what was gained.

NATURAL REMEDIES

• This high-fiber diet should be 50%-75% raw fruits and vegetables.

• No junk, processed, sugar, dairy, wheat, or white-flour foods of any kind should be given. Avoid fried and fatty foods and meat of any kind.

• Dr. Bernard Rimland, a research psychologist in San Diego, found that 50% of his patients improved when placed on a **megavitamin therapy**. If you have an autistic child, give him a **high B-complex supplementation**, plus other nutritional factors.

• In research studies, the vitamins which especially helped the autistic child were niacin (use the **niacinamide** form), **pantothenic acid, vitamin B_6, and vitamin C.** When improvement did not occur, additional **B_6** was given, along with **magnesium**, to offset the B_6; then improvement was seen. *See the vitamin dosage section of this book for high dosage amounts.* As a result of vitamin therapy, there was a reduction in tantrums, improved speech, better sleep patterns, increased alertness, and greater sociability. As soon as the vitamin therapy ceased, the symptoms returned.

• Some researchers found that adding **magnesium** (10-15 mg per 2.2 pounds of body weight) to **vitamin B_6** (3.5 mg to 100 mg per every 2.2 pounds of body weight) worked better than taking B_6 alone. The amounts of B_6 and magnesium used for treating autism are very high, and have the potential for toxicity.

• Allan Cott, M.D., a New York psychiatrist, gave 200 mg of **pangamic acid** (vitamin B_{15}) to autistic chil-

dren and decided improvement frequently occurred.

• Use an elimination diet, to test for **food allergies**. *See Allergies (576) and Pulse Test (575).*

• Regular, moderate **exercise** is important.

SPECIAL NOTE: AUTISM AND VACCINATIONS

The author's book, *The Vaccination Crisis is* available from the publishers of this *Encyclopedia* and contains important information about the relationship of MMR vaccinations, given to infants and children, and the stupendous increase in autism. The evidence is overwhelming: MMR vaccines are the primary cause of autism!

"Serious problems can occur when children, especially small children, are vaccinated. Of these, the rubella (German measles) vaccine is especially dangerous. It is a standard part of the MMR (measles, mumps, and rubella) combination vaccine.

"A 1998 research study, published in the British medical journal, *Lancet*, reveals that the MMR vaccine could be a cause of that terrible condition, known as *autism."—The Vaccination Crisis, p. 139.*

"One of the earliest vaccines introduced for general use in the U.S. was the pertussis vaccine for whooping cough in the 1940s. Autism, a form of childhood schizophrenia, characterized by mental retardation, muteness (inability to speak), and a lack of responsiveness to human contact, was not known or described until 1943, about the same time that vaccinations were introduced. Here are some of the latest facts on this:

"The Wakefield / Walker-Smith Study. In a 1998 study of twelve children in Britain, all twelve had intestinal problems and had suddenly lost language skills; and nine were diagnosed as definitely autistic. The significant part is that, in the case of eight of the children, parents or a doctor noticed the problems developed shortly after the child had received the measles, mumps, *and rubella (MMR) vaccine!"—pp. 138-139.*

"The Wakefield / O'Leary Study: In a separate British study in the summer of 2001, scientists uncovered additional evidence that the MMR vaccine is primarily responsible for autism."—*Vaccination Crisis, p. 141.*

"The Singh Report on MMR and Autism: In late September 2002, scientists at the Department of Biology and Biotechnology Center, Utah State University, Logan, Utah, reported finding a strong association between the MMR vaccine and the autoimmune reaction believed to pay an important role in autism."—*Vaccination Crisis, p. 141.*

"273% increase in autism in California. On April 17, 1999, the California State Department of Developmental Services (DDS) issued a special report to the state legislature. The report, entitled, *"Changes in the Population of Persons with Autism and Pervasive Developmental Disorders in California's Developmental Services System, 1987-1998,* revealed a shocking increase in the number of children with autism . .

"In the past 10 years, California has had a 247% increase in the number of children with autism who enter the developmental services system, 1,685 new cases last year alone. What is generally considered a rare condition is increasing faster here than any other developmental disabilities . . The complete report is available from the California State Department of Developmental Services, in Sacramento.

"While the increase in other child disability problems has been 50%, for autism it has been 273%. This figure does not include data for the more than 13,000 children in the early start program, for 0 to 3 year olds.

"In 1987, there were 2,778 cases of autism in California; in 1998, it was 10,360. That is a 272.93% increase."—*Vaccination Crisis, pp. 144-145.*

Do not let your child be vaccinated! Our book, *Vaccination Crisis*, tells you how, in most states, you can avoid it.

ENCOURAGEMENT—The Lord has not changed. He is true, merciful, compassionate, and faithful to do what He says. Trust your life to Him! You will not be sorry. The future He offers you is a marvelous one.

DEMON POSSESSION

SYMPTOMS—The person will frequently babble, or talk nonsense; he frequently says vulgar words. He will display superhuman strength and endurance, and may go without food or drink for days. He appears frightened, angry, or disturbed, with no interest in his appearance.

CAUSES—He has attended a spiritist sceance, had a hypnotic encounter, been reading occult (witchcraft) literature, played with a ouija board, attended a church of Satan, or been prayed over by a witch doctor.

NATURAL REMEDIES

• Concerned family members and friends should take turns reading the Bible aloud in the presence of the devil-possessed person and alternate with ongoing prayer. Those participating in this must confess to God all known sins and plead for forgiveness. The evil spirit may cry out and complain; but he will always tremble when the name of Jesus Christ is mentioned. This prescription will cause the evil spirit to leave the person.

When that occurs, all should kneel and praise God for his deliverance and plead for the Holy Spirit of God to fill the life of the person, so the evil spirit will not return.

That person must also be told to go and sin no more; and he should intend to change his way of life and never again dabble in satanism.

ENCOURAGEMENT—The faces of men and women who walk and work with God express the peace of heaven. They are surrounded with the atmosphere of heaven. For these souls, the kingdom of God has begun.

— SECTION 10 —

SKELETAL-MUSCULAR

SKELETAL-MUSCULAR - 1 - BONES

FRACTURE

(Broken Bone)

SYMPTOMS—There may be extreme pain and tenderness in the injured area, a protruding bone, blood under the skin, or swelling. There may be tingling, numbness, weakness, or paralysis below the fracture.

A digit, or limb, may be at an abnormal angle or there may be pain at a specific place on a bone.

A major fracture can cause a loss of pulse below the fracture, weakness, and inability to bear weight.

CAUSES—A fracture is a crack or break in a bone. If the skin over the bone remains intact, it is a closed or simple fracture; if the bone breaks the skin, it is a compound fracture.

Accidents are not a common cause of broken bones; but the bone can also be weakened from **osteoporosis, bone tumors, or metabolic disease**. A weakened bone can break much more easily—even from a slip of the foot, a slight fall, or knocking against something.

Malnutrition can also be involved. There can be a **deficiency of calcium and/or magnesium**, or there may be an **improper calcium / phosphorus ratio**.

Oddly enough, although phosphorus is needed for good bone formation, you will find, below, that it is important that you avoid phosphorous foods if you want strong bones. This is due to the fact that phosphorus is the one mineral which is abundantly found in food. Yet too much of it in a meal locks into the calcium and removes it from the body.

Older people do not absorb calcium and other minerals as well. This begins at 40, increases at 50, and very much so beyond 60. It is believed that 200,000 hip fractures occur in people over 65 every year. Very often, this results from **osteoporosis**. The bone has somewhat hollowed out and the break more easily occurred.

Older people who take **tranquilizers** have 70% more hip fractures than other people their age.

When a break occurs, protein fibers form a bridgework between the two parts. Then calcium, phosphorus, and silica are deposited between the protein fibers.

First aid includes covering any wound and immobilizing, or splinting, the broken part in the position it was found (so the problem will not worsen during transport). Take the person to a physician or the hospital, depending on the seriousness of the problem. Medical treatment involves placing the bones in their proper position and keeping them there while healing occurs.

A vibrating tuning fork can be placed against the area; if it causes pain, there is a fracture. X-rays will confirm whether it is a fracture.

It is important that the bone be properly set; otherwise it may thereafter be deformed and not function as well.

NATURAL REMEDIES

DIET

• Obtain a **nourishing diet**. *(See Strengthening the Bones, 505.)*

• Take 1,000 mg of **calcium** daily. Bone breaks in lab animals given **silicon** healed in 17 days. Take 1 mg daily. **Magnesium** works with calcium to build bones. Take 250-500 mg daily. Also important are **boron** (2 mg) and **manganese** (10 mg) daily.

• An alternative to taking silicon is the herb, **called horsetail**. Pour 1 cup water over 2 tsp. dried (not powdered) herb in a pan and boil for 5 minutes; then steep for 10-15 minutes.

• Foods rich in calcium and magnesium include dark green leafy vegetables, broccoli, and parsley. Eat at least 1 serving daily.

• Take 400 IU of **vitamin D** for the first 4 weeks after your injury. It will help your body absorb calcium. In addition, get out in the direct sun for 15-30 minutes a day. That will help your body make its own vitamin D.

• **Pineapple** contains bromelain, an enzyme which acts to reduce swelling and inflammation. Eat half a fresh (not canned or processed) pineapple daily, until the fracture heals. Canned pineapple or pineapple juice may contain aluminum salts, pulled by the acid from the wall of the can by the very acid liquid.

• *Lactobacillus acidophilus* and *Bifidobacterium bifidum* are two kinds of **intestinal bacteria** that make vitamin K in your bowel. That vitamin helps your body produce *osteocalcin*, a protein that aids in building bone. You can find supplements containing these bacteria in most health-food stores. Look for a brand that must be refrigerated. The usual dose is 1 tsp. of powder.

• During healing, the diet should include enough **calories** in order to provide the energy necessary for new bone-cell formation.

• **Coffee** blocks calcium absorption. **Excess phosphorus** locks with calcium so your body cannot ab-

sorb it. **Meat** and the **preservatives** in processed food are rich in phosphorus. **Soft drinks** (Coke, etc.) contain large amounts of phosphoric acid, which is worst of all. The acid melts your bones, and the phosphorus locks with the calcium and carries it out of the body.

OTHER HELPS

• You may use **clay poultices** to alleviate bruising and swelling. Other helpful herbs include **comfrey, alfalfa, plantain, and mistletoe. Tumeric** paste can also be applied to the surface to reduce swelling.

• To speed healing and reduce pain and swelling, place **comfrey** over the site of the fracture.

• Too much **calcium** supplementation, during bone healing, can induce kidney stone formation during the immobile period while the cast is on. The problem is that the person is not active enough at that time.

PREVENTION

• Try to eliminate slippery floors and throw rugs in your home. Put handrails on stairs. Have enough light where you walk and keep the path clear. Do not have pets that keep getting in your way. Shoes and slippers should have rubber soles. Avoid drugs which weaken your sense of balance.

—For detailed information on rebuilding the bones, see Strengthening the Bones, just below.

ENCOURAGEMENT—The grace of Christ and the law of God are inseparable. In Jesus, mercy and truth are met together. By His death and mediation, Jesus can forgive our sins; He can enable us to resist temptation and live clean, godly lives. 1 Corinthians 10:13..

STRENGTHENING THE BONES

It is important that you maintain strong bones, especially as you grow older. People 85 years old are 15 times more likely to break a hip than those who are 65. Unfortunately, enzymatic action and nutrient absorption continue to be reduced from the mid-40s onward. This problem accelerates after 60. Yet there are things everyone, at any age, can do to improve the quality of his or her bone structure.

NATURAL REMEDIES

You cannot succeed in life without good bones. The bones most likely to be damaged by lack of care include the jawbone, teeth, spine, hip, legs, and joints—all very important.

The objective is to achieve the highest possible bone mass before old age, and then to maintain it as long as possible. The following recommendations will help you fulfill these objectives:

DIET

• Eat plenty of **vegetables**, raw and steamed.

• Those with dentures tend to find vegetables difficult to eat. This results in a magnesium and calcium deficiency. They should have **vegetable soups, potassium broth (made of thick, white potato peelings), and raw vegetable juices** daily.

• Calcium and minerals are found abundantly in natural foods such as **green leafy vegetables, carrot juice, and broccoli**. All three are outstanding. Along with them ranks **sesame seeds**. They have the best ratio of high calcium and low phosphorus of any food. (You want a two-to-one ratio of calcium to phosphorus.)

• Other foods high in calcium include **brown rice, kale, turnip greens, pinto beans, spirulina, collard greens**.

• **Millet** is rich in calcium and magnesium. **Almonds** are high in calcium. The grains, **amaranth and quinoa**, are rich in minerals.

• **Do not just eat fruit**. Fruitarians (people who only eat fruit) do not get enough calcium or the magnesium needed to help the calcium be utilized.

• Seaweed (**Nova Scotia dulse or Norwegian kelp**) is a good source of many major minerals, and an outstanding source of the trace minerals.

• **Kelp, dulse, blue-green algae, hijiki, and kombu** are rich in minerals. **Wheat grass juice, green drink, and liquid chlorophyll** are also.

• **Garlic and onions** contain sulfur, which is needed for healthy bones.

• Eating **flaxseed oil** helps the body produce hormones needed for good bone development.

• **Chew your food** well, so it will be properly absorbed.

• **Distilled water** is an excellent way to obtain pure water. But keep in mind that you must also include proper minerals in your diet, including some kelp or dulse, to replace the minerals lost by drinking distilled water. (Distilled water is chemically hungry; it locks onto some minerals in your body when you drink it.) However, if you are eating a good diet, distilled water is the best to drink.

MINERALS

• The body requires **calcium** for many things, although bones are the most obvious need. For example, there has to be a certain amount of calcium in the blood all the time. But when, for one reason or another, the intake of certain minerals is not adequate, calcium is reabsorbed out of the bones in order to supply other needs elsewhere. (One of these needs is providing calcium to a growing fetus during pregnancy.) The bones become porous and "honeycombed," so fragile that breaks can more easily occur.

• A major cause is a lack of **calcium intake** over a period of years. Other causes include inability to absorb calcium as well, a calcium-phosphorus imbalance (caused by **too much phosphorus** in the diet), **lack of exercise**, or **lack of certain hormones**. *For much more information on Calcium, see p. 94. For information on Vitamin D, see p. 90.*

• Obtaining enough nutrients, through diet and supplements, is important to maintaining strong bones. Foods high in calcium include **sesame seeds, spirulina, almonds, and parsley.**

• **Calcium** at 2,000 mg a day, **magnesium** at 1,000 mg per day, along with plant-derived **colloidal miner-**

als are needed. Those under the age of 50 need at least 1,000 mg of calcium daily; those over 50 need a minimum of 1,500 mg per day.

• *Calcium supplements:* The calcium molecule combines with another substance, such as carbonate, citrate, gluconate, lactate, or phosphate before being absorbed into the body. Here are the absorption rates of the five basic types of calcium supplements: (1) **Calcium carbonate** (41% calcium) is very poorly absorbed (5%). (2) **Calcium citrate** (21% calcium is better absorbed (40%). (3) **Calcium gluconate** (9% calcium) contains little calcium and may cause diarrhea or nausea. (4) **Calcium lactate** (13% calcium) is easily absorbed by some people. (5) **Calcium phosphate** should be avoided! Do not use it! The phosphate blocks absorption of the calcium. *Therefore, the two best are calcium citrate and calcium lactate.* The powdered form is best, not the tablets.

• *How to test your calcium supplement:* Put a tablet in a cup of vinegar, stir every few minutes. If it is not completely dissolved in 30 minutes, it will not dissolve in your stomach!

• Lack of **hydrochloric acid** (HCl) can be a cause of poor calcium (and other mineral) absorption. Adequate HCl is needed in the stomach in order for the body to absorb minerals.

• It is important that there be sufficient **acid in the stomach** in order to absorb the calcium and other minerals from the food. An increasing lack of this acid, with age, is part of the reason why older people do not absorb minerals as well and have poor bone structure. If necessary, take supplemental hydrochloric acid (betaine HCl) or lemon juice before each meal.

• **Digestive aids** may be needed to help absorb this and other minerals. Especially important is sufficient acid in the stomach. Either **betaine HCl** (hydrochloric acid supplement) or **lemon juice** can be taken. Or take 1-3 10-grain capsules (tablets may be too hard to digest) of **betaine hydrochloride** with the first few bites of every meal. (Only do this if you have low stomach acid. If you experience heartburn or stomach ulcers, do not take HCl in any form.)

• An **excess of calcium** supplementation, during bone healing (when in bed or confined to a chair while recovering from a fracture, etc.), can induce kidney stone formation during the immobile period while the cast is on. The problem is that the person is not active enough at that time.

• **Potassium** is needed for cell formation; and **vitamin C** is necessary for the maintenance and development of bones. Vitamin C is called "cell cement"; it not only fights infection, but also holds your body together!

• **Manganese** helps prevent osteoporosis (loss of bone mass). Rats on a low manganese diet developed porous bones.

• Trace amounts of **fluorides** are also needed for bone development; but get it out of food—not from additives, fluoridated water, toothpaste, etc. But beware of fluordated drinking water. More on that below.

• A summary of minerals which are needed includes **silicon, boron, zinc, manganese, and copper**, along with **calcium**. (The body also needs phosphorus and **magnesium**; but beware of taking too much of either one. Too much of either one inhibits the body from absorbing calcium. These minerals tend to compete with calcium for absorption in the blood and bone marrow. In the case of magnesium, though, normal supplementation should not be a problem.)

VITAMINS

• **Vitamin D** is necessary (400-1,000 IU daily) for calcium absorption and repair. You need a basic 400 IU daily. Sunlight will help you get part of what you need. It is estimated that, on the average, only 10% of our daily requirement comes from sunlight; so other sources are also needed. People over 65 may need 800 units daily. But excess doses of vitamin D, taken repeatedly, caused bone deterioration.

• In one study, the more **sunlight** that was obtained by the test group, the less likelihood of osteoporosis developing.

• **Vitamin A** helps increase the rate of bone growth. It is needed for proper digestion and assimilation of nutrients.

• **Vitamin B** complex helps bone mass formation. B_6 increases connective tissue strength in bones.

• **Vitamin K** (found in **alfalfa, greens, and other chlorophyll foods**) is needed to help the body synthesize *osteocalcin*, a special protein matrix which attracts calcium to the bones.

• **Folic acid** works to prevent the formation of toxic *homocysteine* from the essential amino acid, methionine. The presence of *homocysteine* is involved in producing osteoporosis. (**Alcohol, tobacco, and oral contraceptives** increase folic acid deficiency.)

• The **acidophilus bacillus** in the large bowel is needed for the digestion of food. The bacilli make **vitamins B_6, B_{12}, and folic acid**, all of which are needed by the body for bone mass. **Lactic acid foods** (including acidophilus products, or plain yogurt) are very helpful; for they make the colon more acid and feed the helpful acid-loving acidophilus (lactic acid is a type of sugar) and reduce the amount of harmful bacteria (which dislikes an acid colon).

HERBS

• Horsetail extract is a good source of **silica**, a vital mineral in the formation of bones. **Horsetail**, along with **oat straw**, is consistently recommended as the best supplemental sources for absorbable silica. **Boron** and silica, both needed for good bone formation, are found in horsetail and oat straw. When your friends come over to visit, invite them to have some savory oat straw tea with you!

• **Alfalfa, comfrey, and slippery elm** also help build strong bones.

• Supplementing your diet with two herbs, **suma and dong quai**, will help regulate hormonal imbalances. Suma contains *sitosterol*. This increases natural estrogen production without stimulating an oversupply.

FOODS TO AVOID

• The following substances remove calcium and other minerals from the food before it is digested or leach it from the bones: **white-sugar products, chocolate, caffeine products, and alcohol**. Each of these are harmful to the bones.

• **Vinegar** and **meat acids** also diminish bone mass. This is because most other dietetic acids are later changed to alkaline forms after they leave the stomach, but not vinegar or meat acid (purines, uric acid, etc.).

• It is well-known among medical professionals that **sugar, coffee, caffeine, a high-meat diet, and smoking** produce osteoporosis and similar bone problems. One study of middle-aged men and women with symptomatic osteoporosis were almost exclusively heavy smokers.

• Do not eat **meat** if you want strong, healthy joints. A diet high in animal protein tends to cause the body to excrete increased amounts of protein. Beef, for example, contains 25 times as much phosphorus as calcium! A high-meat diet will invariably lead to calcium deficiencies. A study, conducted by *The Journal of Clinical Nutrition*, reported that vegetarian women have significantly less bone loss than women who eat meat.

• The amount of protein a man eats may influence the level of calcium in his body. Tests at Wisconsin University, confirmed by other studies, revealed that a **high-protein diet** causes calcium loss. Eskimos, on their high-protein diets, had lower bone mineral levels than Americans. In the 60-90 age bracket, bone loss in meat eaters was 35%; in vegetarians it was 18%.

• Excessive **fat intake** reduces bone mass. On test animals, the daily loss of calcium on the high-fat diet was more than four times as much as on the low-fat diet.

• The **harder the fat** was, prior to being eaten, the more calcium loss it caused.

• Avoid **large meals** and **overeating**.

• A **high-sugar diet** causes calcium to be excreted in the urine. Excess **sodium** does this also.

• **White-flour products** contain chlorine, which is harmful to the bones. Try to avoid drinking **cholorinated water**.

• Women who drink **coffee and soft drinks** are more likely to have osteoporosis.

• **High phosphorous foods** tend to compete with calcium and also combine with it, locking it out. Such foods include **soft drinks, high-protein animal foods, and yeast products**. Do not use foods with **preservatives**, because of their phosphorous content.

• **Cola drinks** are especially harmful in this respect. Cola drinks, frankly, are a terrible concoction: (1) They contain an acid which is more acid than vinegar! (2) The acidity is masked by an excessive amount of sugar which also leaches calcium from bones. (3) Cola drinks are basically phosphoric acid, or a strong acid in a phosphorous medium. Phosphorus locks directly onto calcium, and carries it out of the system, making it unavailable to the body. A tooth placed in a glass of cola drink will entirely melt away within a few hours.

• A dietary **calcium / phosphorus ratio of 2:1** is ideal; yet it can only be attained by taking calcium supplements. Here are some samples of this ratio of calcium to phosphorus in several foods: grain - 1:8; red meat - 1:12; organ meat (liver, kidney) - 1:44; fish - 1:12; carbonated drinks - 1:8. Those who eat meat and/or drink various colas and sodas obtain an immense amount of phosphorus.

• Certain foods contain **oxalic acid** in moderate amounts (the cabbage family, which includes kale, collards, and asparagus). Some contain it in still larger amounts (chard and, especially, spinach), and some in extremely large amounts (rhubarb, poke). Avoid **chard, spinach, rhubarb, and poke** if you want strong bones in your old age.

• **Chocolate** contains oxalic acid and prevents the absorption of calcium.

• Some foods contain the calcium inhibitor, *solanine*. These include **tomatoes, eggplant, bell peppers, tobacco**, and greenness (when it occurs on the outside of **white potatoes**).

• **Whole grains** contain *phytin*, a substance which tends to bind with calcium and prevent its absorption and use by the system. Some suggest that you take calcium supplements at different times than grains, to ensure its absorption. Those who desperately need additional calcium will want to take this advice. They can take calcium powder near bedtime, when it is best absorbed. Calcium also aids in sleeping; for it tends to relax the muscles.

OTHER THINGS TO AVOID

• Avoid **chilling**. Rats exposed to cold stress developed bone mass which was less dense.

• The use of **sodium fluoride**, once thought to help treat osteoporosis, is now known to do the opposite. While it does increase bone mass in the spine, the bone is inferior in quality. Woman receiving the compound were three times more likely to fracture an arm, leg, or hip than if they took a placebo. As little as 16 mg of sodium fluoride a day produces abnormal bone marrow cells. Adequate natural fluoride is easily obtained in all food and non-fluoridated water sources.

• **Drugs**, such as **diuretics**, inhibit calcium assimilation.

• Do not take **estrogen** alone because it also places the user at high risk for cancer, even though it does increase bone mass somewhat. Estrogen therapy initially increases bone formation; but it eventually leads to decreased bone mass and lack of response to the parathyroid hormone. Taking estrogen alone also increases the risk of breast cancer, stroke, and myocardial infarction (heart attack).

• If you take the **thyroid hormone** or an **anticoagulant drug**, increase the amount of calcium you take by 25%-50%.

• Older people who take **tranquilizers** have 70% more hip fractures.

EXERCISE

• **Exercise** strengthens the bones. It causes the

body to strengthen the insides of the bones, by increasing the webbing connections within them. Exercise definitely increases bone density. The body must have regular weight-bearing exercise, such as walking. When this occurs, more minerals are laid down in the bones, to strengthen them—especially where you need it the most: the bones of the legs, hips, and spine. Conversely, a lack of exercise accelerates the loss of bone mass. It is believed that **lack of activity** in old age is a factor in the increased levels of bone loss in those years.

Daily exercise outdoors provides vitamin D and stimulates osteoblastic cells. Exercise increases muscle tone, strengthens muscles, prevents disuse atrophy and further demineralization of the bones.

NASA research experts say the best activity for maintaining bone mass is **gravitational exercise**: walking or jogging. When you are not pushing against gravity very much (because you are sitting in a chair or lying in bed), you are tending to lose bony material. Try to walk outdoors at least 20 minutes a day.

• **"Strain changes"** are important in building and maintaining bone mass. How often you do it is more important than the intensity when it is done. Try to maintain the bounce of earlier years: Keep that spring in your step; put a little strain on your body and muscles every so often. Do this more moderately as you age, but keep it up.

• **Bed rest** tends to cause a negative calcium balance. Bones placed in **plaster casts** develop localized osteoporosis, regardless of the diet, hormonal balance, etc. It is called "disuse osteoporosis." Exercise is vital to healthy bones.

—See "Fracture" (504) and "Osteoporosis" (509) for additional information on factors affecting bone formation and loss. Also see Lactose Intolerance (383).

ENCOURAGEMENT—God's faithful ones are in the majority. They have all heaven on their side, in the battle to fulfill God's will for their lives and resist temptation to sin. Go to Jesus and surrender to Him. He can give you all the help you need. Psalm 4:3.

BROKEN RIB

SYMPTOMS—A sharp pain, which often starts a day or two after the blow to the rib.

CAUSES—Frequently the rib is not broken, but only has, what is known as, a green splint. This is a hairline crack. Yet it is still very painful!

If you are not able to go to a physician or emergency room, and the break is more than hairline, you may wish to use the following treatment:

NATURAL REMEDIES

• **Apply some cold water** to the bruised area, so it will not swell too much.

• When the water applications have been removed and the skin carefully dried, **place six tapes to hold the ribs in proper position**. Here is how to do it:

Cut about six pieces of 1½" or 2" adhesive tape. Each piece should be 8"-10" long. Check the ribs, making sure the ends are properly together. Center the first piece of tape over the break; stretch firmly and apply to the skin. Repeat with the second piece, but at a right angle to the first piece. Continue until you have 6 tapes radiating from the center outward in all directions from where the break occurred.

• Try to **leave this on for about a month**, so it will heal well. A skin rash may develop; but it will be far less a problem than caring for the break.

—For detailed information on rebuilding the bones, see Strengthening the Bones (505).

ENCOURAGEMENT—Come into the presence of God with praise for the blessings you have, and you will be helped all the more as you present your requests for help. Psalm 50:15.

BONE SPUR
(Heel Spur)

SYMPTOMS—Possible pain at a place where the bone seems to protrude out from the body more than it should. Heel spurs can cause severe pain with the first step in the morning and after sitting awhile.

CAUSES—A bone spur is a pointed growth on a bone. Occurring most frequently on the heel, the bone sticks out and occasionally strikes against something, causing pain. Or there may be ongoing pain at the site.

Bone spurs can cause the formation of tiny, painful tumors at the end of some of the nerves in that area.

Those with problems with the heel are generally **overweight** or **middle-aged**. But they are also common in those who have **tendonitis, neuritis, arthritis, or alkalosis**. Other causal factors may include **gout, lupus, walking, or excessive standing**.

If bone pain is felt at an unusual bumpy and protruding place, X-rays will confirm whether the problem is arthritis, fracture, bone spur, or possibly primary metastic bone cancer.

NATURAL REMEDIES

DIET

• Give **vitamin C** to bowel tolerance, along with vitamin E and magnesium.

• Correct the calcium / phosphorus ratio by taking 2,000 mg of **calcium** a day.

• Research indicates that **plant-derived colloidal minerals** tend to reverse spurs and calcium deposits, without surgery, by remodeling the bones.

• The *bromelain* in fresh **pineapple** helps reduce

pain. **Turmeric** also does. Do not use canned pineapple or its juice, because of the aluminum content.

- A 1-2 week **raw food fast** can be helpful.
- Only drink **distilled water**.
- Do not eat **meat, coffee, sugar, and alcohol**. These upset the mineral balance in the body and retard healing. Temporarily avoid **citrus fruit**.

OTHER HELPS

- For heel spurs, apply **hot and cold footbaths**. Rubbing the bottom of the feet with **ice** will help draw healing blood to the area. In the early morning, **walk barefoot outside** on the wet grass. Then come in and dry off; make sure your feet are warm afterward.
- If the shoes are not comfortable, this can make the pain feel worse. Wear **rubber heels** on your shoes, not leather. Adding **heel cushions** to your shoes may reduce pain.
- Avoid walking on **hard surfaces**.
- If you usually walk or jog for exercise, try cycling or swimming instead. Use **stretching exercises**. Deep massage around the painful area may help.
- In some cases, applying **night splints** provides a constant stretching across the sole of the foot during sleep.

ENCOURAGEMENT—Do not be enticed by seeming advantages or the advice of friends, to do wrong. Cling to God and obey His Written Word, and you will have the help that He sees is best for you.

OSTEOPOROSIS

(Brittle Bones)

SYMPTOMS—There is skeletal pain (especially in the hip and back), deformities (such as a hump in the upper back), a stooping and rounding of the shoulders, increased susceptibility to fractures, and a reduction in height. Do you find that your clothes are getting bigger? Unfortunately, symptoms are frequently not very obvious until the bones are quite weak.

There is lower back pain, loss of height (up to several inches), stooped posture, and increased risk of fractures, especially of the hip.

CAUSES—Osteoporosis is a reduction in the total mass of bone, so that the remaining bone is fragile or "brittle." This weakening continues to increase. The bones actually become thinner. This loss of bone mass occurs because bone formation is slowed; and bone reabsorption increases. "Bone reabsorption" means that the body is removing calcium and other minerals from the bones, in order to use them elsewhere.

About 25%-30% of all white females in the U.S. reveal symptoms of this condition, especially after menopause. Older men, above 50, also have it, but to a lesser degree than women. Osteoporosis is rare in black men, but somewhat more common in black women.

White women in America tend to lose 30%-40% of their bone mass between ages 55-70.

But younger women should be careful; research indicates that osteoporosis often begins early in life rather than just after menopause. (However, bone loss definitely accelerates after that time, due to a drop in estrogen levels.)

People with larger and denser bones tend to have less trouble with osteoporosis later in life. They started out with a more bony structure.

A major cause is a **lack of adequate calcium intake** over a period of years. Other causes include **inability to absorb calcium** as well, a calcium-phosphorus imbalance (**too much phosphorus** in the diet), **lack of exercise**, or **lack of certain hormones**.

Still other factors include **late puberty, early menopause** (natural or artificially induced), **chronic liver or kidney disease**, and the **long-term use of anticoagulants, corticosteroids, and antiseizure medications**. **Smoking** is an excellent way to damage your bones.

Compression fractures in the vertebrae occur as bone loss advances. This causes a loss in height and crowds the nerves, resulting in pain. Nerve damage is possible. Older women often have a hump in the upper back as a result.

Osteoporosis can also result in loose teeth which fall out, because the jawbone has weakened.

There are two types of this disease:

Osteoporosis, Type I, is thought to be caused by hormonal changes, especially a loss of estrogen.

Osteoporosis, Type II, traces its cause to dietary factors (lack of calcium, vitamin D, etc.), poor absorption and intake of foods which block absorption.

NATURAL REMEDIES

- Sleep on a **firm bed** to give support to the spine.
- **Do not lift heavy objects**. When you do lift, do it carefully and properly.
- **Avoid fatigue**.
- Look around your house and yard and **make necessary changes, so you will be less likely to fall** (placement of lights, rugs, treads on stairways, etc.).
- Take 1,000-1,500 mg of **calcium** daily.
- Eat a **diet rich in bone-forming minerals and vitamins**.
- **Percussion** builds bone mass. This is a massage technique called "tapotement," a light tapping on the body that mimics the bone-building stimulation from exercise. Bring the fingers of each hand together so there's no space between them (as if you were about to take a swimming stroke). Next, bend the palm and fingers to make a cup shape. Then, using the tips of your fingers and bottom of your palms, tap very lightly over your hips, ribs, and (with one hand at a time) your forearms. These are the three areas commonly weakened by osteoporosis.
- *See Strengthening the Bones (505) for a vast amount of information!*

Also see osteomalacia under Rickets (510), which is sometimes misdiagnosed as osteoporosis.

ENCOURAGEMENT—Do unto others as you

would have them do unto you, and you will be greatly blessed. Live like Jesus, and you will be sunshine in the lives of others. Deuteronomy 7:13.

RICKETS
(Osteomalacia in Children)

SYMPTOMS—Early symptoms include nervousness, numbness in the extremities, leg cramps, painful muscle spasms, restlessness, irritability, and profuse sweating.

Later indications include knock-knee, bowleg, narrow rib cage, protruding breastbone, or scoliosis (abnormal curvature of the spine). There may be delayed walking, tetany, bony beads along the ribs, and decaying teeth. Swelling and tenderness at the growing ends of the bones.

Left untreated, bowleg or knock-knee may develop in affected children.

In adults, in addition to the above symptoms, aching joints and generalized weakness may also occur. *See Osteomalacia, below.*

CAUSES—Rickets is caused by a deficiency of vitamin D in children. When it occurs in adults, it is called osteomalacia *(see below).*

It can result either from not obtaining enough **vitamin D** in the food or from not getting enough **sunlight**.

When sunlight strikes the skin, oils on it are irradiated, vitamin D is synthesized in the skin. Those oils are then reabsorbed into the bloodstream and carried to the liver, where it is stored and, as needed, sent throughout the body to strengthen the bones. Without this vitamin, the body cannot absorb calcium and phosphorus; and the bones cannot retain calcium. As a result, they become soft. This results in deformities when the bones are required to support weight. Yet weight gain and growth will usually be normal. But growth is sometimes retarded.

Normal **liver and kidney function** is needed for production and utilization of vitamin D in the body. Damage to either organ can cause rickets.

Oils on the skin do not make pro-vitamin D quite as well if the children have dark skin and/or lack sunlight exposure. Vegetarians must obtain adequate sunlight on the skin. Research studies found that Muslim women who are entirely covered in black cloth, when outside their homes, could obtain adequate sunlight by exposing their bare feet to the sunlight for a relatively short time each week.

A deficiency of **vitamin C** can make the bones less able to retain bone-building minerals. Rickets is worsened by inadequate **calcium** in the diet.

Certain disorders can interfere with absorption of nutrients: **asthma, bronchitis, colon problems, severe allergies, or celiac disease**. Intestinal surgery and drugs used to treat epilepsy can also interfere.

Osteomalacia is often misdiagnosed as osteoporosis *(509)*.

After treatment with proper nutrition and sunlight, most people make a full recovery; although early deformities may be permanent in children.

NATURAL REMEDIES

• Eat a diet rich in calcium. This includes green leafy vegetables, broccoli, and raw fruits, nuts, and seeds. Avoid processed, junk, or sugar foods. Do not drink soft drinks, which pull calcium out of the bones.

See Strengthening the Bones (505).

• In order to avoid rickets, the National Institutes of Health recommends the following **vitamin D supplementation**: 400 mg until 6 months of age, 600 mg for ages 6-12 months, 800 mg for 1 year through age 5, 800-1,200 mg for ages 6-10. The safe adult dose is 400 IU per day. More than 1,000 IU daily for long periods of time can lead to headaches, weight loss, kidney stones. In rare cases, there is deafness, blindness, and death.

—See Strengthening the Bones (505) for additional information on how to make the bones strong.

ENCOURAGEMENT—You can safely choose only those who love God for your close friends. But, whatever your lot in life, determine that you will do all you can to help and encourage all with whom you come in contact. Psalm 42:8.

OSTEOMALACIA
(Rickets in Adults)

SYMPTOMS—Painful, tender bones. This is most often in the ribs, hips, and bones of the legs. There is difficulty in climbing stairs, getting up from a squatting position, and bone fractures after a minor injury.

CAUSES—This is the adult form of Rickets; and all the information listed under Rickets applies to osteomalacia.

The adult form of rickets, osteomalacia, generally occurs during **pregnancy or breast-feeding**. But it may also be caused by a **kidney disease or defect, calcium deficiency, a lack of vitamin D**, or inability to utilize the vitamin D. It can also occur in those who do not obtain enough sunshine or whose bodies are so low in fat that they cannot produce the bile needed to absorb the vitamin D in the food.

In addition, certain disorders can interfere with absorption of nutrients: **asthma, bronchitis, colon problems, severe allergies, or celiac disease**. Intestinal surgery and drugs used to treat epilepsy can also interfere.

—See Rickets (above) for how to eliminate osteomalacia. Also see Strengthening the Bones (505) for additional information.

ENCOURAGEMENT—God's gift of Christ to us is a pledge of His great love for us. How thankful we can be that God loves us so!

PAGET'S DISEASE OF THE BONE

SYMPTOMS—At first, there are no symptoms other than possibly mild pain in the affected bones (generally at night or when working). There may be joint pain in nearby joints.

In one area, one or more of the bones are deformed. There is bone pain and degeneration, arthritis, obvious bony deformities, and an increased tendency to fractures. Bone deformities may include bowleg, bent spine, barrel-shaped chest, or enlarged forehead.

The bones most frequently affected are those of the spine, thighs, pelvis, skull, hips, shins, and upper arms.

Long-standing Paget's disease may also lead to numbness, tingling, or weakness in the affected area if the bone presses on adjacent nerves. It may cause ringing in the ears or hearing loss if abnormal growth of bone compresses nerves to the ear.

CAUSES—In a healthy person, bone is continually being broken down and replaced by new bone, to maintain the normal bone structure. However, Paget's Disease is an ongoing deterioration of certain parts of the skeleton. At those locations, the bone degenerates at the same time that new bone is made, which is deficient in calcium and therefore fragile. The result is larger bony areas which are deformed.

Because it produces few symptoms, the disease is often first diagnosed when a chance X-ray discovers it.

The cause is unknown; but a viral condition may be involved. Those who live in rural settings, eat wholesome diets, and have outdoor activities are less likely to contract this disease.

NATURAL REMEDIES

• Eat a **nutritious diet**! This is extremely important. The likelihood is that toxic substances in the food or environment, along with an impoverished diet of junk food, are causative factors.

• **Garlic, echinacea, goldenseal, and other antibiotic herbs** are helpful. *See Antibiotic Herbs (228) and cautions concerning them in the chapter on herbs (107-152).*

• *Read the sections on Strengthening the Bones (505), Rickets (510), and Fractures (504).*

• **Heat therapy**, such as hot compresses, heat lamps, etc., can alleviate pain. See the chapter on *Hydrotherapy (153-211).*

ENCOURAGEMENT—Darkness and discouragement will sometimes come upon the soul and threaten to overwhelm us, but we should not cast away our confidence. We must keep the eye fixed on Jesus, feeling or no feeling. We should seek to faithfully perform every known duty, and then calmly rest in the promises of God. Trusting in Christ, we can move steadily forward, obeying God's holy book, the Bible.

SKELETAL-MUSCULAR - 2 - JOINTS

Also: Sciatica (465, 537), Neuritis (467), Neuralgia (462), Lumbago (540)

KNEE PAIN

SYMPTOMS—Pain in, or close to, the knee. In severe cases, it may be difficult to bend the knee.

CAUSES—The problem is generally inflammation of the bursa in front of the kneecap. The tendons of the knees may also be injured. Obvious causes include **running, jumping, climbing stairs, scrubbing floors, sports, bumping against a hard object, poor posture, leaning against a ladder.**

NATURAL REMEDIES

• Putting **ice on the knee** is a soothing natural remedy. Keep ice in the freezer and fill an ice bag (ice cap). Fill some paper cups with water and freeze them. Keep water-soaked Ace bandages in the freezer. Rub ice on the knee until it is numb. Put cold packs on the knee.

• After applying the ice, **stretch the stiff or sore muscle** to restore the range of motion. The stretching should be gradual and not jerky. Gently stretch them.

• Put **ice on an inflamed knee** for 20 minutes at a time, 3-4 times a day, for the first 48 hours. Thereafter, **apply heat** (moist heat is best, or even a hot shower) for 15 minute intervals 3 times a day.

• **Lose extra weight**. It will take a lot of pressure off your knees.

• *If you have to kneel,* wear protective **knee pads**.

• *If you have to work below your waist,* **sit** on a stool or on the floor.

• *When kneeling* (as in gardening), put a **foam cushion under your knees**. Keep shifting your weight and changing leg positions.

• *When sitting for a long time,* keep shifting your position. **Get up and walk around** every 35-40 minutes.

• *If you do fast walking,* do not over-extend the knees, or a pain will develop in the tendons in back.

• *For normal walking or running,* keep the knees slightly bent.

• Do not wear thin-soled or high-heeled shoes. **Walking shoes** should be well-cushioned, especially at the heels.

• *If pain starts,* stop what you are doing. RICE: **Rest** the knee by sitting or laying down. Put **ice** on the knee. **Compress** or wrap the knee gently. **Elevate** the leg. But a very effective alternative is alternate hot and cold to the area.

• Minimize squatting or excessive stair climbing. The stress between kneecap and thigh can be more than 2,000 pounds when you stand up.

• Begin **massage** of the area 24 hours after the in-

jury. Put oil on the top, sides, and back of your knee, so your hand will easily slide over the skin. *If there is swelling,* then stroke all around it, always gliding in the direction of the heart. Use light to moderate pressure.

If there is little or no swelling, stroke with deep circular friction. Press on the skin and move it in circles; then move to a nearby area and begin again. Use firm, not painful pressure. Never apply pressure behind the knee between the two cord-like tendons (because large nerves are there). Repeat the circular friction all over. Do this once a day.

• *Danger signs:* If you feel numbness or tingling in your feet or toes, when your knee is swollen, and especially if you feel something moving inside your knee. If you heard a "pop" in your knee when the injury occurred.

ENCOURAGEMENT—Make your requests known to your Maker. Never is one repulsed who comes to Him with a contrite heart.

OSGOOD-SCHLATTER'S SYNDROME

SYMPTOMS—Knee pain and stiffness. There may be swelling about the knee and tenderness, when it is touched. Pain is often worse when jumping, running, or climbing stairs. The knee is usually sore to pressure at the point where the large tendon from the kneecap attaches to the prominence below.

CAUSES—The patellar tendon, which normally attaches to the tibial tuberosity, has been strained by the powerful quadriceps muscles. This tearing (avulsion) can be extremely painful and is sometimes disabling. Teenagers (especially boys) experience this problem more frequently than others; and it often occurs during or shortly after a growth spurt. It is common in those engaged in sports. Osgood-Schlatter's Syndrome can may occur in both knees at the same time.

The problem tends to occur during the ages of 10 to 15, in boys, and 8 to 13 in girls. It generally lessens over a two-year period as the youth grows. The bone overgrowth may cause a protuberance.

Children with Osgood-Schlatter's Syndrome were formerly restricted from physical activity. Now most orthopedic physicians let the child decide his own level of activity.

NATURAL REMEDIES

• It has been found that **vitamin E** (400 U daily) and **selenium** (50 mcg, 3 times daily) has been very helpful in improving the situation in 2-6 weeks.

• If you experience pain, try to **avoid or restrict the activity** causing it. But you need **exercise**; for it is part of the healing process. Activities, such as running and climbing, may need to be reduced or stopped for a time. Do quadriceps **stretching exercises** during a warm-up period prior to active exercise.

• Daily **gentle massage** improves blood flow in the knee area. An **ice pack** over the knee may reduce pain.

• **Exercises** which strengthen the quadriceps are helpful after the pain subsides; for they improve muscle strength.

Pain medications are sometimes prescribed; although they eliminate pain, the youth may overdo and injure the knee even more, resulting in permanent injury.

Treat the knee right, and the problem tends to eventually subside and disappear.

ENCOURAGEMENT—When in discouragement, let the eye of faith see Jesus in heaven. He is preparing a home for His faithful children.

CHONDROMALACIA
(Patellofemoral Pain Syndrome)

SYMPTOMS—Symptoms vary in severity in different persons; but they may include pain in the knee when the leg is bent and straightened (as in going up and down stairs), stiffness after prolonged sitting, and crepitus (a crackling noise) during knee movement. The problem usually, but not always, occurs in only one knee.

CAUSES—The cartilage surface of the back of the patella (kneecap) has been damaged. This can be caused by **strenuous exercise** or **repeated knee injuries**. In teenagers, it can be caused by **increased weight bearing** on the knee joint during growth spurts. But a **misaligned or recurrently dislocated patella**, or **muscle weakness in the upper leg**, may be part or all of the cause.

To identify whether pain in your knee is caused by chondromalacia, press down on the knee cap and see if the symptoms worsen.

NATURAL REMEDIES

• Recovery can usually occur within several months **if strenuous exercise is not resumed** prematurely. Eat a **nourishing diet**. If you are not careful, there is increased risk that in later life you may develop osteoarthritis *(517)*.

—*Also see Strengthening the Bones (505).*

ENCOURAGEMENT—By faith grasp the hand of Christ, and trust Him as fully in the darkness as in the light.

TYPES OF ARTHRITIS

There are several types of arthritis. Here are several distinguishing symptoms of the four leading kinds:

The largest number of Americans (over 15 million) have ***osteoarthritis*** *(517)*. This begins after 40; and there is pain and stiffness when a joint is moved. It usually begins gradually over many years. Inflammation does not develop until later.

Rheumatoid arthritis *(517)* affects 3 million; it begins between 25 and 50. Joint stiffness occurs for the first hour or so upon awakening. There will be swelling in and around a certain finger or wrist joints. There may, or may not, be pain. The condition may worsen or remain the same.

Gout *(520)* affects 1.5 million (mostly men), and is a rapid onset of extreme pain and swelling of one or more joints, usually the big toe.

Ankylosing spondylitis *(523)*, along with several related disorders, affects 2.5 million; it usually begins between 20 and 40. There is pain, stiffness, inflammation in the spine, along with postural changes.

ENCOURAGEMENT—If we would permit our minds to dwell more upon Christ and the heavenly world, we should find a powerful stimulus and support in fighting the battles of the Lord. Beside the loveliness of Christ, all earthly attractions will seem of little worth. Philippians 4:8.

ARTHRITIS

SYMPTOMS—Swelling in one or more joints. Body stiffness and pain in joints, especially during damp weather, in the morning, or after strenuous activity. There may be a sharp burning or grinding pain or it may feel like a toothache. There may be stiffness and/or pain when moving a joint. Recurring pain or tenderness in any joint. Inability to move a joint normally. Obvious redness and warmth in a joint. Unexplained weight loss, fever, or weakness combined with joint pain. Symptoms such as these that last for more than two weeks.

CAUSES—Arthritis is the inflammation of one or more joints. The word, "arthritis," covers a number of disorders, some of which are covered in this present article—which deals the most completely with the problem.

The most common forms are Osteoarthritis *(517)*, Rheumatoid Arthritis *(517)*, Gout *(520)*, and Ankylosing Spondylitis *(523)*. Other diseases which also infect the joints include Lupus *(240)*, Lyme Disease *(568, 744)*, Psoriatic Arthritis, Sjögren's Syndrome *(241)*, and Reiter's Syndrome. Untreated Lyme disease can lead to chronic arthritis.

The various types of arthritis affect the synovial (movable) joints. These are the fingers, toes, wrists, elbows, hips, and knees. There are also joints between the bones of the spine. Each joint has cartilage covering over the end of the bone; it is continually bathed in synovial fluid in a capsule.

Osteoarthritis: Cartilage is a smooth, soft, pearly tissue. Among other places, it is found on the ends of the long bones; it provides a smooth surface for the bones in the joints to slide against.

As a result of years of wear and improper diet, this cartilage becomes pitted, thin, and may even disappear. There is pain and stiffness. Older people experience this most often; and it generally occurs in the weight-bearing joints (hips and knees).

The connecting ligaments and muscles, which hold the joint together, become weaker. The joint may become deformed. There may be pain, but usually no swelling. Bony outgrowths may later develop.

Osteoarthritis rarely occurs before 40; but it affects most people after 60. Sometimes it is so mild as to be unnoticed. Women have it three times as often as men.

For information on rheumatoid arthritis (517), bursitis (522), and gout (520), turn to their respective articles.

Here is a brief comparative overview:

In *osteoarthritis (517)*, the cartilage at the end of bones wears down and produces rough, hard edges of bone which causes trouble. This generally begins after 40; 16 million persons in the U.S. have it.

In *rheumatoid arthritis (517)*, the cartilage at the end of bones is destroyed; and it is replaced with scar tissue. Then swelling occurs; and the joints may eventually fuse together. While osteoarthritis only affects individual joints, rheumatoid arthritis ultimately affects all synovial joints in a person's body. This problem usually begins between 25 and 50; 3 million in the U.S. are afflicted with it.

Gout (520) produces extreme pain, usually starting in a big toe (or other smaller toe or finger joint). This generally does not begin until 40 or after; 1.5 million experience it. Over 90% are men.

The *spondyloarthropathies* affect the spine, causing pain, stiffness, joint fusion, and changes in posture. The most common is ankylosing spondylitis *(523)*. These difficulties generally start between 20 and 40, afflicting a total of 2.5 million. Men have it over twice as often.

Infectious arthritis is the result of viral, bacterial, or fungal infection within a joint; it is most frequently bacteria or fungi, especially from candida *(215)*. The infection can come from injury, surgery, or disease. There are body aches, chills, and fever, along with throbbing pain in the affected joint. The pain and infection may spread to other joints. It may strike at any age; 100,000 in the U.S. have it.

The following suggestions will help one deal with a variety of arthritic conditions:

NATURAL REMEDIES

DIET

Arthritis is the result of a complex of nutritional deficiencies.

• European clinics have treated arthritis with a diet of **raw food and fresh juices** for over 75 years. Drink 1-2 glasses daily of any combination of **raw juices of beets, carrots, celery, parsley, or alfalfa.**

• A dietary **calcium / phosphorus ratio of 2:1** is

ideal; yet it can only be attained by taking calcium supplements *(see Strengthening the Bones, 505)*. **Meat** is especially bad; it has a ratio of 1:12. Organ meats, such as liver and kidney, are even worse: 1:44. So the more meat you eat, the more calcium you need. It is as simple as that. To really help solve the problem, stop eating all types of meat!

• In addition to the calcium problem, meat is also heavy in purines and uric acid, both of which are extremely acid. Eventually this hodgepodge of acids collects in the joints to such a degree that the bone is eaten away, the bursa becomes inflamed, etc.

• The sulfur-containing foods (**asparagus, garlic, and onions**) help repair bone, cartilage, and connective tissue. They also aid in the absorption of calcium.

• Eat **green leafy vegetables, whole grains, oatmeal, and brown rice**. These supply vitamin K.

• Eat **fresh pineapple** frequently. The *bromelain* in it is good for reducing inflammation. It must be fresh, since freezing or canning destroys the enzyme. Canned pineapple contains aluminum, which can lead to Alzheimer's. An alternative is to take 6-8 **bromelain tablets**. Research studies found that bromelain reduced or eliminated swelling and inflammation in the soft tissues and the joints affected by rheumatoid arthritis.

• The most beneficial vegetables include **celery, parsley, alfalfa, wheat grass, garlic, comfrey, and endive**.

• The most beneficial fruits include **bananas, pineapples, sour apples, and sour cherries**.

• Foods containing the amino acid, *histidine*, include **wheat, rye, and rice**. Histidine helps remove metals; and many arthritics have high levels of copper and iron in their bodies.

• Eat some form of fiber (such as **oat bran, rice bran, flaxseed**, etc.) Take 1 Tbsp. **flaxseed oil** daily. It is a good source of omega-3 fatty acid, which helps alleviate arthritic problems.

• **Vegetable juice therapy** is especially helpful for arthritics, especially those with rheumatoid arthritis.

• **Repeated juice fasts** of 4-6 weeks are recommended, along with about 2 months of an extremely nourishing diet. The alkaline action of raw juices and vegetable broth dissolves the accumulation of deposits around the joints and in other tissues. Underweight people should not fast as long.

• Daily **green juice, mixed with carrot, celery, red beet juice, and vegetable broths** are specifics for arthritis and other rheumatic diseases.

• Drink **raw potato juice**. Slice a potato with the skin on, cut it into thin slices, and place in a large glass. Fill the glass with cold water and let it stand overnight. Drink the water the next morning on an empty stomach.

• **Potato juice** can also be made in an electric juicer. Make it fresh, dilute it 50-50 with water, and drink first thing in the morning.

• People who are low in the antioxidant compound, *glutathione*, are more likely to have arthritis. Vegetables rich in glutathione include **asparagus, cabbage, cauliflower, potatoes, and purslane**.

• Once a day, drink 1 Tbsp. **blackstrap molasses** in ½ cup **apple juice** or **grape juice**.

• **Milk, wheat, eggs, corn, pork and soda drinks** have been shown to produce arthritic symptoms.

• **Vitamin C** is necessary, to prevent the capillary walls in the joints from breaking down and causing bleeding, swelling, and pain. Vitamin C is vital to joint health.

• **Folic acid, vitamin B_{12}, and iron** in food help treat the anemia which frequently accompanies arthritis.

• A British research study revealed that arthritic patients had a low **pantothenic acid** level in their blood. This important B vitamin should be included in the diet.

• Treatment of arthritis should include **calcium** (2,000 mg per day, assuming no meat is eaten), **vitamin C** (to bowel tolerance), **B_6** (100 mg, twice a day), **B_3** (450 mg, twice a day), **vitamin E** (1,000 IU daily), **copper** (2 mg per day), **selenium** (300 mcg per day), and **zinc** (30 mg, three times a day).

• **DMSO** (dimethyl sulfoxide) is a by-product of the wood industry. It can be applied to the skin above the affected area—to relieve pain, reduce swelling, and promote healing. Obtain it from a health-food store.

• Take a **free-form amino acid complex** regularly, to help repair tissue damage.

• Arthritic patients frequently have liver disorders. This can deter the conversion of carotene into vitamin A. Therefore additional **carotene-rich foods** should be eaten.

• The Rheumatoid Disease Foundation suggests taking 3 mg **of boron** (a trace mineral) daily, to treat osteoarthritis and rheumatoid arthritis.

• **Histidine** (an amino acid) is useful for its anti-inflammatory effect in rheumatoid arthritis. **Proline** is an amino acid used in treating arthritis.

AVOID

• Reduce the amount of **fat** in your diet. Avoid dairy products and fatty foods. You must also avoid **hydrogenated oils**.

• **Do not eat meat**. The purines and uric acid in it inflame arthritic conditions. If the blood is too acidic, the cartilage in the joints can dissolve. Stop the meat diet!

• Avoid **salt, caffeine, tobacco, paprika, and citrus fruits**.

• Do not eat anything with **added sugar**.

• A **high-protein diet** induced arthritis in research on pigs. The first symptoms occurred within a week.

• Some arthritics are sensitive to foods in the nightshade *(solanaceous)* family. This includes **eggplant, white potato** (only when it has green on the skin), **bell pepper, tomato, and tobacco**. These foods contain *solanine*, which interferes with muscle activity. In one research study, 85% of arthritics were benefited when they stopped using those foods. Unfortunately, such items are sometimes included in other foods as "natural ingredients." One research study found that 28% of those avoiding nightshade plants, but were unknowingly eating foods that had these ingredients (labeled as "natural ingredients"), had a "marked positive response" and

another 44% had a "positive response." So not eating those foods helped 68% of those who did it.

• **Chocolate, tea, coffee**, and **cortisone injections** may also cause problems.

• Do not use **iron supplements** or vitamin / mineral supplements that contain iron. Get your iron from food (blackstrap molasses, broccoli, etc.).

• Reduce your **body weight**, and you will reduce the amount of pain in your spine, knees, hips, ankles, and feet.

HERBS

• Helpful herbs include **black cohosh, parsley, slippery elm, alfalfa, peppermint, buckthorn bark, ragwort, burdock root, and chaparral**.

• Researchers in India gave 1½-3½ tsp. **ginger** to patients with osteoarthritis and rheumatoid arthritis. More than 75% experienced some—or a lot—of relief from pain and swelling. None showed any ill effects after taking these high doses for 2 years.

• **Cayenne** interferes with pain perception, when placed on the extremities or trunk. It triggers the body to release *endorphins*, which reduce the pain. But do not get it in your eyes. Some people are too sensitive to cayenne to put it on their skin.

• **Turmeric** is a yellow spice from India. It works as well as a pain medication, to reduce arthritic pain and inflammation; and it does not have side effects.

• **Kombucha tea** has nutrients needed to strengthen connective tissue; so it tends to relieve pain, increase energy, and improve mobility in arthritics.

• **Chaparral**, according to Indian folklore, it has anti-rheumatoid properties. They used it extensively. The primary constituent, NDGA *(nordihydroquaiaretic acid)*, possesses analgesic (pain relieving) properties.

• **Sarsaparilla** has been found to be an effective treatment for rheumatism. This is due to the *saponins* in it.

• In 1958, British researchers discovered that **licorice root** has anti-inflammatory properties useful in treating arthritis. It is the *glycyrrhizin* in it that does this.

• Here is an a good **tea for arthritis**: Mix equal parts black cohosh, chamomile, bearberry leaves, cascara sagrada, pokeweed root, and sassafras. Steep 1½ tsp. mixture in 1 cup boiling-hot water for 10 minutes. Take 1 cup in the morning and evening. Sweeten with honey, if desired.

• Here is an alternate **tea for arthritis**: Substitute parsley, yerba buena, and yerba santa for the above herbs, and prepare in the same way. Drink 2 cups a day in mouthful doses.

• The following **poultice** has been used with good results on swollen joints: Take 3 Tbsp. of granulated slippery elm bark, 1 Tbsp. of lobelia, 2 Tbsp. of mullein, 1 tsp. of cayenne, and mix it all in a bowl. Add hot water to make a paste. Spread it on a cloth and cover the swollen joints. Over it, wrap a plastic sheet and then a dry towel. Leave it on for ½ to 1 hour or less, if burning sensation becomes unbearable.

• A second **poultice** for swollen joints: Mix 9 parts slippery elm bark, 6 parts mullein leaves, 3 parts lobelia, and 1 part cayenne. Add 3 oz. of the mixture to boiling-hot water, to make a paste. Spread it on a cloth and apply to the affected area.

• **To promote circulation**: Mix 2 parts ginger root, 1 part cayenne, and ½ part lobelia. Make a paste (as described above). Apply either as a poultice, Fomentation, or liniment. Also use this for rheumatism.

• Mix **eucalyptus oil** with water and rub on the affected area. Wrap the joint in plastic wrap, and apply moist heat with hot towels.

• Apply packs of warmed **castor oil, moistened comfrey tea leaves, or grated raw potato** to the affected area.

• Here is an odd treatment which has been used with partial success for thousands of years: Go find some stinging **nettle plant** *(urticadioica)* or grow it in your backyard. Whenever your arthritis gives you too much trouble, pick some stinging nettle with a gloved hand, and then hit it against the arthritic hand, etc. This is called "urtication," and will greatly improve the situation. It can bring considerable relief and sometimes reduce the swelling within minutes. What happens: The stings bring blood to the area, which provides temporary healing. An application of **cayenne pepper**, mixed with some water in a paste, would have much the same effect. However, the experts say that the tiny stingers of the plant inject several chemicals that produce an anti-inflammatory action. Stinging nettle is a common weed on most continents.

• Take 3 **yucca** tablets with each meal or 2 **primrose oil** capsules twice daily.

• Here are other herbal remedies to reduce inflammation and pain, and stimulate circulation. Try any of them: **white willow bark** or **meadowsweet** (2 capsules or 1 cup of tea, as needed to reduce pain). **Hawthorn** (2 capsules or 1 cup of tea). **Devil's claw** or **wild yam** (3 capsules, 3 times daily).

• **Feverfew** (2 capsules of freeze-dried herb, 3 times daily) has a long history of usage as an anti-arthritic herb.

• **Boswellia serrata** is a large branching tree native to India. It produces an exudative gum resin, known as *salai guggul*, and has been used for centuries to treat arthritic problems. Take the 150 mg capsules or apply it, in cream form, to the area.

• The Polynesians, in the South Pacific Islands, have used **noni** to treat arthritis for hundreds of years.

• Those living in the Mediterranean have used **olive leaf** extract for centuries for the same purpose. It contains *oleuropein*, which is so helpful.

• **Burdock root** has been used for years, both internally and externally, to treat painful joints.

HYDROTHERAPY

• If you are unable to exercise your joints because the pain is too great, do the **exercise program in a tub of warm water** (93°-98° F.).

• Place **cold gel packs** on inflamed joints, to relieve pain. Alternate with applications of heat.

• **Charcoal poultices** may be applied to affected joints.

• **Hot packs** applied to stiff joints tend to decrease

morning stiffness.

• **Hot tub baths** also provide relief.

• In the morning, take a **hot shower**, to help relieve morning stiffness.

OTHER HELPS

• **Exercise** is very important in both preventing and treating arthritis. Joints which are not used tend to stiffen. Practice bending all your joints (not merely the affected ones) in different positions, 5-10 times, twice a day.

• **Swimming** is an ideal exercise for maintaining joint flexibility and stamina. Since the water supports your body, muscles can be exercised without straining your joints.

• Good **posture** is also important. Poor posture does not distribute weight evenly and can intensify the problem.

• Sleeping in a sleeping bag often reduces stiffness and pain in the morning. An electric blanket may also help. **Keeping the body evenly warm at night** is important.

• **Hot castor oil packs** are very useful. Heat castor oil in a pan, but do not boil it. Dip white cotton cloth into it until saturated. Apply to the affected area and cover with a piece of plastic which is larger than the cloth. Place a **heating pad** over the area and keep it warm for 1½ to 2 hours.

• An **arthritis liniment** may be made in this way: Mix 1 pint alcohol, 1/4 ounce menthol, and ½ ounce camphor. Rub it on the affected joints, twice a day.

• A 50-50 mix of **mineral oil and alcohol** is another formula. You can add 1 Tbsp. of wintergreen oil to the mixture, if you wish.

• **Chelation therapy** *(596)* can decidedly help alleviate certain arthritic conditions.

OTHER FACTORS

• **Reduce stress** in your life. Worry, anger, and similar emotions weaken your body and help induce arthritic problems.

• **Chlamydia** *(630)* has been linked to a form of arthritis that affects young women. In one study, half the women with unexplained arthritis were found to have chlamydia.

• **Overweight** *(388)* increases strain on the joints. Arthritics should try to keep their weight slightly below average.

• Avoid **immunizations**. Various immunizations have brought on arthritis.

• **Food allergies** can cause neck and shoulder pain, imitative of arthritis.

• Silicone gel **breast implants** can cause arthritic-like symptoms; it also induces lupus and scleroderma. Antibodies develop which attack collagen.

• In its early stages, **ulcerative colitis** *(373, 374)* can produce arthritic-like symptoms.

• **Lyme disease** *(744)* can appear to be arthritis.

• **Lupus** *(240)*, an autoimmune disease, can produce arthritic-like symptoms.

—See Rheumatoid Arthritis (517), Acute Articular Rheumatism (518), Acute Muscular Rheumatism (519), and Chronic Rheumatism (519).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ARTHRITIS AND RHEUMATOID GOUT AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154/ Hydrotherapy Disease Index: pp. 209-211)*

DIET AND LIFESTYLE—The diet must be especially nourishing and digestible. A warm, rather dry, and uniform climate is most desirable.

GENERAL MEASURES—Carefully **graduated cold applications**, preceded by very **short hot applications**. **Fomentation** to spine or the Radiant Heat Bath for 3-5 minutes. Also the **sunbath**, followed by **Cold Mitten Friction** are especially suitable. Massage. **Hot Abdominal Pack**.

FEVER—Prolonged Neutral Bath at 92° F., **Fomentation** to spine followed by Cold Mitten Friction or **Wet Towel Rub**.

FREQUENT PULSE—Cold Compress or Ice Bag over heart for 15-20 minutes, 3 times a day.

PAIN IN JOINTS—Revulsive Compresses followed by **cotton poultice** and **vapor bath** to the area.

NEURALGIA OF HANDS—Hot Hand Bath followed by **cotton poultice** (to keep it warm).

RADIATING PAINS—Fomentation to spine, 3 times a day, with well-protected (plastic covered) **Heating Compress** during the interval between; **Revulsive Compress** to spine.

NUMBNESS AND TINGLING OF HANDS AND FEET—Fomentation to spine and **Hot or Alternate Sponging** of limbs, repeated 3 times a day.

MUSCULAR CRAMPS—Fomentation or hot immersion of affected parts, two or more times daily; during interval between, **Hot Sponging** and **firm bandaging**. Protect him from chills.

JOINT DEFORMITIES—For thickening of synovial membranes, or accumulation of fluid in joints or bursa, apply Alternate Douche and **Alternate Compress**. Apply, to joint, a dry flannel bandage or **cotton poultice**.

CAUTIONS—To painful joints, avoid cold douches, long sweating processes, and prolonged general applications.

METHOD—Improve the general health by using general tonic measures, especially using carefully Graduated Cold Baths and massage.

ENCOURAGEMENT—Think back over the past and recall to mind all the ways God has helped you through the years. Praise Him for what He has done and continues to do for you. Stay close to Him and trust the future to Him. He will not fail you, even though you may not understand all the workings of providence. He will guide and help you, as you trust in Him. Isaiah 61:1-3.

OSTEOARTHRITIS

SYMPTOMS—Morning joint stiffness is often the first symptom. Later, there is pain on motion of that joint, that is made worse by prolonged activity and relieved by rest. Inflammation is generally not present.

Pain and tenderness that worsen with activity and are relieved by rest. Swelling around the joint. Stiffness lasting a short time after a period of inactivity. Restricted joint movement. Enlarged, distorted finger joints, if the hands are affected. Crackling noise (called crepitus) on moving the affected joint.

CAUSES—Osteoarthritis is a degenerative joint disease; it is the most common form of arthritis—especially in the elderly (80% of those over 50 have it). Under 45, it is more common in men; over 45, it is 10 times more common in women than men.

There is gradual degeneration of the cartilage covering the bone ends within joints. It most often affects the hands and the weight-bearing joints (such as the knees and hips). Wear occurs most often in joints that have been damaged by repeated strenuous activity or by repeated minor injuries.

NATURAL REMEDIES

• *See Arthritis (513) for a rather complete list of natural remedies.*

ENCOURAGEMENT—Through Christ we may present our petitions at the throne of grace. Through Him, unworthy as we are, we may obtain all spiritual blessings. Hebrews 4:16.

RHEUMATISM

SYMPTOMS—Pain, muscle stiffness, and tenderness in soft-tissue structures.

CAUSES—Excess acid settles in the joints, causing pain and inflammation. *See Rheumatoid Arthritis (below) for much more information.*

NATURAL REMEDIES

• Drink parsley and/or juniper berry tea, along with lots of organic cranberry juice, to eliminate uric acid crystals in the joints.

— See Rheumatoid Arthritis for much more information (below). Also see Arthritis (513) for even more.

ENCOURAGEMENT—Confess your secret sins alone before your God. Acknowledge your heart wanderings to Him who knows perfectly how to treat your case.

RHEUMATOID ARTHRITIS

SYMPTOMS—Vague pain, stiffness, weight loss, numbness, and tingling of the hands and feet may precede its onset.

Swelling, stiffness, redness, and often crippling pain in joints, which eventually may fuse together. There is fatigue, anemia, weight loss, and fever.

Affected joints sound like crinkling cellophane. In contrast, osteoarthritis joints sound like popping, clicking, or banging. Joints of the hands, elbows, knees, and ankles are most commonly involved.

Upon awakening in the morning, there may be a joint stiffness which lasts an hour or longer. Swelling will occur in a specific finger, wrist joints, and also around other joints. Pain may, or may not, be present.

The condition can worsen or remain the same for years and later worsen again.

CAUSES—Rheumatoid arthritis (RA) is an inflammatory arthritis. It is an autoimmune disorder. So many acids, purines, etc., have collected in the joints; and the calcium supply has been so low for so long, that the body gets "confused"—and begins attacking the synovial membranes in the joints. Cartilage, nearby tissues, and even the bone surfaces are destroyed.

This damaged area is then replaced with scar tissue, which tends to fuse together the joints—making them immovable.

Oddly enough, this form of arthritis most commonly occurs between the ages of 35 and 45, but may occur at any age. It also occurs even in children. Two-thirds of the 3 million Americans who have RA are women. Among those under 18, about 70,000 have it; most of them are girls.

Causes include poor nutrition, bacterial infection, and/or physical or emotional stress. Stress seems to be the active agent which initially brings it on. Exposure, overwork, or acute infections can also do it.

Unlike osteoarthritis *(517)*, which only affects joints here or there, RA affects all the synovial joints in the body.

In the first year after the disorder appears, 75% improve without any treatment at all. Therefore natural treatments should help the situation even more. Keep in mind that 10% of those with RA become disfigured in one way or another. So this is a problem which is worth taking the time and effort to reduce or eliminate.

The likelihood of remission is greater early in the course of the disease. Each attack seems to be worse than those preceding it.

NATURAL REMEDIES

NUTRITION

• **Fasting** brings temporary relief to RA; but the pain, swelling, and stiffness tend to return a few days after the fast is ended. Some recommendations require a longer vegetable juice and vegetable broth fast of two or more weeks as having more lasting effects.

• People with RA were found to have lower blood levels of **folic acid, protein, and zinc** than other people.

• Each day take **calcium, magnesium, selenium, copper, vitamin B_6, histidine, and bromelain**. *See Arthritis (513) for much more information.*

AVOID

• **Do not take iron supplements** (such as ferrous sulfate, which is commonly given for anemia). These will intensify RA and arthritis.

• **Food allergies** can be involved. One study showed that 86% of a group of rheumatoid arthritics could trace the onset of their problem to allergies; most common were **soy products, milk, eggs, coffee, and sugar foods.** Try avoiding all those foods. *See Arthritis (513) for other helpful and problem foods. Also see Alergies (576).*

• One research study noted that peoples who use large quantities of **wheat, rye, and oats** tend to have high rates of RA.

OTHER HELPS

• **Lose weight**, to reduce the strain on your joints.

• **Keep your hands warm** at night. Stretch nylon gloves, worn at night, do this. Better yet, keep your arms and hands under the covers at night.

• **Deep breathing exercises,** done outdoors, helps those with RA.

• Alternating **hot and cold baths** help. Give 6 minutes for the hot and 4 minutes for the cold, to increase blood flow to the area. The healing is in the blood which is brought to the area, and then recharged as more arrives.

• **Aloe vera gel**, placed on the area, helps relieve pain.

—For extensive information: See Arthritis (513) Osteoarthritis (517), Acute Articular Rheumatism (518), Acute Muscular Rheumatism (519), and Chronic Rheumatism (519).

There is also a Juvenile Rheumatoid Arthritis (713), which is different; it affects children from 6 months of age to the age of 12.

ENCOURAGEMENT—By His life and His death, Christ proved that God's justice did not destroy His mercy; but that sin could be forgiven and that the law is righteous. With Christ's help, His law can be perfectly obeyed. Proverbs 11:3, 6, 20.

ACUTE ARTICULAR RHEUMATISM

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ACUTE ARTICULAR RHEUMATISM AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL—Absolute **rest** in bed. **Abstinence** from all solid food for a few days, allowing only ripe fruits, fruit juices, well-dextrinized (well-cooked) cereals, and malted foods. Avoid meats, animal broths, beef tea or extracts, eggs, oysters, cheese, and all foods rich in proteins.

COMBAT INFLAMMATORY PROCESS IN JOINTS—Secure active cutaneous circulation by **Hot Blanket Pack** and **Sweating Wet Sheet Pack**, hot **Fomentations** to the joints, followed by **Heating Compress**. Keep him sweating until acute pain ceases and temperature falls.

PREVENT EXTENSION OF THE DISEASE TO THE HEART, LUNGS, PLEURA, AND MENINGES—by promoting activity of the skin and kidneys, building up the general vital resistance, and by carefully administered cold applications. The **Hot Blanket Pack**, Hot Enemas, Hot Trunk Pack, following each hot application by **Cold Mitten Friction**. Administered carefully to all portions of the body that are free from local inflammation.

ENCOURAGE ELIMINATION—The prolonged **sweating bath** (given by means of the **Hot Blanket Pack**) should be continued for several hours; this is a most valuable measure. He should not be taken out of the pack suddenly, but gradually; **Cold Mitten Friction** should be applied to each part until good reaction occurs before uncovering another portion. After rubbing, the surface should be carefully protected by **flannel blankets**. Free **water** drinking and large **Enema** twice daily.

PAINS IN JOINTS—Hot Blanket Pack. Follow by dry wrapping (Dry Pack). **Fomentation** to joints, repeated every 2 hours. During the interval in between, a well-protected **Heating Compress** applied as soon as the **Fomentation** is removed. Smear joints with **Vaseline** daily.

FEVER—Hot Blanket Pack continued to full sweating, followed by a **Sweating Wet Sheet Pack** that is prolonged for several hours is the best means of lowering the temperature. When the temperature is very high, the **Neutral Bath**, at 92°-95° F., may be employed. **Ice Compress** to head and neck. Cold Mitten Friction or **Cold Towel Rub** may be given after the **Sweating Wet Sheet Pack** or the Hot Blanket Pack, 2-3 times daily.

PROFUSE PERSPIRATION—Do not check during the early stage; simply wipe him with a dry cloth. If the temperature is very high (104°-105° F.), the **Graduated Bath** may be given; the temperature should not be lowered below 85° F. As the temperature is lowered, he should be rubbed with sufficient vigor, to prevent chill. The **Cool Enema** may also be used in connection with the Fomentation to the back. Be careful not to check perspiration suddenly, at least until all until acute symptoms (of pain, high temperature, etc.) subside.

DURING CONVALESCENCE—Encourage blood making by **Graduated Cold Baths**, especially Cold Mitten Friction.

HYPERPYREXIA (ELEVATION OF SYSTEMIC TEMPERATURE ABOVE 104°-106° F.)—(1) Prevent it by Ice Cap, **Cold Mitten Friction** at 50°-40° F., or Cold Towel Rub at 60°-50° F., 2-3 times a day, when temperature rises above 101.5° F. May precede cold application by **very Hot Sponging**. (2) Combat it when temperature rises above 101.5° F. by **Cold Mitten Friction** at 60° F., given every 2 hours and continuing until temperature falls to 101° F. Continue application to each part until reddened, so as to prevent retrostasis. **Graduated Baths** (102°-85° F.) may be resorted to in obstinate cases, also the **Cool Enema**. In all cases apply **Ice Cap and Ice Collar**, to offset cerebral congestion and coma.

ENDOCARDITIS, PERICARDITIS (INFECTION OF HEART MEMBRANES)—The hot **Fomentation** (and it should not be very hot) should be applied over the heart for half a minute at intervals of 1 hour. This should be followed by the **Ice bag or Cold Compress** above the heart.

CEREBRAL RHEUMATISM—Ice to head. **Prolonged Neutral Baths** at 92° F. Colonics at 80° F., 3 times a day. Ice to head and neck. **Cooling Wet Sheet Pack. Sweating Wet**

Sheet Pack, repeating 2-3 times a day.

TO PREVENT PERMANENT DAMAGE OF JOINTS—Simple **flexions** (movements) of the joints as soon as the fever declines. Short applications of **Alternate Compress** or Alternate Douche, 2-3 times daily, after convalescence begins, with a well-protected **Heating Compress** during the interval in between.

ARTICULAR AFFUSIONS—**Alternate Compress** or Alternate Douche, 3 times a day. Well-protected **Heating Compress** during the interval in between. Massage. Bandaging.

NODOSITIES—Revulsive Douche or **Fomentations**, 3 times a day. **Heating Compress** during interval in between until tenderness is removed. Then **Alternate Douche**, 3 times a day. Follow by well-protected **Heating Compress** and **massage**.

ARTHRITIS AND PHLEBITIS—**Fomentation** over affected part every 2-3 hours for 20 minutes; **Heating Compress** during interval in between, wrung very dry and protected with plastic covering.

NEURALGIA—**Revulsive Compress**. Follow by dry cotton poultice; renew every hour or two.

NEURITIS—Complete **rest** of part; **Fomentation** every 2-3 hours, followed by well-protected **Heating Compress**.

TACHYCARDIA (RAPID HEART BEAT)—**Cold Compress** over heart for 15 minutes every hour; avoid hot food and drinks. **Ice Bag** over heart during hot applications to joints and other parts.

DIARRHEA—**Neutral Enema** at 95° F., after each bowel movement. Cold **Abdominal Compress** at 60° F., during intervals in between, changed every hour.

GASTRALGIA—**Hot and Cold Compress** over stomach, heat to area above stomach, cold to spine, hot **water** drinking; **dry diet** of well-dextrinized (well-cooked) cereals.

PERIOSTATIS and OSTEITIS—Very hot **Fomentations** for 15 minutes every 2 hours. **Heating Compress** during intervals in between, well-wrung and well-protected with flannel and covered with plastic. If suppuration (pussing) occurs, open it with a knife.

URTICARIA—**Sponging** with very hot water, hot salt or alkaline Sponge; **Prolonged Neutral Bath**.

CONTRAINDICATIONS—Avoid Cold Full Baths and Cold Douche.

GENERAL METHOD—Aid the elimination of acids by promoting activity of the skin. This is also the best means of relieving the articular pains. He should be drenched with water through both the stomach and rectum, to encourage profuse perspiration and prevent undue increase in the specific gravity of the blood. Tonic and fever-lowering measures must be used with great care; these must be so managed as to avoid retrostasis (a retrograding of his condition). Chilling him will increase the pain. The cold rubbings (frictions), applied to maintain general vital resistance, must be accompanied by hot applications to the joints; and, if necessary, use more extensive hot applications to the spine or legs, to prevent chilling of the surface. The most efficient hydrotherapy measures aid heat elimination by dilating the surface vessels rather than by lowering the temperature of the skin.

Also see Acute Muscular Rheumatism (519), Chronic Rheumatism (519), Rheumatoid Arthritis (517), and Juvenile Rheumatoid Arthritis (713).

ENCOURAGEMENT—While the Lord has not promised His people exemption from trials, He has promised that which is far better. He has said, "As thy days, so shall thy strength be" (Deut. 33:25).

ACUTE MUSCULAR RHEUMATISM

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ACUTE MUSCULAR RHEUMATISM AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

NUTRITION—A **nourishing dietary** that excludes meats. Avoid fruits and vegetables at the same meal, all indigestible foods and dishes, tea, coffee, condiments, excess salts. Carefully Graduated **Cold Full Baths** daily.

INCREASE GENERAL VITAL RESISTANCE—This is the most important indication in this disease, as in malarial infection, in acute rheumatism, and other infectious diseases. Short sweating procedures of any sort (**Full Hot Baths**, Steam Baths, etc.), followed by short and graduated cold applications, are the most important general measures.

SWELLING OF JOINTS—**Fomentation**, 3 times a day. And, during the intervals in between, apply **Heating Compress**, wrung dry and well-protected by plastic. Also derivative measures.

PAIN—**Revulsive Fan Douche**, other pain-relieving measures.

STIFFNESS OF JOINTS—**Fomentation**, 3 times a day. Well-protected **Heating Compress** during intervals in-between. **Alternate Articular Douche** [alternate hot and cold spray to afflicted joints], massage of joints and muscles, **Prolonged Neutral Bath**.

DRY SKIN—**Sweating Wet Sheet Pack**, oil rubbing on skin, Cold Mitten Friction, **Cold Towel Rub**, Wet Sheet Rub, Steam Bath, hot-air bath, electric-light bath [heating from electric lights or electric heater], sunbath.

CONTRAINDICATIONS—Do not give very Cold Baths, especially Cold Full Baths.

Also see Acute Articular Rheumatism (518), Chronic Rheumatism (519), Fibromyalgia (531), Rheumatoid Arthritis (517), and Juvenile Rheumatoid Arthritis (713).

ENCOURAGEMENT—The first step toward salvation is to respond to the drawing of the love of Christ. Christ draws men through the manifestation of His love in order that they may understand the joy of forgiveness and the peace of God. If they respond to His drawing, yielding their hearts to His grace, He will lead them on (step by step) to a full knowledge of Himself; this is life eternal.

CHRONIC RHEUMATISM

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHRONIC RHEUMATISM AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of*

treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)

RHEUMATISM (CHRONIC) GENERAL CARE—The same as for "Acute Rheumatism," except that the local applications are made to the muscles instead of to the joints. **Sweating baths**, especially the Radiant Heat Bath and the Steam Bath. Long **Neutral Baths**. **Fomentation** over painful parts. Follow with well-protected **Heating Compress**. **Water** drinking and **aseptic diet**.

Also see Acute Articular Rheumatism (518), Acute Muscular Rheumatism (519), Rheumatoid Arthritis (517), and Juvenile Rheumatoid Arthritis (713).

ENCOURAGEMENT—As we approach God through the virtue of the Redeemer's merits, Christ places us close by His side, encircling us with His human arm, while, with His divine arm, He grasps the throne of the Infinite.

GOUT

SYMPTOMS—Sudden attack, often in the middle of the night, of extreme pain and swelling of a joint in the fingers or toes (usually the big toe). But it can affect the ankles, knees, hands, elbows, and wrists. Motion or pressure greatly increases the pain. After the swelling subsides, the skin tends to itch and peel.

During attacks, there often is loss of appetite, stomach and intestinal problems, fever, and decreased urine output.

CAUSES—Gout is an acute type of inflammatory arthritis; it occurs most often in people who eat rich foods (such as meat, gravies, spices, and alcohol). Frequently, those individuals are also overweight.

Gout is caused by a buildup of uric acid in the blood. When levels rise beyond a certain point beyond which the kidneys cannot excrete it, uric acid crystals form and collect in the affected joint or joints, causing excruciating pain. They can also form in major body organs and do great damage.

The body cannot handle all the purines and other acids in the meat; and so these products settle in the body. Uric acid is the end-product of the breakdown of purine compounds.

Gout typically attacks the smaller joints of the feet and hands, especially the big toe. Uric acid salts crystallize in the joint and produce swelling, redness, and a sensation of heat and extreme pain.

Unlike most forms of arthritis, gout affects men over 30 in 90% of the cases. It generally does not begin until after 35 years of age; peak age of onset is 45. Women who have it are generally post-menopausal.

NATURAL REMEDIES

NUTRITION

• **Dietetic changes, water drinking, and weight control** are all very important. *See Arthritis (513).* The amount of urates in the blood is keyed to dietary intake and the amount of body weight.

• Those with this disorder need to **reduce to 10% 15% below calculated normal weight**. However, weigh reduction must be done gradually, so as not to stir up more urates and temporarily increase the number o gout attacks.

• Drink at least 2 quarts of **water** a day between gout attacks in order to get rid the body of uric acid and reduce the likelihood of kidney damage and kidney stones. Those with gout tend to have kidney stones One physician says to drink a gallon of water daily to wash out the acids. Make sure it is clean, good water

• **Vitamin B_{12}** helps distribute water in the body to keep the tissues loaded with water, thus helping the prevent uric acid concentration into crystals. **Magnesium** aids in the absorption of B_{12}.

• **B complex** (1-3 tablets daily) and 500 mg **pantothenic acid** assist the body's conversion of uric acid into harmless compounds.

• To lower serum uric acid, take 1,000 mg of **vitamin C** per hour at the onset of an attack, and then gradually lower it to 500-8,000 mg daily.

• Take 100 IU of **vitamin E** and gradually increase it to 600-800 IU daily, to reduce uric acid buildup.

• A **high-carbohydrate diet** tends to increase uric acid excretion. In contrast, a **high-fat diet** decreases excretion and may bring on a gout attack (even though they may be unsaturated fats). Keep your diet **low in protein and fat**.

• Natural therapists have found that they can eliminate all gout with diet, by eliminating all **meat, eggs and cheese**.

• Eat **high-potassium foods**, which includes most vegetables. Put thick, **white potato peelings** into your pot of vegetables or soup; it is rich in potassium.

• Eating **cherries** is very helpful. The uric acid level in the blood decreases and the attacks tend to stop. They can be any type of cherries, either fresh or canned (½ pound per day). One or two Tbsp. of **cherry concentrate** can be taken instead. If canned cherries are used, only use water-packed ones; most have too much sugar and additives. Estimates as to how much to eat vary from ½ cup to 1 pound (about 70 cherries). Some pit them and blend them to make juice. One research study found that store-bought cherry juice has been pasteurized, which removed the active ingredient, *anthocyanin*. Wild or black cherries work best.

• **Celery extracts** (2-4 tablets daily) help eliminate uric acid.

• Japanese researchers have found that compounds in **chiso**, an Asiatic plant, relieve gout. Chiso contains four *xanthine oxidase inhibitors*, which helps prevent uric acid synthesis. Licorice also contains those inhibitors.

• The *curcumin* in **turmeric** stimulates the adrenal glands to release the body's own cortisone, a potent reliever of inflammation and the pain it often causes.

• Mix **cayenne** with enough **wintergreen oil** to make a paste. Put in on the area to relieve pain and inflammation.

• Here are useful herb teas: **yarrow, peppermint, chamomile, devil's claw, juniper, and birch.**

—For more on foods and herbs which will reduce the inflammation and pain, see Arthritis (513-514).

AVOID

• **Do not fast** when you have gout. Doing so greatly increases the amount of uric acids in the blood.

• Avoid excessive **food yeast.**

• **Overeating** tends toward gout.

• A vegetarian diet is the best program for a person with gout. **Stop eating all types of meat.**

• Here are foods which are very high in purines: **liver, brains, kidneys, heart, anchovies, sardines, meat extract, herring, consommé, mussels, and sweet breads.**

• Here are foods of lesser purine content: **fowl, fish (except those listed above), other seafoods, and other meats.**

• Here are foods of moderate amounts: **whole-grain cereals, lentils, peas, beans, asparagus, mushrooms, oatmeal, cauliflower, and spinach.**

• (Here are the foods which have only negligible amounts of purines and do not cause gout: **vegetables, fruits, and cereal products.**) There are cases in which drinking large amounts of **milk** or eating lots of **tomatoes** produced gout.)

• Avoid **rich foods such as cakes and pies.** Drop **white flour and sugar products** from your diet.

• Do not take any alcoholic beverage. All kinds of beverage **alcohol** increase uric acid production and reduces excretion of urates. It triggers the body to produce uric acid.

• **Direct injury to a joint,** tending toward gout, can bring on an acute attack.

OTHER HELPS

• It is known that the skin can excrete uric acid; so **baths** are very helpful.

• During acute attacks, **keep the affected joint elevated and at rest.**

• **Hot fomentations** for 15 minutes every 3 hours, to help relieve pain. But, to reduce pain, some do better using **cold applications.**

• **Mud packs,** applied to the affected area, will absorb a fair amount of the uric acid.

• **Charcoal** is very helpful. Take it by mouth (12-16 tablets daily) and also put a poultice of **charcoal** on the area.

• A compress of **comfrey root or leaves,** blended with water, helps relieve gout pain. Apply for two hours or more or overnight.

• **Burdock** will help clean uric acid deposits from the joints and other areas. **Kelp, red clover, and yucca** help eliminate uric acid and other toxins.

• Apply **plantain, ginger,** or **fresh comfrey** compresses to the inflamed area.

Colchicine is the primary drug medication for gout. But it causes nausea, vomiting, diarrhea, cramping, hair loss, anemia, liver damage, and decreased leukocytes and platelets. Natural remedies can do the job better.

A number of drugs increase uric acid levels; so it is best to avoid drugs. Diuretic drugs are especially bad.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ACUTE GOUT AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DIET AND LIFESTYLE—**Avoid** meats, tea, coffee, tobacco, milk, and eggs. Take daily sufficient **exercise** in the open air, to cause perspiration. Follow by **short Cool Full Bath** for cooling purposes. Diet would include **fruits, well-cooked cereals, and nuts.**

ENCOURAGE TISSUE CHANGE, ESPECIALLY OXIDATION OF PROTEIN WASTES—**Prolonged Sweating Baths,** Steam Bath, Radiant Heat Bath, Sweating Wet Sheet Pack, Dry Pack, Hot Blanket Pack. Follow by daily **Graduated Cold Bath,** carefully given and nicely graduated. **Outdoor life.**

MAINTAIN NORMAL ALKALINITY OF THE BLOOD—**Tonic graduated cold applications** and free use of **fruits. Avoid** flesh foods, tea, coffee, and alcohol.

GOUT (ACUTE) —

HEADACHE—**Water** drinking. **Enema. Hot and Cold Head Compress,** with **Hot Footbath** or Hot Leg Bath.

MIGRAINE—**Revulsive Compress** to the area, where the pain is located. **Hot Leg Bath** or Hot Foot Bath, **Enema,** Hot Enema, **Fomentation** over stomach, Fomentation over spine, **Alternate Compress** over spine.

HEMORRHOIDS—If inflamed, hot **Fomentations** to relieve pain. Follow with **Cold Compress** to anal region and buttocks. Also **Cool Enema.**

PRURITUS ANI—Very Hot **Anal Douche.**

PAIN AND SWELLING OF JOINTS—Elevate limb. **Cooling Compress,** change as soon as warm.

FEVER—**Hot Blanket Pack,** followed by **Prolonged Neutral Bath.**

SCANTY URINE—**Water** drinking (distilled water). **Enema,** twice daily.

RETROCEDENT GOUT—For coma or delirium, cold to head and neck. Large **Enema. Hot Blanket Pack. Hot Full Bath.**

CARDIAC COMPLICATIONS, SYNCOPE—Hot **Enema, Alternate Compress** to spine.

GASTRO-INTESTINAL DISTURBANCE BY RETROCESSION—**Fomentation** over stomach. **Hot Trunk Pack.** Hot Full Bath or Hot Blanket Pack, with **Heating Compress** during the interval between.

CONTRAINDICATIONS—Avoid cold baths of any kind, and avoid immersion of affected parts in cold water.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHRONIC GOUT AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GOUT (CHRONIC) —

GENERAL MEASURES—Use the general measures given

in the two sections, just above.

INCREASE CIRCULATION in affected parts by hot Fomentations. Follow by Dry cotton Pack or Heating Compress. Massage, at first derivative only (applied elsewhere to draw blood away from afflicted part) and later to the joint itself.

CONSTIPATION—Relaxing diet, Hot Abdominal Pack, cold water drinking, abdominal massage.

HEPATIC CONGESTION—Revulsive Compress over the liver every 3 hours, Heating Compress to it during the interval between.

GRAVEL—Copious water drinking and large Enema daily.

MELANCHOLY—Vigorous Sweating Baths. Follow by short Cold Douche, given with percussion to spine.

ASTHMA—Revulsive Douche to legs, large Enema, Prolonged Neutral Bath, Fomentation to chest. Follow by the Chest Pack.

ANGINA PECTORIS—Fomentation over heart for 1 minute. Follow by Cool Compress for 10 minutes; repeat. Hot Footbath or Hot Leg Pack, Ice Bag to spine, rest in bed, keep extremities very warm.

GENERAL METHODS—The general methods to be pursued in this disease are essentially the same as those applicable in the Uric Acid Diathesis or Lithemia section.

If any of the following related problems exist, look them up under their respective headings: Bronchitis, Epilepsy.

—Also see Rheumatoid Gout (520), Arthritis (513), and Rheumatoid Arthritis (517).

ENCOURAGEMENT—Could the curtain be rolled back, you would see the entire universe intently watching what is occurring on earth. During these few years of your earthly probation, you can choose to stand resolutely for God. He will help you do this.

BURSITIS

SYMPTOMS—Swelling, tenderness, and possible redness. A dull, persistent ache that increases with movement. Immense pain in the affected area, which frequently limits motion.

It most often occurs in shoulder joint; it is less often in the hip joint, the elbows, or feet.

CAUSES—Bursitis is the inflammation of the liquid-filled sac, called a *bursa* (*bursae is* plural), found within joints, muscles, tendons, and bones. These sacs normally help muscular movement occur.

Overstimulation of the bursae causes the synovial membrane to produce excess fluid. This distends the bursa, which causes the discomfort.

Injury to the area is a common cause; but chilling of the area during the day, especially at night, can also lead to it. Bursitis can also be caused by **calcium deposits** in the bursa wall, **reactions to certain foods** or **airborne allergies**. In some instances, **suddenly working tight muscles** can do it; it is called a *stretched muscle*.

Chronic overuse of a body part is a common cause. According to where it is centered, bursitis has many names: housemaid's knee, tennis elbow, policeman's heel, frozen shoulder, or beat knee.

The lowly bunion (caused by **friction in tight shoes** is also a form of bursitis. A bursa sac on the joint of the big toe becomes inflamed.

Athletes and older people are most likely to get bursitis; but it can happen to anyone at any age.

What is the difference between bursitis and tendonitis? Both produce pain in the shoulder or other body parts.

Bursitis is an inflammation of the bursae, the fluid-filled sacs that lubricate the joints in places where muscles and tendons meet bone. Tendonitis is an inflammation of the tendons (the tough, elastic fibrous tissues that connect muscles to bones).

Bursitis generally exhibits a dull, persistent ache that increases with movement. Tendonitis causes a sharp pain during movement; it is most likely to be caused by over-reaching for something. But it can also be caused by calcium deposits pressing against a tendon. There is no swelling and fluid accumulation, as with bursitis. *See Tendonitis (526) for more on that problem.*

NATURAL REMEDIES

• Initially give ice applications. Apply an **ice pack** for 30 minutes, every 2-3 hours.

• As pain decreases, **hot applications** can be given. Heat should be applied for 45-60 minutes at a time. It should be as intense as can be tolerated. Hot castor oil packs are useful. *See Arthritis (513) for information on how to prepare them.* Ten minutes of hot applications, followed by 10 minutes of cold, seems to work best.

• Follow this with a **range of motion exercises** at least once a day. *(Some are given later in this article.)*

• **Do not become chilled.**

• **Keep exercising**, so joints will not lock up.

• **Do not push yourself too hard** or too long during the day. If you are in pain, stop.

• **Sometimes rest and immobilization** of the joint is needed for a time.

NUTRITION

• **Vitamin E** (400-1,000 IU until the pain stops, then 400 IU thereafter). Beta carotene (up to 60,000 IU daily for 1 month, 50,000 IU for 2 weeks, then 25,000 IU each day). **B complex** (1 tablet daily, 1,000 mcg sublingual B_{12} for 10 days, then every other day for 3 weeks). B_1 (50 mg). **Vitamin C** with **bioflavonoids** (1,000 mg every hour or 2 for several days, then 3,000 mg in divided doses daily for several weeks). **Vitamin D** (400 IU daily for only a few weeks).

• **Calcium** (1,500 mg) and **Magnesium** (750 mg). Both should be in divided daily doses.

• **Ginger** has been used for centuries, in Asia, in treating bursitis. Combine it with **pineapple** and a little **licorice** for a tasty treat, if you have recurring bursitis.

• **Licorice** is said to be as effective in treating bursitis as the drug hydrocortisone, without its side effects. Do not take over 3 cups of licorice tea a day.

• **Pineapple** has *bromelain*, which has anti-inflammatory properties. It reduces swelling, bruising, pain, and it speeds healing of joint and tendon injuries. **Papaya** has similar enzymes.

• *Curcumin*, a compound in **turmeric**, is as effective as cortisone in the treatment of certain kinds of inflammation, without the side effects. Here is another tasty treat with healing properties: Mix ripe **pineapple** with **turmeric** and toss in **papaya** and **ginger**. What a wonderful way to feel better!

• If you want to take the enzymes alone, take 250-500 mg of **curcumin** and 250 mg **bromelain**, 3 times a day, between meals.

• The *omega-3* fatty acids found in **flaxseed oil** decreases inflammation.

• **Magnesium** is an important mineral for muscles, bones, and connective tissues.

• **DMSO**, from a health-food store will help. Apply it to the skin of the affected area.

AVOID

• **Do not eat meat**. Not only can the purines and uric acids in it eventually produce severe arthritic problems, but they can aggravate bursitis and tendonitis as well.

• Do not eat **processed or junk foods**. They only intensify the problem.

• Unlike flaxseed oil, the fatty acids in most **polyunsaturated vegetable oils** (including **corn** and **safflower**) and all **hydrogenated oils** (**margarine** and many **baked goods**) increases inflammation.

EXERCISES

• Clasp your hands behind your head, and **touch your elbows**. Then separate them as widely as possible. Gradually work up to ten repetitions at a time.

• A helpful exercise for bursitis of the shoulder: Stand in a corner and **"walk" the fingers up the wall** as high as possible without overstretching. Move away from the wall and **let your arm swing back and forth** like a pendulum, gradually increasing the arc. Gradually work up to 10 and 20 repetitions.

• **Touch your shoulder** with the same hand.

• While lying on a firm mat or bed, **lift one leg, knee bent, and bring it toward your chest**. Use your hands, holding it below the thigh, to help do this. Work up to 10 repetitions.

—Also see Tendonitis (526) and Arthritis (513).

ENCOURAGEMENT—When Jesus speaks of the new heart, He means the mind, the life, the whole being. To have a change of heart is to withdraw the affections from the world and fasten them upon Christ. To have a new heart is to have a new mind, new purposes, new motives. What is the sign of a new heart? It is a changed life. There is a daily, hourly dying to selfishness and pride. Those with whom Christ dwells will be surrounded with a divine atmosphere. Their faces will reflect light from His, brightening the path for stumbling and weary feet.

ANKYLOSING SPONDYLITIS
(Rheumatoid Spondylitis, Marie-Strümpell Disease)

SYMPTOMS—Weight loss, fatigue, malaise, low back pain, sacroiliac pain, back leg pain, stiffness in the back (especially early in the morning), aching and stiffness in the hips and shoulders.

CAUSES—Ankylosing spondylitis (AS) is an autoimmune disorder. It is a form of arthritis which causes inflammation along the spinal column, resulting in back pain and stiffness. The phrase means *ankylosing* (rigid), *spondy* (spine), and *itis* (inflammation). So many poisons have accumulated in the body (from **wrong eating, overwork, and stress**) that the immune system attacks the tissues lining the joints.

Uric acid toxins, a by-product of eating **meat**, accumulate in the joints. They form crystals, which result in inflammation and pain.

For some reason, **tension and stress** help bring on the pain and stiffness. Men develop AS 2.5 times more often than women; and 90% of the cases develop between the ages of 20 and 40.

Malnutrition can also be involved. When proper nutrients are lacking, toxins tend to accumulate in the body. A lack of **minerals** (especially **calcium, magnesium, and silicon**) can strengthen the problem.

The chronic inflammation can destroy the cartilage between the vertebrae. AS can also lead to bony growths that fuse the vertebrae and cause permanent spinal rigidity.

NATURAL REMEDIES

• **Eliminate meat** from the diet. **Reduce the tensions and rush**. Eliminate the anger, worry, and a feverish way of life.

• Go on a **3-day fast** of vegetable juices and green drinks. Clean out the bowels with enemas or colonics.

• **Improve the diet** to a simple, nourishing one, as discussed elsewhere in this book. A **low-calorie, vegetarian diet** helps alleviate the pain and inflammation of AS; it also eliminates the symptoms of a broad range of autoimmune diseases.

• **Avoid processed, sugar, and meat foods**.

• Include a **vitamin / mineral supplement**; and, very important, also include a **calcium** supplement. Essential fatty acids are important (**flaxseed oil** is the best). **Vitamins A, C, E, selenium, and zinc** are needed to rebuild the immune system.

• **Learn to relax** and appreciate the blessings of life which you have.

• *Proteolytic enzymes* help relieve inflammation. One is *zingibain*, which is in fresh **ginger root**. It is as powerful a proteolytic enzyme as the *bromelain* in **pineapple** or the *papain* in **papaya**. All are more effective than the nonsteroidal anti-inflammatory drugs (NSAIDs), which produce stomach ulcers. You can take

any of these in capsule form, as a tea, or enjoy it as part of your food.

• In case your AS develops to the point that you have to wear a neck brace, apply cornstarch to eliminate the chaffing.

ENCOURAGEMENT—In this life, you will ever have disappointments; but know that Jesus is the living, risen, Saviour. He is your Redeemer; and He loves you deeply. Trust your life to Him, and you will be safe. Psalm 91:16.

TEMPOROMANDIBULAR JOINT SYNDROME (TMJ)

SYMPTOMS—Pain in the muscles and joints of the jaws, which can radiate to the face and neck. There is a frequent clenching of the jaws.

Possible headaches, toothaches, dizziness, pain and ringing in the ears, and pressure behind the eyes.

When eating or yawning, there is a clicking, grinding, and popping noise; perhaps there is pain. There may be difficulty in opening and closing the jaws.

CAUSES—The temporomandibular joint connects the lower jaw to the skull. The bite is misaligned, either as a cause of the jaw problem or as an effect. The cartilage disc (disk) that cushions the joint becomes damaged. This causes the bones of the temporomandibular joint to rub against one another instead of gliding smoothly past each other. If the **tooth repair or replacements have not been done properly**, this can be a factor in causing the problem.

Stress, a poor bite, and bruxism are the most frequent causes. Some people develop the habit of clenching their teeth together during the day and/or at night. Called bruxism, this is very hard on the joint in the jaw. *See Bruxism (333).*

An **injury, poor dental work, osteoarthritis, bad posture, repeated or hard blows to the jaw or chin, whiplash, gum chewing, thumb sucking, chewing on only one side of the mouth, or holding the phone between the shoulder and jaw** can cause it.

Rheumatoid arthritis *(517)* can also cause jaw pain.

About 10 million Americans have this problem; yet it is estimated that 90% of all cases respond well to simple, inexpensive treatments.

Put your little fingers in your ears (to block outside noise) and slowly open and shut your jaw. If you hear any clicking or grinding sounds, your jaw may be out of alignment.

NATURAL REMEDIES

DIET

• It is important to have a diet that is rich in **B complex vitamins, calcium, magnesium, silicon, zinc, lecithin, and flaxseed oil.**

• **Fast** once a month, to give the body and jaws a rest, so rebuilding can take place.

• **Avoid sugar foods, which deplete calcium and other minerals.** Avoid **smoking**, and do not eat **meat.**

• Do not drink **caffeine beverages** (including chocolate), because the caffeine increases muscle tension and sensitivity to pain. Avoid **salt**, salty foods, and sodium-containing foods. Do not use **alcohol.**

• You may need to eat **softer, easy-chew foods** for a time. Avoid **hard foods.** Do not bite your **fingernails.**

• **B complex** (1 tablet, plus 100 mg **pantothenic acid**) twice a day. At bedtime in order to help relieve anxiety and improve sleep, take **vitamin C** (2,000-5,000 mg in divided doses daily), B_6 (50 mg), and **skullcap** tea.

• **Boswellia** and **ginger** herb teas of ginger or boswellia have anti-inflammatory effects. **Hops, catnip, skullcap,** or **valerian root** will help calm you. **Turmeric** will help reduce pain and inflammation.

OTHER HELPS

• **Hot and cold packs** (either together or separately) will help relieve pain in the neck and shoulders. A washcloth soaked in almost hot water makes a good compress. Place it against the aching TM joint.

• Learn to **relax** and **avoid stressful thinking or situations.** Herb teas of **hops, skullcap, or valerian root** will help relax you.

• If you sit a lot, relax and **maintain good posture.** Do not hunch over and strain.

• **Do not sleep on your side** or lie on your side, with your head turned to the side. It is crucial that you sleep on your back. Place a bean bag on each side of your head, so you will stay on your back all night.

• **Do not prop your head at an angle** (especially in bed) when reading, talking, or watching television. Do not lean your **head on your hands** at any time.

• **Do not chew after eating**, either bits of food when the meal is over or chewing gum.

EXERCISES

• **This will greatly relieve jaw and head pain:** Put ice on the tense neck muscle and stretch it. First, place a washcloth partly around an ice cube; and then, 3-4 times, rub the ice directly down the side of your head and neck over the muscle. Then stretch that side of your neck by bending your head toward the other shoulder. Hold 10 seconds; then put your hand on the muscle to warm it up. And then work the muscle with your hand. Then repeat the procedure on the neck muscle on the other side. The cold blocks pain, so you stretch the painful muscles more than you otherwise could.

• **This exercise will help relieve neck pain:** Place your fingers on the muscle near where it ends on the back of the neck behind the ear. Place your thumb on the point above your collarbone, close to your Adam's

apple, where that muscle ends. Then gently pull the two ends of the muscle together. This is a "reverse stretch." Do this whenever your neck is painful.

• **This exercise will help reduce pain in the facial muscles on the side of your jaw:** Wash your hands and hook the index finger of the right hand inside the corner of the right side of your mouth. Do the same on the left side. Both fingers, down to the middle knuckles, should be in your mouth. Next, gently push out your cheeks, stopping before you feel pain. Release and do this stretch 3-4 times, several times a day.

• **This exercise will help relieve pain and pressure deep behind the eyes:** The source of the pain is a spasm in the muscle that opens the jaw and moves it from side to side. If the pain is behind the right eye, put the end of your right index finger behind the upper right molar of your upper jaw, so the finger is pointed at the center of your skull, behind the eye. Press up 4-5 times, each time holding for 2-3 seconds. Whether left, right, or both eyes, this is the treatment to reduce pain.

• **To balance your jaw muscles:** Gently try to open your jaws with your hands while resisting with your jaws. Then gently try pushing the jaw sideways while resisting with your jaw. Repeat on the other side. Do each exercise for 30 seconds, 3-4 times a day. Another helpful exercise: When you feel a yawn coming, resist it with your hands under your jaw. At any rate, do not open your mouth too wide when you yawn.

• **How to stop grinding your teeth:** First, think that your jaw is relaxed. Will to do it. Do this whenever you begin tensing or clenching your teeth. Second, never chew any substance when you are not eating. This includes no more chewing of gum. Keep your teeth apart, lips together, tongue on the roof of your mouth.

—Along with tension, bruxism is usually an underlying cause. It is important that you also read Bruxism (333), as well as Rheumatoid arthritis (517). Also read Strengthening the Bones (505), to help maintain and rebuild strong bones.

ENCOURAGEMENT—Come daily to Jesus; He loves you. Open your heart to Him freely. In Him there is no disappointment. You will never find a better counselor, guide, and defense. Psalm 32:11.

GANGLION
(Ganglion Cyst)

SYMPTOMS—A hard bump which develops on the wrist or back of the hand, but sometimes on the foot. It varies in size from a small pea to a plum.

CAUSES—A cyst is an abnormal sac in the body which contains fluid. A ganglion is a cyst that develops under the skin near a joint. It is filled with a jelly-like fluid. The ganglion is usually an outgrowth from the capsule surrounding a joint or from the sheath of a tendon. Tendons are the fibrous cords which attach muscle to bone. The fluid inside the ganglion cyst is derived from the synovial fluid which lubricates both tendons and joints.

Ganglia are quite common and are generally painless. As mentioned above, they may be felt as a lump under the skin and may be present for several years without causing a problem. But some ganglia become very uncomfortable or even cause pain.

NATURAL REMEDIES

A ganglion may disappear spontaneously. It can be removed surgically under local anesthesia. Sometimes these cysts recur.

• A very nutritious diet of **fresh fruits, vegetables, whole grains, legumes, and nuts**, plus a wide-spectrum **of vitamin-mineral supplementation**, will help reduce its size. Do not **overeat**, even of good food. **Constipation** will make it more difficult to shrink the cysts.

• Maintaining outstanding health, through proper **rest, exercise, and outdoor walking** strengthens the body and helps it resolve this problem. Do not **overwork** with your hands while not obtaining enough rest.

• The cyst is a fluid enlargement, so astringent herb **compresses**, saturated with **witch hazel or white oak bark** tea, may help shrink them. It is easier to eliminate them while they are still small.

• In some instances, taking **antibiotic herbs** *(228)* have helped to reduce these cysts.

It is known that bone spurs *(508)*, which in some ways are similar, can be removed with **ultrasound**.

ENCOURAGEMENT—"Ask in my name," Christ says . . Christ is the connecting link between God and man. He has promised His personal intercession.

SKELETAL-MUSCULAR - 3 - TENDONS

Also: Gout (520)

SHINSPLINTS

SYMPTOMS—Pain in the shins of one or both legs. There may, or may not, be a specific area of tenderness; pain and aching will be felt in the front of the lower leg after, or during, activity.

CAUSES—The experts are not clear as what shinsplints are. They may be an irritation to the tendon which attaches the muscle to the bone. Or they may be a muscle irritation or the beginning of a stress fracture.

Active people have shinsplints. For example, 28% of **long distance runners** and 22% of **aerobic dancers** have them.

They are caused by **excessive walking, running, or jumping on a hard surface**. But other factors include **poor shoes, fallen arches, insufficient warm-up, poor posture, faulty walking and running techniques, overstraining, or pinched nerves**.

Sometimes the early stages of *stress fractures* are thought to be shinsplints or vice versa. But there is a

difference: Stress fractures begin pinpoint pain, about the size of a dime or quarter, around or on a bony area. A shinsplint is a generalized pain or aching discomfort up and down the whole shin. But, if the problem is not stopped, shinsplints can develop into stress fractures.

NATURAL REMEDIES

• Athletic trainers call it RICE: **rest, ice, compression, and elevation**. Do this for 20-30 minutes. Prop up the leg, wrap it with an Ace bandage, and place the ice pack on it for 20-30 minutes.

• An alternate method is a one-minute **contrast bath** of ice, followed by a minute of heat. Do this for at least 12 minutes. This is especially good for pain in the *inner* leg (rather than the front where the shinsplints occur).

• **Massage** the area near the shinsplint pain, but not on it. If you rub on it, the inflammation will worsen. Sit on the floor and lightly stroke on the sides several times. Then wrap your hands around the calf; and, with your finger tips, stroke deeply around on each side of the shin from ankle to knee. Do the entire area, pressing as deeply as possible.

• Try to **correct flat feet or very high arches**, if you can. They can also cause shinsplints.

• The nutritional supplement, **MSM** (methylsulfonylmethane), is a form of sulfur that can help reduce muscle soreness and inflammation. Take 1 gram daily.

• A podiatrist can give you shoe inserts which correct **problems with your gait** (orthotics).

PREVENTION

Try to avoid a lot of **hard activity on unyielding** surfaces, such as concrete. Even carpet on concrete can cause problems. Grass or dirt is better than asphalt; asphalt is better than concrete.

• Wear **good, comfortable shoes**; and, when they start wearing down, buy new ones.

• **Stretch your calves and Achilles tendon** frequently. This helps prevent shinsplints. Shortened calf muscles throw more weight and stress forward to the shins.

To stretch your calves, place your hands on a wall, extend one leg behind the other, and press the back heel slowly to the floor. Do this 20 times, and repeat on the other leg.

To stretch your Achilles tendons, have both feet flat on the ground, about 6 inches apart. Bend your ankles and knees forward while keeping the back straight. When you achieve tightness, hold it for 30 seconds. Repeat 10 times.

ENCOURAGEMENT—Only by following Christ's example can we have genuine happiness. He alone can strengthen us for the trials of life; He alone can guide us through them.

The Lord has not changed. He is true, merciful, and faithful to fulfill His Word. Determine that you will stand with Him in the battles of life. He is the best friend you will ever have; and He deserves your love and obedience. 2 Peter 1:11.

TENDONITIS AND TENOSYNOVITIS

SYMPTOMS—Pain in a tendon. Whereas simple muscle soreness soon goes away, tendon pain can continue for some time.

CAUSES—A tendon is used in the same repetitive motion while ignoring initial indications of tiredness. It occurs most frequently in the shoulders, hips, or Achilles tendons in the ankles.

Tendonitis is inflammation of a tendon, which is the fibrous cord that attaches a muscle to a bone. *Tenosynovitis* is inflammation of the sheath of tissues that surrounds a tendon. These two conditions usually occur together and are treated together.

Tendons around the shoulder, elbow, wrist, fingers, thigh, knee, or back of the heel are most commonly affected.

NATURAL REMEDIES

• When this occurs, you have to **stop the activity** for a time, even though that activity is your primary employment or sport (window washing, long-distance swimming, pitching, etc.).

• But **do not rest too long or too much**, or the muscle tends to atrophy. And while you are resting, you do not want absolute rest.

• Soak in a **warm bath** or a whirlpool bath. **Warming** the tendon before stressful activity decreases the soreness.

• Apply a **heating compress**. Place a warm, damp towel over the area (knee, etc.). Put plastic over that, a heating pad on top and, finally, a loose elastic bandage. Keep it in place for 2-6 hours, with the pad set on low. During this time, try to keep the injured part higher than your heart.

• An alternate method is to **wrap the painful area in an Ace bandage**, but not too tightly or kept on too long. Proper circulation must be maintained.

• **Raise the affected area**, to help control swelling.

PREVENTION

• Before a workout, **carefully warm up**. This is important. The tub bath, mentioned above, can precede the warming-up exercises out in the field.

• Before hard exercise, carefully **stretch your muscles**, to limber them up. Stretching helps prevent the shortening which accompanies exercise.

• **Ice** can be placed on the area after exercise, to reduce swelling and pain. But those with diabetes, heart disease, or problems with blood vessels should be cautious about using ice. The danger is that doing so can constrict blood vessels and loosen clots.

• If possible, **switch to a different exercise format** for a time. (Runners can switch to cycling, etc.)

• **Strengthen your muscles** generally.

• Whatever your activity, **take breaks** occasionally and walk around or do something different. This helps

:lax your body and improves circulation. **Breathe eeply** and enjoy life for a moment.

—See Bursitis (522), Repetitive Strain Injury 529), and Arthritis (513) for more information.

ENCOURAGEMENT—The temple of God is opened in eaven; and the threshold is flushed with His glory. He will elp all who will surrender their lives to Him.

SKELETAL-MUSCULAR - 4 - MUSCLES

Also: Hiatal Hernia (347)

RESTLESS LEG SYNDROME

SYMPTOMS—A chronic sensation of discomfort in ıe legs, generally between the knees and feet, which rges a person to move his legs. There may be twitchıg of the leg muscles or deep creeping, crawling senations. Sometimes it feels like a pain, cramps, or ches.

It tends to occur shortly after retiring at night or fter sitting still for quite some time. Sometimes this appens several times a night.

CAUSES—Restless leg syndrome is not a serious eurological disorder; and moving the legs or walking round a little terminates the sensation for a time.

Women and older people have the syndrome more ften than men; and a full 5% of the U.S. population ave experienced it. Yet the cause is not certain. Mild eakness of the legs may be present.

It seems to be related to **iron deficiency, expoure to cold, stress, heredity, and motion sickness**. t also seems to be related to **pulmonary disease, stomch operations, diabetes, and uremia**.

Very likely, there is a circulatory factor involved: **lood circulation is impeded** in the legs or blood is eing drawn away from the legs in excessive amounts, o care for a problem in the trunk.

People who have **food or other allergies** often have estless leg syndrome.

It is obvious that the solutions, listed below, are eyed to improving leg circulation and bettering the diet:

NATURAL REMEDIES

IMMEDIATE TREATMENT

• **Move your feet** back and forth for a few monents.

• **Rotate the feet** back and forth momentarily.

• **Get up and walk about** for a couple of minutes. This seems to work best at night, when you have been rying to sleep.

• **Change position in bed**. It has been noted that some people experience the problem more often when hey sleep in certain positions.

• Some find using a **heating pad** helps; others do better by **soaking the feet in cold water**.

LONGER-TERM CARE

• Some studies have shown **folic acid** and **vitamin E** to be helpful.

• There may be a relationship between this problem and **iron** deficiency. But be sure your iron is from food, not chemical supplements; iron from chemical supplements can initiate other physical problems.

• It would be well to **improve your general diet** and take a **multivitamin supplement** daily.

• Some **sponge the legs with cold water**. Others take a **warm soaking bath** before bedtime. Do not let your bare feet touch the cold floor afterward.

• You may wish to wear **knee socks**.

• **Lie down** every so often to rest your legs.

• Get plenty of **rest**.

• **Walk before going to bed**. Better yet, walk outside in the fresh air. This will help you sleep better.

• Possibly **massage your legs** just before climbing into bed.

AVOID

• Drinking **caffeine products** is a special causal factor of this problem.

• Stop **smoking**. Studies reveal it is also a factor.

• Do not eat much **salt**.

• Never eat **big meals before bedtime**. This draws the blood to the stomach, so that you do not rest well. It can also lead to a nighttime heart attack.

• Do not take **drugs to induce sleep**. They only add another problem to your life.

• Reduce your overall **stress** level.

• Avoid prolonged **exposure to the cold**, which increases the need for additional healing blood to the legs.

• Avoid **overusing the legs**. Strenuous exercise seems to increase the problem.

• Avoid **narrow, pointed shoes** and also **high heels**.

• Sluggish venous blood flow may be a problem; so **do not cross your legs.**

—See Varicose Veins (438) for more information.

ENCOURAGEMENT—All heaven unites in praising God. Let us learn the song of the angels now, that we may later sing it when we join their shining ranks. Let us say with the psalmist, "While I live will I praise the Lord: I will sing praises unto my God while I have my being." Psalm 146:3 and 2 Corinthians 4:8-9.

MUSCLE CRAMPS
(Muscle Pain, Leg Cramps, Charley Horse)

SYMPTOMS—A pain in a body muscle, most often in the legs (especially the calf muscles) or feet.

CAUSES—Instead of relaxing and stretching out after contracting, a muscle contracts and remains that way, causing pain. It is an involuntary contraction of a muscle. Muscle cramps may occur at any age. Between the ages of 15 to 80, a full 50% of people will, at some

time, have pain or cramps in the legs. Leg pains in children are frequent enough that they are called "growing pains."

Reduced blood supply to the legs is part of the problem. Another is an **imbalance in the levels of calcium and magnesium** in the body or a **deficiency of vitamin E**.

But other causes have also been noted: **arthritis, anemia, tobacco usage, inactivity, poor circulation, too much or too little exercise, muscle injury, allergy, fibromyalgia, arteriosclerosis, dehydration, hypothyroidism, heat stroke, and varicose veins. Diuretic drugs for heart problems or hypertension** can also induce cramps. Those who have had **part of the stomach removed** tend to have muscle cramps thereafter.

If cramping occurs *when walking* and stops when you cease, it may be impaired circulation and nothing more.

If leg cramps occur *during pregnancy*, they may be caused by hormone changes, fatigue, uterine pressure, chilling, or muscle tenseness.

A **calcium deficiency** can make the leg muscles trigger-happy; the contractions in the muscles are stronger.

Leg cramps in older people may be caused by **arteriosclerotic changes** in the circulatory system. Turn to the articles on heart and blood vessels, and see your physician.

NATURAL REMEDIES

IMMEDIATE TREATMENT

• Find the center of the cramp, where the pain is worst. With your thumb, fist, or heel of hand, **press into the center of the cramp**, exerting enough pressure to cause pain but not to the point of excruciation. Hold the pressure 8-12 seconds. The cramp will often vanish.

• If you get a calf cramp in the middle of the night, try **slipping that leg out of the covers**. As it gets cold, the cramp will go away. If you have a cramp that will not quit, put a **cold pack or ice pack** over the area for 20 minutes.

• **Massage** the muscles and use **heat** to relieve pain.

• A **heating pad** may be applied to the area. For some, alternate **hot and cold compresses** work better (heat for 6 minutes and cold for 30 seconds, with 4 changes).

• Drink **peppermint** tea; and apply it as an external compress.

• Rubbing **lobelia** extract on the painful area will relieve muscle spasms.

• **Pinch the upper lip** between the thumb and index finger; and hold it for 20-30 seconds till the cramping disappears.

• If you are pregnant and cramping occurs, **push the toes upward** while applying pressure to the knee, to flatten the affected part.

• Here is the strangest advice of all: The next day, **repeat the activity that made you sore**. Do it with much less intensity. This will help work out the soreness. Thereafter, follow this hard / easy routine; for it takes 48 hours for the muscle to properly recover. This is how serious athletes train.

• An alternate method is to **vary activities**, such as regular walking, with occasional biking or swimming instead.

• After hard exercise or physical work, **slow down** instead of stopping suddenly. The bloodstream is loaded with lactic acid; so slowly exercise at a relaxed pace while it drains off. (However, that will not protect you from soreness the next day, resulting from a torn muscle fiber.)

• Perhaps you need to change into **more comfortable shoes**, in order to improve your leg and foot problems.

• If you have "exercise cramps" during or after exercise, do this: **Stretch the affected muscle** before and after exercise, and **drink more water** to prevent muscle dehydration.

ONGOING CARE

The **blood circulation** needs to be improved and equalized:

• Drink enough **water** each day.

• A common mistake is to drink water and take salt tablets during heated exercise. Instead, you need a full range of **electrolytes**, not so much sodium chloride. Drink **fruit drinks**. At mealtime, eat lots of **fresh fruits and vegetables**, especially **dark-green leafy ones** such as **broccoli and kale**. Include **seaweed** in your diet. **Potassium broth** (from thick white potato peelings) is excellent. Eat **whole grains, nuts, and legumes.**

• A **fat-free, sugar-free, salt-free diet** improves the circulation.

• Eat an abundance of **green leafy vegetables**, in order to improve the quality of the blood and the mineral balance.

• **Alfalfa, brewer's yeast, and kelp** are important.

• A deficiency of **calcium** (80-500 mg), **potassium** (500 mg), **magnesium** (500-700 mg), **selenium, and vitamin E** (600-800 IU) exists. Low levels of **calcium, potassium, and magnesium**, especially, are factors in cramping.

• **Mineral imbalances** can produce cramping. Be sure you are getting enough **calcium** through supplementation. Otherwise the phosphorus in certain foods locks with it, so the calcium cannot be absorbed. *See Strengthening the Bones (505) for more information on solving the calcium-phosphorus problem.*

• Those with dentures, who find eating vegetables difficult, are especially prone to magnesium and calcium deficiency and leg cramps. They should have **vegetable soups, potassium broth, and raw vegetable**

uices daily.

• Every 3 hours, drink a large glass of quality **wa-er**; this helps clean the bloodstream, liver, kidneys, nd bowels of stored toxins.

• Drink less **whole milk**.

• **Eat your meals slowly** and **chew well**.

AVOID

• Do not **smoke**. Nicotine greatly impedes blood cir-ulation. Avoid secondhand smoke.

• If you are taking diuretic drugs, take supplemen-al potassium. Better yet, switch to **corn-silk tea** and ther herbal diuretics; also drink more water. *See the everal articles on kidneys and urine (393-403).*

• **Do not stand in one position** for hours without noving. Some motion or shifting of body weight is vi-al.

• Do not sit with **crossed legs**.

• **Stretch your legs** every so often, with the feet lexed up, not down.

• When sitting, try to **elevate your feet** every so of-en.

• Do not wear **garters** or any **binding clothes**.

• If you are **overweight**, reduce to normal range or lightly below.

OTHER HELPS

• **Get off your feet** for 5 minutes every hour. If ossible, during that time, take your shoes off; mas-age your feet and wiggle your toes.

• Twice a day, **soak in a tub of warm water** (100°-10° F.). **Massage** the toes, feet, and calves.

• Rub **olive oil or flaxseed oil into your muscles** efore and after strenuous exercise.

• At night, wear **roomy pajamas**.

• Keep the **bed covers loose** or use a foot cradle, to **eep bedding weight off the feet**. If you sleep on your tomach, extend your feet over the edge of the bed. An-ther method is to sleep on your side, with your legs ent and a pillow between your knees.

• If leg cramps are caused by *varicose veins or preg-ancy*, **elevate the foot of the bed** 9 inches.

• If leg cramping occurs *during pregnancy*, take **requent rest periods with the feet elevated**. Wear com-ortable, **not tight, clothing**. Be sure you are getting nough **calcium**; this is important.

• Here is **an exercise** which really helps stop ongo-ng lower leg cramps for many people: Stand with shoes ff, facing a wall 2-3 feet away. Lean forward, bracing gainst the wall with hands and arms, all the while keep-ng your heels on the floor. When a moderate pull is felt n the calves, hold that position for 10 seconds. Then tand straight for 5 seconds of rest, and lean forward nd repeat. Do 3 stretching cycles.

• Here is **another way to relieve a cramp** in your alf: Sit on the floor or on the bed and draw the cramped eg toward your chest, bending it at the knee. Push your humb gently into your calf, hold it, and breathe nor-nally until you feel the cramp relax.

—Also see Claudication (530), which has the same eg symptoms—but some very special, dangerous causes. It also has additional information on improv-ing the circulation of the legs. Also see Intestinal cramps (364).

ENCOURAGEMENT—In His service, God will place upon you no restriction that will not increase your hap-piness. In complying with His requirements, you will find a peace, contentment, and joy you can never have in the path of sin. Exodus 34:7.

REPETITIVE STRAIN INJURY
(RSI, Overuse Injury, Cumulative Trauma Disorder)

SYMPTOMS—The symptoms develop gradually; at first it may only occur while performing the repetitive activity. They may include pain, aching, tingling, and restricted movement in the affected area. In some cases, tissue swelling occurs in that area.

In the early stages, symptoms may disappear when the affected body part is rested. Later, symptoms may be present even at rest.

CAUSES—Repetitive strain injury (RSI) is caused by activities that involve prolonged, repeated movements of part of the body, especially if the movements are rapid and forceful. Examples of such activities include typing, using a computer mouse, sweeping bar codes over a laser at a checkout counter, cutting hair, playing a violin, or running the 100-yard dash. The problem most often occurs when using a keyboard or working on a production line. Musicians and athletes are also at risk. It can occur at any age, most often affecting muscles and tendons in the arm. The condition may be associated with stress in the workplace. RSI causes approximately 2 in 3 occupational injuries in the U.S.

The condition is more difficult to treat once it has become chronic. If the problem is recognized early enough, there can easily be a complete recovery. But some people wait too long to make needed changes; and the affected muscles and tendons cannot thereafter be used in a repetitive manner without discomfort.

Other disorders that cause pain in the muscles and tendons [such as Tendonitis *(526)* or Carpal Tunnel Syndrome *(470)*] are sometimes classified as RSI. Many people are misdiagnosed and do not make needed changes until the problem has become chronic.

NATURAL REMEDIES

The body will usually heal naturally, if allowed to do so. Here are several pointers:

IMPORTANT MODIFICATIONS

• Stop or modify the activity that is causing the problem. Change your workstation. Use a headset instead of resting the phone on your shoulder.

• The keyboard and mouse should be as close to your body as possible. The monitor (screen) should be directly in front of you at eye level, so you do not have to look up or down. The screen typeface should be large

enough, so you do not have to lean forward to see it.

• The papers you are typing from should be on a slant board or copy stand. Use a wrist rest when typing. Type with a gentle touch. You should only have to move the mouse 30° horizontally away from you. You might want to place the mouse pad on a board that tilts slightly upward away from you. Consider typing on a specially designed keyboard.

• Here is an important point: Your wrists should remain straight as you type! You should not have to bend your hand up or down when typing. If you keep doing it wrong—then welcome to Carpal Tunnel Syndrome! *(470).*

• If necessary, find someone who will sew a pair of cotton gloves which do not cover beyond the midpoint of your fingers. This will keep your hands warmer. Doing this will greatly increase the work "longevity" of your hands. Use those gloves whenever your fingers are cooler than your cheek.

• Maintain proper posture throughout the day. Sit in a chair with a proper-fitting back. You may need a lower back pillow.

• While driving, keep your hands low on the steering wheel in a secure, but relaxed, grip. On long trips, rest your forearms on a pillow on your lap.

• While sleeping, do not lie on your stomach with your head tilted, sleep with your arms overhead, or lie on the injured side. Instead of this, lie on the unaffected side, with one pillow under your head and another under the injured arm. Or lie on your back, possibly with one pillow under each arm up to the shoulders.

• When working, take a 1-2 minute break every half hour and stretch your wrists and neck a little. Roll your shoulders.

OTHER HELPS

• Drink 2-3 quarts of **water** every day. Also drink fresh **vegetable juices** daily.

• An extra 20-30 pounds of **weight** can quadruple your chances of RSI or Carpal Tunnel Syndrome nerve damage. All that extra fat in the wrist area squeezes against the median nerve. **Stop eating meat, fat, junk food, and starches**; and your weight will go down.

Do not use **caffeine** (it drains water out of the body), **nicotine** (it reduces blood flow to the extremities), or **alcohol** (it increases inflammation).

• Make sure you are taking **deeper breaths**, when working and not working. The oxygen recharges your body.

ENCOURAGEMENT—There is a remedy for the sin-sick soul. That remedy is in Jesus. Precious Saviour! His grace is sufficient for the weakest; and the strongest must also have His grace or perish.

CLAUDICATION

(Intermittent Claudication)

SYMPTOMS—Cramping pain, weakness, and tension in a limb (usually the calves) after muscular exercise. Upon resting, the pain always ceases. Typically, after a few moments of rest, the person can begin walking again.

CAUSES—Intermittent claudication (also simply called claudication) is often a symptom of something more serious: **arteriosclerosis** of the femoral and popliteal arteries. When cholesterol-laden plaques narrow the arteries in the heart muscle, the result is angina. When it happens in the leg, the result is claudication.

Other causes include **Buerger's disease** *(285)* or other occlusive arterial diseases of the limbs. **Diabetics** *(547)* tend to have claudication more than the average. **High blood pressure** (above 160 systolic or 90 diastolic) triples the risk of claudication *(see Hypertension, 429).*

Diagnosis of claudication is done by a physician, by taking the "pedal pulse." This is the pulse at the instep of each foot. These pulses should be strong and equal; but if one or both is weak or absent, then there is claudication.

NATURAL REMEDIES

• Maintain a **total vegetarian diet, free from grease and animal foods. Avoid most vegetable oils** also. Because of the connection between claudication and blood vessel diseases, the life you save may be your own. *See Arteriosclerosis (427) and related articles on the heart and blood vessels (418-446).*

• Take **vitamin C** (to bowel tolerance), **vitamin E, B_6, chromium**, and **selenium**.

• Using **nicotine** is ruinous to the health in several ways; choking off circulation to the limbs is one of them. Those who smoke are 6 times more likely to develop claudication *(also see Buerger's Disease, 285).*

• It appears that abnormally high blood viscosity can be a primary cause of poor blood flow. The solution is to drink lots of **water** and use a **diet low in fats, sugars, and concentrated foods**. Those are the foods which have a very low moisture content.

• **Stress** also reduces blood viscosity; so avoid stress.

• A regular **exercise** program is very helpful, especially for those who do it everyday. *See Muscle Cramps (527) for some sample exercises.* Ten repetitions of the exercises should be done at least once a day.

• In addition to other exercises, take a **daily walk**. Build up to a total of an hour, each morning and evening.

• For those who can take them, **hot baths** are helpful. Always keep the head cool with cool washcloths that are changed frequently.

SPECIAL HELPS

• In one 12-week study, a large number of people with claudication were given 800 mg of raw **garlic** daily. Most walked better by their fifth week. Their blood pressure and cholesterol levels were also lower.

• **Ginkgo** improves blood flow through the legs, just as it does through the heart and brain. It does this by dilating the arteries. In a research study, people

who took 40 mg of ginkgo extract daily were able to go 75%-110% farther without pain. But you must take the standardized extract, not the leaf (Ginkgo sometimes produces side effects of abdominal distress, headache, or dizziness.)

• **Ginger** is another remarkable herb, which is almost as effective as garlic in preventing blood clots in the arteries.

• Taking **hawthorn** (120-240 mg of a standardized extract) improves blood flow and ability to walk painlessly.

• **Flaxseed oil** (1 Tbsp. twice a day) contains omega-3, which helps prevent cardiovascular disease. Or take 500-1,000 mg of **omega-3** supplement daily.

• **Carnitine** (2,000 mg, twice a day) is a protein component which helps blood cells work better, even when they are not obtaining enough oxygen.

• People who take 400 IU of **vitamin E** daily can walk farther without pain.

• **Niacin** (500 mg twice daily) widens the arteries, bringing more oxygen to the leg muscles.

—See Muscle Cramps (527) which, in the legs, have the same symptoms. Also see Arteriosclerosis (427) and related articles.

ENCOURAGEMENT—Come apart and worship God. The everlasting assurance shall be yours, that you have a Friend that sticketh closer than a brother.

SIDE STITCHES
(Pain in the Side)

SYMPTOMS—A sharp, temporary pain in the side.

CAUSES—This pain is caused by a spasm in the diaphragm when this muscle, located between your chest and abdomen, does not receive enough oxygen.

Running is a common immediate cause. The dual pressure from the contracted belly muscles (caused by the raised knee during running) and the expanded lungs from above (caused by deeper breathing) can momentarily shut off blood flow to the diaphragm. This causes it to cramp.

Not breathing evenly can cause you to get these cramps, even when heavily laughing.

However, the pain can also come from trapped **gas** in the intestines.

If the pain is only on the right side, it may be due to temporary **lack of oxygen to the liver**.

NATURAL REMEDIES

• **Stop what you are doing** and let your muscles calm down. Exhale deeply and **take slow, deep breaths** in and out. You may wish to massage your side as you do this.

• **Learn to breathe more deeply.** Breathe from the diaphragm more, less from the chest. This is part of the problem.

• Do not do very **strenuous exercise** closer than 2 hours to a meal.

ENCOURAGEMENT—Though now He has ascended to the presence of God and shares the throne of the universe, Jesus has lost none of His compassionate nature. He wants to comfort and help you just now. Psalm 65:3, 111:3.

FIBROMYALGIA SYNDROME
(Chronic Muscle Pain Syndrome, Fibromyositis, Fibrositis, Tension Myalgia, Muscular Rheumatism)

SYMPTOMS—Anxiety, depression, tension, fatigue, chronic muscle aches and pain, joint swelling, headaches (sometimes migraine), irritable bowels, sleep disturbances, and stiffness.

The pain is described as burning, throbbing, shooting, and stabbing. Pain and stiffness are greatest in the morning.

Depression appears to be a key factor. Other symptoms include menstrual problems, palpitations, memory impairment, dizziness, dry eyes and mouth, frequent changes in eyeglasses, and impaired coordination. Lifting or climbing stairs seems hard to do.

As explained below, the existence of "tender points" is a distinctive symptom.

CAUSES—Fibromyalgia is more of a set of symptoms than a disease; and it is primarily caused by stress. Women have it more often than men.

Often mistaken for arthritis, rheumatism, or Epstein-Barr Syndrome, fibromyalgia causes the muscles and joints to tighten up when under stress. The emotions have a powerful effect on the body.

Those experiencing this problem frequently have shallow sleep. Muscle spasms and pain in various places may occur at night or during the day. *Also see Muscular Rheumatism (519).*

Then there are the so-called "tender points." These symptoms are unique to this disease, unlike any other disease. There are 10 pairs of specific points, where muscles are especially sensitive to the touch. Here are those 10 locations:

In the muscles at the base of skull, neck, upper back, or mid-back. On the side of the elbow, around the lower vertebra of the neck, at the insertion of the second rib, in the upper and outer muscles of the buttocks, around the upper part of the thigh bone, and at the middle of the knee joint.

Those with fibromyalgia experience so many sleep problems [insomnia *(448)*, bruxism *(333)*, restless leg syndrome *(527)*, etc.], that they often have chronic fatigue.

The symptoms frequently begin in young adulthood, develop gradually, and slowly increase in intensity until many become incapacitated by the problem.

Sometimes the syndrome disappears; at other times it is chronic. And, in some cases, it comes back in recurring flare-ups.

The cause is not really known; but chronic **depres-**

sion of spirits seems to be involved.

Chronic Fatigue Syndrome *(214)* is similar to fibromyalgia, but less painful.

Prior infection by the **influenza** virus tends to predispose humans to fibromyalgia at a later time.

Of the 3-6 million people with this problem, the majority are women, primarily 25 to 45 years of age.

Physicians prescribe antidepressants for fibromyalgia. These can cause side effects which are not helpful.

NATURAL REMEDIES

DIET

• Maintain a **well-balanced diet.**

• **Do not drink coffee, tea, cola drinks. Do not drink or eat chocolate. Do not take pain relievers.** Avoid all types of **drugs**; they only add to your problems. If you have been taking any of these, the symptoms may worsen for a time when you drop them; but persevere, and you will feel better for having done so.

• Poor absorption of food is involved with this problem. So **eat slowly** of good nourishing food; and **chew it well.** Be sure to take **vitamin / mineral supplementation. Magnesium** is important.

• Drink plenty of **liquids**, including quality water.

• Do not eat **meat, dairy products, white-flour products, processed foods**, or any food high in **saturated fats.**

• Avoid **wheat and brewer's yeast** until your symptoms fade.

• **Food and chemical allergies** may be involved. Try to search out the source of your allergies and avoid them.

OTHER HELPS

• Learn to rest and **be relaxed.** Be able to relax after work. Go out and walk in the fresh air and thank God for your blessings. Indeed, count them all, one by one, and thank Him for every one.

• Determine what your problems are and solve them. Know you are no longer being bothered by those problems because you are working toward solving them or learning to live with them.

• A fair amount of **muscular activity** helps relax a person mentally and emotionally. Enjoy **outdoor activities**, such as gardening or raising flowers. You need a regular amount of daily exercise, **not a hard workout** every so many days. Building up such a regular exercise program will do much to alleviate the problem.

• Take a **hot and cold shower** each morning, to stimulate circulation and help reduce morning stiffness. **Cold showers** are actually better than hot ones for reducing fibromyalgia pains.

• Put 4-6 oz. of **ginger** powder into a somewhat hot bath, to induce sweating and remove toxins. Drinking hot ginger tea has a similar effect.

• Helpful herbs include **comfrey, alfalfa, hops, skullcap, white willow bark, and valerian.**

• Jacob Teitelbaum, M.D. (Annapolis, MD), says that fibromyalgia is specifically caused by a long-term lack of **deep sleep.** He has treated hundreds of patients, with over 85% cured or improved to the point that their symptoms are no longer a problem. He treats the problem as a malfunction of the **hypothalamus**, the master gland in the brain (endfatigue.com). He suggests using each of the following for six months: **Valerian** (160-480 mg) and **lemon balm** (80-240 mg) before bedtime. **Valerian** (100 mg, 3 times a day), for its calming effect. **Kava kava** (200-750 mg before bedtime), to relax the nerves. **Melatonin** (200-300 mcg before bedtime), to help you go to sleep. **Magnesium** (200 mg daily). **Deep massage**: Put three fingers on an area of muscle tension or tenderness; apply enough pressure so your fingers won't slide. Make 5-10 circular motions, rubbing just hard enough to produce mild discomfort only. Then move a hand-width away, to a new area, and begin again. He says to also take a high-potency **multi-vitamin supplement.**

Research studies have demonstrated each of the following:

• An early study found that **vitamin E** (100-300 IU daily) produced positive and sometimes dramatic results.

• Fibromyalgia patients are low in **vitamin B_1** and **thiamine.**

• **Cayenne**, applied topically, alleviates the pain.

• **Chlorella** also decreases the pain. All **deep green vegetables** also help do this as well.

• **Aloe vera** (taken orally), **olive leaf**, and **St. John's wort** each reduce the symptoms.

• Regular **exercise** provides positive, but short-term, benefits.

• **Melatonin** helps correct the impairment of Slow Wave Sleep (deep sleep) experienced by the patients.

• **Magnesium** deficiency within muscle fibers is believed to be a factor in causing fibromyalgia.

• Taking **malic acid** has caused significant improvement in the number of tender points. It binds and removes aluminum with iron (or just aluminum) from the brain and excretion of aluminum and iron from the body. The best single source of malic acid is **prunes.** The other good sources are **apples, limes, passion fruit, raspberry leaf, quinces, cherries, peaches, apricots, nectarines, plums, grapes, strawberries, pears, and tomato.** It is also in the herb, **fennel.**

• Researchers give 2,400 mg per day of malic acid, combined with 600 mg magnesium, in order to effect good results in patients. Malic acid is available from health-food stores in both tablet and capsule forms. (The two forms are calcium malate and magnesium malate.)

• Being happy helps fight pain and inflammatory

HERBS - Index: 107 / Facts: pp. 107-152 / Frequent dosage: 1 tsp. mixed herbs in 1 cup boiled water /
VITAMIN-MINERAL - Dosages: pp. 84-106 / *HYDROTHERAPY* - Therapy Index: 153 / Disease Index: 209.

conditions. **Cheerfulness and even laughter** stimulates the brain to produce *catecholamines* (known as "alertness hormones"); these trigger the release of *endorphins*, which are natural painkillers.

—*See Acute Muscular Rheumatism (519), Chronic Fatigue Syndrome (214), and Depression (494).*

ENCOURAGEMENT—Real happiness is found only in being good and doing good. The purest, highest, and most rewarding enjoyment comes to those who faithfully fulfill their appointed duties. Living for God is the best way to live. 1 Peter 1:8.

MYELITIS

SYMPTOMS—Moderate fever, loss of appetite, numbness, tingling, burning, "girdle pain" at level of the disease (pain encircling the trunk at the point where the disease is). Paralysis soon develops, and may become complete.

CAUSES—This is inflammation of the spinal cord. Here is Kellogg's remedial treatment for this crippling nerve infection:

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ACUTE AND CHRONIC MYELITIS AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

MYELITIS (ACUTE) —

COMBAT INFLAMMATORY PROCESS IN SPINAL CORD—**Ice Bag**, continuously changing **Fomentations** for 5 minutes, every half hour. **Revulsive Compress** to the spine. **Fomentation** for 20 minutes every 3 hours, during intervals between. **Heating Compress** to spine at 60° F., renewed every 15 minutes.

AFTER ACUTE STAGE HAS SUBSIDED—**Alternate Compress** or Alternate Douche to spine, 3 times a day.

PAIN AND PARESTHESIA IN LEGS—Hot Leg Pack, **Hot Footbath**, Hot Half Bath, **Revulsive Compress** to spine several times daily, duration 15-60 minutes.

GIRDLE SENSATION—**Hot Trunk Pack**, followed by **Cold Mitten Friction**. **Hot Abdominal Pack** that is well-protected. **Fomentation** to spine, followed by **Heating Compress** to spine.

NEURALGIC SPINAL PAIN—**Fomentation** or Hot Sponging of spine, followed by **Heating Compress**.

PARAPLEGIA—**Alternate Compress** or Fan Douche to spine and legs, **massage**.

SENSORY PARALYSIS—Alternate Spray Douche, **Alternate Sponging**, Alternate Compress, Percussion Douche (twice daily).

MUSCULAR SPASM—**Revulsive Compress** to spine. **Fomentation** over irritated muscular groups. Follow by continuous **Heating Compress**, repeated twice daily or as often as necessary. **Heating Compress** to spine.

GASTRIC CRISES—**Hot and Cold Trunk Pack, Revulsive Gastric Compress, Fomentation to spine, Hot Footbath**, Hot Leg Pack, **Hot Full Bath** or Hot Sitz Bath.

CONTRAINDICATIONS—Avoid Cold Full Baths and other general cold applications. Carefully avoid burning or blistering him with hot applications.

MYELITIS (CHRONIC) —

GENERAL—**Short sweating procedures**, followed by **graduated cold applications** twice a day. **Revulsive Compress** or Fan Douche to Spine, temperature 120°-170° F.; Prolonged **Neutral Full Baths**, for 1-6 hours. **Heating Compress** to spine. Later stage: Alternate Douche or **Heating Compresses** to spine.

PRICKLING SENSATION IN LEGS—**Revulsive Douche**, Hot **Fomentations** or **Pail Pour** at 96° F. to spine and legs.

DURING EARLY STAGE AND EXACERBATIONS—**Pail Pour** to spine (96° F.), 2-10 minutes, 2-3 times daily. Absolute **rest** in bed and spinal **Fomentation** every 4 hours, **Heating Compress** during the intervals between.

CONTRAINDICATIONS—Avoid Cold Full Bath, very Cold Douche, Cold Pail Pour, and all prolonged cold applications.

ENCOURAGEMENT—Not one sincere prayer is lost. Amid the anthems of the celestial choir, God hears the cries of the weakest human being.

HERNIA
(Rupture, Abdominal Hernia, Femoral Hernia)

SYMPTOMS—Visual awareness of the problem. In the case of a strangulated hernia, there is pain, vomiting, and abdominal distention.

CAUSES—A weak spot develops in or around a muscle wall, usually as a result of straining while lifting heavy objects. An *abdominal hernia* occurs in the abdomen (lower belly), often in the lower left or lower right. A *femoral hernia* occurs in the femoral muscle of the upper front leg. The weak spot slowly enlarges and becomes an opening.

If it is in the abdomen, a loop of intestine may protrude from it at times. Unless corrected, such a condition will grow progressively worse. A *strangulated hernia* occurs when a loop of intestine is caught in the opening and becomes pinched, blocking the intestinal passage. Gangrene of the bowel, peritonitis, and death may result if a strangulated hernia is not given prompt surgical attention.

A hernia in a child is less serious; and the opening may repair itself if the protruding bowel loop is pushed back and held in place by a firm band or adhesive strap for a few months.

Hernias can also develop near the navel; these are called paraumbilical hernias. These are most common in women who are overweight or have had several pregnancies.

NATURAL REMEDIES

• First, a truss can be purchased and worn. This is not a very practical solution; but it may be necessary for a time if funds are not available for an operation.

• Second, a surgical operation can be performed. This is often the best solution, if done by a properly

trained physician.

• Third, simple remedies may be applied which may, or may not, succeed. If they do not, then an operation can be performed.

Here are some suggestions:

• If you are overweight, it would be best to **go on a cleansing program, to lose some weight** and cleanse the system.

• Eat a **nourishing diet**, supplemented by **vitamins and minerals.** And **avoid all grease, meat, and junk foods.**

• Avoid **foods cooked by microwave.** Doing so increases the likelihood of developing a hernia.

• Begin a program of **exercises** each day to strengthen your muscles (abdominal or leg, according to where the hernia is). For example, push-ups from the knees will strengthen the abdominal muscles.

• You may wish to try an astringent tea. Make a very strong tea of **white oak bark**, consisting of one cup of finely broken bark to one quart of water. Boil it 2 minutes and let stand 2 hours. Strain and add 1 tsp. of **alum powder**. Wet a folded piece of cloth in the tea and place it over the hernia. Cover with plastic and hold in place with a truss, elastic bandage, or adhesive tape. Using a clean cloth, repeat this about 4 times a day for a month. The tannin in the bark and the alum will tend to pull together and thicken the area. This may, or may not, close the area.

• You may also try a poultice made of **comfrey leaves, bistort root, and giant Solomon's seal root**. Renew every 12 hours; keep it on continually for a month.

• A **shave grass tea compress** may also be used.

• Another possibility is, for a month, apply a **poultice** at night and a **compress** during the day.

—Also see Hiatal Hernia (347) and Umbilical Hernia (534).

ENCOURAGEMENT—Through all our trials, we have a never-failing Helper. He does not leave us alone to struggle with temptation and battle with evil. Give Him all your heart and hear Him say, "Fear not; I am with you." Luke 12:32.

UMBILICAL HERNIA

(Omphalocele, Navel Hernia)

SYMPTOMS—A grape- to basketball-sized skin sac in the belly button.

CAUSES—"*Omphalos*" means navel, and "*kele*" means hernia. Babies may be born with an umbilical hernia, which developed behind the navel due to a weakness in the abdominal wall.

This flaw, called a *hernial ring*, occurs more frequently than might be expected. The mother did not receive enough **vitamin A and/or zinc** during pregnancy.

NATURAL REMEDIES

• If the hernial ring is larger than your finger tip, **surgery** is needed to correct it.

• If the defect is about the size of the diameter of your finger tip, the following method has been used with good success, to heal it at home without surgery:

• Place a golf-ball size **of virgin wool** on the hernia and tape it firmly down to the level of the skin's surface. Three times a day, remove the wool ball. Make sure the fat is pushed back into the belly cavity; carefully use your finger to do this. At the same time, rub the hernial ring in a rotary fashion for several minutes, to irritate it. Over a period of several weeks or months, the defect will fill in and entirely heal; so no surgery will be needed.

—Also see Hernia (533) and Hiatal Hernia (347).

ENCOURAGEMENT—Educate the soul to cheerfulness and thankfulness to God for the great love which He has for you. Christian cheerfulness is the very beauty of holiness. Isaiah 55:12.

SKELETAL-MUSCULAR - 5 - SPRAINS

MUSCLE INJURIES

(Sprains and Strains)

SYMPTOMS—Bruised wrists, ankles, fingers, knees, back, hips, and sore or swollen muscles.

CAUSES—*Sprains* are a painful stretching of the ligaments of the joints; this is caused by lifting, sudden stops or turns, injuries, or falls.

Strains are more severe; they involve torn ligaments and a torn joint capsule, with bleeding and swelling.

Muscle injuries can occur when **muscles are strained too much, used too long or hard, suddenly twisted, or hard falls occur.** Athletes frequently have such problems.

First degree: mild injury with little pain and little loss of movement. *Second degree:* moderate injury, sharp pain with motion, swelling, possible discoloration. *Third degree:* severe injury, extreme pain, swelling, spasmodic muscle contraction.

Note: A *bad bruise* on any part of the body can be treated as for a sprain or strain.

To prevent strains and sprains, do stretching exercises both before and after exercise. You are at the highest risk of such injury in contact sports.

NATURAL REMEDIES

IMMEDIATELY

• Immediately: Move the injured part until you find a position which hurts the sprained area the least. Leave it there for 2 minutes, all the while breathing deep and regular. Then slowly return it to its normal position. If it is a minor sprain, this may solve the problem.

• If there is still pain, feel for the tender point; and

then lightly press it till it reaches the point of nearly unbearable pain. Hold it until the pain eases (about a minute). What you did was to reduce the maximum muscle contraction at that point. If the pain does not ease, then the sprain is too severe and perhaps you need to see a doctor.

Next, apply water therapy:

HYDROTHERAPY

• According to one view, sprains should be treated with **ice** or **very cold water**. Follow this by bandaging the injury with an Ace bandage. This is known as RICE: rest, ice, compression, and elevation.

• But, according to a different view, sprains should be initially treated with **alternate hot and cold applications**—especially if it is in the *wrist, elbow,* or *ankle*. This method works *better* than using cold alone! Here is how to do it:

• *If the injury is in the wrist, elbow,* or *ankle,* put the injured part in very **hot water**. And keep it there 20-30 minutes. Every few minutes take it out of the hot water and plunge it into **cold water** for about a minute, then back into the hot. Keep the hot water hot. This can continue for up to 2 hours with good results. Repeat this for several days; and, twice a day, **massage** around the area.

If you use the cold method alone on a sprain, you may not be able to walk on a sprained ankle for days; use the alternate hot and cold method, and you may be much better in half the time.

• (A third method calls for **cold** on strains to begin with, to reduce initial swelling, followed very soon afterward by **alternate hot and cold**.)

• If the sprain or strain is *in the back* or *shoulder,* treat it with **hot fomentations, short cold, and massage**.

• While the area is hot from the hot water, **slowly move it about** without causing pain. If necessary, move it with your hand. But do not stretch or stress the joint beyond its comfortable limits.

• In addition to the above, very severe strains frequently require a **cast** similar to that used for a fracture, so the injured joint area can be immobilized for more complete rest.

• **DMSO** (dimethyl sulfoxide) is a liquid that can be applied externally to the injured area, to relieve pain, reduce swelling, and promote healing. But only buy it in a health-food store. Be sure your hands are clean when you apply the gel.

DIET

• Research studies found that taking **bromelain** (125-450 mg, 3 times daily on an empty stomach) speeds healing of contusions, sprains, ecchymoses, hematomas and other soft tissue injuries. (*Bromelain* is the active ingredient in pineapple.)

• Drink plenty of fresh, raw **vegetable juices**.

• Each day take **calcium** (1,500-2,000 mg), **magnesium** (750-1,000 mg), **maganese** (15 mg), and a **multivitamin** supplement.

HERBS

• Here is a liniment for sprains and bruises, recommended by Dr. Christopher: Mix 2 oz. each of **lobelia fluid extract and cayenne**. Combine with 1 tsp. each of **oil of spearmint, rosemary, and wormwood**. Apply as much as can be absorbed. To speed the action, place a hot-water bottle on the area.

• Here is Jethro Kloss' herbal formula: Mix equal amounts of **skullcap, gentian, buckthorn bark, valarian,** and add a pinch of **cayenne**. Put a heaping tsp. in boiling water. Take a tablespoon (or more) every hour.

• Here is the Kloss liniment: 2 oz. **myrrh**, 1 oz. **goldenseal**, and ½ oz. **cayenne**. Rub gently on the affected area.

• Make a poultice of **burdock** leaves or drink burdock tea. Towels can be wrung out of hot burdock or **catnip** tea and applied several times daily.

• Apply compresses of **yellow dock**.

• Bind **orange peel** (with white side next to skin) over the sprain to reduce swelling.

• Put **raw or roasted onions** in a poultice on the sprain.

• Apple cider **vinegar** compresses often relieve the sprain. Apply strips of newspaper, soaked in vinegar, then wrap this with airtight material.

• Add **ginger** tea to bathwater and soak in it.

• **Boswellia** or **goldenseal** can be applied to reduce inflammation.

• **Ginger** and/or **feverfew** will reduce pain and soreness.

• Mix **fenugreek and flaxseed** powder and apply as a poultice, to reduce swelling. Or apply a **mustard** poultice.

LATER EXERCISES

• *Do A to Z for ankle injuries:* While standing (holding onto something for support) or sitting, move your foot and trace every capital letter of the cursive (printed) alphabet. This works all the ligaments of the ankle, prevents adhesions, and improves healing.

• *Towel exercise for ankle injuries:* Stand, holding onto a table, and pick up a section of a towel with your toes; then drop it and pick up another section, etc. Do this once every morning and once every evening.

• *Thumb injury:* About a week after the injury, begin twiddling your thumb in a circle, clockwise, then counterclockwise. Then try to touch it against each of its companion fingers. Next, pick up a newspaper sheet, with the injured hand, and try to crumple it up into a ball.

• *Shoulder injury:* Bend over slightly so your arm is free; then swing it in a circle, in a pendulum, and in figure eights. This will reduce adhesions.

If there is significant swelling, you may need to see a physician.

—*Also see Athletic Workouts (536).*

ENCOURAGEMENT—Those who put away iniquity from their hearts and stretch out their hands in earnest supplication unto God will have that help which God alone can give them. In His strength, you can fulfill

His will for your life. Psalm 68:3.

ATHLETIC WORKOUTS (Strengthen and Build Muscles)

Protecting and strengthening muscles is an important part of physical conditioning, along with aerobic exercise. Muscle fibers are packed with thin protein filaments, that contract to allow movement. The strain of exercise creates tiny tears in muscle tissue. The body produces proteins to repair them. Over a period of time, the proteins accumulate, increasing the size of muscle fibers and producing larger, stronger muscles. However, maintaining a healthy body, by giving it proper nourishment and care is actually more important than merely building larger muscles.

Here are a few helpful suggestions for those engaged in ongoing athletic workouts or other heavy labor or activity:

NATURAL REMEDIES

• Maintain a **nutritious diet**, including **full vitamin / mineral supplementation**. Eat **salads, whole grains, seaweed, seeds, nuts, and drink vegetable juices**.

• Maintain strong bones. *See Strengthening the Bones (505).* Include silica (**horsetail and oat straw herbs**), to help calcium strengthen the bones.

• **Vitamins A, D, E, C, zinc, and manganese** are needed.

• **Locate your allergies** and eliminate them. If you have food allergies, exercise may increase the absorption of the allergenic food, resulting in severe reactions. *See Allergies (576) and Pulse Test (575).*

• **Glucose** is the main fuel for the muscles. It is stored in the liver and muscles in the form of glycogen. You can only work as long as you have stored glycogen ready to be changed into glucose. The best way to store up this glycogen is to eat **complex carbohydrates**.

• Although body fat can also be converted to energy, avoid eating much **fat**. Focus on getting carbohydrates, not fat, in your diet.

THE WORKOUT

• At **the meal before a workout**, do not eat much roughage, requiring energy to digest; it will make you sluggish. At that meal, avoid peaches, grapes, bananas, and celery.

• **Stretch and warm up** your muscles before exercising. Before doing this, muscles are about 98° F. and stiff. After a 5-minute warm-up, they are several degrees higher and ready for action.

• **Drink fluids** before, during, and after workouts. To prevent dehydration and cramping, do this whether or not you are thirsty.

• Be sure to obtain adequate **electrolytes**. A 50-50 mix of **fruit juice and water** will help supply this.

• **Proteins** are needed for muscles and tissues; they are not an energy source. The need for protein does not increase during a workout. Excess protein intake (at any time) increases urine elimination, which produces dehydration unless you are drinking enough water. Eating too much protein can damage the kidneys.

• **Do not use steroids** in order to increase muscle mass and athletic performance! You may see temporary gain, but you are injuring your body. In men, long-term use can lead to cancer, sterility, breast enlargement, shrinkage of the testicles, and osteoporosis (hollowing of the bones, leading to breakage). Once the steroid treatments are stopped, all the buildup is lost, and fat tends to infiltrate the tissue. In women, excess facial and body hair, breast cancer, shrinkage of the breasts may occur. Steroids tend to be psychologically addictive. The person feels dependent on taking them, until the physical damage becomes deeply ingrained. Anabolic steroids can produce heart attacks.

• **After a workout**, keep moving until you are rested. Do not take a shower until your body temperature has cooled down. This cooling-down wait will help you avoid cramping and even a heart attack.

• Do not lift weights if you have a heart problem. At the moment of the lift, breathing stops, circulation to the heart decreases, and great pressure is placed on the heart and lungs by surrounding muscles.

Quotation: "Although muscular work is the largest single factor in determining energy needs, it has no appreciable effect on the protein requirement . . Although there is no basis for the idea that a man requires extra meat because he is doing muscular work, he does require more fuel foods, in order to provide necessary energy . . The energy for muscular work usually comes chiefly from carbohydrates."—*L. Jean Bogart, Nutrition and Physical Fitness, p. 101.*

ENCOURAGEMENT—Real happiness is found only in being good and doing good. Live to bless others, and you will find your deepest satisfaction. Live only for yourself, and you will perish alone. John 15:11.

SKELETAL-MUSCULAR - 6 - SPINE

POSTURE, IMPROVING

SYMPTOMS—A round-shouldered appearance.

NATURAL REMEDIES

It is easy, over the years, to let your posture collapse. Here are several suggestions to get it back into shape:

• Relax and **practice standing up straight.** Put your back and head against a wall as you look forward. Hold it for a minute and get a feel for what the ideal is like.

• Recognize that, as you go through the day, you will not always maintain this ideal. But it gives you something to work toward.

• The best place to practice good posture is when you are walking outside. **Try to walk erect.** Notice that doing so makes it easier to take full breaths of air, and you feel better.

• Then, when it is time to work or relax, do not worry about keeping a ramrod back when you are stooping over, writing, washing the dishes, etc. **Real living is not ramrod;** it is a variety of positions.

• But, when you take your outdoor exercise, return closer to that ideal of perfect posture.

Here are more ideas:

• When you stand, **keep both feet flat** on the floor. Resting on one leg leads to curvature of the back.

• **Adjust your chair height,** so that your thighs are parallel with the floor and your knees are level with, or slightly higher than, your hips. If not, they pull your body forward. Your back slumps; and you work harder, trying to keep your back upright.

• If you place a **small pillow** between the small of your back (the lumbar area) and the back of the chair, you will tend to sit straighter.

• As you are sitting, you ought to be able to feel the **bones in your buttocks** against the seat. If you cannot do so, wiggle around until you can. When you cannot feel them, you are slumping.

• When seated at a table and not working, **sit 6-8 inches away** from it. This will keep you from slumping over onto it. Only your wrists will be on the edge of the table before you. Maintain this same distance if you are working on a computer or typewriter.

Television news announcers use the following two methods, to make a better appearance when they talk while being seated:

• (1) Tend to **sit on the edge** of your chair; you will be less likely to slump back into it.

• (2) While sitting on the edge of your chair, curl **one foot under the chair** and stretch the other out for balance. This will help keep your back straight.

• **Do not cross your legs.** Doing so throws your body out of alignment. Keep your feet flat on the floor.

• In a car, **pull the seat toward the pedals** until your knees are bent and slightly higher than your hips and your thighs are parallel to the floor. Either place a **small cushion** behind the small of your back or use the seat adjustment available in some cars.

• **Get enough sleep** at night. You cannot stand or sit straight if you are exhausted.

• Sleep on a **firm mattress.** When you lie on your side, both hips and shoulders should sink in just a little.

• When sleeping, either **sleep on the side** (with a pillow under your head that is thick enough to keep your head untilted) **or sleep on your back** with only a thin pillow under your head and possibly a small pillow under your knees.

• Walk, run, cycle, or **do exercises and stretching,** to keep your muscles extended and in good condition.

• Here is a way to rest your back and improve your posture at the same time, either during break or at the end of the day: **Lie on the floor** for a few minutes with your legs on a low chair or stool.

ENCOURAGEMENT—A ransom has been paid for the souls of men; but we must individually surrender our lives to God, so that we may claim that ransom. God has a heaven full of blessings for you.

BACKACHE

(Low Back Pain, Lumbago, Sciatica, Slipped Disc, Lumbar Disc Herniation, Spinal Disc Prolapse)

SYMPTOMS—Pain in the back, frequently in the lower back.

If pain comes after lifting something heavy, after coughing, or after unusually heavy exercise, and the pain prevents you from moving or shoots down one leg, you may have a herniated disc.

CAUSES—Backache, or pain felt in the spinal column, is one of the most common reasons for hospitalization in the Western world. Your spinal column has a complicated interconnection of muscles, tendons, bones, and ligaments.

It is helpful to identify the various parts of the spine, also called the *vertebrae* (singular is *vertebra*): The top part of the spine, where the neck is located, is called the cervical spine (or *cervicals*); the shoulder and midpart (which protrudes outward in an adult) is called the *thoracic*; the lower portion (called the hollow of the back) is the *lumbar*; and the bottom part (ending in the tailbone or *coccyx*) is the *sacrum*. The first cervical is the *atlas*. This enables your head to tilt up or down. The second is the *axis*; it permits your head to turn from side to side.

Aches and pains in the lower back can be a chronic problem. This pain can be in the spine or sacroiliac. The *sacroiliac joint* connects (*articulates* is the correct word) the spine to the pelvic bone. (There can also be pain in the *muscles* of the lower back; this is called *lumbago, 540.*)

A *subluxation* occurs when two vertebrae get out of proper alignment with one another. A chiropractor puts these back in place for relatively little cost.

Sciatica (465) is chronic pain in the sciatic nerve, which is the largest nerve in the body. This nerve, which passes down through the upper leg, can experience *neuralgia (462)* or *neuritis (467)* as a result of a pinched nerve in the lumbar region. If the problem is not solved, eventually the painful leg may no longer receive nerve signals from the brain or the central nervous system. When that happens, you can no longer lift it and walk.

The inrvertebral *discs* (also spelled *disks*) are made of cartilage and act as cushions between the vertebrae. Each disc has a tough, fibrous, outer layer surrounding a soft interior.

Lumbar disc *herniation* and lumbar disc *prolapse* occur when the disc herniates (ruptures or breaks) and some of this soft inner disc material pushes outward against the spinal cord to one degree or another. This may be very serious. As in sciatica, it can lead to muscle wasting, reduced nerve reflexes, and muscle weakness. Disc herniation and prolapse are often erroneously referred to as a *"slipped disc."*

Causes of lower-back pain include **wrenched or damaged muscles, bones, tendons, ligaments, kidney or bladder infection, prostate problems, female pelvic disorders. Overeating, overdrinking, eating the wrong kinds of food, and constipation** can also be involved. The spinal bones, and muscles attached to them, are weakened by wrong habits. Chronic conditions causing back pain include **arthritis, bone disease, or abnormal curvature of the spine** *(scoliosis, 541).*

Other causes of back pain are **poor posture, bad walking habits, improper shoes, lifting, straining, calcium deficiency, slouching when sitting, or soft mattresses.**

A common cause of lower back pain is emotional stress. **Feelings of fear, anger, or anxiety** increase muscle tension on the face, head, and spine. This crams joints together, overworks muscles, and increases pain. In addition, anger, anxiety, exhaustion, illness, or depression causes the brain to increase its sensitivity to pain.

There is a definite relationship between a smoker's cough and severe back pain. Injecting the **nicotine** equivalent of one cigarette decidedly reduced the measured blood flow in the vertebral body. It is also thought that using tobacco interferes with the elasticity of connective tissue.

Sometimes a serious case of **constipation** will cause an ache in the back, from **impacted stools or pressure from gas.**

(More rarely, back pain can result from **congenital abnormalities, metabolic disorders, cancer.**)

The back pain can also be the result of an **excess of lactic acid in the muscles**, following muscular exercise. Drinking enough water helps to lessen this problem.

The body twisting needed for **batting, golf, tennis, weight lifting, basketball, football, and bowling**—all put strains, often very severe, on the back.

Where can you go to get help with your bad back? There are lots of experts out there:

Chiropractors adjust the back by pushing and thrusting. They also recommend nutritional and lifestyle changes. In 1994, the U.S. Agency for Health Care Policy and Research issued a report that chiropractors generally provided the most effective treatments for acute back pain. They cost far less, do the job quicker, and do not give medicinal drugs (most drugs are usually poisonous). The *British Medical Journal* reported that chiropractic treatments proved more successful than hospital treatments in nearly every way.

X-rays are generally considered a routine part of back pain diagnosis; yet only a few back conditions show up on X-rays! If the pain is caused by muscle strain or a herniated disc, an X-ray will not reveal anything because muscles, discs, and ligaments are all soft tissues. Avoid unnecessary X-rays! Beware of X-rays if you are pregnant.

Orthopedic surgeons are another source of help. These are medical doctors who also do back surgery; they are very likely to recommend an operation—and that is something you want to avoid, if at all possible.

In addition to prescribing drugs, *osteopaths* can also do back surgery; but they are less likely to do so.

Physiatrists, also called doctors of physical medicine, are also medical doctors. They have a good record of helping to solve serious back problems (such as disc problems) without resorting to surgery (which they are not licensed to do). They recommend lifestyle changes, back braces, etc.

Physical therapists try to restore muscle strength and joint and spine mobility through a range of motion exercises, etc.

Bad backs cost the country a fortune: $16 billion a year in medical treatment, and $80 billion in lost wages and productivity. At some time in their lives, 80% of Americans experience back pain, usually lower back pain. About 45% will have repeated attacks.

Which back pains are the most serious?

Back pain that comes on suddenly, for no apparent reason.

Back pain that is accompanied by other symptoms (such as fever, stomach cramps, chest pain, or difficult breathing).

An acute attack of back pain that lasts more than 2-3 days, without any relief.

Chronic pain which lasts more than 2 weeks.

Pain in the back which radiates down the leg to the knee or foot.

Back pain plus higher temperature or weight loss could indicate **cancer or another trunk disease.** Pain in one side of the lower back could be **kidney infection** (or lack of water drinking). After an accident, a sudden loss of bowel or bladder control, pain or numbness in a leg, or pain after coughing indicates a **herniated disc.**

NATURAL REMEDIES

SIMPLE BACK PAIN

First, we will consider less serious back pain:

• The most common cause of backache is muscle strain. **Rest** will generally eliminate the problem. Bed rest for 24 hours may be needed.

• Soaking in **a tub of warm water** can be quite relaxing to a strained back. **Epsom salt baths** are relaxing and antispasmodic.

• For the first 72 hours after a back strain occurs, an 8-minute **ice massage** often helps. Use ice cubes (or frozen water in a paper cup or frozen fruit-juice can). Massage the area about 6-8 inches around it.

• After 72 hours, use **alternate hot and cold** applications. Apply a wrung-out hot towel for 30 seconds, followed by brief cold. Do this 4-5 times.

• **Ice packs** are especially helpful in relieving muscle spasms.

• **Moist heat** reduces local inflammation and increases blood flow to the area.

• **Avoid long bed rest.** Some people think that staying in bed for a week will help back pain. This is not true. If you remain in bed a week, it will take two weeks to rehabilitate.

• **Stretching** a sore back will tend to accelerate the healing process. Gently bring your knees up from the bed and to your chest. Once there, put a little pressure on your knees. Stretch, then relax. Do this again. Do not underestimate the value of this.

HERBS

• **Cayenne** contains *capsaicin*, which interferes with pain perception, while at the same time triggering production of endorphins. Mash a red pepper and place it on the painful area. Or sprinkle the powder in vegetable oil, mix it together and apply. If it irritates your skin too much, stop using it.

• **Peppermint** and **spearmint** contain menthol. Camphor is in **coriander, spike lavender,** and **hyssop**. All these herbs reduce pain, when applied to the back.

• Herbs containing essential oils relieve back pain. These include **thyme, rosemary, and sage**. They contain *thymol* and *carvacrol*, which help muscles relax. To use them, add a few drops to a teaspoon of vegetable oil and rub into the affected area.

• Herbs containing *borneol* and *bornyl-acetate* relieve back spasms. Such herbs include **sage, cardamom, and rosemary**. Mix with oil and rub them in.

• Here is one doctor's formula for reducing back pain: Mix 2 parts **uva ursi** and 1 part each of **dandelion root, marshmallow, ginger, and plantain**. Simmer 2 oz. of the mixture in 1 quart distilled water 10 minutes, covered tightly. Steep for 10 minutes; strain. Drink 1 cup, 3 times daily.

PREVENTING BACK INJURIES

Preventive measures that will help you, either before or after experiencing back problems:

• **Dietary principles: Reduce fat** in your diet. The greater the deposits of fatty plaque, the greater the degeneration of spinal discs. Your diet should be high in **minerals** and **vegetable proteins**. Vegetarians have stronger bone density. Uric acid increases back pain; so **stop eating meat**. Also stop **caffeine, tobacco, and alcohol**.

• Most people with back pain have a problem with short, tight, rigid back muscles. And it can be relieved by **improved posture while sitting, standing, working, regular aerobic exercise, stretching, and exercises that help strengthen the back muscles.**

• **Special helps**. Take frequent stand-up breaks throughout the day, if you are sitting too long. Carry smaller bundles; and divide the weight onto both arms. If you use a shoulder bag, frequently switch it to the other side. Make sure the computer screen is at eye level. Use a slanted bookstand to copy from.

• **Lifting instructions:** Be very careful when lifting something. Take several deep breaths, to increase muscle strength; and then squat and slowly lift with the legs, not the back, and hold the object close to your body. Do not lift from a bending forward position (opening windows, lifting things from deep in the car trunk). Only lift something in front of you, not off to the side.

• If you cannot manage a squat, put one knee on the floor, then use your arms to move the object onto your opposite thigh (which is horizontal). Then, with a firm grip on the object, simply stand up.

• **Be warm, not exhausted.** Keep the body warm and do not become overly fatigued. When the muscles are chilled or you are exhausted, it is easier to injure joints because the muscles are not able to do the work needed.

• **Not after hot baths**: Do not take a hot bath just before doing heavy exercise; for your muscles will be in a weaker condition.

• **Proper nutrition**, including adequate amounts of **calcium, minerals, vitamin D**, etc. *See Strengthening the Bones (505) for much more on this.*

• **Walking and rowing** are good for the back (walking is good for just about everything!).

BEDTIME

• When sleeping, either a **firm mattress** should be used or a ¾-inch thick ply board should be placed beneath the top mattress. If needed, place 1-2 **pillows** under the knees, to straighten the lumbar curve. *When lying on the side*, **flex the knees** and, if needed, place a **pillow** between them.

• **Do not sleep on the stomach**; it increases the swayback and twists the neck. This is due to the fact that the trunk, being heavier, sinks farther into the bed, causing the back to arch. (One expert says to sleep on your stomach if you have sciatica; but most do not recommend it because of the twist it puts in your neck.)

• It is reported that **water beds**, when they do not make a lot of waves, may help people with back trouble to sleep.

• *When you get out of bed*, roll out slowly and carefully. **Do not sit straight up** in bed.

• *If you have back pain*, slide to the edge of the bed. Then, keeping your back rigid, let your legs off the bed first. That will act as a springboard, lifting your upper body up and off the bed.

• **If your bed has a slight sag** in the middle, it can give you a low-back pain in the morning. Place a ¾-inch plyboard under your mattress, to level it out.

WHEN STANDING AND SITTING

• **Good posture** when sitting, standing, or walking should be the goal.

• **When sitting**: Sit in a straight chair with a firm back. The knees should be higher than the hips; if necessary, use a small footstool. Avoid soft sofas and stuffed chairs. Chair arms help support the shoulders and upper back. Get up and move about every so often.

• **When in a car**, push the car seat forward, to raise the knees higher than the hips. This lessens back and shoulder strain. Use safety belts. Look for a car with adjustable lumbar support; and adjust the support down as low as it goes. Then, if necessary, raise it a notch or two.

• **When standing**: Do not stand in one position for long periods. Do not lean against things. High-heeled shoes will bring trouble sooner or later. Women should wear low-heeled shoes if they want to protect their pelvic organs and spine.

EXERCISES

Exercises to build the muscles are very important if you would avoid back trouble. Here are several which will strengthen the back:

• **Do press-ups**. (These are half a push-up). Lie on the floor, on your stomach. Keep your pelvis flat on the floor and push up with your hands, arching your back as you lift your shoulders off the floor. This will help strengthen your lower back.

• **Do floor swimming**. Lie on your stomach on the floor. Raise your left arm and right leg. Hold for one second; then alternate with the right arm and left leg. Go back and forth. This extends and strengthens the lower back.

• **Do a crunch sit-up**. Lie on your back on the floor, with knees flexed and feet flat on the floor. Cross your arms with your hands on your shoulders. Raise your head and shoulders off the floor as high as you can while keeping your lower back on the floor. Hold for one second; then repeat.

• **Lean over exercise**. Sit in a chair and lean forward until pain is felt; breathe out and slowly lean farther, stretching muscles further.

• **Knee pulls**. Sit in a straight-backed chair. Lift your right knee, clasp it in both hands, and pull it as close to your chest as possible. Exhale deeply as you feel tension or mild pain in your back. Repeat with the left leg. Do several repetitions. / Do the same exercise while lying on floor, but pulling both knees up at the same time.

• **Reverse ankle pull**. Stand behind a straight-backed chair. Bring your right ankle up behind you, grasp it with your right hand, and gently but firmly pull upward toward your back so your thigh muscles stretch. Exhale as you pull. Do the same with the other leg.

• **Know your limit when exercising**. If you feel fine 1-2 days after such exercises, then it is safe to continue them at the same intensity.

• **Give yourself a back rub**. With or without some oil on your hands, stroke gently along the tops of your shoulders and up and down your back. If you feel areas that are tight, rub around and press into those tight spots. This will relieve tension and stiffness in your lower back.

• *Spinal surgery:* Should you have a back operation? Sometimes the problem is so serious that a back operation is necessary. But, if at all possible, try to avoid having one. Not only are they expensive, but very frequently they do not solve your movement and pain problems. It is an intriguing fact that, according to U.S. government reports, only 1% of those with back pain obtain relief from back surgery. And there is always the possibility that the operation will only result in greater pain, more serious damage, and even less mobility. But, after weighing all the possibilities, you may still decide to undergo it. A full 80% of those who experience painful back trouble recover in four months without surgery. There are 20 times more back operations in America than in Canada or Europe.

—Also see Lumbago (below), Sciatica (465, 537), Neuritis (467), and Scoliosis (541).

ENCOURAGEMENT—Those who come frequently to the throne of grace and offer up sincere, earnest, prayers for God's help will not fail of fulfilling His plan for their lives. Revelation 21:6-8.

LUMBAGO

(LOWER BACK PAIN)

SYMPTOMS—Muscular stiffness, cramped tightness, shooting spasms.

CAUSES—Most low-back pain comes from **poor posture, wrong lifting and carrying, being hunched over a desk for long hours, standing on one's feet all day, carrying heavy briefcases, wearing high heels, being overly fatigued, and incorrect sleeping positions**. Another cause is **not keeping one's muscles strong**. A small percentage of lower-back pain may be linked to **flat feet**.

NATURAL REMEDIES

• *Read Backache (537). It is filled with helpful suggestions, exercises, and much more for both upper and lower back problems.*

• For acute lumbago, sciatica, or rheumatism, combine **juniper berries and gravel root**, and drink daily.

• Here is Dr. Christopher's formula for lumbago: Take 1 oz. each of **buchu, goldenrod, and uva ursi**. Combine ½ oz. each of **licorice root, Prince's pine**, and 1 tsp. **cayenne**. Simmer all the herbs but buchu and cayenne in 3 pints water. Then pour hot over the buchu and cayenne, steep covered till cool. Strain and

drink 2 oz., 3 times daily. One hour before going to bed, drink 6-8 oz. of warmed tea.

—For much more specific help, see Backache (537).

ENCOURAGEMENT—Pray with unshaken faith and trust. The Angel of the covenant, even our Lord Jesus Christ, is the Mediator who secures the acceptance of the prayers of His believing ones.

SCOLIOSIS

(Curvature of the Spine, Posterior Lateral Scoliosis)

SYMPTOMS—The spine is curved slightly to the left or right. There is back pain and abnormal gait. If severe, the rib cage may become deformed; sometimes this leads to heart and lung problems.

CAUSES—The spine naturally forms a straight, vertical line when viewed from the back. Scoliosis is an abnormal sideways curvature of the spine, most commonly affecting the spine in the chest area and the lower back region. Early diagnosis is important because, if left untreated, the deformity tends to become worse.

Scoliosis occurs 80% of the time in girls; this is primarily in preteen and teen years, during rapid growth spurts.

Diagnosis is made by having the person bend over, away from you. Look for lateral deviation (a leaning to the left or right).

The primary cause is that **one set of the spinal muscles (right side or left side) is stronger** than the other. This causes an "S" curve in the spine. Other causes include **one leg longer** than the other, **cerebral palsy,** or **polio**. Temporary scoliosis occurs as a result of muscle spasm following a spinal injury.

If not corrected, the result may be degeneration of muscles on one side. In some instances, muscles may be in the early stage of **muscular dystrophy**.

NATURAL REMEDIES

• In the early stages, scoliosis can be eliminated. But the person must be faithful in taking **mineral and vitamin supplements**. Failure to do so can result in serious damage, back braces, and surgery.

• **Avoid food allergies and eat a nourishing diet. Drop all junk foods, caffeine, alcohol, soft drinks, etc.**

• Each day take **vitamin E** (800-1,200 IU), **selenium** (500-1,000 mcg), **calcium** (2,000 mg), and **magnesium** (1,000 mg).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SCOLIOSIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

TO IMPROVE GENERAL NUTRITION AND BLOOD MOVEMENT—Graduated **Tonic Friction baths**. Massage, carefully administered. **Nutritious dietary. Sweating baths**, especially the Radiant Heat Bath. Follow by **Cold Mitten Friction**, carefully given. Copious **water** drinking.

TO COMBAT LOCAL MORBID PROCESSES—Fomentation to the back twice daily, followed by **Heating Compress** to spine. The Heating Compress may be applied at night and retained until morning. **Hot Leg Bath** with **Fomentation** to the spine. Prolonged **Neutral Bath**, 1-4 hours daily.

TO RELIEVE COLONIC SPASM AND NERVOUS IRRITABILITY—Warm Bath at 96°-100° F. Prolonged **Neutral Pail Pour** to the spine at 93°-98° F., with **Heating Compress** at night. **Rest** in bed, when symptoms are progressing.

FOR MUSCULAR WEAKNESS OR PARALYSIS—Massage, exercise of muscles, special **gymnastics**.

CONTRAINDICATIONS—Avoid the Cold Douche and other general Cold Baths, prolonged Hot Baths, exercise to the extent of fatigue.

—See Strengthening the Bones (505) and Backache (537) for much more information.

ENCOURAGEMENT—No sin is small in God's sight; but, in His strength, we can resist all temptation to leave His side and run after the trinkets Satan offers us. Cling to Jesus; and, in spite of the disappointments of earth, you will have peace of heart.

"He will fulfil the desire of them that fear Him. He also will hear their cry, and will save them. Psalm 145:19. Sweet, sweet are the precious promises of Scripture! Read them often.

SKELETAL-MUSCULAR -

7 - ABDOMINAL CAVITY

Also: Pelvic Congestion (654) and Pelvic Pain (654)

PERITONITIS

SYMPTOMS—Symptoms usually develop rapidly. Severe, constant pain in the abdomen, fever, abdominal swelling, nausea and vomiting. Rigidity of the abdominal muscles, rapid pulse, sunken eyes, and a pinched expression of the face. In severe cases, dehydration and shock may also occur.

CAUSES—Peritonitis is serious and frequently fatal. Take the person to the hospital.

The usual cause is bacterial infection that has spread from elsewhere in the abdomen, caused by blows, most often from stab wounds, gunshot wounds, complication of a surgical operation, appendicitis, childbirth, or ovarian disease. The bowel is often pierced and the contents have leaked out. Sometimes the cause is leakage of bile from an inflamed gallbladder into the abdominal cavity or leakage of digestive enzymes into the abdominal cavity, resulting from acute pancreatitis.

Less common is chronic peritonitis, also called tuberculosis peritonitis. This is tubercular in origin,

and shows little pain or fever and few symptoms other than great emaciation, loss of strength, and fluid in the abdominal cavity.

If you have this problem, you will want to be admitted to the hospital immediately. If treated immediately, recovery is usually rapid; and long-term problems, such as adhesions, are less likely to occur.

Adhesions can develop, in which fibrous bands of scar tissue grow between loops of intestine, causing the loops to stick together. This can cause pain months after the attack of peritonitis.

NATURAL REMEDIES

After surgery, to clean out the area and sew up the organs, consider the following:

• ***Tense* the abdominal muscle** on a regular basis. This strengthens it and helps it rebuild.

• Use warm, whole **baths** or warm, wet **packs** over the abdomen. A **castor oil pack** is also good.

• If there is pain, take a **slippery elm** retention enema every morning.

• Go on a 3-day **carrot juice fast** or a diet of **oatmeal gruels, lentil and barley soup**, and other **potassium fruits and vegetables**.

• During the inflammatory stage, **avoid eating**. Instead, drink as much **slippery elm tea** as possible, sipping it continually.

• Helpful herb teas include **bryonia, pleurisy root, and aconite**.

• Once past the critical stage, drink **comfrey root** tea every 3-4 hours, along with **taking echinacea** tablets.

If the condition is tuberculosis peritonitis, the patient should be treated as if for tuberculosis (*412*).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR PERITONITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

PERITONITIS (ACUTE) —

DIETETIC FACTORS—Rest in bed, **fluid diet**, **fruit juice** without sugar, **gruels** of dextrinized or malted cereals. Withhold food for 24-48 hours.

ALBUMIN IN URINE—Hot Blanket Pack and other sweating measures, to maintain cutaneous activity, repeated every 2-4 hours.

FEVER—Hot Blanket Pack, followed by **Cold Mitten Friction**, prolonged **Neutral Bath**, **Fomentation** to abdomen with Cooling **Wet Sheet Pack** at the same time.

GENERAL ASPECTS—Enema at 80° F. Repeat in order to remove gas. **Fomentation** every 2 hours for 15-20 minutes. During interval between, apply **Heating Compress** at 60° F., changing every 5 minutes while the body temperature is elevated, less frequently as temperature falls. Copious **water** drinking. Prolonged **Neutral Bath**. Cold **Compress** or **Ice Bag** over heart for 15 minutes, 2-3 times a day, for cardiac weakness.

PREVENT OBSTRUCTION—Large **enema**, 3 times a day from beginning, temperature 75° F.

CONTRAINDICATIONS—Same as chronic form, just below.

PERITONITIS (CHRONIC) —

GENERAL ASPECTS—Aseptic dietary, **liquid diet**. Hot **Enema.** Follow by **Fomentation** to abdomen for 20 minutes, 3 times daily. Well-protected **Heating Compress** during the interval between. Copious **water** drinking. **Graduated cold applications** (Tonic Frictions), twice daily. If temperature is elevated, **Neutral Bath** half an hour to an hour daily.

CONTRAINDICATIONS—Avoid Cold Full Baths, Prolonged Cold Douche, Cold Pail Pour, Cold Wet Sheet Rub, and Cold Sitz.

PERITONITIS (PELVIC), CELLULITIS —

BASIC CONSIDERATIONS—Surgical and puerperal asepsis, care to avoid exposures at menstrual periods, protection of feet and legs in damp and cold weather, proper clothing.

INCREASE RESISTANCE—Cold Mitten Friction or **Cold Towel Rub** 2-4 times a day. Protect pelvic viscera by simultaneous **Hot Foot Pack,** Hot Foot and Leg Pack, or by hot-water bottle to sacrum and Cold Compress over stomach area.

COMBAT LOCAL INFLAMMATION—Hot Hip and Leg Pack 20 minutes every 2 hours. During intervals between, **Cold Compress** at 60° F. to area over stomach, pudendum and inner surfaces of thighs. Do this with heat to feet and legs or **ice bag** over seat of pain. Hot-water bottles or **Fomentations** to feet, hips and thighs. Hot and cold **pelvic compress** with **ice bag** over seat of pain; continue 20-40 minutes and repeat when needed. Hot **vaginal irrigation** at 110°-120° F., one gallon, every 4 hours.

ENCOURAGE RESOLUTION—After the acute stage has passed, apply **Alternate Compress** for 30 minutes, 3 times a day. During interval, **Heating Compresses**, changing every 2 hours or as soon as well-warmed. **Graduated Baths** for tonic purposes. Alternate **vaginal irrigation** (110°, 80° to 70° F.); later, pelvic massage.

PAIN—Fomentation or **Revulsive Compress** every 2-4 hours or oftener, if necessary.

CONSTIPATION—Large **Hot Enemas**, twice a day, during acute pain and inflammation. Later, give graduated **Cold Enema**.

CHILL—Anticipate chill by wrapping her / him in **warm blankets** with **hot bags** to trunk and limbs. Hot **water** drinking.

SEPTIC FEVER—Add to local measures, if fever is high, **Hot Blanket Pack** for 10-15 minutes. Follow by sweating **Wet Sheet Pack**, **Prolonged Neutral Bath**. If suppuration (pussing) occurs, surgical interference is generally indicated.

CAUTIONS—Avoid Cold Baths; instead use partial cold applications, such as the Cold Mitten Friction and the Cold Towel Rub.

—Also see Appendicitis (365-367) and Tuberculosis (412).

ENCOURAGEMENT—Jesus cares for each one, as though there were not another in the whole world. You can trust your case with Him. He will not fail you. Your only danger is in leaving His side, to follow after the luring temptations Satan offers you.

— SECTION 11 —
ENDOCRINE

ENDOCRINE - 1 - ADRENALS

STRENGTHENING THE GLANDS

This is the glandular balance formula which Dr. Christopher prescribes to strengthen glands:

Mix thoroughly 1 part each of fine powders of **black cohosh, licorice root, bladder wrack** (or another **seaweed**), **goldenseal, lobelia,** ½ part **ginger**; and ¼ part **cayenne**. Place in #0 capsules (each one equivalent to ¼ tsp.). Take 1-2 capsules (or ¼-½ tsp.) before noon each day.

HYPOGLYCEMIA
(Low Blood Sugar)

SYMPTOMS—Confusion, depression, nervousness, anxiety, antisocial behavior, emotional instability, exhaustion, headaches, impatience, inability to cope, fears, craving for sugar, faintness, dizziness.

Symptoms especially occur a few hours after eating sweets or fats. The more that is eaten and the longer the span before the symptoms occur, the worse they are.

CAUSES—The problem is **adrenal exhaustion**. The cause is too much **stress, worry**, and an excess of **undigested sugars, starches, proteins, and dairy products**. The hormone, *cortin*, is depleted; so food cannot be digested properly.

People consume **large quantities of sugars, caffeine, soft drinks, and alcohol**. These all contain simple sugars and **insufficient amounts of complex carbohydrates**. Add to this the **high stress levels**; and the two adrenal glands become exhausted.

Hypoglycemia can be **inherited**; but, more often, it is brought on by an **inadequate diet** (and is then called *functional hypoglycemia*). However, there are several other physical problems which can weaken adrenal function and help bring on hypoglycemia. These include weaknesses in the **thyroid, liver, kidneys, pituitary, and pancreas. Immune deficiency** and **candidiasis** can also lead to it. Other causes include **smoking** and large amounts of **caffeine**.

Hypoglycemia is sometimes mistakenly diagnosed as asthma, allergies, fatigue syndrome, or weight problems. It is also said to be stomach or intestinal problems, perhaps a mental or nervous disorder.

Half the people over 50 who have hypoglycemia, are **hypothyroid**. A six-hour glucose tolerance test (GTT) is the most reliable method of diagnosis; having blood drawn while experiencing symptoms is an alternative. But, even with these tests, hypoglycemia is difficult to diagnose with certainty. Many cases are "subclinical"; in other words, the borderline levels of blood sugar may produce serious symptoms.

Living fast, worrying a lot, and eating wrong results in any one of the following: overproduction of insulin, damage to liver cells, insufficient secretion of adrenocortical hormones, and pituitary gland abnormalities. The result is low blood sugar.

The following conditions are linked to low blood sugar: migraine headaches, leg cramps, depression, premenstrual syndrome, aggressive and criminal behavior, angina.

NATURAL REMEDIES

AVOID

• **Refined starches, sugars, and a high-meat diet** wear out the adrenals. Too much **sugar** shocks the adrenal cortex; and the resulting physical reaction is to crave still more sugar.

• Stop eating or using **meat, nicotine, alcohol, chocolate, soft drinks, black tea, and sugared and fat foods. Caffeine, alcohol, and tobacco** produce wide swings in blood sugar levels.

• Read the labels at the grocery store. Avoid **dextrose, dextrin, lactose, maltose, sucrose, fructose, modified food starch, corn syrup, corn sweetener, cornstarch, and natural sweetener**. Also stay away from **sorbitol, hexanoyl, mannitol, aspartame, and glycol**.

• **Avoid stressful situations**. You may have a **milk allergy**, which often accompanies this disease.

PROPER DIET

• Eat **natural foods**, the ones you should have been eating to begin with. **Whole grains, raw and simply cooked vegetables, some fresh fruit**. But eat in moderation **starchy foods such as corn, noodles, pasta, brown rice, hominy, and yams**.

• Eat a **high-fiber diet** and **vegetables that are raw or steamed**. These foods are also good for you: **beans, lentils, brown rice, white potatoes, soy products, and fruits**.

• Useful fruits include **apricots, apples, bananas, grapefruit, lemons, cantaloupes, and persimmons**. For example, eat a raw apple instead of applesauce; for the **apple** has more fiber which will help keep blood sugar stabilized.

• Only use **honey** and **molasses**; and use them in small amounts. Too much **salt** exhausts the adrenals and causes a loss of potassium, leading to lower blood

sugar.

• *During a blood sugar reaction*, eat something that has both fiber and protein, such as **rice or bran crackers with almond butter**. Fiber alone (**popcorn, rice, oat bran, crackers, ground flaxseed, and psyllium husks**) has the ability to slow down a hypoglycemic reaction. A half hour before each meal, eat some of this high fiber, to stabilize blood sugar. Protein, fiber-rich carbohydrates, and enough fat to slow digestion are the cornerstones of a hypoglycemia-control diet.

• Once a month, go on a **fresh vegetable juice fast** for a day. Take enemas with some added lemon juice at that time. If a reaction starts to occur, reach for the fiber, protein powder, or spirulina.

• Take **vitamin C** (1,000 mg), **bioflavonoids** (1,000 mg), **magnesium** (200 mg), **vitamin E** (400 IU), **chromium** (200-400 mcg), **zinc** (30 mg).

• Some forms of low blood sugar involve very low serum **potassium** levels. Make sure you are obtaining enough potassium.

• Do not skip meals or go on fasts. The binge-purge eating scheme used, by those with bulimia to control weight, only adds to the problem.

HERBS

• **Licorice** acts like *cortin* and helps the blood sugar. It is the best single herb you can take. It increases the effectiveness of glucocorticoids (adrenal hormones) circulating in the liver and mimics the action of those hormones. Eating it helps prevent the destruction of the pancreas.

• Other helpful herbs: **bilberry** and **wild yam** help control insulin levels. **Cedar berries** help the pancreas. **Spirulina** tablets, taken between meals, help stabilize blood sugar. Standardized **milk thistle** extract (25-500 mg daily) contains *silymarin*, which helps your condition. **Ginger** root works indirectly to help increase the availability of dietary nutrients for digestion and metabolism.

ENCOURAGEMENT—Jesus cares for each individual as though there were not another person on the earth. He will help you also, as you earnestly seek Him with all your heart. Psalm 10:14, 18.

ADDISON'S DISEASE
(Adrenal Underactivity)

SYMPTOMS—Dizziness, fainting, nausea, loss of appetite, moodiness, decrease in body hair, inability to cope with stress. A slight darkening and discoloration of the skin, which is more noticeable when body parts are exposed to the sun. This would include forehead, knees, elbows, scars, skin folds and creases (on the palms, etc.). The mouth and freckles may appear darker. The hair becomes darker.

Bands of pigment run the length of the nails.

Reduced adrenal function (resulting either from Addison's or Cushing's Disease) can result in weakness, headaches, memory problems, dizziness, allergies, food cravings, and blood sugar disorders.

CAUSES—Both the adrenal underactivity of Addison's Disease and the overactivity of Cushing's Disease are caused by problems in the function of the adrenal glands.

Continued use of **cortisone drugs** for arthritis and asthma, etc., damage the adrenals. Those drugs cause them to shrink in size and not work properly. Yet, surprisingly enough, the shrunken glands can still overproduce and cause Cushing's Disease or underproduce and cause Addison's.

There is a way you can pinpoint whether or not your adrenals are functioning normally:

The systolic is the first number in a blood pressure reading; and the diastolic is the second number. For example, 120/80. The systolic should be 10 points higher when you are standing than when you are lying down.

Lie down and rest for 5 minutes; and then have someone take your blood pressure. Then stand up and have it immediately taken again. The blood pressure will probably be somewhat higher.

But if it is lower when standing than when lying flat, the adrenals are not working properly. The lower it is, the worse the condition of the adrenals.

You will want to contact a medical professional. Addison's is a chronic condition which needs to be continually worked with. You may moderate the problem; but it is never fully eliminated.

NATURAL REMEDIES

• Maintain a good **nourishing diet**. Include Nova Scotia **dulse** or Norwegian **kelp** for trace minerals. Greens (fresh, raw, and cooked) and **garlic** should be part of your regime. **Garlic** contains *germanium*, which stimulates the immune system. Include in your diet **brown rice, legumes, nuts, flaxseed oil, whole grains,** and **wheat germ.**

• Take a high-**B complex** daily, especially **pantothenic acid** (1,000 mg) and **brewer's yeast** (2 Tbsp.).

• Take licorice extract twice daily.

AVOID

• **Avoid tobacco, alcohol, caffeine, and soft drinks.** Do not use **sugar foods, fried foods, processed or junk foods.** Do not eat **meat.**

• Avoid **stress**! This is very important; for stress is hard on weak adrenals. Take time for prayer and the study of God's Word, the Bible. He can help you solve the problems you experience. Stress releases ACTH through the pituitary; this can raise blood pressure, store sodium, and excrete potassium. Water retention in the tissues is another result.

—Compare the opposite of Addison's Disease, which is "Cushing's Disease" (546).

ENCOURAGEMENT—All your habits are to be brought under the control of a mind that is itself under the control of God. We can fulfill God's will for our lives as we trust in the strength God imparts. Hebrews

11:16.

CUSHING'S DISEASE
(Adrenal overactivity)

SYMPTOMS—Rounded "moon" faces, heavy abdomen and buttocks, thin limbs. The muscles seem weak and wasting away. The eyelids may appear swollen and round; red spots may appear on the face. It is characterized by obesity in the stomach, face, and buttocks; but there is severe thinness in the limbs. There is poor wound healing and thinning of the skin, leading to stretch marks and bruising. Peptic ulcers, high blood pressure, mental instability, and diabetes may also occur. Women have Cushing's disease five times as often as men. There is scalp balding; yet there is excess body and facial hair, and brittle bones. Body hair grows faster; and women may grow mustaches and beards. Healing is more difficult and illnesses are more frequent.

Reduced adrenal function (resulting either from Addison's or Cushing's Disease) can result in weakness, headaches, memory problems, dizziness, allergies, food cravings, and blood sugar disorders.

An **overactive adrenal cortex** is the cause. This condition especially results from an overdose of corticosteroid drugs (especially those used to treat rheumatoid arthritis). It is also a metabolic disease that causes the formation of kidney stones.

CAUSES—There are two adrenal glands in your body. One is on top of each kidney. Each one is remarkably small, weighing only about one-fifth of an ounce.

The outer thick "rind" of each adrenal is the cortex. It produces cortisone. The inner portion is called the medulla; it secretes adrenaline (epinephrine) when stress occurs. *See Addison's Disease (545) for more information.*

NATURAL REMEDIES

• The objective is to **live better;** so the adrenals, whether working too fast or too slow, can normalize.

• Maintain a **vegetarian diet that is low in fat, sodium, and sugar**. Eat high **potassium** foods daily. Eat lots of **fresh greens, other vegetables, and fruits**. Make **green drinks** (whizzed green leaves and pineapple juice). Eat **whole grains, nuts, and legumes**.

• *Follow the directions given under Addison's Disease (545).*

ENCOURAGEMENT—We have not a high priest who is so high, so lifted up, that He cannot notice us or sympathize with us; but Jesus was in all points tempted like as we are, yet without sin. He can help you fulfill God's will for your life. As a child of God, fill your mind with the truths of the Bible. The more you do this, the more strength and clearness of mind you will have to fathom the deep things of God. You will become more earnest and vigorous, as the principles of truth are carried out in your daily life. Psalm 37:19.

ENDOCRINE - 2 - PANCREAS

CYSTIC FIBROSIS

SYMPTOMS—The symptoms are first seen in very small children. Large amounts of thick mucus develops in the lungs, blocking lung passages. This causes difficult breathing, chronic coughing and wheezing, and lung infections.

There are digestive problems, inadequate absorption of fats, after-meal stomach pain, and thinness. Body sweat will have very large amounts of sodium, potassium, and chloride salts. Any, or all, of these symptoms may occur.

CAUSES—In 1938, this physical problem was named "cystic fibrosis" because it was mistakenly thought that abnormal changes in the pancreas were true cysts (tiny pockets of fluid lined with normal tissue). But it was later discovered that those spots were just part of the **shrinking process of the pancreas**, as the disease worsened.

There are three views of the cause of cystic fibrosis (CF):

1 - CF is an inherited disease which the sufferer must learn to live with.

2 - CF is caused by inadequate absorption of selenium, zinc, essential fatty acids, and other minerals (including trace minerals) as a result of subclinical celiac disease. (Celiac disease is the inability to digest wheat and some other foods.)

3 - Dr. Joel Wallach was a veterinarian who, in 1978, was the first to diagnose CF in a laboratory animal, by noting characteristic CF changes in the pancreas and liver of baby monkeys. He says he was fired when it was discovered that he could reproduce those CF changes in the human body by giving or withholding the element, selenium. He had shown that CF was a nutritional problem which could be solved if caught early enough. *(See Let's Play Doctor, J.D. Wallach, D.V.M., N.D., pp. 109-110.)* Here is what he says:

"The prevention of CF has been accomplished in pet, farm, and laboratory animals by the veterinary profession, by assuring **adequate levels of selenium and essential fatty acid nutrition to the pregnant and nursing mother.** This is not as easy as it sounds because of malabsorption problems (*i.e.*, celiac disease and Crohn's disease) in a percentage of women. All things being normal, **a supplementation of 200 mcg selenium per day and 5 gm of flaxseed oil, three times a day [to the pregnant and nursing mother]**, would be adequate to prevent CF.

"Treatment of CF is very basic: **treat the infant as early as possible with selenium IM [given intramuscularly] at 10-25 mcg per day.**"—*Op cit., p. 109.*

He adds that it is vital that it be determined **if the infant is allergic to wheat, cow's milk, or soy milk; so as to avoid what he is allergic to.**

We might conclude that all three theories are correct; in that, if you give the mother and infant proper supplementation, the disease can be eliminated at the beginning of the child's life.

But if this is not done, he will thereafter not be able to absorb nutrients properly, will exhibit the symptoms of CF, and will have to cope with the problem the rest of his life.

However, Wallach says that, even later, the person can lead a more normal life if he regularly receives **essential fatty acids, intravenously, and selenium intramuscularly.**

"The lungs of CF patients are normal at birth and only develop bronchiectasis after **chronic essential fatty acid and copper deficiencies** have taken their toll."—*Ibid.*

"CF . . is preventable, 100% curable in the early stages, and can be far better managed in chronic cases than it is currently managed by 'orthodox' medicine."—*Op. cit., p. 108.*

NATURAL REMEDIES

• In addition to the above instructions, the CF patient should consider the following:

• Eat a **nourishing diet, high in raw fruits and vegetables** and with adequate amounts of **carbohydrates, protein, and vitamin / mineral supplements.** A problem is that those with CF do not absorb food properly. They need to eat more than other people, in order to absorb the needed nutrients. Eat **whole grains, nuts, and legumes.**

• Include **germanium** (found in garlic and onions), **selenium**, and **vitamin E.**

• Drink plenty of **liquids** and an adequate amount of **salt** in hot weather (but not too much).

• **Do not eat processed or junk food** of any type. Avoid **tobacco, alcohol**, etc.

• Helpful herbs include **echinacea, licorice root, ginger, yarrow, and peppermint. Cayenne** helps reduce inflammation. **Cayenne, garlic, and mullein** help clear congestion. **Garlic and tea tree oil** fight infection.

—*Also see Birth Defects (688) for more information on cystic fibrosis.*

ENCOURAGEMENT—Christ would have our thoughts center upon Him. Thank Him for all the blessings you have, and you will have more to thank Him for. He is your best Friend. Deuteronomy 5:33.

DIABETES

(Diabetes Mellitus, Diabetes Insipidus)

SYMPTOMS—*Diabetes insipidus:* Extreme thirst and enormous quantities of urine, regardless of how much water is consumed.

Diabetes mellitus - Type I: (insulin-dependent, also known as juvenile diabetes): Excessive hunger, thirst, urination, depression, weakness, blurred vision, dry mouth, and vomiting.

Diabetes mellitus - Type II: (maturity-onset diabetes): Unusual thirst, frequent urination, general weakness, obesity, skin disorders, boils, blurred vision, and dry mouth.

CAUSES—Diabetes is a major problem; entire books have been written on the subject. We can only touch on the subject here.

Of the two types of diabetes, *diabetes insipidus* is the more rare and is caused by an inadequately functioning pituitary hormone *(vasopressin)* or kidneys which somehow cannot respond properly to it.

Diabetes mellitus is the third largest killer in the U.S.; it is caused by a defect in the production of insulin by the pancreas. Without insulin, the body cannot utilize glucose, which is an important blood sugar. A blood glucose level above 180 mg percent causes excess sugar to spill over into the urine and make it sweet. (*Mellitus* means "sweet.") *Diabetes* comes from a Greek word for "flow through," since diabetics produce so much urine.

To summarize: In *diabetes mellitus (Type I, also known as insulin dependent diabetes)*, the pancreas cannot make the insulin needed to process glucose. This is *childhood-onset diabetes.*

In the rarer diabetes, *diabetes insipidus (Type II, also known as non-insulin-dependent diabetes)*, the pancreas makes enough insulin; but the body has trouble using the insulin. This is *adult-onset diabetes.*

Some people can develop diabetes mellitus as a result of **stress, obesity, or pregnancy.** Certain medicinal **drugs** can also cause it: **oral contraceptives, adrenal corticosteroids, phenytoin, or thiazide diuretics.** A diet high in **sugar** and **white flour** can lead to diabetes. **Hypothyroidism** or **Parasites** (especially in children) can also do it.

It is of interest that people who eat too much **sugar** eventually cannot taste it as well; so they pour on more sugar! But Type II diabetic sufferers also lack this sugar-tasting discernment. Leave off the sugar and learn to enjoy the natural flavors in your food.

Because the diabetic **cannot utilize glucose** for energy, he loses weight and is weakened by excess consumption of his protein and fat stores. Because of this, he may be very hungry and eat large amounts of food.

Diabetes can lead to poor wound healing, higher risk of infections, and many problems involving the eyes, kidneys, nerves, and heart.

NATURAL REMEDIES

• Eat **smaller meals** (if necessary, eat them more frequently), and **chew the food** thoroughly. Do not eat late in the evening. **Overeating** can induce diabetes or, once contracted, increase it.

• **Vegetable broths** and **fresh fruit** are nourishing. A **high-carbohydrate, high-fiber diet** will reduce the need for insulin; it will also lower the amount of fat in the blood. (A low-fiber diet can bring on diabetes.) Get

your protein from vegetable sources. A **fat-free diet** will help reduce blood sugar.

• **Onions and green beans** appear to lower blood sugar. A diet high in **raw food** is also helpful. One individual dropped his insulin dosage from 60 to 15 units per day, by increasing his raw food intake. Eat **raw garlic** every day. It will reduce your blood sugar.

•

• **Vitamin C** (1-3 grams daily) improves glucose tolerance and lowers *sorbitol* in diabetics. Sorbitol is a sugar which can accumulate and damage the eyes, nerves, and kidneys of diabetics. **Vitamin E** (900 IU) improves glucose tolerance, prevents damage to diabetic blood vessels, and protects against diabetic cataracts. **Vitamin B_6** (1,800 mg) improves glucose tolerance in women with diabetes caused by pregnancy or birth control pills. **Vitamin B_{12}** (500 mcg, 3 times daily) reduces nerve damage caused by diabetes. Those given 16 mg of **biotin** daily for 1 week had their fasting glucose levels drop 50%. It also reduces pain from diabetic nerve damage. **Chromium** (200-1,000 mcg) improves glucose tolerance. **Magnesium** (1,000 mg) leads to improved insulin production in elderly people and reduces eye damage. **Zinc** (15-25 mg) lowers blood sugar levels. **Coenzyme Q10** (120 mg) is needed for normal carbohydrate metabolism. **Inositol** (500 mg, 2 times daily) sometimes reverses nerve damage in some diabetics.

Note that one study found that diabetics should not take large amounts of **niacin** (vitamin B_3), **thiamine** (B_1), **PABA** (para-aminobenzoic acid, another B vitamin), or **vitamin C**. But they should take them regularly. Several studies found that high levels of **niacin** (B_3) impair glucose tolerance and should not be taken by diabetics.

AVOID

• **Stop eating sugar, white-flour products, greasy food, meat, eggs, cheese, excess vegetable oil, as well as rancid nuts and seeds.** Totally avoid **tobacco** and those who use it. Because it restricts circulation, it will aggravate your condition. Do not drink **cow's milk.**

• Do not eat **fruits** and **melons** in large amounts. Do not eat **apples** or **bananas.** Do not eat **milk and sugar combinations. Coffee** can induce very high blood sugar levels. Avoid **gluten foods** (wheat, rye, oats, barley). Eat **buckwheat, rice, corn,** which have no gluten.

• Eat your meals at **regular times. Chew the food** and do not be in a rush to swallow the food. The quicker you eat, the higher goes the blood sugar.

OTHER INFORMATION

• Get enough **exercise**; it will improve circulation, which is always poor in diabetics. This will also lower blood sugar levels.

• **Fenugreek** contains six compounds which help regulate blood sugar levels. **Onions** have been used for centuries to treat diabetes in Europe and Asia. In India, the herb, **gurmar,** is used to treat diabetes.

• **Uva Ursi** contains a group of compounds, called *phenolic glycosides,* that help the kidneys excrete excess sugar. **Dandelion** root reduces blood sugar in experimental animals. It contains insulin-like chemicals and may actually substitute, on a limited basis, for insulin.

• **Huckleberry** helps promote insulin production. **Cedar berries** help the pancreas. Other helpful herbs include **black walnut, echinacea, burdock, buchu, dandelion root,** and **uva ursi.**

• James Duke, Ph.D., says that daily taking the tropical herb, ***Neurolaena lobata***, helped a woman on the island of Trinidad to completely normalize her blood sugar.

• *In case of a hyperglycemic attack,* go to an emergency room. You must be given fluids, electrolytes, and possibly insulin.

• *In case hypoglycemia occurs,* in an emergency, immediately drink **fruit juice, soft drinks, or anything else that contains sugar.** If you are insulin dependent, carry a glucagon kit with you at all times.

• **Hot and cold packs** over the pancreas and kidneys will help insulin production and kidney elimination.

• Take good care of your **feet**; for they can become more easily infected than those of non-diabetics.

If your child has diabetes, tell his teacher the warning signs of hypoglycemia and hyperglycemia.

TYPE II DIABETES

Non-insulin dependent diabetics have high blood sugar. Here are several helps:

• Add more whole foods (such as **fruits, vegetables, grains, beans, nuts, and seeds**) to your diet. They are rich in fiber and nutritionally help stabilize blood sugar.

• Do not overindulge in **sweet, fatty foods.**

• Jonathan Wright, M.D., prescribes **chromium polynicotinate** because it is closest to the form of chromium found in the glucose tolerance factor, the body's internal regulator of blood sugar.

• **Exercise** twice a day, every day. Exercise is insulin's best friend. It moves sugar out of the bloodstream into the cells.

—Also see Diabetic Retinopathy (311).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR DIABETES AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INCREASE OXIDATION OF SUGAR—A large amount of moderate **outdoor exercise,** especially respiratory exercise (exercise that requires deeper breathing), and daily **Cold Baths.**

INCREASE ABSORPTION OF OXYGEN—Graduated **Cold Baths, outdoor exercise,** breathing exercises, oxygen inhalation.

IMPROVE INTESTINAL DIGESTION—**Cold Douche** (spray) with percussion to spine. Short Cold Fan Douche to abdomen. Hot **Abdominal Pack**, day and night. **Fomentation** to abdomen, twice daily. Abdominal massage.

DIABETIC DIET—**Zwieback** (twice-baked bread), **fruits**, etc.; but do not use dates and figs, green peas, strawberries, spinach, nuts, and nut products of all sorts except chestnuts. **No meats** of any kind.

SCIATICA—**Hot Leg Pack**, **Revulsive Douche**, **rest** in bed.

RHEUMATIC PAINS—Radiant Heat Bath or **Sweating Wet Sheet Pack** until he perspires for 5-8 minutes. Follow by a suitable **cold application**.

OBESITY—Vigorous **exercise**. **Monotonous diet** (which automatically lessens the desire to overeat). **Sweating baths**, 3 times a week. Vigorous **cold applications** daily. Dripping Wet Sheet Rubs, Half Bath, Cooling Wet Sheet Pack, Plunge Bath.

EMACIATION—**Rest** in bed, Cold Mitten Friction or **Cold Towel Rub**, **Massage**, a **fattening diet**.

BOILS—Prolonged **Neutral baths**. Wash boils with **shampoo** three times a week.

PRURITUS—Prolonged **Neutral baths** followed by **Cold Mitten Friction** to sound parts of skin, **Neutral Compress**.

SOMNOLENCE—Copious **water** drinking. Hot **Enema**, repeated every 3-4 hours. Prolonged **Neutral Bath**, with **Cold Pail Pour** at 60° F. to head and spine during intervals of every 15 minutes. **Hot Blanket Pack** for 15 minutes. Follow by **cold Friction** and **Dry Pack**.

CONSTIPATION—**Enema**, at 70° daily. Hot **Abdominal Pack**.

INSOMNIA—Prolonged **Neutral Bath** at bedtime. Neutral Pack, 30-40 minutes. Neutral **Spray Douche**, 3-4 minutes, at bedtime.

BRONCHITIS—**Chest Pack**, **Warm Vapor Inhalation**, **Revulsive Douche** to legs.

EDEMA OF LEGS—**Rest** in bed; **Cold Compress** over heart, 15-30 minutes, 3 times daily. **Revulsive Compress** or Revulsive Douche to legs, 3 times a day. Follow, during intervals, by **Heating Compress**.

CARDIAC DILATATION—**Cold Compress** over heart or **Ice Bag** over heart, 15 minutes, 3 times a day. Carefully increased moderate **exercises**.

THREATENED GANGRENE—**Alternate Compress** or alternate **Pail Pour** to affected part and large adjacent area, 3 times a day. Protected **Heating Compress** over it during the interval between.

CIRRHOSIS OF LIVER—**Alternate Compress** over liver or a Spray Douche to it twice daily. During the interval between, apply a well-protected **Heating Compress**.

ECZEMA—**Alkaline Bath** (using oatmeal, etc., in water) or a **Neutral Bath**, 30 minutes, twice daily.

THIRST—Frequent drinking of small quantities of cold **water**, half a glass every hour. Sipping very hot water.

DRY SKIN—Steam Bath or Prolonged **Neutral Bath**. Follow by oil rubbing daily or 2-3 times a week.

CONTRAINDICATIONS—If emaciated, avoid exercise and prolonged hot or cold baths.

GENERAL METHOD—The general plan of treatment in this disease is essentially the same as that required in the treatment of obesity, which this disease closely resembles. But, in cases of diabetes accompanied by emaciation, very cold procedures (especially cold immersions used in cases of obesity or in cases of diabetes in which he is fleshy) must be carefully avoided and the principal reliance must be placed upon short, cold procedures which build up his resistance while increasing oxidation of carbon to a moderate degree. Special attention must be given to improving the intestinal digestion.

If any of the following related problems exist, look them up under their respective headings: Pneumonia, Nephritis, Cystitis.

ENCOURAGEMENT—The love of God toward the fallen race is unfathomable. It is without a parallel. This love led Him to give His only begotten Son to die, that rebellious man might be brought back into harmony with the government of Heaven.

ENDOCRINE - 3 - THYROID

HYPOTHYROIDISM

(Underactive Thyroid, Goiter)

SYMPTOMS—Fatigue and inability to tolerate cold are the most common symptoms.

Others include loss of appetite, a slow heart rate, muscle weakness and possibly cramps, dry and scaly skin, recurrent infections, water retention (edema), overweight, brittle nails, constipation, depression, difficulty in concentrating, a yellow-orange coloration of the skin (especially on the palms of the hands). In women, there might be painful menstruations, a milky breast discharge, and fertility problems.

CAUSES—An underactive thyroid is the most common glandular problem in America. The thyroid gland is the body's thermostat. It tells the rest of the body when to produce more heat or less. *Thyroxine* is secreted by the thyroid (a butterfly-shaped gland in the front of your neck) and affects several body functions, including the general rate of metabolism. The pituitary, located in the center of the skull, sends out *TSH* (thyroid-stimulating hormone), to tell the thyroid to speed up or slow down. When a weak thyroid does not respond, TSH levels remain high—and you have hypothyroidism. The hormone, thyroxine, is almost pure iodine. Women are eight times more likely to have hypothyroidism than men.

First thing in the morning, place a thermometer under your arm for 15 minutes while keeping still. A temperature of 97.6° F. or lower may indicate an underactive thyroid. Write down the result for five days. (Others say that if the test is consistently below 98, you are low thyroid.)

A low thyroid condition generally does not produce goiter. It is produced when the thyroid gland enlarges.

It is thought that ***Hashimoto's Disease*** is the most common cause of an underactive thyroid. This occurs when the body becomes allergic to its own thyroxine! It

is not clear why this happens.

In addition, the immune system can produce antibodies that invade and attack the thyroid, disrupting hormone production. This destruction of the thyroid, resulting in hypothyroidism, is called ***myxedema***. It is actually a disease of the immune system. It is believed that **an excess of chemicals, poisonous fumes, medicinal drugs, tobacco smoke, impure living, etc.**, disrupts the immune system and starts it on such rampages.

Get away from the chemicals by moving to the **country**, live a **clean life**, **eat right**, use a distiller to make your own **pure water**, work outdoors part of the time—have peace with God, and you will feel better every day.

Myxedema coma can occur, but rarely. Someone with advanced hypothyroidism can go into a coma from overexposure to cold, during an illness, after an accident, or after taking sedatives or narcotics. Call a physician immediately. *Also see Iodine, p. 97.*

THYROID SUPPLEMENTATION

Medical treatment includes the taking of thyroxine from animals or a synthetic product (synthroid or levoxyl). This is generally 3-9 grains each morning. An excess will cause increase in heart rate and shaking of the extended arm. (Levoxyl tablets are standardized better than synthroid; therefore they are better for you.)

The active ingredient in synthetic thyroid medications, is *levothyroxine*. It can cause a loss of as much as 13 percent of bone mass. An estimated 19 million people in the U.S. take this drug for thyroid problems or thyroid cancer.

Thyroid supplementation can cause cardiac arrest in those whose hearts are not strong enough for the increased activity the thyroid dosage places upon it.

Thyroid medication can have a similar effect on the adrenals. They may be working poorly, as a result of years of low thyroxine. The medication can cause adrenal insufficiency. Diabetes can be made worse by the thyroid pill. Anticoagulants can be upsetting.

Thyroid supplementation also increases the need for insulin and some antidepressants; since this causes some people to become extremely agitated.

Thyroid medication can produce arrhythmia, angina, tachycardia, and hair loss.

After menopause, a smaller dose of thyroid medication is often needed by women.

In newborn infants, synostosis can occur if they are given thyroid. The skull bones close prematurely and the brain does not develop properly.

In cretins, who are born hypothyroid, try taking them off the thyroid medication after three years of supplementation. Maybe their thyroid will start functioning on its own.

The human body needs less thyroid as it gets older; so older folk should try reducing their dose of an animal or synthetic thyroid supplement. To do this, try reducing the amount you take by one dose a week (example: 5 doses a week, then 4 doses the next week, etc.). When you encounter problems, stay with that amount for 4 weeks to see if the thyroid will adjust itself to this new amount. After a month, try reducing the dosage again, staying one month at each reduced level.

Take thyroid medications at a different time than other **drugs**, because they can interact. Do not take **iron supplements** with thyroid supplements. The iron binds with the thyroxine, rendering it insoluble. For the same reason, do not take **calcium** or **carbonate supplements** at the same time with thyroxine medications.

For some, thyroid problems can be corrected; but, for others, it is something to live with for a lifetime while doing that which may lessen the problem.

Some people may think they have a hypothyroid problem, when, instead, they have sugar intolerance, depression, or menopausal symptoms.

The thyroid problem is not a simple one. The *thyroid* in your neck sends out *thyroxine*, which is loaded with iodine, to cells throughout your body, telling them to get to work. But the thyroid is told what to do by hormones from the *pituitary* in the middle of your brain, which sends it *THS* (thyroid stimulating hormone). And the pituitary is told what to do by part of your brain: the *hypothalamus*. So all types of thyroid problems may not be caused by the thyroid gland at all, but by problems in the pituitary or hypothalamus.

NATURAL REMEDIES

IODINE

• You need iodine everyday, at every meal. But how do you obtain it? Extended use of thyroid medication can weaken the bones or result in breast cancer.

• Among the seaweeds, **Nova Scotia dulse** or **Norwegian kelp** are the best-balanced sources of trace minerals. Most other seaweed products also contain iodine; but they are not always as balanced in providing a wide spectrum of other trace minerals. California kelp is not as good.

• Here is an address for Nova Scotia dulse: Roland's Sea Vegetables, 174 Hill Road, Grand Manon, NB E5G4C4, Grand Manan, N.B. [New Brunswick], Canada. I let it dry, whiz the leaves, put them in jars, and sprinkle it on my food.

• Iodine is an element. You must not drink it; for it is poison. But you can purchase a **bottle of iodine** at the drugstore. Then paint a 3 inch by 3 inch area of the skin on your thigh or the top of your foot. If you need iodine, the iodine on your skin will totally disappear (because it has been absorbed) within 24 hours. This technique is also helpful if a nuclear blast has occurred and you need to avoid Strontium 90. An alternative is taking potassium iodide in order to protect your thyroid from being damaged by radioactive fallout. —*See Radiation Poisoning (602).*

• Another source of iodine is **Lugol's solution**. This, of course, should be taken in extremely small doses. Unfortunately, it is difficult to obtain. Pharmacies have it; but they will not dispense it without a prescription.

• There is also **iodized salt**. The problem here is that aluminum is in store-bought salt (so it will not cake);

and that can lead to Alzheimer's disease *(485)*.

• Some use **"sea salt"**; but generally this is nothing more than regular salt, extracted from the ocean rather than from salt mines. It is just regular salt, probably with the added aluminum.

• Some use rock salt (from salt mines) and grind it up. But this lacks the iodine.

• There is a firm in France which produces **salt from the ocean** which does have all the natural trace minerals, including iodine: The U.S. address is Grain & Salt Society, P.O. Box DD, Magalia, CA 95954 / 916-872-5800. Of the three products (Light Grey, Fine Ground, and Flower of the Ocean), the Fine Ground seems to strike a balance between fine grain and low price. The salt is slightly moist; but this is natural. Dry, free-flowing salt has always been treated with chemicals. I prefer Nova Scotia dulse.

• Because **chlorine, fluoride**, and iodine are chemically related, an excess of the first two will block entrance of iodine into the thyroid. So avoid **chlorinated water, fluoridated water,** and **toothpaste**.

DIET

• In addition to taking added iodine, eat a **nutritious diet**. The experts say to eat foods in the cabbage family in moderation (**broccoli, cabbage, kale, Brussels sprouts, mustard greens**); for they tend to suppress the thyroid function. The same is said to hold true for **peaches and pears**. Fresh **carrot juice** improves thyroid function slightly. Drink **green drinks** and **potassium broths** (thick, white potato peeling soup).

• **Mustard greens** contain the largest amount of *tyrosine* (1.9%) of any cooking greens. Tyrosine is a constituent of thyroid hormone. Various beans and seeds contain lesser amounts. **Radishes** have been used, in Russia, to treat both types of thyroid problems. One chemical in radishes, *raphanin*, is said to keep thyroxine levels in balance. Turks use walnuts to treat various glandular problems. In one study, the fresh juice of **green walnuts** (especially the **husks**) doubled levels of thyroxine. A decoction of green walnuts, made by boiling them 20 minutes, boosted thryoxine at least 30%.

• **Mother's milk** is a good treatment for hypothyroid babies; and it helps protect normal babies from developing the problem until weaning.

• **Vitamin A** is necessary for iodine to be properly absorbed. The **B vitamins** work together, to nourish the thyroid. B_6 helps the thyroid use its iodine effectively in hormone production. B_{12} helps the thyroid work properly. A thyroid deficiency can result from lack of **sunshine**.

• Remain on a **salt-free, oil-free, sugar-free diet** until the thyroid is under control. But, on the long term, you need a little salt and oil.

MORE HELP

• *To stimulate the thyroid:* Eat one serving each of **oats** and **bananas** daily, take a **cool shower** each morning and night, and **work** 3-5 hours outdoors everyday. Functions of the thyroid will be increased by more **exercise**; for it stimulates TSH production by the pituitary. T3 increases slowly in the blood during, and after, vigorous exercise.

AVOID

• A thyroid deficiency can result from eating free fats (**margarine, butter, mayonnaise, fried foods, cooking fats, salad oils, and** commercial **peanut butter**).

• The following foods are "goitrogens"; that is, they hinder the body's use of iodine: ***raw* cabbage, turnips, peanuts, mustard, pine nuts, millet, soy products**. *Cooking* these foods inactivates the goitrogen factor.

• Avoid **electric blankets** if you can.

• Avoid drinking **fluoridated water**.

• **Nitrates** are goitrogenic; that is, they stimulate goiter formation. Nitrates can be found in **hot dogs, sausages, luncheon meats, and variously prepared meat products**. Nitrates are also found in **well water, from fertilizer runoff**.

HERBS

Gentian provides bitter principles known to normalize the functioning of the thyroid. Take it alone or combine it with cayenne, kelp, and saw palmetto.

TO ELIMINATE SUPPLEMENTATION

• A natural healer in Central America recommends the following procedures: *To go off thyroid supplementation:* Go on a **fasting, cleansing program of fruit and vegetable juices**, followed by a building program of eating **simple, nourishing foods** (especially raw food). Do this for 2-4 weeks. Get back and neck **spinal adjustments**, and take one **kelp** tablet daily. He says this always works.

TO REDUCE A GOITER

• A goiter is an enlargement of the thyroid gland, which is in the front of the neck. To eliminate that enlargement, the above practitioner recommends this: Follow the above program; and then, after the 2-4 weeks, do one or more of the following four neck applications: (1) Put an **Epsom-salt compress** on the neck every night, leaving it on all night for 10 nights. (2) Use a compress of **white oak bark** tea over the goiter for better results. (3) Put two **hot fomentations** around the neck, for 4 minutes each, and one cold compress for 4 minutes. Continue alternating this for an hour. Then spend 5-10 minutes doing **exercises** with the neck in various positions. (4) Put a poultice of ground-up **almonds** completely around the neck and leave it on all night, for 3-10 nights. This is especially good for harder, more fibrous goiters.

• To reduce a goiter, a different natural healer says to apply **black walnut** extract as paint on the throat. Take ½ dropperful of the extract, twice daily, and apply **the calendula** herb compresses twice a day for a month.

• For goiters, Dr. Christopher prescribes mixing **burdock root** powder with **olive oil** and applying ex-

ternally over the affected gland.

NOTE

Many people with Parkinson's Disease *(480)* tend to have hypothyroidism.

Cancer of the thyroid has been linked to drinking highly fluoridated water.

ENCOURAGEMENT—The secret of happiness is to live a life wholly dedicated to God. You are the Lord's; for He created you. Give Him your heart and your plans, obey His Written Word, and He will wonderfully guide your life. Psalm 146:7.

HYPERTHYROIDISM

(Overactive Thyroid, Graves Disease)

SYMPTOMS—Fatigue, insomnia, intolerance, irritability, increased perspiration, constantly feeling hot, frequent bowel movements, hair and weight loss, nails separate from nail bed, change in skin thickness, hand tremors, intolerance of heat, rapid heartbeat, goiter. Sometimes the eyeballs protrude. In women, there may also be less frequent menstruation and decreased flow.

CAUSES—Hypothyroidism (spoken of in previous pages) is caused by an underactive thyroid, resulting in a slow metabolism and all it brings with it. Hyperthyroidism is the opposite: The **thyroid is overactive.** Metabolism is too fast; and that brings its own problems. The thyroid gland is producing too much thyroxine.

Sometimes called *thyrotoxicosis*, hyperthyroidism is not a simple problem to deal with. Graves' disease is the most common form of it, which 2.5 million Americans have.

A detailed discussion of the thyroid is found in our article on Hypothyroidism *(549)*, which is far more common. Both affect women more often than men. When the thyroid does not work properly, a variety of different physical problems can develop.

In fact, the word, "hypochondriac," was coined in the 19th century to describe those strange people who have all kinds of things wrong with them when they apparently do not seem to have anything wrong with them. Surely, it must all be in their heads! Well, it was in their throats. We now know that those misunderstood people had under or overactive thyroids.

Infection of the thyroid or certain prescription drugs can temporarily produce hyperthyroidism.

The pituitary, parathyroids, and sexual functions work closely together and are affected by the thyroid. Problems in one area can affect them all.

Improving hypothyroidism will improve Parkinson's Disease in those who have both.

NATURAL REMEDIES

• Eat 75% fresh foods, including plenty of **vegetables.** Also need **brown rice, green drink, brewer's yeast, wheat germ, and lecithin.** Eat carefully of good food. Hyperthyroidism speeds up digestion, so you may not properly absorb nutrients.

• Eat the **cabbage** (cruciferous) family of foods (**broccoli, cabbage, kale, brussels sprouts, mustard greens**); for they tend to suppress the thyroid function. Eat as much as you can raw; for this increases the thyroxine-suppressing factor. They contain substances, called *isothiocyanates*, which help restrain the thyroid from producing too much thyroxine. Also eat **radishes**; it is in the same family and is the most powerful thyroxine suppressor of them all. **Rutabagas, soybeans, turnips, peaches, and pears** also slightly suppress the thyroid function.

• The eating of **kelp** helps every type of thyroid problem, including hyperthyroidism. Kelp is a rich source of iodine and thyroxine. The hormone produced by the thyroid is almost pure iodine. Genuine sea salt is another worthwhile source of iodine. *See Hypothyroidism (above).*

• Deficiencies of **vitamins C and E** can result in overproduction of the thyroid hormone.

• Get some early morning **sunlight** on the body, whenever possible. If you are near the **ocean**, wade or swim in it every so often.

AVOID

• Cut down on **dairy products** and avoid **nicotine, alcohol, caffeine, soft drinks, and processed and junk foods.**

• **Radioactive sodium iodine** (iodine 131, also called I-131) may be recommended by a physician; but be aware of the fact that it can cause severe side effects.

• Do not be quick to try **surgery** on your thyroid. You have enough problems without doing that.

HERBS

• **Bugleweed** *(Lycopus)* has been used for a long time, to treat thyroid problems. It mildly (slightly) inhibits iodine metabolism and reduces the amount of hormone that is produced by cells within the thyroid. It is widely used in Europe for this purpose. **Lemon balm** is also used in Europe for the same purpose. Studies show that lemon balm causes a decrease in blood and pituitary levels of TSH after a single injection; thus thyroid hormone production is reduced. Other herbs with this property include **vervain** *(verbena)* and **self-heal.**

—For much more, see Hypothyroidism (549).

ENCOURAGEMENT—In Christ, the family of earth and the family of heaven are bound together. Christ glorified is our brother. Go to Him with all your sorrows and cares. Isaiah 41:17.

"Thou wilt light my candle: the Lord my God will enlighten my darkness." Psalm 18:28.

"They cry unto the Lord in their trouble, and He saveth them out of their distresses." Psalm 107:19.

The work of conquering evil is to be done through faith. Those who go into the battlefield will find that they must put on the whole armor of God (Ephesians 6). The shield of faith will be their defense and will enable them to be more than conquerors.

The Natural Remedies Encyclopedia

- Section 12 - Lymphatic

LYMPH SYSTEM —
Swollen Glands 553
Lymphangitis (Spleenic Inflammation) 554
Mononucleosis (Mono, Infectious Mononucleosis) 554
Scrofula (Lymph TB) 555
—Also see Hodgkin's Disease (625) and Non-Hodgkin's Disease (625).

— SECTION 12 — LYMPHATIC

LYMPHATIC - 1 - LYMPH SYSTEM

SWOLLEN GLANDS

(Lymphadenitis)

SYMPTOMS—This generally refers to the swelling of lymph nodes (commonly referred to as "glands") on the sides of the neck, by the throat.

But it can also refer to enlargement of any other lymph glands, such as are under the armpits or in the groin.

There may also be heat, tenderness, and reddening of the overlying skin, as well as fever.

CAUSES—The lymph system filters out infections of various types, in order to rid them from the system. But an infection in the lymph nodes can occur. This can be a localized infection or an infection symptomatic of a more serious condition (such as **measles, chicken pox, mononucleosis, tuberculosis, syphilis, leukemia, or cancer**).

NATURAL REMEDIES

• The specific infection needs to be overcome through **fasting, bed rest, careful diet, keeping the bowels open, and not consuming improper foods or drink**.

• **Vitamins A, B complex, and C** are important.

• To reduce swellings, apply an herb tea wash of one or more of the following: **comfrey, plantain, apple cidar vinegar, and witch hazel**. Also helpful are **carrot poultices, castor oil packs, lavender lotion or lavender water**. Bruised **parsley** poultice or parsley tea can also be used to reduce swellings. While **witch hazel** is outstanding, some of the other herbs provide additional healing.

• In India, **ginger** has been used for centuries to reduce swellings of various kinds, including glandular swellings. Take 2 oz. daily; results should be seen within 30 days. Do not take this during pregnancy. They also apply 2 parts **turmeric** and 1 part **salt** to the swollen area.

• Take 400-500 mg pure **pineapple compound** (from health-food store) 3 times a day on an empty stomach. It contains the proteolytic enzyme, *bromelain*.

• Dr. Christopher suggests applying a fomentation

FOR MORE NATURAL REMEDIES:

HERBS: Herb Index (pp. 107-108) will help you locate the 126 most important herbs and the diseases each one can treat. How to prepare herbs (109). How to use them (107-152)

HYDROTHERAPY: Therapy Index (pp. 153-154) and its Disease Index (209-211) will lead you to over 100 water therapies and many more remedies.

VITAMINS AND MINERALS: Vitamin-mineral dosages (85-102). Other nutrients (102-105)

CARING FOR THE SICK: Home care for a sick person (17-25). The healing crisis (25-26)

WOMEN'S SECTIONS: Organs (639) Pregnancy (665), Childbirth (727). Infancy, Childhood (685). Women's Herbs (716, 722)

EMERGENCIES: (750-757)

or compress of a strong decoction of **rue** tea to the area.

• Another helpful compress is 2 oz. **mullein**, ½ oz. **lobelia** powder, and 1 tsp. **cayenne**. Simmer in 2 quarts apple cider **vinegar**, cover for 15 minutes, strain, and apply when cool.

Note: **Cat scratch disease** *(702)* is thought to be the primary cause of one-sided lymphadenopathy, a disease affecting the lymph glands. Also see **Tonsillitis** *(703)*, another lymphatic disorder of the tonsils and adenoids affecting children.

—See Fevers (233-239) and other topics in this section on the Lymphatics.

ENCOURAGEMENT—Precious are the privileges of the soul who abides in Christ. In Christ's strength, we are able to meet whatever trials that life may bring,. Psalm 103:3.

"In all these things we are more than conquerors through Him that loved us." Romans 8:37.

The promises are rich and full! Claim them!

LYMPHANGITIS

(Spleenic Inflammation)

SYMPTOMS—This begins with a chill and high fever, with moderate swelling and pain of the lymphatic tissues. A severe pain develops in the left side and extends up to the shoulder. When the infection is in the deep layers of skin, there is a deep general flush with raised borders in the affected areas. The skin becomes hot and dry, and the person becomes very thirsty.

CAUSE AND TREATMENT—This is a streptococcal infection of one or more lymphatic glands, usually of the spleen.

NATURAL REMEDIES

• Provide a **fruit diet** for the first few days. Follow by a light, **nourishing diet**. Give the kind of care for one with a fever. Keep the **bowels** open, using laxative herbs. **Do not strain** at the stool; for this could injure a temporarily enlarged spleen. Give plenty of **fluids**, to help flush out the lymphatics.

• Apply **hot fomentations**, followed by short **cold**. This will greatly help to reduce pain and inflammation. Do this 2-3 times a day until the pain is relieved; then do this once a day.

• Kloss' liniment is excellent, when applied over the spleen. Mix 2 oz. powdered **myrrh**, 1 oz. powdered **goldenseal**, ½ oz. **cayenne**. Put into 1 quart 70% rubbing **alcohol**. Mix and let stand 7 days, shaking well each day. Put the upper fluid in covered bottles. This is good for all kinds of swellings and skin problems.

—See Fevers (233-239).

ENCOURAGEMENT—We must be living branches, connected closely to Christ, so that we may bear the fruit of unselfish kindness to all about us. By His grace this can be done. Isaiah 41:17.

MONONUCLEOSIS

(Mono, Infectious Mononucleosis)

SYMPTOMS—Depression, fatigue, fever, generalized aching, sore throat, swollen glands, headache, jaundice, with possible red rash in the form of raised bumps.

CAUSES—Mono is a contagious disease, primarily affecting the spleen and lymphatic system.

It can be transmitted by **kissing, sexual contact, or sharing food or utensils**. But it can also be spread through the air, **breathing** contaminated air exhaled by another. So it is not necessarily the "kissing disease" it is described to be. It is not highly contagious; for brothers and sisters of the infected person rarely contract it.

Most frequently contracted by children and teenagers, the incubation period is 10 days among children and 30-50 days among adults.

The symptoms are very similar to those of the flu; but those of mononucleosis continue for 2-4 weeks! Even after the other symptoms are gone, a general fatigue can continue for 3-8 weeks more. Some people continue to feel fatigued for months or years.

Individuals frequently say that they felt sick but continued working, thinking they would shake it off—and then came down with mono. So, if you feel like going to bed and getting well, do it before something worse happens to you.

The Epstein-Barr virus (EBV) or, more rarely, the cytomegalovirus (CMV), is the cause of this infection. Therefore, it cannot be treated with antibiotics. (Giving them can produce an allergic rash or worse.) Both EBV and CMV remain in the body throughout the rest of one's life; but the infection, carefully treated, generally seems to go away. Therefore, rest and care for yourself; so the outward symptoms will successfully go away!

Be alert to signs that a more serious spleenic infection may be about to begin: a fever over 102° F., severe pain in the middle of your left side that lasts 5 minutes or more, breathing becomes difficult, or swallowing becomes difficult. If this happens, contact your physician. This occurs because you did not go to bed and properly care for yourself when the infection first started. As a result, the spleen ruptures and there is internal hemorrhage. Fever may reach 103°-104° F. and persist for 1-2 weeks. There may be chills; and sore throat may make eating difficult for several weeks.

NATURAL REMEDIES

• Go on a **light fast of fruit and vegetable juices** for a day or two.

• Eat a **nourishing diet**, emphasizing **vegetable soups, potato peeling broth, and brown rice**. Eat **small meals**. Because of the sore throat, avoid acid juices, such as **citrus**. A **soft diet** is best if the patient is a child with a severe sore throat.

• Drink plenty of **distilled water**; and be sure your intake of **trace minerals** is adequate. Drinking cool water often soothes the throat. **Saltwater gargles** help this.

• Do not eat **processed or junk foods**. Do not eat **meat, sugary, fried foods. No coffee or soft drinks**.

• **Stay in bed** until the worst part is over. As long as the spleen is enlarged, you need lots of rest. However, it has been found that, after a few days, **mild activity** is all right. But excessive activity may lead to a relapse and injury to the spleen. It may require 6-8 weeks before the person can return to regular activities.

• **Do not strain** at the stool; for this could injure a temporarily enlarged spleen.

• Isolation of the ill person is not required. But no one else should use his glasses, cups, drinking straw, etc.

• **Dandelion** tea will protect the liver and **echinacea** will boost the immune system.

• An expert knows how to give 30 minutes of **fever therapy** daily for 3 days, maintaining the body temperature at 102°-103° F. This will successfully treat even the most advanced cases of infectious mononucleosis. Giving a **hot bath** (which induces a brief fever) produces as dramatic results as the use of corticosteroid drugs, with none of their drawbacks (these drugs impair immunologic function).

• Treat headaches with a **hot footbath**. Do not give **aspirin** to a child or youth; for it might cause Reye's Syndrome.

Several weeks of **rest in bed** is required to produce complete healing; but many young people do not want to do this. As a result, some develop a chronic mono fatigue for months or years afterward.

• There is a *"pneudomononucleosis,"* which produces an enlargement of the cervical lymphatic glands and fatigue. This condition may be due to **food allergies;** it often occurs in high school and college age students. This condition is treated with an **allergen-free diet** and completely eliminates the unusual fatigue.

—See Allergies (576) and Lymphangitis (554).

ENCOURAGEMENT—Jesus is your Counselor. It is your privilege to cast all your care upon Him; for He careth for you. We must exercise that living faith which will penetrate the clouds that, like a thick wall, separate us from heaven's light. We have heights of faith to reach, where all is peace and joy in the Lord. How thankful we can be for the love of God! John 15:11.

You can have the heart of a little child in its simplicity and unreserved obedience. Your soul will yearn after holiness, and more and more of the treasures of truth and grace will be revealed to you to be given to the world. God has a wonderful plan for your life; and, day by day, it will be fulfilled more and more as you trust and obey His Written Word.

SCROFULA

(Lymph TB)

HYDRO—Scrofula is a type of tuberculosis which affects the lymphatic organs.

• The following suggestions are from the *Hydrotherapy* section *(153-211)* of this *Encyclopedia:* **Graduated cold applications, sunbaths, cold air baths,** and **outdoor exercise** and living.

• Eat a careful, **nutritious diet**, rich in protein.

• Live in an **elevated region**, not in an area of damp lowlands.

• Dr. Christopher recommends the following herbal formula for scrofula: Mix 2 oz. each of **Dandelion root, yellow dock root, bittersweet, and stillingia root** with 1 oz. each of **sassafras root bark, figwort root, and American ivy (or Virginia creeper bark or only its twigs)**. Simmer the ingredients in 3 quarts water and reduce to 2 quarts. Strain, sweeten to taste with **honey**, allow to cool, bottle and keep in a cool place. Take 1 Tbsp. 3 times daily.

• R.T. Trall, M.D., prescribes the following: Being out in the **sunshine** is extremely important. Eat only quality **fruits, vegetables, and cereals**. Drink **water** freely, especially before noon. Take 1-2 **full baths** (tepid, cool, or cold) daily. Whenever the body is feverish, constantly apply cool or cold **wet compresses** and the **wet sheet pack**, followed by the **dripping-sheet** or **half-bath** (sitting in a partly filled tub). At other times, apply them only 1-2 times weekly. When the patient has torpor or over-fullness, apply moderate **sweating in a dry blanket**. He says not to be surprised if boils, eruptions, and abscesses occur during active treatments. Toxins are being released.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SCROFULA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INCREASE GENERAL VITAL RESISTANCE—Graduated cold applications, sunbaths, cold air baths, **outdoor exercises and living. Aseptic diet** that is rich in protein. And live in an elevated region, not in the damp lowlands.

GENERAL—Revulsive or Alternate Compress over swollen glands, twice a day. During intervals between, apply flannel-covered **Heating Compress**, renewed before it becomes dry.

ENCOURAGEMENT—As the heart is opened to the entrance of God's Written Word, light from heaven shines upon the soul. Determine to make God first, best, and last in everything you say and do. Psalm 1:1.

POISONS - 1 - BITES AND STINGS

FOUR POWERFUL ANTIDOTES

NATURAL ANTIDOTES

This chapter is filled with various types of poisons which we can get—from plant stings, insect or animal bites, infestations, and poisoning. When you need it, you may not have immediate access to the recommended antidote; you may need something in a hurry. When nothing better is available, here are the best universal antidotes: The first is for poisoning and the others for infestations and disease. It is good to keep them on hand. If you go hiking, carry them with you.

CHARCOAL

There are 80 different harmful substances which charcoal can neutralize. It can stop cold 29 of the 30 leading poisons. It can handle many infections. Chew up 10 activated charcoal tablets and swallow them with water. If the problem is on or beneath the skin, also apply charcoal poultices. The sooner the charcoal is applied, the more effective it is. Activated charcoal is better than regular charcoal, because it has more surfaces to adsorb the toxic substance. (Keep in mind that some poisons are powerful acids or alkalines, and need antidotes of the opposite pH to neutralize them; however charcoal can handle many of them also.)

GARLIC

There are 45 different diseases that raw garlic can effectively deal with. It is powerful against bacterial, viral, and fungal infections. The active ingredient is germanium; and garlic has a far higher content of germanium than any other plant or food. Mice exposed to cancer cells, that had been treated with garlic, did not die of cancer. Russian scientists said it was a better antibiotic than any other substance. But the garlic must be raw.

VITAMIN C

This amazing substance helps your white blood cells powerfully fight all kinds of toxic (bacterial, viral, and fungal) substances. The Linus Pauling Institute of Science and Medicine in Palo Alto, California has been researching the benefits of this vitamin for decades. It is used in the treatment cardiovascular disease, cancer, HIV, infections, fevers, cataracts, skin problems, and hundreds of other things. It destroys free radicals and is an antihistamine. It also functions as a "cell cement" to hold your body together!

PLANTAIN

This herb is found in many areas, and is effective in many, if not most, insect bites. Chew the leaves and then apply the pulp to the affected skin area.

ENCOURAGEMENT—Of all things that are sought, cherished, and cultivated, there is nothing so valuable in the sight of God as a pure heart, a disposition imbued with thankfulness and peace. If the love of God is in our hearts, it will shine forth in words and actions.

NETTLE RASH
(Urticaria)

SYMPTOMS—Small, pale swellings on the skin, with severe itching and burning which come and go, to be replaced by others. Each lesion lasts a few hours and is succeeded by new ones in other places. They look like raised, red, inflamed areas; sometimes this is with white lumps.

CAUSES—Also known as urticaria, nettle rash is an intensely itchy rash that may affect the whole body or just a small area of skin. Although it usually lasts only a few hours, chronic urticaria can last for sever months. Both acute and chronic forms can recur.

The other forms of urticaria are dealt with under Hives *(272)*. This present article is only concerned with the rash caused by touching stinging nettles.

Contact with the nettle plant pricks a poison into the skin.

NATURAL REMEDIES

- Sponge with very **hot water**. Also one can sponge with **hot salt or alkaline water**. Give a prolonged **neutral temperature bath**.
- Pour 4 Tbsp. powdered **calcium** into a cup of **water**. Gently cover the itchy area with it. This will help neutralize and eliminate itching.
- Use a poultice of crushed **plantain** over the area.

ENCOURAGEMENT—Pray earnestly for help in all the little things of life, and you will be ready when great crises come. Psalm 119:9.

INSECT REPELLENTS

NATURAL REPELLENTS

All of the following are to be applied only externally (to skin or clothing), unless otherwise stated:

- Mosquitoes and flies: Apply **citronella**.
- Most flying insects: Apply **eucalyptus**.
- Fleas: Apply **pennyroyal** (but not if you are pregnant).
- Fleas and ticks: Apply **cedarwood**.
- Fleas and flies: Apply **thyme, geranium, lavender, rosemary, or peppermint**.
- Insects: In India and Africa, natives rub **basil** on their skin.
- Insects: Pennyroyal (also called **fleabane, tickweed, and mosquito plant**) has been used for thousands of years as an insect repellent. Pliny (first century A.D.) said it was the best flea repellent.
- Insects: **Mountain mint** is said to be even more effective than pennyroyal.
- Insects: **Citronella** smells like a lemon and has been used for years to drive off insects. It is also the active

ingredient in several non-DEET products which you can apply. Pure citronella oil can be irritating to the skin (and should never be swallowed). Dilute the pure oil by adding some vegetable oil to it.

• Insects: **Citrus essential oils.** Any type of citrus, or other plant which smells like citrus, repels insects. Crushed **lemon thyme** has 62% of DEET's repellency. Crush **citrus leaves** and apply. Dilute citrus essential oils before applying to the skin.

• Insects: **Lemon grass** is an herb with a citrus-like odor, which is a good insect repellent.

• Insects: A combination which is powerful in driving off insects: Mix **lavender, citronella, and pennyroyal** in a **vegetable oil** base; then apply it. Never swallow essential oils. Do not use pennyroyal if pregnant.

• **Oil of cedarwood** is effective against moths, flies, and mosquitoes. A box made of soft wood, then painted with cedarwood oil, will repel moths as effectively as a cedarwood chest.

• Sprigs of **mint** leaves will repel flies and fleas. Hang springs of mint about doorways and put them anywhere flies gather.

• Make a strong tea of **chamomile** flowers and let it stand until cold. Then strain off the herb and sponge the solution over the exposed areas of your body, allowing the liquid to dry on. No insects will touch you. Fortunately, chamomile has a very pleasant odor.

• **Pyrethrum** is a herbaceous perennial chrysanthemum that is non-poisonous to man and higher animals. It has been used for thousands of years as an insecticide in China, Persia, and elsewhere. It destroys many forms of biting and sucking insects such as fleas, flies, mosquitoes, gnats, ants, roaches, moths, aphids, leafhoppers, etc. It may be used as a powder or in a water solution. As a powder, it can be puffed around the room, especially in cracks. As a concentrated liquid, it is sprayed. It can also be mixed with other insecticide herbs.

• **Quassia** is amazingly bitter; yet it is harmless to man and animals. Pour ½ pint of boiling water over ¼ oz. of quassia chips and sweeten with molasses or sugar. When cool, pour the mixture in saucers and place in rooms where flies are most numerous.

• A strong solution of **sassafras**, sprinkled or sprayed around the house, keeps flies away. Chips of sassafras, placed in bowls of fresh fruit, will eliminate gnats and fruit flies.

• As a flea repellent, fill a pad or pillow of **winter savory** and place it in the sleeping quarters of the family pet.

• This repellent formula is used in South American jungles with good success: 1 oz. each of rosemary oil, basil oil, rue oil, and wormwood oil. Put in small bottles and carry with you. Do not drink it. Label it as poisonous.

• To fumigate a room (to eliminate all insects), place a Tbsp. of **cayenne** on a bottle lid. Place over a Sterno, or candle-type food warmer, lighting the underneath candle to heat the lid. Allow the pepper to fume (smoke). Close the room. Repeat when necessary.

• *Rodent repellent:* Rats hate **peppermint**. Close all but one exit in a house, cellar, or barn. Place peppermint oil on clothes, and the rats will rush out. Rat catchers would use this with great success, except that they would place a large bag at the only exit, and the rats would run into it and be caught in it.

ENCOURAGEMENT—You are safe only as, in perfect submission and obedience, you connect yourselves with Christ. The yoke is easy; for Christ carries the weight. As you lift the burden of the cross, it will become light; and that cross is to you a pledge of eternal life.

INSECT BITE

SYMPTOMS—Redness, slight swelling, and possibly some itching.

Reaction to the sting can sometimes be more pronounced: hoarseness, labored breathing, confusion, difficult swallowing, and severe swelling.

Sometimes the reaction can be severe: possible closing of the airway and perhaps shock (cyanosis and a drop in blood pressure).

CAUSES—Certain stinging insects in North America can cause reactions (honeybees, bumble bees, African bees, hornets, scorpions, fire ants, yellow jackets, wasps, spiders, centipedes, and ants). Of these, the honeybee, yellow jacket, and African bee are the most dangerous.

Bee venom contains formaldehyde.

Note: Each year, bee stings cause more deaths in America than snake bites.

Anaphylactic Shock may occur! *(574)*

NATURAL REMEDIES

• **Pull out the stinger**, if any remains. (Honeybees leave their stinger in the wound. It must be pulled out immediately; for it keeps pulsating venom into the skin.) Avoid removing the stinger with your fingers; use a knife blade to scrape it out, to avoid squeezing in more poison.

• **Do not scratch** the area. Although it provides some relief, it can lead to a secondary infection. Instead, quickly apply a natural remedy to reduce the itch.

PUT ON THE AREA

• On the area, apply a paste of **baking soda and water** or a compress that is wet with diluted **ammonia** water (which is more useful for scorpion stings).

• Wet a little **calcium gluconate** and put it on the area.

• Crush a **charcoal** tablet, place on the area, and cover with cloth. This will reduce pain and swelling. Put some wet powdered charcoal in a cloth and tie it on for 3-4 hours. Charcoal has an amazing adsorptive (not absorptive) ability to pull into itself toxins and poisons, thus neutralizing them. This is due to its large chemical surface and the fact that charcoal is pure carbon. The carbon molecules are eager to unite with other substances.

• **Clay or mud** can also be used, especially if you are out in the woods. As soon as possible, wet some dirt and put it on. Leave it on for a half hour. Try to select mud from a clean place—not from a mud hole, where animals may have polluted it. If pain persists, apply charcoal.

• **Plantain** is one of the best herbs for bug bites, and first with most herbalists for this problem. Because it is a

common weed, it is frequently available. It grows where the ground is damp, heavy, and shaded. Rub the freshly picked herb on the area. Or add ¼ cup dried plantain leaves to a quart of boiled water, cover and steep for 20-30 minutes. Soak the bitten limb in cooled tea for 10-15 minutes, 3-4 times a day.

• After pulling out the sting, put a little **honey** on it. Or put on some grated **onion,** to draw out swelling and reduce pain.

• **Chamomile** and **St. John's wort** are two other useful herbs for insect stings and bites.

• Other helpful substances to apply include **goldenseal** (to stop the infection) and **bentonite clay** (to remove toxins).

• Apply powdered **comfrey,** mixed with **aloe vera** juice, to reduce the swelling.

• Put a piece of fresh **onion or garlic** on it.

• An enzyme-based **meat tenderizer** breaks down the proteins that make up insect venom; but you have to place it on the area right away for it to be effective.

• Also helpful are **calcium chloride, hydrochloric acid, or ammonium chloride** on the area.

• Apply a poultice of **white oak bark and leaves, comfrey, and slippery elm.**

• Other herbs you can place on the wound include **agrimony, yerba santa,** and **lobelia**. Make a tea and apply to the area.

• **Parsley** alleviates insect bites. Mash the plant and use as a poultice. **Lavender** is an antiseptic, a wound healer; and, in compresses, it reduces inflammation from the bite.

• Here are more things you can place on the area: **aloe vera gel, ammonia, Epsom salts dissolved in warm water, eucalyptus oil.**

• Applying **lemon juice and vinegar** removes the toxic pain.

• **Pain gels, DMSO, or Caladryl** lotions can be applied. **Calamine** lotion often reduces the itching.

OTHER HELPS

• Drink as much **yellow dock** tea as you can or take **echinacea** (tea or in capsule form).

• Ironically, either **hot or cold,** will lessen the pain, when placed on the area. Heat eases distress because it neutralizes a chemical which causes inflammation. Cold also reduces inflammation.

• A lengthy **hot tub bath** will help relieve abdominal pain that often develops after a bite.

• A **cold pack or ice pack** on the area will help relieve pain.

• To strengthen the bodies defenses, after being bitten, take B_6 (50 mg) and **pantothenic acid** (100 mg) immediately after the bite, to help detoxify poisons and prevent allergic reactions. Thereafter, take one high-potency **B complex** tablet daily. Take **vitamin C** (1,000-2,000 mg) immediately; during the rest of that first day, take 4,000-10,000 mg in divided doses. Each day thereafter, take 3,000 mg. Adding **bioflavonoids** to the C dosage increases the protection. **Calcium** (up to 1,500 mg daily) reduces pain and lessens stomach irritation from the acidity of vitamin C.

• Eat **citrus fruits** and **green and yellow vegetables** to boost immunity.

PREVENTIVES

• If you are sensitive to stings, **avoid situations** in which you might get stung. If you have to be in such localities, carry **adrenalin** (epinephrine) with you, so you can inject it. Be accompanied by a friend who can go for help. Reactions can occur within minutes or hours. Contact a physician. Death can result if treatment is not sought. *See Anaphylactic Shock (574).*

• If you have a known allergy to a certain venom, you can have a physician prescribe an **emergency treatment kit** which you can keep with you.

• Purchase a small **venom extractor** and keep it with you.

• Take **vitamin B_1** (thiamine, 50 mg daily). It creates a natural insect repellent in human skin.

• Squashing a yellow jacket releases a chemical that causes other yellow jackets to attack. When one stings, that also causes the others to become excited. **If stung, run.** Go indoors or jump into water. Insects have a hard time following a person through a thicket of woods.

• Always wear shoes outside. Bees love clover and yellow jackets live in the ground.

• Stinging insects prefer dark colors or brightly flowered clothes. So **wear white or light-colored clothing.**

• Insects are attracted to people who are **deficient in zinc.** Take at least 30 mg a day.

• Insects are repelled by the odor of **turpentine.**

• **Brewer's yeast or garlic** rubbed on the skin (or eating it daily) sometimes deters insects.

• **Do not use perfumes,** colognes, scented soaps, or hair sprays. These odors attract insects.

• Drinking **alcohol** or eating an excess of **sugar** attracts insect biting.

• **Avoid bright jewelry** and other metal objects.

• **Meeting an insect:** If you come in contact with a stinging insect, move away slowly. But if there is only one insect and you see him heading directly toward you, face him and wave your hands up and down in front of you. That will confuse him. But if you are outside and he may have buddies, run away fast.

• Do not touch **insect nests.** Keep **garbage cans** covered. Be especially alert **after rain,** because pollen is scarce then and insects are searching everywhere for it.

• *See Spider Bite (564),* which includes that of black widows. *Also see "Snake Bite (565).* Treatment for a black widow bite is the same as that for a snake bite.

ENCOURAGEMENT—Praise God for all His blessings, and you will have more to praise Him for. How many are the dangers He has protected you from!

MOSQUITO BITE

SYMPTOMS—The itchy, red bite of a mosquito, with its attendant itching.

CAUSES—The culex, aedes, and anopheles mosquitoes are in North America. Malaria *(237)* can sometimes occur. The treatment below is for non-malarial bites.

NATURAL REMEDIES

• To relieve itching: Rub with raw **garlic** or fresh **lemon juice**; repeat as often as possible. Rub with damp **salt** or **vitamin C** powder.

• Cover the bite with **Epsom salts** dissolved in warm water, **eucalyptus oil, aloe vera gel, lemon juice, or vinegar**.

• Apply a poultice of crushed **plantain leaves**.

PREVENTION

To prevent mosquito or biting fly bites:

• Eat lots of raw **garlic**. Include vitamin **B complex** and/or **brewer's yeast** in the diet.

• Take 100 mg B_1 (niacin) immediately before exposure and every 4 hours during the problem.

• Take 30 mg **zinc** every day for a month.

• Avoid **sugar** and **white flour** in all forms.

• Wear body-covering **garments**.

• Add 4 Tbsp. **bleach** to a tub bath; and soak in it for 15 minutes. No mosquitoes will bite you for a day or two.

—Also see Malaria (237), West Nile Virus (744), and Dengue (239).

ENCOURAGEMENT—We strive for happiness, but rarely find it. Only in God can we find genuine, lasting peace of heart. Psalm 66:8-9.

BEE AND WASP STINGS

SYMPTOMS—You have just been painfully bitten by a bee or wasp.

CAUSES—There are hundreds of bees; but only one makes honey. Unfortunately, all of them can give us painful stings. But we still value our little honey bee. To make a pound of honey, bees have to travel 13,000 miles, or about 4 times the distance across America.

Wasps help man by eating many harmful insects. They do more good than harm. Hornets and yellow jackets are among the several kinds of wasps.

NATURAL REMEDIES

• As long as the stinger remains in the skin, it keeps pulsating and injecting more venom. So, first, gently **remove the stinger**. Try not to squeeze it as you do this.

• Next, **wash** the sting area. This will remove some of the venom. After this, apply **damp charcoal** to pull out more venom. A paste of **baking soda and water** will help neutralize the toxins. **Cold compresses** or **ice** cubes will help reduce pain still more.

• Six hours later, apply **heat**.

• If the person shows dizziness, difficulty in breathing, severe swelling, or hives, *contact a physician*

Also see Insect Bite (559), Anaphylactic Shock (574), and Hives (272).

ENCOURAGEMENT—If we would travel heavenward, we must take the Word of God, the Bible, as our lessonbook. In the words of inspiration we must read our lessons day by day.

ANT BITE

SYMPTOMS—A biting pain, and the ant is still there biting.

CAUSES—Most ants are no problem, but some bite ferociously. Ant venom, although very small, is quite similar to honey bee venom. What should you do?

NATURAL REMEDIES

• Apply a poultice of crushed **plantain** leaves.

• To reduce itching and swelling, apply **baking soda** to the area. Only add enough water to make a paste.

An **ice pack or cool compress** will also help.

If the person bitten manifests symptoms of shock (difficulty breathing, severe swelling, hives, or dizziness), contact a physician.

—Also see Insect bite (559), Fire Ant Bite (below), Anaphylactic Shock (574), and Hives (272).

ENCOURAGEMENT—The meekness and humility that characterized the life of Christ will be made manifest in the life and character of those who "walk even as He walked." As we humbly, prayerfully read in the Bible, our lives are ennobled; and, trusting in Jesus, we are prepared to encourage and bless those around us. This is the will of God for our lives: to be kindly, sympathetic helpers.

FIRE ANT BITE

SYMPTOMS—One or more severely burning bites from a large ant. A pustule develops within 24 hours, and then subsides over the next several day.

CAUSES—You probably stepped on a fire ant's nest. It is a low mound of loose dirt, 1-3 feet across. As soon as you stepped on it, hundreds of ants started toward your legs.

Fire ants, imported from Africa to Brazil in the 1960s, finally reached America near the end of the century. They have venom similar to that of bees, wasps, hornets, and yellow jackets. And they are still primarily in the Southern States.

NATURAL REMEDIES

• If the bitten part is an extremity, put it in **very hot water** for 30 minutes. This will neutralize the venom.

• To reduce pain, next put **baking soda, ice, vinegar and lemon juice**, or astringent herb tea (**white oak bark, witch hazel, plantain**, etc.) over the area.

• If the person shows any signs of hives, difficult breathing, dizziness, or excessive swelling, contact a physician.

—Also see Insect Bite (559), Ant Bite (561), Anaphylactic Shock (574), and Hives (272).

ENCOURAGEMENT—To be a real man or woman in

the sight of God is to be like Jesus—meek and lowly of heart, always anxious to guard the interests of others more sacredly than you would your own.

CATERPILLAR STING

SYMPTOMS—Stinging sensation after touching a caterpillar.

CAUSES—A caterpillar is a worm-like creature which is the second (larval) stage in the life cycle of butterfies and moths. Many caterpillars can be handled; but some cause problems. When in doubt, avoid them all.

NATURAL REMEDIES

• The stings come from the hairs on the caterpillar, which become slightly embedded in the skin. Gently place a **sticky tape**, such as Scotch tape, over the injured area; then carefully lift it up. This will extract the hairs. Then apply crushed **plantain** leaves to the area.

—See Insect Bite (559) for many suggestions about what to do next.

ENCOURAGEMENT—True happiness is to be found, not in self-indulgence and self-pleasing but, in learning of Christ. Those who trust to their own wisdom and follow their own way go complaining at every step, because the burden which selfishness binds upon them is so heavy

CENTIPEDE BITE

SYMPTOMS—A painful bite caused by touching or handling a centipede, which causes swelling of the lymph glands. Symptoms generally subside within 48 hours.

CAUSES—Centipedes look like caterpillars; but they have very long legs (varying from 15 to 170 pairs). The first pair of legs are used for fighting, not walking. They are called *poison claws*, because a gland in the centipede's head fills these claws with poison. Fortunately, they travel about at night and are primarily found in the tropics.

NATURAL REMEDIES

• Immediately apply a **charcoal compress** to help draw out the poison.

• A **cool compress** or **ice cube** can be applied for pain relief.

• If the person shows dizziness, difficulty in breathing, severe swelling, or hives, contact a physician.

—Also see Insect Bite (559), Anaphylactic Shock (574), and Hives (272).

ENCOURAGEMENT—The meekness of Christ, manifested in the home, will make the inmates happy; it provokes no quarrel, gives back no angry answer; but it soothes the irritated temper and diffuses a gentleness that is felt by all within its charmed circle. Wherever cherished, it makes the families of earth a part of the one great family above.

CHIGGERS

SYMPTOMS—A red spot that itches intensely for about 3 days.

CAUSES—Chiggers, also called red bugs, are extremely tiny insects (about 1/20-inch) in the class, called *arthropoda* (eight-legged creatures). Arthropoda includes scorpions, spiders, and mites. They prefer grassy, weedy, fields; but they are also found in wooded areas and are active from May to September, especially during June and July.

Chiggers attach to humans with claws. They feed for about 3 days by secreting enzymes which liquefy skin cells; then they drop off.

Moving slowly, a chigger crawls along until he finds a tight spot in a body crease or where the clothing is tight. Then, about 2 hours after hitching a ride, he digs in by injecting fluid which dissolves tissue and produces a welt. About 3-6 hours later, the itching begins and continues for about 3 days.

NATURAL REMEDIES

• **Remove the chigger** by scratching off with a fingernail; or you can do this by applying castor oil or Vaseline.

• Another method is to apply clear **nail polish** to the spot; this smothers the creature.

• Or **lather** with soap, scrub with a brush, then rinse thoroughly.

• A **charcoal** or **plantain** poultice can be a help.

• An ice pack helps control swelling.

• **Banana** soothes chigger bites.

• **Hot baths** or a **baking powder** paste helps control the itching. If you have too many chigger bites, get into a bathtub with **cornstarch** sprinkled into it.

• Use the remedies suggested for mosquito bites *(560)*.

ENCOURAGEMENT—Find in the Lord the strength you need every day. The Lord is a great God, a great King above all gods. Oh come; let us worship and bow down, and kneel before our Maker.

ITCH MITE

SYMPTOMS—Itching occurs; but it seems to travel from place to place on the skin.

CAUSES—Beware of bird nests close to your house! Many birds are infested with mites; and these can enter your home and get on you.

NATURAL REMEDIES

• **Wash** the affected part with tar soap. **Wash clothing** in boiling water or press them with a hot iron.

• Steep 1 Tbsp. each of **burdock root, yarrow, and yellow dock root** in a pint of boiling water for half an hour. Strain, add a pound of **cocoa fat**, and keep boiling and stirring until it is a salve. Use this for an itch of any kind.

• The principal author of this *Encyclopedia* got mites

while preparing the Fourth Edition. A bird raised three babies on his front porch; and, as soon as they left the nest, he took it down and could see mites crawling (at a rate of 2 inches every four seconds) up his wrist. Some managed to settle into their new home. Desirous of a simple and non-toxic solution, after praying, a highly successful plan came to mind: It was obvious that ticks hide in the clothes, bite the skin when it very warm, then retreat to the clothes. If ticks bit during the day, he took off his clothes that evening (or the next morning if they bit at night), and pressed them down in a bucket of clear tap water till, all bubbles gone, they remained underwater. Then he showered off in clear water. After a minimum of two hours, he put the clothes in the washer on spin dry for a few minutes; then hung them up to dry. It worked. The ticks drowned.

ENCOURAGEMENT—Oh how good the Lord is to all of us; and how safely we may trust Him everyday. He calls us His little children. So obey Him in all things, and your happiness can only deepen.

LICE
(Pediculosis)

SYMPTOMS—Itching of the skin, often on the head, trunk, or pubic area. Lice eggs can be seen on one's hair. The person will feel like he is overheated or has a slight fever.

CAUSES—There are three types of lice which infect people: the head louse *(pediculosis capitis)*, the body louse *(p. corporis)*, and the crab louse *(p. pubis)*. Crab lice (also called crabs) are spread by sexual contact.

Lice can be spread by hanging coats, scarves, and caps together or using someone else's comb, brush, etc. They live on the clothing (especially in the seams), travel to the skin once a day for a meal, then back onto the clothing.

Lice live about 30 days; and the female lays about ten eggs a day. The tiny eggs (nits) are laid at the base of a hair shaft. As the hair grows, the nits are carried upward and can be seen. They look like tiny black or rust-colored spots at, or near, the base of the hair. They can even be found on the chest, beard, and eyelashes.

NATURAL REMEDIES

No drugs are needed to eradicate lice. Instead use one or more of the following methods:

• Heat **combs and brushes** to 151° F. for 5-10 minutes, soak for an hour in 2% Lysol solution, or freeze them for 30 minutes.

• Launder **clothing and bedding** in hot water. Non-washable items should be sealed in a plastic sack for 10 days.

• **Soak** the place on the body for 30 minutes in very warm, soapy, water.

• Crumble 3 Tbsp. **rue** into 1 pint **white vinegar**. Steep as long as possible (2 weeks is best). Apply to the head or other body area. It is good for body lice, skin parasites, or as a ringworm lotion.

• The **hair** can be doused in kerosene and then wrapped in a towel. Garlic compresses can be placed on the scalp for 2 hours. Hot vinegar (or a 50-50 vinegar / water mixture) applied to the scalp will loosen eggs, so they can be vigorously combed out of the hair with a fine-toothed comb. A 50-50 mixture of kerosene and olive oil can be put on the scalp, to get rid of the nits. Another hair wash: labrador tea or field larkspur. In extreme cases, the hair can be cut off.

• Be careful what you place on the **eyebrows**; you do not want to damage the eyes. Petroleum jelly has been recommended to suffocate the lice.

• Vacuuming **carpets** is as effective as spraying them. Do it frequently.

• Scrub **toilet seats** regularly.

• Whatever method you use, keep in mind that there is a 14-day cycle; you must work intensely for a little over 2 weeks on your body, clothing, and home if you are to have success.

ENCOURAGEMENT—In everything you do, put God and His standards first. You will never be disappointed if you do this. Matthew 1:21.

BEDBUGS

SYMPTOMS—Bites on your skin, which occur at night, often while you are in bed. The bites often appear in groups or lines.

CAUSES—Bedbugs are very small, flat, crawling insects that hide inside mattresses, bedding, furniture, and walls. They usually bite at night. These are especially common in the tropics.

NATURAL REMEDIES

• *To get rid of bedbugs*, **wash** bedding and pour boiling water on bed frames. Sprinkle sulfur on mattresses, cloth furniture, and rugs; and do not use them for 3 weeks. Then wash or shake out the sulfur. Clean it off well before using again.

• *To prevent bedbugs*, often spread bedding in the **sun**.

ENCOURAGEMENT—Cultivate tenderness, affection, and love that have expression in little courtesies, in speech, in thoughtful attentions. It is the kind word, the thoughtful consideration for others that God values.

TICK BITES

SYMPTOMS—You have found a tick on your body.

CAUSES—Although the bite of most ticks are usually harmless, while drawing blood they can inject disease-causing bacteria. The mouth of a tick has a sharp probe with backward pointing barbs.

After initially digging in, it injects bacteria as it feeds on blood. So the sooner it is removed, the less infection you will receive from it.

Ticks live in marshy places, woods and forests, bushes,

shrubs, and long grass. Stay on trails and avoid brushing against vegetation.

Ticks cannot jump or fly; but they wait on low vegetation for a host to pass by, with their little "arms" held upward. As soon as something does, they grab hold and start climbing in search of a place to attach and feed.

NATURAL REMEDIES

• **Avoid walking** in areas frequented by ticks: woods and open fields in the summer. They are generally not on roads or lawns.

• **To remove a tick** that is firmly attached, take care that its head does not remain in the skin, since this can cause an infection. Never pull on the body of a tick! With tweezers, grasp the tick as close as possible to its mouth—the part sticking into the skin. Try not to squeeze its swollen belly. Pull very gently on the tick. This may take as much as 30 seconds, but be patient and gently pull. He will then withdraw and come out. Do not touch the removed tick. Burn it or put some alcohol on it. Then apply crushed plantain leaves.

• If you have to go into fields or forests, you may want to dust some **sulfur** powder on your ankles, wrists, and underarms. But get that powder off later! If you ingest any of it, boils or skin rashes can result.

• *For symptoms, see Rocky Mountain Spotted Fever (568) and Lyme Disease (568, 744). For detailed information on removal of ticks, see Lyme Disease.*

ENCOURAGEMENT—Strength of character consists of two things—power of the will and power of self-control. Many youth mistake strong, uncontrolled passion for strength of character; but the truth is that he who is mastered by his passions is a weak man. The real greatness and nobility of the man is measured by his powers to subdue his feelings, not by the power of his feelings to subdue him.

BLACK WIDOW SPIDER BITE

SYMPTOMS—Within a short time the victim feels agonizing pain throughout the body, especially in the abdomen, which may be rigid as a board. Abdominal pain similar to that of appendicitis. Cold sweats, difficulty in breathing, nausea, spastic muscle contractions, vomiting, localized tissue death, and sometimes delirium and convulsions occur.

CAUSES—There are more than 29,000 known types of spiders. They are excellent at insect control; but two in the U.S. are extremely dangerous. The tarantula is the world's largest spider; it lives as far north as the southwestern U.S. But its bite is no more dangerous to a human than the sting of a bee or wasp.

Black widow venom is more potent, drop for drop, than the poison of a pit viper (rattlesnake, copperhead, or cotton mouth); yet each spider bite injects only an extremely small amount of venom. Four out of every 100 people bitten by a black widow have anaphylactic shock and death. It is possible to develop tetanus *(593)* from a spider bite.

DESCRIPTION—The black widow is the most dangerous spider in the U.S.; it has a shiny black body and a red (or yellow) hourglass patch on the underside of the main body segment. Only the female is dangerous to man. It weaves shapeless webs in dark corners. It may be found in the corners of barns, sheds, and other buildings near homes. It hides in its web when frightened; but it may bite if caught in clothing. Most common in the South, the black widow is in nearly every state and in Canada. There is a brown widow and red widow in Florida, which are also poisonous. Deaths usually result from complications, not from the bite.

NATURAL REMEDIES

Contact a physician.

• The bite of a black widow should be treated like a snake bite *(565)*, except that it is not necessary to give antivenin.

• If there is swelling or pain after a spider bite, keep calm and **apply a constricting band 2-4 inches above** (above, not below) the bite. Loosen the band for 15 seconds every 10 minutes. Do not let the extremity turn blue! Do not move the affected area; and keep it below the heart level, if possible. The victim should lie down. Pack **ice** around the wound.

• Chew up and swallow 10 **charcoal** tablets with water. Crush more tablets, make a paste, and place on the bite as a compress. Charcoal will powerfully draw out the poison if applied extremely fast.

The objective, throughout the above paragraph, is to slow the blood and reduce spread of the poison.

• Drink as much **yellow dock** tea as possible or take 2 capsules of this every hour till symptoms recede. Swallow **echinacea**. Apply **white oak bark** poultices. **Slippery elm, plantain, or comfrey** are also good.

• Massive doses of **vitamin C** (a first dose of 4,000 mg; followed by 1,000-2,000 mg *each hour*). Reduce the dosage if diarrhea develops. **Calcium** gluconate (500 mg every 6 hours), to relieve pain and abdominal cramping from the venom, and prevent stomach upset from massive amounts of vitamin C. Accompany each dose of calcium with **magnesium** (1,000 mg). **Pantothenic acid** (500 mg each 8 hours for 2 days), to augment vitamin C's detoxifying effects.

—Rattlesnake and black widow venom is similar, and so is the treatment. See Snake Bite (565) and Insect Bite (559) for much more information. Also see Brown Recluse Spider Bite (below).

ENCOURAGEMENT—Trust Him with all your heart. He will carry you and your burdens. Find in Him the answers you need. Job 5:20.

BROWN RECLUSE SPIDER BITE

SYMPTOMS—A "bull's eye" appearance of a blister encircled by red and white rings. A few hours after being bitten, the skin around the bite becomes red and swollen. Eventually, most of this tissue dies, leaving a deep sore

that may take months to heal.

CAUSES—There are more than 29,000 known types of spiders. They are excellent at insect control, but two in the U.S. are extremely dangerous. The tarantula is the world's largest spider; it lives as far north as the southwestern U.S. But its bite is no more dangerous to a human than the sting of a bee or wasp.

The bite can cause the flesh to decay; it can require extensive treatment over weeks or months. But death from a brown recluse is extremely rare. It is possible to develop tetanus *(593)* from a spider bite.

DESCRIPTION—The brown recluse is a brownish, poisonous spider, about 3/8-inch long, with a dark, violin-shaped mark on its upper back near the head. It prefers to hide in dark places in the house, like closets and drawers. It spins a sticky, irregular web, with treads running in all directions. It can lives for days without food or water. And it is found all over the U.S.

NATURAL REMEDIES

Contact a physician.

• Chew up and swallow 10 **charcoal** tablets with water. Crush more tablets, make a paste, and place on the bite as a compress. Charcoal will powerfully draw out the poison if applied extremely fast.

• If there is swelling or pain after a spider bite, keep calm and **apply a constricting band 2-4 inches above** (above, not below) the bite. Loosen the band for 15 seconds every 10 minutes. Do not let the extremity turn blue! Do not move the affected area; keep it below the heart level, if possible. The victim should lie down. Pack **ice** around the wound. The objective is to slow the blood and reduce spread of the poison.

• Drink as much **yellow dock** tea as possible or take 2 capsules of this every hour till symptoms recede. Swallow **echinacea**. Apply **white oak bark** poultices. **Slippery elm, plantain, or comfrey** are also good.

• Massive doses of **vitamin C** (a first dose of 4,000 mg; followed by 1,000-2,000 mg *each hour*). Reduce the dosage if diarrhea develops. **Calcium** gluconate (500 mg, every 6 hours), to relieve pain and abdominal cramping from the venom and prevent stomach upset from massive amounts of vitamin C. Accompany each dose of calcium with **magnesium** (1,000 mg). **Pantothenic acid** (500 mg each 8 hours, for 2 days), to augment vitamin C's detoxifying effects.

—Rattlesnake and recluse venom is similar, and so is the treatment. See Snake Bite (below) and Insect Bite (559) for much more information. Also see Black Widow Spider Bite (564).

ENCOURAGEMENT—Trust Him with all your heart. He will carry you and your burdens. Find in Him the answers you need. The highest evidence of nobility in a Christian is self-control. Purity of heart and loveliness of spirit are more precious than gold, both for time and for eternity. Psalm 34:8.

SNAKE BITE

SYMPTOMS—One or two tiny bite holes which cause intense pain; frequently there is nausea, vomiting, and unconsciousness.

CAUSES—There are two types of poisonous serpents in North America:

The *pit viper* (which includes **rattlesnakes, copperheads, and cotton mouths** [also called **water moccasins**]) has a deep, heat-sensitive, pit on each side of the head. Pit vipers lunge forward, bite, and immediately pull back. Their venom contains a blood poison.

The **coral snake** does not jump; and, when it catches hold of the flesh, it must hold on and chew awhile for the poison to sink in. Its venom is a nerve poison.

The danger from snake bite occurs when the poison reaches the heart and, secondarily, the effect of that poison in the blood and nervous system.

The action of the venom is rapid, regardless of the type of poisonous snake. There is rapid swelling and inflammation. The greatest danger is if it is a young child or an old person, the bite is close to the heart, a large quantity of venom is injected, or immediate treatment is not given to suck out or neutralize the poison.

If treatment is not immediately given, the poison may cause death. If not death after the initial effects of pain and shock begin to wear off, extensive tissue damage begins. There is suppuration, gangrene, sloughing, and hemorrhage. If this happens, recovery time is greatly slowed.

Most cases of snakebite occur between sunrise and sunset. Non-poisonous snakebites are treated with antibiotic herbs or drugs, in order to prevent infection. If you are not sure of the identity of the snake, and you killed him, you might bring it back for identification at the emergency room.

DESCRIPTIONS—***Coral snakes:*** They are found only in the southernmost areas of the United States, as well as south of the border, and have brightly colored rings. There is a non-poisonous snake which looks similar; but the colored rings are arranged differently. Remember it this way: *"Red by black, friend of Jack; but black by yellow, kill a fellow."*

NATURAL REMEDIES

CLAY POULTICE

• This is the currently recommended procedure: Keep calm. Apply a thick, wet clay poultice (or better, ground-up activated charcoal powder mixed with the wet clay). Immediately lay down for two hours. The poultice will absorb the venom at the wound site.

HOW TO SUCTION

• An alternate remedy recommended by others: Keep on hand a small **hand-suction extractor** for immediately pulling the poison out of the wound. Continue this for half

an hour. (This suction is less useful for coral snake venom; but use it on all snake bites anyway!)

• Suction can also be done with a **pop bottle** which is heated and applied. As it cools a vacuum is formed.

• Another alternative is to cut off the end of a plastic **injection syringe** at the bottom of the large end, apply to the bitten area, and pull back on the plunger.

• If there is no other way to extract the poison, another person should **suck it out**, continually spitting out the blood, for half an hour. The person doing the sucking should not have any sores in his mouth.

• The former instruction was to cut across between the two bite holes, so you could suck out more blood and poison. The current theory is that no cuts should be made, but only sucking. It might be the best to **suck and spit** for a couple minutes; this will clean the surface as well. Then **cut across**, so you can **suck** even better. But, when you are in the crisis, do what seems best.

Here is more detailed information on this:

• Cutting a snakebite to suck or suction out the venom should be done only when medical care is several hours away and when the bite is on an arm or leg. Then it should be done as soon as a tourniquet is in place.

• Sterilize a sharp knife or razor blade in a flame or alcohol. Make cuts 1/8 of an inch deep. Each cut should run the length of the limb, not across it. So, if necessary, two cuts will be made instead of one.

• For 30-60 minutes, suck out the poison and spit it out. Then rinse out the mouth (snake venom is not poison in the stomach; it is poisonous only when it gets directly into the bloodstream). Wash the wound and bandage it.

THE TOURNIQUET METHOD

• If medical help is more than 30 minutes away and if the bite is on an arm or leg, the medically recommended procedure is to apply a tourniquet between the wound and the heart during the first 5 minutes after the bite: Have the patient **lie down**, keep him **calm and warm**, apply a **tourniquet** above the limb where the wound is. *(But the clay poultice method, mentioned earlier, is far superior.)* This constricting band should be 2-4 inches above the bite and tight enough to shut off the venous blood (but not so tight that it stops the arterial circulation. It should be loose enough that a finger can be inserted between it and the skin, and a pulse can be felt below the bite site.) Loosen the band 15 seconds every 10 minutes. If the swelling reaches the tourniquet, it should be left in place and a second constricting band should be applied a few inches higher.

OTHER HELPS

• Specific **antivenin serums** are in stock for various species of snakes. Learn to identify the various snakes in your locality. (Coral snakes are primarily found only in the southeastern states.)

• Massive doses of **vitamin C** (a first dose of 4,000 mg; followed by 1,000-2,000 mg *each hour*). Reduce the dosage if diarrhea develops. **Calcium** gluconate (500 mg, every 6 hours), to relieve pain and abdominal cramping from the venom, and prevent stomach upset from massive amounts of vitamin C. Accompany each dose of calcium with **magnesium** (1,000 mg). **Pantothenic acid** (500 mg each 8 hours, for 2 days), to augment vitamin C's detoxifying effects.

• The person bitten should **keep calm** and work carefully. Excitement speeds up the blood flow to the heart.

• In most cases, the person does not die. But pray and get yourself prepared for whatever may happen.

• Do not give **liquor** to the person, thinking that this will help him. It does not!

• Take **charcoal** from the campfire, mix it with water and drink it, as follows: a half glassful of water with 1 tsp. of charcoal, and drink another one every 15 minutes until the danger is past.

• If able to do so, a couple hours later, take a **steam bath** or something similar, to sweat out the poison.

• Throughout all this time, you should **eat no food.**

• Do not apply **ice or a cold pack** to the bitten area; for this will drive the poison toward the heart.

• If, after several hours, the bite area is still swollen and painful, put **kerosene** on a cloth and apply it, keeping it wet for several hours. This will help neutralize the poison. An alternative is to grind up raw **onions** and apply to the area. Leave them there until an offensive odor, not of onions, is noticed. Remove. Bathe the area. And apply more raw, crushed onions until the pain is gone. The onion is drawing out the poison.

• **Rue** can expel poison. Drink the tea and apply it to the wound.

• Pouring **alcohol** on a bite is useless and may speed up the venom.

• Chew up and swallow 10 **charcoal** tablets with water. Crush more tablets, make a paste, and place on the bite as a compress. Charcoal will help draw out the poison if applied extremely fast.

PREVENTION

• When you go hiking or camping, include a **suction kit, charcoal, a bottle of powdered vitamin C, and a cell phone** in your pack sack. Stay on the **trails**. If you are in heavy snake country, wear **canvas protectors** on your lower legs. They can be purchased at surplus stores.

ENCOURAGEMENT—When trials and tribulations come to you, know that everything will work out well if, through dedication and prayer, you will keep close to God. Psalm 60:12.

JELLYFISH STING

SYMPTOMS—A strong stinging feeling on the legs or arms while swimming at an ocean beach. This may afterward be followed by headache, muscle cramps, coughing, shortness of breath, nausea, and vomiting.

CAUSES—Jellyfish and Portuguese men-of-war are found in warmer marine waters. The eastern beaches of Florida are one example.

Their long tentacles contain stinging cells which, touching you, pierce the skin and release poison. Even severed tentacles can poison just as intensively.

NATURAL REMEDIES

• Immediately **rinse the wound** with saltwater. Do not use freshwater, because it activates any stinging cells which

have not already burst. For the same reason, **do not rub** the skin.

• Neutralize the area as soon as possible by splashing on one of the following; and do it again as needed: Use rubbing or ethyl (liquor) **alcohol, vinegar, ammonia, or meat tenderizer**. Travel tip: Take a bottle of vinegar with you to the ocean beach.

• **If any tentacles remain** on your skin, apply a paste of sand and seawater; then wrap your hand in a towel and wipe them off or scrape them off with a knife or credit card.

• Apply generous amounts of **aloe vera gel and plantain tincture** to the affected area.

ENCOURAGEMENT—God is preparing the hearts of those who dedicate their lives to Him. Soon, at His coming, they will go to heaven to ever be with Him. This is something each one of us can have.

CORAL, STINGRAY, AND SEA URCHIN BITES

SYMPTOMS—Painful abrasions and wounds while swimming, scuba diving, or snorkeling.

CAUSES—Coral polyps have the same toxic cells as jellyfish. The hard coral can cause painful abrasions; and the polyps can discharge small, poisonous barbs.

Stingrays have barbed, toxic spines at the base of their long tails. Sea urchins have spines which can inject poison. All of them can cause pain and infection.

NATURAL REMEDIES

• Do not rub; but **flush the wound** with saltwater.

• Then, to neutralize more of the poison, splash the wound with **alcohol, vinegar, ammonia, alum, or meat tenderizer** dissolved in saltwater.

• With tweezers or fingers covered with cloth, carefully **remove** coral **fragments** or small spines.

• Then, to neutralize more of the toxin, immerse the wounded area in **hot water** for 30 minutes or more.

• If medical assistance is not likely within half an hour, apply a **tourniquet** between the wound and the heart. *See Snake Bite (565) for directions on how to apply a tourniquet properly.*

ENCOURAGEMENT—There is a science of Christianity to be mastered,—a science as much deeper, broader, higher than any human science as the heavens are higher than the earth. The mind is to be disciplined, educated, trained; for we are to do service for God in ways that are not in harmony with inborn inclination. Hereditary and cultivated tendencies to evil must be overcome. Often the education and training of a lifetime must be discarded, that one may become a learner in the school of Christ. Our hearts must be educated to become steadfast in God. We are to form habits of thought that will enable us to resist temptation. We must learn to look upward. The principles of the Word of God,—principles that are as high as heaven, and that compass eternity,—we are to understand in their bearing upon our daily life. Every act, every word, every thought, is to be in accord with these principles. All must be brought into harmony with, and subject to, Christ.

POISONS -

2 - TRANSMITTED DISEASES

TYPHUS

SYMPTOMS—Sudden onset of chills, high fever, prostration, and general pains. The patient is excited, mentally alert, and has a flushed face and bloodshot eyes.

Delirium frequently occurs early. Small pink spots on neck, chest, abdomen, and limbs appear about the fifth day. They change from pink to red, then to purple, and finally turn brownish.

Heavy bronchitis, with cough and sputum. Pulse is rapid; but blood pressure is low.

In its early stages, typhus is like Rocky Mountain Spotted Fever; but the home treatment for both is essentially the same.

CAUSES—There are three main types of typhus fevers (louse fever, flea and tick fever, and mite fever); but they are all treated about the same and are caused by similar bacteria carried by **lice, fleas, ticks, or mites**.

Typhus, caused by ricketsia, occurs where people are crowded together under unsanitary conditions.

But Rocky Mountain Spotted Fever and Lyme Disease are more easily acquired by anyone who goes out into the woods. *—See Rocky Mountain Spotted Fever (568) and Lyme Disease (568, 744) for related information.*

NATURAL REMEDIES

• Typhus is a tropical disease; it rarely occurs in the northern climates. Call a physician. If none is available, give the treatment for Fevers *(233)* or Bubonic Plague *(571)*.

• Typhus responds to **colloidal silver, echinacea, goldenseal, garlic,** and **water** which is extensively used inside and outside of the body. Eat no food for a few days. It is best to call a physician if one is available.

ENCOURAGEMENT—The end of all things is at hand. Oh that we could see, as we should, the necessity of seeking the Lord with all the heart! Then we would find Him. May God teach each one of us how to pray more fervently. Matthew 11:29.

"It is a good thing to give thanks unto the Lord, and to sing praises unto Thy name, O Most High; to show forth Thy lovingkindness in the morning, and Thy faithfulness every night." Psalm 92:1-2.

"And it shall come to pass, that in the place where it was said unto them, Ye are not My people; there shall they be called the children of the living God." Romans 9:26.

What encouraging promises are these!

ENCOURAGEMENT—You must learn in the school of Christ precious lessons of patience. Do not become discouraged; but keep at the work in all humility. It will drive

you to Jesus; it will lead you to study the Pattern. You want to work as Jesus worked.

ROCKY MOUNTAIN SPOTTED FEVER
(Tick Fever)

SYMPTOMS—Symptoms begin 7-12 days after being bitten: headaches, chills, weakness, fever, muscle pain, and dry cough. There is a skin rash on the wrists, ankles, palms, soles of the feet, and forearms. This then spreads to the neck, face, axilla, buttocks, and trunk.

Next comes liver enlargement and pneumonitis. If untreated, circulatory failure brings death.

CAUSES—When symptoms first appear, do not wait for a positive blood test identification before instituting treatment. Death may occur as soon as 4-10 days after appearance of symptoms. Contact a physician.

Rocky Mountain Spotted Fever is caused by a similar bacteria *(rickettsia)* that causes typhus *(567)*; but it is transmitted solely by a tick. Of the reported cases, 90% occur along the eastern seaboard and 10% in the Rocky Mountains. But it can be contracted anywhere in between those regions.

May through October is when people, who are out in the woods, are especially bitten. You can also get it from your dog, which has been roaming the woods and picking up ticks as though he were a vacuum cleaner.

NATURAL REMEDIES

• Call a physician. Auxiliary home treatment is for fevers *(233)* and Bubonic Plague *(743)*. For preventive measures, see Lyme Disease *(568, 744)*.

• **Colloidal silver, echinacea, goldenseal,** and **garlic** are used to aid in recovery.

• If a tick is biting you, pull it off slowly, so as not to leave part behind; then rub on a little alcohol, vinegar, or lemon.

PREVENTION—Before going on a walk in the woods or fields, mix 50-50 powdered **sulphur and talcum powder**, dusting it on your legs and around your waist. An old-timer suggests putting a little turpentine around your ankles and one drop on your tongue, to discourage them.

Avoid **sleeping** where cattle graze or near your dog.

• *For detailed information on ticks, see Lyme Disease (568, 744).*

ENCOURAGEMENT—We can safely trust in God, to help us through the trials and disappointments of life. Go to Him and find in Him the help you so much need. He will give that which is best.

LYME DISEASE

SYMPTOMS—Between 2 and 32 days after the bite, symptoms appear: fatigue, flu-like symptoms, stiff neck, backache, headache, nausea, and vomiting.

Ultimately, enlargement of the lymph nodes and spleen may occur, along with irregular heart rhythm, arthritis, and brain damage.

Some of these symptoms slowly pass away over 2-3 years. But sometimes symptoms recur later without having been bitten again.

Because this disease is now so prominent, and because it can occur so mysteriously, here are more detailed symptoms on its usual 3 stages (which not everyone experiences):

1 - Small raised bumps, and/or a rash, appear on the entire body for 1-2 days or several weeks and then fades. Fever, chills, nausea, and vomiting may also occur.

2 - Weeks or months later, facial paralysis may occur. Frequently, enlargement of the spleen and lymph glands occurs and/or severe headaches, enlargement of the heart muscle, and abnormal heart rhythm.

3 - This can develop into backache, stiff neck, joint pains in the knees, swelling and pain in other joints, and even degenerative muscle and joint disease. About 70% of those who remain untreated later develop problems in the joints and central nervous system.

Physicians especially look for the following symptoms, before treating with antibiotics: a small red bump at the site of the tick bite, a bull's-eye rash surrounding that tick bite, and flu-like symptoms (such as fatigue, chills, and joint pain). If treatment is postponed until more advanced symptoms develop (heart, brain, or joint problems), drug medications do not work as well.

That ***"bull's-eye" spot***, caused by the tick bite, is the best single early warning that you have been infected with Lyme Disease. Within a day it usually enlarges to a rash around tick bite that is about 3 inches in diameter. But in about 10% of the cases, no rash appears.

To complicate the situation, the tick may not only have transmitted the bacterium, *Borrelia burgdorferi* (the cause of Lyme Disease), to you, but at the same time, it may have infected you with Ehrlichiosis *(570)*.

CAUSES—Lyme Disease is the most common tick-borne illness in America. It was first discovered in Old Lyme, Connecticut in 1975; it most frequently occurs where the white-tailed deer is most abundant, which is the northeastern states. But the disease has spread. Eight states report 90% of the cases: Connecticut, Massachusetts, California, Minnesota, New York, Rhode Island, Wisconsin, and New Jersey. Yet it has occurred in every state except Alaska, Arizona, Hawaii, Montana, and Nebraska. Lyme Disease is actually a very dangerous disease! Therefore, special attention is given to it here.

The bite of a tiny tick *(Ixodes dammini)* is primarily carried by deer. But it is also carried, in the eastern states, by white-footed field mice and, in the west, by lizards and jackrabbits. In California, it is also transmitted by the black-legged tick, carried by wood rats. Unfortunately, deer ticks also infest dogs and get on cats. For centuries, foxes and bobcats killed the mice carrying Lyme Disease; but now the country is overrun with the mice and the ticks they carry, which are now on deer and other animals. Researchers found that, because there are less predators, the ticks are 7 times as prevalent on 1-2 acre lots than on 10-15-acre lots.

Both deer ticks and black-legged ticks are very tiny. An adult is less than 1/10th of an inch and the nymph is a pinhead in size. They are much smaller than a dog tick.

Dogs and cats can collect these special ticks out in the woods and bring them into your home.

Tick bites are generally painless and unnoticed; so the symptoms may not at first, or later, be correctly diagnosed. Yet in advanced stages, when correct diagnosis finally occurs, the situation may have become critical.

The symptoms are similar to those of multiple sclerosis *(478)*, gout *(520)*, Epstein-Barr virus *(214)*, and Chronic Fatigue Syndrome *(214)*.

A test now exists which can detect the bacteria *(Borrelia burgdorferi)* which causes Lyme Disease. Antibodies are present from 3 days to 3 weeks after infection.

The majority of cases occur in the summer and fall. After a tick bites, it waits several hours before it begins to feed on the host's blood; and, once it does, it feasts for 3-4 days. The longer the tick remains attached, the greater the risk of Lyme Disease. If you remove the tick within 30 minutes after he starts biting, you are usually safe. —But can you be sure when the 30 minutes begins?

Lyme Disease is treatable and almost always curable if correctly diagnosed in the early stages. But, because the bites are usually painless, the incubation period so long, and the symptoms so varied, the problem may go unrecognized for weeks or months.

If you develop a bull's-eye type of rash anywhere on your body, see your health-care provider right away.

Significantly, many people have been bitten by the deer tick and have not gotten sick. In some Lyme-endemic parts of the U.S., 10% of the people have antibodies to the disease, showing they were earlier bitten but did not become ill. In other parts of America, about 1%-2% have already been bitten and not gotten sick. A 1995 AMA survey revealed that only about half of those diagnosed with Lyme Disease actually had it. The rest had arthritic or other physical problems from other causes.

If you walk in fields or woods at all, purchase two pairs of flat-edged tweezers, one for home and one to carry with you.

NATURAL REMEDIES

HOW TO REMOVE THE TICK

• The longer the tick is on you, the greater the risk of infection. Here is the safe way to remove it.

• A **drop of oil or alcohol** may be applied to partially immobilize the tick; but *do not use the wrong methods* to get him out. Put a **hot match** close to him to get him to back out or suffocate it with **petroleum jelly** or **nail polish**. Any of these will cause more bacteria to enter your body. Instead quickly, remove him.

• **Remove the tick** with tweezers. Keep fine-pointed tweezers in the home and in your backpack when you camp or hike.

If you find a tick embedded in the skin, carefully place the tweezers straight down over the flat side of the tick (so the tweezers are over its top and bottom). The tweezer points should close on the tick's head, right next to the skin where it is embedded. With a slight rocking motion, slowly and steadily pull the tick out of the skin. Notice that you closed the tweezers on its head, not its rear body! Do not twist. You want the entire tick out, without leaving part of it in the skin or injecting bacteria from its broken body into the skin. You may pour rubbing alcohol on the tick before pulling him out. Do not touch the tick with your hands. Do not apply kerosene, turpentine, or petroleum jelly. (If you do not have tweezers, use your fingers covered with tissue; then thoroughly wash them.) Any of its fluids could cause an infection. If you squeeze or twist the tick, its insides will get on you.

• It is important to **remove the whole tick**. If mouth parts remain in your skin, disinfect them with alcohol and consult your physician.

AFTER REMOVING THE TICK

• Wash your hands and the bite area with **soap and water**. Apply rubbing **alcohol or hydrogen peroxide** to the bite area. Then apply a small bandage, if needed.

• Two or 3 times a day, disinfect the bite area with **tea tree oil, calendula** extract, **St. John's wort** extract, or **echinacea / goldenseal** extract.

• Save the **tick in a jar**, labeled with the date, location, and where the tick bit you on your body. Place a damp towel in the jar; that will keep him fresh for up to 6 weeks.

• **Call a physician,** so you can have it tested immediately. **Watch for symptoms** over the next 3 weeks. Especially look to see if the bull's eye red rash appears within a day! Does stiffening in one or more joints—most often the knee or ankle—occur later?

• *Comparative symptoms:* ***Rocky Mountain Spotted Fever*** *(568)* will produce a fever within a week, a rash of reddish black spots on wrists and ankles. ***Lyme Disease*** starts with a red rash around the bite (70% of the time). From 3 days to 3 months, other symptoms develop: fever, joint and muscle pains, dizziness, swollen glands.

• Put suspicious **clothing in the dryer** for 30 minutes, to kill ticks by dehydration. Washing clothes, even in hot water and bleach, does not necessarily kill ticks.

• Heat relieves pain. **Hot baths** are helpful. *See Fevers (233).*

• Jim Duke recommends **garlic** capsules (equivalent to 1,200 mg of fresh garlic every day), 6 **echinacea** capsules daily (each containing 450 mg). He also recommends drinking fresh **juice from carrots, tomatoes, and fresh garlic**, along with the drug, doxycycline.

IF YOU HAVE CHRONIC LYME DISEASE

• Eat a nourishing diet of **fruits, vegetables, whole grains, nuts, and legumes**. Omit **processed and junk foods, meat, saturated fat**. Identify **food allergies** and eliminate them. Do not use **caffeine, sugar, or alcohol**. Get regular **exercise**—in a safe place outside. Drink at least 48 oz. of **water** daily.

• Take high-potency **B complex, vitamin C** (500-1,000

mg, 3 times a day), **vitamin E** (400-800 IU), **flaxseed oil** (2 Tbsp. daily), **calcium, and seaweed** for trace minerals.

PREVENTION

During the summer and fall months:

• Keep **lawns cut short** and shrubbery to a minimum, where children play. Cut the grass or, otherwise, **clear paths** you walk on in the woods near your home.

• The best solution to this problem is prevention. **Avoid going in the woods** in the summer months when ticks are the most active (especially June to August). Stay on the **center of the trails. Check yourself** and your children carefully afterward.

• Wear **long pants** and tuck them into your socks. Wear a **long-sleeved shirt** with a high neck or scarf, plus hat and gloves. If the clothing is light-colored, you can see the ticks better.

• Do a careful **body inspection** every day, if you have been in the woods or live in an infested area. **Look for dark spots** on your skin, behind knees, in the scalp, crevices, and armpits. Check children before they go to bed.

• You may choose to use an **insect repellent** containing DEET (diethyl toluamide). It lasts longer than others; and it is said to be safe on the outside. But it is fatal if taken into your body. It dissolves plastics, synthetics (nylons and polyesters), and some paints; and it causes adverse reactions in children. Wash it off as soon as you go indoors!

• Avoid having a **dog or cat**; they vacuum up the ticks and bring them to the house, where they fall off and you get them. You may miss the pets; but they will be replaced with lots of songbirds and some happy chipmunks. If you still want to have a pet that roams about the countryside, give it a good bath every week. Unfortunately, deer ticks also infest dogs. They also get on cats.

• **Pregnant women** should do what is needed to keep from being bitten. The infection can be transferred to the developing fetus and causes miscarriage (but rarely).

• Not everyone bitten acquires the disease. A **high sugar and fat diet** attracts insects! The skin eliminates toxins, which attract bugs when the diet is unnatural.

• When the blood is pure and the body clean, there is far less likelihood of tick bites and lice infestation. A diet high in fiber and natural food will help keep the body clean and protect against infections. Sugar attracts insects.

• Herbs useful in preventing infections include **echinacea, goldenseal, garlic, and burdock**. Rubbing with **lemon juice** will disinfect that part of the body you place it on. Applying **aloe vera** aids in healing.

• **Vitamins A and C** protect against infections. **B complex** vitamins help keep the blood clean. **Eat lots of greens.**

A Lyme test is now available; but false positives occur sometimes. So, if you are being treated for Lyme Disease and are not getting better, consider having a second test made. One study of nearly 800 people, diagnosed with Lyme Disease, revealed that half of them did not have it! Physicians blame false-positive tests for this.

—Also see Rocky Mountain Spotted Fever (568).

PET SYMPTOMS

If your cat or dog shows any of the following symptoms, it may have Lyme Disease: One or more swollen, hot joints. Poor appetite. Hot, dry nose. Fever of 103°-106° F. Wants to sit or lie in one place for long periods of time. Lameness that sometimes disappears.

ENCOURAGEMENT—If, through surrender and prayer, you are in Christ, as the trials come, the power of God will come with them. You will receive exactly that which is best at this time. Isaiah 63:9.

EHRLICHIOSIS

SYMPTOMS—Symptoms usually appear 7-10 days after the tick bites. Symptoms include severe headache, chills, fever, and joint pains. Sometimes there is nausea and vomiting; occasionally a spotted rash appears.

Rarely, serious complications develop, causing anemia and damage to the liver, kidneys, lungs, and nervous system.

CAUSES—This is another disease (caused by ehrlichia bacteria) which can be caused by a tick bite. A single tick can transmit two or more different disease bacteria; so you can come down with two or more tick-borne diseases at the same time.

So far, most cases are occurring in southern, central, and Atlantic coast states of the U.S. Walking or camping in wooded areas during the summer and early fall should be avoided.

The disease can be difficult to diagnose from the symptoms, especially if you have Lyme Disease at the same time.

NATURAL REMEDIES

• Prompt treatment can relieve the symptoms within 24-48 hours. See a physician.

• Helpful information will be found in Fevers *(233)* and Antibiotic Herbs *(228)*. Lyme Disease *(568, 744)* is full of information on how to avoid ticks.

ENCOURAGEMENT—Have faith in Jesus as your helper. Remember that you are not to choose your own work or follow your own ways; but look to Jesus as your guide and pattern. Keep His example before you; and constantly ask what will be pleasing in His sight. Learn from Him lessons of self-denial and self-sacrifice.

LEISHMANIASIS

SYMPTOMS—Bite of a small sand fly, which can be difficult to recognize in an internal infection which has developed.

If only the skin is infected, 2-8 weeks after being bitten, a swelling appears where the fly bit. The swelling becomes an open sore, usually with pus. Sores can heal by themselves; but they may take several weeks to 2 years. Meanwhile, the sores can easily become infected by bacteria.

CAUSES—This is a disease which travelers to the Near East, India, and Asia can contract. It is occasionally found in southern Mexico, Central America, and South America.

The infection is carried from person to person by a small sand fly which infects a person when it bites.

Some forms of the disease cause internal infection, called *visceral leishmaniasis*, kala azar, or dumdum fever. These infections are very difficult to recognize and the usual medical treatment is complicated.

Other forms of the disease primarily affect the skin. These are known as *cutaneous leishmaniasis*, tropical sore, Delhi boil, espundia, forest yaws, uta, or chiclero ulcer. These skin sores are easier to treat.

NATURAL REMEDIES

• Clean the skin sore with cool water which has been boiled. Apply a hot, moist cloth to the sore for 10-15 minutes. The cloth should not be so hot that it burns the skin.

• Repeat this 2 times daily for 10 days. This treatment often brings a complete elimination of the skin disease.

• If the sore becomes red and painful, it is becoming infected. Apply goldenseal, echinacea, or another antibiotic herb *(228)*.

ENCOURAGEMENT—Had Peter walked humbly with God (hiding self in Christ), had he earnestly looked for divine help, had he been less self-confident, had he received the Lord's instruction and practiced it, he would have been watching unto prayer. Had he closely examined himself, the Lord would have given him divine help and there would have been no need of Satan's sifting. There is no power in the whole satanic force that can disable the soul that trusts, in simple confidence, in the wisdom that comes from God.

GUINEA WORM

SYMPTOMS—A painful swelling develops in the ankle, leg, testicles, or elsewhere on the body. A week later, a blister forms; and it soon bursts open, forming a sore. This often happens when standing in water or bathing. The end of a white, thread-like Guinera worm can be seen poking out of the sore.

If the sore becomes dirty and infected, the pain and swelling spreads. Eventually walking becomes impossible. Sometimes tetanus *(593)* occurs.

CAUSES—This is another disease which overseas travelers can contract. The disease is spread by drinking **infected water**. It can also be spread by **walking or bathing in pools**. An infected person with an open sore wades into a water hole. The worm extends its head and lays thousands of eggs into the water. Tiny water-fleas pick up the worm eggs. Another person drinks some of water, and fleas and worm eggs are swallowed. Some of the worms develop into worms under the skin; but the person feels nothing. About a year later, a sore forms when an adult worm breaks through the surface of the skin, to lay its eggs.

NATURAL REMEDIES

• Keep the sore clean. Soak it in cold water until the worm's head pokes out. Attach a thread to the worm and pull gently, a little more each day. This may take a week. Do not break it! The worm may be more than 3 feet in length! If broken, severe infection can result. At the same time (or if sores become infected), take antibiotic herbs *(228)*.

• To prevent infection while traveling overseas, boil all drinking water. Stay out of pools. If you must drink out of a pool, put the water into a special pot for drinking, which has a clean cloth tied over the top. The cloth will filter out the water-fleas.

• If nobody wades or bathes in water used for drinking, the infection cannot be passed on; it will eventually disappear from the area.

ENCOURAGEMENT—The answer to our prayers may not come as quickly as we desire; and it may not be just what we have asked. But He who knows what is for the highest good of His children will bestow a much greater good than we have asked, if we do not become faithless and discouraged.

BUBONIC PLAGUE
(Pneumonic Plague)

SYMPTOMS—Following an incubation period of 2-10 days, the disease begins suddenly with a high fever, severe headache, great weakness, and pains in the back and limbs. There may be vomiting and diarrhea.

The fever may go up to 104° F. the first day, accompanied by intense thirst.

Buboes (swollen places) begin to appear the second day in the groin, under the arms, and in the neck.

The disease causes great weakness; and death often occurs sometime between the third and sixth day.

The key symptoms of the *bubonic* form are swollen lymph notes in the groin and armpits. The key symptoms of the *pneumonic* form is the severe cough and shortness of breath.

CAUSES—In the bubonic form of the plague, the lymph glands swell. When swollen, they are called "buboes."

This is a disease carried by the Norway rat. The bacteria are in its droppings, which it leaves in the food stuffs it has broken into and partly eaten.

There is also a pneumonic form of the plague, which is far less common. The symptoms are about the same as pneumonia; but it is transmitted through the air, extremely contagious, and is lethal.

In earlier centuries, several outbreaks of the plague occurred; during one, one-sixth of the people of Europe died. In the 14th century, 25 million people in Europe died from this plague.

Today, small outbreaks occur in Asia, Africa, and South America. There are only 10-12 cases a year in the U.S. So the plague essentially never occurs in the Western world today. We mention it here, so you will be aware of the symptoms. There is danger that terrorists will eventually use it against Western civilization. It is known that stored cultures of the bacterium *(Yersinia pestis)* which causes it are in Russia.

NATURAL REMEDIES

• Call a physician. Living cleanly and eating right is

the best prevention. Healthy, rested, people can resist infection better than others.

• This is a serious disease; a physician will use tetracycline, if it is available. Otherwise, use **coloidal silver, echinacea, goldenseal,** and **garlic**. Drink and bathe in much water; rest and fast for a few days.

• Very helpful information will be found in Fevers *(233)* and Antibiotic Herbs *(228)*.

ENCOURAGEMENT—All our sufferings and sorrows, all our temptations and trials, all our sadness and griefs—in short, all things work together for good to them that love God and are called according to His purpose. Romans 8:28.

DOG OR ANIMAL BITE

SYMPTOMS—You are bitten by an animal.

CAUSES—A bite from an animal carries with it a high risk of transmitted infection. Even a superficial bite should be checked by a physician. There is a special risk of infection of rabies *(572)* or tetanus *(593)*.

The first question is Has the skin been broken? If the tissues have been merely squeezed, then the matter is of little importance. There may be soreness and a black-and-blue appearance; but it will soon disappear.

But, if there has been penetration (an actual wound) then action must be taken. The animal may be perfectly healthy; but you cannot be certain of that.

The animal's teeth may cause the spores of tetanus germs to enter the body or the animal may be rabid. Such bites, if not promptly treated, can result in death.

NATURAL REMEDIES

• Remove the victim from danger, if it is safe to do so.

• **Wash the area** thoroughly, to remove the animal's saliva from the wound. Use warm water and then soap and water. Clean it for 5 minutes. Splash it with hydrogen peroxide or other antiseptic. Rinse with plain water. Pat it dry. Apply a sterile dressing. An ice pack may be placed over the bandage, to relieve pain.

• If the wound is serious, treat it as for severe bleeding.

• Either catch the dog and confine it or try to learn who the owner is. Notify health authorities, so they can observe the animal.

• Ideally, the wound is superficial, the animal is a healthy pet, and the one bitten has had a tetanus shot within the past 5 years. But if there are deep gashes, the possibility of rabies, subsequent swelling, redness, or drainage, contact a physician.

*—**See Rabies** (below) for detailed information about this danger and what should be done. Also see **Tetanus** (593). Tetanus is less likely; yet it is still a possibility.*

ENCOURAGEMENT—All experiences and circumstances are God's workmen, whereby good is brought to us. Let us look at the light behind the cloud. Proverbs 3:6.

RABIES
(Hydrophobia)

SYMPTOMS—Symptoms begin appearing within 1-4 months after the bite, but sometimes longer. They include numbness, soreness, and tingling where the bite occurred.

These sensations spread. And it becomes difficult to swallow, breathe, and talk.

Then more extensive muscle spasms begin; and the victim gradually becomes maniacal. The final stages are depression and exhaustion. Sometimes there is paralysis, coma, and death.

If the symptoms of rabies have already begun to appear, the person will probably die.

See end of this article for symptoms in a rabid dog. Rabies can also be transmitted by the bite of infected bats, foxes, skunks, and other animals.

CAUSES—Rabies is an infectious disease which destroys the nerve cells of part of the brain and causes death. Humans and all warm-blooded animals can get rabies. Because one of the symptoms is inability to swallow water, the disease is also called hydrophobia ("fear of water"). The disease is transmitted by a bite or by getting some of the saliva in a wound. Some animals contract rabies from breathing the air in caves where millions of bats are sleeping during the day. **Dogs** and **wild animals** are the most common sources of rabies for humans.

When the virus enters the body, it travels along the nerves to the spine and brain, producing inflammation. Once symptoms appear, death is inevitable.

MEDICINAL TREATMENT

This is the standard treatment for rabies:

• Nearly all human rabies cases result from dog bites. The animal can transmit disease before it shows symptoms of rabies; but, except in rare instances, the symptoms will appear within 10 days if it is rabid. The disease is always fatal, unless it is halted by a series of Pasteur treatments, which are started before symptoms first appear.

• If at all possible, it is crucial to confine the animal which inflicted the bite, so it can be observed. The course of the disease runs so fast that the animal should show symptoms of rabies before they begin to appear in the person. If the animal is rabid, it will show clear signs within 2 weeks; then the person bitten should begin the Pasteur series of rabies shots (unless circumstances are clear that the animal was not rabid).

• If the animal got away and cannot be found, then the person should immediately take the rabies vaccine series.

• If the series has already been started, and the animal is then found not to have rabies, the Pasteur treatments can be stopped.

• About 10%-12% of persons bitten by a known rabid animal, and not treated, will contract rabies and die. If the Pasteur series is started within 2 weeks or less after the bite, about one-third of 1% of those bitten will die.

• It is not widely known that rabies is sometimes trans-

mitted accidentally in hospitals. Rabies in humans is sometimes misdiagnosed as a stroke. After death, some of that rabid tissue may be transplanted to another person.

• If your child's pet hamster bites him, do not think the child needs to start rabies shots. Know that, if you have had that hamster for 3 weeks or more and it shows no symptoms of rabies, the hamster does not have rabies.

• Rabies shots last 10 days and are so difficult to take that the person often goes to the hospital for respiratory support while they are in progress. Yet they will save your life, if you contract the disease.

UNUSUAL ALTERNATIVES

• A backwoodsman, who is also a nature doctor, has treated all kinds of things with remarkable success. He says to do this: Wash the wound with **water** right away; then mix half and half **vinegar and warm water**, and wash the wound with it. When dry, apply 1-2 drops of **muriatic acid** (hydrochloric acid) to each wound. Do this even if (what appears to be) a rabid dog only licks a previous wound on your body. For extra precaution, you may apply a **tourniquet** and a rubber vacuum cup as for a snake bite *(565)*. If Muriatic acid is not available and you are far from civilization, you may **burn the wound** with a magnifying glass in the sunlight or use a red-hot iron. Then treat as for a regular burn until it is healed. This treatment usually prevents further worry. So says one backwoodsman.

• Jethro Kloss has a lengthy article on rabies in his book, *Back to Eden* (pp. 490-495). He also says to put **hydrochloric acid** on the wound, to neutralize the rabies poison in the saliva. Then, after discussing a number of herbal remedies to also use, he quotes a scientific paper by an M. Buisson, read to the French Academy of Arts and Sciences. M. Buisson had accidentally contracted rabies from a women suffering with it. By the time he discovered he had it, the disease was advanced and he knew he was soon to die. *Kloss quotes a London newspaper which reported on the scientific paper:*

"Concluding from these various symptoms that he was suffering with hydrophobia, he [Buisson] resolved to make an end of himself by suffocating himself in a vapor [**steam**] **bath**. With this view, he raised the heat very, very, hot, but was delighted, no less than surprised, to find that all his pains disappeared. He went out of the bath completely cured, ate a hearty dinner, and drank more freely than was usual with him. He adds that he has treated more than fourscore persons who have been bitten by mad dogs in a similar manner, and they all recovered, with the exception of a child seven years old, who died in a vapour bath he was administering."—*Jethro Kloss, Back to Eden, p. 493.*

• Water therapists normally work with a **steam bath** temperature of 115°-120° F. Those with diabetes, valvular heart disease, extreme arteriosclerosis, or emaciation should not take a steam bath.

• *Kloss also quotes a German newspaper which discussed an incident which happened in Saxony:*

"A Saxon forester named Gastell, at the age of 82, unwilling to take to the grave with him a secret of so much importance, has made public in the *Leipsic Journal* the method which he used for fifty years, and he affirms he has rescued many human beings and cattle from the fearful death of hydrophobia. Wash the wound immediately with **warm water and vinegar**; let it dry, and then pour upon the wound a few drops of **hydrochloric acid**, and that will neutralize and destroy the poison of the saliva."—*Kloss, p. 494.*

• Dr. Christopher suggests the following for rabies: Steep 1 tsp. lobelia in 1 pint boiling water and drink as much as possible to induce vomiting and cleansing of the stomach. Follow this with a high enema of lobelia and catnip. Christopher's remedy is based on the theory that, by cleansing the stomach and intestinal tract, the rabies can be eliminated.

• In his book, *Hydropathic Encyclopedia*, Robert Trall, M.D., recommended the following treatment for rabies: Apply **wet sheet packs or dry sheet packs** to promote perspiration; or give a **rubbing sheet pack, followed by a wet sheet pack**. *(See the hydrotherapy indexes for more information on such treatments: pp. 153-155, 209-211.)*

Trall's method is similar to the steam bath method; both of these methods cause the body to heat up in order to burn out the rabies virus.

• Taking **garlic** and other **antibiotic herbs** are also very helpful in treating serious infections. See Fevers *(233)* and Antibiotic Herbs *(228)*.

RABIES SYMPTOMS IN THE DOG—Was the dog who bit the person rabid? Here are symptoms of rabies in a dog:

• Initially, there is a marked change in its disposition. He will become very friendly or very snappy; the bark becomes hoarse.

• Paralysis may soon develop—first the lower jaw, then the hind legs, and gradually the rest of the body.

• But, instead, the dog wants to run away. It may run for miles, snapping at any creature which comes near it. But some dogs never show this excitative phase.

• Finally, the dog becomes exhausted and paralysis sets in. Paralysis of the jaw usually occurs.

If a dog shows signs of rabies, it must be chained (not roped) and observed for 2 weeks. If it shows signs of rabies, the person must begin a series of injections.

—Also see Dog or Animal Bite (572) and Antispasmodic Tincture (242, 474).

ENCOURAGEMENT—Jesus encourages you to persevere in prayer. In Him you can find the help you need for the crisis you face. How thankful we can be for the sacrifice of Christ on our behalf, that we might be saved!

TULAREMIA
(Rabbit Fever, Deer Fly Disease)

SYMPTOMS—The symptoms are similar to those of undulant fever and the plague. The first indication is a local ulceration at the infection site. About 1-7 days after infection occurs, chills, headache, prostration, and general pains suddenly begin. The disease is characterized by high fever and recurring chills with drenching sweat. A shallow, but ongoing, ulcer develops at the site of the original wound or bite. Lymph glands draining that area become swollen and painful; but they should not be lanced!

If not treated, the fever usually lasts 3-4 weeks; and it is, generally, not fatal. But convalescence is slow. Physical and mental depression can last for months.

CAUSES—Tularemia is a disease caused by *Francisella tularensis*; and it is transmitted to man from rodents, through the bite of a deer fly, and other blood-sucking insects. It can also be acquired through the bite of an animal, generally a **rabbit**. A more frequent cause today (87%) is cutting oneself while skinning and dressing infected rabbits or **ground squirrels**. The infected rabbits are often wild, not tame ones.

If you notice the appearance of symptoms (and you have been working with rabbits, especially wild ones), then have the condition immediately diagnosed. Sputum samples are highly contagious; so the lab should be warned about your suspicions.

TREATMENT—Go to a physician.

— Helpful information will be found in Fevers (233) and Antibiotic Herbs (228).

ENCOURAGEMENT—We yearn for a deeper, broader sense of God's presence. As we seek for it, we find the strength, peace, and encouragement we need. God will help you. 1 Timothy 1:15.

CAT COCCIDIA
(Toxoplasmosis)

SYMPTOMS—Symptoms can mimic the flu and cause headache, high fever, rash, swollen lymph nodes, meningitis, hepatitis, pneumonitis, myocarditis, blindness, and diarrhea.

If a pregnant woman contracts this disease, it will cause birth defects in the fetus (brain defects, blindness, and/or mental retardation).

CAUSES—Those who keep cats should be aware of this danger. Cat coccidia is caused by a tiny protozoa *(Isospora bigemina)* which lives in the intestines of cats. Apparently, it is in many cats!

This disease is acquired by inhaling or swallowing dust from contaminated **kitty litter boxes,** outdoor **sand, or dirt piles**. But it can also come from eating **rare beef**. While that protozoa is in an intermediate stage, it is outside the cat's intestines—and can enter the human body.

TREATMENT—See a physician. Diagnosis is made from a positive blood test or skin test.

PREVENTION—Women should **avoid cats** just prior to, and during, pregnancy. They should only eat **well-cooked meat**. Better yet, stop eating it entirely; since many diseases are transmitted through eating meat (including poultry, fish, and shellfish).

Other diseases which you can get from cats, include Lyme Disease *(568, 744)*, Poison Ivy and Oak *(582)*, Pinworms *(590)*, and Toxoplasmosis *(574, 592)*.

ENCOURAGEMENT—You can trust God to do for you that which you cannot do for yourself. In Him is our strength and help. In Him we find the answers we need to life's problems. Deuteronomy 33:12.

POISONS - 3 - ALLERGIES

ANAPHYLACTIC SHOCK
(Anaphylaxis)

SYMPTOMS—Sudden feeling of extreme anxiety. Swollen face, lips, and tongue. Possibly an itchy, red rash and flushing of skin (hives, *272*). There may be puffiness around the eyes. Wheezing and difficult breathing. If severe, he may lose consciousness.

CAUSES—If you have an extreme sensitivity to a substance, you may experience some or all of the above symptoms as soon as you are exposed to it.

We live in a chemical age, in which we seem to be overwhelmed with drug medications, polluted air, water, soil, chemicaled crops, and chemicals used in our cars and homes. When an insect bite or antibiotic drug is added to all this, serious trouble can develop.

Anaphylaxis, also called anaphylactic shock, is a rare and severe type of allergic reaction to a specific substance (allergen). It can develop within seconds or a few minutes.

The reaction spreads throughout the body, causing a sudden drop in blood pressure and narrowing of the airways. It can be fatal unless immediate treatment is received.

It is most commonly triggered by **insect stings or certain drugs,** such as the antibiotic **penicillin**. **Certain foods** (nuts, strawberries, etc.) may also trigger it.

EMERGENCY TREATMENT

- An immediate **injection of epinephrine**. He also needs oxygen right away.
- You may have been provided with syringes of injectable epinephrine (keep one at home, one at work, or with you as you travel). If anaphylaxis occurs, **inject the epinephrine into a muscle in your thigh**. Then call for an ambulance.

Epinephrine acts to reverse the swelling of the throat, narrowing of the airways, and drop in bood pressure that occurs in anaphylaxis. The drug is given by injection and doses are repeated until the condition improves.

• **Call an ambulance.** If conscious, **help him sit** in a position that makes breathing easiest. If he has a syringe of epinephrine, help him **inject it.**

• Give him **cayenne** (2 capsules or ¼ tsp.) in warm water, as a shock preventive, to strengthen the heart.

• If he loses consciousness, **open the airway, check breathing and pulse**, and be prepared to carry out resuscitation if necessary. Monitor pulse and breathing until medical help arrives. *See How to Give CPR (753) and Rescue Breathing (755).*

PREVENTION

• Avoid any substance to which you are sensitive, especially if you have had a previous anaphylactic reaction. You may be given epinephrine to self-inject. You will also be advised to carry an emergency card or bracelet, to alert others to your extreme allergy.

ENCOURAGEMENT—To all who are reaching out to feel the guiding hand of God, the moment of greatest discouragement is the time when divine help is nearest. From every temptation and every trial He will bring them forth with firmer faith and a richer experience.

PULSE TEST, HOW TO DO

WHAT IT IS—The Pulse Test is occasionally mentioned in this *Encyclopedia*. It was devised by Arthur Coca, M.D., and is discussed in detail in his book, *The Pulse Test*. It is a simple home method, to determine which foods you are allergic to.

HOW TO DO THE PULSE TEST

Identifying specific food allergens can improve your health. Each test is simple enough; but, to make them more effective, they must be continued over a period of time.

Your *pulse* is the rhythmic dilation (enlargement) of an artery, produced by the increased volume of blood as it surges into the vessel by the contraction of the heart. Normal pulse is between 52 and 70 beats per minute.

How to take your pulse. Place your finger on an artery, somewhere on your body that you can easily feel.

Nurses check the pulse at the inside of the wrist. But, immediately after exercise, athletes check their pulse at the carotid artery in the neck. This is also the best way to check it when giving first aid. The carotid artery is also the easiest place for you to check it.

Place your right hand up to the right side of your neck, slightly toward the front. You will quickly find a place where a strong beat (pulse) is occurring. You are pressing the hollow between the trachea (windpipe) and the large neck muscle in the front side of your neck with two fingers on the large carotid artery which is carrying blood to your head.

Have a stopwatch in your left hand and time the beats for one full minute. (Athletes check their heart rate, immediately after strong exercise, for 15 seconds, and multiply by four. But, for accuracy in the Coca pulse test, you should take it for a full 60 seconds.)

To perform Arthur Coca's pulse test, you **first take your pulse before you eat anything.** This is called your *basal pulse* or *base pulse rate*.

Then eat a single food and check your pulse rate 15 minutes afterward, 30 minutes afterward, and 60 minutes afterward.

An elevation in pulse rate of more than ten beats (that is, **if it beats more than 10 beats faster per minute than your base pulse**) means that you are allergic to that food.

A problem is that you may wish to eat more than one food at a time. You can take your base pulse, then sit down and **eat your entire meal and keep checking your pulse** 15, 30, and 60 minutes after you finished that entire meal. In this way you will obtain an inkling that everything was all right at that meal or that something was wrong. Gradually, **over a period of time, you can narrow it down** and then **work on specific foods**. You do that by eating only one food at a time and checking your pulse afterward.

OTHER TESTS

Here are several other tests:

The Elimination Diet: **Eliminate certain foods from your meal for several days**; and see how it affects your pulse. This is a good pattern to use in connection with the Pulse Test.

Food Rotation Diets: This is said to be a good method. Grains, proteins, and other suspected foods are arranged in the diet so that **the consumption of certain types of foods are not repeated more frequently than every 4-5 days.** This helps you figure things out a little more quickly with your pulse test.

Common Allergenic Food Test: For a month or two, **remove all foods from your diet which most frequently cause allergies** or asthma. Then begin adding foods back, one at a time every 3 days, until allergic symptoms reappear.

Here would be the ones to start with: **eggs, milk, chocolate, soy, legumes, corn, citrus, and tomatoes.**

Other problem foods include **all dairy foods, grains (especially wheat, rye, barley, oats, white rice, and corn), strawberries, bananas, peanuts, meat products, caffeine, oysters, salmon, processed and refined foods, white sugar foods, fried foods, salt, tobacco.**

The Fast Test: **Fast for five days; then add individual foods and test each one** with your pulse. This is far more accurate; but who wants to eat like a mouse all that time? The theory behind this method is that many reactions take 5 days to settle down and another 3-5 days to begin again. But following that theory, you will not be eating much for a good long time.

The Diet Diary: This method helps when offending foods afterward seem to emotionally bother you, give you headaches, etc. **Keep an ongoing meal diary, in which you note what you eat; afterward write down how it affected you.** Within minutes or hours after eating an offending food, there may be indications of problems.

Skin Patch Test: This is something you can buy at your drugstore. Perhaps it will tell you something.

The RAST Test: This test costs about $15 per food item; and you may want to use it, after narrowing the range with the other tests. The *Radioallergicabsorbent Test* (RAST Test) identifies specific antibodies in the blood to certain foods or other substances. The most common al-

lergenic foods (such as **wheat, milk, eggs, yeast, and citrus**) are tested. But any food can be a problem. Most good laboratories do RAST tests. However, because it is extremely selective (only showing up positive Ige-mediated allergies), many false-negative reactions occur.

The Cytotoxic Allergy Test: This test exposes some of your white blood cells to a fraction of the suspected food or substance. A battery of 38 to 40 tests of common foods are routinely tested for only $80 to $90; so it is less expensive and more convenient than RAST. Even inhalants, food dyes, or other chemicals can be tested, which is a decided advantage. But the test is only done at large medical centers; and, again, many false-positives occur. Some experts question the reliability of this test, since human interpretation is required to analyze the results.

Unfortunately, results of RAST and the cytotoxic tests rarely agree. (It is said that each test locates different "systems" of allergies.) Frankly, it seems that you would do best just checking your pulse at home and saving the money.

Once you have identified specific allergenic foods, you then eliminate them from your diet.

—See "Testing Food," under Allergies (below). Also see Hay Fever (578).

ENCOURAGEMENT—What must it be like to be close to God? It is a little heaven on earth, to go to heaven in. Yet, by daily surrender and prayer, we can each have this experience. Through the enabling strength of Christ, obey His Ten Commandment law, and you will fulfill His plan for your earthly life.

ALLERGIES

SYMPTOMS—*Digestive (after eating) symptoms:* Dry mouth, food intolerance, stomach ulcers, canker sores, excessive tiredness, palpitations, swelled stomach, sweating, mental fuzziness, stinging tongue, metallic taste, heartburn, indigestion, vomiting, nausea, diarrhea, constipation, food cravings, pains, intestinal gas, gallbladder trouble.

Muscular and skeletal symptoms: Arthritis. Aches in neck, back, or shoulders. Fatigue; spasms; joint pain.

Respiratory and throat symptoms: Cough, asthma, frequent colds, postnasal drip, wheezing, hay fever, nosebleeds, chest tightness, hoarseness, shortness of breath, dry or sore throat.

Nervous symptoms: Tachycardia (fast heart rate), palpitations, depression, anger, anxiety, confusion, irritability, hyperactivity, restlessness, learning and memory problems. After repeated contact with the allergen, a laryngeal (throat) spasm may occur and emergency intubation (a tube) is required to save the life. If the condition gets that bad, epinephrine may be necessary.

Skin symptoms: Blotches, acne, flushing, hives, dark circles under eyes, itching, eczema, psoriasis. The skin rash is the special identifying symptom.

CAUSES—An allergy is a sensitivity to some particular substance, known as an *allergen*. It may be harmless to some while causing problems for others. The allergen will not be a virus or bacteria; but it may be a food, inhalant, or chemical. It may be **smoke, molds, pollen, perfume, formalin, hair spray, fumes from gas stoves, paint fumes, or tobacco smoke**, etc. Hay fever *(578)*, one of the most common allergies, is triggered by **pollens from flowers**. A common cause is **chocolate, milk, pork, and other meat products**.

Causes vary widely: There can be urticaria (skin rash with itching) from **fish** or **strawberries**, paranoia from **sugar**, headaches from **perfume**, or asthma-like symptoms from **sulfite** (a preservative in sulphured raisins and apricots). The list goes on and on.

Mold is a special problem to many. It can be in the house, in the food, in the drugs (that is what the penicillin-type drugs are: mold!). Avoid dampness in, or around, your home.

About 25-30 million Americans suffer from hay fever *(578)* every year. Another 12 million are allergic to things other than pollen (**bee stings, certain foods, drugs**, etc.)

Unfortunately, we live in the chemical age. The body cannot handle all the problem substances entering it; and it rebels. Allergies generally are not life-threatening. But some are; and we call that anaphylaxis *(574)*.

NATURAL REMEDIES

• Begin with a short **3-day cleansing fast** on fruit and vegetable juices. This will eliminate excess mucus buildup, release allergens from your body, and pave the way for improved diet changes. If you are not thin, repeat this 3-day fast every month.

• Here is a good **liver flush** to take during the fast: 1 tsp. of olive oil, one-half tsp. of fresh ginger, 1 tsp. of fenugreek, 1 tsp. of ground dandelion, the juice of 1 fresh lemon, and a pinch of cayenne. Mix it in juice and drink every morning during the fast.

• Take **vitamin C** to bowel tolerance (the amount you can take before diarrhea results from the acidity in the C). Take 1,000 mg, with bioflavonoids, 3 times a day.

• Take **vitamin A** and **zinc**; and be sure and get enough **essential fatty acids** and vitamin **B complex**.

• Take **pantothenic acid** (50-100 mg, 3 times daily) for a few days, to stimulate the production of your own allergy-fighting cortisone. **B complex** and B_{12} may also help. **Pantothenic acid** (200-500 mg daily) boosts adrenal function. **Vitamin E** (400-600 IU) has allergenic properties, when taken for several days before exposure to allergens.

• Eat a balanced, moderate, **nutritious diet.** Drink more **water**, making sure it is pure; and you will find that many things in your life will improve.

• **Avoid** canned, refined, preserved, sugary, fatty foods. Avoid meat, caffeine, dairy, and alcoholic products.

• Try eating 1-2 tsp. **bee pollen** granules each day. This helps solve allergic reactions for some people. Two **acidophilus** capsules daily help others.

• Building up the body and avoiding the offensive substances is what you want. But how can you learn what you should avoid? The simplest solution is to **do a pulse test** *(575)*. Include one test item in each meal, take your pulse after each meal and see if that item raised your pulse a little. Some people are disturbed each time they ride in a car. Perhaps it is something where you work. Keep searching for causes.

TESTING FOOD

• **If you suspect a certain food** to be the problem, avoid it for a week or two; then try it again and see if the symptoms reappear. **If no particular food** is suspected, test favorite foods first. This is because some allergic foods give a "lift" before giving you a letdown allergic reaction, so you tend to crave them. Sometimes a **certain combination** of foods at a meal is the problem. Write down what you are learning in a "food diary," so you will not forget. Always use a high-quality sample of the food you are testing, so you will be certain whether or not it is that food itself which is bothering you. *See Pulse Test (575) for more information on food testing.*

• **Suspect foods** most likely to cause problems: **dairy foods, eggs, grains (especially wheat, rye, barley, oats, white rice, and corn), soybeans in any form (tofu, soy milk), citrus, strawberries, tomatoes, bananas, peanuts, chocolate, meat products, caffeine, oysters, salmon, processed and refined foods, white sugar foods, fried foods, salt, tobacco.**

HERBS

• **Garlic** contains *quercetin*, which slows inflammatory reactions. Quercetin is a bioflavonoid. **Bromelain** (in pineapple) makes quercetin more effective.

• **Stinging nettle** roots and leaves have been used for centuries to treat allergic nasal and respiratory symptoms (runny nose, coughs, chest congestion, asthma, etc.).

• In Europe, **chamomile** is used to treat skin allergies and hives.

•**Wild yam** stimulates the production of hormones which reduce inflammation caused by allergies.

• **Nettles** (stinging nettles) are widely used for their antihistamine and anti-inflammatory effects. Take ½ tsp. tincture or 1-2 capsules (preferably freeze-dried) every 2-4 hours.

• **Ginkgo** contains *ginkgolides*, which reduce allergies, asthma, and inflammation. Do not use more than 60-240 mg of the standardized extract per day.

• **Horseradish** clears the sinuses, **Feverfew** treats migraines and is useful for allergies. Pregnant or nursing mothers should not take feverfew.

• The following herbs have antihistamine properties: **dandelion, eyebright, burdock, comfrey, goldenseal** (unless you are allergic to ragweed or pregnant), **fenugreek, and lobelia.**

• For excess mucus, sip **eyebright** tea.

• For irritated mucous membranes, drink 1 cup of any of these herb teas: **thyme, hyssop, marjoram, or lavender.**

• For itching eyes, apply cold compresses of **witch hazel** diluted in 4 parts boiled water.

• **Echinacea** (½-1 tsp. tincture, 3-4 times daily for 1 week) will help stimulate the immune system.

• For eye redness, drink hot **mullein** flower tea.

• The adrenal gland is weaker during the hay fever season; so drink **licorice** root tea, but not if you have high blood pressure and tend to retain water).

• Hot fluids open nasal passages. Drink hot **red clover** or **nettles** tea.

• In contrast, cold applications to the forehead and face greatly help ease very severe hay fever. Wring the **compress out of ice water** and replace them when they begin warming up. You will begin feeling better in an hour; but keep it up for 3-4 hours and see how much help it brings you.

OTHER HELPS

• **Vacuum** the house and car more often. **Air-condition** the house and car. Install an **air cleaner** in your bedroom or get one which connects to your central air conditioner. Buy a **dehumidifier.**

• Make sure the **bedroom** is as dust free as possible. Wrap your **mattress in plastic.** Use a **synthetic pillow** (polyester fiberfill) or none at all (not feather and kapok pillows). **Wash mattress pads** more often. Avoid fuzzy **blankets.** Wash **bed clothing** frequently. Wipe bed **frames** with a damp cloth. Use **cotton sheets** and **blankets** of synthetic fibers. Avoid **comforters** and **quilts.** Keep **pets** out of the bedroom.

• Get rid of the old **carpets** and clean the **floors.** You may need to install new carpets or stop using carpets; use throw rugs instead. Eliminate "dust catcher" areas.

• Clean **damp areas** in your home, such as under the sink and around the bathtub. Wear a **mask** when you clean your house. Use **dust-removing polish.** When done, **go outside** for 30 minutes so the dust can settle.

• Use a mold-proof paint on the house.

• If you have **animals in the house,** keep them clean, well-groomed, and healthy. Frequently change cages or wash their bedding. Animals are not involved in allergy as frequently as people think. But if you have unmistakable evidence that a pet is the source of an allergy, try bathing it and keeping it well-groomed. If this fails, be sure to find a good home for the pet. It is a living thing also and its needs should be respected.

• Set aside **one room** which you keep air-filtered.

• **Avoid** mold, fresh paint, insect sprays, tobacco smoke, and fresh tar.

• Avoid **outdoor activities too early** in the day when pollen and mold counts are very high. Late afternoon or early evening are better.

• Remain indoors if it is **windy and dry** outside.

• Allergic dust collects in your nose. **Rinse your nose** with saltwater (¼ tsp. in 1 cup warm water).

• **Eat lightly** and maintain a regular **exercise** program. (But do not exercise next to busy, air-polluting roads and freeways.) Exercise improves air flow through the nasal passages. Three minutes of vigorous exercise has been shown to reverse nasal congestion.

• A **hot footbath** is often effective in relieving nasal congestion.

• **Do not smoke** and avoid secondhand smoke. Do not live or work near smoke-producing factories.

• **Avoid** pesticides, fungicides, phosphorus fertilizers,

fluorescent lights, aluminum cookware, mercury tooth fillings, deodorants, microwave ovens, and non-filtered computer screens.

• Do not swim in a lake heavily infested with **algae**, or in pools which are heavily **chlorinated**.

• In extreme situations of severe symptoms and high pollen counts, **shower** when you come indoors or do it that night. Avoid contact with **pets** which have been outside. Do not permit them in the house.

• Here is *Gaonkar's maneuver:* Take a large swallow of salty water into your mouth. Tip your head back as if to swallow it; then try to gargle it up through your nose. While doing this, have your fingers in your ears to close them (to protect the eustachian tubes); the mouth is also closed. Then, as you bring your face downward, try to cough. This forces water into the nasal passageway, and nicely cleans out the nose and nasal cavities. Do this 3-4 times a day.

• Make sure an effective **pollen filter** is installed in your car.

MORE FACTS

• Some allergy-provoking substances, such as dust and pollen, have a positive electrical charge. **Negative ions** appear to counteract the allergenic effects of these positively charged ions on respiratory tissues. Purchasing a negative ion generator (often included in air filter machines) often helps reduce allergenic problems.

• There really are **dust mites**! They are microscopic creatures with eight legs, called house-dust mites. It eats flakes of dead skin and excretes tiny pellets which cause you to sneeze when you breathe them. They live in every type of natural or synthetic fiber in your home. They multiply fastest when temperatures are above 70° F. and the relative humidity is above 50%. They die when the humidity drops below 40%-50%. So purchase a dehumidifier—especially for your bedroom. Before every dust mite dies about 4 months after birth, it leaves 200 times its own weight in waste matter behind—for you to inhale and sneeze over.

—Also see Hay Fever (578) and How to Do the Pulse Test (575). It explains how to identify food allergies.

ENCOURAGEMENT—How sweet it is to trust in God! How encouraging it is to find in Him the guidance we need for daily life. As you seek Him in prayer, He will bring you the deep peace your heart so craves. How thankful we can be every day of our lives that, through the enabling strength of Christ, we can overcome all the temptations of the devil and live clean, honest, good lives and live to help those around us. This is what Jesus wants for us.

HAY FEVER
(Allergic Rhinitis)

SYMPTOMS—Itching in the nose, throat, and eyes. Runny or stuffy nose, headaches, pain in the head and sinuses, blurred vision, red and itchy eyes, postnasal drip. A clear, watery discharge from the nose and eyes occurs. There is sneezing and nervous irritability.

CAUSES—Hay fever is most frequently caused by breathing in mold or plant pollens. **Ragweed and grass pollen** are the worst offenders. Ragweed pollen accounts for about 75% of hay fever cases in the U.S. The problem tends to be seasonal (spring or fall), according to plant cycles.

But some may have to suffer with allergies all year long if they are sensitive to **dust, feathers, or animal danders**. Such people are said to have perennial allergic rhinitis. See *Allergies (576)*, which contains a lot of useful information.

Hay fever is a reaction of the mucous membranes of the eyes, nose, and air passages to such seasonal pollens, as well as to dust, feathers, animal hair, and other irritants.

Days that are dry and windy, riding in an open car, and working in the garden sometimes increase symptoms. **Morning hours (5 to 10 a.m) are the worst; midday is usually best.** The best days are those which are rainy, cloudy, or windless.

Stressful situations and **alcoholic beverages** can trigger an attack.

Anger, resentment, or negative thoughts can increase the symptoms.

Hay fever sufferers frequently have **asthma and dermatitis**.

The body is trying to clean out toxins and dust. If the **diet is not nutritious** or if the person is **eating too much** (perhaps eating foods, such as **milk products, ice cream, sugar, and white-flour products**), the overloaded system cannot deal properly with the additional task of resisting the effects of airborne pollens.

In the Midwest alone, in August and September a quarter of a million tons of pollen blow through those states.

NATURAL REMEDIES

• The most effective treatment is to **avoid the irritant.** Try to find what it is. *See Allergies (576) and Pulse Test (575). Also see Rhinitis (317, 578).*

DIET

• Eating **brewer's yeast** tablets for 2 months before hay fever season has helped some.

• **Vitamin C,** in large doses of 200 mg or more daily, greatly helps many with this problem.

• **Vitamin A** is essential for proper functioning of the respiratory system. The **B complex** (especially B_6 and B_{12}) help the body produce interferon, to protect the body against allergens.

• **Calcium, magnesium, potassium, selenium, and zinc** are also important.

• Be sure and eat **green leafy vegetables**. Stay on a **high-fiber diet**. Eat **whole grains, nuts, and legumes**. If you are allergic to ragweed, do not eat **cantaloupe**; it contains some of the same proteins.

• A diet with too many fats and concentrated carbohydrates can be a causal factor; adhering to a **low-fat, sugar-free diet** helps relieve hay fever in many.

• Try eating unprocessed, **raw honey**. It is rich in pollen. For several weeks before hay fever attacks are expected to begin, eat **comb honey** for 3 days, stop for 3 days, and then do it again for 3 days, etc. Try to use honey made in

your area.

• Alternating 1 day of **regular meals** with 1 day of only **fresh fruits and vegetables** has helped many.

• Drink at least 1-2 glasses of **raw vegetable juices** daily (beet, carrot, cabbage, celery, parsley, spinach, and tomato).

• Include **tyrosine** (an amino acid) in your diet, to help prevent hay fever from grass pollen.

• **Grape-seed extract** contains PCO, a powerful bioflavonoid which has a strong antiallergic action. It strengthens cell membranes of basophils and mast cells, which contain the allergic chemicals, thus preventing overreaction to pollens.

• If you are allergic to **bananas**, German researchers have found that eating 3 of them will provide you with enough magnesium to stop a hay fever attack.

• Each morning and evening, take 1 tsp. grated **lemon or orange peel**, sweetened with honey.

• Eating a small **garlic** clove every 6 hours has been known to relieve congestion caused by hay fever.

• Eating **horseradish** is good for congestion and a runny nose.

• For vitamin-mineral supplementation, *see under Allergies (576).*

• **Alcoholic beverages** increase the severity of allergic reaction in some people. Do not eat **watermelons and mangos during pollen season**; for they are in the same plant family as ragweed.

• Do not consume **soft drinks, coffee, tobacco, chocolate, cake, diary products. No processed, white-flour, sugary, fatty, or junk foods.**

HERBS

• **Eyebright** tea reduces hay fever symptoms, such as runny nose and watery eyes in children.

• **Boswellia** is an Indian herb which reduces inflammatory and allergic symptoms.

• Add 1 tsp. powdered **ginseng** to herb drinks during the hay fever time.

• **Yerba mate** (2-3 tsp. in 16 oz. hot water) helps relieve allergic symptoms. Drink it between meals.

• Soak **eucalyptus** and/or **thyme** (1 oz. in 1 cup boiling water) and inhale the steam in order to reduce nasal congestion.

• **Fenugreek** helps eliminate hard mucus from the body. **Garlic** kills bacteria. **Goldenseal** helps clear out toxins from the digestive tract.

• Each day, during hay fever season, daily drink 1-2 glasses of **red clover** or **fenugreek.** Or take 2 capsules of freeze-dried **nettle**. This has helped many.

• Dr. Christopher recommends the following formula: Mix 1 handful each of **blessed thistle tansy and buckbean**; also add 5 tsp. each of **gentian root and bitter orange peel**. Simmer for 10 minutes in 1 quart water, cool, strain, and bottle. Take 1 Tbsp. with a glass of water after your noon and evening meals.

• **Mullein** leaf provides mucilaginous protection to mucous surfaces, thus inhibiting the absorption of allergens through those membranes.

• **Horehound** directly affects the respiration by dilating vessels and acting as a serotonin antagonist. In this way, it helps alleviate any respiratory distress that occurs.

OTHER HELPS

• **Water** helps flush out the system. Be sure you are drinking enough. A significant amount of water can be lost through sneezing and nasal discharge. Drink at least 2 quarts of quality water (or fruit and vegetable juices for part of it) each day.

• Because it firms up blood vessels throughout the body, **exercise** decreases nasal stuffiness.

• A **hot footbath** helps relieve nasal congestion.

• Consider these possibilities: **Cold cloths** wrung from ice water applied to the forehead greatly help. Change as soon as they warm up. Relief comes in about 45 minutes; but continue it for 3 hours. Then intermittently for 6 hours. In some, this treatment has stopped attacks for the season.

• **Build up the immune system**, and clean the blood and colon. Healthy sinuses have moist mucous membranes similar to the skin in the mouth. They are able to wash pollen and other irritants out of the nasal cavities and down the throat into the stomach, where they are neutralized.

• **Guard against chilling**. It constricts blood vessels in the skin and drives the blood elsewhere, including the nasal cavities. This causes a swelling in the sinuses, which makes the symptoms worse.

• **Cover mattress and pillows** with plastic. Avoid **wool** bedding or furniture stuffed with horsehair.

• If you have **animals** in the house, keep them clean, well-groomed, and healthy. Frequently change cages or wash their bedding.

• **Do not mow** the lawn during grass-pollen season; and avoid freshly cut grass.

• **Do not hang sheets** out to dry; they collect pollen.

• Become a pollen expert. Learn when and where pollens are the most prevalent. When the pollen count is high, stay indoors in an air-filtered room. The *American Academy of Allergy and Immunology* offers this advice:

Springtime: The East and Midwest has tree pollen (oak, sycamore, and birch). The South, South Central States, and the West have tree pollen.

Summer: The East and Midwest has grass pollen (bluegrass and redtop). The South, South Central, and West have tree pollen.

Fall: The East and Midwest has ragweed pollen. The South and South Central States have grass and ragweed pollen. The West has tumbleweed and sage pollen.

Winter: The South and South Central States have tree and grass pollen. The West has tumbleweed and sage pollen.

Throughout much of the year: The Eastern States have mold spores on soil and vegetation from April through November; frost does not kill them. The ragweed season runs from June to November in Central Florida. Much of the West, especially the higher elevations, has less ragweed pollen; and mold spores are less in higher and dryer areas.

Before you take antihistamines for hay fever, read the long list of side effects. Another primary drug medication is steroids; and if they are not safe for athletes, they are not safe for the rest of us.

—Also see Allergies (576), Asthma (580), and Pulse

Test (575).

ENCOURAGEMENT—Amid the problems to which all are exposed, we need help from God. As we come to Him, believing, we can receive all the help we need. Trust Him ever; He will never forsake you, except by your choice. Psalm 68:35.

ASTHMA

SPECIAL NOTE: Asthma is a serious respiratory disorder. But, since 80% of asthma problems are caused by allergies, the large section dealing with it is located here instead of in the chapter on Respiratory Diseases.

SYMPTOMS—Difficult breathing, coughing, wheezing, tight chest. Attacks of multiple symptoms can occur suddenly or gradually. Sometimes there is coughing with thick, persistent sputum that may be clear or yellow. There is a feeling of suffocation. Children often have coughing and vomiting episodes.

CAUSES—Asthma is a lung disease that results in blockage of the airways. During an asthma attack, the muscles around the bronchi (the small passageways of the lungs) tighten and narrow, making it difficult for air to leave the lungs.

The chronic inflammation and excessive sensitivity of the bronchi produce those constricting spasms. The bronchial tubes swell and become plugged with mucus. An attack, often occurring at night, usually begins as a nonproductive cough and wheezing; this is often followed by difficult breathing and a tight chest. After a few hours, it subsides.

But what causes an attack to come on? Only certain people have asthma; those that do may have an attack triggered by an **allergen** or **other irritant** (such as **chemicals, drugs, dust mites, feathers, food additives, pollutants, fumes, mold, animal dander, tobacco smoke**, etc.). But other things can also do it: **anxiety, fear, laughing, stress, low blood sugar, adrenal disorders, temperature changes, extremes of dryness or humidity, or respiratory infections**.

About 80% have an allergic disorder; but others do not. The experts warn that ever-increasing amounts of pollutants will cause the number of asthmatics to increase. Many workers must continually live with such things as **sulfites, urethane, polyurethane, epoxy resins, dry cleaning chemicals**, and many other chemicals common to industry. In the last decade alone, the number of asthmatics in America has increased by one third! Children under 16 and adults over 65 suffer the most from it.

Asthmatics are frequently very sensitive to **foods containing sulfite additives: potassium metabisulfite, sulfur dioxide, potassium bisulfite, sodium bisulfite**, etc. Restaurants use them, to prevent discoloration in salads and other foods. Sulfites are also added to many other foods by the food industry.

Nitrogen dioxide, sulfur dioxide, ozone, carbon monoxide, hydrocarbons, nitrogen oxide, and cigarette smoke are also known to precipitate asthma attacks.

Fumes and strong odors (such as **turpentine, paints gasoline, perfumes**, etc.) disturb many asthmatics.

There are two types of asthma: intrinsic and extrinsic. *Extrinsic asthma* (inherited) usually begins in childhood, is seasonal, and is usually caused by a definite number of substances which can more easily be identified. Asthma is the leading cause of disease and disability in the 2-17 age group.

Intrinsic asthma is the more severe; it generally begins after 30 years of age. Attacks can occur at any time and the causes are much more difficult to identify.

About half of asthmatics are diagnosed between 2 and 17; another third are diagnosed after age 30. The other one-sixth does not fit either the intrinsic or extrinsic category. For example, some may initiate the problem in their 20s and others may, after their 30s, develop reactions to only one or two seasonal allergens.

But asthma can be difficult to diagnose; for its symptoms are similar to those of bronchitis *(407)*, emphysema *(413)*, and lung infections *(409-417)*. But, if the symptoms recur every year at a certain time and your family has a history of allergies, treat as for asthma.

In order to test whether food allergies could be the cause of their problem, 322 children with bronchial asthma or rhinitis were placed on an elimination diet. As is often the case, previous food tests had proved negative. However, 91% showed significant improvement, 61% had almost complete clearing, 30% showed some improvement, and 9% no improvement. In this study, **eggs, milk, chocolate, soy, legumes, and corn** were found to be the allergen foods. (Other studies have also found **citrus and tomatoes** to be problem foods.)

About 20% of infants allergic to cow's milk are also allergic to soy products.

Over a period of time, the attacks can become more frequent; so it is best for the person with asthma to learn every possible way to lessen the problem. Here are several suggestions. *More will be found in Allergies (576), Hay Fever (578), and Pulse Test (575).*

NATURAL REMEDIES

TREATMENT DURING THE ATTACK —

WATER THERAPY

• Hot **fomentations** to the back of the neck, thorax, and front of the chest are helpful, along with a hot **footbath**. Keep the head cool by **sponging** with cool water or use a fan.

• Pouring **cold water** on the back of the neck is useful. As the person bends over, the water is poured on the back of the neck from a container holding about a gallon of water. From about 24 inches above the neck, pour it for about 30-90 seconds. Do this 3 times a day during the critical phase.

• A **neutral bath** (94°-98° F.) is quieting to the nerves and helps relax them.

• A **vaporizer** which blows cold, moist air is helpful during an attack. **Menthol or eucalyptus oil** may be added to the water.

HERBS

• Some take 1 cup of **hot water, catnip tea, or mul-**

lein tea each hour.

• After blending a clove of **garlic** in a cup of water, drink it. This may be vomited back out, loosening the phlegm. If vomited, give another cup. The garlic really helps.

• **Lobelia** is an herb that, when sipped slowly, relaxes the nerves and tends to stop the spasm. (If one drinks it more rapidly or in larger amounts, it has a different effect and induces vomiting.)

• **Mullein oil** is a worthwhile remedy for bronchial congestion. The oil stops coughs because it unclogs bronchial tubes. When taken with water or fruit juice, the effect is even more rapid.

• Other useful herb teas include **juniper berries, echinacea**, and (of course that old standby) **slippery elm** bark.

• Pour 1 cup cold water over 1-2 tsp. shredded **elecampane** root. Let stand 8-10 hours. Reheat and take very hot, in small sips. You can sweeten with honey. Drink 1 cup daily.

• Three times a day, add 20-40 drops of **licorice** tincture to a cup of hot water, let it cool to room temperature, and drink it.

• **Cayenne** desensitizes the respiratory system to irritants; and it is helpful in stopping an asthma attack.

OTHER THINGS

• At the first sign of an asthmatic attack, **sit up straight** in a chair for the first 10 minutes. **Inhale** through your nose and **exhale** through pursed lips. This helps press open the bronchial tubes. Slumping reduces the amount of available air.

• Then **lie on your stomach**, with your head and chest over the edge of the bed. **Cough gently** for 2-3 minutes, to bring up the sputum. (But, during an attack, some cannot tolerate this position; instead, they lie face down on the bed with 2-3 pillows under their hips and a towel under their face.)

TREATMENT THE REST OF THE TIME —

DIET

• Eat a **nourishing diet**. Include **garlic** and **onions**. **Eat lightly**. Research has revealed that a **fat-free diet** can help reduce asthma attacks. Strictly adhere to a simple diet, and not much eaten. Your only oil should be 1 spoonful of **flaxseed oil** taken raw twice a day. It is rich in *omega-3*, which reduces tissue damage from asthma.

• **Avoid bananas and melons**, especially if you are also sensitive to ragweed. Avoid **processed and junk foods**. Do not use **nicotine, alcohol, or caffeine, chocolate, fish, eggs**, and other common allergenic foods. Avoid foods containing **additives**. Do not use **milk products**. You may be allergic to **wheat** products. Do not eat **ice cream** or other **cold liquids**. Cold can shock the bronchial tubes into a spasm.

• Be sure and drink enough **water**. This vital fluid is greatly needed to keep your lungs and bronchi free of thickened phlegm.

• Daily nutrients in divided doses: vitamin **A** (in the form of **beta carotene**, 35,000 IU), **B complex** (a complete supplement), **vitamin C** (500-5,000 mg), bioflavonoids (500 mg), **vitamin D** (400 IU), **vitamin E** (400 IU), **calcium** (1,500 mg), **magnesium** (500 mg). Taking 1-2 calcium tablets during an attack will often reduce its severity. Calcium relaxes the muscles.

OTHER THINGS

• Go on a **juice fast**, 3 days each month, of distilled water and lemon juice, to help clean out the body of toxins and mucus.

• Reduce **stress**. Avoid worry and fear.

• Be alert to **changing weather conditions** (temperature, humidity, barometric pressure, and strong winds). All can bring on an asthma attack.

• Avoid **food additives, chemical environments, smokers**, etc. Avoid riding in **automobiles**.

BREATHING

• You need to **breathe deeply**. Learn to play a wind instrument, harmonica, or sing. Practice deep breathing when you are outdoors. Have regular physical **exercise**. Hiking, swimming, etc. are good. You need to **build up your lung capacity** and utilization. This will strengthen your entire respiratory tract. A person at rest uses only 10% of his lung capacity; hard work increases it to about 50%.

• **Exhale forcefully** through a small drinking straw into a large bottle of water. This forces the bronchial tubes to expand somewhat and become larger.

• Some asthmatics have problems when they breathe too deeply. One way to minimize exercise-induced asthma is to wear a **mask** that retains heat and moisture and limits the effects of cold, dry air.

• Spend a few minutes each day practicing **standing tall**, expanding your chest, and breathing deeply. Devise simple exercises (on the floor, against walls, etc.) which help you do this. Practice breathing through your nose rather than your mouth.

• Practice "**sleep breathing**." This is done by breathing slower and deeper than normal, with a three second pause at the top of the inspiration and at the end of the expiration.

• Move out to the **country**, where the air is purer.

DUST

• Get a good vacuum cleaner and **get rid of the dust** and dust mites in your bed, cushions, rugs, and floor. Avoid **goose feathers** (pillows and down coats). **Dead cockroaches** are also known to produce a dust which can bring on an attack. **House plants** may contain **mold spores**. Keep the bathroom clean of mold, also under the sinks.

• Eliminate things from the house which harbor dust: **carpets, venetian blinds, draperies**, etc. Washable cotton curtains are all right. Avoid the use of electric **fans**; they stir up dust.

• **No dogs, cats**, or other furry animals in your home—and no **birds**.

Cover mattresses in plastic casings. **Wash sheets** in hot water weekly.

—Important: Also see Hay Fever (578) and Allergies (576).

***HYDRO*—Neutral Bath** at bedtime, **Hot Abdominal Pack, copious water drinking, Enema before retiring, graduated Cold Baths, Renal Douche. Cold Colonic** daily in cases of toxemia with dilated colon. Correct any existing stomach disturbance. If skin is inactive, give **sweating process**, followed by a **cold bath** of an appropriate form.

• Use a cold-mist **humidifier** in the room, especially during the winter when the heater dries out the air.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ASTHMA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL TREATMENT—Neutral Bath at bedtime, Hot Abdominal Pack, copious water drinking, Enema before retiring, graduated Cold Baths, Renal Douche. Cold Colonic daily, in cases of toxemia with dilated colon. Correct any existing stomach disturbance.

INACTIVE SKIN—Sweating process, followed by a cold bath of an appropriate form.

Also see Allergies (576), Hay Fever (578), and Pulse Test (575).

ENCOURAGEMENT—All who have been born into the heavenly family are, in a special sense, the brethren of our Lord. The love of Christ binds together the members of His family; and wherever that love is manifested, souls are encouraged and helped.

POISON IVY

(Poison Oak, Poison Sumac)

SYMPTOMS—*In those only slightly sensitive to it:* One or more small round bumps with a slight pus area showing in the center. Each one is extremely itchy. It is slightly itchy until touched by something (clothing, a hand, etc.), when it suddenly becomes intensely itchy. Scratching brings momentary relief. But it causes redness, rash, and much more itching.

In those very sensitive to it: Extreme redness, rash, and large swelling of the affected area. The itch is continuous. Many large blisters develop. As the poison is spread over other parts of the body, both fever and secondary infection may develop.

Symptoms appear within a few hours to 7 days after contact with the plant.

CAUSES—These three poisonous North American plants (poison oak, poison ivy, and sumac) contain an oily, slightly sticky, sap in the flowers, fruit, stem, bark, and roots which, when touched, produces a contact papular dermatitis on the skin. The plant has the greatest amount of this sap in the spring and early summer. The poison is *urushiol*, which has both a plant resin and a volatile oil. Even dead roots and stems contain urushiol.

Scratching can transmit the toxic substance to still other parts of the body.

Contact with the poison can be made by touching an animal's fur, contaminated clothing, shoes, etc. Touching the plant is not the only way to contract the poison. Smoke from burning plants can, through droplets, transmit it to the skin, nose, throat, or lungs. In some cases, children have eaten the leaves or grayish berries and developed severe inflammation in the mouth.

Sensitivity to the plant varies from person to person and at different times in a person's life. Lightweight fabrics do not adequately protect against poison ivy or oak.

Dogs and cats are not affected by urushiol; but they can give it to you when you touch them. Wash them thoroughly while wearing rubber gloves.

NATURAL REMEDIES

• *Those slightly sensitive* to the plant can simply **avoid touching or scratching** the pimples, and the itching will be only slightly noticed. If they wish, they can **briefly apply compresses** of hot, plain, water to the area.

• Those strongly sensitive may wish to consult a physician.

WATER THERAPY

• If the possibility exists that you may have touched the plant, **wash your hands** as soon as possible. Carefully wash downward, so the water drips down off your hands rather than up your arms. Wash with soap and water, rinse in running water, wash again with soap and water, rinse. Do this several times in order to get the toxic oils off your skin. Then dry and see what happens.

• As soon as you touch the plant, **try to wash** the skin with water, even if no soap is available. Water tends to carry off the oil. If nothing else is available, in an emergency apply paint thinner, ammonia, or acetone to carry off the oils.

• **Yellow laundry soap** is best for this purpose. You want a strong cleansing soap which cuts oil and carries it away. An **alkaline laundry soap or detergent** is the best.

• In washing the skin, **never use a washcloth**; it only moves the toxic oil around.

• Wet dressings and soaks are helpful. A **physiological saline solution** (2 level tsp. of salt to a quart of water) is useful.

• Run **hot water** (as hot as can be tolerated) over the area. This seems to wash off some of the oils. Itching may stop for several hours. Repeat when needed.

• Also very effective (even though opposite from above) is to **shower in cool water** immediately after you are exposed to the plant. The sooner and longer you shower, the better.

• Removing urushiol from the skin within 15 minutes after contact greatly reduces or eliminates the rash. Splashing with plain water will do. But 3 soapy latherings and rinses are ideal. Remove clothing and launder it as soon as possible.

• **Wash clothing and gear** in soapy water. Decontaminate everything that might have touched the plant. Use ammonia or paint thinner on most gear. Add 1 cup hydrogen peroxide to 5 gallons of water and wash shoes, tents, or dogs. Add bleach to clothes washing water.

• If you are next to the **ocean**, bathe in it. This will

help neutralize the poison.

TO REDUCE ITCHING

Keep in mind that, for most people, the treatment for urushiol is to **reduce the itching until the poison eventually leaves the system.** At the point in time when the poison leaves, the rash completely clears up.

What should you put on the affected area to reduce the itching? Here are several suggestions:

• **Jewelweed** always ranks at the top of every list. This is a small plant with dark green leaves and red berries, which may be found in your locality. If you are sure it is jewelweed (and if you can find it), crush the leaves and rub them lightly on the affected area. Another method is to ball up the whole plant and wipe it over the area. Jewelweed contains *lawsone*, which chemically binds to the same areas as the plant poison, in effect locking it out. The red knobs near the roots of the plant have the most lawsone. Jewelweed grows in shady wetlands from Canada to Georgia and west to Oklahoma and Missouri. From its tall, translucent stems hang trumpet-shaped yellow or orange flowers. You can buy the seeds and grow jewelweed near your home!

• Another **jewelweed** formula is to make **ice cubes** of the tea and apply them directly to the affected area. It feels wonderful and rapidly reduces the infection.

• Other herbs include **bloodroot, echinacea, goldenseal, lobelia, myrrh, plantain, or Solomon's seal.**

• Another method is to apply a tea made of 50-50 **white oak bark** and **lime water.** Place it on a cloth, cover the area, and reapply as often as needed.

• Most poisons have a pH that is either strongly acid or alkaline. *Here are several **alkaline antidotes** to the itching:* Place some form **of powdered calcium,** mixed with water, to hold it in place, on the area. Calcium gluconate is one of the most alkaline of the dietary calcium supplements and nicely reduces the itching. A combination of **calamus and cloves oil** used topically (on the skin) eliminates the itching.

• An alternate alkaline method is to blend **oatmeal** into a fine powder and add a small amount of water, to make a paste. Add a cup of **oatmeal** (or **cornstarch**) to a bathtub with about 4 inches of lukewarm water. Splash it about for a soothing effect.

Goldenseal, a very alkaline substance, can also be used. **Banana** peels, rubbed directly on the area, bring relief for as long as 4 hours. Another way is to place **calamine** lotion on it (but beware of the antihistamine additives in some brands of it; they can produce their own allergic rash). **White shoe polish** (which contains calcium and pipe clay) has also been used; but it may contain additives you do not want.

• Dr. Christopher recommends drinking **sassafras** tea and applying it externally.

• In addition to healing skin burns, **aloe vera** soothes and heals the rash that is caused by contact with the poison.

• Combine 2 parts each of **yellow dock** and **echinacea** with 1 part **chaparral.** Put the mixed powders in capsules and take 2 capsules every 2 hours. This is a blood purifying formula which will help the body eliminate the poison quicker.

• The *New England Journal of Medicine* reported that **plaintain** poultices can help control the itching of poison ivy. Crush the leaves and place on the skin.

• To reduce itching, mix the following antispasmodic herbs: 1 part each of **valerian** and **black cohosh**, and ½ part **lobelia**. Put the powdered mixture into capsules and take 2 capsules, 3 times a day.

• Apply a poultice of equal parts **comfrey root, slippery elm, witch hazel, aloe vera, and comfrey root.**

• *There is also an **acid approach** to the problem!* Several acid substances have also been used with success, to reduce itching: Wash **lemon juice** over the area, then pat dry. Repeat as needed. **Vinegar** can be used.

• Apple cider **vinegar** washes and baths will reduce the itching.

• The fatty acids in **evening primrose oil** retard the inflammatory process and increase healing of the skin.

• Apply **tea tree oil** to disinfect and heal the skin.

NUTRIENTS

• To reduce the swelling, take **vitamin C** (up to 3,000 mg) and **pantothenic acid** (500 mg) tablets. If taken immediately, the vitamin C can greatly reduce the rash.

• Make a **paste of vitamin C,** spread it over the rash, and leave it on for 1 hour; then rise it off with cool water and pat dry. Do this 3 times a day.

• Also take **beta carotene** (25,000 IU) and **zinc** (30 mg). Swabbing the blisters with crushed zinc tablets often relieves itching. Apply **vitamin E** oil (squeezed from capsules), to reduce pain and increase healing.

OTHER HELPS

• When you are finished working on the affected area, you might wish to wash **rubbing alcohol** over the skin exposed to that area. This washes oils off your skin. (But this would appear to be a poor solution; since the oiless skin would be likely to have a higher affinity to the urushiol than oiled skin.)

• Avoid forest fires, other outdoor **wood fires, or leaf fires**, if one of the three toxic plants may be burning.

IDENTIFYING THE PLANT

• **Poison ivy** is a small plant in the Eastern States which creeps along or grows up an nearby bush or tree. It has three leaves with a notch on the outside of the two outer ones. The central leaf is at the end of the stalk.

• **Poison oak** is a bush which, although generally smaller, can grow taller than a man. Growing in the Western states, it has the same three leaf and notch pattern; but the leaves are curly and appear thicker—more like a live oak.

• **Poison sumac** is also a bush; and, with its compound leaves, it looks very much like other sumacs. It does not have the three-leaf pattern. You are less likely to encounter poison sumac.

ENCOURAGEMENT—Amid all the perils of life, we need help from God. The shield of His grace can preserve us from yielding to temptation to sin. But we must submit our lives to God if we would have this help. Numbers 23:21.

DRUG ALLERGY

SYMPTOMS—Wheezing. Swelling anywhere on the body, but typically affecting the face and throat. Nausea and diarrhea. An itchy rash consisting of red, raised areas and, occasionally, white lumps.

CAUSES—These symptoms may be due to a prescription or over-the-counter drug. Both kinds can cause various difficulties. The underlying problem is that, unlike natural remedies, drug medications consist of artificially separated chemicals (which is done so the drug can be patented and sold for large profits). Because of this, it is unlikely you will ever find a drug which is not poisonous. They all have "side effects," many of which can be very serious.

Although called "drug allergies," drug manuals admit that most symptoms are not allergies at all, but side effects that can injure many of those taking them. A true "drug allergy" occurs when the taking of a drug produces an abnormal reaction. Some can be life-threatening *(see Anaphylaxis, 574)*. But even the non-allergenic reactions can be very serious. For example, many people lose normal kidney functions because of drugs.

An allergic reaction to a drug can occur the first time it is used or after taking it for some time. Allergic reactions may occur with any drug; but it occurs most frequently with antibiotics. See your physician.

If you develop any of the above symptoms, immediately stop taking that drug and contact your physician. The problem may be that you are taking several at the same time, and are uncertain which one is causing the most immediate damage. Once it begins, an allergy to a certain drug is life-long. If it is severe, you will be advised to carry a card or bracelet at all times, in case you need emergency treatment.

One other possibility: Switch to natural remedies.

—Also see Urticaria (558), Anaphylaxis (574), and Allergies (576).

ENCOURAGEMENT—There are many who are not satisfied with the work that God has given them. They are not satisfied to serve Him pleasantly in the place that He has marked out for them, or to do uncomplainingly the work that He has placed in their hands. It is right for us to be dissatisfied with the way in which we perform duty, but we are not to be dissatisfied with the duty itself.

CHEMICAL ALLERGIES

SYMPTOMS—Skin rashes and eruptions, stuffy nose, nausea, watery eyes, upset stomach, ringing in the ears, depression, headache, diarrhea, fatigue, asthma, intestinal disorders, arthritis, bronchitis, eczema. The symptom(s) may occur immediately or a day later.

CAUSES—Ours is the chemical age. We are surrounded by chemicals and doused in them. They are in the air we breathe, water we drink, and food we eat.

When the body is exposed to foreign chemicals, it may respond by producing antibodies to defend itself. We are all different; and some of us are bothered more by one substance than by another. Here is a sampling of some of the chemicals which cause such allergic reactions: **insecticides, smog, fumes of gasoline, coal, oil, disinfectants, chlorine, phenol, paint, hair sprays, formaldehyde, carbolic acid, household cleaning products.** Other chemicals causing allergies are metals that include **nickel, mercury, chrome, beryllium.** The metal may be in **watchbands, earrings, or rings.** Amalgam **dental fillings** contain **mercury.**

NATURAL REMEDIES

- Consider the **above pollutants** and try to avoid them.
- Avoid **sprayed food** or food with **artificial colors.** Avoid protective waxes and ripening agents. When possible, grow your own vegetables or buy locally raised food, grown organically. Read food product labels.
- Try to **identify** which chemicals are bothering you. What caused the problem? Where have you been? What has changed in your environment? What can you do differently?
- Take **vitamin A** (10,000 IU), **B complex** supplement, **carotene** (in carrot juice, and red and yellow vegetables), **grape-seed extract, zinc** (30 mg), **copper** (3 mg).
- At the time of a chemical allergic attack, load up on **vitamin C** (1,000-5,000 mg daily, in divided doses).
- Only eat fresh **fruits and vegetables,** plus **whole grains, legumes, and nuts. Garlic** is important.

—Also see Chemical Poisoning (595) and Heavy Metal Poisoning (596).

ENCOURAGEMENT—Give to God the most precious offering that it is possible for you to make; give Him your heart. He speaks to you saying, "My son, My daughter, give Me thine heart. Though your sins be as scarlet, I will make them white as snow; for I will cleanse you with My own blood. I will make you members of My family—children of the heavenly King. Take My forgiveness, My peace which I freely give you. I will clothe you with My own righteousness,—the wedding garment,—and make you fit for the marriage supper of the Lamb. When clothed in My righteousness, through prayer, through watchfulness, through diligent study of My Word, you will be able to reach a high standard. You will understand the truth; and your character will be molded by a divine influence."

AUTOIMMUNE DISEASES

SYMPTOMS—Varied, depending on the type of autoimmune disease involved.

CAUSES—Autoimmune diseases occur when the body becomes allergic to part of itself! This results from inadequate nutrition, junk foods, pollutants in the environment and workplace, mercury fillings, vaccinations, etc.

Here are several remedies which have helped some with certain autoimmune diseases:

NATURAL REMEDIES

- Only eat good, **nutritious food.** Take a full **vitamin-**

mineral supplement. Avoid **meat, saturated fat, caffeine, alcohol, and tobacco.**

• Roy Swank, M.D., spent 20 years studying the problem and found that a **high-saturated fat diet** makes the problem worse. It is important you only maintain a low-fat, unsaturated fat diet (2 Tbsp. daily of raw **flaxseed oil**, and no other oil).

• Take **magnesium** (375 mg daily). **Purslane** is the herb richest in magnesium (2% on dry weight basis), followed by **poppy seeds** and **cowpeas.** Steam purslane or eat it raw in salads.

• **Black currant oil** contains *gamma-linolenic acid* GLA), useful in treating multiple sclerosis (MS). GLA is good for all autoimmune disorders. GLA is also in **borage** and **evening primrose oil.** Evening primrose oil is very good for MS.

• **Blueberries** contain *oligomeric procyanidins* (OPCs), which help prevent autoimmune destruction. They also relieve anti-inflammatory activity in it.

• **Pineapple** contains *pancreatin* and *bromelain*, two enzymes which break up protein molecules in the stomach so they can be digested better. These enzymes also reduce *circulating immune complexes* (CICs) which occur in several autoimmune diseases. The CICs activate the immune system to attack the body.

• **Ginkgo biloba** contains several unique terpene molecules *(ginkgolides)* which reduce inflammatory and allergic processes in autoimmune diseases.

• **Coenzyme Q_{10}** (90 mg daily) improves circulation and tissue oxygenation, and strengthens the immune system. Coenzyme A (as directed on label) works with CoQ_{10} in detoxifying many dangerous substances.

• **Mthylsulfonyl-methane** (MSM) helps keep cell walls permeable. It allows water and nutrients to flow freely into cells. And it helps wastes to exit. Mthylsulfonyl-methane is used with vitamin C, to build new cells.

• **Chelation therapy** *(596)* helps certain autoimmune diseases.

• **Hyperbaric oxygen therapy** has been used successfully in some other countries (outside the U.S.).

• Here is folk medicine which has helped many people with certain autoimmune problems: They find **stinging nettle** plants and, handling them with gloves, slap it against exposed skin. This places the tiny, hairlike stingers into the skin and gives microinjections of several beneficial chemicals, including histamine (the chemical that often induces allergies such as hay fever). Another method is to get stung by **honey bees.** Both include similar helpful chemicals which can help the condition but will not cure it. The nettles keep regenerating new leaves.

• Other helpful herbs include **ginkgo, suma, gotu kola, kelp, hops, chamomile, skullcap, and valerian.**

ENCOURAGEMENT—The heart in which Jesus makes His abode will be quickened, purified, guided, and ruled by the Holy Spirit; and the human agent will make strenuous efforts to bring his character into harmony with God. He will avoid everything that is contrary to the revealed will and mind of God. 1 Timothy 6:12.

FOOD POISONING

SYMPTOMS—Pain, vomiting, cramping, weakness, diarrhea, dizziness.

Symptoms occur within 1-4 hours after eating the contaminated substance. They can last for a few hours or a few days.

Salmonella symptoms: pain, vomiting, and diarrhea can require several days to appear.

Staphylococcus aureus symptoms: diarrhea, nausea, and vomiting 2-6 hours after the meal. It is good to induce vomiting, to help rid the system of toxins.

Botulism symptoms: 12-48 hours after ingestion, symptoms appear. Extreme weakness, double vision, swallowing difficulty. Paralysis and death can follow.

Giardia symptoms: constipation, diarrhea, abdominal pain, loss of appetite, nausea, flatulence, and vomiting. Symptoms occur within 1-3 weeks after infection.

Campylobacter jejuni symptoms: abdominal cramps, diarrhea, fever, possibly blood in the stool. It takes 3 days for the symptoms to appear.

Scombroid poisoning (histamine poisoning) symptoms: Within a few minutes, nausea, vomiting, hives, abdominal pain, and facial flushing can occur. Symptoms usually subside in 24 hours.

CAUSES—Eating food containing harmful bacteria causes food poisoning. Each year more than 2 million Americans report food poisoning. Of course, the actual number is far higher. Unfortunately, we live in a poisoned age. Of the 2 million Americans who report food poisoning each year, 9,000 people die. A far greater number of those who think it is the flu really have food poisoning.

A full 90% of botulism cases in the United States are caused by **improper home canning.** The safest method is to cook the jarred food in a pressure cooker rather than in a tub on top of the stove.

Two-thirds of all food poisoning cases are related to the use of **poorly cooked eggs.**

The types of bacteria in food which cause disease (pathogenic) or produce toxins (toxigenic) cannot be seen, tasted, or smelled in the food.

Here are the most common of these food poisoning organisms:

Salmonella *(Salmonellosis):* This is the most common cause of food poisoning. It has especially increased since antibiotics began being placed in animal feeds, to prevent disease in crowded, unsanitary conditions. Anibiotics help animals grow faster. (More than 50% of cattle, poultry, and swine are now given antibiotics.) But, doing this, promoted the growth of antibiotic-resistant bacteria in animal intestines. A third of all chickens in America have salmonella.

Salmonella is easily transmitted on **hands, food supplies, knives, table tops, cracked eggs, partly raw food,** etc. Mechanical methods of evisceration in slaughterhouses spread salmonella to all the other birds being slaughtered. Cooks that handle **raw meat or eggs**, and then handle other food—especially **raw food**, such as **salads**—endanger many people. Vegetarians should wash their hands with soap, immediately after handling **raw egg shells**. Cook eggs well. (Beware of **mayonnaise**; it contains raw eggs.) **Milk** and **ice cream** can also be contaminated with salmonella. In 1985, 17,000 people in the northeast became ill from contaminated milk.

Outbreaks of salmonella poisoning primarily occur in the warmer months. Symptoms range from mild abdominal pain to severe diarrhea and even typhoid-like fever. This disease can so weaken the immune system that the kidneys, heart, and blood vessels are damaged. Arthritis can result.

Eating **raw or poorly cooked eggs, chicken, beef, and pork products** is the main way salmonella is eaten. But it can also be found in **clams** and **oysters**.

Of 35 food poisoning outbreaks reported between 1985 to 1987, 24 were caused by contaminated eggs or foods containing them. Boil eggs at least 25 minutes.

Here are some other sources of food-borne illness:

Staphylococcus aureus: This is said to be the second-largest source of food poisoning (25%). This can be transmitted by coughing and sneezing on food.

Clostridium botulinum: This is old-fashioned botulism. Many restaurants and roadhouses leave **food setting out at room temperature** for hours. This can also be found in **old mustard, and other sauce, jars**. It is also in **oxygen-deprived foods,** like foil-wrapped baked potatoes left out overnight. Botulin toxin likes **home-canned vegetables** with a low acidity level (such as green beans, asparagus, beets, and corn). Although easily destroyed by cold or heat, botulism is the most deadly of all the food-borne diseases. It produces toxins which block nerve impulses to the muscles.

Although it does not kill the botulin spores, heating food to 176° F. for 20 minutes or 194° F. for 10 minutes destroys the lethal toxins. **Home-canned food**, not properly cooked, can be dangerous. Never use the **contents of a bulging can or a rusty can**!

Staphylococcus and botulism toxins are found in **canned vegetables, meats, fish, soups, tuna, potato and macaroni salads, cream-filled pastries, and mushrooms.**

Giardia (giardiasis): This is found in **drinking water from lakes and streams**. It is not destroyed by water treatment, including chlorination. It can also be found in **raw food,** grown in contaminated water. Giardia grows best where it is cool and damp.

Staphylococcus: This is carried on human skin and in airborne droplets from coughs or sneezes.

Campylobacter jejuni: This is in fish, fowl, meat, and raw milk. Fortunately, heat destroys this organism which is in the intestines of many apparently healthy animals or birds before they were slaughtered for food.

Clostridium perfringens: This grows rapidly in large portions of food (meat or poultry dishes) allowed to cool slowly. Therefore, it is rather common in cafeterias, even when the food is then reheated (because the toxins are not destroyed by heating).

Escherichia coli (E. coli): A bacteria normally found in human and animal colons. Not always harmful; but when it is, it can be deadly. Sloppy slaughterhouse and packinghouse methods cause this bacteria to infect many people each year.

Ciguatera: This is in large reef fish.

Vibrio (vibrio bacteria): This is in raw or improperly cooked fish and shellfish.

Scombroid poisoning (histamine poisoning): After tuna, mackerel, mahimahi, sardines, bluefish, and abolone are caught, bacteria begin forming and histamine is produced.

Molds: Visible molds, growing on food, can produce mycotoxins or poisons—even when refrigerated. The USDA says that small spots of mold can be removed from surfaces of jams, jellies, hard cheeses, firm vegetables, hard salami, and smoked turkey. But other moldy food must be discarded. This includes grains, nuts, dried legumes, soft vegetables, dairy products, bacon, canned ham. Better yet: Discard all food with mold anywhere on it.

Solanine: Do not eat **potato sprouts** or **potatoes which have begun to sprout.** The sprouts have concentrated *solanine* which can cause hallucinations even after recovery. The green sprouts put salanine all through that potato, which cannot be destroyed by cooking.

Each of the above primarily comes from eating **meat** and, sometimes, **dairy products**. Bacterial contaminants are odorless, tasteless, and invisible. Large colonies may develop without obvious food spoilage.

Before concluding, keep in mind ***trichine*** *(trichinella)*, which is found in **pork**. Also beware of **mold** found on food; it can produce poisonous toxins. When **cream-filled pastries**, potato salad, or cooked high-protein foods are contaminated through unsanitary handling, the bacteria multiply at room temperature and produce poisonous toxins.

The very young, the very old, and those with chronic illnesses are at the highest risk of severe injury. Contact the local health department if the source was a restaurant, roadhouse, or commercially canned food. If the condition continues, contact a physician.

NATURAL REMEDIES

- As soon as you believe you have food poisoning, take a eyedropperful of alcohol-free **goldenseal** extract every 4 hours for 24 hours. This natural antibiotic will destroy bacteria in the intestinal tract. (But never take goldenseal for more than a week at a time, during pregnancy, or if you are allergic to ragweed.)
- Take 6 **charcoal** tablets immediately and again in 6 hours. They will help neutralize poisons in your bloodstream. Drink lots of good **water** (distilled is best).
- Also take 2 **garlic** capsules, 3 times a day. Research at the University of Wolverhamptom, in Britain, disclosed that all types of disease-producing intestinal bacteria died when **garlic** was present.
- Drink a tea of **wormwood, wormwood seed, and cloves** powder 3 times daily to stop symptoms and eliminate the toxin. But **charcoal** is better and cheaper.

• Drinking (or sipping) fluids (**water or fruit juices**) will help the body fight the toxins and recover. **Burdock** root tea is also helpful.

• Telephone your regional Poison Control Center. There is a different phone number for each state. Dial the operator (0) or emergency (911) and ask for that number in your state.

• Use **enemas** to clean out the colon.

• Someone should **help the one vomiting**, so he does not choke. If he does not stop vomiting within 24 hours, collect samples for analysis, to identify the poison.

• Sometimes it is best to **induce vomiting**. Lobelia will help induce vomiting. Also drinking water and putting a **finger** down the throat does this too.

• A severe headache and vomiting soon after a meal may be caused by food allergies *(576)*. Charcoal tablets will help solve that problem.

The body should be permitted to cast off the toxins by diarrhea, without being given **antidiarrhea drugs**.

Antacid or **baking soda with water** should not be given. Either of these can weaken the body's defenses against the toxins. Goldenseal, charcoal, garlic, and lots of water or fruit juices are sufficient.

PREVENTION—It is best to **stop eating meat and dairy products**. If you do, be sure they are most thoroughly cooked. **Check home-canned jars** carefully before opening them. **Beware of restaurants, roadhouses, and salad bars**. When eating out, you eat at your own risk. To help protect you, eat two **garlic** tablets before you eat anything else. Better yet, pack bag lunches and learn to buy what you need at a grocery store. You will save a lot of time and a lot of money.

Refrigerate food you buy as soon as you can. Keep perishables refrigerated. **Keep food hot or cold**; food left at room temperature encourages bacterial growth. Keep the refrigerator set at 40° F., or below, and the freezer set at 0° F. or below. Below 40° F., most bacteria hibernate. Between 45° and 150° F., they become active and multiply. Above 165° F., they die. Two exceptions: Botulism in home-canned foods takes 20 minutes of boiling to kill; staphylococcus bacteria are not destroyed by cooking.

Meat, poultry, eggs, and seafood are especially dangerous. They must be cooked thoroughly and **hands** washed. All **utensils** touching the raw materials must be sterilized. Do not use **recipes** calling for raw eggs which will remain raw or be inadequately cooked. Do not leave mayonnaises, salad dressings, and milk products sitting out at room temperature. Be especially careful what you eat at **picnics**.

Even tasting certain raw or undercooked foods (meat, seafood, poultry, or eggs) can be risky.

Wash kitchen **towels and sponges** daily with a 1-20 bleach and water solution.

Do not handle meat or raw eggs (or eggshells) and then handle other food. Wash hands in between.

Do not use **bulging cans or products** with loose lids or cracked jars! Rusted, sticky, or bent cans should be discarded. Wash **lunch boxes** and **Thermos bottles** after each use.

Thaw all **frozen foods** slowly in the refrigerator, quickly in a microwave oven, or (completely wrapped) in hot water in the sink.

When **reheating food**, bring it to a quick boil, and cook it for a minimum of 4 minutes.

Take **acidophilus** every few days, to increase the beneficial bacteria in your intestinal tract. This encourages an ample supply of B vitamins to protect against food-borne contaminants.

Do not give **honey** to a young baby below the age of one. Fed by the honey, botulism spores will grow in the infant's intestine, producing botulism toxin. After the age of one, honey is safe for infants.

ENCOURAGEMENT—By firm adherence to the right, through the grace of Christ, each one of us can fulfill God's plan for our lives. Go to Him in prayer and find the answers you need. Isaiah 35:3-4.

POISONS - 4 - INFESTATIONS

Also: Lice (563)

HEAD LICE

(Body Lice, Crab Lice)

SYMPTOMS—The head itches intensely, but there are no other symptoms. Lice and/or small eggs (nits) may be seen. Symptoms of body and crab lice are the same; except that body lice infests the body and crab lice are on the pubic area.

CAUSES—Head lice are tiny wingless insects which live on the scalp. It is most common among children between 5 and 11; it is more frequently in girls (because of their longer hair) than boys.

These tiny, almost transparent insects are transmitted by close contact and by sharing combs, brushes, and hats, or by hanging coats together. They are also spread by scarves, carpets, upholstered furniture, bedding, coat hooks, earphones, and pets. Head lice actually prefer clean hair and skin. They live by sucking blood.

The eggs, known as nits, are visible as tiny white specks attached to the bases of the hairs. As the hair grows, the nits move higher up the hair shaft.

Here are the three types of lice which infect humans: head lice *(Pediculosis capitis)*, body lice *(Pediculosis corporis)*, and crab lice *(Pediculosis pubis)*.

Body lice crawl onto the body for feeding; then they crawl back onto the clothing the rest of the time (often making their home in the lining). They do not get on the skin of a person with a fever or who is overheated by exercise.

Since simple remedies are available, it is best to avoid the use of toxic shampoos, containing insecticides. The EPA would like lindane (Kwell) banned because it is reported to have induced convulsions, birth defects, nerve damage, and aplastic anemia. Pyrethrins (RID [brand name]) are also toxic; they irritate the eyes, nose, and mouth. If the child is under age 2, has allergies or asthma, you will have

to be careful in administering toxic drugstore shampoos. (In some instances lindane, carefully used, is effective. Avoid getting it in the eyes and mouth. But natural remedies are better.)

NATURAL REMEDIES

HEAD LICE —

• If you think your child has head lice, **check for eggs** at the root of hair. Using a fine-toothed nit comb, comb the hair over a piece of white paper to see if adult lice fall out. The nits can be seen on the hair.

• If you find any, **check the rest of the family** and notify your child's school.

• Researchers in India treated 814 people who had head lice with a combination of two herbs, **Neem** and **turmeric**. Within 3-15 days, 98% of the people were completely cured, as the paste of the two herbs was put on their bodies at the same time that they boiled all their clothes and linens. (The other 2% had not followed the program.) Neem *(Azadiracta indica)* is a large tree; its leaves and seed oil contain compounds active against a variety of insect pests. Turmeric has been used for centuries in Asia to kill vermin.

• The powdered root of **sweet flag** has lice-killing properties. Apply it as a poultice or by rubbing directly on the affected area.

• Add 2½ Tbsp. **rue** to 1 cup water; and use it in a compress to kill lice. Apply **citronella** oil to the hair. Cover with a bathing cap. Leave on for 8 hours. Shampoo, rinse, comb out remaining lice and nits. (Some are allergic to citronella. If itching or burning occurs, wash it out of the hair immediately.)

• A compress of **elecampane** root powder destroys skin parasites. **Pokeweed** destroys fungi and skin parasites; apply it as a compress.

• European **pennyroyal** repels moths and kills lice. Mix it 50-50 with rubbing alcohol and apply to the scalp. Leave it there for 10 minutes. Then shampoo, rinse, check the scalp, comb, and pick out remaining eggs and lice.

• To get rid of lice, douse the hair in **kerosene** and wrap it in a towel. To get rid of the eggs, mix equal parts **olive oil and vinegar** (or **vinegar and rubbing alcohol**) and apply to the scalp. Keep the solutions on the head for at least 2 hours; then wash the hair and inspect it. Comb out remaining lice. (Compresses of blended **garlic and water** are equally effective, but strong smelling.)

• Apply hot **vinegar** to the hair to loosen eggs; keep it there 2 hours. Then **comb out** the dead lice and eggs, using a fine-toothed comb.

• **Wash linens, combs, and towels** in very hot water. Tell the child **not to share combs or hats**.

• **Vacuuming carpets** is just as effective as spraying insecticides on them. Vacuum frequently.

Soak combs and brushes in 2% Lysol (heated to 151° F.) for 1 hour or put them in a deep **freezer** for 30 minutes.

• Items which cannot be washed or vacuumed, can be **sealed in a plastic sack** for 10 days. By that time, the lice eggs will have hatched and died.

BODY LICE —

Also read the above section on head lice (487-488).

• To eliminate body lice, soak for 30 minutes in a very warm bath with soap. Then launder the clothing and bedding in hot water.

ENCOURAGEMENT—Those who take the name of Christian should come to God in earnestness and humility, pleading for help. The Saviour has told us to pray without ceasing. The Christian cannot always be in the position of prayer; but his thoughts and desires can always be upward. Our self-confidence would vanish, when we talk less and pray more. 1 Thessalonians 5:17.

WORMS

(Intestinal Parasites)

SYMPTOMS—Allergies, diarrhea, constipation, gas and bloating, appetite loss, weight loss, anemia, nervousness, sleep disturbances, irritable bowels, anal itching, chronic fatigue, picking at the nose, dry cough, teeth grinding, and the appearance of worms in the toilet. Worms sometimes cause spasms or convulsions.

CAUSES—An estimated 55 million people, worldwide, are infected with intestinal parasites. Worms live in the gastrointestinal tract or burrow from that tract into the muscles. Several types of parasitic worms can live in human intestines (including tapeworms, hookworms, pinworms, whipworms, and roundworms). The degree of infestation is determined (upon examination) by the type, size, and number of worms found.

Worms tend to eat your food! In the process, they irritate your intestinal lining and reduce even more the amount of nutrients which are absorbed into your bloodstream. The worms also produce toxic waste which is harmful to your body.

Causes include eating **raw or poorly cooked meat, vegetation polluted by contaminated water**, improper disposal of **animal and human waste**, and **walking barefoot** on soil. Scratching the anus will transfer worm eggs on your fingers to anything else you touch. In some cases, the worm eggs are airborne and inhaled.

Pinworms: Very tiny white worms, which cause rectal itching at night. Contracted by eating raw or poorly cooked vegetables which have contacted contaminated water. Scratching the anal area can also transmit them on the fingers. *Also see Rectal Itching (380).*

Tapeworms: Flat worms contracted from eating poorly cooked meat (beef, pork, and fish). The most common one (beef tapeworm) can grow to 20 feet in length in the human intestine.

Hookworms: Found in southern soil and sand, they enter by boring into the feet; but they can also enter when eating with unwashed hands.

Roundworms: Most common in children, they bore through the intestinal wall and settle in other organs.

Because of the warmth of the bed, worms tend to come out of the anus. So inspect that area on children after they

are asleep.

Worm infestation can lead to arthritis, colitis, fatigue, diabetes, headaches, indigestion, lupus, nausea, sinus trouble, back and neck pain, and cancer.

Metronidazole, the drug of choice, can cause severe side effects.

NATURAL REMEDIES

TO PURGE WORMS

• **Aloe vera**, taken in any form, is especially helpful in eliminating worms.

• The following herbs help expel worms: **cascara sagrada, wormwood, wormwood seed, cloves, echinacea, goldenseal, burdock, and black walnut**. Do not use wormwood during pregnancy.

• **Grapefruit-seed extract** helps destroy parasites. **Take black walnut extract and chaparral** tea or tablets. **Eat pumpkin seeds and figs**. Also can drink fig juice.

• Take **diatomaceous earth** capsules for 3 weeks, to get rid of your worms. (Do not imagine you do not have some; everyone generally does.) The worms eat this, and it causes them to disintegrate.

• Drink one cup of **wormwood** tea three times daily between meals.

• Clean the colon with **enemas and colonics**. Take 2 per week for 4 weeks.

• A hot-water **enema**, with 3 tsp. of **salt** to a quart of water, may get rid of pinworms.

• **Cinchona** bark tea (½ tsp. in 1 cup boiling water for 10 minutes) is bitter but effective.

• **Elecampane** contains 2 anti-amoebic compounds. Add 1 tsp. to 1 cup boiling water, simmer 20 minutes, drink 1-3 cups per day.

• The Japanese use **ginger** to get rid of worms. Research has shown this to be true.

• Folk healers in India give **turmeric** for getting rid of worms, especially nematodes. It has 4 anti-parasitic compounds.

DIET

• Eat a diet high in **fiber** (primarily from **raw vegetables, whole grains, nuts, and legumes**).

• For a time, **avoid *all* sugar foods**, including fruits, with the exception of figs and pineapples.

• Eat **figs** and **pumpkin seeds**. This can be combined with **black walnuts**. Pumpkin seeds and extracts immobilize and aid in the expulsion of intestinal worms.

• Because of its high tannin content, the kernel and green hull of **black walnut** have been used to expel various worms by Asians and American Indians. External applications kill ringworm. Chinese use it to kill tapeworms.

• Eat **garlic, onions, cabbage, and carrots**. They contain natural sulphur, which helps expel worms. As you might expect, worms do not like garlic.

• **Garlic** is used for pinworms, roundworms, giardia (an amoeba), and other parasitic infections. Juice 3 cloves with 4-6 oz. carrot juice and take every 2 hours.

• Make sure you are obtaining enough **water**. Drink only pure water (distilled).

• To eliminate pinworms: Eat 1-2 **bitter melons** each day for 7-10 days. It is available in Asian markets.

• To eliminate tapeworms: Fast 3 days on raw **pineapple**. The bromelain in it destroys the worms.

• Cut up two raw **onions** and soak them 12 hours in 1 pint water; strain while squeezing out the juice. Drink a cup of this 3 times a day. Along with this, use **garlic** enemas.

• Mix **tansy, bitterroot, and wormwood.** And put in capsules. Take two capsules, 4 times a day.

• **Pomegranate** is used to expel round worms and tape worms. Grated raw **apples**, sprinkled with **anise** seed in a salad, is said to expel worms. **Yarrow** is a tonic to the bowels after worms have been expelled. Mexicans use **cayenne** to eliminate worms. Fresh **horseradish** is effective against some worms. **Tansy** seeds are used in Britain. Eat **thyme** sprigs or dried thyme mixed in food.

• Other vermifuges include: **bilberry, tarragon, European pennyroyal, quassia wood and bark, tamarind leaves, mugwort, and carline thistle.**

• For children, make **senna** tea, strain it, add enough **raisins** to soak up the tea. Give the children 1 tsp. of this 2-5 times a day. Use **garlic** enemas and put a garlic **clove** up the rectum before bedtime.

• Add ½ cup Epsom salts, per gallon of water, and take a warm bath in it. Before entering it, apply zinc oxide to the anus. Repeat this 3 days in a row.

OTHER PRECAUTIONS

• Eat a **nourishing diet**, rich in vitamins and minerals. You need all the good nourishment you can get. The worms are robbing you of so much. Make sure your children, if they have worms, are getting adequate nutrition.

• **Do not eat** sugar, partly cooked fish, beef, or pork. Do not eat raw food which might be contaminated.

• Never eat **watercress**. It grows in streams, many of which are now polluted. Watercress, which is eaten raw as a salad, can have pinworms and tapeworms.

• **Wash vegetables** thoroughly before eating them raw.

• **Keep the house clean:** Wash all underclothing, bed clothes, and sheets frequently in hot water. Clean rooms frequently, especially bedrooms. Put some ammonia on a cloth, to dampen it as a dustcloth. Sterilize toilet seats. The infected person should sleep alone.

• Have all family members **wash hands** frequently, especially after using the toilet, before meals, and bedtime. Do not bite nails.

—Also see Convulsions (472) and Ringworm (261).

ENCOURAGEMENT—Living day by day with God, we can pray to Him, obey Him, and walk with Him. This can bring a peace and maturity to our lives that is so much needed. The affections should center upon God. Contemplate His greatness, His mercy and excellences. Let His goodness and love and perfection of character captivate your heart. Isaiah 41:10.

ASCARIS
(Intestinal Roundworms)

SYMPTOMS—Often no symptom. In the intestines: diarrhea, abdominal pain. In the lungs: possible wheezing and coughing. Too many worms can cause appendicitis or an intestinal blockage.

CAUSES—The roundworm, *Ascaris lumbricoides*, is one of the most common parasitic infestations of humans. It is pale pink and about 8-12 inches long. About 1 in 4 people in the world have it at some time in life. It is most common in tropical and subtropical areas.

Infestation occurs by **food or water that is contaminated** with the worm eggs. **Poor sanitation, human excrement as fertilizer, poor personal hygiene** are other causes. Once swallowed, the eggs hatch into larvae in the intestine. They then travel in the blood to the lungs and later return to the intestine, where they lay eggs.

NATURAL REMEDIES

• *See Worms (588) for an abundance of remedies.*

ENCOURAGEMENT—Many stumble over this phrase, "a new heart." They do not know what it means. They look for a special change to take place in their feelings. This they term conversion. Over this error thousands have stumbled to ruin, not understanding the expression, "Ye must be born again." When Jesus speaks of the new heart, He means the mind, the life, the whole being. To have a change of heart is to withdraw the affections from the world and fasten them upon Christ. To have a new heart is to have a new mind, new purposes, new motives. What is the sign of a new heart?—a changed life. There is a daily, hourly dying to selfishness and pride.

PINWORMS

SYMPTOMS—Intense itching in the anal region at night, when the worms lay eggs. Inflammation of the anus as a result of constant scratching. Occasionally, mild abdominal pain. Tiny white pinworms can be seen wriggling in the feces after a bowel movement.

CAUSES—Pinworm infestation is caused by a very small, white roundworm, *Enterobius vermicularis*. It is the most common parasitic worm infestation affecting humans in the U.S.

It is primarily caused by eating raw vegetables, any inadequately cooked food, licking the fingers or touching them to the mouth, or inhaling house dust (especially if dogs or cats are kept in the house). Eggs can be picked up under the fingernails and then transferred to the mouth. Pinworm infestation is very common in cold areas throughout the world; it mainly affects children.

NATURAL REMEDIES

• Eating **bitter melons** is a specific for pinworms. They can be purchased in Asian markets. Eat 1 or 2 each day for 7-10 days.

• **Maintain cleanliness**: Do not scratch the anal area. Wash hands after going to the toilet. Regularly wash clothes and linens.

• *See Worms (588) for an abundance of remedies.*

ENCOURAGEMENT—To love as Christ loved means to manifest unselfishness at all times and in all places, by kind words and pleasant looks. Genuine love is a precious attribute of heavenly origin, which increases its fragrance in proportion as it is dispensed to others.

TAPEWORMS
(*Taenia solium*)

SYMPTOMS—Mild abdominal pain, diarrhea. You may feel segments of the worm wriggling out of your anus.

CAUSES—There are three kinds: pork tapeworm *(Taenia solium)*, beef tapeworm *(Taenia saginata)*, and fish tapeworm *(Diphyllobothrium latum)*.

Infestation is by eating raw or undercooked meat or fish. Once in the intestines, the worms mature and may reach 20-30 feet in length. Pork and beef tapeworm are the most common. Fish tapeworm occurs in areas where raw fish (such as sushi) are eaten.

Pork is an extremely dangerous food to eat. The larvae of pork tapeworm frequently burrow through the intestinal wall and travel around the body in the blood. Epilepsy *(473)* and, if they infect the eyes, blindness may result.

NATURAL REMEDIES

• Take 2 Tbsp. caster oil and then fast for 24 hours. Eat nothing but light fruits or fruit juices. Crush 2 oz. pumpkin seeds, flavor with honey, and eat it. Vomiting should be prevented if possible, at least for 30-60 minutes, by firm pressure over the stomach. At the end of 1 hour, take 2 oz. (4 Tbsp.) of castor oil. In the course of 3-4 hours, take a large enema with the hips elevated. The worm should always be examined for the head. If this is not present, the treatment must be repeated.

• *See Worms (588) for an abundance of remedies for intestinal worms (but not for pork tapeworms in the bloodstream).*

ENCOURAGEMENT—Christ's love is deep and earnest, flowing like an irrepressible stream to all who will accept it. There is no selfishness in His love. If this heaven-born love is an abiding principle in the heart, it will make itself known, not only to those we hold most dear in sacred relationship but, to all with whom we come in contact. It will lead us to bestow little acts of attention, to make concessions, to perform deeds of kindness. It leads to tender, true, encouraging words. It will lead us to sympathize with those whose hearts hunger for sympathy.

GIARDIASIS

SYMPTOMS—If symptoms develop, they usually appear within 2 weeks of infection with the parasite and may

include diarrhea, excessive flatulence and belching, bloating and abdominal pain, and nausea.

CAUSES—The disease is caused by Giardia lamblia, a tiny parasite which infects the small intestine. Cysts (in dormant stages) are excreted in the feces of infected animals and people. The Giardiasis usually occurs from drinking water contaminated with cysts. But the disease can also spread from poor personal hygiene.

Infections are worse in those with reduced immunity, due to HIV *(632)* or treatment with immunosuppressant drugs.

If symptoms last longer than 1 week, the infection may cause damage to the lining of the small intestine, preventing the absorption of food and vitamins. If this happens, weight loss and (in some cases) anemia *(440, 723)* may occur.

NATURAL REMEDIES

• *See Worms (588) for an abundance of remedies for intestinal worms (but not for pork tapeworms in the bloodstream).*

• Antibiotic herbs *(228)* should be taken.

See your physician.

PREVENTION

• If visiting a region where giardiasis is prevalent, **boiling drinking water** for at least 10 minutes will kill the cysts. Practice strict personal hygiene. Wash hands after bowel movements and before preparing and eating food.

ENCOURAGEMENT—The qualities which it is essential for all to possess are those which marked the completeness of Christ's character—His love, His patience, His unselfishness, and His goodness. These attributes are gained by doing kindly actions with a kindly heart. Christians love those around them as precious souls for whom Christ has died. There is no such thing as a loveless Christian; for "God is love."

CRYPTOSPORIDIOSIS

SYMPTOMS—Sometimes no symptoms; at other times watery diarrhea, abdominal pain, fever, nausea, and vomiting may develop about a week after infection. Symptoms usually last 7-10 days. Those with reduced immunity (AIDS) may have chronic symptoms and develop severe malnutrition and dehydration, which can be fatal.

CAUSES—This is an intestinal infection which is caused by *Cryptosporidium parvium*, a protozoal parasite. It is spread through contact with infected people or animals, or by eating food or water that has been contaminated with the parasite. Poor personal hygiene helps spread the infection. The disease occurs throughout the world. In the 1990s, it became a frequent cause of diarrhea in children.

NATURAL REMEDIES

• Maintaining outstanding health is the best treatment for this disease. When that is done, you generally can easily resist it.

• If symptoms are severe, take antibiotic herbs *(228)* or contact a physician.

• If a local outbreak occurs, boil all your drinking water, to kill parasites.

ENCOURAGEMENT—The Lord will help every one of us where we need help the most in the grand work of overcoming and conquering self. Let the law of kindness be upon your lips and the oil of grace in your heart. This will produce wonderful results. You will be tender, sympathetic, courteous.

AMEBIASIS

SYMPTOMS—Most infected people do not develop symptoms; or they have mild, intermittent symptoms which may include diarrhea and mild abdominal pain. Five days or several weeks after the initial infection, amoebic dysentery may develop. Symptoms will include watery, bloody diarrhea. Severe abdominal pain. Fever. Sometimes dehydration and anemia may develop. If the disease spreads to the liver, there will be high fever, painful liver abscesses, extreme fatigue, and loss of appetite. The key symptom is bloody mucous in the stools which does *not* go away.

CAUSES—This is an intestinal infection, caused by the protozoan parasite *Entamoeba histolytica*. It is most common outside of North America; about 500 million people, worldwide, are affected.

Infection is usually caused by water or food contaminated with the parasite, which is excreted in the feces of infected people. In severe cases, ulcers occur in the intestinal walls; it is called amoebic dysentery.

PREVENTION

• Drink only bottled or thoroughly boiled water. Avoid eating raw vegetables, salads, or fruits with skins that cannot be peeled.

• Activated **charcoal** is best. Also **wormwood**.

ENCOURAGEMENT—By beholding the character of Christ you will become changed into His likeness. The grace of Christ alone can change your heart; and then you will reflect the image of the Lord Jesus. God calls upon us to be like Him—pure, holy, and undefiled. We are to bear the divine image. 2 Corinthians 3:18.

SCHISTOSOMIASIS
(Bilharziasis)

SYMPTOMS—Fever, muscle pains, diarrhea, coughing, and vomiting. A burning sensation when urinating and an increased need to urinate. Blood in the urine, especially at the end of the stream. "Swimmer's itch" at the sight where the parasite has entered the skin, which usually occurs within a day after swimming or bathing.

CAUSES—The disease is caused by any of five species of flukes (types of flatworms) of the schistosoma group. Freshwater snails release larvae of the parasite, which penetrate the skin of bathers. Once inside, they mature into

adults which lay eggs, causing inflammation. **Those who bathe in lakes, canals, or unchlorinated freshwater pools** (especially in the tropics) are at great risk.

NATURAL REMEDIES

• *See Worms (588) for an abundance of remedies for intestinal worms.*

See your physician.

ENCOURAGEMENT—The pure in heart discern the Creator in the works of His mighty hand, in the things of beauty that comprise the universe. In His written Word they read in clearer lines the revelation of His mercy, His goodness, and His grace. The truths that are hidden from the wise and prudent are revealed to babes. The beauty and preciousness of truth are constantly unfolding to those who have a trusting, childlike desire to know and to do the will of God.

TOXOPLASMOSIS

SYMPTOMS—Most people do not develop symptoms. But, in some people, mild symptoms appear 1-3 weeks after the initial infection and include fatigue, fever, and headache. There are enlarged lymph nodes, usually in the neck.

In those with reduced immunity, the heart, muscles, skin, and eyes may become damaged. Symptoms may include fever and headache. Confusion, lethargy, partial loss of vision, paralysis of a limb or one side of the body. Seizures may occur.

If a fetus is infected, blindness may occur.

CAUSES—Contact with cats and eating raw or undercooked meat are primary risk factors. This is a protozoal infection caused by *Toxoplasma gondii*. The dormant (cysts) stage of the parasite are excreted in the feces of cats and can be passed to people by direct contact with cats or by **handling cat litter**.

People with reduced immunity, or pregnant women, can become extremely ill. If the parasites infect the fetus, abnormalities can occur. If a child pets cats frequently and then puts a finger in his own mouth, he can lose the sight in one eye.

This disease may affect the person for the remainder of his life.

Other diseases which you can get from cats, include Cat Coccidia *(574)*, Lyme Disease *(568)*, Poison Ivy and Oak *(582)*, and Pinworms *(590)*.

NATURAL REMEDIES

• Avoid contact with **cats**. Do not pet cats. Do not clean their litter boxes. If you are pregnant, do not have them in the house.

• Do not eat undercooked **meat**.

See your physician.

ENCOURAGEMENT— When we receive Christ as an abiding guest in the soul, the peace of God, which passeth all understanding, will keep our hearts and minds through Christ Jesus.

PNEUMOCYSTOSIS INFECTION

SYMPTOMS—Fatigue and not feeling well. Shortness of breath on mild exertion (later, even when resting). Dry cough, fever, pneumonia. The symptoms usually develop gradually over weeks, but sometimes quickly.

CAUSES—Pneumocystic infection is caused by **inhaling** the *Pneumocystis carinii* parasite. In those with a healthy immune system, it does not cause pneumonia. **Undernourished** children in developing countries may contract it. Less than 1 case in 10 is fatal. But, without treatment, the infection can reoccur. This is one of the diseases which HIV *(632)* can lead to.

NATURAL REMEDIES

• Use antibiotic herbs *(228)*.

See your physician.

ENCOURAGEMENT—Happiness drawn from earthly sources is as changable as varying circumstances can make it; but the peace of Christ is a constant and abiding peace. It does not depend upon any circumstances in life, on the amount of worldly goods, or the number of earthly friends. Christ is the fountain of living water; and happiness drawn from Him can never fail.

FUNGAL INFECTIONS
(Fungus Growth)

SYMPTOMS—A peculiar tiny growth on various parts of the body. It appears to be moist, red, circular patches. In the vagina, it produces a cheesy discharge.

CAUSES—This substance is fungus, which is also called yeast or mold. It can grow under the nails, causing them to become raised and misshapen *(see Ringworm, 261)*. It can grow on the feet and toes *(see Athlete's Foot, 292)*. It can grow in the throat or intestines *(see Candidiasis, 215)*, or vagina *(see Vaginitis, 660)*.

Those especially affected are those who **take antibiotics**, have a **depressed immune function, perspire heavily, live in a damp environment, or eat improperly. Also affected are those who are obese, ill, diabetic, or use oral contraceptives. Using the same bathroom, shoes, or shaver** of someone who is infected.

NATURAL REMEDIES

• Eat a **nutritious diet**, supplemented with **vitamins and minerals**. Eat plenty of fresh **fruits and vegetables**, much of them raw.

• Avoid mucous-forming foods (**milk and white-flour products**). Do not eat **meat or processed foods**. Fungi thrive on the **sugar** foods you eat. Avoid **soft drinks, caffeine, alcohol, fried and greasy foods**.

• Keep body parts **clean**; and keep them **dry**! Wear clean, dry clothing.

• Do not let an infected part of your body come in contact with healthy skin.

• Apply crushed **garlic** to the affected area on the out-

side of the body, alternating with honey.

• Another formula for fungal infections of any kind is **tea** (tea or tee) **tree oil**. Place some on the affected area for 2-3 weeks, and the problem will be eliminated. Tea tree oil, which smells like eucalyptus, also comes from Australia.

• The fresh husk of the **black walnut** destroys fungus better than many drugs.

• For fungus in toenails: Apply **black walnut tincture** with **plantain** and **tea tree oil** to toenails every night for 60-90 days.

• Drink 1-4 cups of tea, daily, of **lemongrass**, turmeric, or **pau d'arco**. All are good fungicides.

• Use either **chamomile** or **garlic** (or both together) internally and externally as anti-fungal remedies. Garlic, taken internally, is a powerful weapon against fungus attacks on the skin. The extract is very potent when applied externally. Studies revealed that people who took 5-6 tsp. garlic extract daily had significantly greater antifungal activity against several common fungi.

• **Licorice** contains 25 fungicidal compounds. **Goldenseal** contains *berberine*, a powerful fungicide.

• *Fungus under the fingernails or toenails (paronychia):* This is a special problem which is quite difficult to solve. It may take six months of careful work before results begin to be seen. The fungus is generally under one or more toenails and causes them to warp out of shape. **Potassium permanganate** has been the remedy used on this for decades. This is a poison; yet if used externally, it seems to be one of the best solutions to the problem.

• Used externally, permanganate is a powerful fungus killer! It can be used on any fungal infection of the skin. It is deadly, do not drink it! The permanganate will stain the skin dark brown for several days. Formula: Soak the feet for half an hour in a warm 1:5,000 solution of potassium permanganate. Dry the feet thoroughly after use. This is the same formula for athlete's foot *(292)*, which is a similar fungal foot disease.

• If you need to prepare this solution at home, you dissolve a slightly rounded teaspoon of the crystals in 8 ounces of water. Keep it in a dark-colored glass bottle. One tsp. of this saturated solution in a pint of water makes a solution of about 1:1,500 strength; 1 tsp. in a quart of water makes one of about 1:3,000 strength. With this information, you will be able to prepare about any strength you might need. This is one of the few powerful poisons mentioned in this book. Do not let a child drink it!

• Another formula for under-nail fungus is soaking them in a 50-50 mixture of white distilled **vinegar** and clean water for 15-20 minutes daily.

—See Ringworm (261), Athlete's Foot (292), Candidiasis (215), and Vaginitis (660) for much more information.

ENCOURAGEMENT—Live to bless others, and you will find a happiness which you have not experienced before. Ezekiel 34:30.

TETANUS
(Lockjaw)

SYMPTOMS—Symptoms generally appear within 5-10 days. Possible discomfort at the site of the wound. Stiffness on opening and closing the mouth. The person becomes restless and apprehensive. Muscle stiffness and spasms increase and spread to more muscles in the body. The face becomes contorted; and the slightest noise or disturbance produces muscle spasms. Pain intensifies. High fever and exhaustion develops, followed by death.

CAUSES—Tetanus is caused by the toxin (waste product) of *clostridium tetani*, which normally lives in animal manure.

Puncture wounds from stepping on dirty nails is the most likely immediate cause. The germ only grows where there is little or no oxygen. The spores (seeds) are on that nail; and, entering the body, they begin to grow and multiply. But the spores must penetrate deep enough; they cannot grow if oxygen is present. It is the toxin which the growing tetanus produces that paralyzes voluntary muscle tissue, including the jaw muscle (the masseter).

Tetanus is not common; but, if contracted, it is extremely dangerous. See your physician.

NATURAL REMEDIES

• Squeeze the puncture wound repeatedly to **make it bleed**. Keep doing this until it bleeds freely. If necessary, **cut the area open** with a clean, sharp razor blade. You must get air to the wound and get it to bleed freely.

• Then **wash it well** with soap and water; pour in **hydrogen peroxide** and let it fizz. Get the **blood flowing again**. Then **wash** the area with pure water, pat dry with a sterile cloth, and cover with a bandage.

• Call a physician. If symptoms of tetanus begin appearing, call a physician at once! It is not too late.

Here is what nature healers in out-of-the-way places do, when there are no available physicians:

• Take **cramp bark** tea in teaspoon doses.

• Grind up some **peach leaves** and apply directly to the wound after washing it. Change this raw poultice twice a day.

• Heat some **turpentine** and apply it to the wound. Massage it over the jaw, neck, and spine when symptoms of lockjaw are suspected.

• Use 2 cups of **wood ashes** (or powdered **charcoal**), per gallon of water, and soak the limb or punctured part in it. If the wound is located where it cannot be soaked, apply the ash solution in a fomentation. Do this for an hour; repeat if danger is suspected.

• If lockjaw actually appears and the person shows stiffening, give 10 drops of **antispasmodic tincture** every 15 minutes until the stiffening is gone.

The formula for the tincture is as follows:

• Into a large-mouth, glass quart jar, put 1 ounce each of the following herbs (they should be in ground form or you should grind them first): **skullcap, skunk cabbage root or seed, gum myrrh, lobelia seed (or plant** if seed is not obtainable), **and black cohosh root.** Mix them in the jar, while dry, and add one pint of pure grain (not isopropyl or rubbing) **alcohol** of 70 to 100 proof (80 proof **Vodka** works well). Let this stand for 10-14 days, tightly covered, and shaken well once a day. Then strain it through a very fine cloth and squeeze out all the sediment you can. Keep the tincture in a tightly covered jar. Put some into a small dropper bottle. It is taken internally in 8-10 drop doses.

• In addition to the above, also give the person **lobelia and cayenne.** Prepare it by boiling a quart of water, take it off the stove, and put 1 tsp. lobelia powder and 1 tsp. ground cayenne into the water. Let it stand 20 minutes and drink ¼ cup every half hour till relieved.

ENCOURAGEMENT—Make it the law of your life, from which no temptation or side interest shall cause you to turn from honoring God. What would Jesus do if He were to make your decision? This is the question to be asked.

PARROT FEVER
(Ornithosis)

SYMPTOMS—Weakness, fever, chills, and loss of appetite. Dry coughing changes into sputum coughing.

CAUSES—The primary cause is **inhaling the contaminated dust from the feathers, cage bedding, or feces of infected birds.** These birds can include **parrots, parakeets, lovebirds, canaries, or pigeons.** Think twice about keeping a parrot or pigeon. Yet there is danger with the other birds also.

The disease gives the appearance of an "atypical (unusual type of) pneumonia." When it first starts, it is often misdiagnosed as the flu *(226)* or confused with Legionnaires Disease *(414)* or Q fever *(415).* Only a blood test can provide a certain diagnosis; but a history of frequent exposure to birds ought to provide an indication of the true nature of the problem.

NATURAL REMEDIES

• Call a physician. Strict bed rest while he is receiving treatment.

• If left untreated, parrot fever can be fatal.

ENCOURAGEMENT—God wants you to choose the best gifts. And only He can give them to you. Through continued prayer, study of His Written Word, and obedience to it, let Him ennoble your life. You are to be His representative, showing others what it means to be a Christian.

Make God your entire dependence. When you do otherwise, then it is time for a halt to be called. Stop right where you are and change the order of things. In sincerity, in soul hunger, cry after God. Wrestle with the heavenly agencies until you have the victory. Put your whole being into the Lord's hands—soul, body, and spirit—and resolve to be His loving, consecrated agency which is moved by His will, controlled by His mind, infused by His Spirit. Then you will see heavenly things clearly. 1 Corinthians 2:10-12.

POISONS - 5 - POISONING

Also: Toxic Shock (663)

POISONING

SYMPTOMS—Something was swallowed, smelled, or touched that caused the person to be poisoned.

CAUSES—We live in the chemical age; and it is taking us down rapidly. Sometimes the ongoing poisoning becomes especially serious.

Children are especially sensitive, because they are even less careful than the rest of us.

The cause may be **medicinal drugs, street drugs, batteries, cosmetics, paints and varnishes, pesticides, cleaning supplies, workplace chemicals, various gases, smog, etc.**

NATURAL REMEDIES

• Contact your nearest **Poison Control Center** (PCC) and describe the situation to them. Have labels of the product at hand. Every state and many large cities in America and Canada have their own PCC phone number. There is no nationwide number. Telephone the operator (0) or emergency (911), and they can direct you to your nearest Poison Control Center. Also see page 557.

• Many poisons are strong acids or strong alkalies. In such cases, the antidote will have the opposite pH. But the PCC will know what the antidote should be. The PCC will have even better data on the substance than will be found on the label of the product. Then contact a physician.

• ***If the poison is on the outside*** of the body, **flush with plenty of water.** If inside, follow directions on the label if no other information is available.

• Many poisons can be counteracted by taking an **emetic** to cause **vomiting.** (In the case of certain caustic poisons, vomiting is not the best.) Putting a tsp. of **salt** in 2 cups warm water, and drinking it quickly, will usually produce vomiting. Repeat a second or third time if necessary. **Tickle the throat** with a finger. After vomiting has occurred, induce more vomiting.

• ***If a caustic acid has been swallowed:*** First, swallow **soda, chalk, lime water, milk, or vegetable oil,** to neutralize the acid in the stomach; then induce vomiting.

• **If a *strong alkali has been swallowed,*** then first neutralize it by swallowing **lemon or vinegar.**

• Swallow lots of powdered **charcoal** in water.

• After swallowing the powdered charcoal, to help heal the stomach, drink a tea of **white oak bark, alfalfa, oregano, or sweet basil.**

• ***If bits of glass*** from a broken bottle get into the

food and some is swallowed, eat lots of **soft bread**. The sticky dough will tend to wrap around the glass and may help carry it safely through the intestines.

• ***To get rid of heavy metals,*** eat **nutritious** food. Include lots of **fiber**, including **pectin** in apples; this helps discharge metals from the body. **Whole grains** are all high in fiber. Have a hair analysis made. It will tell you how much heavy metals you have. A urine analysis can also identify the metal excess or deficiency.

• **Vitamin A** (25,000 IU for only a few days) helps the body discharge poisons. Deficiency of vitamin A can cause lesions from radiation, antibiotics, and metal poisoning. **B complex** vitamins protect the nervous system and help the liver detoxify the blood. Deficiencies of **vitamin B_6** (200-500 mg) suppress the immune system. **Vitamin E** (400 IU) is an antioxidant and prevents free-radical damage. **Calcium** (2,000 mg) and **magnesium** (1,000 mg) are natural chelating minerals. **Selenium** (700 mcg) enhances the functions of vitamin E. **Zinc** (30 mg) is a free-radical inhibitor and helps utilize vitamin A.

• Herbs which help counteract metal poisoning include **burdock, alfalfa, chaparral, dandelion, echinacea, fennel, garlic, juniper, kelp, lobelia, and cayenne.**

• ***To counteract arsenic***: Eat **onions, beans, legumes, and garlic**; all of these contain sulfur, which helps to eliminate the arsenic. But do not take inorganic sulfur into the body! It will produce boils. Only drink distilled water. Drink plenty of fruit and vegetable juices.

—Related topics in this book include Chelation Therapy (596), Mineral Effects on Minerals (597), Food Poisoning (585), Chemical Allergies (584), and the poisonings listed on the next several pages: Chemical Poisoning (595), Aluminum (598), Arsenic (599), Cadmium (599), Copper (599), DDT (600), Fluoride (600), Lead (600), Mercury (601), Nickel (602), Radiation (602), Toxic Shock (663), Drug Rash (604), Tobacco (607), Toxemia (607).

ENCOURAGEMENT—There are many problems which we encounter in life; but only God can help us deal with them. Go to Him with your difficulties; He can give wisdom to know what is best to do. James 1:5.

CHEMICAL POISONING

SYMPTOMS AND EFFECTS—A remarkable variety of symptoms can occur. The following are common: stuffy nose, watery eyes, diarrhea, ringing in the ears, nausea, upset stomach, eczema, depression, headache, fatigue, bronchitis, asthma, and arthritis.

WHERE FOUND—We live in a chemical age. Chemicals are in the **air, water, earth, food, and drink**. We find them in the **materials, surfaces, and fabrics** in our lives. It is impossible to escape from them; but, with care, we can reduce the rate at which these hazards cause us harm.

Metals (such as mercury, chrome, nickel, and beryllium) produce skin rashes. Aluminum is the primary cause of Alzheimer's Disease.

• Lead causes anemia.

• Dental fillings containing mercury can poison the system.

• ***Poisons:*** Herbicides, pesticides, insecticides, fungicides, fumigants, and fertilizers seep into the soil, ground, water, and wells.

• These poisons are taken up by the plants which animals, birds, and humans eat. They passes on into milk, eggs, meat. The toxic substances are in the fruit and vegetables we eat.

• ***Food additives:*** There are food preservatives and additives. There are artificial colorings, flavorings, and odors. These come from coal tar and lead to cancer.

• Waxes are on the fruit; and added sprays are on the vegetables. There are ripening agents and defoliant chemicals.

• ***Other poisons:*** There are toxic fumes, dangerous chemicals, and radioactive wastes. The rivers and lakes are polluted with poisonous runoff. Smog is full of them.

• There are hair sprays, treated bedding, animal hair products, paint formulas, and exotic cleaning formulas.

• There is benzene from solvents, styrene from plastics, and formaldehyde from pressed-wood products.

• Smoke arises from cigarettes, cigars, and burning forest fires.

• We hardly have time to worry about old-fashioned dust, molds, parasites, and diseases. We now live amid an onslaught of chemicals and radiation.

—For additional information, please see Poisoning (594), Food Poisoning (585), and the poisonings listed on the contents page of this chapter (556-557). These include Aluminum Poisoning, Arsenic Poisoning, Cadmium Poisoning, Copper Poisoning, DDT Poisoning, Fluoride Poisoning, Lead Poisoning, Mercury Poisoning, Nickel Poisoning, and Radiation Poisoning.

NATURAL REMEDIES

• Eat a **nourishing, well-balanced diet** of fresh **fruits, vegetables, whole grains, nuts, and legumes**. Obtain adequate **vitamin-mineral supplementation**. Drink lots of **water**.

• Do not overwork. Obtain **adequate rest** at night and **outdoor exercise** during the day.

• Wear **protective clothing** and gloves when handling chemicals. **Read the labels**; try to learn what type of environment you are in! Employees have died because they have been asked to work with materials which they were not aware were hazardous. If you are feeling bad effects, **consider quitting** and getting a job somewhere else.

• **Stay inside during aerial applications** of insecticides, pesticides, or defoliants. All insect poisons are dangerous.

• **If exposed** to chemicals, go to the contents page of this section *(556)*; then turn to the section on the following pages which deals with that type of problem. *Also see Poisoning (594).*

• Go on a **cleansing fast** for 2-3 days every month. This will help strengthen your body.

ENCOURAGEMENT—As you try to help others, you will be helping yourself. There are those all about us who need a friend they can talk to and pray with. The more you help them, the more help you will receive for yourself.

HEAVY METAL POISONING

SYMPTOMS—Diarrhea, ringing in the ears, nausea, gastrointestinal problems, colic, rickets, extreme nervousness, headache, anemia, poor kidney and liver function, speech disturbances, memory loss, eczema, depression, headache, fatigue, bronchitis, asthma, arthritis, weak and aching muscles, and softening of bones.

CAUSES—Heavy metals, including lead, are inhaled and absorbed through the skin in the smog in cities, industry, and on the highways. They are eaten in food (especially, meat, milk, and processed food). They are in substances you place on your body. They are in your clothes, carpets, insecticides, and certain cooking utensils.

NATURAL REMEDIES

• Read labels and **use nothing containing lead, aluminum, or other dangerous metals**.

• Drink plenty of **fresh fruit and vegetable juices**. Eat **food high in fiber**, including the pectin in apples. The fiber tends to bind with metal in the colon and carry it out of the body.

• Take a full-spectrum **vitamin-mineral supplement**, to help stabilize the body's resistance to excess metal.

• The **B vitamins**, especially B_6 (200 mg), help rid the intestinal tract of excess metals.

• **Vitamin C** (5,000-20,000 mg) and **bioflavonoids** (200 mg). By taking large amounts of this detoxicant, it will combine with heavy metals and, through diarrhea, will help flush them out of the body.

• **Calcium** (1,500 mg) and **magnesium** (700 mg) bind with aluminum and some other metals, and carry them out.

• The unusually balanced mineral content in Nova Scotia **kelp** and Norwegian **dulse** helps eliminate an excess of certain metals. California kelp is not as efficient.

• **L-glutathione** is an amino acid which interrupts radiation from toxic metals and radiation.

• **Echinacea, ginkgo biloba, ginseng, and burdock root** are beneficial, when taken regularly, in blocking heavy metal and radiation absorption.

• **Acid rain** absorbs heavy metals from the soil and carries them into the groundwater, wells, and rivers which later finds its way into the city **water supplies**.

• A **hair analysis** can determine the level of heavy metals in the body.

• **Chelation therapy** is available from some health-care providers. It can remove toxic metals from the body.

—For additional information, see Chelation Therapy (596), Mineral Effects on Minerals (597), Aluminum Poisoning (598), Cadmium Poisoning (599), Copper Poisoning (599), Lead Poisoning (600), Mercury Poisoning (601), Nickel Poisoning (602). Also see Poisoning (594), Chemical Allergies (584), and Chemical Poisoning (595).

ENCOURAGEMENT—If we would permit our minds to dwell more upon Christ and the heavenly world, we should find a powerful stimulus and support in fighting the battles of the Lord. Pride and love of the world will lose their power as we contemplate the glories of that better land so soon to be our home. Beside the loveliness of Christ, all earthly attractions will seem of little worth.

 # CHELATION THERAPY

WHAT IT IS—Chelation *(key-LAY-shun)* therapy is used to safely eliminate excess poisons, especially heavy metals, from the body.

Chelating agents are used to bind with heavy toxic metals (lead, mercury, cadmium, aluminum, etc.) and excrete them from the body.

Chelation therapy is especially useful for circulatory disorders *(427-439)*, atherosclerosis *(427)*, Alzheimer's disease *(485)*, multiple sclerosis *(478)*, Parkinson's Disease *(480)*, arthritis *(513)*, and gangrene (283).

CHELATING AGENTS—There are five groups of chelating agents which can help remove toxins and heavy metals from your body. They can be purchased at a health-food store:

• **Coenzyme A**.

• **Coenzyme Q_{10}**.

• **Calcium** and **magnesium** chelate with **potassium**.

• **Alfalfa, fiber, rutin, and selenium**.

• **Copper chelate, iron, sea kelp, and zinc chelate**.

Other powerful chelating agents (which include some of the above) include:

• **Apple pectin and rutin**.

• **Calcium** (1,500 mg daily) plus **magnesium** (800 mg).

• **Selenium** (200 mcg, but not over 40 if pregnant).

• **B complex** (100 mg of each major B vitamin, 3 times daily), **B_{12}** (1,000 mcg, 3 times daily), **pantothenic acid** (50 mg, 3 times daily), **niacin** (50 mg, 3 times daily), **folic acid** (5 mg), **garlic** (fresh or Kyolic).

• **Vitamin A** (10,000 IU daily) with mixed **carotenoids**.

• **Alfalfa** liquid (2 Tbsp.).

• **Coenzyme Q_{10}** (80 mg daily).

• **L-cysteine and L-methionine** (each: 500 mg twice daily; take on an empty stomach with water or juice, not with milk; take with 50 mg **B_6** and 100 mg **vitamin C** for better absorption).

• **L-lysine and glutathione** (500 mg each daily; do not take lysine longer than 6 months at a time).

• **Vitamin C** (5,000-12,000 mg daily in divided doses).

DIET—Proper diet is important. Fresh **fruits, vegetables, whole grains, nuts, and legumes**. Eat **fiber foods** (such as **oats, wheat bran, and brown rice**). **Onions and garlic** are both good chelating agents. Include them in your diet.

• Eat foods rich in **manganese**, an important chelating agent: **whole wheat, pecans, barley, Brazil nuts, buckwheat, dried split peas**.

• **Alfalfa, kelp, and zinc** supplements also help chelate. **Iron** is helpful, only if taken in natural (not supplement) form (such as **blackstrap molasses**). If taking zinc, eat sulfur-rich foods (**garlic and onions**); because zinc will

balance out the sulfur amount. Only drink distilled water.

• **Avoid processed, fried, sugar, and fast foods.** Avoid **diary products, oils, mayonnaise, meat, salt.**

INTRAVENOUS CHELATION THERAPY—In addition to home therapy, you can also receive chelation from a physician who knows how to do it (there are about 150 in America). Most serious illnesses require repeated injections of the chelating agents.

But the primary chelating agent currently used is a chemical compound that is not natural and somewhat controversial: *ethylenediaminetetraacetic acid* (EDTA). Don't try to pronounce it. A number of lab tests precede the series of injections.

A typical course includes two 3-hour treatments a week. In addition to EDTA, several supplements (including vitamin C, magnesium, and trace minerals) are also injected. This is done because the EDTA removes certain nutrients from the body, so they have to be replaced. If you wish to go this route, you would do well to take extra vitamin-mineral supplements at home.

—For additional information, see Mineral Effects on Minerals (597), Aluminum Poisoning (598), Cadmium Poisoning (599), Copper Poisoning (599), Lead Poisoning (600), Mercury Poisoning (601), Nickel Poisoning (602).

ENCOURAGEMENT—Put your highest power into your effort. Call to your aid the most powerful motives. You are learning. Endeavor to go to the bottom of everything you set your hand to. Never aim lower than to become competent in the matters which occupy you. Do not allow yourself to fall into the habit of being superficial and neglectful in your duties and studies; for your habits will strengthen and you will become incapable of anything better. The mind naturally learns to be satisfied with that which requires little care and effort; it tends to be content with something cheap and inferior. Determine that you want to know God through the study of the Bible and a personal, prayerful relationship with Him each day. John 9:4.

MINERAL EFFECTS ON MINERALS

Of the 92 basic elements, 27 are especially used in the body. An excess of each one in the human body can increase or decrease the availability of certain other elements. In nutrition, they are called "minerals"; so we will call them that here.

The following information can be invaluable if you are trying to increase or reduce the amount of a certain mineral in your body. If not, the following listing is of no value to you.

Hair analysis can reveal the minerals which you have an excess of in your body. The following listing will tell you how they interact with other minerals, either helping or hindering them.

For example, an excess of molybdenum in your body will increase your body's absorption of the dangerous mineral, copper—which hair analysis may reveal that you already have too much of. This information can be very helpful, if you are determined to reduce the amount of certain dangerous elements in your body. For example, looking through the list, you will find that a slight increase in the amount of selenium and zinc taken into your body will help eliminate the dangerous lead in your body. But, of course, never take very much of the trace minerals. *You will find detailed information on dosages of major minerals and trace minerals on pp. 84-85.* You will also learn that lead in your body is interfering with your body's absorption and utilization of three very important major minerals: calcium, iron, and potassium.

Code:
[1] = increases the absorption and use of
[2] = reduces the absorption and use of
[3] = the absorption and use of is reduced by

Example:
Molybdenum (*Mo* is its chemical abbreviation) [1] increases the absorption and use of copper and sulfur. [2] Molybdenum reduces the absorption and use of phosphorus. [3] The absorption and use of molybdenum is reduced by nitrogen.

List of 27 special minerals:
Aluminum (Al) [1] P / [2] F
Arsenic (As) [1] Co, I / [2] Se
Beryllium (Be) [2] Mg
Cadmium (Cd) [2] Cu
Calcium (Ca) [1] Fe, Mg, P / [2] Cu, F, Li, Mn, Zn / [3] Cr, Pb, S
Chlorine (Cl) [1] *(Interactions not documented yet)*
Chromium (Cr) [2] Ca
Cobalt (Co) [1] As, F / [2] Fe, I
Copper (Cu) [1] Fe, Mo, Zn / [2] P / [3] Ag, Ca, Cd, Mn, S
Fluorine (F) [2] Mg / [3] Al, Ca
Iodine (I) [1] As, Co
Iron (Fe) [1] Ca, Cu, K, Mn, P / [3] Co, Mg, Pb, Zn
Lead (Pb) [2] Ca, Fe, K / [3] Se, Zn
Lithium (Li) [2] Na / [3] Ca
Magnesium (Mg) [1] Ca, K, P / [2] Fe / [3] Mn
Manganese (Mn) [1] Cu, Fe, K, P / [2] Mg / [3] Ca
Mercury (Hg) *(Interactions not documented yet)*
Molybdenum (Mo) [1] Cu, S / [2] P / [3] N
Nickel (Ni) *(Interactions not documented yet)*
Nitrogen (N) [2] Mo
Phosphorus (P) [1] Al, be, Ca, Fe, Mg, Mn, Zn / [2] Na / [3] Cu, Mo
Potassium (K) [1] Fe, Mg, Mn, Na / [3] Pb
Selenium (Se) [2] Cd, Pb / [3] As, S
Silver (Ag) [2] Cu
Sodium Na) [1] K / [3] Li, P
Sulfur (S) [1] Mo / [2] Ca, Cu, Se / [3] Zn
Zinc (Zn) [1] Cu, P / [2] Cd, Fe, Pb, S / [3] Ca

—For additional information, see Chelation Therapy (596), Aluminum Poisoning (598), Cadmium Poisoning (599), Copper Poisoning (599), Lead Poisoning (600), Mercury Poisoning (601), Nickel Poisoning (602).

ENCOURAGEMENT— God has given the human mind

great power, power to show that the Creator has endowed man with ability to do a great work against the enemy of all righteousness, power to show what victories may be gained in the conflict against evil. To those who fulfill God's purpose for them will be spoken the words, "Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things."

ENVIRONMENTAL TOXICITY

SYMPTOMS—Headache, stuffy nose, depression, fatigue, bronchitis, arthritic pains, and skin rashes.

CAUSES—Our world is rapidly becoming poisoned and, frankly, somewhat unsafe to live in. The petroleum, chemical, and manufacturing industries pour their pollutants into the air, water, and soil. Modern agriculture is keyed to spraying plants with poisons "to help them grow." There are pesticides, herbicides, insecticides, fungicides, fumigants, and fertilizers.

There are food additives, preservatives, artificial coloring. Toxic chemical and hazardous waste seems to be everywhere.

According to EPA findings, indoor air pollution levels in homes, offices, factories, and schools are often 2-5 times greater than outside those buildings; sometimes 100 times greater.

Pollutants include asbestos, animal hair, bedding, dust, carbon monoxide, disinfectants, formaldehyde, hair sprays, electromagnetic fields, lead, household cleaning products, radiation from TV and computer screens, paint, mold, pollen, solvents, and radon. Certain products emit poisonous fumes and vapors: carpets, certain wood products, plastics, cigarette and pipe tobacco,

NATURAL REMEDIES

• It is urgent that each of us individually maintain the highest level in our body's immune system. This can only be done as we obtain adequate **rest, fresh air, exercise, and nourishing food**.

• In addition to nutritional data in nearby sections of this *Encyclopedia*, here are several additional nutrient sources which you should be aware of. They strengthen natural immunity and help protect your body against the effects of poisonous substances of a foreign nature: **grapeseed extract, coenzyme Q_{10}, coenzyme A, superoxide dismutase, proteolytic enzymes, S-adenosylmethionine, and quercetin**.

ENCOURAGEMENT—We should cultivate a love for time spent alone with God, studying the Bible, praying to Him, thinking about Him and how to help others. Many seem to begrudge moments spent in meditation, the searching of the Scriptures, and prayer, as though the time thus occupied was lost. I wish you could all view these things in the light God would have you; for you would then make the kingdom of Heaven of the first importance. To keep your heart in Heaven will give vigor to all your graces and put life into all your duties. To discipline the mind to dwell upon heavenly things will put life and earnestness into all our endeavors.

ALUMINUM POISONING

SYMPTOMS AND EFFECTS—Many symptoms are similar to those of Alzheimer's Disease *(485)* and osteoporosis *(509)*.

Other symptoms include gastrointestinal problems, colic, rickets, extreme nervousness, headache, anemia, poor kidney and liver function, speech disturbances, memory loss, weak and aching muscles, and softening of bones.

It is believed, by many, that **Alzheimer's disease** *(485)* is caused by aluminum poisoning. Aluminum was little used until the 1940s, when an inexpensive method was found to extract it from bauxite, by running an electric current through that ore. Since then, Alzheimer's disease has rapidly increased. The brains of Alzheimer's patients have 10-50 times as much aluminum as those of normal people.

An excess of either aluminum or silicon in the body results in reduced absorption of calcium and other minerals. Aluminum salts in the brain produce impaired mental abilities and seizures. The autopsied brains of Alzheimer's patients had four times as much aluminum as did those of other people.

Aluminum also damages the kidneys which try to excrete it from the body.

There is so much aluminum in our daily environment, that the average person absorbs 3-10 mg of it every day. It is primarily absorbed in food and drink, but also in breathing and through the skin.

***Absorbed through the skin*: Antiperspirants, deodorants, Aluminum lawn chairs, foil, and toys.**

***Absorbed in food eaten*: Aluminum from pots, pans,** and other cookware that food is cooked in. Aluminum eating utensils and plates (in campware). **Bleached flour, regular table salt, tobacco smoke, processed cheese, cream of tartar, douches, canned goods, baking powder, antacids, buffered aspirin,** and **most city water. Processed cheese** is high in it; for the aluminum helps it melt when heated. Never use aluminum (or copper) cookware! Use stainless steel or glass whenever possible.

***Absorbed in air inhaled*: Deodorants, aluminum dust in industry.**

NATURAL REMEDIES

• Do not use any of the **above listed products**. Read labels.

• **Use nothing containing aluminum**. Avoid aluminum sources and environments. Do not use **aluminum foil** on food. Do not take **buffered aspirin** and certain **antacids**; both are extremely high in aluminum!

• Use only **stainless steel cookware**. Store nothing in aluminum containers. • Do not purchase **canned juice** which is acid (pineapple juice, grapefruit juice, etc.).

• **Calcium** (1,500 mg) and **magnesium** (700 mg) bind with aluminum and some other metals, and carry them out of the body.

• **Acid rain** absorbs aluminum out of the soil, and carries it into wells and water supplies. Drink **distilled water** instead of tap water (which may contain aluminum).

A **hair analysis** can determine the level of aluminum n the body.

—For additional information and remedies, see Alzheimer's Disease (485), Heavy Metal Poisoning (596), Mineral Effects on Minerals (597), Chelation Therapy (596), Chemical Poisoning (595), and Poisoning (594).

ENCOURAGEMENT—Do not allow the perplexities nd worries of everyday life to fret your mind and come etween you and God. You need Him all the more in the roubles you encounter. Do not forsake Him.

ARSENIC POISONING

SYMPTOMS AND EFFECTS—Confusion, headaches, drowsiness, convulsions, vomiting, muscle cramps, diarrhea, bloody urine, and gastrointestinal problems. Alopecia, constipation, delayed healing of skin problems, edema, burning and tingling, stomatitis. The lungs, skin, and liver are primarily affected.

WHERE FOUND—Herbicides, slug poisons, pesticides, smog, beer, water, table salt, seafood, tobacco smoke, laundry aids, smog, dolomite, bone meal. Copper smelting, mining shafts, and sheep dipping.

Arsenic poisoning especially affects the skin, lungs, kidneys, and liver. The more the body accumulates it, the worse the symptoms. Coma and death can result.

NATURAL REMEDIES

• ***EMERGENCY!*** In case of accidental taking of arsenic, immediately chew up 7 **charcoal tablets** and swallow with water. Take 7 more every 15 minutes, until you reach the emergency room.

• **Avoid arsenic sources and environments**. Read labels and use nothing containing arsenic.

• **Selenium** (200 mcg daily) helps rid the body of arsenic.

• Sulphur foods help eliminate arsenic: **garlic and garlic supplements, onions, legumes, and beans**.

• Dr. Christopher has a special "iron compound" which he recommends for arsenic poisoning: 3 oz. each of cut **yellow dock** root and cut **bugle weed**. Simmer for 10 minutes in 1 pint water, strain, sweeten with honey, let cool. Take 2-3 fl. oz. every hour until you drink it all.

—For additional information and remedies, see Heavy Metal Poisoning (596). Also see Chemical Poisoning (595), Chelation Therapy (596), Mineral Effects on Minerals (597), and Poisoning (594).

ENCOURAGEMENT—Thank God there are answers! Go to Him in prayer and you will receive the help you need. He can give you guidance that you very much need.

CADMIUM POISONING

SYMPTOMS—Anemia, joint soreness, hair loss, dry and scaly skin, dulled sense of smell, high blood pressure, loss of appetite. It can lead to emphysema *(413)* and cancer *(613)*.

EFFECTS—Cadmium is a trace metal; but it is poisonous and weakens the immune system by decreasing T-cell production in the body. It is increasingly found in many substances. Cadmium stores up in the liver and kidneys, seriously weakening both organs. In the bloodstream, it produces a dangerous anemia, so body cells do not receive enough oxygen.

WHERE FOUND—Cigarette and cigar smokers have high cadmium levels, but you can get it from **secondhand smoke**. Cadmium is in **plastics, white paint, and nickel-cadmium batteries**. It is in **drinking water, pesticides, fungicides, fertilizers, industrial air pollution, and various foodstuffs (including rice, coffee, tea, soft drinks, and refined grains)**.

SOLUTIONS—Avoid cadmium sources and environments.

One individual lived for a year near a battery salvage plant. It permanently poisoned his body with cadmium. In order to keep his teeth from falling out, he frequently chews on **ginger root** between meals. This has firmed up his gums and kept his teeth intact.

—For additional information and remedies, see Heavy Metal Poisoning (596), Chelation Therapy (596), Mineral Effects on Minerals (597), Chemical Poisoning (595), and Poisoning (594).

ENCOURAGEMENT—As you open your door to needy ones, you are inviting angels to come in. Do what you can to be a blessing to those around you, and you will be blessed. Hebrews 13:2.

COPPER POISONING

SYMPTOMS AND EFFECTS—Excess amounts of copper can result in emotional problems, behavioral disorders, mood swings, anemia, depression, kidney damage, eczema, schizophrenia, sickle-cell anemia, and central nervous system damage.

It can produce infections, heart attack *(419)*, anemia *(440)*, cirrhosis of the liver *(357)*, mental illness *(498)*, insomnia *(448)*, stuttering *(699)*, Wilson's Disease *(385)*, and niacin deficiency (86).

WHERE FOUND—Beer, copper plumbing and cookware, insecticides, permanent wave kits, pasteurized milk, oral contraceptives, tobacco, swimming pools, city water, and various foods. Also **certain frozen foods** have copper added in order to make them greener (peas, etc.).

SOLUTIONS—Read labels and use nothing containing copper. Avoid copper sources and environments.

• **Vitamin C** (1,000 mg, 4 times daily) with rutin (60 mg daily) works as copper chelators and reduce the amount of copper in the system.

• **Zinc** (50 mg, but not over 100 mg daily) actively reduces levels of copper. (Contrariwise, if there is not enough zinc in the diet, copper levels will automatically increase.)

• **L-cysteine and L-methionine** (each: 500 mg twice daily; take on an empty stomach with water or juice, not

with milk) also reduces copper in the body. Take them with 50 mg B_6 and 100 mg **vitamin C** for better absorption.

• Hair analysis can help you determine the amount of copper poisoning in your system.

DEFICIENCY—It is also possible to not have enough copper in the body. Without a balance of copper and zinc in the body, the thyroid will not work properly. Babies fed soy milk tend to have a deficiency of copper. The result is damaged nerves, bones, and lungs. Adults lacking copper will lose protein. Excessively large doses of zinc can also produce a copper deficiency. Oral contraceptives can cause either an excess or deficiency of copper.

—For additional information and remedies, see Heavy Metal Poisoning (596), Chemical Poisoning (595), Chelation Therapy (596), Mineral Effects on Minerals (597), and Poisoning (594).

ENCOURAGEMENT—Keep cheerful and sunny. This will encourage those around you to take heart. They have problems too. Kneel down and pray with them.

DDT POISONING

THE PROBLEM—We still have DDT poisoning. It was first introduced in 1939, into agriculture, to kill insects. It was banned in December 1972; however, we still have DDT. Here is why:

First, it has long-lasting effects on humans, as well as birds, fish, and animals. Second, it is still in our water and soil. Third, shipments of DDT food from overseas are not banned. Food grown in Israel is heavily laced with DDT and then shipped to America because orthodox Jews will not allow it to be sold in Israel. Fourth, it is still used on fruit trees in America!

SOLUTIONS—Avoid DDT sources and environments. Special note: Do not fast on water alone; always do it on **fruit juices**. This is because DDT is stored in your body fat. During a water fast, its sudden release can damage various organs. Drink distilled, not regular, water. Drink plenty of fruit and vegetable juices.

—For additional information and remedies, see Heavy Metal Poisoning (596), Mineral Effects on Minerals (597), Chemical Poisoning (595), and Poisoning (594).

ENCOURAGEMENT—Come up to the light of God's Word, where Jesus is, and you will find all the guidance you need on the pathway to heaven.

FLUORIDE POISONING

SYMPTOMS—Mottled, discolored teeth. This is a permanent change which cannot be reversed.

EFFECTS—Fluoride, a trace mineral, is added to most city water in excessively large amounts. In addition, dentists prescribe fluoride substances in order to reduce dental caries (tooth decay). A much smaller amount has that effect, but only in small children. Fluoride never helps the teeth of adults. (The true cause of dental caries is eating sugar, candies, refined carbohydrates, soda beverages, an too little of fruits and vegetables. The cause is not a lack c fluoride in the diet.)

There was an 85% increase of cancer in Manchester England, after the introduction of fluoride in the city drink ing water. Down's Syndrome increased in U.S. cities whe fluoridated water supplies began. Japanese researcher found that children with mottled teeth had a higher inci dence of heart disease.

Fluoride combines with calcium to make an insolubl calcium, producing bone deformities.

Because it destroys iodine, fluoride also causes thy roid problems.

SOLUTIONS—Read labels and use nothing containin fluoride. Avoid fluoride sources and environments. Onl drink distilled water. Drink plenty of fruit and vegetabl juices.

• Hair analysis can help you determine the amount o fluoride poisoning in your system.

—For additional information and remedies, see Heavy Metal Poisoning (596), Chemical Poisoning (595) Chelation Therapy (596), Mineral Effects on Mineral (597), and Poisoning (594).

ENCOURAGEMENT—In Christ is light and peace anc joy forevermore. The longer we live with Christ, the closer we draw to heaven. Let nothing separate you from His side

LEAD POISONING

SYMPTOMS—Anxiety, confusion, chronic fatigue, diarrhea, insomnia, learning disabilities, loss of appetite, a metallic taste in the mouth, seizures, tremors, vertigo, muscle weakness, arthritis, gout, severe gastrointestinal colic. Also, gums turn blue.

EFFECTS—Lead poisoning produces hyperactivity in children, behavioral problems, and weakened minds. Chronic lead poisoning causes reproductive disorders, impotence in men, infertility in women, and anemia. Sudden infant death syndrome occurs more often in infants with high lead levels than those who die of other causes. Lead poisoning can eventually result in blindness, mental disturbances, mental retardation, paralysis of the extremities, coma, and death.

Toxic amounts damage liver, kidneys, heart, and nervous systems. Painter's colic shows severe wandering pain in the abdomen and acute muscle spasm. Sometimes you will find a lead line on the gum margin of the teeth. Lead inhibits the actions of calcium, iron, and potassium in the body. All of these are important nutrients.

WHERE FOUND—Lead is extremely toxic; it is widely found in **leaded gasoline, lead pipes, piping with solder, ceramic glazes, lead-based paints, and lead-acid batteries**. Lead arsenate is an **insecticide** used on certain plants. **Burning newspapers** throw lead into the air. Lead is in **commercial baby milk** and industrial materials (**nails, solder, plating, plaster, and putty**). **Lead pipes** put lead in **water supplies**. Copper water pipes are connected with **lead soldering**.

People also consume it when they use **tobacco**, eat **liver**, and drink domestic or imported **wines**. It can also be in **soldered cans**. Women with high lead levels give birth to infants with high levels. Such children grow more slowly and have nervous system disorders. No matter how high its lead level, your body is always ready to absorb more.

SOLUTIONS—Read labels and use nothing containing lead. Avoid lead sources and environments.

• **Vitamin E** (400-800 IU) tends to reduce the effects of lead poisoning. **Calcium** (2,000 mg daily) prevents lead from being deposited in body tissues. Take **magnesium** (1,000 mg) with the calcium. **Garlic** binds with, and excretes, lead. **Zinc** (50 mg) reduces lead in the system. **Vitamin A** (1,000 IU) helps protect body from effects of lead.

• Drink **aloe vera** gel or liquid.

• Buy only **canned goods** which are lead-free. These cans have been welded and have no soldered side seems. Do not use imported canned goods; no regulations cover them. Only drink distilled water. Drink plenty of fruit and vegetable juices.

• Stay off main **highways** whenever possible; and do not live near them. Lead fumes and other noxious chemicals and metals are still coming out of car exhausts. Do not grow family garden crops near highways.

• Do not have lead or copper **water pipes** in your home; use PVC (plastic) pipes instead. Copper pipes are connected with lead solder. Solder leaches a significant amount of lead into the water supply, especially during the first few years after installation. Lead solder was not banned until 1986. Copper is also poisonous.

• Do not drink out of **glazed pottery**, especially if it is imported! The glaze can contain lead, which will leach into your fruit juice, etc.

Do not eat on **antique dinnerware**; they leach lead. Do not store foods or liquids in **lead crystal** glassware. Do not turn **bread bags inside out** and use them to store food. There is lead on the ink. Never use the **first water** from your tap in the morning for drinking or cooking. Let it run 3 minutes.

If safe drinking water is not available, **treat water with grapefruit-seed extract**, before using it. Add 10 drops, per gallon of water, and shake (or stir) vigorously.

Hair analysis can help you determine the amount of lead poisoning in your system.

—For additional information and remedies, see Heavy Metal Poisoning (596), Chemical Poisoning (595), Chelation Therapy (596), Mineral Effects on Minerals (597), and Poisoning (594).

ENCOURAGEMENT—If we have Christ abiding with us, we shall be Christians at home as well as abroad. He who is a Christian will have kind words for all he associates with. As we do this, our own hearts will be warmed the more with Christ's love.

MERCURY POISONING

SYMPTOMS AND DISEASE—Allergies, anxiety, metallic taste, gastroenteritis, burning mouth pain, salivation, abdominal pain, tremors, uncontrolled crying, vertigo, nausea, and vomiting.

Mercury poisoning can lead to colitis, kidney disease, dermatitis, asthma, hair loss, gingivitis, mental and emotional disturbances, and nerve damage.

It is believed, by many, that multiple sclerosis is caused by mercury poisoning.

Arriving in the brain, it is stored there and produces dizziness, insomnia, weakness, fatigue, depression, and memory loss.

Symptoms in a child include hyperactivity, irritability, depression, and behavioral changes.

WHERE FOUND—Mercury is more toxic than lead, and can be ingested or inhaled. It is stored in the brain and in the fat.

At normal temperatures, it tends to change from a solid into a gas. This means that the mercury in the **amalgam fillings** in your mouth are always ready, when the opportunity presents itself, to pass into saliva and be swallowed. Acids in food provide that opportunity. Amalgam is over 50% mercury. Minute amounts of methyl mercury are released from the tooth filling as you chew your food. Eventually it passes into the organs and brain.

Nearly 100 chemicals are placed in mouths by dentists (including mercury, copper, nickel, beryllium, zinc, phenol, formaldehyde, disocyanate, and acetone).

Mercury is also found in streams, lakes, **fish, shellfish**, and sewage. The problem is that it is added to **insecticides, herbicides, and fungicides. Grains and seeds** are frequently treated with it, to keep out bugs. We would rather eat a stray bug than mercury. Gradually these substances have gone into the rivers and lakes, contaminating the fish.

Mercury is also included in **fabric softeners, polishes, wood preservatives, latex, solvents, plastics, ink, and some paints. It is in cosmetics, laxatives which have calomel, some hemorrhoidal suppositories, and a variety of other medications.**

SOLUTIONS—Read labels and use nothing containing mercury. Avoid mercury sources and environments.

• Remove the mercury (amalgam) fillings from your teeth.

• **Sweating** helps excrete mercury. **Selenium** (220 mcg daily) helps eliminate it.

• Hair analysis can help you determine the amount of mercury poisoning in your system.

—For additional information and remedies, see Heavy Metal Poisoning (596), Chemical Poisoning (595), Chelation Therapy (596), Mineral Effects on Minerals

(597), and Poisoning (594).

ENCOURAGEMENT—Tell the one in trouble, "Let us pray." Kneel down together and unload your hearts to God. Find in Him the peace and help that both of you need.

NICKEL POISONING

SYMPTOMS AND DISEASE—Skin rashes, respiratory illness, and myocardial infarction. It also interferes with the Kreb's cycle. Later problems are pulmonary edema, and brain and liver swelling.

WHERE FOUND—Nickel is found in **hydrogenated fats and oils, baking soda, cocoa powder, refined and processed foods, and jewelry**. It is in **superphosphate fertilizers**. It is also in **automobile exhaust, cigarette smoke, and manufacturing emissions**. Absorption through the skin can come from **jewelry, hairpins, errings, tongue piercing, coins, heart valves, nickel plating, and prosthetic joints**. Some **cooking utensils** contain nickel. Nickel carbonyl is the most toxic form.

SOLUTIONS—Read the above paragraph carefully. Avoid nickel sources and environments. Also read labels and use nothing containing nickel.

• **Do not pierce your ears** or wear **metal jewelry** containing nickel. The posts placed in pierced ears are nickel and cause nickel rash. The earrings have it also. This rash will appear everywhere on your body when you are wearing metal of any kind. Leave your ears the way God made them. Do not **pierce your tongue.**

• Avoid nickel alloys in **dental work.**

• Do not place acidic foods or liquids in **cookware** that has nickel in it.

• Do not **work** where you may breathe nickel dust or fumes. Doing so can eventually cripple or kill you. Do not work in, or live near, **nickle plating industries.**

Hair analysis can help you determine the amount of copper poisoning in your system.

—For additional information and remedies, see Heavy Metal Poisoning (596), Chemical Poisoning (595), Chelation Therapy (596), Mineral Effects on Minerals (597), and Poisoning (594).

ENCOURAGEMENT—Where can we find help? Only in God! No one on earth can fill our deepest needs. Only He who created us can give what is needed, as we cry to Him in faith for help.

RADIATION POISONING
(Radiation Exposure)

SYMPTOMS AND DISEASE—Dizziness, mental fatigue, eye fatigue, severe headache, cataracts, and nausea.

WHERE FOUND—Medical and dental X-rays, television, cellular phones, video display terminals, satellite dishes, building materials containing radon or uranium, computers, microwave ovens, satellites, high-voltage electric lines, radar devices, electronic games, smoke detectors, and tobacco. It can also come from a **nuclear bomb,** which exploded halfway around the world, or from a terrorist's **dirty bomb** here in the U.S.

When radiation strikes a human cell, it alters, damages, or destroys it. If a cell's DNA is damaged, genetic mutations in offspring can occur. Whether a little or a lot, radiation is extremely dangerous. Living tissue is damaged when ionizing radiation strikes it. This is radiation powerful enough to shift electrons from one collection of atoms to another. Such restructuring of tissue can result in disease or cancer.

A significant percentage of women inherit a **gene** that is sensitive to X-ray exposure. In those women, even a short exposure to X-rays can lead to cancer.

Strontium-90 and **Iodine-131**, which are produced by nuclear explosions, are especially harmful because they have short half-lives and are easily absorbed by the body. In the U.S., **radon and X-rays** are the most frequent sources of radiation. You are exposed to more radiation when you climb in very high altitudes.

SOLUTIONS—Avoid radiation sources and environments. As a help in protecting yourself from radioactivity, you must eat enough **non-radioactive elements.** (1) If you are not obtaining enough **calcium**, your body will absorb radioactive *strontium-90* from the air. (2) Buy a bottle of **iodine** and paint a little on the top of your foot (or the inside of your thigh). If the color disappears within 24 hours, put on a little more (too much iodine can be harmful). Your body will absorb it and protect you from radioactive fallout from radioactive iodine *(iodine-131)*, which destroys the thyroid.

• The following nutrients help protect the body against radiation: **Pantothenic acid** (200 mg), **inositol** (100 mg), **lecithin granules** (1 Tsp), **B complex**, **vitamin E (400-800 IU), calcium** (2,000-5,000 mg), **potassium** (5,500 mg), **magnesium** (750 mg), **zinc** (50 mg), **coenzyme Q_{10}** (100 mg), **dulse or kelp** (1,000 mg). **Aloe vera** has been shown to reduce radioactivity.

• During a nuclear attack, **vitamin C**, taken in large amounts (5,000-25,000 mg or more in divided doses each day), will help protect you. Be sure to get extra calcium and iodine at that time.

• Foods which protect against radiation include **fresh fruits, vegetables, whole grains, and legumes.**

• Foods which reduce one's ability to be protected against radiation include **meat, poultry, dairy products, sugar, refined food, and food with chemical additives.**

• Have your home tested for **radon.** This is a radioactive gas which seeps up from the ground. Homes which are tightly closed are especially liable to this problem.

• People who **smoke** are at special risk of injury by radon in the home.

• If you sit in front of computer monitor (screen) for long hours each day, you need to install a **radiation / glare screen filter.** If your employer will not purchase one for you, for your own protection, buy it yourself.

• Beware of unnecessary **X-rays.** Refuse them if you are pregnant.

• It is claimed that **cell phones** can irradiate your brain. Purchase an earpiece or phone guard. Use it only

or short calls.

• Avoid working in an **X-ray lab**; Because, you do, you will gradually keep increasing your *rad* count.

—For additional information, see Chemotherapy and Radiation Therapy Poisoning (below), Chemical Poisoning (595), Thyroid (549-552).

ENCOURAGEMENT—Our time here is short. We can pass through this world but once. While we are here, let us do all we can to help and bless others. There are so many around us who need our help. In Christ's strength, you can minister to many of their needs.

CHEMOTHERAPY AND RADIATION THERAPY POISONING

SYMPTOMS—Loss of appetite, vomiting, diarrhea, anemia, hair loss, anxiety, insomnia, pain, fatigue, mouth ulcers, yeast infections, depression.

CAUSES—The above are some of the symptoms of current medical cancer treatments, using chemotherapy and/or radiation therapy. Most cancer patients, receiving these treatments, become very ill.

Here are several things which can reduce those symptoms:

NATURAL REMEDIES

• **Maitake** is a Japanese mushroom which contains beta-glucan. It is able to heavily reduce nausea, increase appetite and energy, and strengthen the body's immune system's white blood cells. Take 2-3 drops a day of the extract.

• Take **ginger** in order to reduce the nauseous abdominal sensation that wants to make you vomit.

• **Glutamine** (5,000-15,000 mg daily) is an amino acid which helps protect the lining of your gastrointestinal tract against the damaging effects of chemotherapy and radiation.

• Physicians are taught that **antioxidant vitamins and minerals** reduce the cancer-killing power of chemo and radiation. But, in reality, by taking those vitamins and minerals, recovery is more likely to occur. *See Antioxidants (104).*

• **Siberian ginseng** (200 mg, 3-6 times, daily) helps prevent fatigue brought on by chemo and radiation. Take it with **astragalus** (1,500 mg daily). Make sure the Siberian ginseng is standardized for *eleutherosides*, the primary active ingredient.

• **Green tea** reduces the nausea. Drink several cups each day (or take 500 mg of the herb).

• **Umeboshi** is a good remedy for the nausea and vomiting from chemo and radiation. Umeboshi is a Japanese tea which contains salt plum paste, ginger, and the root of the kudzu plant.

—For additional information, see Radiation Poisoning (602), Chemical Poisoning (595); Thyroid (549).

ENCOURAGEMENT—Let every one who desires to be a partaker of the divine nature appreciate the fact that he must escape the corruption that is in the world through lust. There must be a constant, earnest struggling of the soul against the evil imaginings of the mind. There must be a steadfast resistance of temptation to sin in thought or act. The soul must be kept from every stain, through faith in Him who is able to keep you from falling. We should meditate upon the Scriptures, thinking soberly and candidly upon the things that pertain to our eternal salvation. The infinite mercy and love of Jesus, the sacrifice made in our behalf, call for most serious and solemn reflection.

GUILLAIN-BARRÉ SYNDROME

SYMPTOMS—It begins with neurological weakness in the arms, legs, and face. As it progresses, paralysis of the motor nerves can occur. This can lead to respiratory failure. As the condition worsens, there is strong anxiety, fear, and panic, and depression. Convalescence and recovery can be slow, with the possibility of permanent nerve damage.

CAUSES—This is another disease produced by **vaccinations**. Normally, such a condition would never occur. But when fluids, drawn from animals, are injected into the human bloodstream, terrible consequences can result. *See the author's book, Vaccination Crisis, for more on dangers and ways to avoid having your children vaccinated. (See back of this book.)*

Gerald Ford's introduction of a nationwide vaccination program, in the winter of 1976-1977, was a disaster and resulted in many cases of Guillain-Barré Syndrome.

Other possible factors causing this disorder could include **surgery, viral infections** *(227)*, **Hodgkin's Disease** *(625)*, **Rabies** *(572)*, or **Lupus** *(240)*.

NATURAL REMEDIES

• There are instances in which a careful home-care recovery program has solved the problem.

• In one case, a young man was told he had a severe case of Guillain-Barré Syndrome, and that it might require 2 years to recover. Refusing cortisone shots, he used natural healing methods: heavy on **vitamins and minerals, especially B complex, plus extra pantothenic acid, and vitamin C with bioflavonoids**. In addition to other minerals, he emphasized **calcium, potassium, and additional chelated minerals.** Herbs included **blue vervain, licorice root, chamomile, echinacea, burdock, and ginkgo**. He also took **chlorophyll, green drinks, fruit and vegetable juices** (especially **carrot and beet juice**). Within a month, he was well and back to work, with no residual problems later occurring.

• Mercury poisoning is part of the vaccination problem. *See Mercury Poisoning (601), Chelation Therapy (596), and Vaccination Poisoning (604).*

ENCOURAGEMENT—A lamp, however small, may be the means of lighting many other lamps. Trusting in Jesus, do what you can to encourage another, and you will be more courageous yourself.

VACCINATION POISONING

SYMPTOMS AND CAUSES—The **measles vaccine** can produce visual problems, seizures, paralysis. The **tetanus vaccine** can heavily reduce T lymphocyte blood count ratios (as occurs in HIV). The **diphtheria vaccine** can cause confused speech and a rare form of encephalitis. The **polio vaccine** can produce polio in those who handle babies receiving the live-virus (oral) vaccine. The **mumps vaccine** can cause febrile seizures, rashes, nerve deafness, and encephalitis. The **flu vaccine** can produce Guillain-Barré Syndrome or multiple sclerosis. The **rubella vaccine** can cause limb defects, mental retardation, impaired vision, damaged hearing, or heart malformation in the infant born to a mother receiving that vaccine. Those receiving them directly can experience polyneurities, arthralgia (painful joints), or arthritis. The **pertussis vaccine** can produce neurological complications, including death. It can cause fever, convulsions, blindness, and spasticity.

The **DPT vaccine** combines the diphtheria, pertussis, and typhoid vaccines (discussed above); so it is more dangerous than a vaccine for a single disease. Years later, it can result in a number degenerative diseases (including rheumatoid arthritis, leukemia, diabetes, and multiple sclerosis). Experts believe the DPT vaccine is the direct cause of sudden infant death syndrome.

The **MMR vaccine** combines the measles, mumps, and rubella vaccines; this is another source of danger. As with DPT, it can produce the terrible effects of each of the three single vaccines. The MMR vaccine is the direct cause of autism.

A significant factor is that these vaccines are given to infants and small children, when their natural immunity is not as strong as it would be later.

For an in-depth study on both adult and childhood vaccines, their dangers, and how to avoid them, obtain a copy of the author's book, *Vaccination Crisis. (See the back of this Encyclopedia for additional information.)*

—Also see Vaccination Problems (715).

ENCOURAGEMENT—The very first step in the path of life is to keep the mind stayed on God, to have His fear continually before the eyes. A single departure from moral integrity blunts the conscience and opens the door to the next temptation. "He that walketh uprightly walketh surely: but he that perverteth his way shall be known." It is impossible to keep a clear conscience and the approval of Heaven without divine aid and a principle to love honesty for the sake of the right.

DRUG RASH

CAUSES—It is truly surprising what a high percentage of medicinal drugs are poisonous. Yet it need not be, when their underlying *modus operandi* (method by which they work) is understood.

Medicinal drugs work by introducing a strange new poison into the body. The system immediately turns its attention from the debilitated area—and begins fighting the drug. The type of poison (the drug) introduced, and the way it operates, affects the reaction of the body. For example: The body was eliminating sulphur through a boil; but, then, a drug is introduced and the boil disappears, seemingly "healed." The body no longer lets the boil suppurate, so attention can be diverted to the radical poison which has been introduced. But the body has been weakened by the introduction of a poison; some of this may not be eliminated for years.

Natural remedies operate in a different way: They clean out the body and restore it to a healthy normalcy. Whether it be fresh air, pure water, nutritious food, simple herbs, or water treatments, the natural remedies assist the body in carrying on its work of cleansing the body. For that is what "disease" is: an effort of nature to cleanse the body of impurities and eliminate the effects of enervation.

In contrast, a drug is a foreign substance of a poisonous nature. The healing herbs are not "drugs." It is true that about five of every 100 herbs is poisonous, but natural therapy only uses the safe ones. The poisonous ones can be purchased at the drugstore or grocery counter (tobacco, coffee, black tea, chocolate, black pepper, digitalis, quinine, etc.). Such things as aspirin, Valium, phenobarbital, Dilantin, morphine, etc., are foreign chemical substances of a poisonous nature. They all produce dangerous side effects, called "contraindications."

The natural remedies were given us by the God of heaven (Genesis 1:29). We are unwise to turn from them to use poisonous substances instead. The reason the pharmaceutical firms sell poisons is because they cannot patent the natural remedies; they must invent something new. So they extract chemicals from rocks and herbs; and, in doing so, the result is a poisonous compound.

Most of the damage that drugs inflict on the body occurs beneath the skin; but *drug rashes* are effects on the skin.

Here are a few examples of drugs which produce drug rashes:

Antipyrine: Papular, erythematous rash, sometimes accompanied by edema and much irritation.

Arsenic: Papular or erythematous rash, sometimes urticarial. Prolonged use may produce pigmentation of skin.

Belladonna: Erythematous rash, usually accompanied by intense itching.

Bromides: Usually like acne vulgaris. Sometimes erythema.

Chloral: Papular erythema.

Iodides: Usually papular erythema, sometimes with acne-like pustules.

Phenolphthalein: Macular rash, sometimes purpuric.

Quinine: Very irritable erythema or urticaria.

Salicylate: Erythematous rash, possibly morbilliform.

Serum: Usually urticaria.

Sulfonal: Erythematous or urticarial rash.

Here are some other drugs which produce skin rashes: opium compounds, acetanilid, amidopyrine, barbiturates, ephedrine, novocaine, sulfanilamide, and other sulfa drugs.

Some of the drugs have been given very nice sounding names; but note the chemicals they contain: calomel (mercurous chloride), green vitriol (zinc sulfate), goulard water

(lead lotion), oil of vitriol (sulfuric acid), and vermilion (mercuric sulfide). Most drugs are compounded from a wide range of extremely complex and very poisonous chemical mixtures, not just two.

Let it be emphasized that most drugs work their damage in a thousand other ways in the body, without always producing skin rashes. Many damage the kidneys or liver.

NATURAL REMEDIES

• **Stop using the medicinal drug.** Take **vitamin C** to bowel tolerance (all you can, before its acidity causes a slight diarrhea). Take vitamins A, B complex, and E. Be sure **selenium** and **zinc** are in your diet. Eat more **fresh fruit and vegetables**, as well as kelp or dulse.

• If the drug has an acid base, consider taking a **soda alkaline bath.** Fill a bathtub with water at 95°-98° F. Add about a cup of baking soda or sodium bicarbonate. Sitting in the tub, dip and pour it over yourself. After 30-60 minutes, stand in the tub, partially drip dry, and pat yourself dry.

—Also see Eczema (270).

ENCOURAGEMENT—The throne of grace is to be our continual dependence. There is strength for us in Christ. He is our Advocate before the Father.

PTOMAINE POISONING

SYMPTOMS—Intense pain in the stomach and bowels, headache, backache, shooting pains, soreness, intense vomiting, retching, diarrhea, cold and clammy sweat, weak pulse, collapse, and possible death. Inflammation of the joints, especially the knee, if ptomaine poisoning was caused by eating lobsters or shellfish.

CAUSES—Ptomaines are the waste products produced by bacteria. **Eating tainted or decomposed meat** (sausage, oysters, salmon, pork, shellfish), **cheese**, etc. Because they are not acid, home-canned **peas and beans** are especially liable to become rotten.

NATURAL REMEDIES

• Quickly **empty the stomach** with a stomach tube. Or cause **vomiting** in one of the following ways: Drink 5-6 glasses lukewarm saltwater or a glass of hot water, in which has been stirred a tablespoon of mustard. Two certain ways to induce vomiting: Reach the finger in and tickle the back of the throat or put 1 tablespoon of lobelia in a glass of warm water and immediately drink it.

• Apply **fomentations** over the stomach and bowels while keeping the feet warm; put him **to bed** and keep him **warm**. Give 2 tablespoon of **castor oil** as soon as the stomach will retain it. Allow **no food** for 24 hours; but give all the **water** the stomach will tolerate.

ENCOURAGEMENT—A character that is approved of God and man is to be preferred to wealth. The foundation should be laid broad and deep, resting on the rock Christ Jesus. There are too many who profess to work from the true foundation, whose loose dealing shows them to be building on sliding sand; but the great tempest will sweep away their foundation, and they will have no refuge.

LISTERIOSIS

SYMPTOMS—Symptoms vary. The infection is often unnoticed in healthy adults. Flu-like symptoms may develop (such as fever, sore throat, headache, and aching muscles).

CAUSES—The bacterium, *Listeria monocytogenes*, is in the soil and in most animals everywhere; this can pass to humans through **food products (especially soft cheeses, milk, meat, and prepackaged salads)**. The risk is increased by **letting food remain warm** for a time. The bacteria can multiply in the intestines and spread to the blood and other organs.

In the elderly or those with low immunity, including HIV *(632)*, listeriosis can lead to meningitis *(476)*. In pregnant women, infection can pass to the fetus, causing miscarriage or stillbirth.

NATURAL REMEDIES

• Proper food handling greatly reduces the risk.

• For mild infections, antibiotic herbs *(228)* can be given.

• Those with serious infections should be taken to the hospital.

—Also see Fever (233), Inflammation (225), Flu (226).

ENCOURAGEMENT—To dwell upon the beauty, goodness, mercy, and love of Jesus is strengthening to the mental and moral powers; and, while the mind is kept trained to do the works of Christ and to be obedient children, you will habitually inquire, Is this the way of the Lord?

MUSHROOM POISONING

SYMPTOMS—Intense stomach pains immediately after eating a mushroom.

CAUSES—There are thousands of edible mushrooms. But there are two species which are extremely poisonous, quite common, and members of the amanita group: the death angel (or death cup) and the fly amanita.

The death angel grows in the woods from June until fall. It is usually white, but sometimes somewhat colored. Its poison acts like the venom of a rattlesnake; for it separates blood corpuscles from the serum.

The fly amanita grows in the woods or along the roadside; it has a bright red, yellow, or orange cup. It paralyzes the nerves which control heart action.

IDENTIFICATION—There are three signs to look for: (1) There will be a ring about halfway up the vertical shaft. (2) The base of the mushroom in the ground will be in the

form of a rounded bulb. (3) The top may have tiny flecks on it. (Other indicators are a full, wide cup on top and white spores.) It is said that no mushroom which grows on wood is poisonous.

NATURAL REMEDIES

• There is no known antidote for the death angel, except to quickly empty the stomach. Take an **emetic** to cause **vomiting**. Put a teaspoon of **salt** in 2 cups warm water and quickly drink it. Keep repeating this. **Tickle the throat** with a finger. After vomiting has occurred, induce more vomiting.

• If the fly amanita (which is somewhat less poisonous) is eaten, the stomach must be immediately emptied and an injection of **atropine** given.

Take the person to the emergency room.

Teach your children the three identifying marks of an amanita.

ENCOURAGEMENT—God is able to take those, who are dead in trespasses and sins, and (by the operation of the Spirit which raised Jesus from the dead) transform the human character and bring back the lost image of God to the soul. Those who believe in Jesus Christ are changed from being rebels against the law of God into obedient servants and subjects of His kingdom. They are born again, regenerated, and sanctified through the truth.

FOOD ADDITIVE POISONING

SYMPTOMS—A variety of symptoms.

CAUSES—*Here are the 10 worst food additives:* **BHA** (butylated hydroxyanisole) - food preservative - *Allergies, liver disease, cancer.* **Caffeine** - coloring, flavoring, and stimulant - *Nervousness, heart palpitations, heart defects.* **Carrageen** - thickening agent, binder - *Colitis, genetic defects.* Modified food starch - thickener, filler - *Vomiting, lung damage.* **MSG** (monosodium glutamate) - flavoring agent - *Headaches, chilling, sweating, diarrhea, chest pain, genetic damage.* **Nitrites** and **sodium nitrites** - preservative, coloring, curing - Cancer-causing. **Propylene glycol alginate** - thickener, stabilizer - *Liver damage.* Red dye 40 (Allura Red AC) - coloring - *Birth defects, cancer.* **Saccharin** - sugar substitute - *Allergic response, affects skin, heart, intestines, tumors, bladder cancer.* **Sodium erythrobate** - preservative, coloring agent - *Genetic effects.*

Here are the next 10 worst food additives: **Caramel** - *Genetic effects, possibly cancer.* **EDTA (*calcium disodium ethylenediamine tetraacetate*)** - preservative, flavoring - *Kidney disorders, cramps, skin rashes, intestinal problems.* **Gums: Arabic, cellulose, Ghatti, Karaya, Tragacanth, Xanthan** - thickener, binder, increase easy flow - *Allergic reactions, constipation, diarrhea.* **Hydroxylated lecithin** - binder - *Skin irritations.* **Lactic acid** - preservative - *Caustic.* **Maltol dextrin** - aroma and flavor enhancer - *Derived from harmful wood tars.* **Monoglycerides and diglycerides** - softeners, smoothing agents - *Genetic changes, cancer, birth defects.* **Polysorbate 60, 65, 80** - emulsifier for creaminess - *Diarrhea.* **Propyl gallate** - preservative - *Liver damage, birth defects.* **Tannin (tannic acid)** - flavoring - *Liver ailments and tumors, cancer.*

Foods containing the 20 worst food additives:

Cakes, crackers, pies, and doughnuts - contains 11 of the 20 worst additives. **Colas, soft drinks, punches, powders** - contains 9 of the 20. **Frozen pizzas** - 6 of the 20. **Gelatin and pudding desserts** - 6 of the 20. **Ice cream and ice milk** - 6 of the 20. **Beer** - 6 of the 20. **Vegetable sauces** - 5 of the 20. **Broths** - 4 of the 20.

Also avoid these food additives (which are not quite as dangerous as the 20 worst): baking soda and powder, BHT, nitrates, black pepper, sodium erythorbate, spices, and vinegar.

ENCOURAGEMENT—Reader, are you preparing to become a member of the heavenly family? Are you seeking in the home life to be fitted to become a member of the Lord's family? If so, make the home life happy by mutual self-sacrifice. If we want Jesus in our home, let kind words only be spoken there. The angels of God will not abide in a home where there is strife and contention. Let love be cherished; and peace and Christian politeness, and angels will be your guests.

MSG SENSITIVITY

(Chinese Restaurant Syndrome, Monosodium Glutamate)

SYMPTOMS—Headache, flushing, tingling, weakness, and stomachache.

CAUSES—Monosodium Glutamate is a chemical compound added to food as a flavor enhancer. It is found in some **Chinese and Japanese food** (as Aji no Moto) and is also used as a **meat tenderizer** (Accent). But MSG is being increasingly added to other processed foods (such as **textured vegetable protein, gelatin, hydrolyzed vegetable protein, yeast extracts, calcium and sodium caseinate, whey, vegetable broth, malt extract, smoke flavoring, and many other food ingredients**)—often without being mentioned on the label.

NATURAL REMEDIES

• **Avoid processed foods** in order to avoid MSG.

• It is known that a lack of **vitamin B_6** will increase the symptoms of MSG sensitivity. Give 50 mg for at least 12 weeks. (Pregnant and lactating women should not take more than a total of 100 mg of B_6.)

ENCOURAGEMENT—Through the enabling grace of Christ, each of us can be an overcomer in the battle with temptation. Let no one say, "I cannot overcome my defects of character"; for if this is your decision, then you cannot have eternal life. The impossibility is all in your will. If you will not, that constitutes the cannot.

The real difficulty is the corruption of an unsanctified heart and an unwillingness to submit to the will of God. When there is a determined purpose born in your heart to overcome, you will have a disposition to overcome. You

will cultivate those traits of character that are desirable and will engage in the conflict with steady, persevering effort. You will exercise a ceaseless watchfulness over your defects of character and cultivate right practices in little things. The difficulty of overcoming will be lessened in proportion as the heart is sanctified by the grace of Christ.

TOXEMIA

HYDRO—Here are several suggestions from the *Hydrotherapy* section *(153-211)* of this *Encyclopedia* on detoxifying the body:

Adsorb toxins: Poultices made of charcoal, clay, and glycerin, etc.

Eliminate toxins: These are procedures which encourage vital resistance to disease while at the same time encouraging the destruction of toxins by stimulating the toxin-destroying cells of the thyroid, liver, spleen, lymphatics, and other tissues: Hepatic Douche, Splenic Douche, General Cold Douche. (The word, "douche," in hydrotherapy, means "spray.") Other procedures include Steam Bath *(199-201)* and Hot Fomentations (177-179).

Remove waste products: Contrast Baths to the arm, hand, leg, or foot.

Combat local toxemia, resulting degenerations, and localized inflammations: Hot blanket Pack, followed by Sweating Wet Sheet Pack. Repeat every 3-4 hours if necessary. Fomentation to throat every 2-3 hours for 15 minutes. Ice Compress to throat during intervals. If inflammation becomes intense and sloughing is threatened, the Heating Compress at 60° F., changing every hour. Warm Vapor Inhalation.

Combat toxemia: Sweating procedures, Radiant Hot Bath, Sweating Wet Sheet Pack, Steam Bath, prolonged Neutral Bath. Follow hot baths by short cold applications (such as a Wet Sheet Rub, Cold Towel Rub, Cold Shower, Spray Douche, copious water drinking). Enema daily for a week or two, at 70° F.

ENCOURAGEMENT—Give to God the most precious offering you can give. Give Him your heart. He will take it and, with your cooperation, make it pure and clean.

POISONS - 6 - ADDICTIONS

Also: Dangers of Marijuana (293)

TOBACCO WITHDRAWAL

SYMPTOMS—A continual craving for tobacco in some form.

If the person smokes, there is irritation and inflammation of throat and lungs, chronic cough, chronic bronchitis, and premature aging of the skin. This eventually leads to lung cancer, high blood pressure, osteoporosis, emphysema, respiratory ailments, heart disease, stroke, and/or many other diseased conditions and cancers. Women will have intensified problems with menstruation and menopause; and men will have greater prostate trouble. Women who smoke age twice as fast as other women. Their skin rapidly ages; and the result is a dull, lifeless, gray, deteriorating complexion and wrinkles.

If he chews tobacco, there is irritation and inflammation of the lips, mouth, teeth, throat, and esophagus. This eventually leads to cancer of the lip, mouth, tongue, larynx, esophagus, pharynx, and other diseases.

CAUSES—Nicotine is remarkable for the vast number of harmful chemicals it naturally contains, plus those which are added to it during growth or processing of the leaves. Nicotine is also remarkable for its addictive qualities. It ranks with heroin; and some who have been hooked on both declare it to be harder to quit than heroin. Like heroin, cocaine, and alcohol, tobacco gives a sense of relaxation while making the heart pump harder (12-25 beats per minute faster), causing palpitations and a generalized feeling of anxiety. For the smoker who takes the last puff before bedtime, the circulatory system is only normal 2 hours out of every 24.

Each cigarette destroys 25 mg of vitamin C; a full pack in one day eliminates more of this vitamin than is in the diet.

Nearly 500,000 die each year in the U.S. In America alone, tobacco causes 35% of all cancer deaths, 78% of all fatal heart attacks, 18% of deaths of all kinds, 85% of lung cancer, and 85% of obstructive pulmonary disease. More Americans die each year from smoking than from alcohol, illegal drugs, traffic accidents, murder, or suicide. Cigarettes, pipes, etc., are coffin nails which shorten lifespan by at least 15-20 years. Here are some of the blessings you get from the nicotine: lead, carcinogens, cadmium, hydrogen cyanide, carbon monoxide, and over 5,000 other irritating chemicals in tobacco. Tobacco not only injures you, but it also damages those around you: your spouse, your children, your unborn, and fellow workmen. Did you know that the breath of a smoker contains slightly more nicotine than the side smoke from his cigarette? Men and women who smoke are constantly exhaling air into the room for their children to breathe.

NATURAL REMEDIES

Withdrawal symptoms include cough, depression, anxiety, headaches, stomach cramps, irritability, hunger, and cravings for tobacco. This continues for about 2 weeks. If supplementary treatment is given, the crisis can be weathered easier, with less likelihood of a return to smoking.

- The craving for a smoke only lasts 3-5 minutes; then it returns later for another 3-5 minutes. As time passes, it gets easier to resist the urge.
- In order to quit, it is best to accompany a firm decision with a **cleansing program**. This helps speed up the elimination of stored-up nicotine and other poisons. The quicker this happens, the faster the cravings cease.
- A **nutritious diet** must be adhered to. **Carrot juice** and **citrus juices** are very helpful. **Vitamin C** (5,000-25,000 mg in divided doses daily) is important.
- Take the tobacco pack, or can, and throw it away. In its place put a **candy bar**. Blood sugar level is a factor in the addiction. When the cravings are successfully gone,

throw away the candies.

• Take extra **calcium** and **chamomile** 3-6 times a day. Both will help to relax during the withdrawal period. Vitamin **B complex** is also important for the nerves.

• **Lobelia** contains *lobeline*, which is similar to nicotine. It is non-addictive, but helps a person quit tobacco. Here is how to use it in aversion therapy:

• Only smoke one hour each day; at which time 15 drops of lobelia, diluted in water, are swallowed every half an hour and then 15 minutes before lighting the first cigarette. With each 15-minute period, an additional 15 drops are added to the water, to drink while the cigarettes are smoked. The result will be nausea, which the mind will associate with the cigarettes. This kills the desire for the cigarettes.

• If the lobelia method is not used, the alternative must be a definite quit-all-at-once approach. *See the author's book, How to Quit Tobacco (see back of this book).*

• Keep a stick of **licorice** in your pocket; and suck on it when you want a smoke. Or munch on a raw carrot.

• Do **deep breathing** exercises, whenever you feel an urge to smoke.

• The following herbs help get you off tobacco: **ginger, catnip, skullcap, hops, burdock root, red clover, slippery elm, and cayenne**. Take whichever ones you want, together or alone. Eat **garlic**. **Stop eating junk food and meat**.

—Also see How to Quit Tobacco (773-775), and 208. Also Dangers of Marijuana (293).

HYDRO—Here are suggestions from the hydrotherapy section of this *Encyclopedia (153-211)*:

• **Heating and Sweating Packs** can be used for the elimination of nicotine from the body, thus lessening the physical craving for more tobacco .

• Taking **steam baths** during the withdrawal are also useful in tobacco addictions.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ELIMINATING DRUG HABITS AND THEIR COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease Index: pp. 209-211).*

TOBACCO HABIT—

GENERAL—Drop the drug at once. Put him to **bed**. **Sweating procedures** (such as Radiant Heat Bath, Steam Bath, sweating Wet Sheet Pack) twice daily. Follow with **short cold application** (as Shallow Cold Bath, Wet Sheet Rub, or Cold Douche). **Alternate hot and cold Compress** to spine, 3 times a day. **Hot Abdominal Pack** day and night, renewing 3 times daily. Copious **water** drinking and large **Colonic** daily.

ENCOURAGEMENT—God can give you the help you need. Go to Him and tell Him you need His help. Surrender your life to Him. In His strength, you can overcome the tobacco habit.

DELIRIUM TREMENS

SYMPTOMS—Visual and auditory hallucinations, convulsions, acute anxiety, wild expression on face, pulse feeble and rapid, profuse perspiration, possibly fever.

CAUSES—Severe symptoms immediately following very heavy drinking of alcoholic beverages.

The following article explains how to recover from alcoholism; this one is about the immediate crisis.

NATURAL REMEDIES

• Place him in a **neutral bath** and keep him there as long as possible, 2 or 3 hours or more. Keep the **head cool** with towels wrung out of cold water. Put these around the neck and on the head.

• While he is still in the bath, have him drink **hot, soothing, quieting herbs** (such as **catnip, skullcap, peppermint, spearmint, valerian, gentian, sweet balm, and/or calamus root**). Do not make the tea too strong. Use a small teaspoon of herbs in 1 cup of water.

• Several times, while he is in the bathtub, give him a **short, cold shower** or sponge bath.

• Just before finishing, give him a brisk **salt glow**.

• Put him back in the **warm water**, so he can become thoroughly warm. Then give a final **cold shower** or rub. Dry thoroughly.

• Put him to **bed** in a warm, well-ventilated room.

• Give 2 high **enemas** each day. Herbs kill poisons better than water; so use tea of **bayberry bark or red raspberry leaves**. Use **laxative herbs** to keep the bowels open.

• Give **bayberry bark and lobelia** as an emetic to clean out the stomach. Repeat the vomiting until the stomach and throat are entirely clean.

ENCOURAGEMENT—How thankful you can be every day of your life that, through the enabling grace of Jesus Christ, you can obey all that God asks of you in the Bible.

ALCOHOL WITHDRAWAL

SYMPTOMS—Dependence on, and addiction to, alcoholic beverages. Depression, blackouts, hangovers, arrests, ulcers, emotional problems, flushing of the face, forgetfulness, heart palpitation, indigestion, insomnia, urinary problems, hepatitis, hypertension, divorce, hard drugs, and numbness in the extremities.

CAUSES—Alcohol is absorbed directly through the walls of the stomach, without digestion. It then travels in the bloodstream to every cell in the body, where it extracts water. This weakens or kills cells. The effect on the liver, brain, and vital organs is especially damaging. Most alcoholics are either hypoglycemic or borderline diabetics.

In addition, alcohol produces severe nutritional deficiencies. The body thinks it is well-fed (alcohol contains 70 calories per ounce) while it is being slowly starved.

The liver slowly breaks the alcohol down to sugar. Eventually the difficult task weakens this vital organ, and fatty liver degeneration begins. Scar tissue develops; the experts call it cirrhosis *(361)*. Binge drinking (drinking heavily for several days) can lead to cardiac arrhythmia.

Alcohol is deceptive: It makes a person feel happy, when he is miserable, and strong when he is weak. It ruins his liver, destroys his marriage, hurts his children, eliminates his employment, and makes a bum out of him. The

liquor industry should be closed down.

NATURAL REMEDIES

• **Stop drinking** alcohol entirely. Begin eating very **nutritious food. Vitamins A** (5,000 IU), **B complex, C** (1,000 mg), **D** (1,000 mg), **and K** (140 mcg) are needed in addition to **zinc, iron, potassium, calcium, essential fatty acids, bioflavonoids, and adequate protein**. Sea **kelp** is important, to help the thyroid.

• **Avoid certain foods** which increase the craving for alcohol in those who indulge in it. These include **milk, wheat, corn products, chocolate, and sugar.**

• After going off alcohol, do not substitute large amounts of **sugar** products and strong **coffee**. Sugar only increases the hypoglycemic problem. Nourish the system with good food; do not sugarize it.

• The alcoholic craves **potassium**. One teaspoon of **honey**, to take the place of a beer, supplies some of the potassium which has been depleted by the alcohol. Also high in potassium is **potato peel soup**. The peelings should be about a half inch thick; discard the rest of the potatoes. Cover with water, cook well, then blend and add a little salt. He should eat it often with his meals.

• 1 teaspoon of 50-50 powdered **charcoal and honey** will help sober up a drunk person.

• People who regularly eat good nourishing food are less likely to crave stimulants or addictive substances. Especially eat **raw fruits, vegetables, and nuts**. These are nourishing and have lots of fiber.

• Meat eating will bring back the craving for alcohol; so **quit meat**. Get regular outdoors **exercise**.

• An excellent combination to help a person get off alcohol is take the amino acids, **tyrosine** and **tryptophan**, along with **vitamin B_6, niacin, hops, valerian,** and **passionflower**.

• **Slippery elm** is good to drink while going off alcohol.

• **Guassia chips** help destroy the taste for liquor. Put 1 teaspoon in 1 cup of boiled water and steep a half hour while covered. Take a swallow every 2 hours. Stay with someone, so you will not be tempted to go out and buy more of the cursed stuff.

• Blend up some **orange peel** with **water** and a little **cayenne**. It will help wean away from liquor.

• Drinking **angelica** tea helps produce a disgust for liquor. **Chamomile** tea helps during the withdrawal.

• **Hops tea** is good during delirium tremens.

HYDRO—Here are suggestions from the Hydrotherapy section of this *Encyclopedia (153-211)*:

• The **neutral wet-sheet pack** is excellent for alcoholic delirium. A neutral bath will accomplish the same purpose as a neutral pack; it will probably do it better. Heating and sweating packs are also used for alcoholism.

• Withdraw alcohol at once. Nutritive **enemas**, copious **water** drinking. Neutral **colonic** daily, for a week.

• The **Steam Bath** is also useful in chronic alcoholism. A lot of toxins come out in the sweat.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ELIMINATING DRUG HABITS AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

ALCOHOLISM—

GENERAL—Aseptic dietary, especially fruits. Meats and flesh foods must be strictly prohibited. This includes meat juices, broths, and all preparations of flesh. **Fomentation** over the stomach twice a day with Hot **Abdominal Pack** between applications, short **sweating baths** (Radiant Heat Bath, sweating Wet Sheet Pack), followed by **Wet Sheet Rub. Graduated Cold Baths** twice a day.

INSOMNIA—Neutral Bath at bed time, 94°-96° F., 20-60 minutes. Hot **Abdominal Pack** at night. *See Insomnia (448).*

VOMITING—Ice pills swallowed, **ice bag** over stomach, **hot and cold compress** over stomach.

DELIRIUM TREMENS—Rest in bed. **Hot Full Bath** for 5 minutes. **Hot Blanket Pack**, followed by sweating **Wet Sheet Pack, Neutral Bath** for 1-2 hours or longer, twice a day. **Ice Cap**. Hot **Fomentations** over stomach and abdomen every 3 hours, for 15 minutes. During interval between, **Heating Compress**, changing every 30-60 minutes. Copious water drinking and large **Enema** daily. Exclusive **fruit diet** for 2-3 days.

COUNTERACT NARCOTIC EFFECTS OF ALCOHOL—Cold Shower, water drinking or **Enema**, followed by short **Cold Douche** to spine and lower sternum. Repeat every hour or two if necessary, until the toxic effects disappear.

NEPHRITIS—Usually present in acute alcoholism; treat as for kidney disease.

GENERAL METHOD—He must be placed in a proper environment; isolation and confinement may be required. Suitable mental and moral influences must be brought to bear.

—Also see Wernicke-Korsakoff Syndrome (454).

ENCOURAGEMENT—Only in Christ's strength can you be strong to resist the temptations which assail you. Plead with God for forgiveness. Accept Christ as your Saviour and ask Him to make you a new person. If you are determined to stand true, and cry to Him moment by moment as His little child, He can help you overcome.

COFFEE WITHDRAWAL

PROBLEMS—Coffee and black tea are both addictive and damaging to the system. If you think you are not addicted to your coffee, try to immediately terminate its use.

When it is regularly used, the body enters into a very special chemical dependency on coffee. Immediate withdrawal can cause heart problems. Therefore, gradually go off coffee, taking less and less of it, over a seven-day

period. During that time, and afterward if necessary, give the following therapy:

NATURAL REMEDIES

WATER THERAPY

The following suggestions for withdrawing from the coffee and black tea addictions are from the hydrotherapy chapter in this *Encyclopedia (153-211)*:

• Discontinue the use of the drug at once. If necessary, employ some harmless cereal substitute. **Neutral Bath** at bedtime, **Fomentation** over abdomen, **alternate sponging** of the spine, **cold mitten friction or cold towel rub** before rising in the morning. **Hot abdominal pack** night and day (changing morning, noon, and night), short **sweating wet sheet pack or steam bath** 2-3 times a week. Followed by a **cold** application.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ELIMINATING DRUG HABITS AND THEIR COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

TEA AND COFFEE HABIT—

GENERAL—Discontinue the use of the drug at once. If necessary, employ some harmless cereal substitute. **Neutral Bath** at bedtime. **Fomentation** over abdomen, **alternate Sponging** of the spine, **Cold Mitten Friction** or Cold Towel Rub before rising in the morning, **Hot Abdominal Pack** night and day (changing morning, noon, and night), short **sweating Wet Sheet Pack** or Steam Bath 2-3 times a week. Followed by a **cold application**.

ENCOURAGEMENT—God can help you, just where you are. He can reach down and lift you up; He can help you overcome the coffee habit.

DRUG WITHDRAWAL

SYMPTOMS—Decreased desire to work, inattentiveness, extreme drowsiness, frequent mood swings, loss of appetite, and restlessness.

Prolonged use may result in damage to cells, chromosomes, liver, kidney, and respiratory organs. There is a real danger of cancer and male sterility.

Withdrawal symptoms include insomnia, headache, diarrhea, sensitivity to light and noise, hot and cold flashes, sweating, deep depression, irritability, disorientation, and irrational thinking.

CAUSES—There are legal drugs (medicinal drugs), which you can obtain at a pharmacy. There are also illegal ones, called hard drugs or street drugs. These include narcotics, stimulants, barbiturates, and hallucinogens. In nearly every instance, drugs are toxic and dangerous. Exceptions are the natural products which the FDA erroneously classifies as "drugs." Included here are such things as charcoal tablets and peppermint tea.

People often start taking drugs (such as nicotine, alcohol, and coffee) because they think these are harmless, enjoyable, or beneficial. But they are none of these. Frequently the dose is increased, to obtain the same pleasant effect; but the body is increasingly injured.

NATURAL REMEDIES

• **Withdrawal** from the drug must be done. When a person is highly dependent on a drug, it is best that the dose gradually be reduced over a four-week period. Regarding the hard drugs, it is best that withdrawal be done under professional guidance.

• **Nutritious food** should be eaten along with heavy **vitamin / mineral** supplementation. **Vitamins C** and **B complex** are especially important. Drink lots of water and get extra **rest**. Take **sweat baths**, to help excrete poisons.

• **Valerian** root has a calming effect. Use it with **Siberian ginseng** and the amino acid, **tyrosine**.

• **St. John's wort** minimizes depression during withdrawal.

HYDROTHERAPY

The following water therapies are used for opium, cocaine, and related addictive habits:

General: **Rest** in bed. Give **sweating baths** (such as a **Steam Bath**) twice a day, for 3 days before withdrawing the drug. Follow bath by vigorous cold applications. While withdrawing the drug, the symptoms may be successfully combated with the following water therapies.

Nervousness, restlessness, "indescribable sensations": Prolonged **Neutral Bath** at 92°-94° F., for 10 minutes.

Cardiac weakness: **Cold Compress or Ice Bag** over heart, alternate (hot and then cold) applications to the spine, **Cold Mitten Friction, Cold Towel Rub**. Repeating treatment hourly if necessary.

Vomiting: **Hot and Cold Truck Pack, Ice Bag** over stomach and spine, **Hot Leg Pack**.

Diarrhea: **Hot Enema** after each movement. **Cold Compress** over abdomen, changed every 30 minutes.

Local pain: Revulsive **Compresses** or a compress that alternates hot and cold.

Insomnia after withdrawal: **Wet sheet pack**. Prolonged **Neutral Bath**, 20-60 minutes. Heating **Leg Pack**, Hot **Abdominal Pack**, cold **Ice Cap**.

—Also see Alcohol Withdrawal (608), Tobacco Withdrawal (607), Drug Rash (604), Hard Drug Warning Signals (778-780). Also Dangers of Marijuana (293).

ENCOURAGEMENT—Every wrong habit can be resisted and overcome in the strength of Christ. He died to forgive your sins and strengthen you to resist the temptations of the devil. Trust in Him, live for Him, and determine that you will do what is right.

Since Jesus came to dwell with us, we know that God is acquainted with our trials and sympathizes with our griefs. Every son and daughter of Adam may understand that our Creator is the friend of sinners. In every promise of joy, every deed of love, every divine attraction presented in the Saviour's life on earth, we see "God with us" (Matt. 1:23). Jesus cares for each one of us as though there were not another individual on the face of the earth. As Deity, He exerts mighty power in our behalf while, as our Elder Brother, He feels for all our woes. The Majesty of heaven held not Himself aloof from degraded, sinful humanity. We have not a high priest who is so high, so lifted up, that He cannot notice us or sympathize with us, but one who was in all points tempted like as we are, yet without sin.

IF YOU SUSPECT CANCER, CONSULT YOUR PHYSICIAN.

Special Note: This section was originally larger; but, after completing it, the author wrote a separate 198 page book on the subject, titled *Alternate Cancer Remedies,* which is now available. Also see his book, *The Gerson Therapy,* for additional information.

Although those two books were written for cancer researchers, students of the history of alternative therapy and those wishing to prevent cancer will find that a remarkable number of alternative cancer remedies are available to us.

As with everything else in this series of books, this information on cancer should not be substituted for the advice and treatment of a physician or other licensed health professional.

TUMORS AND CANCER

TUMORS AND CANCER - 1 - TUMORS

CYSTS AND POLYPS

SYMPTOMS—*In the nose:* chronic difficulty in breathing through the nose.

In the colon: Bleeding or a mucous drainage from the rectum are common symptoms.

In the bladder: Blood in the urine.

In the cervix: A heavy watery, bloody, discharge from the vagina. Bleeding may occur after intercourse, between periods, and after menopause.

CAUSES—Polyps *(polyposis)* are growths of various sizes, and are especially found in certain portions of the mucous membranes: the nose, large intestine (colon), bladder, and cervix. They are especially common in the rectum and the portion of the colon just above that (the sigmoid). They often arise from a diet of **too much unsaturated fatty acids**.

These growths are often benign (not cancerous) and, growing on stalk-like structures, look something like narrow mushrooms. They tend to be hereditary.

Nasal polyps: Generally when the nose is clogged, the cause is a heavy cold or possibly chronic catarrh. But it can be nasal polyps. This is a special kind of tumor which usually forms as a result of a chronic infection in a sinus of a person having allergies. Surgical removal is done to remove them.

Colon and rectal polyps: These growths in the outlet end of the colon can become cancerous. *Familial polyposis* is a hereditary disease in which one hundred or more polyps develop in the colon, generally producing mucous drainage and rectal bleeding. They grow back as soon as they are removed. If they are not removed, colon cancer can result. A colectomy is the surgical removal of these polyps; but it is generally done (not by cutting out the polyps) by removing part of the colon! Sometimes the rectum is left in place and the small intestine is connected to it. But, whether or not this drastic operation is performed, the polyps generally return. Bleeding from the colon can be a sign of polyps or of cancer.

Bladder polyps: The medical route is removal of the bladder. It is important that these polyps be removed, whether by natural means or the standard medical way; because bladder cancer may result if they are not removed.

Cervical polyps: These polyps line the inside of the cervix of the uterus and are more common in women who have not had children. They rarely return after being removed.

Vocal cord polyps: These are caused by screaming or improper singing.

NATURAL REMEDIES

• A Wisconsin research team discovered that the polyps in most of their patients either lessened or disappeared entirely, when they were placed on a high **vitamin C** diet. The body is attempting to get rid of various waste products; it needs help doing the job. Vitamin C, more **water** drinking, **nutritious food**, and a **high-fiber diet** is needed. Also **eliminate foods that are processed, fried, and junk**. Take some type of supplemental fiber daily. Be sure to increase your water intake at the same time you increase your fiber intake.

• **Stop eating meat** products. They load the body with impurities which must be eliminated. Only eat wholesome food. Stop using **caffeine, tobacco, and alcohol**.

• Those who eat heavily of **saturated fats** are twice as likely to develop polyps. Use **flaxseed oil** instead.

• Spray **bayberry** powder on the growth, leave it on for 6-8 hours; wash away and repeat.

• The following herbs will help cleanse the body of toxins: **garlic, burdock, goldenseal, red clover**.

• Apply these directly to the cysts and polyps: **aloe vera, pau d' arco,** and **pycnogenol gel**.

• **Scrub your skin** with a loofah or dry skin brush regularly, to keep the sebaceous (oil) glands unblocked.

—Read the sections on Cancer (613-626) for additional information.

ENCOURAGEMENT—Throughout the trials of life we have a never-failing Friend. God can do for you what you could never do for yourself. Ask Him for help. How very thankful we can be for peace, perfect peace, even though we are still in this dark world of sin. In the strength of Christ's enabling grace, we can have power to resist all the temptations of the evil one and come off more than conqueror.

TUMORS

(Including Fibroids)

SYMPTOMS—Tumors, swellings, or growths in the body. They seem to contain solid or semifluid material and be abnormal in their growth.

CAUSES—When something has no apparent reason to be growing, it is growing abnormally. These structures are called tumors. They can be either benign or malignant (cancerous). Malignant tumors spread to other parts of the body; whereas benign ones generally do not spread.

Fibroids are tumors which most often occur in the uterus. Hysterectomies are done to remove them. But the effect of a hysterectomy (removal of the uterus) on a woman's hormonal system can be devastating. Avoid it, if at all possible.

Poor diet and environmental factors are special causes of tumors. Changing both can reverse the process and even eliminate these strange growths. It is best to eliminate them, whenever possible. Even the benign ones, although small, may later become cancerous.

NATURAL REMEDIES

See your physician.

•The body uses tumors as containers in which to store toxic waste collected throughout the body, when the system's natural ways of elimination are overloaded: the lungs, bowels, kidneys, liver, and skin. When these channels of elimination become clogged or inadequate to care for the excess refuse, then the body starts manufacturing garbage cans (the tumors) and placing the waste products in them.

• A physician can cut, burn, chemical, or radiate away the garbage can and its contents. But soon the body will manufacture more of them!

• The solution is to change your way of life. A **complete change of diet** is needed, along with **eating smaller amounts** and **improving ways of eliminating waste** from the body.

• Go on a short **liquid diet** to cleanse the system. Follow with a healthful diet of **fruits, vegetables, whole grains, nuts, and legumes. Avoid refined foods, fried foods, and meat.**

• Take **vitamin C** to bowl tolerance.

• Put **slippery elm poultices** or **sage poultices** on external tumors. Drink one or more of the following herb teas: **bayberry, chickweed, sage, slippery elm, or wild yam.**

• Use the same treatment for cancer. *Read the sections on Cancer (below) for detailed information.*

ENCOURAGEMENT—How thankful we can be that we can go to God for help. He who sent His Son to die, so we could have eternal life, can help you.

TUMORS AND CANCER - 2 - CANCER

Also: Chemotherapy and Radiation Poisoning (602)

CANCER

SYMPTOMS—*The most common symptoms of cancer:* any sore that does not heal on the skin, mouth, tongue, or lips. Any irregular or unusual bleeding or discharge from any body opening. A persistent change from normal in the action of the bowels or bladder. Any persistent lump or thickening in breast or anywhere on the body. Hoarseness or nagging cough. Difficulty in swallowing. Persistent indigestion or loss of appetite, especially if accompanied by loss of weight. Sudden or rapid changes in the form, appearance, or rate of growth of a mole or wart, or if it bleeds. Persistent fatigue.

To the basic eight cancer signs, listed above, can be added three others which are also important: any condition which does not respond to treatment, inflammation from blood clotting (thrombophlebitis), and putrid intestinal gas.

Skin cancer: A lump under the skin, moles which change color or size and have raised edges, an ulcer which does not heal, flat sores, lesions which look like moles. *See Skin Cancer (617).*

Mouth or throat: Chronic ulcer of the mouth, tongue, or throat which does not heal.

Larynx: Persistent cough and hoarse throat.

Lung: Persistent cough, bloody sputum, and chest pain.

Breast: Lump which is hard, does not go away, and does not move; inflammation or thickening of the skin. *See Breast Cancer (619) for more signs.*

Leukemia: Whiteness of skin, weight loss, fatigue, repeated infections, easy bruising, nosebleeds.

Stomach: Indigestion and pain after eating.

Bladder and Kidney: Blood in urine and increased urination frequency. Bloody urine is generally not a cancer symptom, but it can be.

Ovaries: Usually there are no obvious symptoms until later stages.

Endometrium: Bleeding between menstrual periods, unusual discharge, painful periods, heavy periods.

Cervical and Uterine: Bleeding between periods, unusual discharge, painful periods, heavy periods.

Prostate: Weak or interrupted urine flow. Continuous pain in lower back, pelvis, and/or upper thighs.

Testicles: Enlargement of a testicle, lumps, thickening of the scrotum, sudden excess of fluid in the scrotum, and mild ache in the lower abdomen or groin.

Colon: Blood in stools, rectal bleeding, changes in bowel habits (diarrhea and/or constipation).

Lymphoid Tissue: Enlarged, rubbery, lymph nodes. Also itching, night sweats, unexplained fever, and/or weight loss.

CAUSES—Cancer is now the second most common killer in the United States and steadily increasing. One in every three people will die from some form of it. Over 1,400 Americans die each day with it.

Cancer cells are wild, irregular, and different from other body cells. They grow rapidly and gradually invade and fill surrounding areas. They rob neighboring cells of nutrition, resulting in a gradual wasting away of the patient. They can migrate to new locations and multiply. Wherever they go, there are abnormal growths and tumors.

Cancer cells are classified by the organs they initially invade (liver, breast, colon, lung, lip, etc.). There are more than 100 different varieties of cancer. Each varies in its symptoms and how fast it spreads.

There are four main types of cancer: *Carcinomas* affect the skin, mucous membranes, glands, and other organs. *Leukemias* are blood cancers. *Sarcomas* affect muscles, connective tissue, and bones. *Lymphomas* affect the lymphatic system.

Early detection and treatment is vital. One person dies every 3 minutes from cancer.

Dr. Otto Warburg, Nobel Prize winner, stated: "More is known about the cause and prevention of cancer than most any other disease."

Dr. Ronald Raven, Chairman of the Royal College of Surgeons in London, made this comment: "Seventy-five percent of all cancer can be prevented if we utilize the facts we now possess."

At the Eighth International Cancer Congress, Dr. Kavetsky said: "It is essential in the treatment of tumorous disease, not only to act on the tumor, but to endeavor to strengthen the compensatory and defensive reaction . . of the entire system."

When a cancer becomes noticed, it is already far advanced. By the time a person has reached that stage, it is important that he place himself under the care of a competent physician who understands and uses nutritional therapy. However, he needs to understand, for himself, what is required and what he must do. There are situations in which a cancer victim has no one to help him, and he must carry out such a program entirely on His own.

But, whether helped by others or going it alone, unless the individual fully cooperates with right principles, he cannot successfully be helped. He must cease his violations of the natural laws, given by God to mankind, and live fully in accordance with them.

The type of food we eat, the way we live, and environmental factors gradually build up or weaken the body. If the organs of elimination cannot cope with the amount of toxic waste we are producing, in desperation the body eventually turns to the formation of tumors and cancers. Soft cancers are cells gone wild because of the excess waste in the system. Hard tumors are garbage cans prepared to hold the toxic waste.

Cancer generally has a lengthy incubation period of years. Nourishing the body, building up the immune system, and avoiding excess and debilitating substances enables the body to resist cancer.

Because of intemperate living, eating, sleeping, combined with stress, the body is gradually weakened over a period of many years. This produces a chronic autointoxication. Poisons have accumulated in the body. Vital organs, whose job it is to purify and eliminate wastes (primarily the skin, lungs, liver, kidneys, and bowels), become less active and efficient. The system becomes poisoned. These poisons accumulate around the weakest organs or where the body has been injured by a bruise, fall, or blow. The accumulated poisons from years of tea, coffee, tobacco, cola, meat, liquor, fried food, etc., are sent over to the weakened area. Then the body tries to build garbage cans (tumors), to hold the waste products, or the cells in that area go wild from the irritation and begin multiplying. Either way, eventually the cancer cells spill out and spread. It is well-known that irritation, such as always picking at a certain spot, can induce cancer.

Unfortunately, there are also toxic substances in the air, water, and soil. Chemicals, food additives, pesticides, air pollution, etc., make it all the more crucial that we live as carefully as we can.

Prevention of cancer requires effort; yet many people give more attention to caring for their prize dogs or their new cars. It is far more important, for your future, that you give your body the most careful attention.

Drs. Hans Nieper and Dean Burk stated that, by the time the tumor is present, a patient's malignancy is already far advanced. As noted earlier, a tumor is something of a strange parasite which has as little as 2% of normal blood circulation. Its cells are living on sugar fermentation instead of oxygen as normal cells do. It is more like a plant or fungus.

Here are two interesting facts: (1) The U.S. Government declares that the five-year survival rate from taking the officially authorized cancer remedies (chemotherapy, surgery, or radiation) has not changed over the past 20 years. (2) Statistics reveal that patients who do not take officially authorized therapy will, as a group, survive longer than those who do. (3) There is only one form of cancer which the medical community is effectively treating, and that is skin cancer. In all other forms, the death rate is extremely high; that is, within five years after authorized treatment, most of the patients die.

A problem with the cut, burn, and poison routes is their deadly nature. Chemotherapy, for example, produces hair loss, extreme nausea, vomiting, fatigue, weakness, sterility. It also damages the liver, kidneys, and heart. Both chemotherapy and radiation treatments are designed to kill cancer cells a little faster than they are killing or weakening other cells. The effect of this greatly debilitates the entire person and his immune system. Reputable natural remedies cancer specialists, such as those at the Gerson Institute, tell us that it is far more difficult to recover a person from cancer who has previously undergone chemotherapy or radiation treatments.

What should you do? That is your decision. Fortunately, you have a right to decide for yourself. However, you should know that the government and the medical association advises that you should never treat yourself for cancer. Their counsel is that you consult a medical doctor (M.D.) and follow his advice. Not to do so, they say, could result in your death.

Cancer has been reported to be badly underdiagnosed. In one autopsy review of those found with malignancies, over half of the deaths were caused by undiagnosed cancer.

Cancer is a systemic disease, affecting the entire body and caused by conditions in the entire person. So it cannot be treated by specifics. An entire change in one's way of life is required.

NATURAL REMEDIES

PREVENTION AND TREATMENT

• It is easier to prevent cancer than to treat it. Many things which prevent it (and *many* are discussed in this article) help safeguard all of us. But, once contracted, some treatments help one person more than another. So prevention is the best way to deal with cancer. Eat right and live temperately.

"About 80% of cancer cases appear to be linked to the

way people live their lives. For example, whether or not you smoke, the foods you eat, and certain industrial pollutants all affect your likelihood of getting cancer. The role of diet in the cause and prevention of cancer is particularly important. About 35% of cancer deaths may be associated with dietary influences."—*National Cancer Institute, press bureau, October 1990.*

• The NCI press bureau goes on to list seven things you must do to avoid contracting cancer:

"1. *Avoid obesity:* If you are 40% or more overweight, you increase your risk of colon, breast, prostate, gallbladder, ovary, and uterine cancer.

"2. *Cut down on total fat intake.* High-fat intake may be a factor in the development of certain cancers (particularly breast, colon, and prostate). By avoiding fatty foods, you are better able to control body weight.

"3. *Eat more high-fiber foods.* These include whole-grain breads and cereals, fruits, vegetables, and legumes (such as dry peas and beans). These foods may help to reduce the risk of colon cancer. Furthermore, high-fiber foods are a wholesome substitution for fatty foods.

"4. *Include foods rich in vitamins A and C.* Favorable foods are dark-green and deep-yellow fresh vegetables and fruits, such as carrots, yams, peaches, and apricots for beta-carotene, the precursor of vitamin A. Also use oranges, grapefruits, strawberries, and green and red peppers for vitamin C. These foods may help lower risk for cancers of the larynx, esophagus, and the lungs.

"5. *Daily intake of cruciferous vegetables.* These are cabbage, broccoli, brussels sprouts, kohlrabi, cauliflower, and others. They have ingredients that build resistance to certain cancers.

"6. *Avoid salt-cured, smoked, or nitrite-cured foods.* Among those who eat these foods frequently, there is more incidence of cancer of the esophagus and stomach.

"7. *Keep alcohol consumption moderate if you must drink.* Heavy use of alcohol, especially when accompanied by cigarette smoking or smokeless tobacco, increases risk of cancers of the mouth, larynx, throat, esophagus, lung, and liver."—*National Cancer Institute, press bureau, October 1990.*

NUTRITION

• The person must return to a good diet and the avoidance of various pollutants and drugs which caused the problem. Anger and hate must be replaced by cheerfulness and happiness.

• Eat a high-fiber, plant-based diet. Take 16-24 oz. of fresh vegetables juice daily. And get regular exercise.

• The best cancer-fighting foods include:

Carotene-rich foods: carrots, yams, green vegetables, tomatoes. This includes all fruits that are red, orange, and yellow.

Antioxidant-rich foods: garlic, onions, broccoli, wheat germ, sea vegetables, and leafy vegetables.

Steamed cruciferous vegetables: broccoli, cabbage, cauliflower, kale.

Protease inhibitors: beans (especially soy), rice, potatoes, corn.

High-fiber foods: whole grains (especially brown rice), fruits, and vegetables.

Lignan foods: Flaxseed oil, walnuts.

• **Broccoli and dark leafy greens** are outstanding foods. They contain *lutein*, which is an anticancer agent. **Broccoli, brussels sprouts, and cauliflower** contain *D-glucaric acid* which reduces various cancers. Research shows that eating high levels of antioxidant foods provides a strong protection against cancer.

• Other very good foods include **apples, berries, Brazil nuts, cherries, legumes** (including **lentils**), **oranges, plums.**

• Daily drink juice from raw **carrots, beets, cabbages,** and a lesser amount of **asparagus.** Raw **garlic** is powerful. Blend in tomato (or V-8) juice and drink. Let crushed garlic set out (in the air at room temperature) for 10 minutes, before putting it in the juice. This seems to increase its potency. Only drink **distilled water.**

• Eat raw **apricot kernels** daily. If you cannot obtain it, substitute with **almonds, apple seeds, or peach kernals.** They all contain *laetrile*, a cancer-fighting agent.

• Eat a little seaweed daily. Eat **tomatoes**; they contain lycopene, an antioxidant, which protects against cancer.

• **Cherries** (especially tart ones) contain anthocyanins which, by their antioxidant action, prevent cancer and heart disease.

• The only added sweetening should be a little **honey** or **blackstrap molasses.**

• **Soybeans** contain *genistein* and *diadzein*, two isoflavones which are antioxidants and protect against most forms of cancer.

FOODS TO AVOID

• Do not eat any kind of **meat.**

• Do not eat **dairy products, salt, sugar, peanuts, or white flour. No processed, refined, junk, or fried foods.** The chloride in salt is the problem. **Milk** contains saturated fat. **Milk sugar** *(lactose and galactose)* can cause ovarian cancer.

• Do not use **aluminum cooking utensils**; instead use stainless steel (or glass in the oven).

NUTRIENTS

• Nutritional supplements would include:

• **Vitamin C:** 3,000-12,000 mg daily, in divided dosages.

• **Vitamin E:** 400-800 IU daily.

• **Flaxseed oil:** 2 tsp. 3 times daily, because of its lignan and high omega-3 content.

• **Carotene complex:** 50,000-100,000 IU daily.

• **Coenzyme Q_{10}:** 150-300 mg daily.

• **Vitamins C and E** decrease the oxidation of body fats. **Vitamin B_8** (inositol) helps prevent and shrink tumors. **Niacin** has a similar effect. **Calcium** is a preventive factor against cancer. **Selenium** (not over 200 mcg daily) is also helpful.

• Do not take supplemental **iron.** It encourages the growth of cancer cells.

HERBS

• ***Cancer-fighting herbs*** include **pau d'arco** tea (4 cups daily), garlic (6-10 cloves, daily), **ginseng, licorice root. Comfrey** is good; but it should only be applied externally.

• **Essiac tea** has been used for decades, in Canada and more recently the U.S. and Europe, to eliminate cancer.

• **Citrus pectin** inhibits growth of cancer cells; it is especially useful against skin and prostate cancers.

• **Ojibwa herbal tea** is used to reduce cancer. This American Indian combination includes **burdock root, slippery elm bark, sheep sorrell, and turkey rhubarb root.**

• ***Herbs which increase immune function*** and have antitumor factors are **olive leaf extract and ginkgo biloba.** Also included in this list is **cat's claw** (but not to be used during pregnancy).

• ***Antioxidant herbs*** include **turmeric.** It contains *curcuma,* which helps protect against cancer and inhibit growth of cancer cells.

• ***Herbs which reduce the effects of chemotherapy and radiation:*** Alternate the following: **Astragus, echinaciea / goldenseal root capsules, burdock root, chaparral, dandelion, milk thistle, red clover, birch, suma.**

AVOID

• Avoid **synthetic hormones,** particularly **estrogen, X-rays, alcohol,** and **caffeine. And avoid tobacco** in all forms.

• Avoid dangerous chemicals, such as are found in **insecticides** (an important cause of cancer), **fresh paints, cleaning compounds, hair sprays, waxes, cosmetics.** And beware of **ingredients in auto products, art and craft supplies, pet supplies, foods and beverages.**

• **Medicinal drugs and street drugs** are additional sources of trouble. Regular exposure to **secondhand smoke** can increase a nonsmoker's chance of getting cancer by 30%.

• Keep your weight down. **Obesity** in men can contribute to colon and rectal cancer; in women, it has been linked to gallbladder, breast, cervical, and uterine cancer. Fat disrupts the level of sex hormones in the body. The greater the amount of a woman's body fat, the higher will be her levels of stored estrogen. Estrogen stimulates breast and reproductive cells to divide.

• **Tap water** contains chlorine, fluorine, and may contain radium. **Fluoride,** a risk factor for cancer, is in toothpaste, tap water, and every product made with tap water. Therefore, as mentioned earlier, only drink distilled water.

• Check the **radon** level in your home. Test kits for this radioactive gas can be purchased. If found, seal lower cracks, and increase upper ventilation to the outside.

• Do not sit close to **TV screens,** and do not use **microwave ovens.** Both produce radiation. If you sit at a **computer,** install a quality radiation screen.

• Avoid living or working near a high-voltage power line; it may induce cancer.

OTHER HELPS

• Especially for cancer of the internal organs, get some **sunlight** on the body every day possible. It reduces the risk of breast, colon, and prostate cancers.

• **Exercise** regularly outdoors. No healing program will succeed without some exercise.

• If you are able to do so, move to a **rural home** where the air is fresh and not polluted with auto and factory pollutants.

• **Breast-fed children** have a lower rate of leukemia.

SAMPLE RESEARCH STUDIES

Research studies have found many factors which lead to the formation of cancer. Here are a couple samples:

• A 12-year research study of more than 5,000 vegetarians and over 6,000 meat eaters found that **vegetarian diets** reduce risk of death from all causes, including cancer. People who ate no meat had a 40% lower risk of dying from cancer and a 20% lower risk than meat eaters dying from any cause. (Margaret Thorogood, Ph.D., coauthored the study.)

• A Harvard follow-up study of nearly 48,000 men, aged 40-75, found that **fat** helps tumors grow more quickly. A diet as low as possible in saturated fat was recommended. The leading sources of saturated fats are **beef, pork, processed meats, whole milk, dairy products, and fats and oils (such as butter, margarine, and mayonnaise).**

• It has repeatedly been found that eating meat fat is a cause of cancer. But a Harvard study found that even eating **red meat** (with much less fat content) was also dangerous. A 6-year study of almost 90,000 women found that those who ate red meat as a main dish each day were 2½ times more likely to have colon cancer than those who seldom, or never, ate meat. Other studies revealed that frequent consumption of meat is also associated with an increased risk of breast cancer, according to Harvard School of Public Health.

It is remarkable how many natural remedies there are! Here are but a few samples, from among many which could be cited, which either prevent or eliminate various forms of cancer:

• A recent study of a group of Seventh-day Adventists found that men who ate at least five **tomatoes** a week had a 40% lower risk of developing prostate cancer. It is believed that a pigment (lycopene) found in tomatoes is the key factor. It is chemically similar to beta-carotene in carrots, which is also a cancer fighter *(Edward L. Giovannucd, M.D., Harvard Medical School).*

• Forty-four cats were given a feline leukemia virus so lethal that, once cats develop clinical symptoms, 70% are dead within 8 weeks and the rest soon after. **Acemannan,** found in **aloe vera** and a potent immunostimulant, was then injected into the cats for 6 weeks and then reexamined 6 weeks later. By that time, 71% of the cats were alive and in good health *(Molecular Biotherapy, 3(1):41-5, 1991).*

• **Berberine,** found in **goldenseal Oregon grape root and barberry root bark,** has been used in China, since 1972, in the treatment of cancer. Several research studies have found that berberine shows potent antitumor activity against brain, and other, tumors. Three studies could be cited. *(One is from Chinese Medical Journal, 103(3):658-65, 1990.)*

• **Bromelain** (the proteolytic enzyme in pineapple), when added to the diet, decreased metastases in lung cancers. Six studies could be cited. *(One is Cancer Investigation 6(2):241-2, 1988.)*

• **Chaparral** (creosote bush) is an evergreen desert

shrub. Its primary anticancer chemical is a potent antioxidant. Research studies reveal that, when used with care, this plant reduces tumors. Attention to chaparral for this purpose began in 1969, when a man with a known malignant melanoma of the right check (with large metastasis) treated himself for a year with chaparral tea *(Cancer Chemotherapy Report, 53:147-51, 1969).*

• **Chlorella**, a green algae that grows in freshwater, was added to the diet of 21 patients treated for malignant brain tumors. Two years after treatment, 7 patients were alive and showing no reappearance of their tumors *(Phytotherapy Reports 4(6):220-31, 1991).*

• **Coumarin** is a component of several anticancer herbs (including dong quai, sweet clover, and red clover). Eight studies could be cited, which demonstrate its ability to shrink and eliminate cancers *(one study is Molecular Biotherapy, 3:170-8, 1991).* (Note: Coumarin should not be confused with coumadin, also known as warfarin; this is rat poison, used to thin the blood).

• An extract of **echinacea** was given to patients, who were actively receiving massive doses of medical cancer drugs. Patients generally lived longer than they otherwise would have; some did not die. Four studies could be cited. *(One is Cancer Investigation 10(5):343-8.)*

• Remarkable rates of death to cancer cells were experienced by patients receiving **garlic**. Seventeen studies could be cited *(one is Journal National Cancer Institute, 81(2):162-4, 1989).* Garlic appears to exert its effects by "direct action on tumor cell metabolism, inhibition of the initiation and promotion phase of cancer, and modulation of the host immune response" *(Nutritional Reports, 10-937-48, 1990).*

• LaPacho, a tree in Brazil, also known as **pau d' arco** or tahebo, has a long history of use by Brazilians in the treatment of cancer. The major active component is *lapachol*. Four studies could be cited (one is Revista do Instituto de Antibioticos, 20:61-8, 1980/81, in which all 9 patients experienced a shrinkage of tumors.) Note: Two Canadian studies revealed that many commercially sold pau d'arco products contained no *lapachol* (Canadian Health Protection Branch: Information Letter, 726, August 13, 1987).

• **Mistletoe** has been widely used in Europe for cancer therapy. They are injected because they are not absorbed if taken orally. Seven reports could be cited. *(One is Journal Ethnopharmacol, 29:35-41, 1990.)*

• Chinese or Korean **ginseng** is another inhibitor of cancer development. Nine studies could be cited. *(One is Biotherapy, 4(2):117-28, 1992.)*

• An extract of a **seaweed** (Undaria pinnantifida) stimulates immunological processes, including macrophage activity and antitumor effectiveness *(Cancer Letter, 50:71-8, 1990).*

• **Shiitake mushrooms** are an important part of Japanese diets; they are well-known for their protection against cancer. One of its components, lentinan, is used in cancer treatment in that nation. But it must be injected. Four studies could be cited. *(One is Cancer Detection Previews [supplement], 1:333-49, 1987.)*

• **Turmeric** and its major active component, *curcumin*, exerts powerful antioxidant effects; it is helpful in the treatment of cancer, according to three studies. *(One is Cancer Letter, 29:197-2002, 1985.)*

See your physician.

ENCOURAGEMENT—Life is difficult and we cannot always see what the future will hold; but, if our trust is in God, we can have the assurance that He will care for us, regardless of what may happen. "He that hath the Son, hath life." 1 John 5:12. "The meek shall inherit the earth; and shall delight themselves in the abundance of peace." Psalm 37:11.

SKIN CANCER
(Melanoma)

SYMPTOMS—Identification is especially important in dealing with skin cancer. *Here are official warning signs of skin cancer:*

1. An open sore that bleeds, crusts over, and will not heal properly.

2. A reddish, irritated, spot that is usually on the chest, shoulder, arm, or leg. It may itch, hurt, or cause no discomfort at all.

3. A smooth growth with an elevated border and a center indentation. As it becomes bigger, tiny blood vessels develop on the surface.

4. A shiny scar-like area that may be white, yellow, or waxy. It has a shiny, taut appearance.

5. An enlarging, irregular, "angry" appearing lesion on the face, lips, or ears.

Here is a description of one of the more common types of skin cancer: large flat, tan, or brown spots, with darker black or brown areas dotted on its surface. The edges may, or may not, be clearly defined. The spot may appear mottled.

Moles should also be watched—especially those that change in size or color, are irregularly shaped, have ridges around the edges, widen, bleed, itch, or seem to be continually irritated by clothing.

Here are still more identifiers of skin cancer—the so-called "A-B-C-D checklist":

Asymmetry: Both sides of the mole should be shaped similarly. If the overall shape is irregular, then it might be skin cancer.

Border: The edges of moles should be smooth, not blurred or ragged.

Color: It should be tan, brown, or dark brown if it is normal. If it is not, it is red, white, blue, or black.

Diameter: Any mole that is larger than ¼ inch, in diameter, or its diameter seems to be increasing, should be treated with suspicion.

CAUSES—Skin cancer is called melanoma, or *lentigo-maligna melanoma;* it appears on body surfaces which are most frequently exposed to the sunlight: the face, neck, arms, and trunk. It can also occur on the lips and even eyelids.

The best thing about skin cancer is that it is often slow in spreading and invading the deeper layers of the skin. As long as the cancer is only on the surface, it can easily be

removed.

There are three types of skin cancer: The first two are the most common; the third is the most dangerous. Yet all three types can be eliminated if treated early. The medical route or natural methods can be used to eliminate each of these. But, either way, be sure it is gone. As long as it is treated early, you can easily see if it is gone.

Basal cell carcinoma: This is the most common type, the slowest growing. It does not spread until it has been present for a number of years. It is an ulcer-like growth which spreads very slowly. The first sign is a large pearly lump, generally on the face, nose, or area around the eyes. About six weeks later, it becomes an ulcer with a moist center and a hard border which may bleed. Scabs continually form; then they drop off. But there is no healing of the ulcer. Another form is flat sores which slowly widen. Treatment is the same as for squamous cell cancer.

Squamous cell carcinoma: Due to damage to lower-skin surface, a lump forms on the skin. Looking like a wart or a nonhealing ulcer, physicians cut it off, freeze it off, chemical it off, or irradiate it off. A skin graft may be applied afterward.

Melanoma: This is the most dangerous of the three; and it can run in families. It often begins as what appears to be a mole. Most people have moles; but be especially beware of those which appear after the age of 40. Any mole that is unusual or that changes in size or color should be eliminated. If in doubt, see a physician!

A melanoma mole arises out of the deeper pigment layer of the skin. For this reason, it spreads more quickly. Melanomas most frequently occur on the upper back and legs. But they may also occur on mucous membranes or under the nails.

A fourth type of skin cancer is ***actinic*** (solar) ***keratoses***. These appear to be age spots on the neck, head, or back of the hands. But eventually 25% of them become cancerous. *See Actinic Keratoses (279).*

A fifth type is the rare ***mycosis fungoides***. For years there will be itching skin lesions. Eventually they become firm and begin ulcerating. Later they involve the lymph nodes and produce cancer of the lymph (lymphoma).

Over 600,000 Americans develop skin cancer each year; and 10,000 die of it. More than 90% of skin cancers can easily be eliminated, if done early.

NATURAL REMEDIES

See your physician.

• Wear **protective clothing** when out in the sun. Exposure to the sun is vital to good health. Unfortunately, the ultraviolet rays also cause wrinkles and 90% of all types of skin cancer. (It can cause cataracts too.) Yes, continue to get out in the sunlight; but try not to overdo it. Keep in mind that, in the early stages, it is not difficult to remove skin cancers; but you have to have a certain amount of sunlight for general physical health. Be especially careful between 10 a.m. and 2 p.m., when sunlight is strongest. Those with a family history of skin cancer should obtain their sunlight more sparingly. In the summer, wear light-colored clothing which has a tight weave. Consider using a sunscreen of at least 15. As the **ozone layer** is gradually destroyed over the north and south poles, those living in the temperate zones throughout the world become more susceptible to skin cancer—without even being in the sun.

• **Tanning salons** and **sunlamps** are more dangerous than sunlight, because people tend to overdo them.

• Every month or so check over your body carefully and look for signs of skin cancer. Then do something about it.

Suggestions for eliminating skin cancer:

You can **go to your physician**; and he will excise it with a knife or an ointment which will burn it off. If you delay, surgery will cut more deeply; and, as with all cancer surgery, there is the very real danger that not all the cancer will be removed.

• Or you can use natural remedies. Fortunately, with skin cancer, as long as it is treated in the early stages, you can tell if it is gone!

• **Garlic** is a faithful standby. Cut a thin slice of garlic and carefully tape it over, what you consider might be, a skin cancer. Try to avoid contact of the garlic on good skin. (If you can't avoid it, the skin will redden and burn somewhat.) Russian research, from back in the 1950s, revealed that garlic is more powerful than antibiotics in destroying bacteria. It also causes moles and skin cancers to fall off. In the morning, put on the garlic patches; take them off in the evening, before bedtime, and carefully wash the area. Put on a new application. Remove it in the morning; and repeat the process. Do this for about 3 days. The mole or ulcer will dissolve and slough off. Let the area heal. If part of it remains, repeat the process at a later time. If you continue applying the garlic for more than 4 days, it will begin burning deeper into the skin (you will know, because the area will become very painful.) Such deep burning is not necessary to slough off the cancer; it could be harmful.

• The herb, **chaparral**, works well for skin cancer. Take it as a tea or in tablet form. Also good is **burdock root and red clover** tea.

• According to a 1988 medical article *(British Journal of Surgery)*, eating an adequate amount of essential **fatty acids** helps protect the body against skin cancers. It even helps eliminate them, once they form.

• Get enough **rest**. Temperate living helps your body resist and throw off cancerous lesions.

• Eat a **nourishing diet**, including **leafy greens**. Green, orange, and yellow vegetables are important. The diet should be **high in antioxidants** (such as **broccoli, brussels sprouts, kale, cabbage, carrots**). It is important that you **reduce your fat intake**. Instead, take 2 tablespoons flaxseed oil daily.

• **Stop eating meat and foods that are processed, fried, sugary, and junk.** Stop smoking and drinking, including the drinking of caffeine or eating caffeine products.

• Take **vitamin C** to bowel tolerance; also take **vitamin A** and **selenium**. Eat a few **apricot kernals** daily.

• Apply a **goldenseal / myrrh** solution to the affected areas.

• **Carcelim** is a cream which you can purchase; with this, it requires 30 days to remove the melanoma. Apply **tea tree** oil cream to the area.

—Read the sections on Cancer (613-626) for additional information.

ENCOURAGEMENT—Take your problems to God; for He can help you know what to do. He can lead you to solutions which are the best. Psalm 34:18.

BREAST CANCER

SYMPTOMS—*The most common type:* Lumps are firm, do not go away, and are generally pain free. Lumps which do not move around may be malignant or may not be. *In another type:* There is itching, redness, and soreness of the nipple. *In yet a third type:* The breast becomes extremely tender and appears infected with something.

All three are explained in more detail below.

CAUSES—Breast cancer is a leading cause of malignant death among women in the United States. Women over forty are more likely to develop breast cancer than younger women. Lung cancer kills about 56,000 women in America each year; breast cancer is responsible for the death of about 46,000.

It is vital that early detection be made. Discussions of how to carry out breast self-examination are readily available elsewhere and need not be repeated here. As you conduct it, watch for subtle changes in the breast. You are looking for special types of lumps in the breast. These lumps are firm, do not go away, and are generally pain free. Lumps which do not move around may be malignant or may be caused by normal fibrocystic changes during the menstrual cycle. The experts say a biopsy will detect what kind of lump it is.

But you should know that biopsies can be dangerous. A *biopsy* is a slice of the tissue which is then sent to a lab for microscopic examination. The problem is that slicing any suspected tissue—immediately releases its cancer (if any is present) into the body, where it can more rapidly spread. Whether or not you choose to have a biopsy made someday, you should be aware of this fact.

There are several different types of breast cancer. Most of them are similar, producing lumps described above. But a few are different:

Paget's disease of the nipple affects the nipple; it cannot be detected by a self-examination. Cancer cells have migrated to the nipple. The symptoms are itching, redness, and soreness of the nipple. This form of cancer only occurs when a different form of cancer is present elsewhere in the breast tissue.

Inflammatory carcinoma is a different type. The skin thickens and turns red. The breast becomes extremely tender and appears infected with something. The lymphatic system and blood vessels have become clogged because of a tumor. This type of cancer spreads very rapidly. Professionals recommend a biopsy; but, if you choose not to do so, you must be planning to go on an intense natural remedies cleansing, to eliminate the problem. Whatever you do, you had better set to work and do it.

It is well to keep in mind that many people have undergone the orthodox cancer routine of surgery, chemotherapy, or radiation; some have survived while others have died. There are many who have taken the natural remedies route, with the same end results; some have lived and others have died. No one can, or ought to, decide what you should do; the decision is yours.

NATURAL REMEDIES

See your physician.

IMPORTANT FACTS

• In the late 1980s, researchers discovered that women develop breast cancer far more frequently in certain localities than in others. Analyzing those locations, it was discovered that they are those areas where there tends to be **less sunlight** throughout the year. For example, northwestern California, the western slopes of Oregon and Washington, and the Northeast had a far greater number of breast cancer cases than did Florida, Texas, Arizona, and southern California. The solution: **Take sunbaths** from time to time, throughout the year; sunlight is important for maintaining good health, purifying the body, and resisting infection.

• Breast cancer more often occurs in women who previously **started menstruation early** in their youth, had a **late menopause**, **gave birth later in life**, had a **family history** of breast cancer, developed **obesity after menopause**, and had a history of **alcoholism** and eating a **high-fat diet**.

• Research indicates that those who take **oral contraceptives** are 3 times more likely to develop breast cancer. **Silicone** (used in breast implants) causes cancer in test animals. Those who develop breast cancer, and other cancers, have **less vitamin A** in their bodies.

WHAT TO DO

• Eat a **nutritious diet** centered around **fresh fruits and vegetables, whole grains, and nuts**. Eat **garlic and onions**. Drink **distilled water** and **fresh fruit and vegetable juices**.

• Get **extra fiber** in your diet. Studies have shown that breast disease is associated with poor intestinal health, constipation, and low-fiber diets. Fiber also dramatically reduces estrogen levels in a woman's body; and estrogen is a significant causative factor in this disease.

• Take **coenzyme Q_{10}**, as well as full **vitamin-mineral supplementation**. Take 40 IU of vitamin E daily. Low levels of B_{12} are linked to an increased risk.

• Cancer thrives in an oxygen-poor environment. Gradually build up until you are **walking** 2 miles, 4 times a week. Women who exercise outdoors have a lower incidence of this disease.

• Do not eat too much **soy or peanut products**. Do not eat **meat or dairy products. No alcohol, caffeine, or nicotine. No processed, fried, white-flour, and junk foods**. Do not eat **sugary foods**. Do not take supplements containing **iron**. There is a clear link between drinking **alcohol** and breast cancer. Cut total **fat consumption** to

20% of total calorie intake. **Birth control pills, X-rays,** and **permanent dark hair dyes** increase the likelihood of later breast cancer.

• Herbs useful in cleansing the blood and liver include **red clover, milk thistle, and burdock root. Silymarin,** an antioxidant extract of milk thistle, is being used to reduce breast cancer.

• **Wearing a bra** for more than 12 hours a day increases the likelihood of breast cancer. That discovery resulted from interviews with over 4,000 women. A woman who never wears a bra is 21 times less likely to get breast cancer than a woman in the general population. Avoid bras with stiffening wires; they are the worst.

• You should **examine your breasts regularly.** Procedures for doing this, and what to watch for, are discussed in many books. You will be able to detect initial changes better than anyone else.

—Read the sections on Cancer (613-626) for additional information.

ENCOURAGEMENT—Take all your problems to God in prayer. He can wonderfully change the most hopeless outlook. And whatever happens will be for the best, if we are trusting in Him. Psalm 147:3.

PROSTATE CANCER

SYMPTOMS—Possible pain or burning sensation during urination, frequent urination, a decrease in the size and force of urine flow, inability to urinate, blood in the urine, and continuing lower-back or pelvic discomfort just above the pubic area. But there may be no symptoms until an advanced stage or until the cancer spreads out beyond the prostate.

Many, many, times the above symptoms point to a benign enlargement of the prostate and not cancer in that organ.

CAUSES—The prostate is a walnut-sized gland at the base of the bladder and encircles the urethra, the tube through which the bladder voids urine. The prostate makes prostatic fluid which nourishes the sperm.

Prostate cancer is the second leading cause of cancer deaths in American men. **Poor diet, exposure to environmental toxins and cancer-causing chemicals, and overactivity of the sexual organs** are possible causes. There is a link between a **high-fat diet** and prostate cancer. It is believed, by some, that a **vasectomy** may increase the likelihood that this problem will later develop.

Men over 65 have 80% of the cases of prostate cancer; and 80% of 80-year-old men have it. The incidence is higher among married men and African-Americans. It is lowest among Asian-Americans.

The younger a man is, when he is diagnosed with prostrate cancer, the worse the outlook. Those with recurring prostate infections are at greater risk. Men whose ancestors had prostate cancer are more likely to develop it.

A careful, but relatively simple, rectal examination can reveal if cancer is developing in this organ. There are also other screening methods; and PSA (prostate-specific antigen) appears to be the best. The PSA test should be taken twice if there is an indication of cancer.

The prostate glands of many men in their 70s are gradually enlarging. Having an operation can damage the ability to urinate and cause incontinence (25% of the time), resulting in much difficulty later. Fortunately, prostate cancer is slow growing. "Watchful waiting" is the method used in Europe. However, invasive prostate cancer is rapidly increasing worldwide. This deadly form rapidly engulfs the organ and spreads throughout the body; it is noticeably increasing among men in their 40s and 50s in all industrialized countries. Western diet, chemicals, and living is a major problem. There are natural remedies which can help.

An enlarged prostate can become cancerous; but, fortunately, it always proceeds very, very slowly. So slowly, in fact, that an operation to remove the prostate, because of cancer, is generally not needed. This is because, before the man is likely to die of prostate cancer, he is quite aged and dies of something else first. But, of course, you will want to consult your medical specialist.

—Also see Cancer (613), Enlarged Prostate (635), and Prostatitis (637).

NATURAL REMEDIES

Contact your physician.

• Go on a program with a **nourishing diet, vitamin and mineral supplementation, and outdoor exercise.**

• Make the diet rich in **vegetables.** Drink **fresh fruit and vegetable juices** daily. **Carrot, beet, cabbage juices** are especially good; they are used in cancer clinics worldwide. Only drink distilled water.

• **Do not eat meat.** There is a definite correlation between red meat consumption and prostate cancer. **Avoid processed and junk foods, saturated fats, dairy products, coffee, tea, alcohol, tobacco, tobacco smoke, food additives.**

• **Vitamins C and E, zinc, selenium, flaxseed oil** are important in avoiding and reducing this disease.

• Researchers gave 15 patients with advanced prostate cancer 600 mg, daily, of oil-based **coenzyme Q_{10}**; a year later, cancer had been reversed in 10 patients and stopped in 4 others.

• In one study of hundreds of men, a daily intake of 200 mg **selenium** reduced prostrate cancer incidence by 60%.

• **Saw palmetto** herb shrinks prostate tissue. Take 80 mg 2 times daily, plus 25 mg daily of **pygeum africanum.** Both inhibit the DHT form of testosterone. Another herb that may reduce prostate swelling is **pipsissewa** tincture (25 drips, 3 times daily).

• Other helpful herbs include **turmeric, echinacea, goldenseal, pau d'arco, and buchu.**

• **Exercise** is a must for men dealing with this disease, plus early morning **sunlight**

• The risk of prostate cancer is three times greater for men who have had **vasectomies.**

—Read the sections on Cancer (613-626) for additional information. Also see Enlarged Prostate (635) and Prostatitis (637).

ENCOURAGEMENT—No friend can help us as wonderfully as God can. Go to Him in prayer and ask for His help. Trust your life to Him and believe that He will work everything out for the best.

LUNG CANCER

SYMPTOMS—A persistent cough, chest pain, shortness of breath, wheezing, sputum with blood, hoarseness, fatigue, recurring bronchitis or pneumonia, weight loss, swelling of face and neck.

CAUSES—This is the most common form of cancer that kills both men and women. The average age at diagnosis is 60. Nearly 200,000 people die of lung cancer yearly. Because early symptoms are not noticed, most cancers are advanced before they are discovered; so only 12% of cases recover. The rest die.

There are two types: small-cell (oat cell) and large-cell lung cancer. The small-cell type, commonly found in smokers, grows rapidly and quickly spreads to other parts of the body. About 75% of lung cancers are of the large-cell type.

Smoking is the leading cause of both types of lung cancer. But some contract the disease through **smoking marijuana and breathing secondary smoke. Lung cancer is also caused by exposure to nickel, asbestos, chromates, arsenic compounds, radon, pesticides, pollution, or radioactive substances.** Other factors include **drinking alcohol, tuberculosis, chronic bronchitis, lung scarring from pneumonia, exposure to talcum powder, and deficiency or excess of vitamin A.**

NATURAL REMEDIES

Contact your physician.

• Immediately **eliminate tobacco and alcohol** from your house and workplace.

• Eat a diet rich in **fresh fruits, vegetables, whole grains, nuts, and legumes.**

• Take **vitamins C, E, B complex, and beta-carotene**, as well as **selenium, lutein, lycopene, genistein**, and glutathione. Genistein is found in soybeans, lentinan in shiitake mushrooms.

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—The blessings of God are more than the hairs of our head, more than the sands of the seashore. Meditate upon His love and care for us; and may it inspire you with love that trials cannot interrupt nor afflictions quench.

BLADDER CANCER

SYMPTOMS—Early symptoms do not usually appear. The first indication is generally blood in the urine. Other symptoms may be increased urination, pain and burning during urination, or difficulty in urinating.

CAUSES—Smoking is the leading cause. **Breathing or ingesting chemicals** is another. Such chemicals include **aniline dyes, benzidines, saccharin, sucaryl, insecticides, medicinal drugs, street drugs, radiation exposure, and urinary tract infections.** It is also caused by **working in the rubber, chemical, leather, or dye industries.** Previously sick with **schistosomiasis**, a tropical disease, will also cause this.

NATURAL REMEDIES

Contact your physician.

• Drink a lot of **liquids** (including fresh **carrot, cabbage, beet, and fruit juices**). Such a program continually cleans out the bladder, so it can recover from the illness.

• Research studies have found that eating **broccoli, brussels sprouts, cabbage, kale, and cauliflower** help lower the risk of this disease. Eating **fruits of various kinds** also reduces it. The same diet should also be eaten during the disease.

• Take vitamins C, A, a B-complex supplement, plus beta-carotene. DMSO also helps reduce the cancer.

• Do not eat **meat, junk, fried, or processed foods.**

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—If you have given yourself to God, to do His work, you have no need to be anxious for tomorrow. He, whose servant you are, knows the end from the beginning. The events of tomorrow, which are hidden from your view, are open to the eyes of Him who is omnipotent.

When we take into our hands the management of things with which we have to do, and depend upon our own wisdom for success, we are taking a burden which God has not given us and are trying to bear it without His aid. We are taking upon ourselves the responsibility that belongs to God, and thus are really putting ourselves in His place. We may well have anxiety and anticipate danger and loss; for it is certain to befall us. But when we really believe that God loves us and means to do us good, we shall cease to worry about the future. We shall trust God as a child trusts a loving parent. Then our troubles and torments will disappear; for our will is swallowed up in the will of God.

Christ has given us no promise of help in bearing today the burdens of tomorrow. He has said, "My grace is sufficient for thee"; but, like the manna given in the wilderness, His grace is bestowed daily, for the day's need. Like the hosts of Israel in their pilgrim life, we may find morning by morning the bread of heaven for the day's supply.

One day alone is ours; and, during this day, we are to live for God. For this one day we are to place in the hand of Christ, in solemn service, all our purposes and plans, casting all our care upon Him, for He careth for us. "I know the thoughts that I think toward you, saith the Lord, thoughts of peace and not of evil."

COLON CANCER
(Colorectal Cancer)

SYMPTOMS—Rectal bleeding, blood in the stool, gas pains, constipation, persistent bloating, abdominal tenderness or pain. Changes in bowel habits, anemia, significant weight loss, ulcerative colitis, unusual fatigue, or paleness.

CAUSES—This is the second most common form of cancer that kills both men and women; it primarily occurs

in people over 50 (about 20% of all cancer deaths in the U.S.). The large intestine contains the colon (the upper 5-6 feet) and the rectum (the last 6-8 inches).

This cancer develops over a period of 10-15 years; it produces no symptoms until it is advanced.

It is far more prevalent in the Western world, where people eat lots of **meat** and **dairy products**; it is much lower among people groups which primarily eat grains, vegetables, and fruits. A diet rich in meat and **fat**, and **low in vegetables and fiber**, helps this cancer develop. Other factors include **obesity, alcohol, tobacco, and cancer elsewhere in the body**. A **lack of exercise** is also a factor. You are more likely to contract it if you have had **inflammatory bowel disease**.

A diet of meat and fat also encourages the growth of colon polyps, which can become cancerous.

If the disease is detected early enough and the tumor has not metastasized (spread), the survival rate is high.

NATURAL REMEDIES

Contact your physician.

• Eat a **high-fiber diet of fruits and vegetables, citrus fruits, soybeans, whole-grains** (especially **brown rice**). **Broccoli, cabbage, dark leafy greens,** and raw **garlic** are excellent.

• Take **vitamins C, E, folic acid** (800 mcg daily), **beta-carotene, calcium, and the B complex**. **Quercetin**, one of the **bioflavonoids**, has been found to also have anticancer properties.

• **Do not eat meat or even unsaturated fats**. Avoid **charbroiled, burned, wood-smoked, or fried foods**. Do not drink **coffee** or **chlorinated water**. Avoid **vitamin D** and **iron** supplements.

• Obtain adequate outdoor **exercise**.

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—We are living in altogether too solemn a period of the world's history to be careless and negligent. You must pray, believe, and obey. In your own strength you can do nothing; but in the grace of Jesus Christ, you can employ your powers in such a way as to bring the greatest good to your own soul and the greatest blessing to the souls of others. Lay hold of Jesus and you will diligently work the works of Christ and finally receive the eternal reward.

CERVICAL CANCER

(Uterine, Endometrial Cancer)

SYMPTOMS—No symptoms until the disease has progressed quite a bit. Bleeding between menstrual periods, bleeding after intercourse or douching. Unusual discharge. Painful or heavy periods.

CAUSES—A primary cause is HPV (**human papilloma virus**) infection, which can be transmitted sexually. Other factors include **unprotected sex, sexually transmitted infections** (including **HIV, HPV, and genital herpes**), **multiple sex partners, first intercourse before 18, early childbearing, more than five complete pregnancies, infertility, smoking, nutritional deficiencies,** and **susceptible tendencies toward it because of low socioeconomic status**.

If not treated, cervical cancer usually spreads to underlying connective tissue, nearby lymph glands, the uterus, and the genito-urinary tract.

Serious vaginal infections, such as **trichomonas** and **exposure to carcinogenic substances** (such as **heavy metals, asbestos, herbicides and nicotine**), should be warning signs. Beware of the drug, called **tamoxifen**.

The American Cancer Society now says that annual pap smears should only be obtained in case of high-risk factors.

NATURAL REMEDIES

Contact your physician.

• Eat a diet high in **fruits and vegetables, soy products, whole grains, and vitamin supplementation** (especially **vitamins C, E, A, bioflavonoids, and B complex**). **Folic acid** (800 mcg daily) can reverse precancerous changes in the cells within the cervix. Drink **green drinks** daily.

• **Do not eat meat** of any kind. Do not eat **unsaturated fatty acids,** including **eggs and butter.** Avoid **white bread, cheeses, and processed or fried foods**.

• **Smoking** secretes toxins into cervical mucus and increases risk of cervical cancer.

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—Blessed is the soul who can say, "I am guilty before God; but Jesus is my Advocate. I have transgressed His law. I cannot save myself; but I make the precious blood that was shed on Calvary all my plea. I am lost in Adam, but restored in Christ. God, who so loved the world as to give His only begotten Son to die, will not leave me to perish while repentant and in contrition of soul. He will not look upon me; for I am all unworthy. But He will look upon the face of His Anointed, He will look upon my Substitute and Surety; He will listen to the plea of my Advocate who died for my sin, that I might be made the righteousness of God in Him. By beholding Him I shall be changed into His image. I cannot change my own character, save by partaking of the grace of Him who is all goodness, righteousness, mercy, and truth. But, by beholding Him, I shall catch His spirit and be transformed into His likeness."

OVARIAN CANCER

SYMPTOMS—Symptoms are often absent until the disease is advanced. Abdominal enlargement, constipation or diarrhea, frequent urination, or vaginal bleeding (rarely). Especially watch for any enlargement of

the abdomen or persistent digestive disturbances that cannot be explained.

CAUSES—This is the leading reproductive-organ cancer killer among women. If diagnosed and treated early, the survival rate is high. But there are generally no symptoms till it is quite advanced. The risk of this disease increases after the age of 40.

Risk factors include **high dietary fat intake, the use of talcum powder in the genital area, human papilloma virus, obesity, a diet high in saturated animal fat and low in fiber. There is also previous history of breast, uterine, or colon cancer. Other risks include not having gone through pregnancy and childbirth, exposure to radiation or asbestos, early onset and/or late cessation of menstruation.**

NATURAL REMEDIES

Contact your physician.

• **Stop eating meat, grease, and all saturated fatty acids**. Do not use **tobacco, alcohol, or eat junk food**.

• Eat a high-fiber **fruit and vegetable diet**, as discussed in other articles under Cancer *(613-626)*.

ENCOURAGEMENT—The heart that is filled with the grace of Christ will be made manifest by its peace and joy; and where Christ abides, the character will become purified, elevated, ennobled, and glorified.

TESTICULAR CANCER

SYMPTOMS—One or more lumps in the testicle. Enlargement of a testicle. Thickening of the scrotum. Sudden quantity of fluid in the scrotum. Discomfort or pain in the scrotum or a testicle. Mild ache in the back, lower abdomen, or groin. Enlarged or tender breasts. Bloody semen.

CAUSES—White men between the ages of 20 and 35 are most likely to contract this disease. Because it can enlarge and spread very rapidly, it must be detected and treated early.

Cryptorchism (undescended testicles) increases the risk, even if earlier corrected by surgery. Other factors are **inguinal hernia**, during childhood, and earlier **mumps orchitis**. The other causes are not known.

NATURAL REMEDIES

Contact your physician.

• A **low-fat diet of fruits, vegetables, and whole grains**. **Tomatoes** contain *lycopene*, which may protect against testicular cancer.

• Take a full vitamin-mineral supplement, high in **vitamin E**. Drink **carrot juice** for carotenes instead of taking added **vitamin A**, which may cause problems.

• **Do not eat meat, unsaturated fat foods, or junk foods**. Do not use **tobacco** or **alcohol**.

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—There is nothing that can make the soul so strong to resist the temptations of Satan (in the great conflict of life) as to seek God in humility, laying before Him your soul in all its helplessness, expecting that He will be your helper and your defender.

With the trusting faith of a little child, we are to come to our heavenly Father and tell Him of all our needs. He is always ready to pardon and help. The supply of divine wisdom is inexhaustible; and the Lord encourages us to draw largely from it.

MOUTH CANCER
(Oral Cancer)

SYMPTOMS—Sometimes early symptoms appear; at other times none till the disease is advanced. Symptoms include a persistent sore on the tongue, in the mouth, or throat which does not heal. Discolored patches in the mouth or throat. Loss of feeling on the tongue or mouth. Difficulty swallowing or a feeling something is stuck in the throat. A mass in the cheek or neck. Swelling of the jaw or difficulty moving jaw or neck. Changes in the voice. Unexplained toothache. Weight loss.

CAUSES—This is another totally unnecessary disease; yet 10,000 people die from it in America each year. Nearly all (90%) of those who contract this disease either **chew smokeless tobacco or smoke cigarettes / pipes**. Other factors are ongoing use of a **mouthwash containing alcohol, ultraviolet light exposure to the lips, human papilloma virus, and immuno-depressant drugs**. When cancer occurs in the mouth, it frequently develops in other parts of the body as well.

Oral leukoplakia is a precancerous condition of the mouth, which smokers and drinkers are most likely to develop.

NATURAL REMEDIES

Contact your physician.

• Immediately **stop the use of tobacco and alcohol**.

• Eat a fiber-rich diet of **fresh fruits, vegetables, flaxseed oil,** and **vitamin-mineral supplementation. Broccoli, brussels sprouts, green leafy vegetables, soybeans, and garlic** are important.

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—Oh that we might have a consuming desire to know God by an experimental knowledge, to come into the audience chamber of the Most High, reaching up the hand of faith, and casting our helpless souls upon the One mighty to save. His loving kindness is better than life. He desires to bestow on the children of men the riches of an eternal inheritance. His kingdom is an everlasting kingdom.

LARYNGEAL CANCER

SYMPTOMS—Persistent cough, hoarse throat, difficulty swallowing, chronic sore throat. A pain from swallowing that radiates to the ear, continual ear pain. Blood in sputum or saliva. Difficult breathing, weight loss.

CAUSES—The larynx ("voice box") is the section of the respiratory tract between the pharynx and trachea, where the vocal chords are located. This disease especially occurs in men over the age of 50; it is primarily caused by the prolonged use of **tobacco** or **alcohol**. But repeated inhalation of **poisonous fumes, frequent straining of the vocal chords or laryngitis** can be involved. The cells lining the larynx become cancerous.

NATURAL REMEDIES

Contact your physician.

• Immediately **stop the use of tobacco and alcohol.** Eat a **nourishing diet of fruits and vegetables, whole grains, and vitamin-mineral supplementation.**

• **Vitamins A, B complex, C, E, flavonoids, and retinoids** are important.

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—If we would give more expression to our faith, rejoice more in the blessings that we know we have,—the great mercy and love of God,—we should have more faith and greater joy. No tongue can express, no finite mind can conceive, the blessing that results from appreciating the goodness and love of God. Even on earth we may have joy as a wellspring, never failing, because we are fed by the streams that flow from the throne of God.

ESOPHAGEAL CANCER

SYMPTOMS—No symptoms until the cancer is advanced. An increasing difficulty in swallowing (dysphagyia), often with a feeling that something is stuck in the throat or chest. Vomiting, often of blood. Spitting out excess mucus. Weight loss, pernicious anemia, chronic indigestion, stomach pain after eating.

CAUSES—Esophageal cancers occur more frequently in men and in African-Americans. Primary causes are **using tobacco and/or drinking alcohol**. Other factors include a **high-fat diet, eating wood-smoked foods, frequent heartburn or reflux** (stomach fluids going up into esophagus).

NATURAL REMEDIES

Contact your physician.

• Eat plenty of **fruits and vegetables**, especially **broccoli and cabbage**. Also **green peppers, soybeans, whole wheat, wheat bran, garlic**. Add glutathione-rich foods like **avocados, asparagus, grapefruit, oranges, and tomatoes. Spirulina** (a freshwater algae) also inhibits the growth of the tumor.

• Take **vitamins A, C, riboflavin, and selenium.**

• **Stop eating all meat, fats, salt. No processed, sugary, or fried foods.** Do not eat **moldy or pickled foods.** Do not eat **very hot or very cold foods.**

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—Satan has represented God as selfish and oppressive, as claiming all, and giving nothing, as requiring the service of His creatures for His own glory, and making no sacrifice for their good. But the gift of Christ reveals the Father's heart . . It declares that while God's hatred of sin is as strong as death, His love for the sinner is stronger than death. Having undertaken our redemption, He will spare nothing, however dear, which is necessary to the completion of His work. No truth essential to our salvation is withheld, no miracle of mercy is neglected, no divine agency is left unemployed. Favor is heaped upon favor, gift upon gift. The whole treasury of heaven is open to those He seeks to save. Having collected the riches of the universe, and laid open the resources of infinite power, He gives them all into the hands of Christ and says, All these are for man. Use these gifts to convince him that there is no love greater than Mine in earth or heaven. His greatest happiness will be found in loving Me.

The Father appreciates every soul whom His Son has purchased by the gift of His life. Every provision has been made for us to receive divine power, which will enable us to overcome temptations. Through obedience to all God's requirements the soul is preserved unto eternal life.

God has a heaven full of blessings that He wants to bestow on those who are earnestly seeking for that help which the Lord alone can give.

STOMACH CANCER

SYMPTOMS—Often no symptoms until the condition is advanced. Pain, indigestion, bloating after eating, stomach pain that cannot be eliminated (even by antacids), vomiting after eating, bloody vomit, black stools, fatigue, anemia, and weight loss.

CAUSES—Stomach cancer occurs twice as often in men, especially among those with a lower income. The risk increases after the age of 40.

Risk factors include **lack of dietary fiber, a high-fat diet. Too much smoked, salted, or picked foods. Foods high in starch and low in fiber. Tobacco and/or alcohol.** Other factors include **pernicious anemia, previous stomach surgery, chronic gastritis, stomach polyps, or having type A blood.**

A **high-fat, low-fiber diet** is always present in stomach polyps and stomach cancer. **Smoking** is another high-risk factor. This cancer takes as long as 15 years to develop.

NATURAL REMEDIES

Contact your physician.

• **Stop eating meat products and white-flour. No fried, processed, sugared, and junk foods.**

• Eat **fruits, vegetables, whole grains** (especially **brown rice**), **soybeans, and lentils, broccoli, brussels sprouts, green leafy vegetables, plus vitamin-mineral supplements. Vitamins C, E, bioflavonoids, and selenium** are important. **Garlic and pineapple** are very helpful.

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—The transforming power of grace can make you a partaker of the divine nature. The glory of God has shone on Christ; and by looking upon Christ, contemplating His self-sacrifice, remembering that

in Him dwells all the fullness of the Godhead bodily, the believer is drawn closer and closer to the Source of power.

The sinner may become a child of God, an heir of heaven. He may rise from the dust and stand forth arrayed in garments of light . . At every step of advance, he sees new beauties in Christ and becomes more like Him in character.

The love that was manifested toward him, in the death of Christ, awakens a response of thankful love; and, in answer to sincere prayer, the believer is brought from grace to grace, from glory to glory, until (by beholding Christ) he is changed into the same image.

HODGKIN'S LYMPHOMA
(Hodgkin's Disease)

SYMPTOMS—Fatigue, itching, fever, general sickish feeling, night sweats, weakness, weight loss, enlargement of lymph nodes and spleen (which is generally not painful).

CAUSES—There are two types of cancer of the lymph system: Hodgkin's disease and non-Hodgkin's disease. Both are lymphomas. Hodgkin's disease is cancer of the lymph glands, which includes the lymph nodes and the spleen. It most frequently occurs in young adults. There are hundreds of lymph nodes in your body; and, together with their connecting network of tubes, they are really immense in size and scope.

The lymphatic system helps protect the body against toxins of various types. Carried off through the lymphatic vessels, those foreign substances are then temporarily stored in lymphatic organs (the spleen, nodes, tonsils, and appendix). If these are removed or become clogged because too much waste matter is being channeled through them, then trouble occurs.

NATURAL REMEDIES

Contact your physician.

• Go on a **vegetable juice fast** for 2-3 days; then eat **nourishing food** and **fast again** every few days. It is vital that you clean out the system, so it can restore itself.

• Stop eating all **refined and junk foods**. Stop **smoking and drinking** liquor. You must live right if you are to recover.

• **Exercise** is vital. Muscles move the lymphatic waste.

• **Steam baths, salt glows, and hot and cold water treatments** will invigorate the body.

• Keep the **bowels** open. **Do not strain** at the stool; for this could injure a temporarily enlarged spleen.

• Helpful herbs include **echinacea, burdock, pau d'arco, and red clover**. Other herbs include **white oak bark, plantain, vervain, and yarrow**.

—For further information, see Cancer (613-626). Also see Non-Hodgkin's Lymphoma (below).

ENCOURAGEMENT—Decide, with all your heart, that you will walk in the truth found in the Bible, and you will be safe. Cling to Jesus as your only help and stay close to Him amid the crises of life. Habakkuk 3:18.

NON-HODGKIN'S LYMPHOMA
(Non-Hodgkin's Disease)

SYMPTOMS—*If cancer is in abdomen:* vomiting, nausea, abdominal pain, or abdominal enlargement. *If in the chest:* shortness of breath and coughing. *If in the brain:* vision changes, headaches, seizures. *If in the bone marrow:* anemia. *If in the thymus:* shortness of breath or feeling of suffocation, plus coughing.

CAUSES—There are two types of cancer of the lymph system: Hodgkin's lymphoma (HL) and non-Hodgkin's lymphoma (NHL). NHL is the fifth most common cancer in the U.S.; and it is rapidly increasing. In this disease, the body's ability to resist infection is greatly reduced because fewer than normal white blood cells are being produced. In addition, the cancer is able to spread more rapidly.

Causes include **exposure to herbicides, pesticides, black hair dye, benzene, meat eating, AIDS, immune-depressant drugs, or previous organ transplantation.**

NATURAL REMEDIES

Contact your physician.

• Immediately **stop eating meat. Stop using tobacco and alcohol. Do not eat processed, fatty, and junk foods.**

• Eat a nourishing diet of **fruits and vegetables. And drink fresh juices of carrot, cabbage, and beet.**

—Read the sections on Cancer (613-626) and see Hodgkin's Disease (above).

ENCOURAGEMENT—Only those who read the Bible as the voice of God speaking to them are the true learners. They tremble at the Word of God; for, to them, it is a living reality. They study; they search for the hidden treasure. They open their understanding and heart to receive; and they pray for heavenly grace, that they may obtain a preparation for the future, immortal life. Through the study of the Bible, man sees his own frailty, his infirmity, his hopelessness in looking to himself for righteousness. He sees that in himself there is nothing to recommend him to God. He prays for the Holy Spirit, the representative of Christ, to be his constant guide, to lead him into all truth. With all his heart, he claims the precious promises of Scripture and, by faith in the empowering grace of Christ, he obeys all ten of the commandments (Exodus 20:3-17).

LEUKEMIA

SYMPTOMS—Weakness, easy fatigue, a remarkable whiteness of the skin, difficulty in breathing, spells of fever, palpitation, rapid heart, excessive sweating, loss of weight, easy bruising, soreness or ulceration of the throat and gums, swollen lymph nodes, slow-healing cuts, bone and joint pain, an enlarged spleen or liver, or a tendency to hemorrhage or nosebleeds.

CAUSES—This is called cancer of the blood; but it is actually cancer of one of the organs where the white blood cells are made (bone marrow, lymph system, or spleen).

Leukemia (which means "white blood") produces a

defect in the production of white blood cells (WBCs or leukocytes), resulting in large numbers of immature WBCs in the bloodstream. WBCs are vital to physical health; and, without them, the body deteriorates. But the bone marrow is now producing an excess of them; and large numbers of those dumped into the bloodstream are essentially useless.

A blood test reveals anemia (not enough red blood cells), low platelet count, increased lymphoblasts (an excess of immature WBCs), and an elevated total WBC count.

Chronic cases run an up-and-down course for several years. Acute cases generally end fatally in a few weeks. As a rule, leukemia ends in death. A person can choose to go the medical route or try natural remedies. There will, of course, be a risk and the very real possibility of death, whatever his decision.

It occurs among both children and adults; and it is slightly more among Caucasians than among African-Americans. Causes include **exposure to radiation, radon, benzene, or certain toxic chemicals.** Other causative factors include **chronic viral infections, genetics, Down Syndrome, having a sibling with leukemia, HIV infection, commercial hair dyes, certain cancer therapies, and poor living habits.**

TREATMENT—

• Treatment may include **laetrile, germanium, selenium, vitamin A, and vitamin C** to bowel tolerance. **DMSO IV** helps mature the immature white blood cells in circulation. A moderate amount of **selenium** should be taken; for leukemia victims tend to have a low amount.

• **Quercetin**, a bioflavonoid found in citrus pulp and certain other vegetable sources has been found to have definite anti-leukemia properties. **Genistein** is another bioflavonoid which destroys leukemia cells. Bioflavonoids are essential for the absorption of vitamin C; and the two bioflavonoids should be taken together. Sources of bioflavonoids include **peppers, buckwheat, black currants,** and **the white material just beneath the peel of citrus fruits.** Other sources include **citrus pulp, cherries, apricots, blackberries, plums, prunes, and rose hips.**

—Also read the sections on Cancer (613-626).

ENCOURAGEMENT—In Christ we find our hope; in Him we find our salvation. Cry to Him for help and trust that He will work everything for the best for all concerned. You can safely lean on Him. He will not fail you, no matter what the outcome.

LEPROSY

It is an intriguing fact that people get leprosy in tropical climates and cancer in cooler areas. So leprosy is listed in this chapter.

SYMPTOMS—Any unnatural patch on the surface of the skin. If void of sensibility to temperature, pain, or touch, it should be a warning of the possible onset of this disease. Other early symptoms include headache, nosebleed, and fevers. Certain areas may become insensitive, because the disease follows along nerve trunks and especially affects areas on, or close to, the skin. Eventually, even the bones decay; and fingers and toes drop off.

CAUSES—Leprosy is a strange infectious disease, caused by a bacteria which, under a microscope, looks like tuberculosis. It is mildly contagious.

There may be 2-3 years, and sometimes much longer, after exposure before symptoms appear. Once it appears, it develops very slowly.

The disease is almost unknown among vegetarians; but is prevalent among **meat eaters**, especially in hot tropical climates. People who eat heavily of meat, especially pork, are the ones most likely to contract leprosy. The worst things to take into your body are **pork, crocodile meat, lard, blood, greasy meats, coffee, alcohol, or tobacco.**

NATURAL REMEDIES

• A careful, **nourishing vegetarian diet** and **clean, hygienic living** is important. Eat plenty of **fruits, vegetables, whole grains, nuts, and legumes.** Fresh air is important.

• In tropical countries, **chaulmoogra oil** is taken. Begin by swallowing 10 drops a day, gradually increasing to 30 if the person can tolerate it.

• **Sunbathing** helps.

• Helpful herbs include **red clover blossoms, burdock seeds, myrrh, dandelion, yellow dock root, lobelia, redroot, poke root, goldenseal, myrrh, bittersweet, sassafras, poplar bark, black cherry bark, and comfrey.**

• Mix a heaping tsp. of **goldenseal** and ½ tsp. **myrrh**; steep in a pint of boiling water. Drink 1 cup ½ hour before each meal and before retiring.

• Dr. Christopher recommends making an apple cider vinegar tincture of freshly bruised **pennyroyal** and applying it externally as a fomentation. Also drink pennyroyal internally.

—Leprosy closely resembles syphilis (630) and tuberculosis (412); so you may also wish to read those articles also.

ENCOURAGEMENT—Find in God the help that you so much need. He can help you, day by day. Giving your life to Him is the best thing you can do. Whatever the outcome, He has your life in Hands. And that is the best way to have it. Ephesians 1:7.

By His humanity, Christ touched humanity. By His divinity, He lays hold upon the throne of God. As the Son of man, He gave us an example of obedience. As the Son of God, He gives us power to obey. The meek and lowly Saviour is God "manifest in the flesh" (1 Tim. 3:16). "God with us" is the surety of our deliverance from sin, the assurance of our power to obey the law of heaven.

In taking our nature, the Saviour has bound Himself to humanity by a tie that is never to be broken. Through the eternal ages He is linked with us. "Unto us a child is born, unto us a son is given" (Isa. 9:6). God has adopted human nature in the person of His Son, and has carried the same into the highest heaven. It is the "Son of man" who shares the throne of the universe. In Christ the family of earth and the family of heaven are bound together. Christ glorified is our brother. Heaven is enshrined in humanity, and humanity is enfolded in the bosom of Infinite Love.

— SECTION 15 —

SEXUALLY TRANSMITTED DISEASES

STD - 1 - VENEREAL DISEASES

WHICH ONE IS IT?

Here are key symptoms of the nine leading kinds of sexually transmitted diseases:

HIV (AIDS): Night sweats, unexplained weight loss, fatigue, headache, swollen lymph glands, vaginal yeast infections, whitish coating on the tongue and inside of mouth (thrush), diarrhea, lung infections.

Chlamydia, *Women:* Burning sensation when urinating, itching, painful intercourse, white vaginal discharge (like cottage cheese). *Men:* Often there are no symptoms. Possibly clear, watery urethral discharge.

Candidiasis: *Both sexes have* itching in genital area and pain when urinating. *Women:* Thick, odorless vaginal discharge.

Genital herpes: Itching, burning in the genital area, discomfort during urination. A watery vaginal or urethral discharge. Weeping, fluid-filled eruptions on penis or in vagina.

Genital warts: Soft, growths (like cauliflower), either singly or in clusters in and around the vagina, anus, groin, penis, and/or scrotum.

Pelvic inflammatory disease, *Women:* Pus-filled vaginal discharge, plus fever and pain in lower abdomen.

Trichomoniasis, *Women:* Itching and pain in vagina. Foamy, greenish or yellowish, smelly discharge. *Men:* Clear urethral discharge.

Gonorrhea, *Women:* Vaginal itching, frequent and painful urination, and a cloudy vaginal discharge. Inflammation of the pelvic area, rectal discharge, abnormal uterine bleeding. *Men:* Yellowish, pus-filled urethral discharge. *Both sexes:* Very often (especially in women) there are no symptoms.

Syphilis: A sore on the genitals, sores in the mouth or anus. A rash, patches of flaking tissue, sore throat, fever.

ENCOURAGEMENT—It is only as we feel our need of a Saviour that we can receive the help that we so much need. Those who receive Christ by faith receive power to become the sons of God. Trusting in Jesus, and pleading for divine help, they will receive empowering grace to resist temptation and overcome sin. How thankful we can be that, in Christ's strength, we can live lives which are pleasing to God and have a home someday with Him, in heaven.

VENEREAL DISEASES

(STD, Sexually Transmitted Diseases)

SYMPTOMS—Blisters around the vagina, burning when urinating, anal pain, itching, pelvic inflammation, penile discharge, sore throat, flu-like symptoms, and more. *Here is a brief comparative analysis of the symptoms of nine of these STDs:*

Chlamydia: In women, there is a burning sensation when urinating. A white vaginal discharge resembling cottage cheese. Itching, painful intercourse. In men, a clear, watery, urethral discharge. This disease, which often shows no symptoms at all, can cause urinary tract infections and adhesions, resulting in sterility.

Genital Herpes: Itching and burning in the genital area. Discomfort when urinating. A watery vaginal or urethral discharge. Fluid-filled, weeping, eruptions in the vagina or on the penis.

Genital Warts: Single or clustered, soft, cauliflower-like growths in and around the vagina, anus, penis, groin, and/or scrotal area.

Pelvic Inflammatory Disease (PID): Fever and lower abdominal pain. A pus-filled vaginal discharge.

Trichomoniasis: In women, there is a foamy, greenish or yellowish, foul-smelling vaginal discharge, vaginal itching, and pain. In men, there is a clear urethral discharge.

Syphilis: A sore on the genitals is accompanied by rash, fever, patches of flaking tissue, sore throat, and sores in the mouth or anus.

Gonorrhea: In women, there is a cloudy vaginal discharge, frequent and painful urination, vaginal itching. Inflammation of the pelvic area, rectal discharge, and abnormal uterine bleeding. In men, there is a pus-filled, yellowish discharge. Often there are no symptoms for months. In women, there may never be symptoms; yet, all the while, they are infecting men.

AIDS *(Acquired Immune Deficiency Syndrome): Aids has many symptoms; see AIDS (632).*

Candidiasis: Itching in the genital area, pain when urinating, a thick odorless vaginal discharge. *This is not a "venereal disease"; but it is a yeast infection which can be transmitted by sexual activity, as well as in other ways (Candidiasis, 215).*

CAUSES—Venereal diseases are transmitted by **intimate contact**, when at least one has had more than one partner. STDs can cause urinary tract problems, sterility in women, and prostatic inflammation in men.

At the present time, one teenage girl in four has a

STD. Some of these diseases can kill newborn babies.

People who **smoke or chew tobacco** are three times as likely to contract an STD.

Oral contraceptives also increase the STD risk. They do this by decreasing levels of key nutrients within the body. Because of their imbalancing estrogen content, they also increase the likelihood of precancerous lesions.

We are living in an STD health crisis; it is rapidly increasing every year.

Condoms do not guarantee protection against any STD. A University of Texas research study showed that 30% of the time they do not even protect against AIDS, one of the worst killers of all.

Many STDs are increasing, due to the fact that the AIDS epidemic weakens the immune system and reduces resistance to many diseases.

Strong doses of antibiotics are the usual medical treatment; but an increasing amount of drug resistance is occurring among patients.

NATURAL REMEDIES

• The only genuine protection is **abstinence**. Marry a person who never has, and never will have, sex with another during your lifetime. Afterward, both of you remain faithful to one another to the end.

• Follow a very cleansing **liquid diet** for 3-7 days. During acute stages, take one each of the following juices daily: **potassium broth, fresh carrot juice, vegetable drink**, and **apple / parsley juice** to alkalize.

• Follow the liquid diet with a cleansing **fresh foods** diet. **Avoid refined, starchy, fried, and saturated fat foods. No meat, dairy products, caffeine, tobacco, and liquor.**

• Take **vitamin C** (3,000-8,000 mg daily), **vitamin E** (200-400 IU daily), and **flaxseed oil** (1 Tbsp. daily).

• **Fever therapy** is powerful; but you need to do it under the supervision of someone who knows how to watch the temperature closely and reduce it as needed. This is excellent for controlling virus replication. Even slight increases in body temperature can lead to considerable reduction of infection.

• If you have one of these diseases, see your physician. The directions for Cancer *(613-626)* in this book will help alleviate some of these afflictions.

ENCOURAGEMENT—When all seems dark and unexplainable, we are to trust in God's love. You need His help. In His strength, you can stand for the right and come off more than conqueror in the battle against temptation.

GONORRHEA

SYMPTOMS—In women, no symptoms may ever appear. When they do, there may be vaginal discharge, frequent and painful urination, abnormal menstrual bleeding, acute inflammation in the pelvic area, and rectal itching. Symptoms generally appear 7-14 days after sexual contact.

In men, symptoms are generally present (including difficult and painful urination, a yellow discharge of pus, and mucus from the penis). Symptoms appear 2-14 days after contact. The discharge continues 6-8 weeks.

LATER SYMPTOMS—As with syphilis *(630)*, the effects of gonorrhea keep getting worse. The secondary stage is difficult to detect; so it is often misdiagnosed as arthritis. The gonorrhea is entering the bones, joints, tendons, and other tissues. This causes mild fever, aches, inflamed joints, and sometimes skin lesions. In men, the outcome can be sterility.

As long as 10 years later, the urethra may narrow or stricture; this makes urination difficult and at times impossible, producing serious inflammation of the bladder. This occurs more often in men than in women.

Women, who unknowingly contract gonorrhea from their husbands, generally do not realize that they have the disease until it is far advanced. The infection can travel up the uterus, into the Fallopian tubes, and out into the abdominal cavity. This causes peritonitis and possibly death. If that does not occur, the tubes may eventually seal off. This is due to pus pockets of infection and pain, causing sterility.

CAUSES—Gonorrhea is caused by a microoganism, called *Neisseria gonorrhoeae*. These bacteria are commonly known as gonococci.

NATURAL REMEDIES

See your physician.

• Go on a **cleansing program**. Drink lots of **lemon juice**. An entire changeover to **a good diet and way of life** is required. Follow the program under Cancer *(613)*.

• Go to bed as soon as you know you have this disease. Have the room well-ventilated. Go on a **cleansing program of fruit juices**. Take 2 high **enemas** daily. Eat nothing that is irritating to the stomach.

• Take **beta-carotene** (150,000 IU daily) and ½ tsp. **vitamin C** powder, every hour to bowel tolerance, during the acute phase. Later reduce it to 5,000 mg daily, for a month.

• When you begin solid food, only eat simple, nourishing **fruits and vegetables**. Later include **whole grains, nuts, and legumes**.

• **Avoid refined, starchy, fried, and saturated fat foods. No meat, dairy products, caffeine, tobacco, or liquor.**

• Here is a tea with which you can wash the sores: **myrrh, goldenseal root, witch hazel, chickweed, and sorrel.**

• Drink 3 cups of the following tea daily: **skullcap, hops, white oak bark, uva ursi, sage, poplar, redroot, and juniper**. Take 2 high **enemas** each day.

• A tea of **red raspberry leaves and witch hazel leaves** can be used as a douche for women, including after each urination.

• A tea of one part **aloes** and two parts each of **goldenseal and myrrh** can be used as a wash on the sores and ulcers. Drink at least one quart of slippery elm tea

daily. It can be mixed with fruit juice.

• A warm **sitz bath,** 2-3 times daily, will give relief from the pain. If there are pains in the legs or elsewhere, apply hot **fomentations**.

• For acute gonorrhea, mix **black willow, skullcap, and saw palmetto berries**. Steep a heaping tsp. of the mixture in a cup of boiling water for ½ hour. Take 2 Tbsp. 6 times daily. In addition, use **herbs** listed under syphilis *(630)*.

• Keep in mind that all this work will be a waste of time if certain other lifestyle changes are not made.

ENCOURAGEMENT—There is hope for everyone who will seek God's face. He alone can provide for our needs; He alone can give us the solutions we need. He alone can provide the strength to resist temptation and overcome all tendencies to wrongdoing.

"Ye shall walk in all the ways which the Lord your God hath commanded you, that ye may live, and that it may be well with you, and that ye may prolong your days in the land which ye shall possess."—Deuteronomy 5:33.

SYPHILIS

SYMPTOMS—A chancre appears on the skin, either on the mouth, in the mouth, or on the genitals. It is also called a hard chancre or Hunterian sore. This is a red, painless, raised ulcer with hard, well-defined edges. It appears 10 days to 3 weeks after exposure and lasts from a few days to several weeks. In women, it sometimes develops on the cervix; so it is not recognized.

Later, a rash and patches of flaking tissue appear in the mouth or genital area. This skin eruption consists of either a few red, pimply blemishes or a profuse crop of various types of blotches. By this time, the disease is well-established throughout the system.

Later stages occur, as the disease worsens. Paralysis, insanity, and death are the final outcome.

CAUSES—Syphilis is caused by the germ, *treponema pallidum*, which is corkscrew in shape and much larger than most bacteria. The germs must remain wet; for drying quickly kills them. They generally enter the body through a living source—another person (acquired syphilis) or through the placenta to the unborn child (congenital syphilis). But, in some instances, the disease has been transmitted to the dentist during dental work.

NATURAL REMEDIES

See your physician. Go on the treatment outlined under Cancer *(613)* in this book.

• Go on a simple diet of **fruits and vegetables**. Eat **whole grains, nuts, and legumes**. Do not eat **oysters, shell fish, or any other meat**.

• Do not eat **condiments, stimulating foods, and drinks**. No **tobacco**.

• Mix together 2 Tbsp. each of the following herbs: **buckthorn bark, uva ursi, burdock root, red clover blossoms, Oregon grape, blue flag root, prickly ash berries**, plus 1 tsp. **bloodroot**. Steep 1 heaping tsp. in a cup of boiling water ½ hour. Drink at least 4 cups daily, one an hour before each meal and one upon retiring. Take these herbs at least 1 year.

Put 1 tsp. each of **goldenseal and myrrh** into a pint of boiling water. When the eruptions appear, bathe them thoroughly with this tea.

• Heavy **sweating applications and salt glows** will help eliminate the poisons from the system. Take high **enemas** daily, using the tea of **echinacea, yellow dock root, burdock root, or bayberry bark**.

Start the above treatment as soon as the first symptoms appear, in order to not suffer too much from the disease. But a **careful diet** and **adequate rest** must be adhered to.

• Other helpful herbs include **goldenseal, pau d'arco, echinacea, sassafras, and suma**.

• **Hops tea** helps relieve pain and tension.

ENCOURAGEMENT—Determine that you will study God's Word every day and obey everything you read. Let every day begin a new page in your life. Pray earnestly and take every step in the Lord.

CHLAMYDIA

SYMPTOMS—Vaginal or urethral discharge, genital inflammation, difficulty in urinating, itching around the inflamed area, and painful intercourse.

CAUSES—According to the CDC, more people in America contract Chlamydia than any other sexually transmitted disease. Over 4 million new cases are diagnosed yearly. Nearly 20% of teenagers in the United States are known to have contracted it. But these figures do not include the large number that are not reported. Nearly 10% of men and 70% of women who have chlamydia—have no symptoms. So one can expect that the total number having, and sharing, this highly contagious disease is vast indeed.

But, whether recognized or not, the effects of chlamydia are serious. About 30% of the women become sterile; and pelvic inflammatory disease and other reproductive problems can, and do, result. In young women, the disease can also produce a form of arthritis.

In men, prostate infection and seminal vesicle inflammation may later occur. (Symptoms of prostatitis include pain when urinating and a watery mucous urethral discharge.)

The disease is transmitted through the discharge

produced by both men and women. If one spouse is treated for this, the other one must be also.

To delay treatment is to intensify the effects of the disease.

NATURAL REMEDIES

- This is a complicated disease; see your physician.
- If you wish to supplement such care with natural remedies, you will need to undergo a thorough natural healing program, such as is detailed in the articles on "Cancer" *(613-626)*.
- Mix an equal amount of powdered **goldenseal, barberry**, and **Oregon grape root** with **vitamin A oil**. Soak an all-cotton tampon and place directly in the cervix.
- Bathe sores several times daily in a **goldenseal / myrrh** solution.
- Use a vaginal suppository of **tea tree oil** nightly.

ENCOURAGEMENT—How can we solve the problems we have? Only in Christ can they be resolved. He can do for you those things you could never do for yourself.

TRICHOMONIASIS

SYMPTOMS—Some women have no symptoms. If they occur, they may include profuse, yellow, frothy, and offensive-smelling discharge from the vagina. Also there is painful inflammation. Itching and soreness of the vulva (skin around the vagina). Burning sensation when urinating. Discomfort during intercourse.

Men may also not have symptoms. If present, they may include discomfort, when urinating, and discharge from the penis.

CAUSES—This is an infection caused by Trichomonas vaginalis, a protozoan. In women, it can cause vulvovaginitis. There is also inflammation in and around the vulva, which may lead to cystitis *(402)*. In men, it causes a mild infection of the urethra (the tube from the bladder to the outside of the body). **Unprotected sex** is the primary cause; but an infected woman who is pregnant may transmit the infection to the baby during **childbirth**.

NATURAL REMEDIES

- Practice **safe sex**; and the only effective way to do that is for a virgin man and a virgin woman to only marry once, only having sex with one another.
- If you are infected, you should not have sex until confirmation has been given that the disease has been eradicated.
- See Venereal Diseases *(628)*, Gonorrhea *(629)*, and Syphilis *(630)* for additional information on natural remedies.

—Also see Congenital Infections (687).

ENCOURAGEMENT—Christ is our example in all things if we imitate His example in earnest, importunate prayer to God that we may have strength in His name (who never yielded to the temptations of Satan, but ever resisted the devices of the wily foe), we shall not be overcome by him. Amid the perils of these last days, our only safety lies in ever-increasing watchfulness and prayer.

VENEREAL WARTS

SYMPTOMS—Chronic yeast infection with heavy, pus-filled discharge. Painful intercourse. Painful, infected sores in the genital area. High fever during infection.

CAUSE—Next to genital herpes *(631)*, this is the most common STD. It infects ovaries, fallopian tubes, cervix, and uterus. Primary causes include early age of first intercourse, multiple sexual partners, lower socio-economic level (with its traditionally nutrient-poor diet), plus smoking and oral contraceptives.

NATURAL REMEDIES

- Drink 2 cups of **pau d'arco and echinacea** tea daily.
- Take a daily **calcium** supplement to prevent lesions from becoming cancerous. Take 10 drops **grapeseed extract** daily.
- Bathe sores several times daily in a **goldenseal / myrrh** solution.
- Use a vaginal suppository of **tea tree oil**, nightly, or use **goldenseal / chaparral vaginal suppositories**, mixed with **vitamin A oil**. This has helped many women.
- Alternating **hot and cold baths, fomentations, or sitz baths** will increase immune activity in the pelvic area. Sitz baths are easiest for many to use.
- Follow the remedies outlined above under Venereal Diseases *(628)* and Gonorrhea *(629)*.

ENCOURAGEMENT—There is a mighty power in prayer. Our great adversary is constantly seeking to keep the troubled soul away from God. An appeal to Heaven by the humblest child of God is more to be dreaded by Satan than the decrees of cabinets or the mandates of kings.

GENITAL HERPES (TYPE II)

(Herpes Genitalis, Venereal Herpes)

INITIAL SYMPTOMS—Recurrent fluid-filled blisters on the genitals that rupture; this leaves red, inflamed, painful lesions. These are preceded by a slightly irritating tingling. When the lesion appears, it is accompanied by a sharp pain.

LATER SYMPTOMS—This viral infection can range from a symptomless infection in the nerves to a major inflammation of the liver, accompanied by fever. In women, it can lead to cervical cancer. There seems to be a link between having Type II and later developing atherosclerosis.

CAUSES—Of the 90 varieties of animal herpes, only four affect humans. Herpes is a virus that causes re-

current blisters and ulcers. Type 1 is cold sores *(250)*, also called fever blisters; these affect the lips. Type II affects the genitals; this can produce blisters either on the genitals or on, or around, the mouth. Type III is herpes zoster *(274)*, which causes chicken pox *(704)* and, as a secondary infection, shingles *(274)*.

We will here deal only with Type II, which is also called *herpes genitalis*, venereal herpes, and genital herpes. It is the most prevalent sexually transmitted disease in the United States. One-sixth of all Americans (about 30 million) have the disease, although about half never develop serious symptoms. A half million new cases are reported yearly; and 80% are 20 to 39 years of age. Herpes is a virus which enters the body through the skin and travels into nerve groups at the base of the spine. The first attack generally occurs about 4-8 days after initial **exposure to a sexual partner**. Each occurrence is quite painful and lasts up to three weeks; but, once a person is infected, the disease can be transmitted at any time. Symptoms reoccur every few weeks to once a year or less. Scarring does not usually occur, but can. Outbreaks rarely occur after the age of 50.

It remains with you the rest of your lifetime; it can be dormant for years and then appear again when the immune system is lowered by **poor diet, stress, illness, too much sunlight, or harmful chemicals**. It tends to recur especially when **sexual intercourse** takes place, as a result of irritation to the skin. It is not a newly invading infection, but one which was received from a sexual partner at an earlier time.

As a baby passes through **an infected birth canal**, it can get Type II and possibly have brain damage, blindness, or death as a result. If an attack occurs late in the pregnancy, the baby should be delivered by cesarean section. If no lesions are present, the baby is far less likely to become infected as it passes through the birth canal.

NATURAL REMEDIES

• The diet should be alkaline in reaction. Eat only **nutritious food** (especially **brown rice, vegetables, potassium** [thick white potato peeling] **broth**, and some **lentils**). Drink only **distilled water** and get plenty of **rest**. Drink plenty of fruit juices and carrot / beet / cucumber juice.

Foods to avoid are sweets, alcohol, immune-suppressing drugs, and (for some people) **citrus.** No **chocolate, peanuts, nuts, seeds**. Also no **refined or processed foods.** The virus lives in red meat and fat; you do well to stop eating **meat products**. There are substances in meat which encourage the growth of Type II.

• **DMSO** (Dimethyl sulfoxide), a by-product of wood processing, is a liquid which can be placed on the affected area to relieve pain and promote healing. Only use the type sold in health-food stores.

• Some physicians prescribe BHT (butylated hydroxytoluene) for this disease; but it is known to cause perforated stomachs.

• Both internally and externally, apply to the area of the problem: **black walnut or goldenseal** extract and / or **cayenne and red clover**.

• Other helpful herbs include **goldenseal, echinacea, myrrh, aloe vera, and burdock**.

• Lightly dab **tea tree oil** on the affected area several times a day, either full strength or slightly diluted. It is a powerful antiseptic. Do not get it near your eyes.

• Here is a formula which one herbalist has used effectively: Mix the following powdered herbs: 25% each of echinacea and chaparral, 12% each of **sarsaparilla and Oregon grape root**, 10% of **Poria cocos**, and 8% each of **licorice root and ginger**. Put them in #00 capsules; and take 2 capsules, 3-4 times daily, for at least 3 months, along with an extremely careful diet.

• To relieve pain and inflammation, apply ice packs to lesions. Get some early morning sunlight on lesions.

• Take hot baths frequently as a fever therapy remedy.

• Wear only cotton underwear.

• **Do not share drinking glasses, scratch the blisters, touch genital sores, or have sex**. Doing any of these things can spread the disease.

ENCOURAGEMENT—Jesus draws near to everyone who is hurting, who needs His help. He can forgive and fulfill our deepest needs. In Him we can find strength, and peace, and power to overcome.

AIDS (HIV)

(Acquired Immune Deficiency Syndrome)

SYMPTOMS—Loss of appetite, weight loss, candida, fatigue, various infections, intestinal problems, skin diseases, immune system disorders, fevers, brain and neurological disorders, and many other symptoms.

CAUSES—AIDS (Acquired Immune Deficiency Syndrome) is a disease that does not need to happen. If people controlled themselves, it would never have gotten started and would eventually die out. But, instead, it is an exploding epidemic.

HIV (Human Immunodeficiency Virus) invades special immune cells in the body, which are called T lymphocytes, and then slowly multiplies over a long period of time. As it does so, the body's immune system gradually crumbles. All this time, the disease appears to lay dormant; only an HIV test will reveal that a person even has the disease. But, after three to ten years, enough of the body's defenses are broken down and full-blown AIDS develops. Suddenly, very pronounced symptoms appear, which are called "AIDS-related diseases." These include pneumocystis carinii pneumonia (PCP, found in 60% of those with AIDS), Karposi's sarcoma (a rare type of skin cancer), Epstein-Barr virus (EBV, *214*), cytomegalovirus (CMV), toxoplasmosis, and tuberculosis *(412)*.

The less deadly AIDS-related diseases are often the first to appear. The first sign is often the tongue coated with white bumps. This is oral thrush, a type of candida (candidiasis, *215*). Intestinal parasites *(588)* and herpes simplex virus (herpes type I, *250*) are two other

relatively simple infections which can occur. All indicate that the body's immune system is damaged. Yet, it is true that candida, parasites, herpes simplex, Epstein-Barr virus, and tuberculosis can occur in individuals who do not have AIDS.

Most of those who are HIV-positive eventually develop full-blown AIDS. Once that occurs, they generally live only a few years. The median survival time, after full-blown AIDS appears, is 26 months.

Researchers are searching for an "AIDS cure"; but the HIV virus changes form so fast, it is unlikely a cure will ever be found.

Some say the origin of AIDS is unknown; the earliest documented case of it appeared in 1981 in San Francisco. However, there may have been undocumented cases of it in the 1970s.

Others say that there is a different origin of AIDS. Dr. Eva Snead feels that the virus was created in the laboratories. She insists that, if you have been vaccinated, you have the virus.

Then there is Dr. William Campbell Douglass, M.D., who, in his book, *AIDS the End of Civilization*, maintains that the vaccines were made from the kidney of the green African monkeys; and that the disease was purposely invented to eliminate certain people.

The disease is transmitted by **oral, vaginal, and anal sex.** This disease is also transmitted through **common needles for IV drugs, contaminated hospital and dental equipment, commercially prepared blood products, and immunotoxic lubricants.** In other words, HIV is transmitted by **sex, street drug IVs, blood transfusions, and getting someone else's blood into your eyes or into cuts on your skin.** It is not possible to contract HIV by giving blood.

NATURAL REMEDIES

PREVENTION

• There are definite indications that some people who test positive for HIV, yet who **take good care of their immune systems**, are less likely to develop full-blown AIDS. Those most often in this category are individuals who contracted HIV by accident (such as hemophiliacs) and normally lived **healthful, clean lives.** Many of them never develop AIDS.

• Conduct yourself properly, so you are not likely to contract HIV in the first place. Maintain an excellent immune system through **proper diet, rest, exercise,** etc.

• **Total abstinence**, on the part of both you and your spouse prior to and after marriage, is a wonderful way to live and an excellent way to avoid a lot of misery and disease.

• **Never share a toothbrush, razor**, or anything that might have another person's blood on it.

TREATMENT

See your physician.

• But if you contract HIV, you need to think through what you need to change in your life and then set to work to rebuild your immune system.

• Eat lots of **broccoli, brussels sprouts, and cabbage. Raw foods**, such as fruits and vegetables (especially those high in **vitamins A, B complex, C, bioflavonoids, and E**) are very important. Take **vitamin C** to bowel tolerance. **Selenium, zinc, potassium, calcium,** and **magnesium** are also important.

• **Garlic, cabbage, kelp, and lots of fresh and cooked greens** are important. Eat **whole-grain products.** Also eat **beans and nuts.** Limit your intake of **soy products**, without fully dropping them.

• Drink fresh **carrot juice** (3 glasses) daily.

• It is important that you take 4,000-6,000 mg of **flaxseed oil** daily.

• Here are herbs which will help rebuild the immune system: **burdock, garlic, goldenseal, pau d'arco, psyllium, suma, and ginkgo. Garlic** contains *allicin*, which can help kill viruses.

• Also important is **black radish, dandelion root, and silymarin** (milk thistle extract), to strengthen the liver. **Aloe vera** inhibits the growth and spread of HIV. **St. John's wort** tends to inhibit retroviral infections.

• In a research study, 13 patients with HIV were given injections of **bloodroot** and **celandine**; they were found to have improved after 20 days. In another research study, an aged **garlic** preparation significantly helped AIDS patients. In yet another study, **licorice root** was found to help the patients.

• Drink concentrated **aloe vera** juice (2-4 Tbsp.) daily. It contains *carrisyn*, which appears to inhibit the growth of HIV. Although echinacea is a powerful drug, avoid it because it can increase levels of the tumor-necrosis-factor (TNF), thus stimulating replication of HIV.

AVOID

• Stop eating **meat, processed foods, and junk foods.** Banish **tobacco, alcohol, and coffee.** Avoid those who **smoke.**

Certain activities tend to tear down the immune system faster than anything else. Everyone should be aware of what those activities are:

• Using any form of **nicotine.**
• Drinking **alcohol.**
• Using **street drugs.**
• Taking **medicinal drugs.**
• Eating primarily **junk foods.**
• **Sexual excess**, especially non-monogamous sex.
• **Overeating** and getting **little exercise.**
• Eating lots of **pork, shellfish, and animal fat.**

Follow the instructions for Cancer *(613)* in this book.

Jon Kaiser, M.D., in San Francisco, has stopped the progression of HIV in more than 1,000 patients by putting them on a program of whole foods, nutritional supplements, herbs, exercise, and stress reduction. Once again, natural remedies can accomplish a lot.

ENCOURAGEMENT—You have a bright future, if you will give your earthly life to Jesus, just now. He can forgive your past and empower you, by His grace, to obey His Ten Commandment law. Everyone in the world needs Him. You can be one of those who find Him.

SPERMATORRHEA
(Nocturnal Emission)

SYMPTOMS—Involuntary loss of semen, without orgasm, often while asleep.

CAUSES AND TREATMENT—The male generative organs, the testes, must remain somewhat cooler than body temperature. When they become overheated (by taking a **hot tub bath**), a release of sperm will be made in the night; since that particular supply of sperm has become damaged and must be eliminated from the body.

If you sleep **too warmly at night**, due to an electric sleeping blanket set on high, the overheated testicles will eject sperm the next day.

Another cause is visual or thought **sexual stimulation**. A **poor diet** is another cause.

NATURAL REMEDIES

• A low-protein diet, free from the use of eggs, may prove of benefit.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SPERMATORRHEA AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

BASIC—**Graduated cold applications** to improve general conditions.

GENERAL NERVOUS IRRITABILITY—Prolonged **Neutral Bath** at night.

IRRITABLE PROSTATE, IRRITABLE URETHRA—Prolonged **Neutral Sitz Bath**, 30-60 minutes, at bedtime. **Revulsive Douche** to perineum with little pressure. Tepid **Colonic** at 80° F.

RELAXED EJACULATORY DUCTS—Rubbing Cold **Sitz Bath**. Cold or alternate hot and cold **Colonic**. Cold **Douche** to feet and legs. Cold **percussion Douche** to lower spine. Bowels must be kept regular by the Cool **Enema**, if necessary. And proper **diet**. An aseptic dietary is essential. Condiments must be strictly avoided.

CAUTION—When losses are frequent or parts irritable, avoid Cold Sitz Baths and prolonged Hot Baths.

ENCOURAGEMENT—Pray with unshaken faith and trust. The Angel of the covenant, even our Lord Jesus Christ, is the Mediator who secures the acceptance of the prayers of His believing ones. God can give you the help you need. Hebrews 11:6.

"Give diligence to make your calling and election sure: for if ye do these things, ye shall never fall." 2 Peter 1:10.

"The Son of man came . . to give His life a ransom for many." Mark 10:45.

ENLARGED PROSTATE
(Benign Prostatic Hypertrophy)

SYMPTOMS—Pain on urination, frequent urination, urine retention, often a fever. There may be a discharge. It becomes harder to urinate forcefully. The outstanding symptom is having to get up at night to urinate.

CAUSES—The prostate is a doughnut-shaped male reproductive gland. It is under the urinary bladder and surrounds the urinary tube (urethra).

Muscles located within the prostate squeeze prostatic fluid into the urethral tract during ejaculation. Most of the semen consists of this fluid, which provides nourishment and protection for the sperm.

Prostate enlargement is also called benign prostatic hypertrophy. The prostate gland gradually becomes bigger. This occurs in half of all men over 50 and three-fourths of men over 70. It is probably the most common infirmity of aging in the human male. More than 500,000 American men are afflicted each year.

It is believed that, with age, testosterone production and levels decrease and certain other hormones (prolactin and estradiol) increase. This results in more of a powerful form of testosterone, called dihydrotestosterone, in the body. This hormone causes an overproduction (hyperplasia) of prostate cells—which causes the prostate gland to become larger. As it does, it eventually tends to pinch the urethra and interfere with the flow of urine.

As a result, neither the bladder nor kidneys empty fully. This produces pressure which can damage them. Urination becomes more frequent; and the urine flows more slowly. There may be difficulty in starting and stopping the flow. Sometimes there is blood in the urine.

Here is how to check your own prostate:

The prostate can be felt (palpated) with the gloved finger. If you are going to do this effectively, you would need to examine it monthly. The normal prostate is firm like an orange and about the size of a walnut. You would reach into the rectum, to carry out this examination. The prostate is found at a depth in the rectum that is just comfortably in reach of the index finger. An acute case of enlargement may be hard while a chronic enlargement may be boggy. Tumors, either benign or ma-

lignant, tend to be irregular and nodular.

Prostatic cancer: Although this section is not about prostate cancer, it will be briefly mentioned here. *For a fuller discussion, go to Prostate Cancer (620).* An enlarged prostate can become cancerous; but, fortunately, it always proceeds very, very slowly. So slowly, in fact, that an operation to remove the prostate, because of cancer, is generally not needed. This is because, before the man is likely to die of prostate cancer, he is quite aged and dies of something else first. But, of course, you will want to consult your medical specialist. For more information on home care (in those instances in which cancer is present) *see Prostate Cancer (620).*

Vasectomy, for purposes of male sterilization, has been linked to prostate disorders and even cancer.

NATURAL REMEDIES

DIET

• Eat a **nourishing diet**, including **vitamin / mineral supplementation,** especially zinc.

• The diets of those who have prostate trouble are usually low in **essential fatty acids** (**flaxseed oil** and **wheat germ oil** are the best). Never heat these oils.

• Treat it with **zinc**, essential fatty acids (**flaxseed oil**, 1 tsp., three times a day), and a **high-fiber diet** which includes **pumpkin seeds** and **alfalfa. Vitamin A** (such as beta-carotene, 300,000 IU a day), **vitamin C** to bowel tolerance, **chlorophyll** (such as alfalfa), **selenium** (250 mcg, three times a day), **amino acids** (alanine, glycine, and glutamic acid; 5 grams each, daily for 90 days), and **cranberry juice** (2 pints a day).

• The prostate contains more **zinc** than any other organ in the body. Take 30 mg, 3 times daily, in the highly absorbable form of zinc picolinate or zinc citrate. Taper slowly to 60 mg daily; then taper down to 30 mg daily as symptoms recede. Also take 2 mg copper with every 30 mg (because zinc can cause a copper deficiency).

• Take high-lignan **flaxseed oil** (2 Tbsp.) twice daily, along with 400 IU **vitamin E**.

• Drinking **cranberry juice** can protect the urinary tract against infection.

OTHER HELPS

• Maintain optimal physical and emotional **health**.

• Regular **exercise** outdoors in the open air is important. **Walking** for an hour or two everyday is excellent.

• Increase **fluid intake**, in order to flush the kidneys and bladder of toxins and bacteria. Drink at least 48 oz. water daily, but no fluids after 7 p.m.

• Do not let the bladder become too full. **Urinate** as quickly as possible, when the urge comes. Try to completely empty the bladder each time.

• When there is an acute condition, take **hot sitz baths** daily and add **chamomile** tea to the water.

• **Sit** 15-30 minutes daily in a partly full tub of very hot water.

• Each day, 3 times, **spray** the lower abdomen and pelvic area with hot water for 3 minutes, alternating with 1 minute for cold.

• Also helpful is a **short cold bath**.

• A high **charcoal and water enema** helps the healing process. Use 1 cup of hot water to 1 teaspoon of powdered charcoal. Allow it to remain as long as possible.

• In order to increase circulation in the area, **lay flat on your back** on the floor. Then swing one leg across the other till the knee touches the floor and vice versa. Do this as many times as you can; eventually bring it up to 50 repetitions at a time.

• James Duke, Ph.D., recommends daily eating a special food mixture to keep the prostate from enlarging: Place a half-cup or so of fresh **pumpkin seeds** in a blender. Open 1 capsule of **saw palmetto** and pour it in. Add a few drops of **licorice extract**. Blend until smooth. (A few drops of **flaxseed oil** can be added to make it more spreadable.) Keep it refrigerated! Spread it on bread, eating a couple tablespoonfuls daily. Only mix small batches (enough for 2 days), so it will be fresh until eaten.

• **Saw palmetto** contains a compound which inhibits the action of the enzyme *(testosterone-5-alpha-reductase)* that turns testosterone into dihydrotestosterone—this preventing prostate enlargement. Saw palmetto is also a diuretic, increasing urine flow.

• **Pumpkin seeds** have been used for centuries to increase urine flow and help the prostate. The seeds contain *cucurbitacins*, which also helps prevent prostate enlargement. They also contain zinc, which is recommended for avoiding enlargement. In addition, pumpkin seeds contain large amounts of three special amino acids: glutamic acid, glycine, and alanine. Each of these has been found to reduce enlarged prostates (given in doses of 200 mg of each, daily). Or eat ¼ cup raw pumpkin seeds each day.

• **Licorice** contains a compound which also prevents the conversion of testosterone to dihydrotestosterone. (But eating it in large doses for years can produce headaches and other problems.)

• Two other herbs which researchers have found to reduce prostate enlargement are **pygeum** (50 mg of the bark extract, 2 times daily) and **stinging nettle** (2-3 tsp. of extract daily). Pygeum (pygeum africanum) is an African evergreen tree; and extracts of the bark are used.

• Here is another formula for treating the prostate: Mix equal amounts of **cornsilk, buchu leaves, parsley, saw palmetto berries, kelp, and pumpkin seeds,** plus a pinch of **cayenne**.

• Other helpful herbs include **echinacea** and **goldenseal**, for bactericidal purposes. **Horsetail**, combined with **hydrangea**, helps contract the prostate. **Saw palmetto** and **cayenne** are also useful.

AVOID

• Do not eat **junk foods, fried foods, spices, chocolate, nuts (especially cashews), or caffeine products. Do not drink alcohol or use nicotine.**

• **Avoid sexual stimulation** without a natural conclusion (an orgasm). Continued stimulation leads to a proionged engorgement. This is not good for the prostate. Keep your mind where it belongs. Do not look at anything hinting of a pornographical nature. Avoid everything that is sexually stimulating.

• **Avoiding sexual activity** as little as possible is the best way to care for your prostate in the older years.

• Avoid exposure to **dampness or cold.**

• Avoid **constipation.** This is important.

• **Riding bicycles, motorcycles, or horses** may injure the perineum, resulting in congestion of the prostate. Especially avoid riding bicycles.

• Do not sit for hours on **padded seats in cold places** (such as buses, trains, etc.). It keeps the healing blood from flowing in and out of your prostate.

• Avoid **deep foam chairs.** Whenever possible, sit on a hard chair. This reduces compression, which especially occurs when sitting in deep foam chairs.

• Many medicinal **drugs**, including pilocarpine, irritate the prostate.

—Also see Prostatitis (637) and Prostate Cancer (620).

ENCOURAGEMENT—Cling to God with all your heart, and He will guide you aright. You need His help every moment. Trust and obey His Written Word.

PROSTATITIS

SYMPTOMS—Pain during urination, fever, and a discharge from the penis.

Acute prostatitis: Pain around the base of the penis. Pain between the scrotum and rectum, Fever and chills. Lower back pain. Pain during bowel movements. Frequent, urgent, painful urination. There is urinary retention, a feeling of fullness in the bladder. Painful swelling behind the testis, the formation of an abscess in the prostate, frequent and burning urination, pus or blood in the urine.

Chronic prostatitis: The chronic form may not have any symptoms. If they appear, it occurs gradually: Frequent and burning urination, blood in the urine, lower back pain, pain on ejaculation. Blood in the semen. Eventually impotence (inability to copulate). Gradually urination becomes still more difficult. Pain and tenderness at the base of the penis and in the testes, groin, pelvis, or back.

CAUSES—Prostatitis is inflammation of the prostate gland. It may be acute or chronic. Acute prostatitis produces severe and sudden symptoms which clear up rapidly. Chronic prostatitis may cause mild symptoms for a long time; and it is difficult to treat. Both types are most common in men, aged 30-50, who are sexually active. It can be in men of all ages; it is the most frequent type of prostate problem.

The cause is often a **bacterial infection** which has spread from the urinary tract to the prostate gland. But it can also be caused by a **sexually transmitted disease** *(627-633).*

The inflammation tends to block off the urine flow (urine retention); and this causes bacteria to build up. Sometimes **hormonal changes**, from aging, may be a contributing factor.

When urine retention results, the bladder becomes distended, weak, tender, and liable to infection. Infection can easily pass up the ureters to the kidneys.

NATURAL REMEDIES

• Eat a nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts.** Include cruciferous vegetables (**broccoli, brussels sprouts, cabbage**). Take **vitamin C** (2,000-5,000 mg), **vitamin E** (800 IU), and **flaxseed oil** (4 tbsp. daily). Also **selenium** (500 mg) and **zinc** (45-60 mg for 3 months, then 30 mg daily). Zinc is very important.

• Avoid **spicy foods, stress, smoking, and alcohol.** Do not eat **meat.** Do not eat **saturated fat.**

• Jay Cohen, M.D., had chronic nonbacterial prostatitis for five years. Having notice that his epididymis swelled and ached the more he was on his feet, he tried laying on his wife's **slantboard** (which raised his feet above his head at an angle of 30°) for 20 minutes, daily. Gradually, over a period of a year, the symptoms disappeared. Now he only feels the problem slightly when he has been on his feet for a long day. (But he suggests caution, if you have high blood pressure, cardiovascular distress, glaucoma, breathing difficulties, or intracranial problems.)

• **Cernilton** is a flower pollen extract which has been used successfully for decades in Europe.

• Identify and eliminate allergies.

—Important: see Enlarged Prostate (635) for more information about the prostate which you can use. Also see Prostate Cancer (620).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR PROSTATITIS AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

BASIC APPLICATIONS—Revulsive **Sitz Bath.** Hot **Colonic.** Neutral **Sitz Bath**, for 30-60 seconds. **Cold Mitten Friction.**

PAIN—Revulsive **Sitz Bath. Fomentation** or the Revulsive Douche to perineum, with little pressure. **Colonic** in chronic cases. Hot **Enema**, when bowels are constipated.

CHRONIC ENLARGEMENT WITH INDURATION—Good results often follow the use of the following measures: alternate hot and cold **Colonic.** Shallow Cold Rubbing **Sitz Bath**, for 4-8 minutes. Cold **pelvic pack** (Wet Sheet Pack over pelvic area) with Hot **Leg Pack.** Massage of prostate. Graduated tonic baths. Ice bag to perineum, with Hot **Hip and Leg Pack** for 15-30 minutes.

CAUTIONS—When pain is present, avoid general cold

baths, cold Sitz Baths, Cold Footbaths, and chilling of feet. Absolute sexual continence is essential.

ENCOURAGEMENT—When humanity depends wholly upon God, trusting in Christ and relying on His empowering grace, men may keep God's commandments and live clean, godly lives.

TESTICLE INFLAMMATION, ACUTE

SYMPTOMS—Pain in the testicles, which gradually becomes sharp and severe.

CAUSES—Bacterial infection of the testicles can be difficult to work with. Here are Dr. Kellogg's recommendations:

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ACUTE TESTICLE INFLAMMATION *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

NATURAL REMEDIES

BASIC POINTS—Rest in bed. Elevation of scrotum upon a tense broad band of cloth, placed about the thighs and close to hips. **Hot Pelvic Pack** or Hot Hip Pack with **Cold Compress** over genitals, every 3 hours. During intervals, **Compress** (at 60° F.) over perineum, genitals, and stomach (with heat to feet). Tepid **Enema**, twice daily. Cold Mitten Friction or **Cold Towel Rub**, twice a day. Prolonged **Neutral Bath** or Neutral Pack to control temperature, if necessary.

ENCOURAGEMENT—God is love, and He cares for us. "Like as a father pitieth his children, so the Lord pitieth them that fear Him." As in humility of heart, we bow in prayer, pleading for His mercy. God will forgive our sins, adopt us as His children, and enable us to fulfill His will as we seek to help and encourage those around us.

TESTICULAR ATROPHY

SYMPTOMS—Progressive wasting and shriveling of the testes.

CAUSES—This condition is not uncommon in aging men. It can also follow an episode of mumps.

Testicular atrophy may result in lessened sexual drive and possible feminization.

NATURAL REMEDIES

• Eat a **nutritious diet**, plus a full range of **vitamin / mineral supplementation**.

• Take **zinc** (30 mg, three times a day).

• Helpful herbs include **saw palmetto** and **ginseng**.

—For much more helpful information, see Testicular Inflammation (above), Prostatitis (637), Enlarged Prostate (635).

ENCOURAGEMENT—Jesus says to ask God for the help you need. It is wonderful to be able to call on God. Do not neglect this privilege. He can do for you that which you can never do for yourself.

MALE MENOPAUSE

SYMPTOMS—Reduced energy, tendency to gain weight, less ambition, sore muscles, and less masculine drive.

CAUSES—Male menopause occurs with the gradual decline of the hormone, testosterone. Every system in a man is affected by this lessening of the male hormone. The circulatory system, muscles (including the heart), bones, nervous system, and brain are especially affected.

The following home remedies can help reverse this downward trend.

NATURAL REMEDIES

• **Lose weight** or regularly keep your weight down. Overweight men produce lower amounts of testosterone. That is due to the fact that the body, as it accumulates fat, makes less testosterone—while converting some of that testosterone into estrogen.

• As your muscular strength lessens, it becomes more difficult for you to burn excess fat. That only adds to the excess weight. This, in turn, causes even less testosterone and more estrogen. The solution is more **exercise**, and done on a regular basis. Three times every week, take a brisk walk for 20 minutes. As your weight drops, so will your estrogen. This will let your testosterone levels rise.

• Do not **overeat**. Only eat the most **nutritious food**, and not much of it. As you get older, you do not need much food.

• Take 25 mg of **zinc**, twice a day. The zinc enables your body to deactivate *aromatase*, an enzyme which converts testosterone to estrogen. It may take a couple months to see solid improvement; during this time, reduce your zinc intake to 30 mg once a day.

• Take **vitamin C** (1,000-3,000 mg) for 1-2 months; then lower it (to 1,000 mg). The vitamin C also reduces *aromatase*, raising testosterone.

• Take a complete **multivitamin supplement** daily.

• Drink **carrot juice** and eat **broccoli, brussels sprouts, and cabbage**. They are high in antioxidants. They also contain *indoles*, which help break down estrogen more efficiently. Do not eat **grapefruit**; for it blocks the body's elimination of estrogen.

• **Soybeans** contain *isoflavones*, which increase the liver's ability to eliminate estrogen.

• Do not **smoke**. Do not drink **caffeine** or **alcohol**. Alcohol decreases zinc levels.

ENCOURAGEMENT—God wants us to stand firm amid the pollutions of this degenerate age. He wants us to hold so fast to His divine strength, that we can overcome every temptation to wrongdoing. Trusting in Him and obeying His Written Word, we can be more than conquerors in the battle against temptation and sin. God wants you to live with Him forever in heaven.

Pelvic Pain (654)

BREAST DISCOMFORT
(Breast Tenderness)

SYMPTOMS—There is tenderness and discomfort in the breast.

CAUSES—Breast tenderness is a common characteristic of premenstrual syndrome (PMS) and early pregnancy. If caused by PMS, the tenderness may occur regularly every month; if associated with early pregnancy, missed periods and a positive home pregnancy test will reveal that.

The cause is generally the **natural cycles of the reproductive hormones**, which are estrogen and progesterone. They signal the milk-producing glands in the breast to grow and areas around them to expand with blood and other fluids to nourish the cells. This can result in stretched nerve fibers and a sense of pain.

Then there are fibrocystic changes which include lumps and cysts. *See Breast Cyst (640) for more information).*

NATURAL REMEDIES

• For breast tenderness, apply **vitamin E** on the area; and be sure to include enough essential fatty acids in the diet (1 tsp., 3 times a day). **Flaxseed oil, sunflower seed oil, or wheat germ oil** are best.

• **Selenium** is an antioxidant and helps prevent breast tenderness.

• Avoid **caffeine** products; they are linked to breast tenderness.

Discomfort and soreness in the breast is also a symptom of fibrocystic breast disease. *See Breast Cyst (640).*

ENCOURAGEMENT—Since Jesus came to dwell with us, we know that God is acquainted with our trials and sympathizes with our griefs. Obey God's Ten Commandment law by faith in Jesus Christ; and you will have a much happier, fulfilled life.

Those who accept Christ as their personal Saviour are not left as orphans to bear the trials of life alone. He receives them as members of the heavenly family; He bids them call His Father their Father. They are His "little ones," dear to the heart of God, bound to Him by the most tender and abiding ties. He has toward them an exceeding tenderness, far surpassing what our father or mother has felt toward us in our helplessness. The divine is superior to the human. Proverbs 1:23.

BREAST INFLAMMATION

SYMPTOMS—Painful and hard swelling in the breast. There is restlessness, throbbing, burning pain, and possible fever.

CAUSES—Injury or **improper diet** are among the causes of inflamed, swollen, caked breasts, or sore nipples.

NATURAL REMEDIES

• Soak a cloth in a mixture of 1 pint of **linseed oil** and 4 ounces of spirits of **camphor**, and cover the entire affected area. Apply as often as needed.

• **Hot and cold applications** of dry cloths help relieve the soreness and inflammation. Give these continually until relieved. Then apply the mixture again.

• When the breast is swollen, give a poultice of **slippery elm**, with a little **lobelia** added to it.

• Bathing an inflamed breast with **alder** tea will often relieve the inflammation and pain.

• Drink a tea of **goldenseal, black cohosh, and ginger**.

• Go on a short fruit and vegetable **juice fast**, and clean out the **bowels**.

—Also see Breast Discomfort (above) and Breast Cyst (below).

ENCOURAGEMENT—As the Son of man, Christ gave an example of obedience to God's holy law; as the Son of God, He gives us power to obey that law.

"God, who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ." 2 Corinthians 4:6.

"Blessed are all they that wait for Him." Isaiah 30:18.

BREAST CYST
(Fibrocystic Breast Disease, Cystic Mastitis)

SYMPTOMS—Discomfort, soreness, tenderness, lumpiness, and possible felt lumps and cysts in the breast. These will be round lumps which move freely

and are either firm or soft.

The symptoms are the most prominent before the monthly, and almost entirely absent during pregnancy.

CAUSES—This is the most common breast problem that women have; over 50% of adult females have it. It is most frequent in women of childbearing age; it primarily occurs between the ages of 30 and 50.

When there is too much fluid in the breast, instead of moving it out of the breast, the lymph system stores it in small spaces, here and there. Eventually, fibrous tissue surrounds them and thickens, forming cysts. These cysts frequently swell just before the monthly, causing pain.

These cysts may change in size; but, although tender, *they move freely*. In contrast, a cancerous growth generally does not move freely, is usually not tender, and does not leave.

It is important to regularly examine each breast for lumps and determine what kind they are. It is best to do this weekly. It is known that the risk of breast cancer is three times as great in women with cysts.

Breast cysts rarely appear after the age of 50, when estrogen levels are less.

Hormonal imbalance, abnormal production of breast milk (caused by high levels of estrogen), and an **underactive thyroid** can induce cysts.

Other causative agents are listed below. Here are suggestions to help you avoid problems with benign breast changes. It may take up to six months for these remedies to reduce the cysts:

NATURAL REMEDIES

DIET

• Eat a **low-fat, high-fiber diet**, including more **raw foods**. Emphasize **fruits, vegetables, and whole grains**. Stop eating **meat**. Reducing blood cholesterol (preferably to 170 mg or lower), by avoiding foods containing saturated fat and cholesterol will greatly help you. Fiber binds with estrogen in the intestine and eliminates it.

• The trace element, germanium, is important. It is found in **garlic** and **onions**.

• Research shows that milk and dairy products have high estrogen levels. It is best to avoid them; for the cyst problem can always lead to a cancerous condition.

• **Vitamin B_1** (25 mg), **vitamin B_2** (5 mg), **vitamin B_6** (200 mg), **vitamin C** (500-1,000 mg), vitamin E (400 mg), **calcium** (1,000 mg), magnesium (1,000 mg), **flaxseed oil** (2 tsp.). The **B vitamins, vitamin C, calcium, and magnesium** help regulate the production of *prostaglandin E*, which in turn slows down *prolactin* activity. Prolactin activates breast tissue.

• In animals, **iodine** deficiency causes fibrocystic disease. Eat Nova Scotia dulse or Norwegian kelp.

• Drink enough **water**, so it is easier for the blood and lymphatic system to care for the milk glands.

AVOID

• Avoid a diet high in **meat, eggs, butter, and cheese**. Do not eat **nuts** which have been heated.

• **White-flour products** should be avoided.

• Do not eat **animal products, cooked oils, fried foods, sugar, salt** or drink beverages with **alcohol** or **caffeine**. Do not use highly **salted foods**.

• Methylxanthines (which include caffeine, theophylline, and theobromine), found in **caffeine** and **chocolate** foods, have been found to induce breast disease. Cut out caffeine products entirely.

• Do not use **nicotine** products. They stimulate the growth of cysts.

• Do not use **diuretic drugs**. Instead, drink more water to help improve kidney function.

OTHER HELPS

• Keep the **weight** low. It is more difficult to locate tumors in larger breasts.

• Check for food allergies. See *Food Allergies (576)* and *Pulse Test (575)*.

• If you have an underactive **thyroid**, do what is needed to strengthen it; since hypothyroidism *(549)* has been linked to fibrocystic disease.

• Breast congestion can be caused by **padded bras**. Do not overheat the breasts; this can lead to breast cancer.

• Be aware that **birth control pills** increase estrogen levels and raise the possibility of breast disease. Have estrogen levels checked; then reduce them. A **low-fat diet** (especially eliminating all **saturated fat**) reduces estrogen levels.

• Excess **clothing** on the trunk, and not enough on the extremities, is a significant cause of female problems of various types. The body is not kept evenly warm; and blood pools in the trunk organs.

• Some find that applying **cold water** to the breasts helps when they are painful. But others find that alternating **very warm and cold** works better. This can be done via heating pads, cold cloths, showers, etc.

• Gentle **breast massage** will help move liquids out of the breast area into the lymph passages.

• Not using caffeine and applying **primrose oil** (3 grams daily) will help reduce the cysts. Primrose oil is especially good for fibrocystic breasts.

• **Dong quai** helps regulate hormonal levels. **Goldenseal** helps heal infections. **Red clover** cleans the blood. **Chlorophyll** helps clean the liver and prevents formation of cysts. **Germanium** and **CoQ_{10}** provide oxygen to the cells and prevent free-radical damage. **Flaxseed** oil helps prevent breast cancer. **Dandelion** tea cleanses the liver.

• **Red clover, pau d'arco, squaw vine, mullein, and curcumin** (turmeric) are useful in treating breast cysts.

• Women who **exercise** more have less breast tenderness.

—*Also see Cancer (613)*.

ENCOURAGEMENT—When you open your eyes in the morning, thank God that He has kept you through the night. Thank Him for His blessings. Live your days in the presence of God. Revelation 22:17.

"Who are kept by the power of God, through faith, unto salvation." 1 Peter 1:5.

"Unto Him that is able to keep you from falling, and to present you faultless before the presence of His glory with exceeding joy." Jude 24.

"The promise is unto you and to your children." Acts 2:39.

BREAST ENLARGEMENT
(Gynecomastia)

SYMPTOMS—The breasts become excessively large.

CAUSES—Overweight is a primary cause.

NATURAL REMEDIES

• Eat only **nutritious food**; and **do not overeat** or eat between meals. Do not eat **saturated fats, meat products, mayonnaise, margarine, fried foods, cooking fats, or salad oils.** Your only oil should be 2 tsp. twice a day of **flaxseed oil** or **wheat germ oil.**

• **Obesity** can cause breast enlargement. All **milk and diary products** must be removed from the diet.

• **Estrogens**, fed to food animals, will tend to enlarge the breasts of those eating them (beef, pork, etc.).

• Women who take **fenugreek** tea, to help control diabetes, might have their breasts enlarge. It contains *diosgenin.*

• **Saw palmetto** is known to shrink an enlarged prostate gland in men.

ENCOURAGEMENT—We are to follow God as dear children, to be obedient to all His requirements and walking in love as Christ also hath loved us. We must follow the example set by Christ and make Him our pattern, until we shall have the same love for others as He has manifested for us.

ABNORMALLY SMALL BREASTS
(Increase breast size)

SYMPTOMS—Breasts are abnormally small.

NATURAL REMEDIES

• The seeds and sprouts of **fenugreek** have been used for centuries to increase the size of breasts. The seeds contain *diosgenin.* Drink the tea and gently massage powdered **fenugreek** into the breasts.

• **Fennel** is an estrogenic herb used to promote milk production. Do not use fennel oil; this can cause miscarriage in pregnant women. Doses of fennel larger than a teaspoonful can be toxic. Fennel contains phytoestrogens, which are plant chemicals similar to estrogen.

• Other herbs which contain phytoestrogens include **anise, basil, dill, caraway, licorice, marjoram, and lemon grass.** They could be mixed together with the other herbs listed here.

• **Wild yam** also contains *diosgenin,* but not as much as fenugreek. Shave off the outer bark of the root and make paste of the inner bark in a blender. Mix with oil or water and apply as a salve.

• **Cumin** and **black cumin** increase the number of mammary cells in test animals.

Birth control pills contain estrogen, which, as a side effect, cause the breasts to retain water. But this is not true breast enlargement.

ENCOURAGEMENT—God has given you life and all the rich blessings that make it enjoyable; and in return He has claims upon you for service, for gratitude, for love, for obedience to His law. These claims are of the first importance and cannot be lightly disregarded; but He requires nothing of you that will not make you happier, even in this life.

CERVICAL DYSPLASIA
(Abnormal pap smear)

SYMPTOMS—Normal cervical cells are regular in shape and size. Abnormal ones are distorted, indicating cervical dysplasia.

CAUSES—Cervical dysplasia is changes in the surface cells of the cervix which may become cancerous. A Pap smear is given to check cells from the cervix for any evidence of precancerous or cancerous changes. Because cancer of the cervix is fairly common and sometimes fatal, women are counseled by physicians to have periodic Pap smears. There are three grades of dysplasia: mild, moderate, and severe. Mild dysplasia may return to a normal state; but severe dysplasia may progress to cancer of the cervix if not treated. The most common cause is the presence of infection. Both the woman and her spouse must be treated.

Cells are collected from the cervix, using a spatula or brush, and are sent away to be examined under a microscope.

NATURAL REMEDIES

• Compared with healthy women, those with cervical dysplasia may have lower blood levels of **beta-carotene** and **vitamin E.** For beta-carotene, eat green and yellow vegetables. Take 400 IU of vitamin E daily.

• Low levels of **selenium** and low dietary intake of **vitamin C** are frequent in those with cervical dysplasia. Daily take 500 mcg (but not over 1,000 mcg) of selenium and 1,000 mg of vitamin C. If taking higher amounts of vitamin C, also include **copper** (4 mg).

• Women with a low intake of **vitamin A** are more likely to have an abnormal pap smear. If pregnant, or may become pregnant, do not take over 10,000 IU daily.

to avoid birth defects.

• Large amounts of **folic acid** (10 mg daily) have been found to improve the abnormal pap smears of women who are taking birth control pills. Folic acid does not appear to improve the smears of women not taking oral contraceptives. But another study found that high blood levels of folic acid protected against cervical dysplasia. Along with the folic acid, take 1,000 mcg B_{12}.

ENCOURAGEMENT—There are many from whom hope has departed. Bring back the sunshine to them. Many have lost their courage. Pray for these souls. Bring them to Jesus. Tell them how He can help them.

REPRODUCTIVE: WOMEN -

2 - MENSTRUAL PROBLEMS

PREMENSTRUAL SYNDROME (PMS)

SYMPTOMS—There are over 150 symptoms linked to PMS; the most common include abdominal bloating, anxiety, acne, backache, breast swelling and tenderness, swollen feet, depression, cramps, food cravings, fainting spells, headaches, fatigue, joint pain, insomnia, nervousness, impatience, drastic mood swings, angry outbursts.

Other symptoms include sluggishness, lethargy, delusions, indecisiveness, dizziness, constipation, hemorrhoids, skin eruptions, and migraines.

CAUSES—PMS affects many women during the one to two weeks prior to the onset of menstruation. It affects one-third to one-half of all American women between the ages of 20 and 50. As many as 75% have the problem at one time or another. About 5% are incapacitated by it; and about a third report symptoms severe enough to interfere with their daily life.

Bearing children or **being married** seems to increase the likelihood. The problem is a major cause of divorce.

Hormonal imbalance is part of the PMS problem. *See Menstrual Disorders (644).*

The liver regulates hormonal balance, by selectively filtering out of the blood and excreting unwanted excess hormones. One of these is *estradiol*, a type of estrogen which causes problems. If not eliminated, it can build up in the body.

Part of the hormonal imbalance problem is that there is **too much estrogen** in the body and **not enough progesterone**. Fluid retention is the result. This affects the circulation and impedes oxygen and nutrient flow to the brain and female organs.

Additional causative factors are mentioned below.

NATURAL REMEDIES

DIET

• Correct the diet. Compared with women without significant PMS problems, those that experience them eat 275% more **refined sugar**, 62% more **refined carbohydrates** (white-flour products), 75% more **dairy products**, 75% more **sodium** (salt), 53% less **iron**, 77% less **manganese**, and 52% less **zinc**.

• Typically, women with serious PMS problems tend to have high estrogen levels, had an early menarche (onset of periods, usually at 12 years of age or younger), and are on a **high fat / high cholesterol diet**. Fat cells produce estrogen, which disrupts the estrogen / progesterone balance. You will be greatly helped by significantly lowering your fat and cholesterol intake.

• Meals high in **complex carbohydrates** help one deal with stress. It is thought that they increase the production of serotonin, a brain chemical which counteracts depression.

• **High-fiber fruits, vegetables, and whole grains** help the body eliminate excess estrogen and prevent constipation.

• Take a full **vitamin / mineral supplementation**.

• An inadequate intake of **B complex vitamins** is another factor causing PMS. B vitamins and **magnesium** (1,000 mg) help the liver excrete unwanted estrogen. **Fried foods** block the absorption of magnesium.

• During the premenstrual period, the body wants **more sugar** as fuel. Satisfying these cravings with lots of sweet foods (even good ones) causes blood sugar levels to shoot up and then plunge. This triggers much of the fatigue, mental fog, and emotional imbalance. Mildly **salty food** will tend to satisfy the cravings for sweets.

• Eating **smaller meals** of nourishing food and complex carbohydrates (whole grains) helps keep blood sugar levels stable and reduces sugar cravings.

• **Vitamin E** has been found useful in the treatment of PMS, with most improvement where benign breast disease was a major problem. Vitamin E is an antioxidant and helps prevent inflammatory reactions to dietary fats. It is possible that **vitamin A** and **zinc** also aid in this function.

• **Vitamin B_6** (50-3,000 mg daily), especially during the 10 days preceding menstruation, helps relieve premenstrual edema and soreness. It helps the liver eliminate excess estrogen.

• Adequate **calcium** (2,000-5,000 mg) intake during the monthly cycle is very important. Blood calcium drops 10 days before menstruation. A lack of it causes headaches, tension, nervousness, depression, insomnia.

• **Magnesium** (1,000 mg) and **vitamin D** (1,000 IU) help in calcium absorption. Adequate stomach acid is also needed.

• **Selenium** is an antioxidant and helps prevent menstrual cramps.

• **Daidzein** and **genistein** (two bioflavonoids in soybeans) help control excess estrogen. Take 1,000-

2,000 mg daily.

• **Fast** for 1-3 days on **fruit and vegetable juices** before the onset of the period, to reduce problems.

• **Pycnogenol** (50 mg once or twice daily) can reduce bloating, fluid retention, and breast tenderness.

AVOID

• **Constipation** is a primary reason why the liver cannot get rid of excess estradiol. Eat **natural foods with sufficient bulk**. Avoid **processed and junk foods**. Estrogen is eliminated through the bowels. Fiber binds with it and carries it out.

• According to the *New England Journal of Medicine*, **vegetarian** women eliminate 2-3 times more estrogen in their feces than nonvegetarians. They eat diets low in fat and high in fiber.

• Eating **chocolate, caffeine, sugar, and excess sodium** are additional causative factors. Women who regularly consume caffeine are four times more likely to have severe PMS. Do not use **nicotine or alcohol**. **Alcohol, animal fats, and the lactose in milk** products can elevate already high estrogen levels and may contribute to overproduction of pre-period breast cells and other discomforts. The more caffeine consumed, the greater the PMS symptoms.

• It is important that you not eat foods (**meat and dairy products**) **which contain hormones**! They are fed to meat cattle, swine, cows, and chickens. Meat and dairy products help produce a hormonal imbalance—exactly the kind in PMS, excessive estrogen and inadequate progesterone.

• Another factor is unstable **blood sugar levels**. This can be caused by **hypoglycemia** or simply **poor eating habits**. Either way, eat complex carbohydrates and avoid the **sugar foods**.

• **Food allergies** are another factor. Search out the offending foods and stop eating them. *See Allergies (576) and Pulse Test (575).*

• Do not eat **synthetic sugars** (Aspartame, etc.).

OTHER HELPS

• Regular outdoor **exercise** is important. Walk at least half a mile a day. This increases oxygen intake, which in turn aids in nutrient absorption and elimination of toxins.

• Here are herbs which may help reduce the pain of cramps: **rosemary, black haw, cramp bark, red raspberry, and angelica**.

• Use **warm sitz baths, heating pad, or hot-water bottle** for cramps. This draws the healing blood and relaxes muscles.

• Some women with PMS are deficient in **melatonin**.

• When melatonin is low, women do not sleep well. When serotonin is low, they feel tense, depressed, and irritable. This can be interpreted as cravings for sugar, white bread, or alcohol. Exposure to **sunlight** boosts levels of both melatonin and serotonin. For the winter months, buy **full-spectrum light boxes or bulbs**.

• Not keeping the **legs and feet properly clothed** can cause uterine problems, due to pooled blood in the trunk organs.

HERBS

In addition to drinking at least a quart of **water** each day, drink a cup or two of any of the following herbal teas:

• **Wild yam** cream contains *diosgenin*, which helps many women. Rub the cream into the skin on the chest, inner arms, thighs, and abdomen just after ovulation. The active ingredient is absorbed through the skin.

• American Indian women chewed the seeds of the **evening primrose** for premenstrual and menstrual complaints. In Great Britain, **evening primrose oil** is an approved PMS treatment. The product is available commercially; and it is an excellent help.

• **Chinese angelica** *(Angelica sinensis)* is widely used in China to treat PMS and menstrual cramps. Take 2 tablets to help prevent PMS. Do not use if pregnant.

• **Chasteberry** *(Vitex agnus-castus)* is the small fruit of the chaste tree; it has been used for centuries for PMS, by balancing hormones. It increases production of the luteinizing hormone and inhibits release of the follicle-stimulating hormone. This results in the production of less estrogen. But do not take it if you have significant depression. Chasteberry has proven superior to vitamin B_6 in treating PMS.

• **Skullcap** helps relieve nervous tension and irritability.

• **Raspberry** quiets an irritable uterus. Also used for PMS.

• **Ginger** tea substitutes for the emotional lift of chocolate. It also helps cure the fatigue of PMS.

• Herbs helpful in treating PMS include **dong quai, false unicorn root, fennel seed, squaw vine, blessed thistle, and sarsaparilla root**. They help balance the hormones.

• Take a capsule of **black cohosh, dandelion root, false unicorn root, or skullcap** daily for 10 days before the anticipated onset of menstruation and until 3 days after its cessation.

• Take valerian or chamomile.

Discuss the problem with your spouse. This will help him understand the situation.

—Also see Menstrual Disorders (below) and Breast Discomfort (640).

ENCOURAGEMENT—The angels of God guard us every moment. Have we not reason to be thankful for the protection we are given? All through the day, thank God for His blessings.

MENSTRUAL DISORDERS
(Amenorrhea, Dysmenorrhea, Metrorrhagia, Oligomenorrhea)

NOTE: Separate articles on some of these topics immediately follow this one.

SYMPTOMS—Depression, tension, melancholia,

breast tenderness, cramps, fainting, water retention, rapid heartbeat, and backache may occur.

CAUSES—The first menstruation is also called menarche. Women whose general health and resistance are good are less likely to have menstrual problems.

An irregular cycle often indicates the general state of a woman's health; it is usually the result of nutritional deficiencies or autointoxication caused by constipation, an organic malfunction, drugs, vitamin or mineral deficiency, and/or chemicals or stress.

Amenorrhea: Absence or suppression of menstruation.

Dysmenorrhea: Painful or difficult menstruation.

Metrorrhagia: Bleeding between periods.

Oligomenorrhea: Infrequent or scanty menstruation.

Periods tend to stop in athletes and in women who drop below 20% body fat.

There are two types of dysmenorrhea (painful menstruation):

Primary dysmenorrhea usually does not occur until several years after menstruation begins. The pain begins a few hours before or at the onset of bleeding. This may last from a few hours to 1-2 days; and it is generally worst the first day. At first, there is a scanty flow, which increases as the pain subsides.

Secondary dysmenorrhea may start 2-3 days before onset, with pain in the abdomen, small of back, and on down the legs. It is a more constant pain; but it includes sharp cramps and continues throughout the period. This type is often linked to a pelvic disorder (**inflammation, uterine malposition, endometriosis, tumors**, etc.), which needs to be eliminated in order to lessen or remove the pain.

Important: Because toxic shock *(663)* occurs most frequently during the menstrual period, the women who uses tampons should change them every 3-4 hours, during the day, and use pads during the night. But it is far better for the health not to use tampons at all.

Hormonal imbalance is usually involved. *See Premenstrual Syndrome (643).*

NATURAL REMEDIES

DIET

• The diet should contain an adequate, but not excessive, amount of high quality **proteins**; it, preferably, should be from nonmeat sources.

• Eat complex carbohydrates (**whole grains**), to avoid blood sugar drops. This is important. Low blood sugar is common during menstruation.

• **Avoid overeating**! This encourages abdominal congestion. Do not overeat on anything.

• Fresh, raw **beets, beet juice, or beet powder** is very helpful in regulating all menstrual problems.

• Include **B complex, especially B_{12} and B_6, along with vitamins C and E**. Take **brewer's yeast, kelp, and essential fatty acids**. B vitamins, especially B_6 and **folic acid**, help reduce some of the tensions associated with menstruation. Vitamin B_{12} helps restore normal menstrual cycles.

• Deficiencies of **essential fatty acids**, together with cyclic hormonal patterns, produce the classic symptoms of fragile emotions, irritability, etc.

• Take vitamin A as **beta-carotene** during the last 14 days of the cycle (**Carrot juice, orange and yellow vegetables**).

• **Iron** is vital because of the loss of blood each month. **Vitamin C** helps the body absorb iron. *Beware of supplemental iron tablets during pregnancy!* Iron-rich sources include **blackstrap molasses** (best single source), **apricots, and raisins**. **Iodine** is also needed, when there is a blood loss. Eat **kelp or dulse**.

• Cramping may be relieved by additional intake of **calcium and niacin**. Calcium supplementation is very important for avoiding painful cramps!

• **Manganese** is needed for normal reproduction and the mammary glands, and helps prevent osteoporosis.

• Limiting **salt and fluid intake** a short time before menstrual onset may help reduce edema in the legs and elsewhere in the body. A low-salt diet helps relieve bloating and water retention.

• **Food allergies** can be involved in painful menstruation. In one study, eight patients were freed of the problem when all foods they were allergic to were eliminated. *See Allergies (576) and Pulse Test (575).*

• Allergenic foods most frequently listed are **wheat, milk, eggs, beef, chocolate, nuts, fish, beans, cauliflower, pepper, and cabbage**.

• Extreme diets (**strict fruitarianism, very low protein diets, or repeated strict weight loss regimens**) can produce amenorrhea.

OTHER HELPS

• Taking the **birth control pill** greatly upsets the entire hormonal system; and it does not recover, even after the pill is stopped for many months or years.

• Problems with the **pituitary, adrenals, or thyroid** may produce amenorrhea or abnormal bleeding cycles. **Stress** or the **birth control pill** can seriously affect the adrenals (which produce 20% of the total estrogen used by the body).

• **Poor posture** causes the female organs to move out of place; and this can affect menstruation. Proper posture tends to reduce cramping. Do not wear **high heels**; this throws the pelvic organs forward and cramps them.

• Those who have diaphragmatic (**abdominal**) **breathing** tend to have no menstrual pain. **Avoid belts and tight clothing** about the waist. No **corsets**.

• Adequate **exercise** is also needed.

• Avoiding **constipation** is very important.

• Avoid **overfatigue** just prior to the period. Maintain a **regular daily schedule** throughout the month.

• An excess of **stress** can also affect menstrual flow and attendant problems.

• **Sexual stimulation** at that time of the month increases abdominal congestion.

• Not keeping the **legs and feet properly clothed** can cause uterine problems, due to pooled blood in the

trunk organs.

• If you are **overweight**, lose weight in order to reduce painful periods.

• Using **tobacco** aggravates menstrual disorders. Smoking induces painful menstruation.

HYDROTHERAPY

• Take a daily **hot sitz bath**. If available, add **chamomile or juniper needles** to the water. A **hot sitz bath** (105°-115° F.) **with a hot footbath** (110°-117° F.) for 3-10 minutes is often helpful. Or take **two hot baths** each day at the beginning of menstruation. This draws blood from the over-congested uterus to the skin.

• A four-minute **back massage** to an area an inch to the right of the lumbar (small of the back) spine may bring relief from painful menstruation.

HERBS

• Drink **catnip** tea each morning and evening during the period.

• Helpful herbs include **yarrow, blue cohosh** (in mentrual difficulties), **wormwood, pennyroyal** (when there is painful menstruation). **Chamomile** relieves menstrual spasms. **Peppermint tea** eases the pain. **Desert tea** *(ephedra viridis)* is for delayed or difficult menstruation. Life root (when there is suppressed menstruation), **black cohosh** (when there is obstructed menstruation), **garlic** and **motherwort** (to promote menstrual flow), **amaranth** and **lady's mantle** (when there is excessive menstruation), **blazing star** (for low-ovarian function and lack of estrogen).

• **Red raspberry leaf** tea (1 cup) helps the entire reproductive system.

• Massage **chamomile** into lower abdomen and/or place in bath or in vaporizer.

• Taking **Vitex** (½ tsp. of tincture or 2 capsules, 3 times daily), especially during last two weeks of cycle (after ovulation occurs), helps stimulate progesterone production and normalize the estrogen / progesterone balance.

• This is the herbal formula recommended by Dr. Christopher for female disorders: Mix 4 parts **squaw vine** with 1 part each of **cramp bark, blue cohosh root, and false unicorn root (helonias)**. Add 1 tsp. per cup of water, simmer slowly 5 minutes, and drink 1 cup 3 times a day.

• The following are **emmenagogue plants**. They produce or ease menstruation. As a rule, they have a balancing and normalizing effect on the menstrual cycle. But do not use them during pregnancy, because they increase the risk of abortion: **Rowan, jalop, buck bean, European pennyroyal, laurel, saffron, tarragon, wormwood, basil, German chamomile, Roman chamomile, bill, butterbur, Venus' hair, motherwort, sage, groundsel, wild betony, milfoil, aloe, birchwort, heliotrope, clary, sage, tansy, juniper, wild balm, parsley, madder, mugwort, calendula, rue**. It is fortunate that there are so many useful herbs.

WILD YAM

Contrary to popular claims, wild yam roots do not contain progesterone; they are not converted into progesterone or dehydroepiandrosterone (DHEA) in the body. But it has properties similar to those compounds. The saponins and similar constituents in wild yam are converted by pharmaceutical firms into progesterone, using a chemical conversion process. But this cannot be duplicated by the body. Wild yam also contains *diosgenin*, but not as much as fenugreek. Shave off the outer bark of the root and make paste of the inner bark in a blender. Mix with oil or water and apply as a salve. Rub it on the abdomen and it will greatly help reduce various symptoms. Wild yam works similarly to progesterone; but it does not contain true progesterone.

—Also see Premenstrual Syndrome (643), Lack of Menstruation (647), Painful Menstruation (649), Profuse Menstruation (647), Menstrual Cramps (649), and Uterine Fibroids (657).

ENCOURAGEMENT—All heaven is interested in the work going on in this world, to prepare people to live forever in heaven. It is important that we cooperate with God by accepting Christ as our Saviour and, by faith in Him, obeying His Ten Commandments. 2 Corinthians 9:8, 10.

IRREGULAR MENSTRUATION MENOMETRORRHAGIA

SYMPTOMS—A menstrual cycle that has wide variations in the length of time between periods.

CAUSES—Although the average menstrual cycle lasts 28 days, they may occur as often as every 24 days or as infrequently as every 34 days. After puberty, most women develop a regular cycle; but, for some, they remain irregular. Menstrual bleeding normally lasts 2-4 days, with the average length being 5 days. Wide variations are common at puberty, the first few months after childbirth, and as menopause approaches.

Variations are usually the result of a **temporary hormonal imbalance, stress, depression, severe or chronic illness, excessive exercise, and extreme weight loss**. Other possible causes include **disorders of the ovaries or uterus** (especially **polycystic ovary syndrome**), in which there is an imbalance of the sex hormones. Or it might be **endometriosis** *(659)*, in which fragments of the tissue that normally lines the uterus are displaced and attached to other pelvic organs. Another cause is an **unsuspected pregnancy**. A single, late, heavy period may be due to a **miscarriage**.

NATURAL REMEDIES

• Raw **beets, beet juice, or beet powder** is very helpful in regulating all menstrual problems.

• **Diets that cause extreme weight loss** can disrupt periods, as can hypoglycemia, nutritional anemia, iodine deficiency, and hypothyroidism.

• **Dong quai** (½ tsp. of tincture or 2 capsules, 3 times daily), taken during the first two weeks of the menstrual cycle, helps regulate hormonal production, particularly estrogen. Do not take during menstruation or pregnancy, because it can stimulate bleeding.

• Gently simmer 1 Tbsp. **elecampane** root 10 minutes in a pint of water. Let cool, strain, drink 1-2 Tbsp. several times daily.

• To promote delayed menstruation, drink **angelica** root tea several times a day. Bruise 2 tsp. of root, simmer in 2 cups boiling water for 15 minutes, strain.

• **Evening primrose** balances the hormonal system. An infusion of **parsley** fruit stimulates and regulates menstruation.

• A decoction of **calendula** flowers helps regulate menstruation.

• An infusion of the flower clusters of **rue** contracts the uterus and helps regulate menstruation.

• An infusion of **mugwort** flowers or root helps regulate menstruation.

• Alternating **hot and cold sitz baths** stimulate pelvic circulation.

—Also see Lack of Menstruation (below), Menstrual Disorders (above), and Scanty Menstruation (647).

ENCOURAGEMENT—Godliness is an entire surrender of the will to God. It is living by every word that proceeds from the mouth of God. It is doing the will of our heavenly Father. It is trusting God in trial, in darkness as well as in light. It is walking by faith and not by sight. It is relying on God with unquestioning confidence and resting in His love.

LACK OF MENSTRUATION
(Amenorrhea)

SYMPTOMS—Absence of mentrual periods for at least 3 months in women who would otherwise be menstruating regularly.

CAUSES—There are two types of ammenorrhea. The primary kind refers to menstruation that has not started by the age of 16. If the condition later stops at any time, longer than 3 months, it is secondary.

A late menstrual period that is accompanied by severe abdominal pain should receive immediate medical attention—because it may be due to an ectopic pregnancy *(653;* a pregnancy that develops outside the uterus, usually in one of the fallopian tubes).

A single, heavy period that is late may be due to a **miscarriage** *(678).*

NATURAL REMEDIES

• Take **blazing star** tincture (10-30 drops, 3 times daily) for low ovarian function.

• **Pulsatilla** (10 drops of tincture, 3 times daily), especially when due to stress or emotional suppression.

• Simmer bruised **fennel seeds** for 5 minutes in boiling water, cool, strain, and drink frequently.

• **Life root** (10-30 drops tincture, 2-4 times daily) increases local circulation and is a uterine tonic.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR AMENORRHEA AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

BASIC APPLICATIONS—Tonic **Sitz Bath. Cold Pelvic Pack. Graduated Baths**, twice daily, for tonic purposes. Short very **cold Douche** to lower spine, over stomach, and to inner surfaces of thighs. Pelvic massage daily, especially when period is due.

SUPPRESSED MENSTRUATION—Short **Cold Douche** to spine, thighs, and over stomach, daily or twice a day. **Hot Footbath** or **Hot Blanket Pack** during the interval between the periods. **Hot Hip Pack.** Warm **vaginal irrigation** at 95°-100° F.

GENERAL METHOD—It is very necessary to seek for the problem and not merely to "treat a malady." Apply such measures as may be required for relief of anemia, chlorosis, indigestion, or any other disturbance of the nutritive functions.

—Also see Irregular Menstruation (646), Menstrual Disorders (644), and Scanty Menstruation (below).

SCANTY MENSTRUATION
(Oligomenorrhea)

SYMPTOMS—An extremely insufficient menstrual flow which is inadequate to provide thorough cleansing.

CAUSES—This problem may be caused by **stress, depression, hormonal imbalance, chronic or severe illness, too much exercise, or extreme weight loss.** Other possible causes include **disorders of the ovaries or uterus.**

NATURAL REMEDIES

• Take **blazing star** (tincture, 10-30 drops, 3 times daily).

• To increase flow and elimination, place a **hot-water bottle** over uterus during the period.

—Also see Menstrual Disorders (644), Lack of Menstruation (above), and Irregular Menstruation (646).

ENCOURAGEMENT—How thankful we can be that God, who loved us so much that He gave us His Son, is ever ready to help us.

PROFUSE MENSTRUATION
(Menorrhagia)

SYMPTOMS—Menstrual periods that are heavier than normal. There may be a dragging pain in the lower abdomen. Menstruation may also be irregular.

CAUSES—Some women have heavier flows than others. However, if the bleeding lasts longer than 7 days,

cannot be controlled by napkins or tampons, or includes large blood clots, it is classed as menorrhagia.

General debility is a primary cause. The condition occurs more frequently in women with **kidney or liver disease. Marital excess** is another cause.

About 1 in 20 women have menorrhagia regularly. It is more common when **approaching menopause** *(650)*.

This condition may be caused by **uterine polyps** or **fibroids** *(657)*, or **cancer of the uterus**. *(See Tumors, 612)*. It is also a well-known side effect of using an **intrauterine contraceptive device** (IUD). A single, heavy period that is late may be due to a **miscarriage** *(678)* or **ectopic pregnancy** *(653)*. The cause also may be a **hormonal disorder**, such as **hypothyroidism** *(549)*. The condition is more common in **overweight** women. If your periods have always been heavy, there may be no cause for concern. Yet there may be an underlying problem.

If not checked, profuse menstruation can lead to difficult urination, displaced womb *(657)*, or leukorrhea *(663)*. It can also produce iron deficiency anemia *(440, 723)*, causing lightheadedness and fatigue.

NATURAL REMEDIES

DIET

• Eat plenty of **leafy greens**, plus **trace minerals** (Nova Scotia dulse or Norwegian kelp), to help regulate metabolism.

• Eat omega-3 rich foods; the best is **flaxseed oil** (2 Tbsp. daily). Eat **garlic** for natural sulphur.

• Heavy blood loss can lead to **iron** (simple) anemia *(440, 723)*. Iron deficiency can both result from, *and induce*, menorrhagia. Take 1-2 tsp. blackstrap molasses daily. *Do not take extra iron during pregnancy!* This is a must.

• Studies revealed that, taking 25,000 IU of **vitamin A** twice a day for 15 days, showed significant improvement, even to complete normalization of blood loss. But women who are, or could, become pregnant must not take more than 10,000 IU (3,000 mcg) per day. Birth defects could result from taking more.

• **Vitamin E** (100 IU daily for 2 weeks) was found to reduce excessive blood loss caused by the IUD (intrauterine device).

• **Vitamin C** and **bioflavonoids** protect capillaries (small blood vessels) from damage. In one study, 14 of 16 women improved when given 200 mg vitamin C and 200 mg bioflavonoids.

• Add a few grains of **cayenne** to any herbal tea of your choice. Cayenne is able to powerfully regulate bleeding, internally and externally, and may help the menstrual flow.

• Drink diluted **lemon juice** throughout the menstrual period. It will slightly help reduce the flow.

• Restrict intake of **animal products**. Reduce **fried and saturated fatty foods, sugars, and high cholesterol foods**. Avoid **caffeine foods, tobacco, and liquor**.

HERBS

• Here is a special formula to decrease excessive flow during menstruation: Mix equal parts **cranes bill root, red raspberry leaves, witch hazel leaves, uva-ursi leaves, shepherd's purse, papaya leaves, and black haw bark**. Drink it and apply externally in compresses. This formula can also be used for hemorrhoids.

• Make a strong tea of **red raspberry** leaves to control an excessive flow. Drink a half cup of strong **thyme** tea each morning and evening to control excessive flow. Also apply a compress of the tea to the pelvic area.

• Take **amaranth** (tincture, 15-25 drops, 3-4 times daily).

• Shepherd's purse is good at stopping hemorrhaging anywhere in the body. Drink 2 cups, 3 times daily. Also apply a compress, soaked in the tea, to the pelvic area during excessive flow.

• **Two other astringent teas are good: agrimony and cranes bill** (3 cups, 3 times daily).

• Hemostatic herbs which help regulate menstruation include **mistletoe** (infusion or cold extract of dry leaves), **hazelnut** (decoction of leaves and bark), and **nettle** (infusion of fresh juice of the leaves).

• **Horsetail** heals bleeding tissues; use a decoction of the plant. **Blind nettle** (an infusion of the leaves and flower clusters) stops excessive blood loss. **Calendula** (decoction of the flowers) is a menstrual regulator. **Knotweed** (decoction of the plant) increases capillary resistance.

• **Witch hazel** stops bleeding and strengthens venous and capillary walls. Use an infusion of leaves and/or bark.

• An infusion of fresh **smartweed** reduces too abundant menstruation. An infusion of **goldenseal** contracts the uterus and reduces bleeding.

OTHER HELPS

• Not keeping the **legs and feet properly clothed** can cause uterine problems. Blood is chilled back from the extremities and pools in the trunk organs.

• Get extra **sleep** during that time. Avoid all **drugs**, including aspirin. Many inhibit vitamin K formation.

• For excessive bleeding or pain, apply an **ice pack** to the uterus, pubic, or sacral region. **Hot compresses** applied to the legs and feet will enhance the action of removing blood from the pelvic region.

• After the period is over, take a warm douche of **white oak bark, wild alum root, or bayberry bark**. Steep 1 heaping tsp. to a quart of boiling water, let steep while covered. Inject 4-5 times a day with a bulb syringe. In addition, drink the herb teas.

• If periods are extremely profuse, make small balls of absorbent cotton, immerse in a tea of equal parts **white oak bark** and **wild alum root**, plus a little **lobelia**. Tie a strong cord around the middle, long enough to extend to the outside. Press it against the vagina. Every 12 hours, remove the ball and wash with an herb douche.

—Also see Menstrual Disorders (644), Uterine Bleeding (656), Vaginal Discharge (662), Uterine Fibroids (657).

ENCOURAGEMENT—He who has given His precious life because He loved you, and wanted you to be

happy, will always be mindful of your problems. He can provide you with encouragement and help, as no one else can.

MENSTRUAL CRAMPS

SYMPTOMS—Strong cramping sensations during menstruation. A cramping lower abdominal pain that comes in waves, radiating to the lower back and down the legs. Dragging pain in the pelvis.

CAUSES—This is a severe form of dysmenorrhea *(649)*.

NATURAL REMEDIES

—Also see Painful Menstruation (below).

• The diet should be light and simple. Primarily eat **fresh fruits and vegetables. Do not overeat.**

• Omega-3 fatty acids (2-4 tsp. **flaxseed oil** daily) keeps prostaglandins trapped in cells, so they cannot enter muscle tissue and trigger spasms.

• Avoid *arachidonic acid* (a type of fatty acid), which is found in **meat, diary products, and palm kernel oil** (a common ingredient in processed foods). **Reduce salt intake. Food allergies** *(576)* are sometimes a cause.

• **Niacin** helps relieve cramps. Take 25-200 mg, beginning 7-10 days before menstruation begins.

• **Vitamin B_6** helps convert fatty acids to a form which helps produce pain-relieving chemicals.

• **Vitamin C** helps strengthen the uterine intake of nutrients and discharge of toxins. Take 1,000-3,000 mg daily, especially when symptoms are experienced.

• **Magnesium** (1,000 mg) and **vitamin E** (800-1,000 IU daily) are also important. Studies show that taking this vitamin helps reduce menopausal symptoms.

• **Calcium** is a great wonder-worker, when it comes to relaxing muscles and reducing pain. Take 1,000-5,000 mg daily.

HYDROTHERAPY

One of any of the following hydrotherapy methods will probably help you greatly:

• Place an **ice pack** over the abdomen.

• Place a **heating pad or hot-water bottle** to the abdomen or back.

• With the first sign of pain, place a **heating pad** to the back from the waist to the end of the spine. Keep the heat high.

• Take a **warm bath.**

• Take a **hot sitz (sitting) bath** (105°-115° F.) with a hot footbath (110°-117° F.) for 3-10 minutes.

• Take a **cold sitz bath** (55°-75° F.) for 2-10 minutes while constantly rubbing the skin.

HERBS

• Women of several Indian tribes (Cherokee, Delaware, Iroquois, Oklahoma, and Menominee) regularly took **squaw vine** tea for menstrual pain. They also used it to make childbirth easier and to treat sore nipples while nursing. Use it with red raspberry tea for better effect.

• According to a special German research team, **strawberry** leaf tea relieves menstrual cramping. Also recommended for this purpose is **yarrow** tea.

• **Chinese angelica** (also known as **dong-quai, or dang qual**) is one of the most widely used herbs in Chinese herbal medicine. Considered a female tonic, it is especially used for menstrual cramping.

• **Red raspberry** leaf tea is used by many women to reduce period cramping. It is also used to soothe uterine irritability during pregnancy.

• Here are several other very effective anti-cramping herbs used by women: **Bilberry** contains *anthocyanidins*, which relax muscles. **Ginger** contains 6 pain-relieving compounds and 6 anti-cramping compounds. **Red clover** has phytoestrogens, which reduce cramping by balancing hormones better. **Chasteberry** fruits are also good for reducing menstrual cramping.

• A combination of **ginger, valerian, black haw, and motherwort** is very helpful in relieving menstrual cramps. Black haw specifically relaxes the uterus.

• **Motherwort** alone can stop menstrual cramps. Take 5 drops of motherwort extract, keep increasing it until the cramps stop; then take that amount each time cramps begin.

OTHER HELPS

• Continue taking regular outdoor **exercise.** It has been proven that those who exercise have less pain. The best exercises are those which involve the pelvis and legs: **waist-bending,** and **leg exercises. Walk up 100 steps** and back down every day.

• If you are **overweight,** you need to reduce. This will significantly lessen painful periods.

• Maintain **regularity** in times for rising, sleeping, eating, and exercise.

• Improve your **posture,** and the pain will lessen. Women who do diaphragmatic (abdominal) breathing, experience less problems.

• Every so often, take a brief **rest** period, with your **feet elevated.** This will bring healing blood to the abdominal area.

—Also see Painful Menstruation (below), Pelvic Pain (654), and Menstrual Disorders (644).

ENCOURAGEMENT—Come daily to Jesus, who loves you. Open your heart to Him freely. In Him there is no disappointment. You will never find a better counselor, a safer guide, a more sure defense.

PAINFUL MENSTRUATION
(Dysmenorrhea)

SYMPTOMS—Lower abdominal pain and discomfort experienced just before or during menstruation. The pain may be accompanied by any of the symptoms of premenstrual syndrome *(643)*. These symptoms can be headache, breast tenderness, and abdominal bloating.

CAUSES—Up to three-fourths of women have menstrual period pain. In about one-fifth of these women, the pain is severe enough to disrupt normal activities. The pain is usually experienced within the 24 hours before menstruation or the first few days of the period.

Primary dysmenorrhea occurs in the early teens. One to two years after periods begin, ovulation generally begins—and the pains with it. An increase in *prostaglandins* occurs some days after ovulation and makes the uterine muscles contract. This contraction interferes with blood supply and causes pain. This type of pain lessens after the age of 25 and, generally, disappears by age 30. It becomes less severe after childbirth.

The *secondary* type occurs in women who previously had little menstrual pain. Affecting women, aged 20-40, it is often caused by **endometriosis** *(659)* or **uterine fibroids** *(657)*. A **chronic infection** of the reproductive organs or the use of an **intrauterine contraceptive device** (IUD) are other causes.

NATURAL REMEDIES

—Also see Menstrual Cramps (649).

• Drink **catnip** tea each morning and evening during the period. Place 1 tsp. of the powder in a cup of boiling water. Let steep, cool, and drink.

• **Strawberry** leaf tea, taken over a number of months, will eventually help regulate the flow.

• **Chamomile** tea gently relieves painful spasms.

• **Peppermint** tea aids digestion and reduces bloat and pain.

• The following are **uterine antispasmodic herbs**. They relax the spasm of the uterine muscles, thus alleviating dysmenorrhea and many female pelvic pains caused by uterine spasms. These herbs also exert antispasmodic action, though not as specific, on other hollow organs (such as the intestines and urinary pathways): **calendula, rue, wild betony, cramp bark, venus' hair, buck bean, Roman chamomile, pasqueflower.**

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR PAINFUL MENSTRUATION AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

BASIC—Rest in bed during period.

WHEN DUE TO OVARIAN DISEASE (beginning before flow)—Hot **Hip and Leg Pack**, Hot Blanket Pack, **Fomentation** over stomach, hot Pelvic Pack, **Revulsive Sitz**, hot **Colonic**. Follow with hot **Footbath** if flow is checked. Hot Douche at 99°-102° F. Also very Hot **Full Bath** (105°-110° F.) for 5-8 minutes.

WHEN DUE TO UTERINE DISEASE (beginning with, and accompanying, flow)—Hot **Hip Pack** with Hot **Footbath**, followed by Cold **Compress** to area above stomach and inner surfaces of thighs for 30-40 seconds.

WHEN DUE TO INFLAMMATORY DISEASE OF APPENDAGES—Hot **Enema**, hot **Fomentations**, Hot **Pelvic Pack**, Hot Blanket Pack.

GENERAL METHOD—In addition to the local measures for relief of pain which have been indicated above, it is, in most cases, necessary to combat some general disorder to which the local disease may be, more or less, directly related. See "Anemia," "Neurasthenia," "Hysteria." General tonic measures must be used between the menstrual periods. In chronic ovarian congestion, apply the stomach compress during the night. Also give a daily Revulsive Sitz Bath or Hot Pelvic Pack and the very hot vaginal irrigation, 115°-120° F., for 15 minutes. In cases of deficient development, as in infantile uterus or nerve spasm of the uterine vessels, employ the Revulsive Sitz Bath, alternate genito-urinary douche, tonic sitz bath, pelvic and general massage. Surgical measures are often required for permanent relief. But a surprisingly large number of cases are resolvable without surgery; hence water therapies should be perseveringly tried before resorting to surgical procedures.

—Also see Menstrual Cramps (649), Pelvic Pain (654), Menstrual Disorders (644), and Uterine Fibroids (657).

ENCOURAGEMENT—Disappointments you will have; but ever bear in mind that Jesus, the living and risen Saviour, is your Redeemer and your Restorer.

MENSTRUAL FLUID RETENTION

SYMPTOMS—Hands, and especially feet, tend to swell during menstruation.

CAUSES—Hormonal imbalances cause the tissues to take up an excess of water.

NATURAL REMEDIES

• Reduce **salt** intake. Read labels and avoid foods containing **sodium**. Take no salt, especially from a week before the period starts to the onset of the period. All dairy products are high in salt.

• Take **dandelion leaf tea** if there is water retention.

• **White birch tea** increases the volume of urine and reduces tissue swelling. Use an infusion of leaves and/or buds.

—For much more information, see Edema (401, 723) and Menstrual Disorders (644).

ENCOURAGEMENT—Through all your trials you can have a never-failing Friend who has said, "I am with you alway, even unto the end of the world."

MENOPAUSE
(Post-Menstrual Syndrome, Climacteric, Change of Life)

SYMPTOMS—Hot flashes, insomnia, disturbances in calcium metabolism, irritability, mental instability, dizziness, backaches, headaches, bladder problems, dryness and aging of the skin, shortness of breath, and heart palpitations. Some have almost no symp-

toms at all, other than absence of menses.

CAUSES—Menopause is the cessation of ovarian function, the stopping of the menstrual cycle, and the end of the reproductive years. Glandular changes cause this to happen. It is a natural event in a woman's life; and it usually occurs between 42 and 55. The average age is about 50; and the transition is generally up to 5 years.

While it is occurring, there tends to be a hormone starvation; since menopause usually results from a decreased production of female sex hormones.

The lessened supply of estrogen increases the possibility of cardiovascular disease *(418-439)*, osteoporosis *(509)*, and vaginal atrophy.

It is popular to take estrogen supplements, to prevent or postpone menopausal symptoms. But keep in mind that there is an increased risk of cancer when this is done unwisely. *See Hormone Replacement Therapy (652).* Some recommend that oral estrogens should not be accompanied by progesterone because they increase the risk of cancer, especially of the uterus or breast. Others disagree with that.

Keep in mind that synthetic, not natural, estrogens are given in hormone replacement therapy. These tend to accumulate in the body and can also cause metabolic changes in the liver. This can lead to high blood pressure, fluid retention, and blood clots. But natural estrogens are available. One is equine estrogen; this is extracted from the urine of pregnant mares. But it is very powerful and may also cause changes in the liver. Do not use it if you are obese, smoke, or have high blood pressure, high cholesterol, or varicose veins.

Somewhat safer estrogens are estropipate (Ogen) and estradiol (Estrace, Emcyt, and Estraderm); these are all metabolized more easily by your body. Be sure and use the smallest possible dose; and take it only every other day.

It is coming to be recognized that it is often more important to replace the lessened progesterone than the lessened estrogen. Natural progesterone-like creams (from the herb, **wild yam,** which contains *diosgenin*) provide a simplified way to do this. Many, many, have been helped by doing this! *(See the note on wild yam in Menstrual Disorders, 644.)*

When the menopause proceeds normally, the adrenals and liver increase their output of female hormones and make up the difference from the lost ovarian function.

Proper diet, nutritional supplements, exercise, and adequate rest can minimize the effects of menopause.

NATURAL REMEDIES

DIET

• **Raw fruit and vegetable juices, brewer's yeast, lecithin, kelp, and cold-pressed vegetable oils** are needed. The diet should be at least 50% **raw food.**

• Hypothyroidism *(549)* is common during menopause; this is responsible for a number of the symptoms. So be sure to take additional amounts of **Nova Scotia dulse or Norwegian kelp.**

• If estrogen (hormone replacement) therapy is begun, take **vitamin E** several hours earlier or later, not at the same time. Daily taking up to 1,200 IU of vitamin E is especially important during this time.

• In addition, generous amounts of vitamins $\mathbf{B_6}$ (500 mg), **C** (1,000 mg), **folic acid** (5 mg), **pantothenic acid** (200 mg), **PABA** (100 mg), and $\mathbf{B_{12}}$ (1,000 mg) will make the estrogen therapy more effective. **Vitamin C** works with bioflavonoids (100 mg) to maintain capillary strength. **Pantothenic** acid and **PABA** relieve nervous irritability.

• It is very important that sufficient **calcium** (4,000 mg) be taken, to maintain a proper calcium-phosphorus balance. After menopause begins, you will not have as much calcium in your body, due to the lessened estrogen; it is important that you henceforth supplement with calcium. Of the 250,000 hip fractures that occur in the U.S. every year, 80% are due to osteoporosis *(509)*.

• An increase in **protein** and reduction in **carbohydrates** is recommended at this time.

• Maintain an adequate intake of **vitamin D** (1,000 IU), **iron** (50 mg), and **magnesium** (1,000 mg).

• Eliminate all **processed, refined, and junk foods.** This includes **white sugar** and **white-flour products.**

• Avoid **animal products** and **dairy products.**

• Do not use **alcohol, caffeine, spicy foods, sugar, hot soups or drinks.** They make the emotional swings worse and the blood more acidic. This causes the bones to release extra calcium, to balance blood pH and weaken the bones if extra calcium is not taken.

• Substitute **garlic** and **onion** powder for salt. Consuming **salt** increases urinary excretion of calcium.

• Studies reveal that menopausal hot flashes and sweating are sometimes caused by **food, or other, allergies.** *See Allergies (576) and Pulse Test (575).*

OTHER HELPS

• Drink 2 quarts of **water** each day, to help prevent drying of skin and mucous membranes.

• Avoid mental / emotional **stress** and **worry.** Be happy with the blessings you have; and thank God for them.

• Get plenty of outdoor **exercise** and sufficient **rest.** Lie down and rest a little before lunch and supper. A lack of exercise weakens bone density.

• The body expels toxins during menstruation. When it ceases, the body may instead use hot flashes to eliminate them. In a research study, women who took a 20-minute **sauna or steam bath,** for 6 out of 7 days for a month, experienced almost total relief from hot flashes. (Instead of a steam bath, you can take a **hot bath** for 20 minutes a day.)

• Avoid **hot environments. Stay cool.** Dress in "layered" fashion, so you can take outer clothing on and off. Do not eat hot meals.

• Try to be **calm and relaxed.** Only do one thing at a time and avoid becoming anxious.

HERBS

• Here is a formula recommended by Dr. Christo-

pher: Mix 2 parts each **squaw vine, rue, red raspberry leaves, white pond lily** with 1 part each **of ginger root, chamomile, spearmint, uva ursi leaves, and black cohosh root.** Add 1 tsp. to boiling water, cover tightly, and let cool. Drink 2 fl. oz. every 2 hours or as needed.

• In one study, 80% of women who used the natural progesterone hormone for 1 year reported improvement from hot flashes. Apply a cream, containing **wild yam,** to the pelvic area.

• **Black cohosh** (20 mg of tablets, twice daily) and **motherwort** (½-1 cup tea, 3 times daily) are extremely helpful herbs.

• **Sage** (½-1 cup tea, 3 times daily) tea is good for a woman having hot flashes throughout the day.

• **Siberian ginseng** (200-1,000 mg, in 3 divided doses, daily) helps restore energy and cool hot flashes.

• **St. John's wort** also helps reduce menopausal symptoms.

• Several research studies have been done on **black cohosh, dong quai, licorice root, and Chinese (or Korean) ginseng.** All were found to be very effective in treating menopausal symptoms.

—See Menstrual Disorders (644) for related information. Important: Also see Hormone Replacement Therapy (below) and Postmenopausal Bleeding (652).

ENCOURAGEMENT—All the instructions we need to obey God are found in the Bible. Read it everyday; and, accompanied by earnest prayer for help, you will receive the strength needed to fulfill God's will one day at a time. Psalm 34:9-10.

HORMONE REPLACEMENT THERAPY DISORDER

FACTS ABOUT HRT—Hormone Replacement Therapy (HRT) is given to help reduce problems during, and after, menopause. The female sex hormone, estrogen, relieves hot flashes, vaginal dryness, and other discomforts of menopause. Some research indicates that it may also increase a woman's risk of getting cancer of the breast or some other part of the reproductive system. Other research shows that including progesterone as part of the therapy reduces that risk somewhat.

HRT is associated with a dramatic increase in uterine cancer, along with a smaller but still significant increase in breast cancer. Progesterone is given to reduce the risk of uterine cancer; but it also reduces HDL cholesterol in the bloodstream, making women more at risk of heart disease and stroke.

HRT should be avoided if you have a personal or family history of cancer of the breast, ovaries, uterus, etc.

If you take HRT, also take a low dose of estrogen (1.25 mg daily, maximum). Never take HRT without progesterone for at least part of the monthly cycle.

Medical literature is filled with warnings both for and against using HRT. Physicians keep using it because it seems to accomplish good results.

It is true that HRT also reduces the risk of heart disease *(652)* and osteoporosis *(509)*. But a woman may wish to consider natural remedies to prevent them.

HRT can increase the size of uterine fibroids *(657)*.

NATURAL SOLUTIONS

• Eat **nourishing food, consisting of fruits, vegetables, whole grains, legumes, and nuts.** Hot flashes and other menopausal symptoms are rare among people groups which are vegetarian, especially those consuming lots of legumes (beans, especially soybeans). This is because beans and many other plants contain *phytoestrogens*, which produce a mild estrogenic activity in the body. These compounds include *lignans, saponins, isoflavones, and phytosterols. Phytoestrogens* reduce the risk of estrogen-linked cancers. One cup of soybeans, for example, contains the equivalent of 1 tablet of Premarin, a synthetic hormone used in estrogen replacement therapy.

HERBS

• A number of herbs are helpful. Wild yam contains *diosgenin*, similar to natural progesterone. Drink tea and rub salve on the pelvic area.

• **Red clover** contains 1-2.5% *isoflavones*. In one research study, postmenopausal women who ate **clover, flaxseed, and soy** for 2 weeks, had definitely higher estrogen levels; this declined when they left the diet.

• **Alfalfa, chasteberry, strawberry, and Chinese angelica** are also extremely good.

• In one study, menopausal women given **black cohosh** root extract, showed significant estrogenic activity. In another study, it reduced vaginal dryness.

• **Licorice** contains *glycyrrhizin*, which reduces estrogen levels in women, when too high; it also increases estrogen levels in women, when too low. Use licorice herb, not the candy. Many licorice products contain anise, which has anethole; this is less estrogenic.

—Also see Menopause (650) and Menstrual Disorders (644).

ENCOURAGEMENT—We must not study to have our own way, but God's way and His will. We suffer when we step out of the path that God has chosen for us to follow. The sure result is affliction, unrest, and sorrow which we might have avoided if we had submitted our will to God. Let us bow in humility before God and follow the path that He chooses for us. That is the only safe path.

POSTMENOPAUSAL BLEEDING

SYMPTOMS—Bleeding from the uterus, which occurs at least 6 months after menstruation has stopped.

CAUSES—Normally, menstruation ceases at the end of menopause. But there are instances in which this does not happen. Postmenopausal bleeding (PMB) should be normalized only with certain forms of hor-

mone replacement therapy, which limits bleeding to once each month. Any other PMB which occurs indicates a serious disorder. Whatever the cause, PMB is generally painless; it ranges from light spotting to a heavier flow of blood.

The most common and least serious cause of PMB is atrophic vaginitis; the vagina becomes inflamed, due to a decline in estrogen after menopause.

The cause could be a disorder of the cervix, such as cervical erosion or cancer of the cervix. In such instances, bleeding is more likely to occur after intercourse.

The cause of PMB could be a thickened endometrium (the lining of the uterus), cancerous growths, or non-cancerous growths in the uterus *(see uterine polyps, 657)*.

You will want to consult your physician. If the cause is not serious, the use of astringent herb teas and douches can help eliminate the problem.

NATURAL REMEDIES

• A large collection of helps will be found in the section, *Profuse Menstruation (647)*, which explains ways to reduce uterine bleeding. Also see *Uterine Bleeding (656) and Uterine Fibroids (657)*.

ENCOURAGEMENT—A faithful fulfillment of home duties and filling the position you can occupy to the best advantage, be it ever so simple and humble, is truly elevating. In doing this, there is peace and sacred joy. It possesses healing power. It will secretly and insensibly soothe the wounds of the soul, and even the sufferings of the body. Humbly trusting in Jesus and doing the best you can to help those around you will bring great encouragement to your own heart.

VAGINAL DOUCHE

HOW TO DO IT—A douche is especially helpful if one has a history of discharges or infection (primarily vaginitis, *660*). But do not use it otherwise.

• Retention douches are quite effective and are best done in a bathtub with the feet up on the sides, to aid in retaining the fluid for 10-15 minutes. Warm the douche to body temperature before taking. Possible douches include:

• Add 4-8 ounces of diluted **vinegar** to a pint of distilled water.

• Add 4-8 ounces of **hydrogen peroxide** and 1 ounce of **bayberry myrtle** (myrica cerifera) to 1 pint water.

• A replant of **lactobacillus acidophilus** may be needed, to normalize flora after vaginitis or antibiotic drug medications. Acidophilus capsules (6-8) from a health-food store) or 4 oz. of plain, unsweetened yogurt can be emptied into warm water (10-20 oz.).

• Routine douching is not necessary for personal hygiene. Douching is best reserved for therapy, in time of infection. Excessive douching may actually help promote infection.

• If herbal douches are used, they should be steeped for many minutes in water that has just been boiled; then store this preparation in a sterile environment until used.

• Mix equal parts of **chamomile, wintergreen, and sage**. Add ½ cup to 2 cups boiling-hot water, let steep 10-20 minutes, strain. Add warm, sterile water to make up the full amount. Best to use immediately. This is used to soothe and heal; also for abnormal discharges.

Another herbal douche formula is equal parts of **peppermint, comfrey, spearmint, and wax myrtle**. Prepare in the same manner as the above formula.

WARNING—Douching may induce pelvic inflammatory disease (PID, *655*). In one study, almost 90% of the women with PID were vigorous douchers, often since the age of 16 or 17. Very likely, infected fluid has been flushed up into the uterine cavity by the douche.

Regular douching can kill beneficial microorganisms and leave you open for invasion by the infection-causing variety of microorganisms.

ENCOURAGEMENT—Home is to be the center of the purest and most elevated affections. Through prayer and earnest effort, each person in the home is submitted to be molded by the Spirit of God. Home can become a little heaven. Isaiah 1:18.

ECTOPIC PREGNANCY

SYMPTOMS—This specifically refers to a late menstrual period that is accompanied by severe abdominal pain. Because of this symptom, this disorder is placed here instead of in the section on Pregnancy.

CAUSES—***If the this symptom occurs, you should see a physician immediately.*** You may have an ectopic pregnancy. This is a pregnancy that develops outside the uterus, usually in one of the two fallopian tubes.

Because of the seriousness of the situation, this topic is placed here along with menstrual problems, with cross-references to the pregnancy section *(665-684)*.

About 1 in 100 pregnancies is ectopic. This means that the fertilized egg has become implanted in the tissues outside the uterus instead of in the lining of the uterus. Where it is implanted, the egg begins developing into an embryo. In most ectopic pregnancies, the fertilized egg lodges inside one of the two fallopian tubes. Much more rarely, the egg implants in the cervix or in the abdominal cavity. Unfortunately, a fetus which cannot grow normally, cannot survive. If the placenta develops inside a fallopian tube, the tube will eventually rupture (break open). This will immediately result in life-threatening bleeding into the mother's abdominal cavity. Such pregnancies need to be surgically removed as soon as possible.

Ectopic pregnancies are more common in women aged 20 to 29, primarily those exposed to sexually

transmitted diseases (especially gonorrhea). Here are other causes: Previous **damage to one of the fallopian tubes** obstructs the passage of a fertilized egg to the uterus. This damage may be caused by an **unsuccessful sterilization procedure** ("tying the tubes"). But an ectopic pregnancy is also more common in women using **intrauterine contraceptive devices** (IUDs). This is due to the fact that these devices increase the risk of a pelvic infection, if the woman is exposed to sexually transmitted diseases. Another cause is Pelvic Inflammatory Disease *(655)*. You are especially at risk if you have had a previous ectopic pregnancy. Having one increases the risk of later having another.

A physician can measure levels of chronic gonadotropin (hCG), a hormone produced by the placenta which increases in quantity until the end of the first trimester. If it is not increasing, the next step is to do an ultrasound to locate where the fetus is growing.

ENCOURAGEMENT—A home where love dwells and where it finds expression in looks, in words, in acts, is a place where angels delight to dwell. Let the sunshine of love, cheer, and happy content enter your own hearts; and let its sweet influence pervade the home . . The atmosphere thus created will be to the children what air and sunshine are to the vegetable world, promoting health and vigor of mind and body.

While grief and anxiety cannot remedy a single evil, they can do great harm; but cheerfulness and hope, while they brighten the pathway of others, "are life unto those that find them and health to all their flesh." Trust in Jesus, and He will help you to the very end. He is faithful who hath promised.

REPRODUCTIVE: WOMEN -

3 - FEMALE PELVIC ORGANS

PELVIC CONGESTION

SYMPTOMS—A feeling of heaviness and discomfort in the pelvic area. It may result in fatigue or depression.

CAUSES—The preceding sections on menstrual problems cited a wide variety of possible causes, ranging from poor diet to hormonal imbalances. In this present section, we will consider a number of water therapies which were used a century ago by the world's leading hydrotherapy expert.

—Also see Menstrual Disorders (644).

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR PELVIC CONGESTION AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

BASIC APPLICATIONS—Graduated cold applications. Hot **vaginal irrigation**, 10-15 minutes, twice daily. Hot **Blanket Pack** to legs with cold pelvic pack (Wet Sheet Pack over pelvic area), continued to sweating stage. Follow with **cold friction** or Wet Sheet Rub.

PAIN—Prolonged Neutral **Sitz Bath** at 95°-97° F., for 15-20 minutes.

LEUKORRHEA—In addition to the above measures, antiseptic **vaginal irrigation** is recommended. In certain cases, cool irrigation, at 75°-65° F., produces better results than hot irrigation. Constipation and portal congestion must be relieved. Cervical catarrh and erosions often require the use of the curette [a spoon-shaped scraping instrument for scraping foreign matter from a cavity].

ACUTE INFLAMMATION—If attacks of inflammation occur, **rest** in bed; Hot **Hip or Leg Pack**; hot and cold **pelvic compress** or hot and cold pelvic pack.

PELVIC PAIN

SYMPTOMS—Pain in the pelvic area, the cause of which may or may not be due to problems in the female reproductive organs.

CAUSES—Pains in the pelvic region should be identified. The cause could be a problem in the uterus, ovaries, vagina, bowels, or anus. If the pain is on the left or right rear side, the problem is in the kidneys.

—See Menstrual Cramps (649), Painful Menstruation (649), Menstrual Disorders (644), Pelvic Inflammatory Disease (655), Kidney Problems (397), Renal Colic (399), Colitis (373), and Hemorrhoids (378, 676).

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR PELVIC CONGESTION AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

BASIC FACTORS—Remove all known causes: tight bands around the waist, tight shoes, cold extremities, sexual excess.

GENERAL APPLICATIONS—Rest in a horizontal position, with proper general treatment for any existing general or local morbid condition (as anemia, neurasthenia, hysteria, enteroptosis, constipation, or any discoverable pelvic disease). If caused by neuralgia: Give hot **Hip and Leg Pack** or very hot **Revulsive Sitz**, 3 times a day. **Hot-water bottle** over seat of pain and **heat** to feet and legs. Very hot **vaginal irrigation**.

If due to chronic congestion in a pelvic organ: Hot **Hip and Leg Pack** every 2-4 hours, with abdominal **Heating Compress** and heating **leg packs** during the interval between.

If due to inflammation or acute congestion: Hot Hip

and Leg Pack or Hot and Cold **Pelvic Pack** every 2-4 hours. Follow by continuous **heat** to legs with **cooling compress** to lower abdomen, external genitals, and inner surfaces of thighs. **Vaginal irrigation** at 105° F. for 15 minutes, every 3 hours. Apply **Ice Bag** over seat of pain during the hot vaginal irrigation and Hot Hip and Leg Pack.

ENCOURAGEMENT—With the eye of faith, with child-like submission as obedient children, we must look to God, to follow His guidance; and difficulties will clear away. The promise is, "I will instruct thee and teach thee."

PELVIC INFLAMMATORY DISEASE (PID)

SYMPTOMS—Lack of appetite, nausea, fever, chills, generalized aching, fast heartbeat, and occasional vaginal bleeding. There is acute aching of both sides of the abdomen. Bowel movements may intensify the pain.

Frequently there is mild pain that is dismissed as "just cramps." There may be chills, fever, and a smelly vaginal discharge. Even walking may be extremely painful. Chronic PID can develop with a continual pain in the lower pelvis, which is especially severe during intercourse. Be alert to lower abdominal pain which increases with motion (walking).

CAUSES—Pelvic inflammatory disease is an infection of the fallopian tubes, ovaries, and surrounding structures; it results from an infected uterus. It occurs most often among sexually active women between the ages of 15 and 25; and is the most common gynocological reason for the hospitalization of women. However, most women with PID experience no complaints.

Although abortions can result in sterility, pelvic inflammatory disease causes sterility even more frequently. A single attack of this disease produces sterility about 15% of the time.

Other complications include recurring infections, ectopic pregnancy *(653)*.

It is believed that this disorder owes its origin to **unsanitary conditions**, especially during intercourse.

The use of **intrauterine devices** (IUD) is another cause. The disorder was over four times higher in IUD users. They may not have been sterile or may have been inserted by hands that had not been carefully washed.

Douching is yet a third cause of this problem *(see Vaginal Douch, 653)*. When it is not done carefully, bacteria can be flushed up into the uterus. In one study, 90% of the infected women regularly douched; they frequently did this since the ages of 16 or 17.

A fourth cause is **wiping** the wrong way after a bowel movement. Aways wipe from front to back, to avoid spreading germs from the rectum to the vagina. PID occurs when disease-causing organisms travel upward from the vagina and cervix into the reproductive organs.

—Also see Salingitis and Ovaritis (658), Menstrual Cramps (649), Painful Menstruation (649), Menstrual Disorders (644), Ectopic Pregnancy (653), Pelvic Pain (654), Kidney Problems (397), Renal Colic (399), Colitis (373), and Hemorrhoids (378).

NATURAL REMEDIES

• Go on a **fruit and vegetable juice fast** for a time.

• When solid food is started, eat **nourishing food**, free of **sugar** and **oil**. Avoid **junk food**. Do not use **tobacco, caffeine, or alcohol**.

• For pain relief, apply **heat** to the lower back or abdomen. **Sitz baths** are also helpful.

• A **hot half bath** is useful in fighting the infection.

• Every 4 hours, take a **hot footbath** while **ice bags** are on the lower abdomen for 30 minutes, followed by 30 minutes' **rest** in bed. This will speed the healing process.

PREVENTION

• If vaginal **douches** are used, they must be done in a very sanitary manner. *See Vaginal Douche (653).*

• If feasible, avoid the use of **IUDs**.

• **Require** that, immediately prior to intercourse, your spouse carefully wash his hands with soap and water, cleaning beneath the fingernails; then hands should be dryed on a clean towel. Also require that he carefully wash his male organ with soap and water. If he really loves you, he will be glad to do this. If this is not done, Pelvic Inflammatory Disease *(655)* or Kidney Infection *(400)* can easily result. It can take as little as a few weeks of PID to cause permanent sterility!

• Never have **unprotected sex** or **multiple sex partners**.

ENCOURAGEMENT—A great name among men is as letters traced in sand; but a spotless character will endure through all eternity. God stands ready to help all willing to surrender their lives, so He can help them live a better life. Galatians 3:28-29.

CHRONIC METRITIS
(Inflammation of Uterus)

SYMPTOMS—Severe pain in the uterine area.

CAUSES—Metritis is a severe infection in the uterus. It is designated as endometritis if the endometrium is involved. It is designated as myometritis if the uterine musculature (myometrium) is the part which is infected.

The following remedies are especially adapted to the chronic form of metritis.

—See Endometriosis (659); this is a problem with ovarian cysts.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHRONIC METRITIS AND ITS COMPLICATIONS *(Wa-*

ter therapies: how to give: pp. 153-208 / Disease Index: pp. 209-211).

BASIC APPLICATIONS—Graduated cold applications. Hot **vaginal irrigation**, for 10-15 minutes, twice daily. Hot **Blanket Pack** to legs with cold **pelvic pack** (Wet Sheet Pack over pelvic area) that is continued to sweating stage. Follow with cold friction or **Wet Sheet Rub.**

PAIN—Prolonged Neutral **Sitz Bath** at 95°-97° F., for 15-20 minutes.

LEUKORRHEA—In addition to the above measures, use antiseptic **vaginal irrigation.** In certain cases, cool **irrigation**, at 75°-65° F., produces better results than hot irrigation. Constipation and portal congestion must be relieved. Cervical catarrh and erosions often require the use of the curette (a spoon-shaped scraping instrument for removing foreign matter from a cavity).

ACUTE INFLAMMATION—If attacks of inflammation occur, rest in bed. Hot Hip or Leg Pack. Hot and cold pelvic compress or hot and cold pelvic pack.

ENCOURAGEMENT—Trusting in Jesus and humbling submitting to His guidance will brighten and sweeten every detail of life with more than an earthly joy and a higher than earthly peace.

UTERINE BLEEDING
(Metrorrhagia)

SYMPTOMS—Excessive bleeding from the uterus.

CAUSES—This difficulty may be related to Profuse Menstruation *(647)* and Postmenstrual Bleeding *(652)*. You will also want to check those sections for possible causes and many other natural remedies.

Infection is a frequent cause of prolonged bleeding from the uterus.

NATURAL REMEDIES

• After the period is over, take a warm douche of **white oak bark, wild alum root, or bayberry bark.** Steep, while covered, 1 heaping tsp. to a quart of boiling water. Inject 4-5 times a day with a bulb syringe. In addition, drink the herb teas.

—See Profuse Menstruation (647), Postmenstrual Bleeding (652), Vaginal Discharge (662), and Uterine Fibroids (657).

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR UTERINE BLEEDING AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease Index: pp. 209-211).*

BASIC APPLICATIONS—Hot **vaginal irrigation**, short **Hot Hip Pack**, **Hot Footbath.** Follow with **Cold Compress** over stomach and inner surfaces of thighs. In obstinate cases, cold **vaginal irrigation.** Moderately prolonged, very cold, Shallow **Sitz Bath** at 50°-65° F. for 5-15 minutes. Accompanied by Hot **Footbath** when other measures fail. Hot **Douche** to lower spine area over stomach and inner surfaces of thighs, twice daily during intervals.

CAUTIONS—Avoid prolonged Hot **Sitz Bath**, Hot Douche, Hot Leg Bath, Hot **Footbath**, or Hot **Sitz Bath.** In some cases, even avoid **Fomentations** and hot **vaginal irrigation.** It is equally necessary to avoid short cold applications to the lower spine, abdomen, thighs, and feet, as the reflex effects of such applications increase pelvic and uterine congestion.

GENERAL METHOD—It is always highly important to inquire closely for all possible causes of the profuse flow. The cause may be simple anemia from defective nutrition, constipation, sexual excess, enteroptosis, uterine displacement, ovarian or tubal disease, uterine inflammation, or congestion. The most common cause is vegetation of the endometrium, which must be removed by surgical measures. The operation must be followed by treatment for chronic metritis. In many instances, several of these conditions may be combined. Good results generally follow water treatments.

AUTHOR'S NOTE—The following two paragraphs were typed as part of the "how to stop bleeding" section; but they have been placed here instead because they are lengthy, cover the subject of uterine bleeding well, and are not duplicated in this present section of Kellogg formulas.

For hemorrhage from the uterus, apply short, very hot **fomentations** (or the hot douche) to the thighs and spine while an **ice bag** is placed over the lower abdomen and a hot **vaginal douche** is given. Another very useful procedure for uterine hemorrhage is this: a very short hot **douche** to the lower back, the inner surfaces of the thighs, and the soles of the feet. Prolonged **cold applications** to the same surfaces produce like effects. These applications may be made either with or without a simultaneous use of the hot **uterine or vaginal douche**, according to the severity of the case.

Caution: Cold applications must not be used in cases of menorrhagia (excessive bleeding during menstruation, either in amount of loss or number of days), except with the utmost care and discretion, on account of the danger of producing hematoma or hematosalpinx through the sudden checking of the outflow of blood. Therefore, use only less strong measures during the first 24 or 36 hours of the period. Reserve the cold applications to a later time. During the first day, the hot vaginal douche is better and safer. "The danger of producing hematoma is very small after the first day." Kellogg then tells of a girl who had suffered for nearly a year without relief, although she had gone to many physicians. When brought to him, she was "placed at once in a **sitz bath** of about 50° F. for 15 minutes, the feet being placed in **cold** water at the same time, with the result that the hemorrhage ceased at once; and, by continued and repeated application of the cool **sitz bath** for a few weeks, the difficulty was relieved. The above measures will not solve the problem when the hemorrhage is due to vegetation, a uterine fibroid, or a malignant disease. In cases where the hemorrhage is accompanied by severe nerve pain or acute pelvic inflammation, use **very hot** rather than very cold applications to the inside of the thighs and lower back region. This should be brief and the temperature sufficiently high to be somewhat painful; it is best done by **sponging** the parts with water at 140° F. or by applying, for 1-2 minutes, **cloths** wrung from 140° F. water.

ENCOURAGEMENT—Trust in the Lord and never forsake Him, regardless of what may happen.

UTERINE FIBROIDS

(Fibroids, Uterine Fibroma, Uterine Polyps)

SYMPTOMS—There are no symptoms, in half of the cases. But these growths can cause abnormally heavy and frequent menstrual periods; they even result in infertility. Other possible indications: anemia, fatigue, bleeding between periods, weakness from blood loss, increased vaginal discharge, bleeding after intercourse.

Most small fibroids (about half of them) produce no symptoms. The common symptoms of larger fibroids are prolonged menstrual bleeding, pain during menstrual periods, heavy flow during periods.

Depending on their location, fibroids can cause pain in the back, legs, and/or pelvis. They can exert pressure on the bladder or bowels; fibroids even block the flow of urine through the urethra.

CAUSES—Uterine fibroids are common noncancerous tumors that grow slowly within the muscular wall of the uterus. They vary in size from a millet seed to large enough to fill the entire abdominal cavity, and may be single or multiple. The tumors are completely covered by a fibrous connective tissue capsule. They may be as small as a pea or as large as a grapefruit. Larger ones may affect menstruation or case infertility.

Fibroids rarely cause symptoms before the age of 30; but they are common after that age, especially among blacks (3 times as likely). 20%-30% of women have them. They are the most common of tumors. The type of symptoms shown depends on where the fibroids are located. They can exert pressure and cause pain to the bladder, bowels, or even block the urethra (producing kidney obstruction).

When they produce no symptoms, *they should be left alone;* but they should be removed if unusually rapid growth occurs.

If the flow is far too heavy or rapid, you may have interfering fibroids.

Fibroids do not occur before puberty; and they usually stop growing after menopause. They increase in size at times when there are increased levels of estrogen in the body. This increased size can be caused by **pregnancy**, taking the **contraceptive pill**, or **hormone replacement therapy (HRT,** *652).*

NATURAL REMEDIES

• Taking **oral contraceptives** increases the likelihood of developing fibroids. If fibroids are found, do not take oral contraceptives with a high-estrogen content; the estrogen may make them enlarge faster.

• Over 30% of the **hysterectomies** done in the U.S. are for the purpose of removing fibroids. But, if possible, do not remove them. Fibroids generally shrink when menopause begins. This is due to the decreased amount of estrogen in the body from that time onward.

• An alternate surgery is a **myomectomy**, which removes the fibroids and leaves the uterus intact. It is true that there is a slightly higher possibility of complications with a myomectomy; the results are not always permanent (50% of the time, new fibroids will appear). But a hysterectomy works hovac with the hormonal system.

If you practice the following rules, you will be far less likely to develop fibroids, or have them enlarge.

• A simple, nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts** (supplemented with **vitamins and minerals**) strengthens the body. Drink **carrot juice** daily. **Flaxseed oil** (2 tsp. daily) should be your only oil source. **Vitamin C** (1,000-2,000 mg) and **vitamin E** (400-800 IU) daily are important.

• Do not eat large amounts of food! **Do not overeat** on protein! Obtain adequate **rest** and get outdoor **exercise.**

• Avoid high-fat foods, including **full-fat dairy products.** They cause imbalanced estrogen levels, a clear cause of fibroids. **Obesity** from a high fat diet also increases the risk. Avoid **concentrated starches. Also avoid fried, sugary, and salty foods.**

• Avoid **caffeine** and caffeine-containing foods, such as **chocolate.** Avoid cooked **spinach, rhubarb** (both high in oxalic acid), and **carbonated sodas.**

• Avoid hormone-laden **meat.** Do not **smoke** or be around those who smoke.

• Do not take **drugs** (including HRT). **Do not overindulge** in sex.

• Obtain adequate **iodine** from seaweed. Iodine deficiency can be caused by **alcohol, refined sugars, and X-rays.**

• Do not take any **estrogen compounds.**

• *Also read Hysterectomy Problems (664).*

ENCOURAGEMENT—God wants us to be happy. He desires to put a new song on our lips, even praise to our God. He can give you overcoming strength. Walking with Him, you can have peace and assurance.

Speak of Jesus. Educate the tongue to speak of His mercy, to tell of His power, showing forth the praises of Him who hath called you out of darkness into His marvelous light.

Thank God every day of our life that, through the enabling grace of Christ, you can live a clean life in obedience to the ten commandments.

UTERINE PROLAPSE

(Prolapse of Uterus, Pelvic Floor Hernia)

SYMPTOMS—A feeling of fullness in the vagina. A dragging sensation or mild pain in the lower back. Increased frequency of urination. Difficulty urinating or defecating. A lump protruding into, or even out of, the vagina. Leakage of urine when laughing or coughing.

CAUSES—Prolapse of the uterus (which usually also prolapses the vagina) is a downward displacement

of the uterus and/or wall of the vagina. Both are held in place by strong pelvic muscles and ligaments. If they become weakened or stretched (often as a result of **childbirth**), the displacement can occur. Women who have **given birth to several children** or have had a **difficult or prolonged labor** are more likely to have a prolapse.

It is after menopause that prolapse generally occurs, as a result of lessened amounts of estrogen. **Obesity**, a **chronic cough, asthma, diabetes, chronic bronchitis, or straining** during bowel movements are other causes. Prolapse is more common in white people; the reason is not known. Most prolapses occur before the age of 55.

When the uterus drops too far, a *cystocele* results (the bladder bulges into the front wall of the vagina or a *ureterocele*; a urethra that does the same).

NATURAL REMEDIES

• Eat a nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts**. Include enough **fiber**.

• Take a multivitamin. **Vitamin C** (2,000 mg) and **bioflavonoids** (100 mg) lessen bladder infections.

• **Calcium** (1,200 mg) and **magnesium** (1,000 mg) provides needed minerals to strengthen uterine support.

• **Exercises** that strengthen the pelvic floor muscles can help treat a mild prolapse and prevent urinary incontinence. These are called **"Kegel exercises."** You can do them sitting, standing, or lying down. Do them as often as you can, at least once an hour throughout the day. To identify the proper muscle, imagine that you are urinating—and have to stop suddenly. The muscles which you feel tightening are the pelvic floor muscles that support the bladder, uterus, and rectum. Contract (tighten) these muscles and hold for 10 seconds. Relax slowly. Repeat 5-10 times, as often as you can.

• Rubbing **wild yam** cream on the pelvic area is good; it helps to strengthen the supporting tissues.

ENCOURAGEMENT—How thankful we can be for the enabling grace of Christ, which alone can give us the victory over sin.

SALPINGITIS AND OVARITIS
(Fallopian Tube Inflammation, Ovarian Inflammation)

SYMPTOMS—Tenderness of one or both fallopian tubes. In severe cases, there is pelvic pain, usually felt on both tubes. Vaginal discharge, swelling, fever, possible abscesses. Peritonitis may later occur. Peritonitis *(541)* is inflammation of the peritoneum, which is the membranous coat that lines the abdominal cavity.

CAUSES—*Salpingitis* is inflammation of the fallopian tubes. *Ovaritis* is inflammation of the ovaries. Ovaritis may involve the substance of the organ *(oophoritis)* or its surface *(perioophoritis)*. This may be acute or chronic. These technical words are defined because it is easy to confuse ovaritis and oophoritis in the medical literature.

The fallopian tubes and ovaries are normally protected by the acidic vagina, the mucous plug of the cervix, and cilia in the uterus and fallopian tubes. But there are five situations, during which infection can more easily penetrate those delicate organs:

During **menstruation**, the vagina is alkaline, the plug is gone, and only a healthy flow protects the fallopian tubes and ovaries from infection. **Sexual intercourse with an infected individual who has a venereal disease** can result in these problems.

Activity, during a period, can introduce bacteria.

During and just after childbirth.

Following an abortion. It has been well-documented that abortion clinics tend to operate on a mass-production basis instead of the careful and sterile conditions one would find in a hospital operating room.

Use of an **IUD** (intrauterine device) is also a significant cause of infection.

General **enervation or local congestion** due to a variety of causes—ranging from **poor diet, overwork, constipation** *(367, 723)*, **pelvic infections**, etc.

Once salpingitis or oophoritis occurs, there is a 70% likelihood of sterility. *(See Female Infertility Problems, 666).*

NATURAL REMEDIES

Antibiotics are usually given; but they only work on a short-term basis. Frequently a chronic case of salpingitis follows. While it is being treated, scar tissue and other blockage can occur on the tubes. Whether or not antibiotics are used, it is highly recommended that natural methods also be used. The objective is to clear up the infection as soon as possible, to prevent possible sterility.

• **Vegetable juice fasting** for a time, followed by all **raw fruits and salads**. Follow this with a **nourishing vegetarian protein diet**. **Vitamins A** (in the form of beta-carotene: carrot juice and green and yellow vegetables). **Vitamins C** (2,000-5,000 mg), **E** (800 IU), **also zinc** (30 mg) are especially needed. But include a full **vitamin / mineral supplement**.

• These fasts will need to be continued until all acute symptoms are gone. If a chronic infection has already started, then alternate the fasts with nourishing food.

• Use **hot and cold contrast sitz baths**, to remove pelvic congestion and infection. Do this 3-4 times a day. The alternate hot and cold bath pumps healing blood throughout the affected area.

• Alternate 2-3 minutes **hot** and 2-3 minutes **ice-cold compresses** directly over the painful pelvic area.

• Helpful herbs include **echinacea, goldenseal, black cohosh, black haw, and bearberry**.

• Here is a douche for ovarian infection: Prepare a rosemary tea with 1 Tbsp. dried **rosemary** to 2 quarts boiling water. Steep, cool. Use for 7 days as a vaginal douche. Or use **red raspberry**, preparing it in the same manner.

—*Also see Pelvic Inflammatory Disease (655).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SALPINGITIS AND OVARITIS AND ITS COMPLICATIONS
(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).

(1) ACUTE FORM —

GENERAL CARE—**Rest** in bed. Hot **vaginal irrigation**, twice daily. Hot **pelvic pack**. Hot Leg Pack or Hot Footbath, twice daily. Follow by **cold friction**. If suppuration of tubes occurs, operation is usually necessary. During the first few days, **ice bag** over inflamed part. Interrupted, at intervals of 1-3 hours, by **Fomentation** for 15 minutes, or use hot and cold **pelvic compress** for 30 minutes. Heat the limbs.

CAUTIONS—Avoid general cold applications and cold applications to the feet.

(2) CHRONIC FORM —

BASIC APPLICATIONS—Hot **vaginal irrigation**, twice daily. Hot **rectal irrigation** once daily, if exudation in pelvis is extensive. Pelvis **massage**. General **tonic applications**, general **massage**, **sunbaths**. **Outdoor exposure with proper protection**, carefully avoiding chill. Also nourishing and blood-building **diet**. If suppuration is present, give **drainage**. Removal of the diseased appendages is sometimes required; but, in most cases, this can be avoided by the proper application of water treatments at the outset.

ENCOURAGEMENT—You are the Lord's; He created you. You are His by redemption; He gave His life for you. Preserve every portion of the living machinery, so that you may use it for God. Psalm 16:5.

ENDOMETRIOSIS
(Ovarian Cysts)

SYMPTOMS—Abdominal pain, back pain, pelvic pain, constipation, bladder problems, bleeding between periods, very painful menstrual cramps, and the passing of large clots and shreds of tissue during the menses. In 30% of the cases, there are no symptoms. Iron anemia commonly occurs.

CAUSES—Tissue cells, which appear to be like those in the endometrium (the lining of the uterus), are able to grow elsewhere in the abdominal cavity: the ligaments, ovary, bladder, rectum, bowel, appendix, etc. They rarely occur outside the pelvic area. These tissue implants, wherever they settle in the body, will be affected by estrogen and will bleed during the monthly.

Endometriosis is generally diagnosed between 30 and 40 years of age. About 25%-30% of white women have it; but blacks rarely do have this. There is a **hereditary** factor, passing from mother to daughter.

The problem lessens during pregnancy and lactation; and it sometimes does not return. But, more often, it does return and continues **until menopause**; after which time, it becomes inactive, though scar tissue remains (unless **hormone replacement therapy** is done after menopause).

A frequent result of endometriosis is the inability to become pregnant. Most women who have the disorder have never been pregnant. *See Female infertility Problems (666).* **Tampons** reduce the internal flow and can increase the likelihood of developing or increasing the implants. They also increase pain and cramping. A hysterectomy will not solve the problem if implants have occurred elsewhere in the pelvic region.

When **internal fetal monitors** are placed in an expectant mother, the chances of later developing endometriosis are increased threefold.

Avoiding **sexual activity during menstruation** reduces the risk of developing this disorder.

NATURAL REMEDIES

DIET

• The **diet** must also be improved. A simple, nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts** (supplemented with **vitamins and minerals**) strengthens the body. Eat much **raw food**; it is high in **fiber**. Drink **carrot juice** daily. **Flaxseed oil** (2 tsp. daily) should be your only oil source.

• A **B-vitamin supplement, vitamin C** (1,000-2,000 mg), and **vitamin E** (400-800 IU) are important. Also needed is **calcium** (2,000 mg) **and magnesium** (1,000 mg; to reduce nervous tension), and **potassium** (5,500 mg).

• Do not use **caffeine** products; for this aggravates the pain. A diet that is high in **sugar** and **white-flour products** contributes to endometriosis.

• Eliminate foods containing **hormones and antibiotics**; since they upset the natural balance in the body and can lead to endometriosis. Such foods include **meat** and **dairy products** (including **eggs**).

• Hot and cold sitz baths, **for 20-30 minutes at a time, help reduce congestion. Another help is a** hot footbath **for 30 minutes. Conclude either treatment with a** cold mitten friction.

• **Hot fomentations** to the lower abdomen are helpful; and, it is reported, when this is done faithfully, there frequently is complete remission.

• An **ice bag, hot-water bottle, or heating pad** may be placed on the lower abdomen or back.

OTHER HELPS

• **Fast** for 3 days (on distilled water and fresh fruit and vegetable juices) each month before the anticipated beginning of the menstrual period.

• Helpful herbs include **black cohosh (to balance hormones), echinacea and goldenseal** (to eliminate infections), **cayenne** (to stop bleeding), and **burdock** (to cleanse the blood).

ENCOURAGEMENT—With the rich promises of the Bible before you, you can have assurance of God's love for you. As you read the promises, remember they

are the expression of unutterable love and pity. He loves you. Revelation 21:4.

OVARIAN INSUFFICIENCY

SYMPTOMS—An inadequate amount of female sexual hormones are being released by ovaries.

CAUSES—The ovaries store and release eggs, which pass along the fallopian tubes into the uterus. But they also produce important female hormones: estrogen and progesterone. But secretion of these hormones is controlled by the follicle-stimulating hormone and the luteinize hormone, which are produced in the pituitary gland in the brain.

Causes of ovarian insufficiency may include **poor diet, lack of exercise, and overwork**.

NATURAL REMEDIES

• A nutritious diet of **fruits, vegetables, whole grains, legumes, and nuts** that is supplemented with **vitamins and minerals** strengthens the body. Drink **carrot juice** daily. **Flaxseed oil** (2 tsp. daily) should be your only oil source. **Vitamins C** (1,000-2,000 mg) and **E** (400-800 IU) are also important.

• Obtain adequate **rest** and outdoor **exercise**.

• The seed oil of the **evening primrose** helps to balance the hormonal system.

• An infusion of **damiana** leaves regulates menstruation and stimulates ovary function.

• An extract of the plant and powdered root of the **pasqueflower** stimulates ovaries, calms menstrual pain, and regularizes menstruation.

ENCOURAGEMENT—Obedience to God's Word is our only safeguard against the evils that are sweeping the world to destruction.

VAGINITIS

(Vaginal Candidiasis, Yeast Vaginitis, Trichomoniasis, Atrophic Vaginitis, Bacterial Vaginosis)

SYMPTOMS—Vaginal pain or tenderness, itching, increased vaginal discharge, burning sensation, painful intercourse, and urination.

CAUSES—Vaginitis is an inflammatory infection of the vagina. There are four types:

1 - ***Yeast vaginitis***, also called monilia or vaginal candida. The yeast infection causing it is *Candida albicans (see candida, 215)*. It is more common in pregnant women and diabetics *(547)*. Also as common are those on **antibiotics, oral contraceptives,** or **long-term steroid therapy. Changes in the vaginal pH** (caused by tap water, tub baths, certain additives to bathwater, and some commercial douches) permit the yeast to grow in the vagina. The discharge is moderate in amount; but it is thick yellowish, or white, and curd-like. It may cause severe itching of the external genitalia. *(See Candida, 215)*. Yeast vaginitis is the most common form of vaginitis.

2 - ***Trichomoniasis***, caused by *Trichomonas vaginalis*. This is a protozoan which likes an alkaline environment. It may be **sexually transmitted** (so both should be treated at the same time). In the man, there are no symptoms; in the woman, there is a greenish white or heavy yellow, frothy discharge which may have a slight odor. The discharge causes itching, burning, and reddening of the skin. If it spreads to the urethra, there may be frequent burning urination. Flagyl, which is a medication for this, is known to cause cancer in animals. *See Trichomoniasis (631)*.

3 - ***Bacterial vaginosis*** is the most common infectious cause of vaginitis, being twice as common as candidiasis *(215)*. The predominant vaginal lactobacillus flora is replaced by anaerobic bacteria that produces a "fishy" vaginal discharge, especially noticable during intercourse.

4 - ***Atrophic vaginitis*** occurs in postmenopausal women and those whose ovaries have been surgically removed. Adhesions form and there is a high susceptibility to infection. Symptoms include itching or burning, painful intercourse, and a thin watery discharge that is sometimes tinged with blood.

Vaginitis may have one or more of the following causes: **bacterial or fungal infection, intestinal worms, vitamin B deficiency, congestion of the pelvic organs, gonococci, chemical irritation (strong douches), mechanical irritation (tampons), drug medications, and deodorant sprays**.

Other contributing factors include **tight and nonporous clothing, diabetes,** and the use of **antibiotics**.

The **birth control pill** causes a B_6 deficiency and changes the vaginal pH.

Pregnancy makes the vaginal pH somewhat more alkaline and also contributes to its glycogen content. This is favorable to yeast infection.

Tight-fitting **synthetic underwear** provides poor ventilation and a warm, moist environment for yeast infection to occur.

Eating **excess sugar and refined carbohydrates** feed yeast infection. This is important! **Alcohol** also changes into sugar (glucose) in the body.

Normally, the pH of the vagina is acid; anything that alkalinizes it contributes to vaginitis. Causes include **diabetes** *(547)*, **menstrual period** *(644)*, **pregnancy** *(670)*, **and the time just after a miscarriage** *(678)* **or abortion**.

The most common aftereffect of **antibiotic therapy** in women is a vaginal yeast infection. About 5% of women given **tetracycline** for acne develop vaginitis.

Frequent **douching** upsets vaginal pH and flora.

Excessive sex or intercourse, without proper lubrication, irritates vaginal walls.

Intrauterine devices (IUDs) produce a favorable environment for yeast infection; since they reduce normal vaginal secretions.

Four primary factors are **antibiotics, oral contraceptives, diabetes, and pregnancy**.

If you have chronic or persistent vaginitis, you may have **diabetes**. If you have recurring vaginitis, you may be getting it from your **husband**.

One or another form of vaginitis accounts for about half of all gynecologic visits.

NATURAL REMEDIES

• All of the **above factors** should be carefully noted.

DOUCHES

• For yeast vaginitis, use a hot **soda-water douche** (1-3 teaspoons of soda to 1 quart water) twice a day for 7 days, then once a day for 30 days.

• If there is not clear and rapid improvement, a trichomonas may be the cause. If so, apply a **vinegar douche** (1-4 tablespoon of vinegar to 1 quart water) twice a day for 7 days, then once a day for 30 days.

• **Garlic-water douche** (1 clove into part of a quart of boiling water; add the remainder of the quart, let cool to 110° F. twice a day for 7 days, then once a day for 30 days). Or blend a small clove of garlic with a pint of water and strain before using.

• For organisms other than yeast and trichomonas, a warm normal **saline douche** (1 teaspoon of salt per quart water) is useful.

• Do not use **sweet-smelling douches**. Plain acidophilus or a plain yogurt douche is much better. *Also see Douches (653).*

• Douche with an herb tea of any of the following: **chaparral, goldenseal, white oak bark, or witch hazel**. A douche of **slippery elm tea** is an old remedy for irritated vaginal membranes.

• Make a tea of equal parts **goldenseal, chaparral, comfrey root, and slippery elm**. Use 1 oz. herb per pint of water, simmer gently for 30 minutes. Strain, cool and add 1 Tbsp. **vinegar** per pint. Use as a douche once a day for 1-3 days.

• Dr. Christopher recommends a douche of **bayberry**, as a cleansing to the membrane and toning of the tissues.

• Here is a yeast infection douche: Add 1 cup boiling **water** to 1 tsp. each of **chamomile flowers** and **goldenseal** powder. Steep 15 minutes. Strain out the flowers. Add 1 cup strained **comfrey leaf** or **comfrey root** tea. Steep. Mix 2 Tbsp. of apple cider **vinegar**, 1 tablet of **acidophilus** which is liquefied, 2 Tbsp. **of witch hazel** liquid, plus 2 quarts **water**. Douche every other day for a week. This is very effective and should help control the infection.

ALTERNATIVES TO DOUCHING

• Beware of regular **tub baths**, unless the tub has been sterilized! Take showers instead.

• **Hot sitz baths**, 2-3 times a day, will soothe local irritation; but it is important that the tub be sterilized first, lest bacteria be introduced into the vagina.

• An alternative to douching is the **sitz (sitting) bath**. Fill a shallow tub to the hip with warm water; then add salt (enough to make the water taste salty, about ½ cup) to match your body's natural saline state. Add ½ cup vinegar, to help rebalance the vaginal pH to 4.5. Then sit in the water, knees apart, until it gets cool. The bath will do the cleansing. Douching can be done with a similar mixture (4 teaspoons of vinegar to 1 pint of water). Vinegar has the same pH as a normal vagina.

• Another alternate to douching is to apply **garlic suppositories**. Peel a clove of garlic, with no nicks on it, and wrap it in a piece of sterile gauze, with a clean, unbleached string attached. Lubricate the suppository with pure organic vegetable oil and insert it in the vagina; yet keep a piece protruding outside. Insert a freshly prepared packet into the vagina each night for up to 6 consecutive nights. In many cases, this cures the infection.

• Add a tsp. of fresh **garlic juice** to a few tablespoons of yogurt. Either soak a tampon in it or use it as a douche (twice a day while symptoms persist). *Allicin* is the major compound in garlic which kills *Candida albicans*, the fungus causing yeast infections.

• **Tea tree oil** is good for vaginitis. Use creams, suppositories, etc. The oil contains *terpinen-4-ol*, which is especially effective against candida. Research studies have found it to be as effective as medicinal drugs, but without the side effects.

• Mix 2-3 drops of **tea tree oil** in a Tbsp. of plain yogurt, soak a tampon in it. Insert it at night for up to 6 nights. But do not take tea tree oil (or any essential oil) internally; they can be poisonous.

• Cardmom also contains *terpinen-4-ol*. You can substitute it for tea tree oil.

• Apply an opened **vitamin E capsule** to the area, to reduce itching.

• For atrophic vaginitis, apply natural **progesterone cream** to the vagina. Prescription ointments for this condition contain estrogen. But they increase the need for **vitamin B_6** (500 mg). Vaginal absorption of estrogen may be dangerous.

HERBS

• **Aloe vera** is helpful for infections, including yeast infections. It can be taken internally or used as a douche.

• Also helpful are **bayberry, goldenseal, yarrow, marshmallow root, calendula, chamomile, pau d'arco, and dandelion**.

• Combine equal amounts of powdered **echinacea, chaparral, goldenseal, and squaw vine**. Fill gelatin capsules. Take 2 capsules, 3 times a day, before meals. Also take a tsp. of garlic oil with meals.

• **Goldenseal** is a broad-spectrum herbal antibiotic: it contains *berberine* and *hydrastine*. These compounds treat the trichomonal form of vaginitis, which is caused by an amoeba. Take it orally as a tea, capsule, or tincture.

• Combine **goldenseal** with **echinacea**, which is both antibiotic and immune-stimulating.

• Add 1 oz. each of **echinacea root, goldenseal root, ginseng root, yellow dock root**, and 2 oz. **echinacea root**. Either prepare as a tea to drink or put the mixture into gelatin capsules and take 2-3 a day.

DIET

• Adequate **rest, a healthful diet, and meticulous personal hygiene** with frequent **bathing** are important.

• According to the *New England Journal of Medicine*, **vegetarian** women eliminate 2-3 times more estrogen in their feces than nonvegetarians. They eat diets low in fat and high in fiber.

• Take a complete **multivitamin supplement**, which includes **vitamins A**.

• Include adequate **fiber** in the diet.

• To normalize vaginal flora, apply **acidophilus bacillus** (6-8 capsules, from a health-food store) or plain *yogurt* to the vagina.

• Eliminate coffee, alcohol, sugar and refined carbohydrates. Diets high in sugar can radically change the normal pH of the vagina.

• One research study showed that vaginitis may be due to **milk or pollen allergy**.

• Do not take **iron supplements** until the infection is reduced. Infectious bacteria require iron for growth.

OTHER HELPS

• **Other precautions include:** Dry thoroughly after the daily bath (with a hair dryer, if desired). Do not dust with cornstarch; this encourages yeast growth. (Talcum powder is powdered rock and can cause cancer.) Alternate cotton tampons with sanitary napkins, to permit natural vaginal flushing.

• Each time you use the bathroom, day or night, **wipe** from front to back, away from the vagina. While on the toilet, **pour a full cup** of hot or cold (not lukewarm) water through the pubic hair and let it run over the vaginal area. Blot dry with tissue. This will eliminate many cases of vaginitis accompanied by itching.

• The **vulva** must be kept as clean as possible and very dry, because infection spreads in moisture and heat. So dry well after a shower or bath.

• Thoroughly clean diaphragms.

AVOID

• Wear **cotton underpants** rather than close-meshed synthetic or silk. Candida survives normal laundering. To kill the yeast spores deposited on panties, either boil them, soak in bleach 24 hours, or press with a hot iron. Avoid **panty hose, girdles, or synthetic pants** or panties. **Tight-fitting clothing** increases moisture retention. Wear cotton clothing. Change from **bathing suits** soon after swimming. **Clothing** that comes in contact with your vulva must be washed between each wearing.

• Avoid **chemical deodorant sprays, colored toilet paper, harsh soaps or detergents**. Do not use commercial **sexual lubricants**.

• Avoid feminine hygiene **sprays or bubble baths**. The chemicals in them can induce vaginal problems.

• **Synthetic hormones**, including **birth control pills**, can alter the hormonal balance of the vagina.

• Avoid the use of dry **tampons**. They can injure the vaginal wall. If you must use them, alternate with pads part of the time.

• When **washing underwear**, do not wash it with socks and stockings, lest foot infections be transferred to the pelvic organs. Cotton underwear can be microwaved to destroy yeast. Wet it, wring it out well, and microwave on high for 30 seconds.

• Do not have **marital relations during menstruation, pelvic problems, or other infections** (if you can avoid it). At least wait before doing again, perhaps a few days immediately afterward.

• Always require that your **husband wash** his hands and genitals well before intercourse. If he really loves you, he will gladly do this.

• If you have vaginitis, **alert** your husband so he can be treated for candida also. Otherwise, he may reinfect you.

For more information on dealing with a yeast infection, see *Candida (215) and Athlete's Foot (292).*

—Related articles include Chlamydia (630), Toxic Shock (663), Leukorrhea (663), Trachomoniasis (631), and Douches (653).

ENCOURAGEMENT—By sin, earth was cut off from heaven and alienated from its communion. But Jesus has connected it again with God's throne. His love has encircled man and opened the way, so you can find God anew and walk with Him every day.

VAGINAL DISCHARGE

SYMPTOMS—Irritation of vagina and vulva, redness, intense itching, odor, discharge of mucus, and pain during intercourse.

CAUSES—A mucous discharge from the vagina is normal during the childbearing years, especially as part of the menstrual cycle.

The discharge may be abnormal if it is excessive, yellow or green, odorous or offensive in smell, and causes irritation or itching. Vaginitis (inflammation of the vagina, *660*) is among the most common causes of vaginal discharge; it is often accompanied by itching of the vagina and vulva.

A normal discharge is used by the body to eliminate toxins. But this discharge can become abnormal when there is a **bad diet and lifestyle**. Because of the modern Western diet, discharge problems have been quite common.

The diet is loaded with **fat**, which stimulates fat cells throughout the body to produce estrogen. The lack of **fiber**, along with the excess estrogen, encourages the growth of intestinal bacteria (clostridia) which converts bile acids into additional estrogen-like hormones.

Using **birth control pills** affect the mucous membranes of the vagina, increasing or decreasing the discharge. They disrupt normal vaginal health by causing it to be become too alkaline. This condition encourages the growth of bacteria and the fungus known as *Candida albicans*.

Allergies are another cause of abnormal discharge. Foods, especially food additives and colorings, may be the source; or it may be soaps and bubble baths.

NATURAL REMEDIES

• Eat a simple, nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts** (supplement with **vitamins and minerals**). Drink **carrot juice** daily. **Flaxseed oil** (2 tsp. daily) should be your only oil source. **Vitamin C** (1,000-2,000 mg) and **vitamin E** (400-800 IU) daily are also important.

• Do not **overeat**! Avoid high-fat foods, especially **animal fat** and **full-fat dairy products**. They cause imbalanced estrogen levels. **Obesity** increases the number of fat cells in your body. Avoid **concentrated starches. No fried, sugary, and salty foods**.

• Obtain adequate **rest** and get outdoor **exercise**.

• *Go to Vaginitis (660) for many more helps, including douches. Also see Leukorrhea (below), Profuse Menstruation (647), and Uterine Bleeding (656).*

ENCOURAGEMENT—There never was a more important time to study the Bible than now. Deceptive influences are on every side. We need the protection of God's angels every day. Do nothing that will separate you from Christ!

LEUKORRHEA

SYMPTOMS—A thick whitish vaginal discharge. Related symptoms may include burning and itching of the vulva.

CAUSES—Leukorrhea is a nonspecific vaginal discharge that contains mucus and white blood cells; sometimes it is tinged with blood. The amount of discharge increases when **estrogen levels** are heightened. If blood is present, a more serious disorder may be indicated.

It is often a symptom of vaginal infection. Infective causes include **candida** (*215*, also called yeast infection or monilia), **Trichomonas vaginalis** (*631*), **Vaginitis** (*660*), **chlamydia** (*630*), **hemophilus vaginitis**, **streptococcus or neisseria gonorrhea** (*629*). It can also be caused by **staphylococcus**; this is the bacteria which will cause **toxic shock syndrome** (*663*), when vaginal tampons are used incorrectly. Culture growth of bacteria and examination of discharge under a microscope is needed for specific diagnosis.

Other causes include a **vitamin B complex deficiency**, **excessive douching** (*douches, 653*), the use of **antibiotics or oral contraceptives**, or **intestinal worms** (*588*). A **hormonal imbalance**, due to poor diet or eating animal fat can be another cause.

Leukorrhea frequently occurs where there is **diabetes** (*547*) or **pregnancy**.

NATURAL REMEDIES

• The infective cause should be determined and then treated. See articles listed above.

• Wear white **cotton underwear**, so air can circulate freely. Keep the area clean and dry.

• To restore natural vaginal flora, douche with 6-8 **acidophilus** capsules or plain yogurt. Also douche with fresh **garlic** juice and water. *See Vaginitis (660) for much more on douches.*

• **Pau d'arco** tea is a natural antibiotic. Drink 3 cups daily.

• Use an injection of the distilled extract of **witch hazel** in warm water as a warm infusion.

• Mix equal parts **parsley root, uva ursi, burdock root, and parsley root**. Use 1 oz. per pint of water. Alternately, take 2 capsules of equal parts **echinacea, goldenseal, and myrrh**. Every 2 hours, alternately take first one, then the other, of the above two herbal compounds.

• Mix equal parts **shepherd's purse** and **blind nettle**. Steep 1 tsp. in ½ cup boiling-hot water. Take 1-1½ cups a day, unsweetened, in mouthful doses.

• Once each day, use a douche made of **white oak bark tea** or **bayberry bark tea**.

• Here are several other herbal douches which are effective: A decoction of **walnut** leaves and/or fruit green rind. **Myrtle** berries and leaves. **Pomegranate** flowers and bark. **Bistort** rhizome. **Rhatany** bark. **Great burnet, blind nettle, white willow, goldenseal,**

Also see Vaginal Discharge (662).

ENCOURAGEMENT—Let the peace of God reign in your soul. Then you will have strength to bear all suffering; and you will rejoice that you have grace to endure. God can give you help that no one else can.

TOXIC SHOCK SYNDROME

SYMPTOMS—Sudden onset of the condition: diarrhea, vomiting, headache, confusion, skin rash, and sore throat. ***There can be rapid deterioration, and even death, within 48 hours.***

CAUSES—Prevention is far better than treatment. Aside from the name, this is an actual disease. Circumstances have permitted staphylococcus into the system, producing exotoxins faster than the body defenses can eliminate them.

Young women between 13-32 years of age contract 85% of this disease. In their case, the cause is usually the improper use of vaginal **tampons**. A single one is kept in place more than 4 hours. This produces an ideal environment for rapid staphylococcus growth with terrible consequences.

Another cause is **tight-fitting clothes, or synthetic or silk undergarments** which do not permit air to circulate to the vagina. A less frequent cause is **food poisoning** (*585*), caused by poor food handling.

NATURAL REMEDIES

• ***Immediately take the person to the emergency room***, at the hospital. ***Do not let the staff make you wait*** awhile! The person needs fluids and electrolytes by IV, along with penicillin.

—Also see Leukorrhea (663).

ENCOURAGEMENT—Praise the Lord. Talk of His goodness; tell of His power. He is the health of your countenance, your Saviour, and your God. Psalm 92:1-2.

HYSTERECTOMY

(Post-Hysterectomy)

SYMPTOMS—Depression, urinary tract problems, joint pain, headaches, dizziness, insomnia, fatigue, loss of bone mass, and increased likelihood of heart disease.

CAUSES—A hysterectomy is the surgical removal of the uterus; it is done to remove fibroids (30% of the time), endometriosis (20%), or uterine prolapse (18%).

There are three types of hysterectomies, each more complete than the preceding one:

*1 - **Partial hysterectomy:*** The uterus is removed; but the cervix and other female reproductive organs remain.

*2 - **Total hysterectomy:*** Both the uterus and cervix are removed.

*3 - **Panhysterectomy:*** The uterus, fallopian tubes, and ovaries are removed.

Certain difficulties lead to the decision to have a hysterectomy. These may include urinary tract problems, lengthy and heavy periods, a heavy and bloated feeling, abdominal swelling due to fibroids, infertility resulting from fibroids or endometriosis, or reactions to drugs given for endometriosis.

Yet the problems resulting from a hysterectomy are, if anything, more significant and sometimes devastating:

The hormones are suddenly stopped. This sends shock waves throughout the entire system.

Lack of those hormones can result in immense bone-mass loss, osteoporosis *(509)*, and greater likelihood of heart disease *(419)*, urinary tract problems *(393-403)*, dizziness *(451, 671)*, insomnia *(448)*, headaches *(456)*, and general fatigue *(213-218)*.

Even those women who do not have their ovaries cut out still experience a drastic lessening of estrogen output. In addition, menopause begins years earlier for half the women who are spared their ovaries.

Depression *(494)* may also occur; however, reduced sexual desire frequently does occur. There is a 50% chance of a minor post-operative complication (such as fever, bleeding, or wound healing). One in a 1,000 die; and 10% require a blood transfusion.

It has been estimated that many of the 600,000 hysterectomies performed in America each year are totally unnecessary. No foreign country has even half that per-capita amount.

Once the operation has been performed, you are permanently sterile; and it cannot be reversed.

It is often recommended that the ovaries also be taken out, because they might later become cancerous. Yet statistics reveal that ovarian cancer is rare.

It is frequently recommended that a hysterectomy be performed to eliminate fibroids; since they might be malignant. But modern technology permits them to be examined, by ultrasound, for abnormalities. A myomectomy should be performed to remove problematic fibroids, not a hysterectomy. *Also see Fibroids (657).*

Women who have hysterectomies have a higher incidence of cardiovascular disease *(418-439)*.

If you decide to have a hysterectomy, ask that a horizontal incision be made, not a vertical one. The scar will thus be less noticeable afterward.

NATURAL REMEDIES

IF YOU HAVE HAD A HYSTERECTOMY

• Eat a **nutritious diet**, with **vitamin / mineral supplementation**. This will reduce the amount of estrogen deprivation, especially if you still have your ovaries.

• **Vitamin B complex, vitamin C** (1,000-3,000 mg; to bowel tolerance, without producing a slight diarrhea), **vitamin E, Calcium** (2,000 mg), **magnesium** (1,000 mg), **potassium** (100 mg), and **flaxseed oil** (2 Tbsp.) are important.

• Avoid **caffeine, dairy products, processed foods, meat, sugar, and fried foods**.

• *If you do use hormonal replacement therapy,* take the lowest dosage possible. Ask for a combined hormone that contains both estrogen and progesterone. That will help reduce the risk of cancer. Progesterone, not estrogen, is the hormone most needed in replacement therapy.

ENCOURAGEMENT—Keep your thoughts on Christ and the heavenly world, and you will have more strength for the trials of life. Talk His praise and rest in His love. Proverbs 16:3.

"Now the Lord of peace Himself give you peace always by all means." 2 Thessalonians 3:16.

Many who are sincerely seeking for holiness of heart and purity of life seem perplexed and discouraged. Darkness and discouragement will sometimes come upon the soul and threaten to overwhelm us, but we should not cast away our confidence. We must keep the eye fixed on Jesus, feeling or no feeling. We should seek to faithfully perform every known duty, in His enabling strength obey His Written Word the Bible, and then calmly rest in the promises of God.

If we would permit our minds to dwell more upon Christ and the heavenly world, we should find a powerful stimulus and support in fighting the battles of the Lord. Beside the loveliness of Christ, all earthly attractions will seem of little worth.

EMERGENCIES: **(750-757)**

— SECTION 18 —

PREGNANCY AND BREAST-FEEDING

PREGNANCY AND BREAST-FEEDING -

1 - FERTILITY

FEMALE STRESS SYNDROME

SYMPTOMS—Allergies, frigidity, infertility, amenorrhea, anorexia, anxiety neurosis, menopausal melancholia, post-partum depression, premenstrual tension.

CAUSES—Women experience many stresses, because they have so many tasks: bearing children and raising them, caring for the husband, working in and around the house, perhaps working outside the home.

Increasing nutritional intake can help meet these stresses.

NATURAL REMEDIES

• **Fresh fruit and vegetable juice**, lots of **fresh fruits and vegetables, whole grains, nuts, and legumes. Flaxseed oil** and **lecithin** are also important.

• Adequate **vitamin and mineral supplementation**, especially **B complex, vitamin C** (1,000 mg), **vitamin E** (400 IU), **selenium** (40 mcg), **zinc** (30 mg), **calcium** (2,000 mg), **magnesium** (1,000 mg), **potassium** (5,500 mg), **and iron** (in the form of blackstrap molasses).

ENCOURAGEMENT—Do not forget the One who gives you all blessings. God alone can provide for your needs. Trust in Him. He can give you the peace of heart you so much need.

FRIGIDITY

SYMPTOMS—Absence of sexual desire, or an inability to find pleasure in sexual intercourse. Inability to have an orgasm.

CAUSES—Frigidity is generally of psychic, not organic, cause. There is guilt, fear, depression, a sense of inferiority or conflict with one's mate. Unfortunate experience and misinformation, received earlier in life, often lays the groundwork for the problem.

However, in some cases the woman may find intercourse painful because of inadequate stimulation, insufficient lubrication, or underlying infection or disease.

NATURAL REMEDIES

• Eat **eggs** fresh from the hen (not those in the stores which have been stored cold), **alfalfa, olive oil, pumpkin seeds and other seeds, nuts, soy oil, avocados, and wheat.**

• Avoid **meat** products.

• **Vitamin deficiencies** can result in lowered estrogen levels and thus poor lubrication. Especially take **B complex** and **vitamin E** (400 IU). Take **zinc** (30 mg) and **copper** (3 mg) daily.

• Helpful herbs include **wild yam**. This contains a natural steroid which may help. Take it for 2 weeks, stop for 2 weeks, and then back on again.

• **Damiana** contains alkaloids which, like testosterone, directly stimulates nerves. Place an eyedropperful under your tongue an hour or two before coming together. It may require several days before a desired effect will be noted.

• Extra **lubrication** may help reduce possible pain.

• Also helpful are **gotu kola, Siberian ginseng, saw palmetto, and sarsaparilla.**

ENCOURAGEMENT—Songs of praise to God will help you keep up your courage. Trust Him and know that He is the best Friend you can ever have. In His strength you can have the help you need. He will do for you that which is best.

FEMALE INFERTILITY

(Female Fertility Problems)

SYMPTOMS—Seeming inability of a woman to become pregnant.

CAUSES—Infertility is generally defined as the failure to conceive after a year or more of regular sexual activity during the time of ovulation. Either the woman or the man may be the cause. *See Male Infertility (668).* The primary cause is generally low sperm count; but, in women, it is ovulatory dysfunction.

Infertility usually means that the problem can be reversed; sterility means that the situation is permanent. An estimated 20% of American couples experience infertility. Determining the exact cause can be difficult.

In general, 60% of couples conceive within 6 months; and 90% conceive within a year. If you both are under 28, and have no reason to think otherwise, you ought to have a baby within a year.

A frequent cause is a **deficiency** in one or more nutrients.

The problem may be that the woman is **not cycling and ovulating properly**. If she has less than 20% body fat, she may not.

Other causes include **inherited disorders, infections, venereal disease** *(627-633)*, **mishandled abortions, bacterial organisms, drugs, plugged fallopian tubes, emotional trauma,** or **frigidity** *(666)*.

If you are producing milk or have male-pattern hair growth on your breasts, upper lip, or chin, you may have a **hormonal imbalance**. There may be a **thyroid** problem.

You or your spouse may have had **chlamydia, gonorrhea**, or other sexually transmitted diseases which can destroy the fallopian tubes in women and inflame and scar the ductile system in men. Over 4,000 Americans contract these diseases yearly.

You may have had **pelvic infections, endometriosis** *(659)*, **polycystic ovary disease, abdominal or urinary tract surgery, injuries to the perineum, excessively high fevers, the mumps or measles**. You may have used an **intrauterine device** (IUD). **Salpingitis and Ovaritis** *(658)* can cause sterility.

One of you may have been exposed to a harmful chemical, such as **lead** *(600)*.

Kidney problems *(397)* can result in reproductive imbalances. Clean out the kidneys.

The more women **smoke**, the less likely they will conceive. In fact, women whose mothers smoked are only half as likely to conceive as those whose mothers were nonsmokers.

In rare instances, women develop **antibodies** to their partner's sperm.

In some cases, one or the other is only half-hearted about having a baby.

—Also see Male Infertility (668).

NATURAL REMEDIES

DIET

• Eat a **nourishing diet**; be sure to include sufficient **vitamins, minerals,** and (if necessary) **digestive aids**. A **high-protein diet, essential fatty acids** (flaxseed oil is best, 2-4 tsp.), **vitamin A** (in the form of carotenes), **B complex, zinc** (30 mg), **germanium** (100 mg), **and CoQ_{10}**. **Folic acid** (5 mg) helps female fertility.

• **Vitamin E** (400 IU) is very important if you wish to conceive. In women with irregular or absent periods, extra **vitamin B_6** can boost fertility (50 mg daily).

• In one study, taking over 1,000 mg of **vitamin C** daily can reduce fertility in a women (whereas, in men it increases it).

• A deficiency of **selenium** (500 mcg; not over 40 mcg if pregnant) can lead to infertility in women.

• **Para-aminobenzoic acid** (PABA) is a B vitamin which stimulates the pituitary gland and sometimes restores fertility to a woman (100 mg).

• Test for **food allergies**. *See Pulse Test (575) and Food Allergies (576).*

AVOID

• Avoid **fried, sugary, junk, and caffeine foods**. Do not eat **white flour or animal fats**.

• A **gluten-free diet** has enabled women, who previously were unable to conceive, to become pregnant.

• Stop **smoking** and do not be around cigarette smoke. Avoid **medicinal drugs**. Studies reveal that **caffeine** can prevent pregnancy from beginning. Just one drink a day can reduce your chances of becoming pregnant. (In addition, **decaffeinated coffee** has been linked to spontaneous abortion!) It is suspected that the cause is the tannic acid in coffee and **black tea**.

• Women who drink **alcohol** can prevent implantation of the fertilized egg in their womb.

• Avoid **stress**. Avoid **overweight**. The closer a woman's weight is to the ideal, the more likely she is to conceive.

• Do not **exercise** too much at that time of the month. It can, in some, cause a skipped ovulation or increase infertility.

• Avoid **hot tubs and saunas**; for they may cause changes in ovulation.

• Do not **douche**. It can interfere with vaginal pH. Beware of commercial douches, lubrication agents, and jellies.

• Do not work so hard that you are **fatigued**. It is well-known that people who go on a vacation trip are more likely to conceive. They have more time to relax and rest up.

• There is the possibility that you have had **heavy metal poisoning** *(596)*.

HERBS

• Helpful herbs include **black cohosh, red clover, yellow dock, wild yam, chamomile, skullcap, dong quai**. **Black cohosh** balances hormones, **False unicorn, wild yam, and dong quai** help increase fertility.

• Add 2 Tbsp. each of **chasteberry, Chinese angelica** (dong quai), **and false unicorn root**, plus 1-2 tsp. **blessed thistle** to a quart of boiling water. Steep for 15 minutes. Drink 2-3 cups a day, 4-5 days a week.

• Here is one physician's formula for improving fertility in a woman: Mix equal amounts of **damiana leaves, Siberian ginseng, sarsaparillia root, saw palmetto berries, licorice root, and kelp**. Swallow the powder. Or make a tea and drink it.

• The use of natural **progesterone cream** has helped many women become pregnant. An excellent alternative is **wild yam**, which contains a progesterone-like compound. Rub it on the abdomen.

• If the infertility is due to elevated prolactin levels or ovarian insufficiency, **chasteberry** extract may help (175-225 mg daily). Several months may be needed for the chasteberry to restore female balance.

OTHER HELPS

• Make sure you **time it** just right, in accordance with the monthly cycle.

• The woman should **remain lying down** for 20 minutes after ejaculation.

• If a woman has developed **antibodies** to her husband's sperm, avoid releasing sperm for a month

(via a condom, etc.). This should cause the sperm antibodies to decrease.

There is always risk if you give consent for a physician to do fertility testing inside your body.

—Also see Male Infertility (668).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR FEMALE INFERTILITY AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease Index: pp. 209-211).*

GENERAL CARE—When not due to organic disease, this may be eliminated by a course of water treatments. A series of **graduated cold applications** (Tonic Frictions) is most useful. The **Cold Rubbing Sitz** is highly useful. Remove catarrhal conditions of uterus and vagina; also remove subinvolution by means of **hot vaginal irrigation.** Follow by **tonic (cool or cold) Sitz.**

—Also see Male Infertility (below).

ENCOURAGEMENT—Pray earnestly for help, and God will give you the very blessing that is best for you. Whatever path God chooses is the very best for us. Ecclesiastes 5:18-20.

MALE INFERTILITY

(Male Impotence Problems)

SYMPTOMS—Inability of a man to produce viable sperm which will unite with an ovum and result in conception.

CAUSES—There are more than 20 million sperm in a teaspoon. The most frequent cause of male infertility is **low sperm count** or an **anatomical abnormality.** Sperm factors account for 40% of all cases of infertility.

Factors affecting this include **excessive heat to the testes, exposure to toxins or radiation alcohol consumption, endocrine disorders, recent acute illness, or prolonged fever.** Any **viral illness** associated with a fever up to 3 months earlier. **Testicular mumps** is another cause.

A very common structural damage problem in men is a **varicocele.** This is a dilated vein of the spermatic duct.

If your sperm count is healthy, a **cold or flu** probably will not affect it. But if sperm count is borderline, an illness might render you infertile for a time.

Modern **pesticides** contain estrogenic materials, which cause animals to become infertile.

—Also see Female Infertility (666) for additional information.

NATURAL REMEDIES

DIET

• Obtain an **adequate diet;** include enough **protein, essential fatty acids,** and (if necessary) **digestive aids.**

• Pay special attention to **selenium** (500 mcg) deficiency as a factor in male infertility. **Vitamin B_6** (200 mg) and **vitamin C** (500 mg, twice a day) increase male fertility. **Zinc** may be involved in male infertility (30 mg). Researchers found that choline (a B vitamin) increases male fertility in rats. Take 1,000 mg.

• **Arginine** (an amino acid) helps raise sperm counts. Take 4 grams daily (the amount in 2 oz. sunflower seeds, the richest source).

• Strictly adhering to a **gluten-free diet** has enabled some men, who previously thought they were sterile, to become fathers.

• Do not use **anabolic steroids!** They can shut down the pituitary gland and throw the body's hormonal system out of balance. Athletes often have fertility problems. Long-time use of steroids can permanently damage the testicles.

• Drinking **alcohol** reduces sperm count in men.

OTHER HELPS

• **Ginger** increases sperm count. **Ginseng, schisandra, and saw palmetto** may reduce male infertility. The Chinese herb, **cangzhu,** has been used for thousands of years to increase male fertility. **Ashwaganda** is used in India for the same purpose. Animal breeders add **red raspberry** leaf tea to animal feeds to increase male fertility. The Chinese herb, **astragalus,** improves sperm motility.

• Do not **overheat** the testes. If you do, they will produce sterile sperm for several hours or up to a day afterward. The testes must remain a half degree cooler than your core body temperature. **Fevers** to the body, **close-fitting underwear,** or **hot tub baths** can cause this. The scrotal sac is supposed to keep the testes at a temperature of 94°-96° F. If it rises above 96°, sperm production is greatly inhibited or completely stopped.

• Do not have **intercourse** for seven days prior to the special fertile time.

• **Tagamet and Zantac,** two ulcer medications, decrease sperm counts and may even produce impotence.

In some cases, sperm count is so low that the only means of fertilization is artificial insemination.

If a varicocele is the problem, it must be treated by surgery.

—Also see Female Infertility (666) for additional factors. Much of that information also applies to the man.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MALE INFERTILITY AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease Index: pp. 209-211).*

GENERAL TREATMENT—Graduated Cold Baths. Cold Douche to spine, especially the lower part. **Cold Rubbing Sitz Bath,** beginning at 60° F., lowering temperature 5° daily to 60° F. Duration of bath is 3-8 minutes, with vigorously rub, to prevent chilling. If urethral irritation is

present, short **Revulsive Sitz Bath** (2-4 minutes). **Cooling Compress**, 5 minutes daily.

ENCOURAGEMENT—Christ could have spent His days in self-seeking and idleness; but He chose to come to earth and die, so you could have eternal life. Trust your life to Him, and you will not regret it. Isaiah 45:21-22. God can do far more for you than you could ever do for yourself.

PREGNANCY AND BREAST-FEEDING -

2 - PREGNANCY AND CHILDBIRTH

IMPORTANT: Other important chapters in this book: Herbs for Pregnancy *(722)*, How to Deliver a Baby *(727)*, and The First Nine Months *(736)*.

The section in this chapter, Pregnancy Problems *(670-680)*, tells you what to do to avoid birth defects. Also read Birth Defects *(688-689)*.

BIRTH CONTROL

Many ask this question: **When does the baby start existing.** Various theories have been proposed. The answer is simple enough: The baby begins existing as soon as growth begins. That is obvious; as soon as the baby begins growing. Growth begins as soon as the two cells (the sperm and the egg) unite. From that point onward, a new person exists.

Another important question is **How can we properly prevent this from occurring, without killing the child?** Here is how this is done:

The rhythm method of birth control consists simply of abstaining from intercourse during the "fertility period." This extends from about one week after the menstrual period ends, onward for another 10 days or so. At that point, it will be at least 5 days past ovulation. In summary, an interval of abstinence between the 10th and 18th of a 28-day cycle usually suffices for birth control.

A third question is **What is the best time in the monthly cycle to have a child?** If you are having an infertility problem, the wife may take her oral temperature early in the morning before rising or drinking fluids. At the time of ovulation, the morning temperature (called basal temperature) increases about 0.5° to 1° F. This change marks the day of ovulation. This is the time to have intercourse.

Another question: **How can we select the sex of the baby?** To have a baby boy, have intercourse only on the 16th day from the first day of the menstrual period. To have a baby girl, have intercourse on the 12th day instead. Either way, the couple should not have intercourse seven days before or after. Intercourse facing one another tends to produce girls; and with the man behind his wife tends to produce boys (because the semen initially is shot farther up the vagina).

PREDICTING THE BIRTH DATE

How you can tell the date when you are likely to give birth:

Start with the date the last menstrual period began, subtract three months, and add 7 days.

For example, suppose your last period began May 10.

May 10 minus 3 months is February 10.

Plus 7 days is February 17.

The baby is likely to be born around February 17.

BIRTH DATE CHART

The following chart was prepared by Frederick M. Rossiter, B.S., M.D., for his book, *Practical Guide to Health*. Here is how to use it.

Normal labor occurs about 280 days from the beginning of the last menstrual period. The left-hand columns, below, list the last-menstrual dates for an entire year. In order to find the normal delivery date, look across to the date in the right-hand column. *Example:* If the last menstrual period began on January 2, then the baby would normally be born on October 9.

Jan.	Oct.	Feb.	Nov.	Mar.	Dec.	Apr.	Jan.	May.	Feb.	June	Mar.
1	8	1	8	1	6	1	6	1	5	1	8
2	9	2	9	2	7	2	7	2	6	2	9

SIGNS OF PREGNANCY RISK

Signs of special risk that make it important that

a doctor or skilled midwife attend the birth—if possible, in a hospital:

- If regular labor pains begin more than 3 weeks before the baby is expected.
- If the woman begins to bleed before labor.
- If there are signs of toxemia during pregnancy.
- If the woman is suffering from a chronic or acute illness.
- If the woman is very anemic or if her blood does not clot normally (when she cuts herself).
- If she is under 15, over 40, or over 35 at her first pregnancy.
- If she has had more than 5 or 6 babies.
- If she is especially short or has narrow hips.
- If she has had serious trouble or severe bleeding with other births.
- If she has diabetes or heart trouble.
- If she has a hernia.
- If it looks like she will have twins.
- If it seems the baby is not in a normal position in the womb.
- If the bag of waters breaks and labor does not begin within a few hours. (The danger is even greater if she has a fever.)
- If the baby is still not born within 2 weeks after 9 months of pregnancy.

PREGNANCY RELATED PROBLEMS

SYMPTOMS—A variety of problems can occur during pregnancy—ranging from backache, constipation, stretch marks, and gas to hemorrhoids, varicose veins, and miscarriage.

INTRODUCTION—Pregnancy is that special 40-week period between conception and birth, when the child grows and develops. A weight gain of 20-35 pounds is desirable and, in most cases, is in keeping with good health. But a number of problems can occur. Here are several of them. *For more information, see Morning Sickness (671), Premature Labor (679), and Miscarriage (678).*

Many of the problems occurring during pregnancy are related to hormonal changes, nutritional needs, or various expansion pressures as the fetus continues to grow.

NOTE: A late menstrual period that is accompanied by severe abdominal pain should receive immediate medical attention—because it may be due to an ectopic pregnancy (a pregnancy that develops outside the uterus, usually in one of the fallopian tubes). If the mother does not receive immediate attention, she may die. *See Ectopic pregnancy (653).*

NATURAL HELPS

DIET

• **NUTRITION**—Proper nutrition is important. There is a 20% increase of blood volume during pregnancy. This requires additional complete **protein.**

• A healthy diet during this time would include **2 fruits a day, 7 vegetables (including salads, grains, and other worthwhile foods)**, etc. Complex carbohydrates, best obtained in **whole grains**, are important. Also **nuts, legumes, and seeds.**

• Do not eat junk food of any type. Avoid caffeine, alcohol, and tobacco. Also do not eat spicy, fried, or overly processed foods. If possible, avoid all drugs.

VITAMINS

• Complete **vitamin / mineral supplementation** is also important.

• ***Vitamin A*** protects the immune system and avoids **eye abnormalities, cleft lip, and cleft palate.** Do not let vitamin A intake go over 10,000 IU daily. Excessive intake of vitamin A is linked to **cleft palate, heart defects, and other congenital defects.** Foods rich in vitamin A (meat, milk, and eggs) may also cause problems. But foods with natural beta-carotene (green and yellow vegetables) are not harmful. (This is because carotene is only converted to vitamin A as it is needed.)

• All the ***B complex*** is important. They help prevent **leg, back, and joint pains** in the mother during pregnancy.

• ***Vitamin B_1*** (thiamine) prevents **stillbirths, low birth weight babies, and heart disorders.** In late pregnancy and post-delivery, B_1 requirements are greatly increased.

• ***Vitamin B_2*** (riboflavin) prevents **short limbs and cleft palate.**

• ***Vitamin B_3*** (niacin, niacinamide) prevents **irritability, depression, disorientation, fatigue, nervousness, and muscular weakness.**

• ***Vitamin B_6*** (pyridoxine) prevents several fetal abnormalities (including **seizures, cleft lip, and cleft palate**). Take 100 mg daily until birth, followed by only 50 mg daily. This is because an excess of B_6 after delivery can hinder the amount of **mother's milk** produced.

• ***Folic acid*** prevents **anemia and birth defects.** It is involved in cell growth and DNA production. But it is vital that this supplementation be started prior to conception. Take 400 mg daily. If there is not enough folic acid in the system during the first six weeks of pregnancy, **spina bifida** and **anencephaly** can result. But most women do not know they are pregnant until several weeks after conception has occurred. Therefore it is crucial that you be taking this vitamin regularly.

• ***Vitamin C*** prevents **infections** and the birth of **small babies.**

• ***Vitamin D*** works with **calcium**, to build strong **bones.**

• ***Vitamin E*** is the **anti-abortion** vitamin, and is needed in order to bring a baby to full term.

MINERALS

• ***Magnesium*** helps prevent **birth abnormalities and miscarriage.**

• ***Calcium*** prevents **weak bones and teeth, pre-**

mature births, and damaged nerves.

• Although ***phosphorus*** is important, you always get enough in your food. Too much blocks **iron** and **calcium** absorption. Soft drinks eliminate calcium. *See Strengthening the Bones (505).*

• The ***trace minerals*** are also important. Nova Scotia dulse and Norwegian kelp are good sources.

• ***Iodine*** prevents thyroid problems, abnormal development, and certain types of mental retardation.

• ***Zinc*** prevents dwarfism and limb defects.

• ***Manganese*** prevents certain brain abnormalities.

• Inadequate ***folic acid, manganese, zinc,*** and ***amino acid*** imbalances have been linked to **mental retardation and deformities** in the fetus.

DO NOT DO THIS

• Do not use an **electric blanket**. Studies indicate it may increase risk of miscarriage and problems in development.

• **Aspirin** has been linked to fetal deformities, bleeding, and complications during pregnancy.

• Do not use **cinnamon** in large quantities during pregnancy.

• The drug, Etretinate (**Tegison**), is prescribed for psoriasis; but it can cause birth defects.

• **Avoid the following herbs** during pregnancy: **feverfew, goldenseal, black cohosh, tansy, angelica, bloodroot, celandine, dong quai, Oregon grape, rue, cat's claw, barberry, cottonwood bark, and pennyroyal.**

• Do not take anything containing **shark cartilage** during pregnancy. It reduces production of new blood vessels.

• Do not take supplements containing **phenylalanine**. This is an amino acid which can alter brain growth in the fetus. The sweetener, **Aspartame** (Equal, NutraSweet), contains high levels of phenylalanine.

• A drug prescribed for acne (Isotretinoin, under the trade name of **Accutane**) can cause birth defects.

• Avoid **mineral oil**; it inhibits the absorption of fat-soluble vitamins.

• Two medications, used to control seizures, increase by four times the risk of producing a baby with heart defects. These drugs are **phenobarbital and phenytoin** (Dilantin).

• Drinking large quantities of **coffee, cola drinks**, or other caffeine sources can result in birth defects.

• Certain chemicals in drugs can stunt fetal growth. These include acetaminophen (**Tylenol, Datril**, and others); antacids (**Pepto-Bismol, Alka-Seltzer, Rolaids, Tums, Di-Gel, Maalox, Gelusil**); as well as **aspirin, cough remedies, cold pill, antihistamines, estrogens, and decongestants.**

DO THIS

• If at all possible, have your baby by **natural childbirth**—and with the help of a midwife.

• Be sure to **breast-feed** your baby for at least the first three months, and longer if possible *(see Breast-feeding, 680).*

• Keep yourself healthy; and keep eating an **adequate diet**. Avoid long fasts, cleansing diets, or strictly limited diets during pregnancy and lactation. *See Eclampsia (679).*

• Do not permit any **X-rays** to be taken of you—even of your teeth—during pregnancy.

—Also see Pregnancy Herbs (722-726).

ENCOURAGEMENT—With the eye of faith and a child-like submission, trust your life to God; and He will wonderfully guide you. His promise is, "I will instruct thee and teach thee." Psalm 32:8.

MORNING SICKNESS
(Pregnancy Nausea)

SYMPTOMS—Nausea and vomiting by the mother between the sixth and twelfth weeks of pregnancy.

CAUSES—Although called morning sickness, it can occur at any time of the day. Morning sickness is caused by **rising progesterone levels**; this is quite normal.

Morning sickness is said to be a cleansing of the body, to prepare a clean environment in which the fetus can properly develop.

However, about 1 woman in 200 experiences an abnormal amount of vomiting and severe nausea. This can result in acidosis, malnutrition, dehydration, and significant weight loss.

Possible causes of this abnormal condition include **drug toxicity, vitamin deficiency (especially of B_6), pancreatitis, bile duct disease, and inflammatory bowel disorders.**

It can also be caused by the production of high levels of **human chorionic gonadotropin**, which is a hormone. **Cysts** in the uterus or multiple pregnancy can also be the cause.

Morning sickness generally does not continue beyond the first 13 weeks of pregnancy. If there is persistent vomiting or nausea later, consult with your health-care provider.

At its worst, morning sickness can degenerate into *hyperemesis gravidarum*. In this situation, the mother-to-be has far too much vomiting and nausea, is overly dehydrated, and not urinating properly. She cannot keep food, water, and juice down for over a period of 4-6 hours.

This condition can lead to pulse irregularities, electrolyte imbalance, and even kidney and liver damage. Ketones, produced by the breaking down of stored fat, can damage neurological development in the fetus.

How to avoid this danger? Do not stop eating and drinking fluids, even though you feel nauseated and vomit.

NATURAL REMEDIES

• Because morning sickness is caused by rising progesterone levels, you need a **complex carbohydrate** (or possibly **protein**) **snack** upon awakening in the morn-

ing. This will relieve much of the nausea.

• Keep **crackers or whole-wheat toast** near your bed and eat some as soon as you arise in the morning. Pop them in your mouth, chew well, and swallow; then place your feet on the floor.

• It helps to keep some food in the stomach all day long. Eat **small and frequent meals**; but do not overeat. When needed, snack on **whole-grain crackers**, possibly with a little **nut butter** (but not peanut butter).

• Another method is to carry some **raw almonds** with you, wherever you go. Make sure they are not old and stale.

• **Do not go without food or drink;** you must continue to have both—even though you feel nauseated and may vomit.

• **Vitamin B_6** and the entire **B complex** is important. **Essential fatty acids** and a complete line of nutritional supplements should be taken.

• Drink lots of fluids: **water, fruit or vegetable juice, broth**, or certain **herbal teas**. Drinking fluids at frequent intervals also helps neutralize the extra hydrochloric acid produced by the stomach at this time.

• **Avoid eating or smelling fried and fatty foods**. Do not use **caffeine** products.

• **Ginger** is extremely helpful in relieving morning sickness. But only drink 1 cup of this tea at a time. Too many cups can induce miscarriage.

• Helpful herbs for nausea include **peppermint, red raspberry leaf, catnip, or dandelion**.

• **Do not sit up** or get up out of bed too rapidly.

ENCOURAGEMENT—The Lord Jesus came to our world to save those who would come unto Him. But He can save no one against His will. In Him you can find the rest, courage, and peace of heart that you so much need. 2 Corinthians 6:18.

DIZZINESS IN PREGNANCY

SYMPTOMS—Dizziness when, during pregnancy, you suddenly stand.

CAUSES—So much is happening in your digestive and reproductive organs, that the blood tends to pool in them; this causes a lack of blood in the brain when you stand up suddenly.

In addition, especially during the second trimester, blood pressure drops as the uterus presses on major blood vessels.

NATURAL REMEDIES

• **Do not quickly arise or change positions**. Breathe deeper when you sense that you need to do so.

—Also see Dizziness (671, 451).

ENCOURAGEMENT—When temptations and trials rush in upon us, let us go to God and agonize with Him in prayer. He will not turn us away empty, but will give us grace and strength to overcome and to break the power of the enemy.

SWEATING IN PREGNANCY

SYMPTOMS—You are sweating more than previously, perhaps more than you want.

CAUSES—As your size increases, it becomes more difficult to walk, climb stairs, and do your daily chores. This increases the tendency to sweat. In addition, you body is primarily concerned with providing a correct temperature for your baby, but only secondarily for you. This can, at times, add to your warmth.

NATURAL REMEDIES

• **Do not overheat** your body. Do not take a **hot tub bath** during pregnancy; for doing so can overheat your baby. Do not **exercise** too strenuously.

• Wear **light-weight, loose clothing**, preferably of cotton or other porous natural fibers.

ENCOURAGEMENT—The gift of God to man is beyond all computation. Nothing was withheld. God would not permit it to be said that He could have done more or revealed to humanity a greater measure of love. He gave all heaven when He gave the gift of Christ.

INSOMNIA IN PREGNANCY

SYMPTOMS—During the final weeks of pregnancy, you are having an increasingly difficult time getting to sleep at night.

CAUSES—Difficulty in finding a comfortable position is a significant part of the problem. Lack of B vitamins can add to it. Emotional changes also affect it.

NATURAL REMEDIES

• Include more **B complex** vitamins in your diet. Take 500 mg **calcium** and 250 mg **magnesium** at bedtime to calm the nerves and muscles, and help you sleep. Calcium citrate or calcium lactate provides maximum absorption.

• Avoid **heavy meals** before bedtime. Do not use **stimulants** or **sedatives**; they affect your baby.

• Drink a cup of **hot herb tea** before retiring. Select from **lemon balm, marjoram, or passionflower**.

• Do not **sleep** until you feel like doing so. You may want to just **sit** in a very comfortable chair for a time before going to bed. **Walking outside** in the fresh night air, before retiring, can also be helpful.

• Place **pillows** behind or under your abdomen to

help you breathe better.

—Also see Insomnia (448).

ENCOURAGEMENT—All who have been born into the heavenly family are in a special sense the brethren of our Lord. The love of Christ binds together the members of His family; and, wherever that love is manifest, there the divine relationship is revealed.

COUGHS AND COLDS IN PREGNANCY

SYMPTOMS—Coughs and colds are occurring more frequently; they seem to be harder to get rid of.

CAUSES—Your physical resources are being stretched at this time; since you are providing care for two people.

NATURAL REMEDIES

• For information on how to treat colds and coughs, *see under Colds (222) and Coughs (224).*

• To prevent these problems, maintain a **healthy, nutritious diet** of fresh fruits, vegetables, whole grains, legumes, and nuts. Take a **multivitamin-mineral** supplement. Maintain a program of **rest and light exercise**, without overworking.

—Also see Coughs (224) and Colds (222).

ENCOURAGEMENT—Every soul is cherished, because it has been purchased by the precious blood of Jesus Christ.

SKIN PROBLEMS IN PREGNANCY

SYMPTOMS—An increasing number of pimples, red marks, acne, and dark blotches on the face.

CAUSES—The dark blotches are called the "mask of pregnancy. During pregnancy, your body is undergoing great adaptations. It is a time when you want to give your body the best care; so it, in turn, can better care for your little one.

NATURAL REMEDIES

• Eat only wholesome, **nutritious food**; and take a **multivitamin** supplement. **Folic acid** (one of the B vitamins) is especially helpful.

• Do not eat **greasy, fried food**. Do not be around those who **smoke.**

• Keep your **skin clean** by showering twice a day.

• Avoid the use of **makeup** or only use water-based hypoallergenic cosmetics.

—Also see Acne (254) and Oily Skin (264).

ENCOURAGEMENT—The more we make known the rich treasures of God's blessings to others, the more blessings will be imparted to us.

STRETCH MARKS IN PREGNANCY

SYMPTOMS—Wavy stripes which (during pregnancy) appear on the breasts, abdomen, buttocks, and thighs. Initially reddish in color, they gradually turn white.

CAUSES—Rapid weight gains, which frequently occurs during pregnancy, is the cause. As the skin is stretched, fibers in the deeper layers tear, causing permanent marks which after childbirth usually become difficult to see.

NATURAL REMEDIES

• In order to avoid these stretch marks, apply **oil**, once a day, all over the areas where the marks are likely to appear. The formula includes ½ cup of **olive oil**, ¼ cup of **aloe vera** gel, 6 capsules of **vitamin E**, and 4 capsules of **vitamin A**. Cut open the capsules, mix it all together, and apply. If you make extra, store it in a closed jar in the refrigerator.

ENCOURAGEMENT—The Lord looks upon His redeemed heritage with pity. He is ready to pardon their sins if they will surrender and be loyal to Him.

VARICOSE VEINS IN PREGNANCY

SYMPTOMS—Enlarged veins close to the surface of the skin which are present during pregnancy.

CAUSES—These enlarged veins may disappear after childbirth.

NATURAL REMEDIES

• If possible, **walk** a mile a day in order to increase circulation. **Change positions** frequently; and never cross your legs. Sit with your **feet elevated**. If necessary, wear support hose. Do not wear bands on the legs.

• To improve blood flow from your legs to your upper body, do "**pelvic tilting**" during your second and third trimesters. Stand with feet shoulder-width apart and hands on hips. Slowly tip your pelvis forward, then backward, gradually increasing speed until you are doing it somewhat vigorously. You can also roll and rock. Do this exercise 5-10 minutes a day.

—Also see Varicose Veins (438, 723-724).

ENCOURAGEMENT—Shall we, sons and daughters of God, forget our royal birth? Shall we not rather honor our Lord and Saviour Jesus Christ? Shall we not show forth the praises of Him who has called us out of darkness into His marvelous light? How thankful we can be that, through the grace of Christ, we can be enabled to obey God's ten commandment law.

SORENESS IN RIB AREA DURING PREGNANCY

SYMPTOMS—Your ribs feel sore and hurt a little.

CAUSES—Pressure from the expanding womb is the cause of this. This pressure tends to stop when the baby drops down within the last six weeks of the pregnancy.

NATURAL REMEDIES

• **Change positions** frequently. **Sit or lay down** every so often and rest a little.

ENCOURAGEMENT—God does not accept men because of their capabilities, but because they seek His face and desire His help.

LEG CRAMPS IN PREGNANCY

SYMPTOMS—Leg cramps occur every so often.

CAUSES—Significant hormonal and physical adjustments are being made at this time. But there are solutions to the problem. The cramps are primarily due to lack of a nutritious diet, necessary vitamins and minerals, plus circulatory and positional factors.

NATURAL REMEDIES

• It is important that you correct nutritional deficiencies. **Calcium** (2,000 mg), **magnesium** (1,000 mg), and **potassium** (5,500 mg), are needed daily.

• Avoid too much **salt** in the diet.

• There is now extra **weight** on your legs. Walking about is important; but try not to stand in one place too long. When you must do so, frequently shift your weight from one leg to the other. **Flex your feet** every so often, with your toes pointed upward.

• **Elevate your legs** while sleeping; so they are higher than your heart. Apply a **heating pad** to the cramping area. **Massage** the area with your hands.

—For much more, see Leg Cramps (288, 527).

ENCOURAGEMENT—Christ intercedes in behalf of those who have received Him. To them He gives power, by virtue of His own merits, to become members of the royal family, children of the heavenly King. And the Father demonstrates His infinite love for Christ, who paid our ransom with His blood, by receiving and welcoming Christ's friends as His friends. He is satisfied with the atonement made. He is glorified by the incarnation, the life, death, and mediation of His Son.

NOSEBLEEDS AND NASAL CONGESTION IN PREGNANCY

SYMPTOMS—Nosebleeds and nasal congestion become more frequent.

CAUSES—In order to provide for the needs of two of you, your bones are making an increasing volume of blood. This can cause pressure in the small capillaries of the nasal passages. When one ruptures, a nosebleed results. This problem will stop when the baby is born.

NATURAL REMEDIES

• **Vitamin C** (1,000 mg daily) and **bioflavonoids** (100 mg daily) are very important in preventing nosebleeds. Make sure you are eating enough **fresh fruits and vegetables**.

• You may need to reduce your intake of **dairy products** if you have nasal congestion; but make sure you have an adequate intake of **calcium** (2,000 mg), **magnesium** (1,000 mg), and **potassium** (5,500 mg).

• Avoid **nasal sprays**. Instead, spray a little warm water into your nose to moisten it. Or use a **humidifier**.

ENCOURAGEMENT—Christ declares to all who would follow Him: "My grace is sufficient for thee" (2 Cor. 12:9). Let none, then, regard their defects as incurable. God will give faith and grace to overcome them.

INDIGESTION IN PREGNANCY

SYMPTOMS—Food does not seem to be digesting as well.

CAUSES—During this special time, your body craves good quality food. You need to eat enough; but you should not overeat.

NATURAL REMEDIES

• Eat **smaller meals** and **chew** your food well. **Acidophilus, peppermint tea, ginger, and aloe vera** juice will help.

• Do not take **baking soda** to alleviate indigestion; because the sodium content will increase fluid retention.

Also see Indigestion (674, 348, 723).

ENCOURAGEMENT—As Christ intercedes in our behalf, the Father lays open all the treasures of His grace for our appropriation, to be enjoyed and to be communicated to others. "Ask in my name," Christ says; "I do not say that I will pray the Father for you; for the Father Himself loveth you, because you have loved Me. Make use of My name. This will give your prayers efficiency, and the Father will give you the riches of His grace; wherefore, "ask and ye shall receive, that your joy may be full" (John 16:24).

HEARTBURN IN PREGNANCY

SYMPTOMS—Burning sensations in your stomach, especially in the upper part.

CAUSES—Because of the expanded size of the womb, there is a tendency for stomach fluids to be pushed up and reenter the esophagus (the food tube above

your stomach). In addition, pregnancy hormones tend to soften the sphincter muscles of the stomach.

NATURAL REMEDIES

• Do not eat **fried, greasy, and spicy foods**. Avoid **baking soda, coffee, alcohol, and antacids**.

• For several hours after a meal, **do not bend over or lie flat**; remain active.

• When you feel heartburn, drink a glass of warm **rice milk** or **soymilk**.

• Take your daytime **naps before eating**, not immediately afterward. Do not eat **supper** close to bedtime.

• While in bed, place **pillows** under or behind your abdomen.

—Also see Heartburn (346, 723).

ENCOURAGEMENT—By faith let us look upon the rainbow round about the throne, the cloud of sins confessed behind it. The rainbow of promise is an assurance to every humble, contrite, believing soul, that his life is one with Christ and that Christ is one with God.

FLATULENCE IN PREGNANCY

SYMPTOMS—Intestinal gas is more likely during pregnancy.

CAUSES—You experience significant hormonal changes at this time; and your nutritional needs are somewhat different.

NATURAL REMEDIES

• Try to determine which **foods** are causing the problem. You may need to eat fewer meals more often.

• Make sure you are obtaining enough **fresh fruit and vegetables**. Avoid foods which you know tend to disagree with you. **Chew** everything slowly and thoroughly. Drink as much **water** as you can.

• Walking helps alleviate bloating and gas.

—See Flatulence (344) for more information.

ENCOURAGEMENT—The slain lamb—Christ now alive in heaven—is our only hope. Our faith looks up to Him and grasps Him as the One who can save to the uttermost; and the fragrance of the all-sufficient offering is accepted of the Father. Christ's glory is concerned in our success. He has a common interest in all humanity. He is our sympathizing Saviour.

CONSTIPATION IN PREGNANCY

SYMPTOMS—Constipation tends to increase during pregnancy.

CAUSES—Higher progesterone levels relax the bowel muscles and make them less efficient. Normal rhythmic contractions are slowed. The result is constipation; this most frequently occurs in the third trimester. In addition, the baby increases pressure on the intestines, slowing the movement of feces.

Constipation can lead to high blood pressure, water retention, toxemia (toxic blood), and injure both the mother and baby. It can also produce leg cramps, backache, fatigue, and varicose veins.

NATURAL REMEDIES

• Do not eat **constipating food** (such as soft bread, hard cheese, etc.) Drink lots of **water**, beginning as soon as you arise in the morning.

• Increase the amount of **fiber** in your diet. Eat **fresh and dried fruit**, especially stewed **prunes**. **Bran** can also be taken; but, if so, accompany it with a lot of water—or it will constipate. These fiber-rich foods help soften stools and make elimination easier.

• Iron supplements can cause constipation; they may also induce a miscarriage. It is best to get the iron (which you need) from blackstrap molasses.

• Do not use over-the-counter laxatives.

• Do a lot of walking each day.

• Regularity is important. Try to set a certain time each day for bowel movements. Elevating your legs during each one will help relax your anal muscle.

—Also see Constipation (367).

ENCOURAGEMENT—The grace of Christ and the law of God are inseparable. In Jesus, mercy and truth are met together; and, by His grace, we are enabled to obey all that God asks of us in the Bible.

BLADDER PROBLEMS IN PREGNANCY

SYMPTOMS—Difficulty urinating, possibility of bladder infections.

CAUSES—The expanding uterus presses against the bowel and the bladder, compressing both. It becomes necessary to urinate more frequently. Because the bladder may not fully empty, it can become infected.

NATURAL REMEDIES

• **Do not reduce intake of liquids**, thinking this will solve the problem! Instead, increase your fluid intake. Drink quality water.

• Avoid **sugary foods**; for they feed wrong bacteria.

• Eating an **acidophilus** preparation daily will help maintain "friendly" bacteria in the system. Also eat **cranberries** (either sauce or juice) in order to maintain proper acidity in the bladder.

Wear **cotton** underwear. Do not wear anything tight, synthetic, or non-porous next to your skin.

• Do not **douche**; for that can lead to bladder infection.

—Also see Kidney Problems (397-402) and Bladder Problems (402-403, 724).

ENCOURAGEMENT—Through the cross, man was drawn to God and God to man. Justice moved from its high and awful position. And the heavenly hosts, the armies of holiness, drew near to the cross, bowing with reverence; for, at the cross, justice was satisfied.

HEMORRHOIDS IN PREGNANCY

SYMPTOMS—Painful anal hemorrhoids.

CAUSES—Pressure by the womb on the anus can induce hemorrhoids if constipation is present.

NATURAL REMEDIES

• Drink more **water**. Increase intake of **roughage**. Eat lots of raw fruits and vegetables, plus dried fruits.

Keep **legs elevated** on a stool during elimination.

• Apply cold **witch hazel compresses** to help shrink hemorrhoids.

• Do not **strain** to have a bowel movement.

—Also see Constipation (367) and Hemorrhoids (378).

ENCOURAGEMENT—We need often to recount God's goodness and to praise Him for His wonderful works.

BACKACHE IN PREGNANCY

SYMPTOMS—The back hurts when sitting, standing, or walking.

CAUSES—Your entire center of gravity changes during pregnancy. The added weight and muscle-relaxing effects of progesterone are other causal factors.

NATURAL REMEDIES

• When your back hurts, soak a small **towel in cider vinegar**. Squeeze off the excess, lie down on your side, and place the towel across your back. Remain there relaxed for 15 minutes.

• It is important that you maintain **proper posture. Relax your shoulders** and stand tall, keeping your **head up and back straight. Avoid fatigue**. Be careful to lift correctly; so pressure is on the legs, not on the back.

• Do not wear **high-heeled shoes;** and do not remain in **one position** too long. Wear flat or low-heeled shoes. You may need larger shoes during pregnancy.

• Get down on your **hands and knees** and gently round your back upward while holding in your abdominal muscles. Continue breathing and hold this position while you count 10. Relax your muscles by flattening your back (but do not let it become concave, curved downward toward the floor). Do this 12 times. Backaches can last long after childbirth; so continue it later if it is helping you.

• Gently **stretch** (without straining) for 2-3 minutes at a time. Have someone **massage** your back.

• Sleep on a **mattress** firm enough to support you, with a **pillow** supporting your back. Sleep on your **side**, not on your back.

—Also see Backache (537).

ENCOURAGEMENT—In every assembly of the saints, below, are angels of God; they listen to the testimonies, songs, and prayers. Let us remember that our praises are supplemented by the choirs of the angelic host above.

SCIATICA IN PREGNANCY

SYMPTOMS—Nerve pain in the back of one or both legs.

CAUSES—The sciatic nerve is the largest and longest nerve in your body. It comes out near the base of your spine and goes down through the back of each leg. Pressure from the uterus can irritate this nerve.

NATURAL REMEDIES

• A **back adjustment** by a chiropractor who is qualified to do this may be able to help alleviate this problem. A pelvic adjustment can reduce the pressure on that nerve.

—Also see Sciatica (465).

ENCOURAGEMENT—No sooner does the child of God approach the mercy seat than he becomes the client of the great Advocate. At his first utterance of penitence and appeal for pardon, Christ espouses his case and makes it His own; He presents the supplication before the Father as His own request.

GROIN SPASM OR PRESSURE IN PREGNANCY

SYMPTOMS—There is a "stitch" or pain on the right side. Later in pregnancy, lower groin pressure may develop.

CAUSES—The ligaments which connect the corners of the uterus to the pubic area sometimes kink. When this happens, they go into spasm and produce the side stitch. In later months, the weight of the womb presses down on the groin, causing pressure and discomfort.

NATURAL REMEDIES

• During a spasm, **breathe deeply and bend** toward the point of pain. Doing this permits the ligaments to relax. **Lie down** and **rest** until the pain leaves.

• Maintaining daily **exercise** will help avoid this.

ENCOURAGEMENT—If we are following Christ, His merits, imputed to us, come up before the Father as sweet odor. And the graces of our Saviour's character, implanted in our hearts, will shed around us a precious fragrance.

BLEEDING GUMS IN PREGNANCY

SYMPTOMS—The gums tend to swell and become softer. At times, they may bleed.

CAUSES—An increased estrogen output causes this swelling and softening. In addition, more blood is circulating throughout the body, including the gum area. Poor hygiene and infected gums are other causes.

NATURAL REMEDIES

• Give your teeth and gums special care. **Brush** your teeth after each meal. Increase your **calcium** (2,000 mg), **vitamin C** (1,000 mg), and **bioflavonoid** (100 mg) intake. Do not **smoke** or be around it! Nicotine destroys vitamin C.

• Eat a balanced, nutritious diet of **fresh fruits, vegetables, whole wheat, legumes, and nuts. Soy** products will help you obtain enough protein.

• Apply **aloe vera gel** to the gums.

ENCOURAGEMENT—Jesus cares for each one as though there were not another individual on the face of the earth. As Deity, He exerts mighty power in our behalf while, as our Elder Brother, He feels for all our woes.

ANEMIA IN PREGNANCY

SYMPTOMS—Paleness of skin and gums, fatigue, rapid heartbeat. There may be an increased craving for sweets or unusual foods (a sign of nutritional deficiency).

CAUSES—Blood volume greatly increases during pregnancy; but it is primarily an increase of plasma (the liquid part of blood) rather than hemoglobin and the red blood cells it is in. Because of this, if you are not eating well, you can develop simple (iron) anemia. This is most likely to occur during the second trimester. Fortunately, the baby, itself, is unlikely to develop anemia.

NATURAL REMEDIES

It is important that you obtain enough **iron**—the right kind—so you can avoid simple anemia. Natural iron herbal formulas, which include **yellow dock and dandelion**, will build up the blood. **Chlorophyll, kelp, dulse, rice bran, whole grains, beans, dried apricots, and green leafy vegetables** are other sources. But the richest source of natural iron is **blackstrap molasses**.

• You should be aware of the fact that bottled **iron supplement** tablets frequently have the wrong kind of iron in them. Because it is not natural, it can block the absorption of vitamins E and A. Vitamin E is the antiabortion vitamin; it is needed in order to bring a baby to full term. Do not take iron tablets during pregnancy!

• Take **folic acid** (5 mg), **vitamin B_{12}** (1,000 mcg), and a complete **B complex** supplement.

—*Also see Anemia (440, 723).*

ENCOURAGEMENT—The love of the Father toward a fallen race is unfathomable, indescribable, without a parallel. This love led Him to consent to give His only begotten Son to die, that rebellious man might be brought into harmony with the government of Heaven and be saved from the penalty of his transgression.

EDEMA IN PREGNANCY

SYMPTOMS—Swelling develops in the hands and feet.

CAUSES—The increase of estrogen during pregnancy increases the tendency for the body to retain liquids. Some swelling of the hands and feet is normal.

But this must be carefully watched, because too much swelling is a symptom of pre-eclampsia *(679)*.

NATURAL REMEDIES

• Avoid salt and highly processed foods. Do not take diuretics (water pills). Try to walk at least a mile a day.

• Wear loose clothing and comfortable shoes. You may need a larger pair of shoes till the baby is delivered. When sitting, have your feet elevated.

• Remove finger rings early in the pregnancy, or they may have to be cut off later.

• If the swelling increases too much, see your physician. You may have pre-eclampsia *(679)*.

—*Also see Edema (401, 723).*

ENCOURAGEMENT—Because Jesus came to dwell with us, we know that God is acquainted with our trials and sympathizes with our griefs. Every son and daughter of Adam may understand that our Creator is the friend of sinners.

DIABETES IN PREGNANCY
(Gestational Diabetes)

SYMPTOMS—Frequent urination, excessive thirst, and increased fatigue. But possibly no symptoms at all. Identified by testing the woman's blood sugar levels around the 28th week of pregnancy.

CAUSES—This type of diabetes affects 3%-5% of pregnant women and only occurs during pregnancy. Because of hormonal secretions, not enough insulin is produced and blood sugar can become very high.

Although this condition does no permanent injury to the mother, the baby tends to gain weight and could be born with a low blood sugar level and excess weight. This could cause a difficult delivery. Fortunately, if fed sweet drinks, the baby's blood sugar can return to normal within hours after birth.

NATURAL REMEDIES

• Never miss meals, even if nauseated. Eat **small meals and frequently**. Do not eat **sugary** foods or too

many **high-carbohydrate** foods.

• If the baby is determined to be too **large**, it may be best to deliver him early by cesarean section.

—Also see Diabetes (547).

ENCOURAGEMENT—In taking our nature, the Saviour has bound Himself to humanity by a tie that is never to be broken. He is linked with us throughout the eternal ages. "Unto us a child is born, unto us a son is given" (Isa. 9:6). God has adopted human nature in the person of His Son; He has carried the same into the highest heaven. It is the "Son of man" who shares the throne of the universe. In Christ, the family of earth and the family of heaven are bound together. Christ glorified is our brother. Heaven is enshrined in humanity; and humanity is enfolded in the bosom of Infinite Love.

ASTHMA IN PREGNANCY

SYMPTOMS—A pregnant woman has asthma.

CAUSES—For the sake of the child, it was previously thought best for women with asthma to stop taking any asthma medicine during pregnancy. It is now believed that the baby may be injured more by the mother's asthmatic attacks than by her taking the medicine. (Pregnancy usually reduces her asthmatic condition. If an attack occurs, take the medicine.)

NATURAL REMEDIES

• Avoid airborne pollutants. Purchase an air purifier for your bedroom, at least. Avoid anything that might trigger an asthma attack.

—For an extensive coverage of these natural remedies, see Asthma (580).

ENCOURAGEMENT—We have not a high priest who is so high, so lifted up, that He cannot notice us or sympathize with us; but He was in all points tempted like as we are, yet without sin.

MISCARRIAGE
(Spontaneous Abortion)

SYMPTOMS—The fetus is ejected by the mother's body prior to the time that normal delivery should occur; this is usually before the 20th week.

CAUSES AND TREATMENT—Possible causes include cervical incompetence, ectopic pregnancy (implantation of the fertilized egg into a fallopian tube), *abruptio placentae* (placenta separates from the uterine wall), *placenta previa* (implantation of the placenta over the cervical opening). It can also be caused by chromosomal abnormality in the fetus or cervical incompetence (the cervix opens prematurely).

Other causes include emotional stress, general malaise, glandular disorders, and pregnancy-induced hypertension. But a frequent and often underlying cause is malnutrition.

Bleeding should always be taken seriously; for it may indicate that a miscarriage is about to begin. *See your physician.*

NATURAL REMEDIES

IMMEDIATE

• For a threatened abortion, have the woman lie very still and give a cup of false unicorn tea every ½ hour. As hemorrhaging decreases, give the tea every hour; then give it every 2 hours. Add 6 lobelia extract drops (no more) as a relaxer to the last cup.

• Every hour until bleeding is controlled, give a tea of wild yam, cranes bill, and comfrey.

• Take black haw tea in small doses throughout the danger period of habitual spontaneous abortion.

PREVENTION

• There can be deficiencies of **vitamins, trace minerals, and/or protein.** Vitamin A (taken in the form of **carotenes**, 5,000 IU), **folic acid** (5 mg), **zinc** (150 mg), and **complete amino acids** are especially important. **Vitamin E** (600-1,000 IU) is the "anti-abortion vitamin."

• Taking iron supplements can block the absorption of vitamin E, resulting in a miscarriage. Do not take iron tablets. Instead, take a little **blackstrap molasses** daily. It is the richest natural source of iron.

• It is vital that the mother-to-be take full **vitamin / mineral supplementation**, eat sufficient amounts of good **nourishing food** and avoid **junk food** of all types.

• **Ignore** the advice that you should eat whatever you want. If it is junk food, do not eat it! If it is real food and you crave it, then eat it. Getting enough **minerals** in your diet will help you avoid a craving for sweets, chocolate, etc. The cravings come because not enough vitamins, minerals, and complete proteins are being consumed.

• You may be eating certain foods which you, personally, ought to avoid because of malabsorption syndromes (such as **celiac disease**). Do **pulse tests** *(575)* to identify offending foods.

• In order to prevent another miscarriage, start on a fully nourishing diet six months before the planned conception.

• Do not **smoke** or be around it. Smokers are twice as likely to miscarry; and they have low birth-weight babies. Do not have **X-rays**, not even dental X-rays.

• Drinking **coffee** (either decaffeinated or regular) may induce miscarriage, especially during the first trimester.

• Take **red raspberry leaf tea** frequently, especially during the last few months of pregnancy. Or take **red raspberry leaf and catnip tea** throughout the pregnancy.

TESTING IF THE FETUS IS ALIVE

• To determine if the baby within you is alive, shake down a thermometer and place it by your bed. Upon awakening in the morning, move as little as possible, and take your temperature before arising. The fetus is alive if **your body temperature is 98.6 or above** (un-

less, due to hypothroidism, your normal temperature is lower).

—*Also see Avoiding Miscarriage (724).*

ENCOURAGEMENT—Jesus understands. Go to Him and give Him all your heart. Trust your future to Him, and He will wonderfully guide.

PREMATURE LABOR

SYMPTOMS—The baby is born a number of weeks ahead of schedule.

CAUSES AND PREVENTION—Premature labor is the onset of rhythmic uterine contractions prior to fetal maturity; this is most likely to occur between the 20th and 37th weeks. About 5%-10% of infant deaths are premature.

For possible causes and prevention, *read Miscarriage (678)*; caution may avert this possibility.

ENCOURAGEMENT—The closer we are to God, the happier we are. Take time in prayer. Lay out before Him all your trials and sorrows, and He will provide the answers you need. Isaiah 32:18.

FALSE LABOR

SYMPTOMS—Strong contractions, which are close together, begin coming—and then suddenly stop—hours or days before childbirth actually begins.

CAUSES—It is normal for a woman to have a few practice contractions weeks before labor begins. But sometimes she may have false labor, as described above.

NATURAL REMEDIES

• Sometimes **walking**, a **warm bath**, or **resting** will help calm the contractions, if they are false, or bring on childbirth if they are real. (Even if it is false labor, the contractions help to prepare the womb for actual labor later on.)

• An alternate method: Take 2 capsules each of **cayenne** and **bayberry**; and get to the hospital or call your midwife immediately.

ENCOURAGEMENT—God permitted His beloved Son, full of grace and truth, to come from a world of indescribable glory to a world marred and blighted with sin, under the shadow of death and the curse, in order to save us.

CHILDBIRTH

TO MAKE LABOR EASIER—Take earlier **training classes**. Later they will help you relax during contractions, reduce pains, help train the coach to assist, and explain how to recognize potential problems.

Helpful herbs include **blue cohosh**.

TO STOP POST-PARTUM HEMORRHAGE—**Raspberry** tea can be used to stop post-partum hemorrhage. Give it either orally or intramuscularly).

TO STOP AFTER-BIRTH PAINS—**Wild yam, cramp bark, and black haw** are specific herbs which help reduce after-birth pains and cramping throughout the pelvic area. Rub **warming liniment** into the skin, followed by **hot fomentations** over the area

Warm whole baths help the pain subside. Make sure the bathtub is sterile beforehand. Fast on **vegetable juices and broths** until the pains are gone. Once the pain is relieved, apply a **castor oil pack** for an hour.

ENCOURAGEMENT—Let God's Word, the Bible, be a lamp to your feet and a light to your path. In Him you can find the help you need.

PRE-ECLAMPSIA, ECLAMPSIA
(Pregnancy Toxemia)

SYMPTOMS—*Pre-eclampsia:* Sudden weight gain, high blood pressure, albuminuria, headaches, dizziness, spots before the eyes, epigastric pain, edema (swelling) of the legs and feet.

Eclampsia: Symptoms of pre-eclampsia, plus convulsions and coma. The convulsions begin with fixation of the eyeballs and rolling of the eyes. There is also twitchings of the face, arms, and hands. Then coma with temperature at 103°-104° F. The person can die in the coma.

CAUSES—Beginning about the turn of the century, physicians have sometimes prescribed that women keep their weight down in order to have smaller babies (which are easier for the doctor to deliver).

But such **arbitrarily restricted diets—low in protein, salt, and water**—can lead to serious consequences.

The sudden weight gain occurs because of fluid retention, due to low blood protein, high blood pressure, and albuminuria.

If pre-eclampsia is not treated properly, it develops into eclampsia—an even worse form of the disorder.

Both forms of this disorder *occur after the 20th week* of pregnancy. The orthodox treatment is to place the woman in the hospital, wait until convulsions occur, and then give her barbiturates. But what she needs is nourishing food before then and during that time.

Diet, blood pressure, and weight must be watched—but proper nutrition and fluid intake is most important.

NATURAL REMEDIES

• A **balanced high-protein diet**. Do not restrict **salt**. Take **seaweed** products, for trace minerals, and a full **vitamin / mineral supplement**. *See Pregnancy-related Problems for a list of nutritional needs (670).*

• Take **vitamin B_6** (100 mg daily until birth; then only take 50 mg daily) and 10-12 glasses of **water or fruit juice** a day, especially in the hot months.

ENCOURAGEMENT—The old song says, "Trust and obey; for there is no other way to be happy in Jesus, but to trust and obey." And how very true that is. Ezekiel 36:25.

PREGNANCY AND BREAST-FEEDING -

3 - BREAST-FEEDING

BREAST-FEEDING

(Lactation, Nursing)

YOUR OWN NUTRITION

• Try to nurse your little one for at least nine months, if at all possible. It will have fewer allergies, respiratory diseases, hypoglycemia, obesity, and gastroenteritis. Both you and the child will be happier and bond together more fully. The infant will have increased health and adapt better to later physical and emotional situations which may develop. Breast-fed babies are less susceptible to SIDS (especially if they are not given infant vaccines!). *See SIDS (697).* Research studies reveal that the docosahexaenoic acid (DHA) in mother's milk improves intellectual development in the infant. Formula-fed babies do not receive DHA.

• A high-**calcium** diet is very important in maintaining a good milk supply. *See Strengthening the Bones (505) for information on obtaining enough calcium.* Be sure and obtain enough **sunshine** on your skin, so it can be converted into vitamin D in your liver.

• A high-**protein** diet is very important. Take B complex, plus all the other vitamins and minerals, along with a sizeable amount of **brewer's yeast** at every meal. You need to stuff yourself on yeast and calcium foods in order to have enough milk for your baby.

• Drink lots of **lemon juice**. Avoid **sage tea**; for it dries up the milk. Do not eat **beans, onions, and cabbage**; for they will upset your baby.

• Keep your **bowels** open and clean with high-**fiber** foods.

• To increase milk supply, helpful herbs include **milkweed, caraway, goat's rue, and fenugreek**.

OTHER HELPS

• Keep yourself in good **health**; so you can continue eating an adequate diet while you are nursing your little one. You want to avoid long fasts, cleansing diets, or strictly limited diets during lactation.

• Avoid **mental depression** and **violent exercise.** They will also upset the baby.

• Do not **smoke** while nursing! Please, do not smoke at all! Avoid **caffeine, liquor, junk food, fried food, and drugs.**

• Be happy, rest often, and pray that God will help you raise a child who is dedicated to Him.

BREAST-FEEDING

• Sore, fissured, and possibly infected nipples will be avoided if certain principles are followed.

• Try to **wash your hands** before handling your breasts.

• **Position the baby** properly. His entire body should face you. His buttocks should be in one of your hands and his head in the bend of your elbow. The other hand is under the breast, with all four fingers supporting it. But do not place your fingers on the areola (the darker area around the nipple).

• **Prepare the nipple.** If—if—your hands are clean, you can rub the nipple lightly to firm it. Pinching it lightly flattens the nipple, to fit his mouth better. Do not try to toughen your nipples by vigorously rubbing them. This can damage them.

• **Bring the baby to the nipple.** As you tickle the baby's lower lip with your nipple, his mouth will open wide. When it is open wide, pull his body in quickly. His mouth should fix on the areola, and the nipple should be deep in his throat. At least an inch of the areola should be in his mouth. In this way, there is no movement of the nipple as the infant sucks.

• **Breaking the suction.** If you feel pain, do not delay; but immediately use your finger to break the suction and reposition him. Break the suction by placing a finger inside the corner of the infant's mouth to allow air to enter and break the vacuum. Do not, instead, just pull the nipple out of his mouth!

• La Leche (an organization advocating breast-feeding) says that 95% of the nipple soreness problems are caused by the way the baby sucks; and this can be corrected.

• **Leave him on a breast** as long as he is sucking effectively (swallowing every suck or two). If he begins pausing, burp him, wake him, switch sides, and let him nurse as long as he wants. Feeding time is usually 20-30 minutes.

• (But, for the first few days, it may be necessary to limit feeding periods to 5 minutes on each breast, before rotating to the other. It is very important that you work with the baby properly; so that you avoid fissures developing on, or near, the nipples.)

• Do not let him remain on the breast after he has finished actively feeding. *See Mastitis (682, 726) for why these precautions are given.*

• **The next time you start**, begin on the breast you ended with previously. Always have him nurse on

both sides.

• You will find that the baby will want to nurse often—frequently 8-12 times a day in the early weeks. God designed that these frequent feedings would bond the infant to his mother.

• **After feeding**, empty the breasts manually or with a breast pump until supply and demand reach an equilibrium.

• Air-dry the breasts after each feeding, before covering them. (Exposing the breasts to the air for 20 minutes at a time, two or three times a day, is helpful.) A 40-watt bulb can be placed near them for 15 minutes at a time. Never use breast pads that might retain moisture (especially those with plastic in them). Do not wear bras with plastic liners. If needed, place a folded handkerchief there.

• **Nipple cleanliness** is important. But never use soap on the nipples; it dries them out. The milk contains its own oil and also a self-cleaning antiseptic. Leave a little on at the end of each feeding, to lubricate and soften the nipple.

• Baby saliva contains an enzyme which softens the skin. So, if possible, wash the nipples with clean water. (Water or alcohol applied to the nipple will toughen the skin and assist in preventing sore nipples.) Or, better yet, place some mother's milk on them.

• You will want to do that which will avoid each of the following problems: *Sore Nipple (681), Nipple Candida (683), Plugged Duct (682), Engorgement (682), and Mastitis (682). See each section for more information.*

• **Other helps**. Clothing worn next to the breast should always be soft and non-irritating. Cotton is generally best.

• Feed the baby before the breasts become too full; then the infant will not have difficulty grasping the breast. Stasis of milk (when it is not flowing on out, but remaining in the breast too long) helps lead to mastitis *(682, 726)*. Also see Engorgement *(682)*.

• If the baby is fed before he is hungry, he will not suck the nipple too vigorously. Never allow him to chew the nipple.

• If a nipple is cracked, pierce a vitamin E capsule and apply the oil just after nursing. Do not use very much.

• Apply hot, wet compresses to the breast, if the baby is not taking as much milk as you are producing and you are getting too full. This will open up the ducts and increase the flow. Then nurse the baby more often and longer. Drink more fluids, so you can urinate every hour.

—Also see Mastitis (726), for an explanation of prebirth preparation of the nipples.

ENCOURAGEMENT—Only the love that flows from the heart of Christ can heal. Only He can restore the wounded soul. Submit your life to Him everyday, obey His Written Word, claim His promises; and you will find the help you need.

SORE NIPPLE

SYMPTOMS—One or both nipples becomes sore.

CAUSES—Sore nipples are generally caused by one of the following: The baby is not being positioned properly on the nipple. The nursing schedule is irregular or not frequent enough. The baby is permitted to incorrectly suck on the nipple. The breast becomes engorged (overly filled) with milk. As a result of one or more of these, infection may have set in. The infection is usually the fungus *Candida albicans*. *See Nipple Candida (683).*

NATURAL REMEDIES

• **Position** the baby so that his jaws are over the least tender parts of the nipple. Do not pull away when the infant is about to begin feeding. Relax and let him feed.

• Nurse on the breast that has the least soreness.

• If both breasts are sore, **hand-express** (with your hand or a breast pump) the milk until the "let-down" occurs (the milk is flowing well). Then put the baby to the breast so he can easily get it.

• **Frequently feed** the baby so he will not be hungry and bite down roughly on the nipple.

• **Position him** properly. His mouth should cover over as much of the areola (dark area of the nipple) as possible. He should not make slurping noises when feeding. Frequently change nursing positions, to rotate the pressure of his mouth on the nipple. Always correctly break the suction, instead of just pulling him off the nipple.

• Keep the **nipples dry** between feedings. Expose them to sunlight and air.

• Do not **wash** the nipples with soap, alcohol, or petroleum-based products. Put a little of the milk on the nipples and let them air-dry.

• If the nipples are cracked, as well as sore, apply fresh **aloe vera gel** or a paste form of **calendula**, **marshmallow**, or **slippery elm** to them. This will soothe them.

• In order to avoid engorgement *(682)*, **massage** your breasts from base to tip. Begin doing this in the final weeks of pregnancy; and continue doing it through to the time the baby begins nursing, and beyond.

• If a nipple becomes sore, put a little **milk** on it. Then let it air dry. The nipples should be checked daily; and, if they are sore or cracked, treatment should begin promptly. Do not wait. *See Mastitis (682, 726).*

• For sore nipples, use **sunshine** or the light of a **light bulb** that is close enough to feel warm but not burn.

• Place some cold grocery-store **tea** (containing tannic acid) on a folded tissue and lay it on the area for 20 minutes; then dry and expose it to air for 20 minutes. Rinse it before the next nursing. The tannic acid will promote healing.

• Poultices of **comfrey** root or leaf may be used for

sore nipples.

• If the condition continues, you may have a candida infection. *See Nipple Candida (683).*

ENCOURAGEMENT—When we obey God's holy ten commandment law (through the enabling grace of Jesus Christ), our lives are ennobled and we live cleaner, happier lives.

ENGORGEMENT

SYMPTOMS—The tissues in the breast swell. They feel full, hard, tender, and tight. The skin of the breast is shiny, hot, and distended. You may have a low-grade fever.

CAUSES—Especially during the first two weeks, there is an increased blood supply to the breast; and newly produced milk is placing pressure on the breast.

NATURAL REMEDIES

• Until engorgement ends (usually within two weeks), give your baby short, frequent feedings every 1½-2 hours, day and night. Express (pump out) milk between feedings, to relieve pressure.

• Apply moist heat to the engorged breast (or breasts) for 30 minutes before each feeding. While the infant is nursing, massage the breast to help get the milk flowing.

• Feed your baby whenever he wants it. Do not delay doing this.

• Do not feed your baby anything else (except clean water) during this initial engorgement period. Let him empty each breast completely at each feeding. According to the American Academy of Pediatrics, newborns should nurse 8-12 times every 24 hours; continue nursing each time until the baby is satisfied, which is usually 10-15 minutes on each side.

• Do not give him formula or sugary water.

• To reduce milk supply (or the pain of breast engorgement), the herb, **goldenrod**, is helpful. (But do not take it if you are allergic to that herb.)

• Research studies have found that, because of a stillbirth or neonatal death, the flow of breast milk was suppressed (reduced or stopped) by placing **jasmine flowers** on the area. They are held in place with tape. Each breast had 50 cm. of stringed flowers applied to it. This lowers serum prolactin levels.

ENCOURAGEMENT—God has given His holy law to man as His measure of character. By the enabling grace of Christ, you may see and overcome every defect in your character.

PLUGGED DUCT

SYMPTOMS—Soreness or a lump in one area of the breast. A place on the breast will feel hard and painful to the touch.

CAUSES—The breast is full of thousands of tiny milk ducts. They are the sources of the milk which is fed to your baby. But some of them can become plugged.

Causes include incomplete emptying of the breast in each feeding by the infant. If the milk does not come out, it begins drying in the duct and clogs it. Wearing a tight bra can also cause a plugged duct.

Binding clothes, fatigue, or prolonged periods without nursing can cause them. If not dealt with promptly, infection can begin.

If milk is left on the nipple after a feeding, so that it dries, that can also keep the milk from flowing out freely during the next feeding.

NATURAL REMEDIES

• After each feeding, carefully check each nipple, looking for tiny "dots" of dried milk. Gently wash them away. By doing this each time, plus emptying the breast fully at each feeding, will generally clear plugged ducts within 24 hours.

• Massage the breast, starting at the chest wall and working down with a circular motion. This stimulates milk flow. It is important that you let the baby nurse on that side frequently. The sucking clears out the duct better than anything else.

• Offer the child the affected breast first. This will ensure that he will fully empty it.

• You may need to alter the position of the infant on the nipple, so all the ducts are drained.

ENCOURAGEMENT—It is not necessary that anyone should yield to the temptations of Satan and thus violate his conscience and grieve the Holy Spirit.

MASTITIS

SYMPTOMS—Breast inflammation, redness, pain, fever, chills, hard swelling, malaise, headache, and possibly swollen cervical and/or axillary lymph nodes. Soreness and redness in the breast, fever, pus-like secretions from the nipple which are yellow, general tiredness, flu-like symptoms.

CAUSES—Mastitis generally occurs between the fifth day after childbirth to the second or third week. —It especially occurs to mothers nursing their first baby. Usually limited to one breast, it must be treated promptly or an abscess may develop. Treatment must be started within 12-18 hours after the first symptoms are noted.

The breast and milk duct system has become inflamed by staphylococci invading a fissured or cracked nipple.

Causes include **shallow grip on the nipple** by the infant, **incomplete emptying** during each feeding, **blocked duct, poor nipple care and hygiene, irritating clothing, engorged breast** (because of trying to wean the child off milk), or **lack of proper nipple preparation** prior to lactation. *See Breast-feeding (680), Engorgement (682), Plugged Duct (682), Sore Nipple (681).*

It is important that the infant completely empty the breast each time. If he is not properly positioned on the nipple, the infant can excessively suck it while trying to get milk. *See Breast-feeding (680).*

Most minor infections will heal by themselves within a week.

NATURAL REMEDIES

• **Do not stop nursing** the baby because you have mastitis! The milk is not infected, the baby needs it; and you must keep giving it for months to come. The milk gives the baby valuable antibodies. If you stop nursing, the mastitis could more easily lead to an abscess in the breast.

• **Go to bed, keep drinking lots of clear fluids, and nurse more frequently.**

• Air-dry the nipples after each nursing, to prevent cracking. (Bacteria enter through the cracks.) If they do crack, place breast milk on them. Then, when they dry, put fresh aloe vera gel on them.

• Apply heat to the breasts, to help heal the cracks and prevent infections. Place a 100-watt bulb about 12-18 inches from each breast. It should not be close enough to cause discomfort.

• Alternate **hot and cold compresses** are often all the treatment required. Apply a hot compress for 3 minutes; then apply cold for 30 seconds. Do this 3 times and repeat the series 2-3 times each day.

• Sometimes, a continuous **cold application** is preferred. If so, give a **hot footbath** at the same time.

• Nurse the affected breast twice as often, but for shorter periods of time. Try to **keep it emptied.** Let no one tell you that you should stop nursing if you have mastitis! Keep nursing; you will recover more quickly and the baby will not be injured.

• Obtain plenty of **rest**, including frequent rest periods throughout the day.

• Always wash your hands before and after each breast-feeding. Always wash the breast and nipple afterward.

PREVENTION

• Prevention of mastitis begins prior to childbirth. For 2-3 months, the mother-to-be must get her nipples ready for lactation. She should **massage** the nipples daily with **chickweed** ointment. **Vitamin E** may also be used. Perform the "nipple pull" several times each day during a shower.

• During breast-feeding, **position the baby right.** Place the baby on the breast correctly, empty the breast fully, and break suction properly. This should be followed by **emptying the breast** with a hand pump, if necessary. Nipple **cleanliness** is also important. Proper **clothing** should be worn. *All this and more is explained in "Breast-feeding" (680).*

— Also see Fibrocystic Breast Disease (640).

ENCOURAGEMENT—There are many whose hearts are aching under a load of care. Go to God with your trials and problems, and find in Him the solutions you so much seek. Matthew 25:21.

BREAST ABSCESS

SYMPTOMS—The symptoms of mastitis have worsened into pus in the breast and breast milk.

CAUSES—In rare instances, a breast abscess develops—and the breast fills with pus. If this happens, milk should be hand-expressed (pumped by hand) and discarded. Drainage may be necessary; and this can be done in a physician's office. Breast-feeding should continue on the uninfected breast until the abscess in the other one has healed.

NIPPLE CANDIDA

SYMPTOMS—A reddened, itchy, area on the nipple. Or severe pain while feeding the infant.

CAUSES—This is a fungal infection. This condition can be further complicated if the baby develops oral thrush. Treat oral thrush essentially the same as for nipple candida.

NATURAL REMEDIES

NUTRITION

• Eat a nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts.** While treating the infection, a diet primarily of **raw food** is best.

• Avoid **tobacco, alcohol, caffeine.** Do not eat **meat or dairy products.** Avoid **sugary, fried, and processed foods.** Eat nothing **greasy.**

HERBS

• **Goldenseal** contains *berberine*, which destroys fungi. It can be used against every type of fungus infection. It can be applied both topically and as a drink. Only use goldenseal for a week; then switch for a time to another fungicide herb.

• **Pau d'arco** is strongly antifungal. Drink 3 cups daily.

• **Bloodroot** also contains *berberine*; this has been shown to be quite effective as a fungicide.

• **Yellowroot, barberry, and Oregon grape** also contain *berberine.*

• **Tea tree** oil is excellent when applied externally; but do not drink it. Apply it several times a day to the affected area; it can be applied either full strength or diluted with a little distilled water or cold-pressed oil. **Black walnut** extract can also be used.

• A powerful antifungicide is **wild oregano oil.** The most resistent forms of fungus infection can generally be eliminated by it.

• The **pepper tree** (horopito) is a New Zealand shrub which contains *polygodial*; this is useful against both fungi and bacteria. Another antifungal herb is the ***Licaria puchuri-major***, a Brazilian plant.

OTHER HELPS

• Keep the **nipples clean and dry.** Expose the af-

fected area to air as much as possible. Your **clothing** should be kept clean.

—Also see Candida (215).

ENCOURAGEMENT—In the religious life of every soul who is finally victorious there will be scenes of terrible perplexity and trial; but his knowledge of the Scriptures will enable him to bring to mind the encouraging promises of God, which will comfort his heart and strengthen his faith in the power of the Mighty One.

PREGNANCY AND BREAST-FEEDING -
4 - EMOTIONAL PROBLEMS

BABY BLUES

SYMPTOMS—Symptoms start 3-10 days after giving birth. They are often worse about day 5 and include weeping, dramatic mood swings, fatigue and irritability, lack of concentration.

CAUSES—It is very common for a new mother to feel low or miserable during the first few days or weeks after childbirth. Major changes have to be made. Up to 8 in 10 women experience the "baby blues."

This condition is caused by the sudden fall in hormone levels (especially estrogen and progesterone) that occurs after a baby is born.

Baby blues generally clear up within a few weeks, as the mother obtains more rest and adapts to her new responsibilities.

NATURAL REMEDIES

• Obtain extra **rest**. Take time to **walk outdoors** in the fresh air. **Be thankful** to God for all your blessings; for they are many. **Set to work helping** your new baby. **Recognize the possibilities** of how much you will be able to help him now and in the coming years.

—Also see Depression (494).

ENCOURAGEMENT—Summon all your powers to look up, not down at your difficulties; then you will never faint by the way. You will soon see Jesus behind the cloud, reaching out His hand to help you; and all you have to do is to give Him your hand in simple faith and let Him lead you.

POST-PARTUM DEPRESSION

SYMPTOMS—Symptoms are like those of baby blues, but more severe; they begin any time within the first 6 months. The new mother constantly feels exhausted; she has little interest in the baby. There is a sense of anticlimax, feeling inadequate and overwhelmed by new responsibilities, difficulty sleeping, loss of appetite, and feelings of guilt.

CAUSES—This is more severe than baby blues; yet it is somewhat common in the first few weeks or months after childbirth. It affects about 1 woman in 10. Hormonal changes are involved.

Inadequacy, isolation, concerns about the new responsibilities can cause stress and lead to depression. There is also lack of sleep, exhaustion from a lengthy birth labor, painful wounds (vaginal tears or cesarean stitches).

Some women, who have post-partum depression, have had depression *(494)* prior to becoming pregnant. Some women have panic attacks which lead to post-partum depression.

The problem generally clears up within a few months or up to a year.

NATURAL REMEDIES

• Take time to rest, count your blessings, ask God for courage and strength for each day's new duties. And dedicate your life to serving others; right now, it especially includes your new child.

• Rest and take time to be around other mothers with their little ones. Make more friends and take time to talk to them. Find ways to help others. We forget ourselves when we are busy thinking about how to help someone who needs us.

—Also see Depression (494).

ENCOURAGEMENT—Jesus is always ready to help you in forming a strong, symmetrical character.

POST-PARTUM PSYCHOSIS

SYMPTOMS—Symptoms usually develop rapidly, about 2-5 weeks after childbirth, and include extreme mood swings from depression to mania, insomnia and overactivity, confusion, false beliefs of being disliked and persecuted by people, hallucinations.

CAUSES—About 1 woman in 1,000 develops a serious psychiatric condition, known as post-partum psychosis. It requires special care.

The woman usually has previously experienced episodes of severe depression *(494)*, alternating with mania *(496)*. Some of these women have close relatives who have a history of bipolar disorder (manic-depression, *495*) or severe depression.

NATURAL REMEDIES

• This person needs understanding friends. It is best that she not be left alone until she can feel happy caring for her baby.

— Also see Mental Illness (498).

ENCOURAGEMENT—As you draw near to God with confession and repentance, He will draw near to you with mercy and forgiveness.

Oh, how thankful we can be for the love of God in Christ Jesus our Lord! As we trust him and obey His ten commandment law, He ennobles our lives and enables us to prepare to live forever with Him in heaven.

— SECTION 19 —

INFANCY AND CHILDHOOD

INFANCY AND CHILDHOOD -

1 - INFANT NUTRITION

INFANT FEEDING

DOS AND DON'TS

From the beginning, give your baby a little **water**, gradually increasing the amount. Do not give **orange juice or tomato juice** until he is older. He is a precious gift; so you want to give him the best of care.

At 3 months, begin a little **blended food**. By 9 months, the baby should be eating a variety of carefully prepared natural foods. However, in order to avoid food allergies, many experts declare that breast-feeding alone, with nothing else for the first 6 months, is best.

Do not give the baby any grains (wheat, oats, rice, etc.) until he is 6 months old! When the baby is 6 months old, dilute 4 teaspoons of whole-wheat flakes in boiling water till entirely dissolved, put through a fine sieve, and add to the baby's bottle (if you are giving him a bottle by then). A little powdered oatmeal can also be added.

When the first teeth appear, begin feeding wholesome simple foods in puree form (such as **greens, vegetables, fruit juices, and gruels**).

Do not give the infant **cane sugar** in any form. This can lead to fever and various ailments. Use **malt sugar**. Do not give **honey** or **orange juice**.

Do not give the infant **meat**! Feeding an infant **meat, cane sugar, white-flour products, candies, or soft drinks** causes him to lose his taste for simple, natural foods; and it is responsible for rickets, scurvy, tonsil trouble, night terrors, anemia, and convulsions.

INFANCY AND CHILDHOOD -

2 - BIRTH DEFECTS

CONGENITAL INFECTIONS

SYMPTOMS—A variety of problems to the infant include miscarriage, preterm birth, illness at birth, or physical abnormalities.

CAUSES—Most infections contracted by a mother during pregnancy do not affect the fetus; but some cross the placenta and cause harm. These infections are often brief, minor illnesses for the mother; and she may be unaware of them. However, chronic infections such as HIV may also be passed on.

The effect on the baby depends on when the baby received it. In early pregnancy, the development of organs may be disrupted and a miscarriage *(678, 724)* may occur. Infections in later pregnancy may result in premature labor *(679)* and a baby who is seriously ill at birth. Infections may also be transmitted as the baby passes through the birth canal.

First part of pregnancy: In the first 3 months, **rubella** can produce heart abnormalities (congenital heart disease), impaired hearing, and/or impaired vision. **Toxoplasmosis** (cat coccidia, *574*), or **cytomegalovirus** (CMV), can cause miscarriage or malformations, The first can cause damage to the retina; the second (CMV) is the leading cause of congenital deafness.

Later in the pregnancy: The above two diseases can result in preterm labor, stillbirth, and serious illness in the newborn. **Listeriosis** *(605)* may cause miscarriage.

Chronic viral infections which may be transmitted include **HIV** *(632)*, **hepatitis** *(358)* **(either B or C)**, **syphilis** *(630)*, and **trichomoniasis** *(631)*. These infections do not always produce symptoms at birth; but they may cause serious illness later in life. **Herpes simplex** (250) and **bacterial streptococcal infections** (225-233) cause acute and sometimes fatal illness in the newborn. The risk of infection is greater if the mother's waters break prematurely.

NATURAL PREVENTIVES

- If people in your neighborhood are getting rubella (German measles), **avoid extensive contact** with others during the first three months of the pregnancy.
- To avoid toxoplasmosis, do not have a **cat** in the house; and **do not clean cat feces**!
- To avoid listeriosis, do not eat **soft cheese, pate, poorly cooked meat, or dairy products**.
- In order to avoid venereal diseases *(627-633)*, do not practice **unsafe sex**.
- Do what is needed to **avoid hepatitis** *(358)*.
- If you have HIV or active genital herpes, it is best to have delivery by **cesarean section**.

ENCOURAGEMENT—God can encourage your heart as no one on earth can. Go to Him with all your trials and problems. He alone can give you the peace of heart that you so much desire.

BIRTH DEFECTS

IMPORTANT: Be sure to read Pregnancy Problems *(670)*. It tells you what to do to avoid birth defects.

SYMPTOMS—A variety of partially, or wholly, incapacitating physical or mental defects which are present at birth.

CAUSES—More than 90% of birth defects are the result of **early pregnancy malnutrition** of the mother. Such defects include cleft palates, cleft lips, heart defects, limb defects, spina bifida, cystic fibrosis, muscular dystrophy, heart defects, brain defect, fetal hernia.

All of the above diseases have been eliminated from valuable livestock by the veterinary profession. This has been done by giving the animals excellent nutrition. Why is it that we feed animals better than we feed humans! Yet junk food (which leads to a variety of diseases in adults, children, and newborns) is sold—and no warnings are given to the public. Indeed, the official government message is that "you can get all your vitamins and minerals in the food you buy at the store."

It is well-known that **bearing a child after the age of 40** can cause problems. Yet teenagers have a greater percentage of children with birth defects than do women over 40, because of their generally poor eating habits and lack of vitamin / mineral supplementation. Many young people today live on junk food and have damaged offspring as a result.

As an example, let us consider **cystic fibrosis** *(546)*. It is a type of adrenal damage disorder; this is said to be the "most common genetic defect. Yet, in reality, cystic fibrosis is caused by a **selenium and fatty acid deficiency** in the fetus and/or newborn breast-fed infant. If the mother has **celiac disease**, this can impede her absorption of essential nutrients (such as selenium and even more).

In 1958, Dr. Kaus Schwartz reported in the NIH publication, *Federal Proceedings*, that selenium was an essential nutrient. The deficiency symptoms he reported all fit cystic fibrosis. But no one paid attention.

In 1972, Cornell University found that chicks hatched from selenium-deficient hens developed all the classical symptoms of cystic fibrosis of the pancreas. They found that chicks were totally cured from selenium difficiency within 21 days, if selenium was given within 30 days after hatching.

In 1978, J.D. Wallach, a veterinarian researcher, identified this problem in animals and birds as being "cystic fibrosis." But, when other researchers agreed with his findings, Wallach was fired within 24 hours from his government research laboratory.

Since that date, Wallach has treated over 450 cystic fibrosis patients with excellent results. He has cured three-month-old infants of the disorder. Wallach later did joint research with the Chinese government, in their hospitals, and helped thousands of their people.

Yet, in America, the people are told fibrosis is a "genetic defect" and nothing can be done, except expensive and time-consuming rehabilitation programs. Why does this cover-up continue?

Dr. Arthur F. Coco, inventor of the pulse test, made this statement: "I am a realist. As long as the profit is in the treatment of symptoms rather than a search for causes, that's where the medical profession will go for its harvest."

It is true that radiation is another cause of birth defects; yet only .1% of birth defects result from X-rays, etc. Most pregnant women realize that they should avoid them.

What is the solution to the problem? *It is to give women a good, nourishing diet. But it must begin a couple of years before conception!*

Prevention of birth defects requires more than "prenatal" vitamins after the second month of pregnancy, when the physician gives his pronouncement, "You are pregnant." By that time, the embryo has formed all organs and tissues—for better or worse! **Proper supplementation of vitamins and minerals, nourishing food, and avoidance of tobacco, alcohol, caffeine, drugs, and junk foods must have had its effect on the mother's body—before conception took place!**

Do a home pregnancy test as soon as you suspect the possibility of being pregnant; and immediately begin eating nourishing food and taking supplements.

Here is a vitamin you must be taking *before* you become pregnant: **Folic acid**. This B vitamin helps prevent **brain and spinal column defects** in newborns. To prevent such defects, women should begin taking 400 mcg a day at least one month prior to conception—and continue for at least 3 months afterward. The only effective way that this can be done is for them to be taking it from the time they become able to bear children.

—A sample of such a birth defect is Cerebral Palsy (below). Also see Cystic Fibrosis (546).

ENCOURAGEMENT—Faith is needed in the world today, faith that will lay hold on the promises of God's Word and refuse to let go until Heaven hears.

CEREBRAL PALSY

SYMPTOMS—A form of paralysis caused by a prenatal brain defect, characterized by involuntary motions and difficulty in control of the voluntary muscles.

CAUSES—The cause of this disorder, which affects the fine motor coordination of the body, is a **deficiency of zinc and B_6** in the mother's diet prior to, and during, the formation of the brain of the fetus. It is possible that **celiac disease** *(382)* in the mother may also have been a factor in inducing this deficiency.

There is, at this time, no known treatment.

NATURAL REMEDIES

• As reported in *Annals of Allergy (August 1981, Abstract 28,* many victims of cerebral palsy experience an increase in the intensity of their symptoms because of allergies. Recognizing and removing these **allergies** may improve their quality of life.

—Also see Birth Defects (688).

ENCOURAGEMENT—Let the afflictions which pain us so grievously draw us closer to God. Find in Him the help that you need.

DOWN'S SYNDROME
(Mongolism)

SYMPTOMS—Slow physical development, moderate to severe mental retardation, and facial features which are somewhat flattened. Ears are set low, tongue is large and furrowed, hands are broad and short—and have a single (simian) crease across the palm.

CAUSES—Also called *trisomy 21,* Down's Syndrome occurs during fetal development; but it is not inherited. The problem is **an extra 21st chromosome.** It occurs in 1 out of 700 live births. The risk increases greatly after the age of 34.

People with Down's Syndrome can, with care, live to old age. But they are prone to Alzheimer's disease *(485),* pneumonia *(409),* and other lung diseases.

NATURAL REMEDIES

• A nourishing diet of fresh **fruits, vegetables, legumes, and nuts** is very important, plus proper rest. Avoid foods containing gluten (**wheat, oats, barley, and rye**). Avoid **sugars, refined foods, dairy products, tobacco smoke, and alcohol.** Give him **supplements** in liquid (not tablet or capsule) form. The entire **B complex** is important for brain development.

• **Exercise** is important, so oxygen gets to the brain. Carefully planned activities are needed at an early age, to provide exercises to improve his motor skills.

• Children with this problem tend to be very affectionate. **Hold your child** and show him love; and he will become even more kindly and affable. **Involve him** in whatever you are doing; encourage your other children to do the same.

NEW HELPS

There are several **new methods** that have been developed for helping children with this problem. The result can be a lengthening of life and an increase of mental ability. Details are lengthy; and here is where you can learn more about this. You can obtain real help from them:

• Nutri-Chem Labs, 1303 Richmond Road, Ottawa, Ontario K2B 764, Canada / 613-820-9065 or 613-829-2226. Ask about MSBPlus formula and anything else they have for Down's Syndrome. It has had fairly good success.

• Warner House, 1023 East Chapman Avenue, Fullerton CA 92631 / 714-441-2600. Their formula reduces infections in persons with this problem.

• The Registrar, Institutes for the Achievement of Human Potential, 8801 Stenton Avenue, Philadelphia, PA 19118 / 800-736-4663.

ENCOURAGEMENT—Rejoice that Jesus is soon to return and all the problems of life will be past. Then all who love God and, by faith in Christ, obey His Word will be with Him forever.

MITRAL VALVE PROLAPSE

SYMPTOMS—Possible palpitations or chest pain in some children; but most cases are undiscovered until a routine physical exam. Diagnosis can easily be made with a stethoscope. The heart sound is like a click; and sometimes a murmur is heard.

CAUSES—This is the most common heart abnormality in children and adolescents; it is usually first noticed in childhood. The mitral valve (which lets blood flow from the left atrium of the heart into the left ventricle) flops closed, making a "click." If the valve does not close tightly, some blood will leak back, causing a murmur sound. Neither the click nor the murmur generally causes much problem for the heart. Only 3.6% of those with this prolapse also have other medical problems.

NATURAL REMEDIES

• In nearly every case, **the child does not need to be especially protected** or have physical activity restricted. Unnecessary diagnostic procedures are not needed.

• For one who has this defect, **deep breathing** exercises will help relieve stress.

• Eat a **nutritious diet,** which is low in **salt and fat.** Do not **overeat;** and keep the **weight** down. Every extra pound requires an extra 5 miles of blood vessels. **Caffeine** will induce palpitations.

INFANCY AND CHILDHOOD -
3 - INFANT PROBLEMS

NORMAL DEVELOPMENT: AGES 1-5

During their first 5 years, children learn the basic

skills necessary for their future development. The four main areas are physical skills, manual (hand) dexterity, language, and social skills.

In the normal development of a child, the following ages indicate when the ability normally begins.

Can lift head to 45° - by 3 months.
Startled by loud sounds - till 2 months.
Can roll over - 1½-4½ months.
Can bear weight on legs - 1½-5 months.
Squeals - 1-4 months.
Smiles spontaneously - 1-5 months.
Looks at own hands - 1-4 months.
Holds hands together - 2-4 months.

Reaches out for a rattle - 3-6 months.
Makes cooing sounds - 3-5½ months.
Turns toward voice - 3½-6½ months.
Passes rattle from hand to hand - 5-8 months.
Can sit unsupported - 5½-8½ months.
Says "dada" and "mama" to *anyone* - 5½-9½ mo.

Can crawl - 6-10 months.
Can stand by hoisting up own weight - 6-10 months.
Plays with feet - 6-8 months.
Plays peekaboo - 6-10 months.
Can grasp object between finger and thumb - 7-11½.
Eats with fingers - 8-12 months.
Can stand without help - 9-14 months.
Can pick up a small object - 9-14 months.
Says "dada" and "mama" to *parents* - 9-13 months.
Can walk holding on to furniture - 9½-14½ months.
Can walk without help - 10-18½ months.
Can drink from a cup - 10-16½ months.

Likes to scribble - 12-24 months.
Starts to learn single words - 12-24 months.
Mimics housework - 12-19½ months.

Can walk up stairs without help - 14-21 months.
Can point to parts of the body - 14-24 months.
Can put two words together - 14-27 months.
Can eat with a *spoon* and fork - 14-27 months.
Can undress without help - 14½-27 months.
Can throw a ball - 16-24 months.
Can build a tower of 4 blocks - 16-27 months.
Stays dry in the day - 16½-38 months.
Can kick a ball - 18-24 months.

Can draw a straight line - 20-36 months.

Separates easily from parents - 23½-57 months.
Can pedal a tricycle - 24-36 months.
Knows first and last names - 24-32 months.

Can copy a circle - 29½-53 months.
Can balance on one foot for a second - 30-54 mo.
Can talk in full sentences - 30-42 months.
Can name a color - 32-46 months.

Can dress without help - 30-60 months.
Stays dry at night - 30-60 months, or beyond.

Can draw basic likeness of a person - 36-60 months.
Can eat with a *knife* and fork - 39-60 months.

Can catch a bounced ball - 42-60 months.

Can hop on one leg - 48-60 months.
Can copy a square - 48-60 months.
Can define seven words - 48-60 months.

DIAPER RASH

(Ammoniacal Dermatitis)

SYMPTOMS—A reddish rash affecting the diaper region, with or without secondary infection by fungi or bacteria. Redness, tenderness, thickening of skin, inflammation. If secondary yeast infection appears, the skin will be bright red with well-defined borders, frequently with distinct red papules.

CAUSES—The pelvic area is **covered and damp** (especially damp) too much of the time. About 50% of the rashes go away within a day. The rest can last 10 days or longer. Breast-fed babies have less diaper rash; and this resistance continues long after the baby has been weaned. When diaper rash is more prominent later, a **food allergy** may be the cause.

NATURAL REMEDIES

• The basic solution is to keep the diaper area **dry and warm.**

• **Change the diaper** frequently; wash the area with cool water and gently dab dry, using a soft cotton diaper. All urine and stool must be removed. Special attention should be given to skin folds. Avoid harsh soaps. Mineral oil may be used to remove stool.

• To dry the baby, use **cornstarch** (or ordinary flour) as a drying agent; never use talcum powder! It is a powdered rock dust; and it can cause cancer in anyone (infant or adult) that uses it. Do not apply alcohol. Research studies show that cornstarch or flour will not cause *Candida albicans*.

Try **blow-drying** the baby before re-diapering.

• The new **super-absorbent diapers** greatly help in solving the problem. They reduce skin wetness, but cause allergies.

• When **washing diapers**, add vinegar to the final rinse. This will help reduce the pH of the cloth. Add 1 oz. of vinegar to 1 gallon of water during the final rinse. Diapers should be sun-dried if possible. If machine dried, fabric softeners should be avoided (they may cause allergic reactions).

• **Give air** to that region. Take the diaper off and lay the baby chest down, with his face turned to one side, on towels underlaid with a waterproof sheet. Keeping an eye on him, leave him that way for as long as practicable. If you do not watch him, problems could develop. Keep the child bare and exposed to air and

sunlight as much as the climate will permit.

• Expose the infant to small daily doses of **sunlight**. Be careful not to burn him. No ocean bathing until the rash is gone. But fresh pool water or rainwater is all right.

• Giving 2-3 ounces of **cranberry juice** to older infants will make urine pH slightly more acid. This helps reduce irritation.

• For a **diaper rash ointment**, add ½ cup **cornstarch** to ¼ cup **vitamin E oil**, mix thoroughly, store in a refrigerator, apply with each diaper change. It will last a week.

• **Aloe vera gel** is also effective in healing an irritated diaper rash.

• Do not use **commercial diaper ointments**; some of these produce nerve damage.

• **Allergies** to cow's milk, citrus fruits, and wheat have all been associated with diaper rash.

• If the child is not drinking enough **fluids**, urine acidity increases. Also diaper rash comes along with it.

ENCOURAGEMENT—The majority may choose the wrong; yet you can choose the right. Stay on God's side of the battle, and you will have victory.

CRADLE CAP

(Infantile Seborrheic Dermatitis)

SYMPTOMS—Thin, whitish, flaky scales. Or thick, yellow, greasy crusts. Sometimes it spreads to the eyelids, external ear canal, and nose.

CAUSES—Cradle cap is the most common scalp disorder of infants. About 50% have it at some time. It can occur up to the age of 5. There is an overproduction of sebum; this is a waxy, oily substance that may plug the sebaceous glands, leading to inflammation and acne formation. The entire scalp can become covered with a thick mat of sebum and dead skin cells. It can spread to the eyelids, outer ear canal, and sides of the nose. Hair may temporarily be lost.

Possible causes include **food allergies**. Of 187 infants which had it, in later years 67% had an allergy (whereas 20% have allergies in the general population). A deficiency of **vitamin B_6 and zinc** may be involved.

NATURAL REMEDIES

• **Gently remove** the crusts. Shampoo 2-4 times a week with a mild soap. Massage the scalp gently; but do it firmly enough to remove the flakes. Do not break the inflamed skin underneath. Massage **vegetable oil** into still-adhering flake areas. Let it set for a few minutes; then shampoo it off.

• Include **vitamin B_6** (10-25 mg daily) and **zinc** (15-25 mg daily) in the infant's diet.

• Check for **food allergies**. The problem most frequently develops within the first 3 months and usually 3-4 weeks after introduction of a new food. When that food was withdrawn, cradle cap cleared up. Most likely to cause problems: **milk, wheat, eggs, oranges, beans, peas,** and occasionally **oatmeal**.

• Avoid **strong shampoos and medications**; for they may be absorbed through the child's skin.

See Pulse Test (575) and Seborrhea (272).

ENCOURAGEMENT—There is an ornament that will never perish; this will promote the happiness of all around us in this life and will shine with undimmed luster in the immortal future. It is the adorning of a meek and quiet spirit.

COLIC IN INFANTS

(Infant Colic)

SYMPTOMS—Stomach or intestinal pain in an infant. There is abdominal pain, distension, insomnia, extreme fretfulness, or hysteria. The child cries out, pulls the knees up to the stomach, and has a distended stomach. The child may be red in the face and symptoms worsen at night.

CAUSES—Abnormal amounts of gas are passing upward or downward through the infant's stomach and intestines; this is causing pain. Infant colic usually begins around the 3rd or 4th week and clears up by the 12th week. It occurs in 1 in 10 babies. **Food allergies** are a frequent cause. Colic is rare in countries that subsist on regular food and do not use medicinal drugs. Mothers who are given **drugs during labor and delivery** are more likely to give birth to babies who have colic. **Milk formulas** which use pork skin to fortify the vitamin D is frequent cause of allergies and infant colic.

NATURAL REMEDIES

• You can immediately give the infant warm **catnip tea** in a bottle. A catnip tea **enema** will also help. Crying spells occur at regular intervals; so, if a very **warm bath** is given an hour before an expected attack, it may be prevented. Have catnip tea on hand to use in an emergency. In addition, a **hot footbath** or **hot fomentation** over the abdomen will relieve the baby.

• One or 2 oz. of **warm water** bring relief to some. Warm **anise, peppermint, chamomile, thyme, or catnip** tea may help him. Make 1 cup of the tea and give 1 Tbsp. at a time to the distressed baby.

• **Charcoal** will help relieve gas. Put a little powdered charcoal into a bottle of water and give it to him. Too much can constipate him; and it will blacken the stool.

• If the baby is *totally breast-fed*, the cause is in the **mother's diet**. Any food the mother eats may, through her milk, cause the baby to suffer infant colic. **Onions, cabbage, garlic, wheat, yeast, broccoli, and brussels sprouts** are common offenders. Another major cause is **fried foods, junk foods, refined foods,** and all types of **confused food combinations**. Both the mother and the child need an excellent diet.

• Colic in a *formula-fed infant* points to the food given to the child. It may be the **milk, wheat, soy, or sugar** in the formula. If possible, substitute vitamin-

enriched **goat's milk**. Also try to have the mother begin **breast-feeding** the baby. Even if she did not begin doing it after delivery, she can, with some effort, get the flow started later. This is done by frequent attempts to feed the baby over several months. The mother should eats lots of brewer's yeast! *See Breast-feeding (680-683).*

• If the infant is *bottle-fed*, for added nourishment at this time you might pour boiling water over **wheat flakes** to dissolve them. Put them through a sieve and add **soybean milk**, to bring it to a desired consistency. **Potassium broth** (soup made of thick white potato peelings) and **oatmeal gruel** are also helpful.

• If colic develops *after weaning* has begun, the **new food** is the problem. The infant must be given proper foods. Only one new food should be added at a time. This way the infant can be carefully monitored for colic, rashes, or other reactions.

• After weaning, helpful foods include sweet vegetable broths (of carrots, squash, parsnips, or sweet potato). Also good is cooked fruit, milled to be soft.

• **Wheat and dairy products** are especially suspect. When in doubt, eliminate them first. **Wheat and other grains** are often introduced far too early. And this can cause the child to later develop celiac disease, which will affect him throughout life. *See Celiac Disease (382).* The infant does not have the digestive enzymes to handle grains until he is 5-6 months old. Let grains be one of the last foods introduced; and do not give yeast bread until the baby is a year old.

• Give fresh, boiled **goat's milk**; it is far less of a problem.

• Keep **diet diaries** and do **pulse testing**, to ascertain offending foods. *See Pulse Test (575).*

• It may help to give **pancreatic enzymes** (75-200 mg three times a day) before meals (enzymes may be constipating), **flaxseed oil** (1-2 drops) after each meal, and **vitamin B_6** (10 mg, twice a day).

• **Discourage daytime sleep** in a child. Do not let him sleep more than 3 hours during the day. This will help him go to sleep at night. Keep him awake during the early evening hours.

• Feed him in an **upright position**; and **burp him** frequently during feedings. Never feed him while lying down. Never prop up his feeding bottle. If formula is given, it should be at body temperature. Feed him in a calm, quiet environment.

• Dr. J.H. Kellogg found that **cold feet** could give babies colic. Keep booties on him 24 hours a day if he is colicky. **Smoking** parents tend to have colicky babies. Babies given **iron**-fortified foods tend to have colic. Breast-feeding mothers should not take iron supplements. (Take blackstrap molasses instead.)

—*Also see Colic in Children (698).*

ENCOURAGEMENT—Speak words of hope and good cheer, and you will encourage all about you in the pathway of life. Ask God to help you be a blessing to others. Proverbs 8:35.

DIARRHEA IN INFANTS

SYMPTOMS—Abnormally frequent discharge of fecal matter and fluid.

CAUSES—Diarrhea is a common problem in young children; it is more of a symptom than a disease. Fortunately, in children it is often brief. It occurs as a way to **rid the body of toxins, viruses**, or other substances which are causing the bowel to be inflamed. It is best not to take drugs to stop it.

Acute diarrhea in a small child under one year may quickly cause dehydration, causing him to need more fluids.

The cause is generally **improper feeding** (especially of infected animal products). Very often it is **overfeeding**. Do not give an irritable or fussy child food or sugar drinks to soothe him. Overfeeding can also lead to vomiting.

A **food allergy** may be involved. Chronic diarrhea may be caused by intolerance to **cow's milk**. Other frequent causes are eating **eggs, chicken, and meat**.

Changing formulas may cause brief diarrhea. Too much **sugar** in the diet will produce soft, watery stools. **Honey** added to milk will also do it.

Infections, antibiotics, and other **medicinal drugs** will induce diarrhea. The body is trying to quickly cast off substances which should not be in it. Children in **day-care centers** are at greater risk of viral diarrhea. Inadequate hand washing between diaper changes readily spreads the infection. Blood may be in the diarrhea stool if the cause is a **gastro-intestinal infection** *(352)*, **urinary tract infection** *(400)*, **Crohn's disease** *(374)*, or **ulcerative colitis** *(373)*.

If the cause is **food poisoning** *(585)*, there may also be nausea, abdominal pain, and vomiting.

The child swallows a lot of saliva during **teething**; and this sometimes causes slight diarrhea. Avoid feeding him **cold foods**.

Unusual **excitement or anxiety** can cause extremely brief diarrhea.

You will want to try to find possible causes. Each time it happens, take note of what happened that was special or different. Was a new food added? Was the daily scheduling different? Was there stress?

NATURAL REMEDIES

• Medicines are generally not needed. Give the child only **clear, warm** (not cold) **fluids** for 24-48 hours. **No milk** during that time. Fluids should be given in small amounts (a teaspoonful at a time) and frequently. If he

vomits, give him another teaspoonful immediately.

• Diarrhea in infants can be checked by the use of thin, homemade, boiled **rice or barley water**. For an older child, use **oatmeal gruel**. This should be given until the looseness is checked.

• To restore electrolytes, add 1 level tsp. table **salt** (no more) and 4 heaping tsp. **sugar** to 1 quart boiled **water**; and give that to him. Do not give **soft drinks**.

• If the child wants solids, give him **mashed ripe banana, cooked carrots, beets, blended raw apple, or rice cereal**. Do not give him green or overly ripe (black) bananas. If he does not want solids, only give him fluids.

• Pull gently on the skin of his abdomen. If it stands up and stays there, he is getting dehydrated. Give him fluids! Other signs of dehydration: reduced urine output, sunken eyeballs, fever, rapid breathing, dry mouth.

• To eliminate the cause of diarrhea, give 1 Tbsp. **charcoal powder** in a little water, and let him suck it through a straw or drink from a baby bottle.

ENCOURAGEMENT—The plan of salvation, as revealed in the Bible, opens up a way for you to go to heaven. Do all you can to take that path. Work to save your family. Jude 24.

INFANT CRIES OFTEN

SYMPTOMS—The baby is crying a lot.

CAUSES AND TREATMENT—

• This is often due to a deficiency of **B complex vitamins**. But he could also be lacking other important **nutrients**, including **vitamins and minerals**.

• Undue **stress** in the home could be another problem.

• **Fatigue, constipation, or not enough sleep** may be involved.

• Helpful herbs include **hops** and **skullcap**.

ENCOURAGEMENT—In the heart of Jesus there is perfect peace. Trusting in Him, you can have that peace also. Philippians 4:19.

ROSEOLA
(Roseola Infantum)

SYMPTOMS—High fever, mild diarrhea, dry cough, swollen lymph nodes in the neck, earache. Symptoms occur in two stages: a high fever (occasionally with fever convulsions) of about 4 days, followed by a rash of tiny pink spots on the face and trunk which disappears in about 4 days.

CAUSES—This is a **viral infection**. It most commonly occurs between the ages of 6 months and 2 years; and it affects about 3 in 10 children in the U.S. It especially occurs in the spring and fall; and it is caused by strains of the herpes virus, from close contact with other children. One attack of the infection gives lifelong immunity.

NATURAL REMEDIES

• Give the child **rest**, a spare diet of **fluids** and **juices** during the fever, plus a little solid (best blended) food if he wants it *(see Fever, 233)*. Within a few days, the fever will end; and, when the spots appear, he will feel better. But caution is needed if the child with a fever is under 6 months of age.

ENCOURAGEMENT—There is nothing so great and powerful as God's love for those who are His children.

TEETHING

SYMPTOMS—The baby's gums become swollen and tender; and he is irritable and restless. Teething has begun!

CAUSES—An infant's teeth begin developing months before birth. In fact, the buds begin appearing in the fetus by the fifth or sixth week of pregnancy!

All 20 teeth will begin coming through during the two and a half years following birth, beginning about 4-8 months of age.

NATURAL REMEDIES

• **Massage** the baby's gums, beginning before the teeth appear. Wrap a piece of clean gauze around your finger and gently rub the gums. This removes bacteria and gets him used to having your finger in his mouth.

• Place **teething rings** in the refrigerator; then, when cold, give them to him to mouth. This feels good on the gums. If the baby is 6 months old or older, a **clean, cold washcloth** does well.

• Wrap a piece of **cold apple** in a wet child-size washcloth, and let the infant bite on it to help his gums.

• Apply **clove** the gum area.

ENCOURAGEMENT—True happiness is found in surrendering to Christ and, by His grace, obeying His Ten Commandment law. Galatians 3:26.

REGURGITATION

SYMPTOMS—Food comes up into the mouth from the stomach.

CAUSES—Regurgitation is not exactly the same as vomiting. A small mouthful of food comes back up out of the stomach. It is fairly common during early infancy. The cause is thought to be immaturity of the upper end of the stomach; it disappears as the child grows older. The problem usually disappears by the time the child has been walking for 3 months. In most children, it is totally gone by eight months of age. If the child is growing normally, there should be little reason to be concerned.

Some infants regurgitate for several hours after they are first born. The stomach is being emptied of blood,

amniotic fluid, and other substances swallowed during delivery.

NATURAL REMEDIES

• **Do not overfeed** the child. If the stomach is full, regurgitation is more likely to occur. Only feed for 20 minutes or less, and not more often than every 2½ hours apart (4-5 hours is better). There should be longer intervals between feedings at night.

• While he is steadily sucking, do not interrupt him. But as soon as the baby pauses, **burp him**.

• The best food for the infant is **breast-feeding alone**, with nothing else (including water) for the first six months. When the child becomes older, **thickened feedings** will help reduce regurgitation. After the first 6 months, this can include cereal with some breast milk added to it.

• Try to keep the child **upright** for 30-45 minutes after each feeding. Hold him, carry him, or place him in his infant seat.

—See Gastroesophageal Reflux in Infants (below).

ENCOURAGEMENT—Parents are to look upon their children as entrusted to them of God to be educated for the family above. Train them in the fear and love of God; for "the fear of the Lord is the beginning of wisdom."

GASTROESOPHAGEAL REFLUX IN INFANTS (GRI)

SYMPTOMS—An extreme amount of regurgitation occurs in an infant. Larger amounts of milk or food come up. Coughing or wheezing may occur if the regurgitated milk is inhaled into the lungs.

CAUSES—If the mother is eating properly and breast-feeding her child, this should not happen; although normal regurgitation may regularly occur for a time. *See Regurgitation (693).* Gastroesophageal reflux is likely to occur if the breast-feeding mother is not eating properly. This can also happen if she is feeding the infant meat and/or junk foods.

GRI is more common in preterm babies and babies with cerebral palsy *(688)*. How can you tell whether this is normal regurgitation or GRI? If it is GRI, the baby will not be gaining weight. Severe GRI may also cause inflammation and bleeding of the lining of the esophagus (due to stomach acid brought up). This may make the vomit bloodstained. If milk is inhaled into the stomach, pneumonia *(409)* sometimes develops. Rarely, a baby stops breathing temporarily after inhaling milk. So watch to see if the baby regularly regurgitates more than a dribble of milk after feeding or if the milk is bloodstained.

NATURAL REMEDIES

• Make corrections in your diet and the baby's diet. Follow the instructions given in Regurgitation *(693)*. If that does not solve the problem, contact a physician.

ENCOURAGEMENT—Those who are loyal to God will represent Him in the home life. They will look upon the training of their children as a sacred work, entrusted to them by the Most High.

COW'S MILK ALLERGY

SYMPTOMS—Diarrhea, with loose stools containing blood and/or mucus. Wheezing and coughing. Vomiting. Abdominal discomfort, causing the baby to cry and become irritable. Eczema *(270)*. Failure to gain weight.

CAUSES—This is an allergic reaction to the proteins present in **cow's milk and cow's milk products**. It occurs in over 1 in 25 babies. Reaction to the cow's milk causes inflammation of the digestive tract. This allergy rarely leads to anaphylaxis *(574)*. This problem also occurs when there is a deficiency of the lactose enzyme needed to digest milk (which occurs in 20% of Caucasian children).

Many children by the age of 3 no longer have this allergy; but some continue it through to adulthood.

NATURAL REMEDIES

• **Exclude cow's milk** from your diet, if you are breast-feeding the child. If the infant is eating other foods, exclude cow's milk from his diet.

• **Goat's milk** is generally better for a child; since the curds are smaller. In addition, goat milk tends to be healthier. A sick cow is given drugs; but a sick goat dies.

• **Soymilk** might be a partial solution. But make sure the child is getting enough vitamins, minerals, and calcium.

If the child's symptoms disappear while you (and the child) are not eating or drinking the cow's milk products, then that is the cause of the problem. As soon as the problem is resolved, the child quickly recovers and begins gaining weight.

ENCOURAGEMENT—By patient work, you can bring your little ones to the Saviour.

NEONATAL JAUNDICE

SYMPTOMS—A yellowing of the skin is seen in the infant, appearing first in the upper body and progressing downward toward the toes. *In a full-term normal infant*, it is first seen about the third day; and, by the fifth day, it is disappearing. *In a preterm infant*, jaundice may appear later, but last longer.

CAUSES—Jaundice is probably the most common disorder in newborn babies. Old blood is broken down, by the liver, into bilirubin, a yellowish pigment. But when too much is made, the excess is dumped into the bloodstream and is deposited in tissues for temporary storage. To one extent or another, about a fifth of infants have this condition.

"Breast milk jaundice" occurs in only about 3% of infants. Peak levels of bilirubin do not occur until the tenth or fifteenth day; it may not return to normal for 12 weeks. But do not stop breast-feeding during this time.

If the baby has prolonged jaundice, have a thyroid check done; he may have a tendency toward hypothyroidism *(549)*.

Neonatal jaundice is more common in infants in one or more of **these conditions:** born at high altitudes, are males, have a brother or sister who had it, premature, low birth weight, firstborn child, or rapid weight loss after birth. Delivered by cesarean section, forceps, or vacuum extraction. Mothers had epidural anesthesia during delivery, have blood type O. Or she is older at the time of birth of this child.

Certain drugs given to the mother during pregnancy, labor, delivery, and/or breast-feeding can lead to neonatal jaundice. This includes **sulfonamides, hydrocortisone, Valium, Orinase, Gentamicin, thiazide diuretics, and oral contraceptives.**

NATURAL REMEDIES

• If the baby is **breast-fed more frequently**, the bowel movements will carry bilirubin out of the body faster. One research team found that the 3-4 hour feedings, recommended by many hospitals, is incorrect; the **feedings should be every 2 hours**, in order to reduce bilirubin levels.

• **Activated charcoal** is very helpful in lowering bilirubin levels. Stir 2-3 teaspoons powdered charcoal into a little water and give with a nipple. Beginning at 4 hours of age, give it every two hours for 120 hours in normal newborns and for 168 hours in premature infants (until bilirubin levels fall).

"Newborn babies who experience jaundice will usually be improved with activated charcoal. Bile secretion from the liver into the intestines is usually followed by an efficient reabsorption process. Charcoal binds this bile and carries the pigment out, reducing the risks from jaundice. Charcoal can be mingled with the baby's formula, or with breast milk expressed into a bottle, or be mixed with the mother's milk and given for several days until the neonatal jaundice clears."—*Richard A. Hansen, M.D., Get Well at Home, p. 260.*

• Exposure to **sunlight** helps reduce bilirubin levels. A little can fall on the infant through a window or he can be taken outside. Do not let direct sunlight enter his eyes; but let it fall on as much bare skin as possible. Of course, be careful and do not sunburn him.

—Also see Jaundice (303, 359), Infectious Jaundice (360), and Hepatitis (358).

ENCOURAGEMENT—By yielding your life to Christ, you can experience a peace and contentment which will make life a joy rather than a burden. Children are a great blessing which the Lord gives us; as we prepare them for heaven, we are more likely to get there ourselves. John 15:11.

INFANT THRUSH
(Oral Thrush)

SYMPTOMS—White patches in the mouth which may look like milk curds. Although milk curds are easily rubbed off, thrush sticks to the oral tissues. When removed, it leaves a red, raw appearing area. Discomfort may hinder food intake in severe cases.

CAUSES—Infant thrush is an infection of the mucosa of the mouth by *Candida albicans*. Occurring in 4% of infants, it generally begins within 8-9 days after birth. Sources of infection are infected mothers who either have candida *(215)* or vaginitis *(660)*; perhaps the infant was exposed in the newborn nursery. Infants of diabetic mothers are especially susceptible. Also susceptible are infants born with cleft palate or cleft lip.

NATURAL REMEDIES

TREATMENT

• Three or 4 times a day, swab the infected areas with a cotton-tipped applicator, saturated in a **baking soda** solution. Carefully clean all candida spots within reach.

• The mouth can also be swabbed several times a day with a **garlic** solution. Blend 1 peanut-size clove in 1 cup water till smooth. Garlic overpowers candida

• Simmer 5 **bay leaves** in 2 cups water for 20 minutes. Strain, let cool, and use the solution as a mouthwash. Apply it in a sterile dropper to the baby's mouth, twice a day. Store it in the refrigerator; and prepare a fresh solution every 2 days.

PREVENTION

• **Breast milk** contains substances which help the infant's immune system to resist the candida infection.

• **Pacifiers and bottle nipples** should be soaked in 130° F. water for 15 minutes between each use. (Candida spores are heat resistant). All other objects going into his mouth should be clean. Breast-feeding mothers should **wash** their nipples well with plain water after each feeding.

• Both mother and child should avoid **antibiotics**; and mothers should avoid **steroids**. They destroy natural, friendly bacteria; these help candida to grow.

• If the mother has no candida, swabbing the infant's mouth with some of her **saliva** will establish a flora that is unfavorable for the growth of candida.

Give plain water, to **cleanse the mouth** after every feeding. Inspect the mouth before each feeding; and begin treatment if thrush is seen.

—Also see Candida (215) and Vaginitis (660).

ENCOURAGEMENT—The judgment shall sit and the books shall be opened, when the "well done" of the great Judge is pronounced and the crown of immortal glory is placed upon the brow of the victor. At that time many will raise their crowns in sight of the assembled universe; and, pointing to their mother, they will say,

"She made me all I am through the grace of God. Her instruction, her prayers, have been blessed to my eternal salvation."

ANAL FISTULA
(Fistula-in-Ano)

SYMPTOMS—Tenderness, swelling, redness, and painful bowel movements. Pus or mucous drainage may be present. Symptoms subside and recur again.

CAUSES—This is a type of pereneal abscess that occurs most frequently during the first year of life; it is more frequent in males than in females.

NATURAL REMEDIES

• **Sitz baths** and a **nonconstipating diet** generally solves the problem within a short time.

• The child should **not strain** in order to have a bowel movement.

In some instances, surgery may be necessary.

ENCOURAGEMENT—Keep praying and keep working to help your children, and God will help you.

INFANT FLATFEET
(Pes Planus)

SYMPTOMS—The bare footprint of the child does not show where the inner arch is raised (producing no print mark).

CAUSES—Many young children appear to have flatfeet. But, by the age of 10, only 4% have it. Many children with "flatfeet" really have fat feet. Raise his big toe while you have him stand. If he has an arch, you will see it raise.

The child with true flatfeet walks on the inner or outer (usually inner) edge of his feet; and he wears down the edge of his shoe soles.

NATURAL REMEDIES

• Let the child run and play outdoors with **bare feet**. "Corrective shoes," often very costly, accomplish little. Letting him walk barefoot outside is better.

• While the child is laying on his back relaxed, with the knee straight and the heel turned slightly inward, the parent should **flex the foot**; this is done by moving the foot up toward his body and holding it for a count of 10. Relax and repeat 20 times, 3 times daily.

• An older child can do the same exercise, standing flat on the floor as he **leans into a wall** 12-18 inches away.

• Alternate **hot and cold footbaths**, using two basins, help some children with painful flatfeet. For 10 minutes, put both feet in the hot for 1 minute; then put both feet into the cold for 1 minute. Do this twice a day.

ENCOURAGEMENT—Heaven will be cheap enough if, in spite of all our prayers, tears, and suffering, we arrive there with our children.

INFANTILE CONVULSIONS

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR INFANTILE CONVULSIONS AND THEIR COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

BASIC ASPECTS—Regulate **diet**, withholding meats and all indigestibles. Avoid cow's milk, if curds are present in the stools. Daily Cold Bath, Wet Hand Rub, or **Cold Towel Rub**.

GENERAL CARE—When due to autointoxication from intestinal irritation, give a large **Hot Enema**. For immediate relief, give a **Hot Blanket Pack** with **Warm Bath**, at 95°-98° F., for 1-2 minutes. If not quickly relieved, remove from bath and employ **Cold Pail Pour** to head and spine. **Alternate Hot and Cold Pail Pour**, if necessary. Apply **Hot Abdominal Pack**, changing every 4 hours.

—Also see Convulsions (472).

ENCOURAGEMENT—Help your children learn how to trust and obey God, and you will point them in the direction of the Holy City, where you want to live with them throughout all eternity.

CHOLERA INFANTUM
(Gastro-intestinal Catarrh in Children)

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR INFANT CHOLERA AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

GASTRO-INTESTINAL CATARRH IN CHILDREN (ACUTE) AND CHOLERA INFANTUM BASIC FACTORS—Withdraw all food. Hot Blanket Pack till skin is reddened. Follow by **Cold Mitten Friction or Cold Wet Hand Rub**. If his temperature is high, apply a **Heating Wet Sheet Pack**. Repeat if necessary. **Rest** in bed.

PERSISTENT VOMITING—Ice Bag to stomach.

FREQUENT BOWEL MOVEMENTS—Hot **Enema** at 105°-110° F. after every bowel movement. **Fomentation** to abdomen every 3 hours. Follow by **Heating Compress**, changing every 20 minutes.

PAIN IN ABDOMEN—Revulsive Compress over abdomen for 15-20 minutes every hour or two.

COLLAPSE—Hot Blanket Pack until warm. Follow with **Prolonged Neutral Bath** at 92°-95° F. Hot **water** drinking

and large Warm **Enema**.

—Also see Cholera (236).

ENCOURAGEMENT—Amid all your suffering and grief, cry to God for help, and He will comfort and help you. He can do for you that which no one else can do.

SUDDEN INFANT DEATH SYNDROME
(SIDS)

SYMPTOMS—The infant suddenly dies.

CAUSES—There is no advance warning or symptom. This is what it is called "sudden infant death syndrome." The central nervous system is affected, which in turn suppresses the involuntary act of breathing.

Each year, in the United States, there are 10,000 deaths from this problem. SIDS primarily occurs in the winter and especially to underweight babies from poor families; the mothers are generally under 20.

Several possible causes have been traced:

It has been reported that there are high levels of **lead** in the blood of infants who die of SIDS.

Suffocation may be the cause. It has been found that infants who were **laid on their stomachs**, to go to sleep, are much more likely to suddenly die than infants who are laid on their backs.

Breast-fed babies are less susceptible to SIDS. In addition, they have less allergies, respiratory diseases, hypoglycemia, obesity, and gastroenteritis.

It is now known that SIDS can be caused by the **pertussis vaccine**, which is given to infants at 2, 4, and 6 months of age. The following quotation is from a book which can be purchased from the publisher of this *Encyclopedia*:

"Three research studies were made on **the relationship that the pertussis vaccine had to death.** Each one specifically examined DPT vaccinations; and each found a decided relationship. In Waler's case-control study, **the relative risk of the child having SIDS (sudden infant death syndrome) within 3 days after immunization was 7.3%!** Did you hear that? That is almost one child out of every ten vaccinated with DPT (the diphtheria-pertussis-typhoid vaccine, a standard vaccination given to schoolchildren). *(The three studies were: Baraff, et al., 1983, reported in Pediatric Infectious Disease Journal, 1983, Vol. 2, pp. 7-11; Torch, 1982, reported in Neurology, 1982, Vol. 32, p. A 169; Waler, et al., 1987, reported in American Journal of Public Health, 1987, Vol. 77, pp. 945-951).*"—*Vaccination Crisis, pp. 121-122.*

NATURAL REMEDIES

• Give careful attention to each one of the **above factors**.

• Both the mother and child should receive **nourishing food**. If the infant is breast-fed, the mother's diet should be excellent; if the baby is bottle-fed, then, if possible, fresh boiled goat's milk should be used. Mothers should nurse their babies, if at all possible.

• Locate **allergenic foods** and eliminate them.

• **The mother should avoid** chemicals, drugs, and junk foods during and after pregnancy. Even aspirin is not good; it interferes with blood clotting and could damage the fetus. Do not use caffeine, alcohol, or tobacco; they harm the unborn child, so it does not develop properly.

ENCOURAGEMENT—Heaven is very near to those who suffer for righteousness' sake. Christ identifies His interests with the interests of His faithful ones. Be His little child, and He will care for you. Galatians 4:4-5, 7.

INFANCY AND CHILDHOOD -
4 - CHILDHOOD PROBLEMS
Also: Fever (233-239), Worms (588, 590), Hyperactivity (489)

BED-WETTING
(Enuresis)

SYMPTOMS—A child continues to wet the bed after infancy.

CAUSES—Bed wetters tend to have a small bladder capacity; this makes it difficult for them to go through the night without voiding. They also tend to urinate more frequently during the day.

Here are the frequency statistics: 50% wet by the age of 2, 10%-15% by 4 years of age, and 4% at 12 years old. Boys do it more frequently than girls; but girls can develop urinary tract infections from it.

A primary cause of bed-wetting is **allergy**. Their parents are more likely to have hives, hay fever, urinary tract infection, food allergies, or drug allergies.

Food allergies in the children are responsible for many cases. The most frequent problem foods were **cow's milk** (60% of the time), **chocolate, eggs, citrus fruits, wheat, grains, corn, chicken, meat, peanuts, and fish**. You would need to do pulse tests *(575)*, to determine the problem food. Removing milk from the diet reduced bed-wetting in 50% of a group being studied.

Hyperactive children tend to be bed wetters.

Constipation may at times be involved, by pressing on the bladder. Some children, especially older ones, continue to wet the bed because of **tensions** they live under in the home or at school.

Anemia, pinworms, upper respiratory tract **infections**, or any toxic condition can be contributing factors.

NATURAL REMEDIES

• Consider all the **above factors**.

• A common method used to solve the problem is

to have the child **stop and start the flow** of urine each time he urinates. This causes him to acquire better mental control of the function. This may solve the problem in as little as six weeks.

• Spanking the child is not the solution! Do not praise and do not punish. The child does not do it on purpose; he is sorry. Just change the bed and do not say a word. —But keep working on possible solutions listed here. No child wants to do it.

• The child should be encouraged to have **vigorous outdoor exercise**. (It is known that bed wetters wet less during the summer months; and some who have stopped may return to it in the winter.)

• In children over 10 years old, **limit the amount of fluid intake after 5 p.m.**, until several months after bed-wetting ceases.

• Bed-wetting **alarms** can be purchased. They often wake up everyone at night; but it, many times, accomplishes the task within 60 days.

Victory is said to come with 21 days of consecutive dry nights.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR BED-WETTING AND THEIR COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

IMPROVE GENERAL AND LOCAL NERVE TONE—Cold Pail Pour at 75° F. at bedtime. Follow by **Neutral Pail Pour** to spine, 2 minutes, 96° F. Sea bathing and swimming, if this is available. **Avoid water drinking for 2 hours before retiring.** Aseptic **dietary.** Meats and salts are especially to be avoided.

RELIEVE CONSTIPATION AND FLATULENCE WHEN PRESENT—by using Hot **Abdominal Pack** and **Graduated Enema.** If necessary, carefully Graduated **Cold Baths**, cool **Enema**, and proper diet.

DIMINISH ACIDITY OF URINE—by free use of **fruit** and **water** drinking in the forenoon.

—For incontinence in adults, see Incontinence (395).

ENCOURAGEMENT—While the Lord has not promised His people exemption from trials, He has promised that which is far better. He has said, "As thy days, so shall thy strength be." Deuteronomy 33:25. "My grace is sufficient for thee." 2 Corinthians 12:9.

COLIC IN CHILDREN

SYMPTOMS—The child cries out, pulls his knees up to his stomach, and has a distended stomach. His stomach and/or intestines hurt.

CAUSES—Pressure from gas moving upward or downward causes pain. The cause is usually **improper food or constipation. Indigestion** is the most frequent cause.

NATURAL REMEDIES

• Put him into bed and give him warm catnip tea in a bottle.

—Also see Colic in Infants (691).

ENCOURAGEMENT—True happiness is found in learning of Christ and living for Him. Those who take Christ at His Word and surrender their soul to His keeping will find peace and quietude. 2 Thessalonians 2:16-17.

VOMITING IN CHILDREN

SYMPTOMS—The child is vomiting, perhaps frequently.

CAUSES—Vomiting is a symptom rather than a disease. There are about 60 different things which can cause it; none of them are serious. However, continued vomiting is not good for the child.

If the child is growing, vigorous, gaining weight, and happy, occasional vomiting should not be a cause for concern. Primary causes of *infant vomiting* is **poor feeding techniques, immaturity of the stomach and intestines**, or a variety of other factors.

Young children often spit up a little food; but that is usually not serious. *See Regurgitation (693).* Some children repeatedly vomit *(cyclic vomiting).* It is usually preceded by a mild headache. These children generally have an allergic disease (such as **asthma, hives, eczema, rhinitis, or allergic conjunctivitis**). Fatty or fried foods cause attacks in many of these children; but sometimes other foods are the problem, including oranges. Many of these children later develop **migraines**; there frequently is a family history of this problem. Cyclic vomiting usually begins late in infancy and ends by the age of 10.

Vomiting can be a sign of **Reye's Syndrome** *(713)*, which can occur after a viral illness, especially if aspirin was given to the child. This is very serious. A blow to the head, causing a **concusion**, can cause vomiting.

NATURAL REMEDIES

• **Withhold all food and fluid** for 2 hours after the vomiting occurs. Give a teaspoon or two of **water or peppermint tea** every 20 minutes. Older children may be given **ice chips** and told to let them melt in the mouth before swallowing. If vomiting recurs, given nothing for another hour. If vomiting ceases, give a little fluid again. About 6 hours later, give **mashed banana, potato, applesauce, rice, or toast.** If this is accepted, about 24 hours later return to a regular diet; but this should be **without milk, greasy or fatty foods, or spices.**

• **Burp** the infant regularly and **do not overfeed** him. Be careful when giving him new foods. Avoid giving him any **spices, highly seasoned foods, or junk foods.** Maintain a **regular feeding schedule.**

• **If he has a cold**, clear his nasal passages before feeding him. Otherwise mucus in the back of his throat might cause him to vomit. Do not play vigorously with him for an hour or so after feeding. Avoid foods which cause him to vomit. **Cow's milk, eggs, or gluten (in wheat, rye, oats, and barley)** may be the problem.

• **After feeding**, place the infant on his right side, with a folded towel behind his back, or upright in an

infant seat. Do not place him on his back, because he may inhale and choke on the vomitus.

• **Avoid dehydration.** Signs are if he cries without tears or has not passed urine in 8 hours. *See Diarrhea (369-370).*

• **Charcoal** is an excellent help. Stir 1 heaping Tbsp. of the powder into ¼ cup water or juice; and let him drink it through a straw. Repeat each time he vomits. Caution: Too much charcoal can be constipating. For many children, a little **peppermint** tea is soothing.

ENCOURAGEMENT—You must make the Bible your guide if you would bring up your children in the nurture and admonition of the Lord. Let the life and character of Christ be presented as the pattern for them to copy.

GIGGLE MICTURITION

SYMPTOMS—Accidental leakage of urine while laughing.

CAUSES—More common in girls, it often disappears as the child gets older. But, in some instances, it continues until the age of 20. The child should not unnecessarily be subjected to urological examination.

NATURAL REMEDIES

• The child does not need reproof but **encouragement** to persevere in trying to stop the problem. **Reassure** the child that it will eventually be outgrown. It helps some to **sit down** while laughing.

• Have the child practice **starting and stopping the flow** of urine while urinating, in order to practice gaining control over that muscle.

ENCOURAGEMENT—If faithful, you will someday see your children in heaven, and what a glorious day that will be! Whatever our trials down here may have been, it will be worth it all.

NERVOUS TICS

SYMPTOMS—Rapid, uncontrolled eye blinking. Twitching of the muscles around the mouth. Shrugging of the shoulders or jerking movements of the neck. Involuntary contractions of the diaphragm, causing grunting or hiccups.

CAUSES—This uncontrolled muscle twitch is called a "tic." It only lasts a fraction of a second and is painless. The muscle contraction may occur repeatedly. Nervous tics occur because a muscle or group of muscles controlled by peripheral nerves contracts repeatedly and involuntarily. The condition usually affects the facial muscles; but sudden, uncontrolled movements of the limbs and sounds (such as grunts and throat clearing) can also occur.

Tics generally develop during childhood and occur more commonly in boys than girls. The cause is frequently unknown; but they may be associated with **stress**. This is more common in children who are tired or upset. When children are asleep, tics usually disappear. Sometimes the tics continue into adulthood.

If a **cool wind** blows on one side of a person's face when he is driving or sleeping, a muscle can be chilled and a tic can begin. *For more on tics, see 464.*

NATURAL REMEDIES

• Do not scold the child or ridicule him. Instead, try to improve his diet and way of life. Perhaps too much is expected of him. He should have time for exercise and also time to rest.

• The diet should be simple and non-stimulating. He should try to maintain a regular schedule. Deep breathing exercises will help him.

• The nerves are nourished by the entire **vitamin B complex, by lecithin, calcium, trace minerals,** and (to a lesser degree) by **other vitamins and minerals.** Set aside the processed, fried, and junk foods. And only eat nourishing food: **fresh fruits and vegetables,** plus **lecithin** and **flaxseed oil** (2 tsp.). Take **calcium** daily (2,000 mg); it is a specific for relaxing the muscles.

• Avoid **stress and pressure.** Choose to work relaxed. Do the best you can and be contented.

• Try to solve learning disabilities. These add to the problem. Take time to **study** at school **and do your homework. Learn to read, write, spell, and do basic math.** But also **get proper** outdoor **exercise.**

• Stand in front of a mirror and **try to repeat the tic.** Oddly enough, this is almost impossible to do; but, gradually, the attempt can help you gain control over the affected muscle.

• Try to **remain motionless** for as long as possible, gradually increasing the amount of time, until it can be done for 5 minutes.

ENCOURAGEMENT—"These things I have spoken unto you, that in Me ye might have peace. In the world ye shall have tribulation: but be of good cheer; I have overcome the world." John 16:23.

STUTTERING

SYMPTOMS—The child tends to stutter or have speech difficulties.

CAUSES—It is normal for children to have some difficulty with speaking. The child's speech abilities do not progress as fast as his thought processes. It is also normal for boys to be slower than girls in learning to speak without impediments. It is believed that only 1% of children really have a true stutter. In most children, speech problems are usually resolved by the age of six or seven. Most speech abnormalities disappear over two or three months, if properly handled.

NATURAL REMEDIES

• **Avoid calling attention** to the child's speech problems. They are normal and do not mention them.

Calling the child's attention to it increases the risk that he will become concerned about it—and believe it is something he will always have.

• If the child mentions it to his parents, they should **tell him that it is a part of normal development**, which many children have.

• **Do not talk too fast** to a child. More important: Before the parent replies, the parent should **pause 2-3 seconds after the child speaks**

• This will help the child relax and feel he does not need to speak faster.

• **Spend time** each day with the child, doing things, conversing with him, reading to him and asking questions. This helps his speech development.

• **Do not correct his grammar** when he is having speech problems. He can learn grammar later.

• In some instances, removing **milk** from the diet will lessen stuttering by the child.

• Mothers who avoid **eye contact** when the child speaks, or **express displeasure** with his performance, lengthen the time he will stutter. At times, when she is working and cannot maintain eye contact, she should be pleasant and say "uh, huh," "yes," etc., which show she is carefully listening.

• **Do not supply a word** which the child is stumbling over. **Give him time** to say what he wants to say. Do not put him under **stress**.

For more information, go online to nspstutter.org, or stuttersfa.org.

ENCOURAGEMENT—Help your children to become like Jesus, and you will later be glad you did. Let them see Jesus in you.

BOW LEGS
(Genu Varum)

SYMPTOMS—The child's legs bow outward.

CAUSES—It is quite normal for young children to be bowlegged. This is due to their position before birth. In nearly every case, as the child grows older, his legs will straighten. Bowleg is most apparent between the age of one and two. Thick diapers tend to bow the legs; and after they are outgrown, the legs straighten—sometimes becoming knock-kneed. As the child nears his teen years, the legs straighten.

Rickets *(510)* is a cause of bowleg; but so much Western food is fortified with vitamin D that rickets is not usually the cause.

NATURAL REMEDIES

• If you are feeding your child a **nourishing diet**, and he is healthy, growing, gaining weight, and obtaining enough **sunlight** (for vitamin D), his legs will eventually straighten.

ENCOURAGEMENT—If you lack wisdom, go to God; He has promised to give liberally. Pray much, and fervently, for divine aid. One rule cannot be followed in every case. The exercise of sanctified judgment is now needed.

RECTAL PROLAPSE

SYMPTOMS—The bright red or dark inner part of the anus protrudes after a bowel movement. A discharge of mucus or blood may occur.

CAUSES—Protrusion of the rectal mucosa out of the anus. This condition primarily occurs in children under the age of 5. **Prolonged straining** at the stool and **inadequate nutrition** are the usual causes. But causes can include **chronic diarrhea, constipation, cystic fibrosis, or physical abnormalities**.

NATURAL REMEDIES

• Each bowel movement loosens the rectal tissue from the supporting wall a little more. Eventually the mother may have to replace it. Wrapping a piece of toilet paper around her finger, she should carefully **press the extended tissue back in**. Once it is inside the anus, she carefully pulls her finger out, leaving the toilet paper there. It will be expelled with the next bowel movement. (Trying to withdraw the finger, with the toilet paper still around it, would pull the tissue back out.) Instead of toilet paper, a finger lubricated with petroleum jelly could be used. Next, place a wad of cotton or cotton material against the area, and place tape across the hips to compress the region.

• Work steadily to avoid constipation in the child. The section on constipation *(367, 723)* will provide guidance on this.

• Teach the child not to **strain** when having a bowel movement. Make sure he is drinking large amounts of **water**, obtaining sufficient **bulk** in his food, and not eating any **processed foods**.

• One method that has been used successfully is this: Insert a cone-shaped piece of ice into the rectum after the bowel movement. This will greatly strengthen the anal muscles.

ENCOURAGEMENT—Trust and obey; for there is no other way to be happy in Jesus, but to trust and obey.

NIGHT TERRORS
(Pavor Nocturnus)

SYMPTOMS—Vivid, terrifying experiences for the child (and his parents) in the middle of the night and sometimes during naps.

CAUSES—Night terrors occur in about 3% of children between the ages of one and twelve. These are not nightmares, which are bad dreams that one awakens from. Instead, the child partially awakens and sits up or runs around the room, thrashing and screaming. His eyes are open; but he does not recognize his parents or anyone else who comes into the room. His heart rate, breathing, and perspiration are rapid; and he cannot be comforted or really awakened.

These experiences may occur several times a week, many times a month; but they usually subside several months later. The child tends to have these experiences when he has a fever, has irregular hours for going to sleep, is very tired, or is frightened by a story or movie. A heavy meal before bed can induce them.

NATURAL REMEDIES

• **Do not try to awaken him**. Instead, let him fall back asleep. He will remember nothing the next morning. If you did manage to awaken him, he would be confused and have difficulty going back to sleep.

• **Protect him**. Remove sharp objects from the room and lock the doors and windows. Do not later mention it, and he will not remember it.

• Give the child **no supper** or only a very **light supper** until the night terrors cease. Eliminate all **frightening TV, movies, and bad stories**.

• He should **go to bed at the same time** every night, even on weekends. If he is very tired, let him **nap** during the day. Sleep deprivation increases night terrors.

• Do not bring him into your room for the rest of the night. If done, he may want to always sleep with you.

• Notice when the terrors occur and **awaken him 15 minutes ahead of time**. Doing this will usually cause them to stop within one week.

—*Also see Nightmares (490).*

ENCOURAGEMENT—Impatience in the parents excites impatience in the children. Kindly, patiently, lead them in the right way, the way that leads to heaven.

MALNUTRITION

SYMPTOMS—The child is thin and does not grow or gain weight properly.

CAUSES—Malnutrition occurs primarily among poor people, whose children do not get enough good food to eat. This problem is more common in developing countries.

Mild malnutrition is the most common form; but it is not always obvious. The child does not grow or gain weight as fast as a well-nourished child. Although he may appear rather small and thin, he usually does not look sick. But because he is **poorly nourished**, he may lack resistance to fight infections. So he tends to become seriously ill and takes longer to get well.

Such children are more liable to have diarrhea and colds. Their colds usually last longer and are more likely to turn into pneumonia. They are at higher risk of getting measles, tuberculosis, and many other infectious diseases. More of them die.

Here is the best test of whether a child is malnourished: After 1 year of age, any child whose middle upper arm measures less than 13½ cm. (5-5/16 in.) around is malnourished—no matter how "fat" his feet, hands, and face may look. If the arm measures less than 12½ cm. (4-15/16 in.), he is severely malnourished. Another helpful way to tell if a child is well or is poorly nourished is to weigh him regularly: once a month, in the first year and then once every 3 months thereafter. A healthy, well-nourished child gains weight regularly.

There are two types of ***severe malnutrition***: Dry malnutrition (marasmus), in which the child does not get enough of any kind of food. He is starved. His body is small and thin; and he has a potbelly. Wet malnutrition is the same; except that his feet, hands, and face are swollen. This is caused by a lack of bodybuilding foods: proteins. Eating beans, lentils, or other foods that have been stored in a damp, moldy place can also be a cause.

Other types of malnutrition include night blindness (lack of vitamin A), rickets (lack of vitamin D), anemia (lack of iron), goiter (lack of iodine), various skin problems, sores on the lips and mouth, or bleeding gums as a result of the lack of enough fruits, vegetables, and other foods containing certain vitamins.

NATURAL REMEDIES

• In much of the world, most people eat one main low-cost food with almost every meal; it may be rice, maize, millet, wheat, cassava, potato, breadfruit, or banana. But other foods (called "protective foods") are also needed (such as **dark green-leafy vegetables, orange and yellow fruits and vegetables, nuts, beans, and peanuts**).

• If available to them, the children could also use a **multivitamin** tablet every day.

SPECIAL NOTE: This section was especially prepared for readers in developing countries. Severe malnourishment is far less likely in the Western world. Parents should not try to stuff children with food, just because they are slender. A certain percentage of the population are thin and will always be thin, even though their parents may be able to easily gain weight. Set before your child nourishing food. Let him eat what he wants while requiring that he eats a little of everything on his plate; but do not let him eat snacks or junk foods. Do not let him drink between meals. If you habitually let him eat junk foods and eat between meals, he is certain to have inadequate nourishment.

ENCOURAGEMENT—How lovingly the angels guard the steps of God-fearing, God-loving youth. Jesus knows them by name; and their example is helping other youth to do right. The youth who has hidden within his heart and mind a store of God's words of caution and encouragement, of His precious pearls of promise

from which he can draw at any time, will be a living channel of light.

INFANCY AND CHILDHOOD -

5 - CHILDHOOD INFECTIONS

Also: Fever (233-239), Worms (588, 590), Hyperactivity (489), Rickets (510), Impetigo (274), Ringworm (261), Croup (405), Bronchiectasis (409), Head Lice (587)

CHILDHOOD DISEASES

SYMPTOMS—Fevers, rashes, coughs, sore throat, weakness, etc.

CAUSES—The childhood diseases include *chicken pox (704), measles (706), mumps (705), German measles (rubella, 707), rheumatic fever (712), whooping cough (711), and scarlet fever (708).*

Many of these common childhood diseases are contracted by nearly all children. Some experience only mild cough or cold while others have serious cases. A few receive permanent damage.

NATURAL REMEDIES

PREVENTION

• If the child is receiving exceilent **nutrition, exercise, rest, sunshine, fresh air**, etc., he is unlikely to experience serious difficulty with these diseases. Louis Pasteur, developer of the germ theory of disease, said, "The germ is nothing; it is the soil that matters." If the person is living a good life, the germ has a hard time obtaining a foothold.

• Avoid excess **milk and carbohydrates**, especially refined ones. Avoid **sugar, fried foods, and junk foods**.

• Include **vitamin-mineral supplements** in a diet. Eat **fresh fruits and vegetables, whole grains, nuts, and legumes**. A well-fed child will usually be strong enough to resist the onslaught of childhood diseases. He may contract them; but the case will not be serious, usually brief, and often mild.

TREATMENT

• Give a **liquid diet** in the acute stages, later followed by **fruits and vegetables**. Do not suppress the fever with drugs. Use **water therapy** treatments *(153-209)*, to help the body fight the infection. The bowels must be kept open by means of herbal **enemas** and, if needed, herbal **laxatives**.

• Treat the kidneys and bowels, so they can keep discharging toxins. Sweating therapy (hot packs, 186) can be used to bring waste products out through the skin.

• **Garlic** is helpful, along with the **fruit and vegetable juices**, and **herb teas**.

• **Vitamins A and C**, with an abundant amount of **bioflavonoids**, are needed.

• Never, never, give **aspirin** to a child or youth who has a fever! It can lead to Reye's Syndrome *(713)*, which can cause irreversible coma or death. This is what happens: The child has a fever and aspirin is given. There is improvement for a day or two—then a sudden turn for the worst; and coma or death follows.

ENCOURAGEMENT—Worry is blind and cannot discern the future; but, trusting in Jesus, you need not fear. Take His hand, and He will lead you step by step. Malachi 4:2.

CAT SCRATCH DISEASE

SYMPTOMS—Infections from cuts and scratches, frequently on the arms. The scratched areas become enlarged and infected. The area may be swollen and red; and a slow-healing ulcer may form. Within 10-30 days, there is fever, headache, nausea, vomiting, loss of appetite, chills, abdominal pain, general aching, and enlargement of the lymph glands.

The low-grade fever may continue for months. Half the time, swelling of the lymph gland is the only symptom; but it can last 2 to 12 months. Usually only one lymph node is swollen.

CAUSES—The child may be scratched by a **cat, splinter, thorn, fishhook, pins, pet bird**, etc. The disease is thought to be carried by rodents and birds. When the cat gets this problem, it thereafter carries the infection on its claws for about 3 weeks. When a cat bites or licks the child, the disease can also be spread. Three-fourths of all cases occur in children and adolescents, usually in the fall or winter. It is estimated that only 10% of those scratched or bitten develop the disease.

Cat scratch disease is thought to be the primary cause of one-sided lymphadenopathy, a disease affecting the lymph glands; this primarily affects those glands under the arms and in the neck. Antibiotics are not effective and should not be given.

When an ulcer forms, it can heal very slowly.

NATURAL REMEDIES

• Give **warm, moist soaks** to the involved lymph glands, along with **bed rest** or very **little physical activity**. As long as those glands are swollen, vigorous activity should be avoided.

• Require the children to **immediately wash** any cuts or scratches. Do not allow the cat to **lick** any part of the skin. The child should **wash** his hands immediately after petting a cat. Teach him to **handle cats gently**, so he will not be scratched or bitten. (If you are tired of all the washings, you might try giving away the cat.)

—Diseases which you can get from cats include Cat Coccidia (574), Poison Ivy and Oak (582), Pinworms (590), Lyme Disease (568, 744), and Toxoplasmosis (574, 592).

ENCOURAGEMENT—The Saviour of the world loves to have children and youth give their hearts to Him.

TINEA CAPITIS
(ringworm of the sculp)

SYMPTOMS—Moist, possibly itchy, red patches on the scalp.

CAUSES—This is a fungal infection; it is most common in schoolchildren.

NATURAL REMEDIES

NUTRITION

• Eat a nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts**. While treating the infection, a diet primarily of **raw food** is best.

• Avoid **tobacco, alcohol, caffeine**. Do not eat **meat or dairy products**. Avoid **sugary, fried, and processed foods**. Eat nothing **greasy**.

HERBS

• **Goldenseal** contains *berberine*, which destroys fungi. It can be used against every type of fungus infection. It can be applied both topically and as a drink. Only use goldenseal for a week; then switch for a time to another fungicide herb.

• **Pau d'arco** is strongly antifungal. Drink 3 cups daily.

• **Bloodroot** also contains *berberine*; it has been shown to be quite effective as a fungicide.

• **Yellowroot, barberry, and Oregon grape** also contain *berberine*.

• Place a compress of **goldenseal and pau d'arco** on the area.

• **Tea tree** oil is excellent when applied externally, but do not drink it. Apply it several times a day to the affected area, either full strength or diluted with a little distilled water or cold-pressed oil. **Black walnut** extract can also be used.

• A powerful antifungicide is **wild oregano oil**. The most resistent forms of fungus infection can generally be eliminated by it.

• The **pepper tree** (horopito) is a New Zealand shrub which contains *polygodial*, which is useful against both fungi and bacteria. Another antifungal herb is the ***Licaria puchuri-major***, a Brazilian plant.

OTHER HELPS

• Keep the **skin clean and dry**. Expose the affected area to air as much as possible. The **clothing** should be kept clean. The child should keep his hands clean.

—*Also see Candida (215).*

ENCOURAGEMENT—Jesus knows the needs of His children and He loves to listen to their prayers. Trusting in Him, obeying Him, they can grow up into strong Christian adults who are able to help many others.

TONSILLITIS, ADENITIS, STREP THROAT, AND QUINSY

SYMPTOMS—Inflammation and possible infection of the tonsils and adenoids. If streptococcal bacteria have caused the infection, it is called *strep throat*. There is a sore throat with fever, lack of appetite, chills, headache, muscle pain, nausea, vomiting, nasal obstruction and discharge. The lymph glands may become swollen. Symptoms continue for 24-72 hours; then they gradually subside over 7-10 days. The tonsils may look red and enlarged; and pus may be observed.

CAUSES—The tonsils and adenoids are glands containing lymphatic tissue, located in the upper throat. Both are part of the immune system; they protect the body, at the top of the gastrointestinal tract, against infection. Each tonsil contains 200 million lymphocytes. We will here primarily deal with tonsillitis; treatment for adenitis is essentially the same. Strep throat also has the same treatment.

When the **body's resistance is lowered**, viruses or bacteria (usually streptococcal) set to work. And a **diet of processed and junk foods, that is high in carbohydrates and low in protein**, can also bring on this condition.

If streptococcal infection (strep throat) is not present, then the throat condition is eliminated much quicker.

If not cared for properly, strep throat can be potentially dangerous and can lead to rheumatic fever or meningitis.

Food allergies weaken the body: usually **cow's milk, chocolate,** or too much **white flour** or **sugar** products. Cow's milk and **wheat** are the two primary allergens to beware of. **Antibiotics** weaken the body more.

The more frequently this infection occurs, the more difficult it is to eliminate. The tonsils become scarred from previous inflammations.

Quinsy is a peritonsillar abscess. It is an infection of the tonsil, between the tonsil and the pharyngeal constrictor muscle. The solution is not a tonsillectomy, but the care specified below.

NATURAL REMEDIES

• **Cold applications** to the throat may bring relief and shorten the high point of the infection. This could be an **ice collar** or **flannel** wrung out of cold water and frequently changed.

• Hot **saltwater gargles** will help. To increase blood circulation in the throat, do alternate hot and cold gargling.

• Gargle with **goldenseal** tea, drinking it as you do this (1 cup 3-4 times a day).

• **Colloidal silver** is an inexpensive and safe way treat sore throats.

• Place a **heating compress** on the throat at other

times. Prepare a strip of cotton sheet (dipped and wrung out of cold water) in a strip of dry wool; and put this on the throat.

• Give a hot **footbath**, along with hot (5 minutes) and cold (5 minutes) **cloths** to the throat (2-3 times daily). Finish with a **cold mitten friction** to the whole body. Then immediately put him into a warm **bed** and let him rest.

• Drink plenty of **liquids**. *Fresh* juices are the best. Drink fruit and vegetable juices, green drink, and lots of water. Avoid **sugary, processed, and junk foods**. A cleansing **juice fast**, alternated with **vegetable broths**, for 3 days is helpful. **Lemon or lime juice** in warm water with **honey and ginger** will help the cleansing process. **Peppermint** tea will help settle the stomach.

• Maintain a high intake of **vitamin C**. It powerfully fights the infection and also produces interferon which does the same. Along with the light meals, include **vitamin A, selenium, and zinc**.

• Dissolve in the mouth a **charcoal** tablet several times a day. It will both soothe the throat and combine with toxins, absorbing them.

• **Catnip tea enemas** are good for fevers.

• **Goldenseal, echinacea, and garlic** act as antibiotics. **Tea tree oil** helps heal the throat infection. **Fenugreek** and **comfrey** loosens the mucus and carries it out of the body.

• ¼ tsp. of **lobelia** extract (swallowed every 2 hours) will help alleviate fever, pain, and swelling.

• Avoid people who **smoke**. Children whose parents are smokers have very high rates of tonsil infections.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR TONSILLITIS AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

(1) ACUTE FORM —

DIETARY FACTORS—**Rest** in bed. Keep room a uniform temperature. **Eat a spare diet** that consists chiefly of fruits. Avoid meats of all sorts. Copious water drinking.

GENERAL CARE—Hot **Blanket Pack**, sweating Wet Sheet Pack, Steam Bath, Radiant Heat Bath, Hot Full Bath. Follow with **Dry Pack** or other sweating procedures, once daily. Follow with **Cold Mitten Friction**, Cold Wet Sheet Rub, or Cold Douche. **Fomentation** to the throat, 3 times daily. **Cold Compress** during intervals, changed every 15-30 minutes. **Enema**, if bowels are inactive. Hot **gargle** every few minutes, if throat is very sensitive. **Ice Bag** to throat if inflammation is intense. **Inhalation** of soothing vapors. Use of steam inhaler 10-14 minutes hourly or almost continuously. If the tonsil suppurates (discharges pus), it should be lanced. See your doctor.

(2) CHRONIC FORM —

CLERGYMAN'S SORE THROAT DIETARY AND LIFESTYLE—Aseptic **dietary**, **outdoor life**, open air gymnastics, swimming.

GENERAL CARE—**Fomentation** to the throat at bedtime. Follow by **throat pack** (Cold Compress) during the night. And **gargle with hot water**, 3 times a day. Radiant Heat Bath, sweating **Wet Sheet Pack**. Steam Bath or other sweating bath, 3 times weekly. Follow by suitable **cold application**. Daily **Cold Bath** on rising. **Moist Abdominal Bandage**, to be worn during the night. If necessary, remove tonsils and vegetations in throat or postnasal region.

—Also see Adenoids below (704).

ENCOURAGEMENT—Strength for today, courage for tomorrow; trusting Christ and obeying Him. God can help us have all this. Psalm 138:8.

"I pray not that Thou shouldest take them out of the world, but that Thou shouldest keep them from the evil." John 17:15.

Surrender to Jesus and let Him guide your life.

ADENOIDS
(Adenoid Hypertrophy)

SYMPTOMS—It hurts at the back of the child's throat. When he opens his mouth, the area of the tonsils appears red and swollen.

CAUSES—What is commonly called adenoids is enlargement of the pharyngeal tonsil, which is a tissue close to the tonsils. This infection frequently occurs in children. *Also see Tonsillitis (703).*

NATURAL REMEDIES

• Do a 3-5 day **fast** on diluted **citrus juices**. Follow this with a **careful diet**.

• Three times a day, give herb teas such as **red clover, sassafras,** and **burdock root**.

• **Gargle** several times a day with **goldenseal** tea. **Echinacea** and **myrrh** are very good for all glandular swellings.

—See Tonsillitis (703) and Childhood Diseases (702).

ENCOURAGEMENT—Jesus sees the end from the beginning. He can plan for you better than you can plan for yourself. Luke 3:79.

CHICKEN POX
(Varicella Zoster, Pox)

SYMPTOMS—Small, round pimples on the face and body, filled with fluid and appearing like water blisters. As the fluid leaks, it forms a crust.

CAUSES—Chicken pox is a viral disease which first manifests itself as a fever and headache, 7-21 days after exposure. The eruptions continue in cycles from 3-7 days; and the disease generally runs its course in

14 days. It is communicable for 1-2 days before the rash develops, until all the blister-like lesions have crusted (averaging 5-6 days).

Chicken pox mainly occurs between 2 and 8 years of age; *it is much more severe if not contracted until one is an adult.* If a pregnant mother has it in the first four months of pregnancy, birth defects are possible in the infant. Once you have had it, you generally have lifetime immunity. *This is why chicken pox vaccines are dangerous.* It is better to get the disease as a child, when it is relatively harmless, than to wait till adulthood to contract it.

Oddly enough, the same virus that causes chicken pox in children *(varicella zoster)* is the one which causes shingles *(274)* in adults.

Chicken pox is transmitted by **contact** and by **airborne droplets**. Epidemics tend to occur in the winter and spring.

NATURAL REMEDIES

• Drink freshly made **juices**, with added **protein** powder and **brewer's yeast**. Drink **vegetable broth**.

• When the fever drops and appetite returns, give **mashed bananas** and fresh, raw **applesauce**. Use a light, **fat-free, sugar-free diet**. You can give **vitamin C** to bowel tolerance.

• **Catnip** tea, with a little **molasses**, is good during the fever. If the child is over two, catnip tea enemas will help reduce the fever.

• The only real concern with childhood chicken pox is pock scarring. This may be minimized by several simple **baths** and **soaks** to the skin. And, of course, do not scratch.

• To avoid scratching the pocks, keep the child's **nails short**, to minimize spreading of the infection. Have the child wear **mittens or gloves**, to avoid scratching—especially at night. Instead of scratching, apply pressure to the area. Bathe him often.

• Relieve itching with **calamine lotion, moist baking soda, or starch baths**. **Vitamin E oil** can be applied directly to each papule.

• A deep, warm 15-minute **bath** at the onset of the disease will help the pox develop more rapidly. Keep the **head cool**; but do not let him become chilled.

• Each day give a **tepid bath**, followed by a change of clothes and linens. Protect against chilling while bathing and at other times. Chicken pox pneumonia can develop!

• **Oatmeal baths** are soothing because they are alkaline. Put 1 pound of uncooked oatmeal (or 1 heaping cup of uncooked rolled oats, ground fine, in a blender) in a bag made of 2 thicknesses of old sheeting. Soften it with hot water and then float it in the bathtub or hang it on the faucet. Water will flow through it. You can use the bag to gently sponge the body. Pat dry when finished; do not rub.

• If needed, mix 1 level teaspoon of **salt** with 1 pint (2 cups) of water and **gargle** with it.

• Avoid **constipation**.

• **Isolation**. Keep the infected child away from newborn infants, elderly people, and pregnant women. They may not have had chicken pox before. Do not send the child back to school until all the lesions have finished being crusted.

• **Antibiotics and corticosteroids** do not help in any way; and they should not be given. (Chicken pox is a virus.)

• **Do not give aspirin to children!** About 10% of Reye's Syndrome *(713)* cases occur after chicken pox as a result of aspirin dosages. Reye's can cause irreversible coma or death.

• *If you contract chicken pox as an adult,* go on a fasting program of **fresh fruit and vegetable juices**, interspersed with **light meals**.

ENCOURAGEMENT—Guard against the tendency to forget God. You dare not do this. He is the only one who can give you the extra help you need everyday. 2 James 1:22-24.

MUMPS

SYMPTOMS—Swelling of one or both salivary glands, fever (up to 104° F.), chills, headache, sore throat, and pain when swallowing or chewing. Swelling often occurs in one gland first; and then it begins in the other as swelling in the first subsides. But it may occur on only one side.

CAUSES—Mumps is an infection of the salivary (parotid) glands, located in front of, and below, each ear. It rarely occurs before 3 years of age or after 40. Either **direct contact or droplets** spread the disease.

Mumps is not as contagious as chicken pox or measles. But a person with the disease is still contagious 48 hours before symptoms develop to 6 days afterward. Incubation is 14 to 21 days.

If no complications occur, complete recovery generally results within about 10 days. One bout, and lifetime immunity generally follows.

If it is acquired after puberty, the ovaries or testes may become involved and sterility may result. Other complications can also occur; these affect the heart, kidneys, and brain.

Swollen salivary glands can also be caused by several other diseases: A partial list includes cirrhosis of the liver *(361)*, leukemia *(625)*, lupus *(240)*, and tuberculosis *(412)*. It also includes strep throat *(703)* and taking of certain drugs. If it seems to be an isolated case of "mumps," it might actually be something else.

NATURAL REMEDIES

• Keep the **diet simple, fat-free, and sugar-free**. Eat mostly **raw fruits and vegetables** that are juiced or softened. Avoid foods that require **chewing** or might be irritating.

• Drink plenty of pure **water** and fresh **juices**. This will keep the body working well, help flush toxins, and render it less likely that complications may occur.

• Do not eat **junk food** of any type. Avoid **caffeine, tobacco, alcohol, soft drinks**, etc. Avoid **acidic foods**, such as pickles or citrus fruits.

• To relieve pain, **cold or warm compresses** (whichever feels best) may be placed on the neck and over the glands. But avoid hot or icy cold applications.

• **Do not give aspirin** to a child or youth with a fever; it may result in death! *See Reye's Syndrome (713).*

If nausea and/or pain on swallowing becomes so severe that the person becomes unable to eat, intravenous administration of dextrose and fluids may be needed.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MUMPS AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

GENERAL—**Cold Mitten Friction** or **Cold Towel Rub**, 24 times a day. **Neutral Bath** for one hour, daily. Copious water drinking.

TO COMBAT LOCAL INFLAMMATION—**Hot Blanket Pack.** Follow by **Heating or Sweating Wet Sheet Pack**, continued 1-2 hours. Repeat the application twice a day. **Fomentation** over the affected parts every 2 hours for 15 minutes. Follow by **Heating Compress** at 60°F., to be changed every 10 minutes or as soon as warm. **Ice Bag** over swollen glands until active inflammation is subdued. Remove ice every half hour and apply **Fomentation** for 5 minutes.

HEADACHE—**Cool Compress.**

NOSE BLEED—**Ice** to back of neck, **Hot Compress** over face. Ice to hands. Elevate hands to vertical position, if necessary. **Hot Footbath** or Hot Leg Pack. Very **Hot Nasal Douche.**

DIARRHEA—Enema at 95° F. after each bowel movement. **Abdominal Bandage** at 60° F., renewed every 15-30 minutes. If pain is present, **Fomentation** to abdomen for 15 minutes or until it is relieved; do this every 2 hours. Empty colon with a large Hot **Enema**, if due to fecal accumulation.

VOMITING—**Ice** over stomach or spine opposite the stomach. Or **Hot and Cold Compress** over stomach. Ice pills. Sipping very hot water.

EARACHE—**Ice Bag** to neck of the same side. **Fomentation** over ear. **Hot Ear Douche**, if necessary. Protect the ear with warm **cotton**, to prevent chilling by evaporation after treatment.

CONVULSIONS—**Hot Blanket Pack** or **Hot Immersion** at 105°-108° F., with cold to the head (**Cold Compress, Ice Bag, Ice Cap**, etc.).

INFLAMMATION OF THE BREAST—**Fomentation** over the breast for 15 minutes, every 3 hours. During interval between, apply a **Heating Compress** at 60° F.; this is renewed every 15-30 minutes. **Hot Pack** to arm of the same side. **Hot Hip and Leg Pack** for derivative effect if pain is severe.

INFLAMMATION OF TESTICLE—**Ice Compress** covering entire genitals and inner surfaces of thighs with simultaneous **Hot Hip and Leg Pack** for 30 minutes. Repeat every 4 hours. During interval between, apply **Heating Compress** at 60° F. in place of the **Ice Compress**, renewed every 15 minutes.

—Also see Childhood Diseases (702).

ENCOURAGEMENT—"What doth the Lord thy God require of thee, but to fear the Lord thy God, to walk in all His ways, and to love Him, and to serve the Lord thy God with all thy heart and with all thy soul."—Deuteronomy 10:12.

MEASLES
(Rubeola)

SYMPTOMS—First symptoms are fever, coughing, sneezing, runny nose, and inflammation of the eyes. The eyes may become red and sensitive to light. Within 24-48 hours, small red spots with white centers appear on the insides of the cheeks. A rash appears 3-5 days later on the sides of the neck, forehead, and ears; then it spreads over 5-7 days to the rest of the body. As it spreads, the fever subsides.

CAUSES—There are two types of measles: **common measles *(rubeola)*** and **German measles *(rubella, 707)***. Common measles is highly contagious; it is **spread by droplets** from the nose, throat, and mouth. At the present time, adolescents and young adults are affected more often than children. If the person was previously healthy, the disease will pass within 10 days.

But it can be followed by one of several serious complications, including pneumonia, bronchitis, croup, middle-ear infection, meningitis, encephalitis, or injury to the nervous system.

Approximately 98% of the population have had common measles. Lifelong immunity follows this infection.

The best protection is to live right and eat right.

NATURAL REMEDIES

• He should be **isolated** in a room which is **well-ventilated**. If he is sensitive to light, **darken** the room. He should not read or watch television. Keep the lights dim.

• Drink plenty of **water** and **fruit and vegetable juices**, preferably fresh.

• Fevers increase the body's need for calories and **vitamins A and C**. He should be encouraged, but not forced, to eat. **Frequent small meals** of nourishing food may be best.

• Avoid **processed foods.**

• **Rest** until the rash and fever have disappeared.

• **Garlic** or **catnip** tea enemas help lower fever.

• If a cough is present, cool moisture from a **vaporizer** may help. But **water**, given copiously, is the best cough medicine.

• A **hot bath** may help reduce the fever. Place the child in a hot tub (105°-108° F.) for one minute for each year of his age. Keep the **head cool.** This may be repeated every 2 hours. Dress him warmly afterward, so chilling does not occur.

• Helpful herbs include **yarrow, pleurisy root, and marigold.**

COMPLICATIONS

• **Antibiotics** are useless against measles and do not decrease the likelihood of complications. But, in an emergency (if complications occur), they could be used.

• Complications can be serious; but they are unlikely in the developed nations. Most such problems stem from secondary bacterial infection, primarily middle-ear infection *(320)* or pneumonia *(409)*. But special care and vigorous use of simple, natural remedies can generally deal with them.

• *Bronchitis (407)* may occur; it can be treated with hot **fomentations** to the chest. Apply them twice a day, along with a **hot footbath**. A **heating compress** to the chest can be applied at night.

• *If there is itching of the skin*, bathe him with one of the following teas: **goldenseal root, yellow dock root, or burdock root**. Another formula: Mix 1 oz. **goldenseal** and 9 oz. **flaxseed oil**; and apply freely as needed.

• **Do not give aspirin** to a child or youth with a fever; it may result in death! *See Reye's Syndrome (713).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MEASLES AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

MAINTAIN GENERAL RESISTANCE—**Wet Sheet Pack**, Graduated Bath.

PREVENT LUNG COMPLICATIONS—**Fomentation** to chest, twice a day. **Chest Pack** during interval between.

NASO-PHARYNGEAL IRRITATION—Apply light, very Hot **Compresses** to the face. **Inhale** vapor of water, aromatic oils, and balsams. **Fomentation** to the throat every 2 hours. **Heating Compress** during the interval between, changing every 15 minutes at first, less frequently later.

INFLAMMATION OF MIDDLE EAR—**Ice** to throat of same side. **Fomentation** over ear.

HEMORRHAGIC FORM—**Hot Blanket Pack** or short Hot Full **Bath**, followed by **Heating Wet Sheet Pack**. Repeat every 3-4 Hours. Prolonged **Neutral Bath** at 93°-95° F.

BRONCHIAL CATARRH—**Fomentation** to chest, **Cold Towel Rub**, or **Cold Mitten Friction** (twice daily), **Heating Chest Pack** night and day.

LOBAR PNEUMONIA AND BRONCHO-PNEUMONIA—**Fomentation** for pain and irritable cough, repeated every 2-3 hours. **Cold Compress** during interval at 60° F., changing every 15-30 minutes. Hot **Hip and Leg Pack**, if the local inflammation is severe. *See Pneumonia (409).*

—For any of the following associated problems, see under their respective headings: *Cough (224), Nosebleed (318), Inflammation of the Eye (or eyelids, 301), Headache (456), Acute Nephritis (kidney inflammation, 400).*

—Also see German Measles (below) and Childhood Diseases (702).

ENCOURAGEMENT—In this life, we will encounter many difficulties and trials; but, if we will make God the center of our lives, He will wonderfully work to help us through our problems. He will guide, guard, and keep us from the evil one, if we will submit our lives to His control. Isaiah 11:4.

GERMAN MEASLES
(Rubella)

SYMPTOMS—Fatigue, coughing, headache, mild fever, muscle aches, and stiffness in the neck. A pink rash often develops 1-5 days later. It generally first appears on the face and neck; then it spreads to the rest of the body.

CAUSES—As we mentioned earlier, there are two types of measles: common measles and German measles:

Common measles *(rubeola, 706)* is highly contagious and can have serious complications if cautions are not taken; but this usually passes within 10 days.

German measles *(rubella)* is different in several ways. It is usually a mild contagious illness with a rapid recovery period (5-7 days). But it is dangerous if a woman contracts it during the first trimester (first 3 months) of her pregnancy. If that happens, she might give birth to a child with heart defects, deafness, mental retardation, or blindness. Therefore, **a pregnant woman must guard against exposure to rubella.**

NATURAL REMEDIES

• Follow the **treatment** specified for common measles. *See Measles (706).*

• Drink plenty of fluids. This can be **water, fruit juices, and vegetable broths.**

• **Rest in bed** until the rash and fever have disappeared.

• If you need to lower the fever, **catnip tea** or **garlic enemas** will help. **Peppermint tea** is also good.

• The person with rubella should **avoid contact** with others, especially children and adolescents—*and especially women of childbearing age and their children until a full week after the rash disappears.*

• Do not give **antibiotics**; since they are ineffective against rubella, which is a virus.

• Do not give **aspirin** to a child or youth with a fever; it may result in his death! *See Reye's Syndrome (713).*

What precautions should a woman take?

• A pregnant woman must avoid exposure to German measles. The disease should be considered contagious from 1 week before the rash appears until 1 week after the rash fades. The rash usually lasts about 3 days.

• If she thinks she has been exposed to the disease, she can immediately see a physician and request that she be given a gamma-globulin injection. If given soon after exposure, it may reduce the severity of the disease or possibly prevent it from occurring.

• Immunity to German measles can be determined by a special blood test. She may wish to be vaccinated. If this is done, pregnancy must be avoided for 3 months following immunization. (A woman who previously has had rubella will give immunity to her child for 1 year.)

—Also see Measles (706) and Childhood Diseases (702).

ENCOURAGEMENT—God has given, in the Bible, sufficient evidence that His Word is from Him. Study and obey it, and God will guide you day by day as you pray for help. Claim the power of its many, many promises. Psalm 22:26.

SCARLET FEVER
(Scarlatina)

SYMPTOMS—Symptoms appear 2-7 days after exposure. Vomiting, along with sore throat and headache. Within a day, high fever develops. The throat membrane is inflamed and the soft palate may show a fine light-red rash. The tongue is coated white; but, on the second day, reddened raised points show through, especially at the tip and sides.

The throat condition becomes more severe, with redness and enlargement of glands under the lower jaw.

The rash usually begins on the chest within 1-2 days after the first symptoms; it later extends to other parts of the body and limbs. But infection can occur without a rash occurring.

CAUSES—Scarlet fever is an acute contagious disease and is caused by one of several different streptococcal germs. Urine and discharges from nose, mouth, ears, and any abscesses are highly infectious. One attack generally brings lifelong immunity. Few contract it after the age of 15.

The fever usually does not remain high more than 4 days; and the rash fades within a week. The more intense the rash, the more scaling forms on the skin.

Inflammation of the ear is one of the most frequent complications of scarlet fever. The infection in the throat passes up the eustachian tube into the middle ear. *See Earache and Infection (320).* Children can become deaf as a result.

The infection may extend from the ear to the mastoid cells in the bone behind the ear or to the membranes covering the brain, or to both. This produces mastoiditis *(320)*, brain abscess, or meningitis *(476)*. These conditions are serious and often fatal.

Rheumatic fever *(712)* frequently follows scarlet fever; and this sometimes results in inflammation of the lining membranes and valves of the heart.

Enlargement of the lymph glands of the neck can turn into an abscess of these glands, as late as 5-6 weeks after the disease began.

In a child that is well-advanced toward recovery (especially in the third week), nephritis *(400)*, a kidney infection, can develop. So, this is another danger to be warded off by proper treatment.

Scarlet fever is not a matter to be taken lightly.

You do well to call a physician, if possible. He may need to lance the middle ear if infection develops. He will probably examine the heart daily, for indications of damage, and do frequent urinalysis for signs of nephritis.

NATURAL REMEDIES

• Put the child on a **fruit and vegetable juice fast**, followed by a simple diet of **fruits, vegetables, and broths** for a time.

• **Avoid** giving the child inadequate care, improper food, and too early physical activity. This is a **contagious** disease; so proper precautions must be taken.

• Keep him **in bed** at least 3 weeks, even though he feels well! Muscular activity too soon can result in kidney damage.

• *If the temperature* goes above 103° F., reduce it by means of **tepid sponge baths**. Lightly rub the face and upper body with a cloth wrung out of lukewarm water.

• *If there is a sore throat*, apply a hot **fomentation** twice a day to the area, followed by continuous heating compresses.

• *When the rash begins to appear*, help him to sweat. Give a long-continued hot **footbath**, along with hot **drinks**, all the while keeping him covered with **blankets**. The objective is to get him to sweat. But, afterward, guard against chilling!

• *To help prevent kidney damage*—when he goes back on food—**eliminate eggs, meat, meat broths, and legumes** from the diet. Give him only **milk, cereals, fruit juices, pureed vegetables, and** all the **water** he will drink.

• *To hasten the scaling of the skin*, and get it over with, give a **daily sponge** bath with warm water and mild soap. Follow by an **olive oil rub**.

• *If there is itching of the skin*, bathe him with teas of **goldenseal root, yellow dock root, or burdock root**. Another formula: Mix 1 oz. **goldenseal** and 9 oz. **flaxseed oil**; and apply freely as needed.

• Helpful herbs include **black rose, twinleaf, and bloodroot**.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SCARLET FEVER AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

BUILD GENERAL RESISTANCE—Hot Blanket Pack, 3-8 minutes. Follow by **Cooling Wet Sheet Pack**. (The cold sheet should be well-heated by him before removing it.) Or, the Hot Blanket Pack may be followed by **Cold Towel Rub**, Wet Sheet Rub in bed, or Tepid Pail Pour at 85°-80° F. while he sits in a bathtub. Avoid giving him a **Cold Mitten Friction**.

ELIMINATE TOXINS—Copious drinking of **water, fruit juices**, fruit purees, etc.

REDUCE FEVER—**Cooling Wet Sheet Pack. Hot Blanket Pack**. Follow with **Cold towel Rub** or Wet Sheet Rub. Graduated Bath, copious **water** drinking, **Cooling Enema.**

IF ERUPTION IS DELAYED—**Wet Sheet Pack**, prolonged to heating stage.

DIARRHEA—75°-80° F. **Enema** after each bowel movement. **Fomentation,** for 15 minutes, over the abdomen every 2 hours. Follow with **Heating Compress**, changed every half hour. If most of his skin surface is cold, use the **Hot Full Bath** for 5 minutes. Follow with short **Cold Towel Rubbing**.

VOMITING—**Hot and Cold Trunk Pack. Ice Bag** over the stomach or spine opposite stomach.

CONVULSIONS—**Hot Blanket Pack** for 10 minutes. Follow by **Cold Wet Sheet Pack** with ice to the head. Hot Bath for 5 minutes. Follow with **Neutral Bath** at 92°-95° F. **Water** drinking. Large **Enema.**

PHARYNGITIS—**Fomentation** to throat 10 minutes every hour with **Ice Compress** during interval between. **Warm Vapor Inhalation** for 5-10 minutes every half hour. **Gargle** throat with very hot water, hourly. **Throat Compress** at 60° F., changed every 15 minutes. It should be protected by a **Heating Compress,** changed once in 3 hours.

DELIRIUM WITH INSOMNIA AND NERVOUS AGITATION OR CHOREA—**Ice Bag** to head, Hot **Fomentations** to spine, followed by Prolonged **Wet Sheet Pack.**

SCALING OF THE SKIN—Neutral (92°-95° F.) Alkaline **Bath** daily, for 15 minutes to 1 hour.

NEPHRITIS, OR SUPPRESSION OF THE URINE—Hot **Blanket Pack** for 20-30 minutes. Follow by **Heating Compress** to the loins. Copious **water** drinking. **Enema,** at 80°-90° F. twice daily.

PLEURISY—**Fomentation** to the chest for 15 minutes, every 2 hours, with **Heating Compress** during the interval. Tight muslin **bandage** about chest, if pain is intense.

RHEUMATISM—Sweating **Wet Sheet Pack.** Copious water drinking. **Fomentation** to joints every 3 hours, with **Heating Compress** during interval between.

PERICARDITIS OR ENDOCARDITIS—Ice Ball or **Cold Compress** over heart, to be removed for 5 minutes, every 15-20 minutes.

ENTERITIS—**Hot Trunk Heating Pack** with **Hot Footbath** or Hot Leg Pack, for 20 minutes. Follow by **Cold Abdominal Compress** at 60° F., to be changed every 30 minutes. **Enema** after each stool, at 95° F.

PNEUMONIA—**Fomentation** for 15 minutes, every 2-3 hours. **Cold Compress** at 60° F. during interval, changing every 10-20 minutes. **Hot Hip and Leg Pack** once or twice daily, to relieve congestion. Keep skin warm and active. **Hot Blanket Pack,** if he is chilly. Follow by heating **Wet Sheet Pack.**

ENLARGED SPLEEN OR LIVER—**Fomentation** over the afflicted body part, for 10-20 minutes, twice daily. Follow with **Ice Water Compress**, to be changed every 2 hours during the interval.

CONTRAINDICATIONS—**Avoid** short Cold Baths, prolonged Hot Baths, and all other measures which diminish heat elimination or increase heat production.

GENERAL METHOD—At the beginning, encourage eruption by hot-water drinking, very Hot Baths, Heating Pack. After eruption is fully developed, give Cooling Wet Sheet Pack, Graduated Bath, Cool Enema, and other fever-reducing measures. Copious water drinking is especially important. Give attention to the throat, to prevent infection of the ears. Warm Vapor Inhalation. Irrigation of the throat (gargling). Heating Compress. If albumin appears, the blood must be kept in the skin by Hot Packs and warm wrappings that are covered well with blankets. And the cold applications must be "partial" (such as Wet Hand Rub, Cold Mitten Friction, Cold Towel Rub). Prolonged chilling of the skin must be carefully avoided.

ENCOURAGEMENT—God has boundless love and mercy toward us. You can find in Him the help you need. Only He can protect you from the evil one. Romans 8:6.

DIPHTHERIA

SYMPTOMS—It begins with sore throat and fever. Frequently a dirty, white or grayish membrane forms in the throat or nose, or both. There are slight chills, possible vomiting and diarrhea, always fetid breath, difficulty in swallowing, and hoarseness.

Children first complain of feeling tired and sleepy. The tonsils appear inflamed, dark red, and unevenly swollen. White parchment-like patches appear on them. The glands in the neck usually swell. *If there are no white patches or developing membrane, it is not diphtheria.*

CAUSES—Diphtheria is an acute, contagious disease. It begins 3-8 days after exposure; and it primarily occurs between 1 and 10 years of age.

Part of the danger is the obstruction to breathing, due to the above-mentioned false membrane; this is partly due to the toxins carried by the diphtheria germs which—carried throughout the body—especially harm the heart muscles, nerves, and kidneys.

This is a serious disease. Diphtheria is transmitted by **clothing, contact, domestic animals and pets,** and sometimes by **raw milk.** Anything (dish, garment, etc.) coming in contact with the person must be disinfected.

Highly contagious: Individuals can carry the germs on them for several years and transmit them to still others. A carrier should be isolated until the germs can no longer be found in his throat, nose, or catarrhal discharge.

The membrane is tenacious and dangerous. If not checked, it will cover the air tube and the child will suffocate. It is generally whitish; but it may appear yellowish or greenish. When the child breathes harder and then has a frightened look, his air flow is narrowing.

When someone develops diphtheria, there must be no delay. Give him vigorous treatment. You will want to call a physician.

NATURAL REMEDIES

- Give the child all the **water** he can drink; and keep him in **bed**, in a well-ventilated room.
- **Avoid** chilling him. Too early exercise may overstrain the heart.
- **The diet** should be liquid. Fast on fresh **carrot**

juice or citrus juices. If the child insists on eating something, give him **bananas, raisins, figs, and oranges**—and no other food. *It is best to give him only liquids (water and fresh juices) until he is cleaned out, the throat is clean, and the phlegm and false membrane are totally gone.*

• After the disease appears to be ended, give him no **meat** for quite some time. (It is better not to give it to him at all.)

• Give him **warm baths**.

• An **emetic** to make him vomit is usually needed to empty the stomach of putrefying matter; otherwise, high fevers will result. **Lobelia** in water can be given, but combined with **bayberry bark** is better. The vomiting must be repeated until the stomach and throat are entirely clean.

• As the disease progresses, **lobelia** and **bayberry bark** tea can be given at any time, to clean out the mucous membranes of the mouth and throat. Bayberry cleans the membrane and eliminates the odor. It is also healing and antiseptic. A very small amount of **cayenne** or **ginger** can be added as stimulants.

• *Problems can develop while the child is sleeping*—serious ones. Therefore, always give the **emetic** before he goes to sleep each time. Otherwise he might suffocate during sleep.

• Give him an **enema** every morning and evening. This helps clean out toxins from the diphtheria germs. An herb tea can be added, to detoxify the colon: **bayberry, white oak bark, or red raspberry**. There should be at least 3-4 bowel movements a day.

• **Bayberry** is excellent in all throat or stomach mucous conditions.

• *If the heart rate is rapid*, apply an **ice bag** over the heart.

• *In case of headache*, place cold compresses or ice bags to the head and neck.

• A gargle can be made of **goldenseal and myrrh**, with a pinch of **cayenne**. Use this every half hour. It will clean the mucus and germs out of the throat.

• Apply **hot and cold fomentations** over the liver, stomach, kidneys, and spine to keep the circulation normal. This stimulates the lymphatic system, to help clean out toxins.

• *If there is any danger of paralysis*, give **hot and cold applications** to the spine, stomach, and liver.

• Give 2 high **enemas** daily.

• If symptoms of heart failure appear, give a half teaspoon of **cayenne** in hot water. Have him drink it all down immediately. Repeat if necessary.

• Each day, **clean all clothing and bed linens** by boiling them.

• As he begins to recuperate, he can be given **baked apples, potato peeling broth, fresh fruits, cooked vegetables, and soy milk**.

• If properly cared for, the disease will end within 7-10 days.

• Do not give **aspirin** to a child or youth with a fever; it may result in his death! *See Reye's Syndrome (713).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR DIPHTHERIA AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

INCREASE AND MAINTAIN VITAL RESISTANCE—Hot Fomentation to the spine or short **Hot Bath**. Follow by **Cold Mitten Friction** or Cold Towel Rub, 2-3 times a day.

TO COMBAT LOCAL INFLAMMATION—Fomentation to throat for 15 minutes, every 2 hours. **Ice Compress** to throat during interval between. If inflammation becomes intense, and suppuration (pus flowing) or sloughing (separation of dead tissue from living tissue) is threatened, use the **Heating Compress** at 60° F., changing every hour. **Warm vapor Inhalation**, antiseptic lotions to throat, **hot-water gargle**.

COMBAT GENERAL TOXEMIA, RESULTING DEGENERATIONS, AND LOCALIZED INFLAMMATIONS—Copious **enemas**, twice daily. Copious **water** drinking, 3-6 pints daily. The free use of **fruit juices**. Hot **Fomentations** to the spine or short Hot **Full Bath**. Follow with Cold Mitten Friction or **Cold Towel Rub**, 2-3 times a day.

TO COMBAT LOCAL INFLAMMATION—Hot Blanket Pack. Follow with Sweating **Wet Sheet Pack**; repeat every 3-4 hours, if necessary. **Fomentation** to throat every 2-3 hours, for 15 minutes. **Ice Compress** to throat during interval. **Ice pills**. The **Heating Compress** at 60° F., changing every hour. Warm Vapor Inhalation. Antiseptic lotions.

FEVER—Hot **Blanket Pack**. Follow by **Wet Sheet Pack**. Prolonged **Neutral Bath**, when rectal temperature rises above 101° F. **Fomentation**. Follow by **Cold Towel Rub**. Cold **Enema** with simultaneous **Fomentation** to the back. Hot **Enema**. Follow by **Cold Towel Rub** or Cold Mitten Friction.

COMA OR COLLAPSE—Hot **Blanket Pack**. **Colonic** at 80° F. **Alternate Compress or Sponging** to spine. **Cold Mitten Friction**. **Hot and Cold Head Compress**, in case of collapse. Short Hot **Full Bath**. Follow by **Dry Blanket Pack**. Hot **Enema**. Follow by **Dry Blanket Pack**.

PARALYSIS—Fomentation to spine with **Cold Mitten Friction** or short Hot Blanket Pack. Follow by **Cold Mitten Friction**. **Hot and Cold Friction** over the affected part. Gymnastics, **massage**, and appropriate **exercise**.

NEURITIS—Fomentation over the course of the affected nerve for 15 minutes, every 2-4 hours. During the interval between, apply a well-protected **Heating Compress**. **Colonic** daily. Water drinking, 2-4 pints daily. **Aseptic diet**. **Rest** to the affected part.

CROUP—Warm Vapor Inhalation. **Fomentation** to throat for 15 minutes, every 2 hours. **Cold** (or very cold) **Compress**, changed every 15 minutes, during the interval. **Hot Blanket Pack**. Keep skin warm.

THREATENED SUFFOCATION—Put him in a **Neutral Full Bath** at 102°-105° F. And **pour cold water** over the chest and spine. **Cold Mitten Friction**.

—Also see Childhood Diseases (702).

ENCOURAGEMENT—Only in humble reliance upon God and obedience to all His commandments can we be secure. Trust your case to Him. He is the Great Physician.

The youth may have principles so firm that the most powerful temptations of Satan will not draw them away

from their allegiance. How very important this is—at this time in history, when there is so much wickedness in the world. Psalm 119:165.

WHOOPING COUGH
(Pertussis)

SYMPTOMS—A week or two after exposure, the catarrhal stage begins. The eyes may be red and the child seems to have a cold in the head. There is sneezing and watering of the eyes. Then a persistent cough develops, especially bad at night. This coughing continues a week and keeps getting worse—this is the most significant indication that the problem may be whooping cough.

In about 2 weeks, the typical whoop begins. At first, only 1-2 times a day; it degrades to every time there is coughing. It is a deep breath at the end of a series of deep coughs. The child's face may be reddish or bluish from the effort and lack of air. Vomiting may also occur.

This whooping stage lasts 3-6 weeks; the cough may not entirely disappear for several months.

CAUSES—Whooping cough is a contagious bacterial disease, which usually attacks children between 6 months and 5 years of age. But infants and adults can also be affected. A person rarely has a second attack of this disease.

The disease is not highly contagious after the first few weeks. The most contagious phase is before a definite diagnosis is possible.

Whooping cough occurs more frequently, and seriously, in overcrowded and unhygienic quarters and cold weather. In very young, delicate, or undernourished children, it is more likely to develop into broncho-pneumonia—which is the principal cause of death in cases of whooping cough.

Complications include convulsions, bleeding from the nose into brain or area around the eyes. Bronchopneumonia can also occur; death rarely occurs.

Whooping cough is an experience to frighten parents. There are three stages: (1) During the *catarrhal stage* (7-10 days), there are cold-like symptoms of runny, stuffy nose and sneezing. (2) During the *paroxysmal stage* (up to 2 days to 4 weeks), there are violent episodes of coughing which may last for several minutes. Each one may occur a few or many times each day. The child is gasping for air and his face may turn red; there may be vomiting and nosebleeds. The coughing gradually decreases. (3) During the *convalescent stage* (3-4 weeks), there is a chronic cough of less intensity than earlier.

You may choose to have the child vaccinated at an early age (2 months is recommended for the series). You should weigh the fact that ***pertussis vaccine is one of the most dangerous of the shots*** in its occasional side effects. *See Vaccination Poisoning (604, 714).*

NATURAL REMEDIES

COUGHS

• Treat the cough—**When a cough first develops, treat that cough!** If you do so, the whooping cough phase can be entirely prevented! (Cough medicines, sedatives, expectorants, and antispasmodic drugs are useless.)

• In all kinds of coughs, first cleanse the system with high herb **enemas** and an herbal **laxative**.

• *When the cough is severe*, have him drink **warm water**, one cup after another; then stick your **finger** down his throat and have him vomit.

• **Wild cherry bark tea** is excellent. *Here are other herbs useful for coughs;* select from those you have on hand or can most easily obtain. They can be mixed: **black cohosh, flaxseed, rosemary, comfrey, horehound, hyssop, myrrh, white pine, bloodroot, red sage, blue violet, ginseng, coltsfoot.** Prepare a tea and give a teaspoonful every hour until the cough is better.

• Thick **slippery elm** tea is very good in whooping cough; mix in a little lemon juice and drink it freely.

• David Reeder, M.D., used the following method for many years; and he never lost one patient to whooping cough. He would place a **poultice of garlic on the bottom of the child's feet!** This is the procedure: Remove the outer shells from the cloves and chop them finely enough to make a poultice about ¼ inch thick to cover the bottom of each foot. Spread it evenly on a piece of soft cloth. Place a thin piece of cloth over the garlic. Grease the bottoms of the feet with vasoline (because if the garlic is placed directly on the skin it will burn and blister). On each foot, place the poultice and bind with a cloth and tape. Then put an old sock on each foot. Prepare the two poultices in the evening, put them on the feet, and remove them carefully the next morning (because the same poultice may be used several times). You will smell garlic on the child's breath. Clean the feet, apply vasoline, and apply another set of poultices. With the poultices on, the child will have a sound sleep without coughing while the garlic works in his body to kill the infection.

• Be sure to include other worthwhile practices, such as partial or complete **fasting on fruit and vegetable juices** until the cough is past.

• To help him sleep at night (or any time), give him a **tepid bath** (99° F.) for 10-15 minutes, with the head or face kept cool with an ice pack or wet washcloth. This will give him great relief; and he will often sleep afterward. Coughing episodes seem to decrease.

DIET

• *As soon* as it is perceived that the problem is whooping cough, place him on a **full fruit-juice fast.** First, give citrus juices. This can be followed by other fruit juices, then carrot and other vegetable juices, and clear vegetable broth soup. Later still, fruit can be added. Give vitamins A and C in large doses.

• A **light diet** is essential. **Overfeeding** during the

whooping cough prolongs the disease and leads to complications. In case it is a breast-fed infant, do not overfeed either. The child is thirsty, not hungry.

OTHER HELPS

• It is good to **soak the feet** in hot water, with a little **mustard** and **salt** added to it.

• A little **petroleum jelly** can be placed under his nose and around the lips, to prevent skin irritation.

• As soon as the child finishes vomiting, **rinse his mouth** to get rid of hydrochloric acid, which could damage his teeth.

• **Warm vapor inhalations** are often very helpful. They can be given every 2-4 hours, according to the severity of the case. In his room, place a humidifier or a steam kettle on a hot plate.

• Keep his bedroom **well-ventilated,** day and night; but avoid drafts.

• If the weather is warm, sunny, and not too damp or dusty, keep him **outdoors** most of the day. But he should not exert himself in play or become chilled.

• When there is sunshine, air and sun his bedding every day.

• Keep him **isolated** from other children.

• Do not give **aspirin** to a child or youth with a fever; it may result in his death! *See Reye's Syndrome (713).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR WHOOPING COUGH AND ITS COMPLICATIONS *(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).*

INCREASE VITAL RESISTANCE—**Cold Mitten Friction** or Cold Wet hand Rub, 3 times a day.

TO RELIEVE COUGH—Chest and neck **Heating Pack,** changing every 4 hours. Copious drinking of hot **water,** especially just before coughing paroxysm. He should drink 3-8 pints of water daily.

HELP KIDNEY ACTION—**Neutral Bath** daily for a half hour. Follow by **Cold Mitten Friction,** to promote activity of skin and kidneys.

GENERAL METHOD—The disease cannot be greatly shortened. But the strength may be maintained, suffering mitigated, convalescence facilitated, and grave effects prevented by the faithful employment of the above measures. The above measures should be continued for several weeks after the beginning of convalescence, not only during the active stage of the disease.

—Also see Childhood Diseases (702), Fever (233).

ENCOURAGEMENT—God is grieved with our griefs. He bends down in sympathy and tender love. Cry to Him for help, and He will give you that which is for the best. How thankful we can be for the love of God in Christ, our Lord and Saviour! Rejoice every day that you can be His humble, obedient child. 1 John 2:25.

RHEUMATIC FEVER

SYMPTOMS—Inflammation, and stiffness in a large joint (such as the knee). These initial symptoms are accompanied by pain.

The pain and swelling can travel from one joint to another. A skin rash may also appear.

CAUSES—Rheumatic fever is a streptococcal disease *(Streptococcus Group A);* it occurs between the ages of 4 and 18. It tends to follow a bout with tonsillitis, scarlet fever, strep throat, or an ear infection. Most often it follows strep throat. *See Tonsillitis (703).* After the disease appears ended, it may recur again later.

Rheumatic fever affects one or several body organs or locations: joints (arthritis), brain (chorea), tissues (nodules), skin (erythema marginatum), or heart (carius). It may also result in residual heart disease, producing permanent damage to one or more heart valves. *See Arthritis (513) and Chorea (453).*

The residual heart valve damage is the most dangerous aspect of untreated rheumatic fever. Treatment early in the course of the disease will generally prevent the heart damage. But this treatment may require the help of a physician and a stay in the hospital. Here is supplementary information:

NATURAL REMEDIES

• Give a **nourishing diet,** restricting all **salt.** Give a **diet with water** and **fresh fruit and vegetable juice.** Eat no solid food until the fever subsides and joint pain is reduced. Then maintain a **light diet,** including **fresh fruits and vegetables, fruit juices,** etc. **Bioflavonoids** are especially valuable in preventing and treating rheumatic fever.

• Avoid **caffeine, fried foods, soft drinks, processed or refined foods, sugar, or salt.**

• **Bed rest** is very important.

• While *in bed,* **massage** and **mild exercise** is helpful. A planned exercise program should later be undertaken.

• **Catnip tea** (a nerve tonic) can be used as an enema to relax the child and reduce fever.

• Useful herbs include **bayberry bark, goldenseal, yellow dock, pau d'arco, and burdock root. Echinacea and dandelion** are also good.

• Do not give **aspirin** to a child or youth with a fever; it may result in his death! *See Reye's Syndrome (713).*

ENCOURAGEMENT—To many, as to Mary, Christ says, "Why weepest Thou? Whom seekest thou?" He is close beside us; but so often our tear-blinded eyes do not discern Him. Pray earnestly for help, and He will supply it." Psalm 147:14.

"O how great is Thy goodness, which Thou hast laid up for them that fear Thee." Psalm 31:19.

"For whosoever is born of God overcometh the world: and this is the victory that overcometh the world, even our faith." 1 John 5:4.

Trust in the Lord. His guidance is safe.

REYE'S SYNDROME

SYMPTOMS—A fever and vomiting suddenly occur. A rapid change in mental status to a deep depression, nausea, amnesia. Then pneumonia, coma, convulsions, fixed and dilated pupils, and death.

There can be confusion, drowsiness, memory lapses, lethargy, irritability, or unusual belligerence.

There may be weakness or paralysis in the limbs, speech impairment, hearing loss, double vision, etc.

CAUSES—Reye's Syndrome is a disaster worth avoiding. This disease affects many internal organs, especially the brain and liver.

It primarily strikes children between the ages of 4 and 15 (most frequently young teens) in the fall or winter months.

Not long ago, the death rate stood at 42%-80%; but, more recently, it has dropped to below 10%.

Most cases occur after a **viral infection**, such as the flu or chicken pox. Influenza B, Epstein-Barr virus, and viruses which primarily affect the gastrointestinal tract (enteroviruses) can also occur prior to its onset.

It is known that giving ***ASPIRIN*** *to a child or youth who has a fever can lead to Reye's Disease and the likely possibility of death.* In the early 1980s, it was discovered that **a viral infection, plus the taking of aspirin**, dramatically increased the risk of developing Reye's Syndrome.

The cause of the disease may be consumption of aflatoxin, which is an exotoxin of the grain mold, *aspergillus flavus*.

A biopsy generally shows liver necrosis (the liver is dying). Yet, if the person survives, there will be a full recovery of the liver within 12 weeks.

If you see the above symptoms, just after your child has come out of a viral illness—do something quickly! Here are the key symptoms again:

Just after a virus infection, the child has:

(1) Agitation, disorientation, and delirium.

(2) Fatigue, lethargy, and lapses in memory.

(3) Prolonged and heavy vomiting, followed by drowsiness.

Call a physician! Phone 911 and send the child to a hospital!

NATURAL REMEDIES

DURING THE CRISIS

• It would be well for the child to be intravenously given **vitamin C** (5-10 gm per day). Intramuscularly, give him **B-complex, vitamin B_{12}** (1,000 mcg.), **and selenium** (250-500 mcg per day).

• If the child is in the hospital, and he receives an **IV solution** of glucose and electrolytes (mineral salts) within 12-24 hours after the heavy vomiting begins, his chances of recovery are very good.

AFTER THE CRISIS

During recovery, after the acute phase of the disease is successfully passed, give peppermint and ginger; this will relieve nausea. To strengthen and rebuild the liver, give hawthorn berry, wild yam, milk thistle, and/or pau d'arco.

PREVENTION

• Never give a child or youth **aspirin after any kind of fever**. The pattern of events is this: The child has a fever; then aspirin is given. There is improvement for a day or two—then a sudden turn for the worse occurs; and coma or death follows. A Centers for Disease Control study revealed that 96% of the children contracting Reye's Syndrome had been given aspirin while they had a viral infection. It was also found that there was a direct correlation between the amount of aspirin given and the severity of the illness. Children's aspirins are banned in Britain because of this problem.

• The drug, **Tigan**, used in suppository form, to control vomiting and nausea, may also be a cause of Reye's.

• In an emergency, if you are determined to give him a drug pain reliever, give him acetaminophen (Tylenol, Datril, and others) or ibuprofen (Advil, Nuprin, and others) instead.

ENCOURAGEMENT—Often our trials are such that they seem almost unbearable. Go to Him just now; and find in Him the peace of heart you so much need. John 6:47.

JUVENILE RHEUMATOID ARTHRITIS

SYMPTOMS—Pain or tenderness on movement, limitation of motion, swelling and redness of the joint. If symptoms persist more than 6 weeks, other causes of joint pain (infection, cancer, rheumatic fever, connective tissue disorders) could not be the problem. It is only by ruling out other diseases as the cause, that physicians determine Juvenile Rheumatoid Arthritis is the disorder.

CAUSES—The juvenile form of rheumatoid arthritis (JRA) begins before the age of 16. Peak onset is between 1 to 3 years of age. It also occurs between 8 and 12; but children get this as early as 6 months of age.

Something (cause unknown) induces the immune system to begin making antibodies which attack the linings of the joints. Sometimes it starts after the child has had an infection.

There are three types of JRA: systemic, polyarticu-

lar, and pauciarticular.

Most people with *systemic JRA* will recover with little or no disability. The remaining 20% will have stunted growth. They have fever, lace-like rash, joint pain and stiffness, plus fever spikes which will reach 103°-105° F. Boys have this slightly more often; onset can be at any time during childhood.

Children with *polyarticular JRA* have symptoms in many joints (frequently the hand joints). Fever and rash are usually not present. More than five joints are usually involved; and the symptoms will last for long periods. Girls have this problem more than boys. This is the most common type of JRA. This type usually recovers the most fully.

Pauciarticular JRA is the third type; it affects few joints (*pauci* is Latin for "few"). More common in girls, symptoms generally appear before the age of 5. Some of these develop into the polyarticular form; and loss of vision can result if not treated early and properly.

NATURAL REMEDIES

• A woman who had the effects of this disease (into her 30s) was placed on a diet without **milk, butter, and cheese**—and eventually made a full recovery.

• There is a relationship between the nightshade family (**white potatoes, tomatoes, eggplant**, and tobacco) and all forms of arthritis. The physician who made that discovery (Norman Childers) also found that **milk** worsens symptoms of rheumatoid arthritis.

• **Wheat** has often been found to be a cause of rheumatoid arthritis

—For much more information on the treatment of JRA, see Arthritis (513). Also see Autoimmune Diseases (584), Rheumatoid Arthritis (517), and Strengthening the Bones (505).

ENCOURAGEMENT— If you are seeking to reflect the life and character of Christ, you will be true and obedient to your parents. You will show your love for them by your willing obedience.

INFANCY AND CHILDHOOD -

6 - LATER PROBLEMS

Also: Dyslexia (490) and Autism (501)

GROWING PAINS

SYMPTOMS—Pains in the joints, twitches in the legs, etc.

CAUSES—No, it is not a disease. Growing pains are a part of life in many homes, as the children grow toward adulthood.

But growing pains are not necessary. If good food and proper vitamin / mineral supplementation are provided, along with proper rest and an active exercise program, there is no need for "growing pains" to occur.

NATURAL REMEDIES

• Prevention of growing pains include a daily nutritional program that is rich in **calcium** (2,000 mg), **magnesium** (1,000 mg), **selenium** (500 mg), **vitamins A** (in the form of carotene from orange and yellow fruits and vegetables, and carrot juice), **B-complex, E** (400 IU), **and C** (1,000 mg).

ENCOURAGEMENT—Rejoice in the Lord always, and He will give you the courage you need. The more you praise Him, the more you will have to praise Him for. Psalm 138:8.

GROWTH PROBLEMS

SYMPTOMS—The child fails to grow properly in height.

CAUSES—The key to growth is the pituitary, the master gland, which is located in the center of the skull. When it does not function properly, normal growth does not occur.

The pitultary gland produces the growth hormone, *somatotropin*, and sends it throughout the body, to stimulate normal enlargement of bones and muscles in children.

Too little production of this hormone will produce dwarfism; too much results in abnormally enlarged hands, feet, jaw, and possible gigantism.

The **pituitary** may not be functioning properly because of a tumor growing in, or near, it. But the **thymus** gland may not be working properly; and that will affect a child's growth and increase the likelihood of infection.

Malabsorption disorders, such as **celiac disease** *(382)*, can also reduce growth somewhat.

Excess amounts of **lead** *(600)*, a toxic metal, can produce growth problems.

NATURAL REMEDIES

• Be sure to provide a well-balanced, **nourishing diet**. Omit **junk foods**.

• Adequate amounts of **protein** are important, especially the amino acid, **arginine**. Arginine is used to synthesize *ornithine*, an amino acid which prompts the pituitary to release its growth hormone. Sources of arginine include **coconut, oats, soybeans, walnuts, wheat, wheat germ, carob, and dairy products**. If a child's protein intake is reduced severely, he develops Kwashiorkor *(388)*, a protein-deficiency disease. This condition can occur in any nation, not just India.

Growth hormone therapy can be prescribed by a physician; but it is very expensive.

ENCOURAGEMENT—"The eye of the Lord is upon them that fear Him, upon them that hope in His mercy." Psalm 33:18. He gives His faithful children the help

they need. So turn to His Word today! Isaiah 65:24.

VACCINATION PROBLEMS

SYMPTOMS—Physical problems resulting from a vaccination (including fevers, permanent brain damage, paralysis, autism, and/or death).

DISCUSSION—This is a wide-ranging subject, too large for discussion in detail here. See the author's book, *The Vaccination Crisis*, for detailed discussions of the various vaccines, their dangers, and how to avoid vaccination requirements. It is available from the publisher of this *Encyclopedia* (Harvestime Books).

The underlying problem is simple enough: Each person normally take substances into his body through his stomach, where harmful bacteria are generally destroyed.

But a vaccine is injected directly into a muscle or directly into the bloodstream, thus bypassing the normal protections. This is highly dangerous!

The problem is that it is impossible to purify the vaccines properly. To do so would require too much time and expense to try to examine every microscopic portion (identify every toxin, poison, and microbe) and eliminate the bad ones. It simply cannot be done.

So monkey pus, horse urine, raw animal hormones, and other substances are "purified" somewhat; then they are injected into your child.

In addition, the vaccines are frequently given to very small children who are especially susceptible to nerve damage.

The solution is to live right, eat right, and avoid vaccinations. See the author's book, *The Vaccination Crisis*, for further information on vaccinations.

—See Vaccination Poisoning (604) for a list of a few of the harmful effects of various childhood vaccines.

ENCOURAGEMENT—God can provide solutions, when earthly trials seem hard to bear. Go to Him and find in Him the courage and help you so much need. Psalm 89:15-16.

By learning the lessons of obedience, children are not only honoring their parents and lightening their burdens, but they are pleasing One higher in authority. "Honour thy father and thy mother" is a positive command. Children who treat their parents with disrespect, and disregard their wishes, not only dishonor them, but break the law of God. And none can hope for the love and blessing of God when they do not learn obedience to His commandments and stand up firmly against temptation.

"And Adam knew Eve his wife; and she conceived, and bare Cain, and said, I have gotten a man from the Lord."—*Genesis 4:1.*

"I have blessed him, and will make him fruitful, and will multiply him exceedingly."—*Genesis 17:20.*

"And she conceived again, and bare a son: and she said, Now will I praise the Lord."—*Genesis 29:35.*

"The Lord gave her conception, and she bare a son."—*Ruth 4:13.*

"A father of the fatherless, and a judge of the widows, is God in His holy habitation."—*Psalm 68:5.*

"Leave thy fatherless children, I will preserve them alive; and let thy widows trust in Me."—*Jeremiah 49:11.*

"The Lord . . relieveth the fatherless and widow."—*Psalm 146:9.*

"In thee the fatherless findeth mercy."—*Hosea 14:3.*

"I will be a swift witness against . . those that oppress . . the widow, and the fatherless."—*Malachi 3:5.*

"Lo, children are an heritage of the Lord: and the fruit of the womb is His reward. As arrows are in the hand of a mighty man; so are children of the youth. Happy is the man that hath his quiver full of them: they shall not be ashamed, but they shall speak with the enemies in the gate."—*Psalm 127:3-5.*

"Children's children are the crown of old men; and the glory of children are their fathers."—*Proverbs 17:6.*

"Honor thy father and thy mother: that thy days may be long upon the land which the Lord thy God giveth thee."—*Exodus 20:12 [Fifth Commandment].*

HOW TO USE HERBS

On pp. 107-152 of this *Natural Remedies Encyclopedia*, you will find a wealth of information on purchasing, gathering, storing, preparing, and using the 126 most important herbs in your own home.

In this present section, you will find an invaluable collection of information on herbs of particular importance to women. An attempt has been made to make it as complete as possible.

SOME SPECIAL HERBS

Ashwagandha (Winter cherry; *Withania omnifera)*

Root. In India, it is valued as a rejuvenative herb as highly as ginseng is in Chinese medicine. Among other properties, it helps weak, pregnant women and is said to stabilize the embryo. It acts as a tonic to the hormonal system and is recommended for sexual debility, infertility (in men and women), and promotes conception.

Bayberry *(Myrica cerifera)*

Root. Douche made with tea. / Prolapse of the uterus, excessive menstrual bleeding, vaginal infections, and leukorrhea.

Beth Root *(Trillium pendulum)*

Root. Tincture (1-2 tsp. 3 times daily) or fluid extract (½ tsp. 3 times daily). / Excessive uterine bleeding (menorrhagia and metrorrhagia). Controls excessive menstruation and vaginal discharges.

FOR MORE NATURAL REMEDIES:

HERBS: Herb Index (pp. 107-108) will help you locate the 126 most important herbs and the diseases each one can treat. How to prepare herbs (109). How to use them (107-152)

HYDROTHERAPY: Therapy Index (pp. 153-154) and its Disease Index (209-211) will lead you to over 100 water therapies and many more remedies.

VITAMINS AND MINERALS: Vitamin-mineral dosages (85-102). Other nutrients (102-105)

CARING FOR THE SICK: Home care for a sick person (17-25). The healing crisis (25-26)

WOMEN'S SECTIONS: Organs (639) Pregnancy (665), Childbirth (727). Infancy, Childhood (685). Women's Herbs (716, 722)

EMERGENCIES: (750-757)

Black Cohosh *(Cimicifuga racemosa)*

Rhizome. Tincture (½-1 tsp. 3 times daily) or fluid extract (5-30 drops 3 times daily). / American Indian women used it for all female complaints, pelvic conditions, uterine problems, cramps, and to relieve pain in childbirth and menstrual cycles. Helps induce menstrual flow that has been retarded by exposure to cold. *Warning:* An overdose will produce nausea and vomiting.

Black Haw *(Viburnum prunifolium)*

Bark of the root. Tincture (½-1 tsp. 3 times daily) or fluid extract (½-2 tsp. 3 times daily). / Afterbirth pains, cramps, dysmenorrhea, irregular menstrual flow, leukorrhea, uterine inflammation, congestion, scanty menstrual flow, and the threatening of miscarriage. It is a tonic and sedative to the female reproductive organs. Gives a good tonic effect during pregnancy.

Blue Cohosh *(Caulophyllum thalictroides)*

Rhizome. Tincture (½-1 tsp. 3 times daily) or fluid extract (10-30 drops 3-4 times daily). / American Indians used to ease childbirth and relieve associated pains. Regulates menstrual flow, useful for suppressed menstruation. Warning: Pregnant women should not use except during last month of pregnancy.

Chamomile *(Matricaria chamomilla)*

Flowers. Tincture (30-60 drops [½-1 tsp.] 3 times daily) or fluid extract (½-1 tsp. 3 times daily). / Menstrual cramps (6 oz. infusion or 1-2 tsp. infusion at a time).

Chaste tree *(Vitex agnus-castus)*

Seeds. This Mediterranean shrub stimulates and balances the pituitary in relation to female hormones, by its effect on the follicle stimulating hormone (FSH) and luteinizing hormone (LH), produced by the anterior pituitary gland. It helps the work of producing hormones in the second half of the menstrual cycle. It appears to have a more progesteronic than estrogenic action, and makes a fine remedy for PMS and a range of menstrual and gynecologic problems that are related to hormone imbalance. It can be used effectively for irregular and painful periods, heavy bleeding, fibroids, and to re-establish hormone balance after stopping use of the contraceptive pill. It is a good remedy for menopausal problems and stimulates milk production in nursing mothers. Because it has a calming and relaxing effect, it can be used for any emotional distress associated with the reproductive system, such as PMS and menopausal depression.

Cramp bark *(Viburnum opulus)*

Bark. Tincture (½-1 tsp. 3-4 times daily) or fluid extract (½-2 tsp. 3-4 times daily). / Menstrual cramps, dysmenorrhea, menorrhagia nervous conditions during pregnancy, prevents miscarriage.

Dong qui (Dang gui; *Angelica sinensis)*

Root. This is the best Chinese herb for women, and is the most highly valued blood tonic in the East. It tones the reproductive system and maintains normal function of the sex organs. It regulates hormones, menstruation, brings on delayed or suppressed periods, relieves menstrual cramps, and can be used during menopause. Eaten raw or taken as a tincture, it relaxes the uterus; used with water, it tones the uterus, stimulates uterine contractions, increases circulation, and relieves congestion in the pelvic area. As a tonic, it is used in convalescence and to speed recovery and increase energy after childbirth. When cooked, it improves the circulation and helps speed tissue repair. Warning: Do not take during pregnancy.

False Unicorn *(Chamaelirium luteum; Helonias)*

Root. Tincture (15-30 drops 3 times daily) or fluid extract (½-1 tsp. 3 times daily). / Amenorrhea female hormone imbalances, infertility, irregular menstruation, leukorrhea, menorrhagia, miscarriage, prolapse uterus, threatened abortion, uterine and ovarian problems, uterine displacement. False unicorn is a common herb for female infertility, impotence, and other problems. It can be taken for several months. Generally combined with cramp bark or black haw, but can be taken alone. During especially difficult situations, 15 drops of tincture or ½ tsp. of fluid extract can be taken each hour. Do not confuse with True Unicorn herb.

Motherwort *(Leonurus cardiaca)*

Tops. Tincture (30-60 drops [½-1 tsp.] 3-4 times daily) or fluid extract (½-1 tsp. 3-4 times daily). / Amenorrhea, suppressed menstruation, cramps, dysmenorrhea, uterine pains. For female cramping and suppressed menstrual flow, combine motherwort with cramp bark and squaw vine. To relieve cramps and pain during menstruation, use a hot fomentation made from strong tea.

Mugwort *(Artemisia vulgaris)*

Tops. Tincture (30-60 drops [½-1 tsp.] as needed) or fluid extract (1 tsp. as needed). / Menstrual cramps, menstrual obstruction, suppressed menstruation. Best combined with cramp bark, marigold, and black haw.

American Pennyroyal *(Mentha Pulegium)*

Tops. Tincture (30-60 drops or ½-1 tsp. frequently) or fluid extract (1 tsp. frequently). / Delayed or scanty menstruation, cramps, regulates menstrual flow. To induce menstrual flow, use hot footbaths of pennyroyal tea.

Pulsatilla (Pasque flower; *Anemone pulsatilla)*

Dried aerial parts (everything above ground). Best used in small doses: 1-2 ml of tincture or half a tsp. of herb to a cup of boiling water as tea, 3 times daily when necessary. / Helps debilitated women and children who feel depressed, irritable, and weep easily. It promotes sleep and rest and thereby helps recuperation. It is particularly helpful for spasm, pain, and inflammation of the reproductive system. It relieves premenstrual tension, period pains, scanty or sup-

pressed periods, uterine colic, and inflammation and pain in the ovaries. Its analgesic (pain-relieving) properties are useful during childbirth. Its properties promote and facilitate birth. It is good for sluggish, ineffectual and weak labor pains, and for peevishness and irritability in labor. After the birth, it is helpful for overexcitement, depression, and anxiety about the birth of the new baby. Warning: Never use this plant fresh, for it will be poisonous. Do not store it for more than a year.

Saw Palmetto *(Serenoa serrulata)*

Fruit. Tincture (15-60 drops 2-3 times daily) or fluid extract (10 drops 2-3 times daily). / Ovarian enlargement, dysmenorrhea, sterility. Very useful in the treatment of disease in the reproductive organs. Helps speed recovery afterward. It also increases milk flow in nursing mothers. It helps relieve painful periods, regulate the menstrual cycle, and for inflammatory conditions such as salpingitis and ovarian pain.

Shatavari (Tian men dong; *Asparagus racemosus)*

Root. This is one of the most important herbs for women in India. Its main action is on the female reproductive system. Use it for sexual debility, infertility, and to balance hormones. It increases milk production in nursing mothers and is excellent during menopause, as it supplies many steroidal precursors (building blocks for production of sex hormones). It nourishes and strengthens the reproductive system. It is so valued in India that its name (shatavari) means "who possesses a hundred husbands."

Squaw Vine *(Mitchella repens)*

Whole plant. Tincture (15-60 drops 3-4 times daily) or fluid extract (½-1 tsp. 3-4 times daily). / Leukorrhea, painful menstruation, uterine and ovarian pains, cramping and pains before and during labor in childbirth. American Indian women used squaw vine as a tea or infusion throughout pregnancy in order to produce a safe, easy delivery and help proper lactation. Relieves congestion of the uterus and ovaries. Very good for painful or absent menstruation. Good combined with raspberry leaf during pregnancy. Crush the berries and add to a tincture of myrrh, allow to steep for three days and strain; then use as a fomentation for sore nipples. Combined with witch hazel, it makes a very good injection for leukorrhea.

Tormentil Root *(Potentilla tormentilla)*

Root. Tincture (15-30 drops 3 times daily, 5-10 drops in water every hour) or fluid extract (½-1 tsp. 3 times daily). / Prolapsed uterus, leukorrhea,

White Oak Bark *(Quercus alba)*

Bark. Tincture (15-30 drops as needed) or fluid extract (½-1 tsp. as needed). / This is one of the best astringent herbs known. Outstanding for stopping bleeding. Also good for vaginal infections, leukorrhea, prolapsed uterus.

Witch hasel *(Hamamelis virginiana)*

Bark. Tincture (15-60 drops as needed) or fluid extract (½ tsp. as needed). / Leukorrhea, prolapsed uterus, stops uterine bleeding. A powerful astringent. Excellent for stopping excessive menstruation, hemorrhage from the uterus. Use as a retention douche in leukorrhea; as a fomentation or salve for sore breasts; as an injection for vaginal discharges and infections.

Wild Yam *(Dioscorea villosa)*

Root. Tincture (10-40 drops 3-4 times daily) or fluid extract (1 tsp. 3-4 times daily); 5 to 10 #0 capsules (30-60 grains) 3-4 times daily. / Cramps, morning sickness, nausea, neuralgic dysmenorrhea, ovarian neuralgia. Wild yam contains a steroid-like substance, and is used in many gland-balancing formulas. An excellent antispasmodic, it is used for abdominal cramps and menstrual cramps. To prevent miscarriage, combine 1 tsp. wild yam with ½ tsp. powdered ginger. Also helpful: Add 1 tsp. red raspberry to that formula, strain, and take a mouthful every half hour in times of danger of miscarriage. For afterbirth pains, use 10 drops of tincture in cold water. Do not use hot; for it may overly relax uterus and cause hemorrhage.

The wild yam is so unusual that it deserves special attention. It is a perennial twining vine. The heart-shaped leaves have conspicuous, deep-set veins and are hairy beneath. The leaves are arranged in an alternating pattern, with the lower ones in whorls of 3 to 8. The flowers are green and not showy. It grows from May to August in wet woods from Connecticut to Tennessee, and from Minnesota to Texas.

American Indians used tea made from this root, to relieve labor pains. Fresh dried root, made into a tea, is good for morning sickness.

Wild yam contains diosgenin, a chemical used by scientists to manufacture progesterone and other steroid drugs. Wild yam does NOT contain progesterone; yet it has a beneficial progesterone-like effect on the human body.

A majority of the steroid harmones used in modern drug medication, especially those in contraceptives, have been developed from elaborately processed chemical components which are derived from yams.

Drugs made with yam-derived components (diosgenins) are used to relieve asthma, arthritis, and eczema. They also regulate metabolism and control fertility. Synthetic products manufactured from diosgenins include human sex hormones (contraceptives), drugs to treat menopause, dysmenorrhea, premenstrual syndrome, testicular deficiency, impotency, prostate hypertrophy, and psychosexual problems, as well as high blood pressure, arterial spasms, migraines, and other ailments. Cortisones and hydrocortisones are other products from the wild yam. They

are used for Addison's disease, some allergies, bursitis, contact dermatitis, psoriasis, rheumatoid arthritis, sciatica, brown recluse spider bites, insect stings, and a number of other diseases. But ignore claims that wild yam is a plant "source" of estrogen or progesterone, for it does not contain human sex hormones.

With all this in mind, women would do well to make use of the wild yam herb. But do not use the fresh plant, for it may induce vomiting and other undesirable effects. Only use the dried root.

HERBS DURING PREGNANCY

For much more information on Pregnancy, turn to Section 18 - **Pregnancy and Breast-Feeding** *(665-684)*.

Just below, you will find additional helpful information on pregnancy.

Anemia—Pregnant women need extra iron. ***Yellow dock*** herb is said to contain nearly 50% iron. ***Blackstrap molasses*** is the richest source of iron you can purchase.

Constipation—Bulk laxatives, such as ***psyllium seed***, can be used for a long time. One lower bowel formula is ***cascara sagrada bark, bayberry root bark, goldenseal root, red raspberry leaves, fennel seed***. Use one or several together, but do not take them too long. Avoid a laxative habit. Do not use mineral oil!

False labor—Drink ***catnip tea*** in small amounts. ***Blue cohosh*** is another very helpful herb in relaxing the uterus.

Gas—***Papaya tablets*** and small amounts of ***ginger***.

Heartburn—***Papaya tablets, comfrey,*** and ***pepsin*** are useful.

Insomnia—Additional ***calcium*** in the diet. Drink teas of equal parts of ***hops*** and ***chamomile*** before retiring. Another formula is equal parts of the following and make an infusion. Drink one cup before bed or when needed: ***wood betony, chamomile, valerian, peppermint, catnip***.

Morning sickness—***Red raspberry*** tea is excellent. ***Catnip*** tea is another good one. A little ***ginger*** is useful.

Miscarriage—***Red raspberry*** tea is very helpful in avoiding miscarriage. This is a good formula: ***Wild yam, false unicorn, squaw vine, cramp bark***. Also helpful: A tiny amount of ***lobelia*** will help relax the uterus. ***Catnip*** and ***bayberry*** also help prevent miscarriage.

Toxemia—***Raspberry, alfalfa,*** and ***comfrey tea*** provides a nourishing, cleansing effect.

Last three months before delivery—Here is an excellent pelvic tonic; use equal parts: partridge berry, cramp bark, blue cohosh, false unicorn root.

Last six or seven weeks before delivery—Here are three formulas, each of which will help the delivery and make labor easier: (1) ***Squaw vine, black cohosh, false unicorn, blessed thistle, pennyroyal, red raspberry, lobelia*** (very small amount). (2) ***Squaw vine, black cohosh, pennyroyal, red raspberry, lobelia*** (very small amount). (3) Mix equal parts: raspberry leaves, blue cohosh, false unicorn root, motherwort. These formulas will help keep the pelvic muscles elastic and relaxed.

Braxton-Hicks contractions—If this powerful tightening of the uterus and hardening of the abdomen occurs, take herbs relaxing to the uterine area, such as ***cramp bark*** and ***wild yam***.

As pregnancy begins, be sure and carefully read the section in this Encyclopedia dealing with this subject (pp. 722-726). In order to avoid birth defects, at the very beginning of pregnancy, indeed before it occurs, it is extremely important that you are on an excellent diet of vitamins and minerals. Do not eat junk food, liquor, tobacco, or drugs.

HERBS AT CHILDBIRTH

For more information on childbirth, turn to Section 18 - **Pregnancy and Breast-Feeding** *(665-684)*.

Blue cohosh helps relax the uterine muscles, soothe the nerves, and relieve restlessness or irritability. ***Black cohosh*** promotes relaxation and helps regulate contractions, making them less painful and yet more productive. It helps calm pain and relax you if you get tense, overexcited, or panicky. ***Raspberry leaves*** relax the uterus, calm and strengthen the nerves, normalize contractions, and reduce pain. ***Wild yam*** is specific for those who are tense and nervous. ***Cramp bark*** is a general relaxant and also reduces uterine tension. ***Skullcap*** is an excellent relaxant; a tonic to the nervous system, it is best combined with ***blue cohosh***.

Weak, irregular contractions—Any of the following herbs would be helpful: ***blue cohosh, black cohosh, beth root, feverfew, raspberry leaves, wormwood, sage, calendula, goldenseal***.

Overstrong, painful contractions—Any of the following herbs: ***blue cohosh, black cohosh, wild yam, cramp bark, raspberry leaves***.

Aids relaxation and relieves pain—***Skullcap, motherwort, partridge berry, lavender, chamomile, linden blossom***.

Relaxes a rigid cervix and prevents tearing—***Partridge berry, blue cohosh, motherwort, black cohosh, skullcap, passionflower.*** After the birth: ***lavender, ginger, raspberry leaves, false unicorn root***.

Expel afterbirth—In order to help the uterus continue to contract, so the afterbirth will be expelled: a tea of ***raspberry leaves*** and ***beth root***. Another formula is ***black haw, beth root, partridge berry, black***

cohosh, and ***raspberry leaves***. (Breast-feeding is a natural trigger to postpartum contractions, to expel the afterbirth.)

Heal perineum—Tinctures of ***calendula, arnica, distilled witch hazel***.

Tonic after delivery—To help restore energy after the birth: A tea of ***dong quai (dang gui)*** has been used for centuries in China, and tastes good. Drink a tea of false unicorn three times a day.

Pain after delivery—Here are sedative and anodyne (pain-relieving) herbs; drink a tea from one or several throughout the day: ***black cohosh, pulsatilla, lavender, wild yam***.

Postpartum hemorrhage—Use any of the following: ***goldenseal, false unicorn root, black haw, beth root, wild yam***. In China, ***Huang qi*** and ***dong quai (dang gui)*** are used for postpartum hemorrhage or any after weakness. They also promote healing of the pelvic tissues.

Postpartum uterine infections—Drink ***echinacea*** tea every 2 hours. Other astringent and antiseptic herbs are ***goldenseal*** and ***cramp bark***.

Postnatal depression—Drink teas of one or more of the following, to help your nervous system and lift depression: ***rosemary, lemon balm, vervain, borage, skullcap, pulsatilla***.

HERBS FOR NURSING MOTHERS

For more information on childbirth, turn to Section 18 - **Pregnancy and Breast-Feeding** *(665-684)*.

Nursing—***Brewer's yeast*** taken daily with increased milk is extremely helpful in producing enough mother's milk. ***Red raspberry*** and ***marshmallow*** are also good. ***Alfalfa*** provides extra nourishment. ***Fennel seed*** boiled in ***barley water*** increases mother's milk. ***Blessed thistle*** also increases mother's milk.

Cracked nipples—Apply a quality ***vegetable oil*** (almond, wheat germ, flaxseed). Thin ***honey*** can also be applied.

Drying up milk—***Sage*** and ***parsley*** will dry up mother's milk.

HERBS FOR INFANT CARE

For more information on infant care, turn to Section 19 - **Infancy and Childhood** *(685-715)*.

Colic—***Catnip tea*** is an old standby. It is outstanding. ***Fennel*** and ***peppermint*** tea are also good for babies. A tiny amount of ***lobelia*** is very relaxing.

Constipation—Something gentle is needed. A small amount of ***mullein*** added to warm water or weak ***licorice*** tea.

Cradle cap—Rub ***vitamin E*** or a quality ***vegetable oil*** onto the scalp.

Diaper rash—Make a paste of ground ***comfrey, goldenseal,*** and ***aloe vera juice***. ***Vitamins E and A*** are helpful.

Diarrhea—Every few hours, give one of the following: ***barley water, carob flour*** in clean water, carob in boiled milk. Useful herb teas include: ***slippery elm, red raspberry, ginger, yarrow, oak bark tea, strawberry***.

Dry skin—A quality ***vegetable oil, vitamins A*** and ***E, aloe vera***.

Ear infection—Place ***garlic oil***, echinacea, or plantain tea in the ear. To relieve pain, bake a large ***onion*** until soft, cut into halves and apply over the ear and wrap it tightly.

Fever—***Catnip*** tea or ***red raspberry*** tea. Enemas help bring the fever down; also sponging with slightly cool water bring fevers down.

Pinworms—***Chamomile*** and ***mint*** tea. Small piece of ***garlic*** placed in child's rectum helps discard worms. ***Raisins*** soaked in ***senna tea*** for older children.

Teething—More ***calcium*** and ***vitamin D*** (but not too much) is needed by restless, crying babies who are teething. A weak, warm tea of ***catnip, chamomile, peppermint,*** or ***fennel***. If the infant chews on ***licorice root***, it will dull any irritation and pain.

Sore gums—Mix thick ***honey*** and a tiny pinch of ***salt***, rub it on the gums. Also helpful to rub on gums: ***honey*** with ***chamomile oil*** or ***peppermint oil***.

Cannot urinate—Crush ***watermelon seeds*** and make into a tea; frequently give small amounts.

CAUTIONS REGARDING HERBS

This is not a complete listing.

Aloe Vera *(Aloe vera, var. officinalis)*
Warning: It is an emmenagogue and should not be used during pregnancy.

Angelica *(Angelica archangelica)*
Warning: it is a strong emmenagogue and should not be used during pregnancy. Diabetics should avoid it, because it can induce weakness.

Black Cohosh *(Cimicifuga racemosa)*
An overdose will produce nausea and vomiting.

Blessed Thistle *(Cerbenia benedicta)*
Warning: Do not take alone or in large amounts during pregnancy.

Buckthorn *(Rhamnus frangula)*
Warning: It should not be used during pregnancy.

Wild Celery *(Apium graveolens)*
Use only in moderate amounts during pregnancy.

Ephedra *(Ephedra vulgaris)*
It should not be used by those with high blood pressure or who are weak or debilitated.

Goldenseal *(Hydrastis canadensis)*
Do not use large amounts during pregnancy. Used over prolonged periods of time, it will reduce B vitamin absorption and destroy intestinal bacteria. Two

to three #00 capsules daily is usually adequate for most conditions.

Juniper *(Juniperis communis)*

Juniper should not be used alone, in large doses, or with prolonged use during urinary tract or inflammatory problems.

Licorice *(Glycyrrhiza glabra)*

Large does are to be avoided by those with high blood pressure or hyper-adrenal function. When it is taken daily over an extended period of time, the dosage should not exceed three grams per day. It contains a substance similar to adrenal cortical hormones that may cause edema.

Mandrake *(Polophyllum peltatum)*

Do not use during pregnancy or in large doses. Only moderate doses of this herb should be used. In large doses, it produces nausea, vomiting, and even inflammation of the intestines and membranes of the stomach. Discontinue its use if any uncomfortable symptoms are noticed.

American Mistletoe *(Viscum flavescens)*

It is known to be toxic and should be used with caution.

European Mistletoe *(Viscum album)*

Do not eat the berries! They are poisonous.

Myrrh *(Commiphora nayrrha)*

Do not take myrrh gum in large amounts or over a long period of time.

Parsley *(Petroselinum sp.)*

It should not be used if kidney inflammation exists.

Peach *(Amygdalus persica)*

The bark and leaves are used as herb medications. Avoid large doses of either for pregnant women, as they can cause a purging of the bowels.

American Pennyroyal *(Mentha pulegium)*

Do not use when there is excessive menstrual flow. Do not use during pregnancy; for the tea has been used to induce abortions.

Poke *(Phytolacca americana)*

Poke contains toxic substances; it should not be used in excess of one gram a day. Toxic effects have been noticed while using it either internally and externally.

Rhubarb *(Rheum palmatum)*

Do not use it over prolonged periods; it tends to aggravate any tendency toward chronic constipation. Do not use it during pregnancy.

Rosemary *(Rosmarinus offinalis)*

Do not drink rosemary tea in excessive amounts. Three cups daily appears to be the limit in most cases.

Sassafras *(Sassafras officinale)*

The oil is toxic and should not be taken internally. Those who are anemic or have thin blood should not use this herb.

Senna *(Cassia acutifolia)*

It should not be used when there is inflammation anywhere in the intestinal tract, piles, prolapsed intestines, or rectum. It should not be used during pregnancy.

Uva Ursi *(Arctostaphylos uva ursi)*

It should not be used in large quantities during pregnancy, because it is a vasoconstrictor to the uterus (reducing blood circulation to it).

WOMAN'S HERBAL TONIC

Dr. Daniel B. Mowrey, in his book, *The Scientific Validation of Herbal Medicine*, presents an outstanding herbal tonic for women. Here it is:

Mix equal amounts of the following powdered herbs, and place them in capsules:

Black Cohosh Root, Licorice Root, Raspberry Leaves, Passion Flower, Fenugreek, Black Haw Bark, Saw Palmetoo Berries, Squaw Vine, Wild Yam Root, and Kelp.

Dr. Mowrey recommends using the mixture, when needed, as teas to drink, in capsules to swallow, and in douches.

Use this tonic during pregnancy, delivery, menstruation, and menopause. Also use it for pain, cramping, and atony that is related to pregnancy and childbirth.

For any of the above-named problems, you will also want to take additional herbs, which are especially suited for alleviating pain, reducing bleeding, and calming the nerves.

For more information, see:
Section 17 - **Reproductive Disorders** *(639-664)*
Section 18 - **Pregnancy and Breast-Feeding** *(665-684)*

What is the difference between a medicinal drug and an herb? Herbs contain a variety of chemical compounds placed there by God "for the healing of the nations" *(Revelation 22:2; also Ezekiel 47:12)*. Over the centuries, many have been found to be extremely useful for physical problems. Medicinal drugs are different. In order to patent them (for exclusive sales and profits), medicinal drugs cannot have the exact formulas found in herbs. Instead, they contain various man-made combinations of chemicals. Because of this, to one extent or another, they are always poisonous. Their "contra-indications" paragraphs verify the fact. The liver, kidneys, and other organs frequently suffer from them.

WHICH HERBS TO AVOID DURING PREGNANCY

During pregnancy, the following herbs must not be used. *For a much longer list, see the section on Women's Herbs (716-721).*

As a rule, use great caution when taking any herbs during the pregnancy, especially in the first 12 weeks.

• **Oxytocic plants.** Because they have a chemical similar to oxytocin (a hormone which contracts the uterus), these herbs produce contractions in the uterus. Do not take them during pregnancy! **aloe vera, birchwort, rue, Scotch broom, sheperd's purse.** But they can be taken at the time of delivery, to lessen labor.

• **Emmenagogue plants.** These herbs produce or ease menstruation. As a rule, they have a balancing and normalizing effect on the menstrual cycle. But do not use them during pregnancy, because they increase the risk of abortion: **aloe vera, basil, birchwort, buck bean, butterbur, calendula, clary sage, European pennyroyal, German chamomile, groundsil, heliotrope, jalop, juniper, laurel, lavender cotton, madder, milfoil, motherwort, mugwort, parsley, Roman chamomile, rowan, rue, saffron, sage, tansy, tarragon, Venus' hair, wood betony, wormwood, wild balm.**

• Other herbs to avoid during pregnancy: **arnica, barberry, black cohosh, bloodroot, cat's claw, celandine, cottonwood bark, dong quai, ephedra, feverfew, ginseng, goldenseal, lobelia, myrrh, Oregon grape, pennyroyal, saw palmetto, turmeric.**

THE SINGLE BEST PREGNANCY HERB

RED RASPBERRY

Either wild *(Rubus strigosus)* or cultivated *(Rubus idaeus)* can be used.

Red raspberry helps from before pregnancy begins

to after it ends. This is the most all-round good herb for the needs of pregnancy, from start to finish. It is the most widely used and safest of all pregnancy and uterine tonics. It is high in vitamins A, C, D, E, and B complex. It increases fertility, eases morning sickness, assists labor and reduces pain, promotes easier childbirth, relaxes smooth muscles and reduces tears, improves milk production.

It can be used as a tea or taken as capsules. Safe and effective, it strengthens the uterus for easier delivery; and there is less bleeding. It is also high in natural iron and helps reduce after pains. It tends to shorten labor. Drink the tea as often as you wish.

Caution: It is claimed by some that *Rubus idaeus* (the cultivated form) should not be used and may lead to miscarriages. But most women use it with no problem. You may want to avoid it if you have had a previous miscarriage.

DURING PREGNANCY

MORNING SICKNESS

GINGER

Relieves morning sickness (nausea). Ginger helps relieve nausea, reduces vomiting, and calms the stomach.

Sip 1 Tbsp. of the tea (but not more than that) whenever nausea occurs. Or take 6 capsules of the powdered herb daily. It combines well with wild yam, which also reduces morning sickness.

Caution: Do NOT take during the last trimester (last 3 months). This is because ginger increases circulation to the uterus, and could increase risk of postpartum (after delivery) infection.

PEPPERMINT TEA

Relieves morning sickness, prevents vomiting.

Peppermint is an old standby for relieving nausea and upset stomach, and preventing vomiting.

Sip the tea whenever needed.

Other dietetic aids to reduce morning sickness: catnip or spearmint tea, digestive enzymes, green drink, alfalfa. Bet plenty of B_6, and B complex. Take 2 ginger capsules before each meal.

Avoid irritating food, hot spicy foods, condiments. Baking soda, fatty, fried, oily foods, caffeine, sugar. Do not lie down right after eating.

Maintain regularity in sleep, eating, and outdoor exercise.

DANDELION

Put 4-6 Tbsp. dried dandelion root in 1 quart boiling water and steep for 4 hours. Strain, cool, drink slowly throughout the day (up to 2 cups). Or take 30 drops of undiluted tincture 3-4 times a day until nausea is gone. It calms and strengthens the stomach, and improves appetite.

ANEMIA

YELLOW DOCK

Yellow dock is almost 50% iron. Pregnant women need extra iron; yet iron tablets can be extremely dangerous! It can cause miscarriage. Obtain iron from natural sources only! Blackstrap molasses is the richest natural source of iron. Red beets are helpful. Vitamin C (500 mg) helps absorption of iron in the diet. Vitamin E (600 IU) strengthens blood cells.

INCREASE CALCIUM ABSORPTION

KALE

Calcium builds strong bones in both mother and child. It also calms the nerves and reduces pain.

The deep green leafy vegetables are excellent sources of calcium and most vitamins and minerals.

INDIGESTION OR HEARTBURN

MEADOWSWEET

Take 15-45 drops of tincture diluted in a bit of water 1-4 times a day. Find the amount which works best for you. Or put a heaping tablespoon in a cup, pour 1 cup boiling water over it, steep for 20 minutes, strain, cool, and drink 3-4 cups daily. Sip this slowly. It is a good digestive aid.

CONSTIPATION

SLIPPERY ELM BARK

This invaluable herb reduces constipation, soothes the digestive system and irritated bowels, and is an antacid. It is a safe herb to take during pregnancy for constipation.

Take 1 teaspoon of the powder with hot water and honey. Or swallow 6 capsules daily, as needed.

Eat raw vegetables and fruits daily. Also helpful is brewer's yeast and psyllium seed. If bran is taken, it should be accompanied by a large glass of water—or the bran will cause further constipation.

SWELLING

PEPPERMINT

Drink peppermint or spearmint tea with the juice of a fresh lemon.

EDEMA

CORN SILK

Make a tea of this outstanding diuretic herb and drink it as needed.

VARICOSE VEINS

WITCH HAZEL

Varicose veins are caused by increased pressure in the abdomen, and will normally disappear after the baby is delivered.

Witch hazel (or white oak bark) tea, applied externally, will help tighten the tissue and reduce varicose veins. Saturate a cloth in the tea and wipe it on varicosities, which may be in the legs, vulva, and/or near the rectum. Also drink a quart of nettle leaf tea each day.

Other helps include eating lots of green leafy veg-

etables, garlic, and onions. Keep the bowels moving regularly. Avoid crossing your legs. If necessary, wear elastic stockings. In some cases, taking 1 tablet of stone root, 3 times daily, helps. Discontinue if there is no improvement within 2 weeks.

BILBERRY

This is the European blueberry. It contains flavonoid compounds, known as *anthocyanosides*, which greatly improves circulation in the smaller blood vessels. Research studies (using an extract standardized for 25% *anthocyanidin* content at dosage of 160-480 mg daily) show that they prevent and treat varicose veins during pregnancy.

HORSE CHESTNUT

In addition to daily exercise, take 5-15 drops of tincture diluted in ¼ cup water 2-3 times a day. Do this during the first trimester, to reduce varicose veins.

BLADDER INFECTION

UVA URSI

Take uva ursi tablets for 1 week at the most (if taken longer, uterine contractions could be stimulated). Drink cranberry juice. Avoid sweets, coffee, black tea, cola drinks, and panties not made of cotton. Echinacea, taken for no more than a week at a time, may also help reduce infection.

HYPERTENSION

HAWTHORN BERRY

This herb reduces hypertension during pregnancy by dilating the blood vessels and strengthening the heart. Take 8 drops of the tincture, 2 or 3 times daily. Do not take hawthorn berries if you have low blood pressure.

TOXEMIA

HERB MIX

Alfafa tea (mixed with red raspberry and comfrey) is cleansing and nourishing. Both to avoid and eliminate toxemia during pregnancy, you need fresh vegetables. Kelp, dandelion, and alfalfa is another good combination. Avoid meat, white flour and white sugar products. Add more vitamins A and C to your diet.

AVOID MISCARRIAGE

BLACK HAW

Black haw root bark (also called cramp bark) is an astringent which increases the tone and firmness of the uterine tissues. Women, who in the past have had repeated miscarriages, would do well to take black haw when miscarriage threatens. It will help prevent premature labor. This herb was listed in 19th century pharmacy reference books as a treatment for painful menstrual cramps and threatened miscarriage. It reduces the discomforts of pregnancy and soothes the uterus. Drink 1-2 cups of tea daily and then, after symptoms cease, drink the tea for an additional 2 weeks.

Because it decreases excessive menstrual flow, black haw is also good for PMS. When needed, drink 3 or 4 cups of the tea daily. It will stop contractions.

FALSE UNICORN

This herb is a specific for threatened abortion. It increases the muscle tone of the uterus and related organs. Take 3-4 drops of the tincture 4-5 times daily during the first trimester.

FORMULAS

Here is a suggested formula to prevent miscarriage: Mix tinctures: 20 drops black haw, and 10 drops each of wild yam and false unicorn root. Add water or juice, and drink 2-4 times a day. If spotting occurs, take it every 2 hours until spotting stops.

Another formula to prevent miscarriage: Mix 2 Tbsp. lemon balm (melissa) and partridge berry leaves, and 1 Tbsp. each oatstraw, red raspberry leaves, and stinging nettle leaves. Steep in a quart of boiling water. Drink 1-3 cups a day.

LAST SIX WEEKS

LAST SIX WEEKS

HERB MIX

During the last six weeks before delivery, this formula will make labor easier and help the delivery: Drink a tea of squaw vine, black cohosh, pennyroyal, red raspberry, and a pinch of lobelia. Or take false unicorn, squaw vine, pennyroyal, black cohosh, red raspberry, and blessed thistle.

K FACTOR (ANEMIA)

NETTLE LEAF

This useful herb, taken as a tea, improves the K factor in your blood during last month. It is a blood coagulant. This means that if bleeding starts, it is more likely to stop right away. Nettle leaf tea strengthens the entire body (including the kidneys). Taken during the last month before delivery, this will increase vitamin K in both the mother and child.

PREMATURE LABOR

WILD YAM ROOT

Wild yam has antispasmodic qualities. It relaxes muscles, reduces spasms, convulsions, and cramps. It also helps the liver. It stops premature labor (miscarriage), and is also good for morning sickness. Because it balances female hormones. For threatened miscarriage, take 8-10 drops of the tincture every hour as long as needed. Sip the tea to reduce morning sickness.

DURING LABOR

ASSIST LABOR

BLACK COHOSH WITH BLUE COHOSH

Taken together, these two herbs assist labor from the time the baby has dropped. They should be taken

together; for blue cohosh gets the contractions going and black cohosh makes the contractions rhythmic. This makes labor easier; and the contractions become consistent and regular. But it is important to take both herbs together for the best effect. They help relieve pain and soothe irritation of the uterus and cervix. Take 8-10 drops of the tincture. Either take sublingually (place under the tongue and let it dissolve) or drink with water. In order to stimulate labor contractions, start with 5 drops of black cohosh under the tongue; then alternate with 5 drops of blue cohosh. After alternating them four times, stop. These two herbs help initiate labor by stimulating contractions. They also help the afterbirth come out. Begin with 5 drops of the two herbs combined; this can be increased to 8-10. Repeat every 20-30 minutes, but stop after you have taken the drops 4 times.

Caution: Do NOT stimulate contractions UNTIL the baby's head is engaged (has dropped into the pelvic cavity). Using these two herbs to start labor increases the possibility of ruptured membranes which, in turn, increases the possibility of a prolapsed cord.

PARTRIDGE BERRY

Indian squaws living in western New York would drink it for 2-3 weeks before and during delivery, because it made the delivery so much easier.

FORMULAS

A formula to make delivery easier: Mix equal parts of black haw, red raspberry, partridge berry, blessed thistle, and licorice or sarsaparilla. Make a tea and drink it just before delivery.

A formula at time of delivery: Add 2 parts each of lemon balm, lavender, and holy basil, and 1 part each pansy flowers and borage. Alternate drinking this tea, with a tea of red raspberry leaf.

AVOID PERINEAL TEARS

ARNICA

While in labor, gently rub arnica oil over the lip of the cervix. This will help protect it from tearing. Do not take internally.

EVENING PRIMROSE OIL

Place on the cervix to help soften it. Slowly rub it into the rigid part. This is especially helpful for mothers bearing their first child (primaparias). But do NOT place it on a loose cervix; for you do not want the child to come out too rapidly.

AFTERWARD

EXPEL AFTERBIRTH

ANGELICA

Angelica root is a powerful uterine stimulant. It helps expel the retained placenta; also if a miscarriage accidentally occurs during the pregnancy, taking angelica will help complete it. It is a good uterine stimulant and helps bring on menstrual cycles. Take 8-10 drops of the tincture. Hold them under the tongue (sublingually) and let them absorb. Start with the lowest dosage and repeat if necessary.

Caution: Some are sensitive to this herb. Do not take large doses. It can affect blood pressure and the heart.

STOP POST-PARTUM BLEEDING

SHEPHERD'S PURSE

This herb reduces post-partum bleeding from the womb. It is a blood coagulant. Begin with only 8-10 drops of the tincture. Place it under the tongue. This will stop post-partum hemorrhage. If needed, take more.

Caution: Do not take shepherd's purse during pregnancy. Only use it after the baby is born. Do not take too much; for it can cause huge clots which are difficult to expel.

Caution: Some recommend taking cayenne to stop bleeding. Normally, it is good for that purpose, but not in this case. Although it may reduce bleeding, cayenne does not contract the uterus. Taken with shepherd's purse, the cayenne will stimulate circulation, causing still larger blood clots.

HEALING OF PERINEUM

COMFREY

This herb aids in more rapid healing of either a tear or episiotomy in the perineum. Put it in a sitz bath and let the mother sit in the water. Comfrey will help prevent infection and relieve pain. Comfrey tea can also be applied to the breast, for breast infections.

For a sitz bath, put 4 oz. dried leaves in ½ gallon of boiling water, steep 8 hours, strain. Then pour in tub and let mother sit in it 15 minutes twice a day.

As a compress, place a handful of dried leaves in a folded clean cloth, simmer 12-15 minutes. Apply the compress several times each day, for not over 5 minutes at a time.

ST. JOHN'S WORT OIL

Rub this blood-red oil on the perineum (the area between the vulva and anus) at the time of delivery. This will help avoid tearing this area, which tends to tear. Applying it after delivery speeds healing of perineal tears. It has a soothing action; and it reduces burning and swelling of the tissues. Like all essential oils, it must only be applied externally.

FORMULA

This formula will help repair perineal tears: Take herbal **sitz baths**, with **yarrow flowers, comfrey leaves, and calendula** added to the water.

AFTER PAINS

CHAMOMILE

Taken internally by the mother, this beneficial herb relaxes and reduces pains. It may be applied to the perineum during delivery and to help clean the infant's eyes shortly after birth. As a tea, use 1 tsp. to 1 cup

water. For the infant's eyes, do this: Place 1 oz. in 1 quart of boiling water and let it steep 1-2 hours. Very carefully, apply lukewarm with sterile cotton.

Caution: Do not drink chamomile throughout pregnancy! Doing so may calm the uterus or bring on a menstrual cycle, resulting in a miscarriage.

AFTER CESAREAN SECTION

FORMULA

A formula to use after cesarean sections: Mix a tincture of 3 parts **bupleurum**: 2 parts **dandelion root**; and 1 part each **blessed thistle, wild yam, and astragalus**. Drink it and apply it to area.

MASTITIS

ECHINACEA

This excellent antibiotic herb will reduce or eliminate mastitis. Echinacea purifies the blood, destroys viruses, and prevents the growth of bacteria. It helps build the immune system. It fights infection, both bacterial or viral (something antibiotic drugs cannot do). It can also be used for infections in the newborn infant.

Add 1 oz. of boiling water, per pint, and let steep 4-8 hours. Drink 2 cups daily or ½ dropper of tincture 3-6 times daily. For infants: Every 3 hours, give 1 drop of echninacea tincture per five pounds of the child's body weight. (Example: a 10-pound infant would receive 2 drops every 3 hours.) Do not give it to infants for more than 10 days.

INCREASE BREAST MILK

HOPS

This helpful herb relieves after pains, increases breast milk, and helps the mother go to sleep.

Add 1 tsp. to a cup of boiling water, steep for 20 minutes, and take a little (only as much as needed) each night.

"Happy are the parents whose lives are a true reflection of the divine, so that the promises and commands of God awaken in the child gratitude and reverence; the parents whose tenderness and justice and long-suffering interpret to the child the love and justice and long-suffering of God; and who, by teaching the child to love and trust and obey them, are teaching him to love and trust and obey his Father in heaven. Parents who impart to a child such a gift have endowed him with a treasure more precious than the wealth of all the ages—a treasure as enduring as eternity.

"In the children committed to her care, every mother has a sacred charge from God. 'Take this son, this daughter,' He says; 'train it for Me; give it a character polished after the similitude of a palace, that it may shine in the courts of the Lord forever.'

"The mother's work often seems to her an unimportant service. It is a work that is rarely appreciated. Others know little of her many cares and burdens. Her days are occupied with a round of little duties, all calling for patient effort, for self-control, for tact, wisdom, and self-sacrificing love; yet she cannot boast of what she has done as any great achievement. She has only kept things in the home running smoothly; often weary and perplexed, she has tried to speak kindly to the children, to keep them busy and happy, and to guide the little feet in the right path. She feels that she has accomplished nothing. But it is not so. Heavenly angels watch the care-worn mother, noting the burdens she carries day by day. Her name may not have been heard in the world, but it is written in the Lamb's book of life.

"There is a God above, and the light and glory from His throne rests upon the faithful mother as she tries to educate her children to resist the influence of evil. No other work can equal hers in importance. She has not, like the artist, to paint a form of beauty upon canvas, nor, like the sculptor, to chisel it from marble. She has not, like the author, to embody a noble thought in words of power, nor, like the musician, to express a beautiful sentiment in melody. It is hers, with the help of God, to develop in a human soul the likeness of the divine.

"The mother who appreciates this will regard her opportunities as priceless. Earnestly will she seek, in her own character and by her methods of training, to present before her children the highest ideal. Earnestly, patiently, courageously, she will endeavor to improve her own abilities, that she may use aright the highest powers of the mind in the training of her children. Earnestly will she inquire at every step, 'What hath God spoken?' Diligently she will study His word. She will keep her eyes fixed upon Christ, that her own daily experience, in the lowly round of care and duty, may be a true reflection of the one true Life."—*Ministry of Healing, 375-378.*

"[Hannah, the mother of Samuel, continually sent up to heaven] a prayer that he might be pure, noble, and true. She did not ask for her son worldly greatness, but she earnestly pleaded that he might attain that greatness which Heaven values—that he might honor God and bless his fellow men.

"What a reward was Hannah's! and what an encouragement to faithfulness is her example! There are opportunities of inestimable worth, interests infinitely precious, committed to every mother. The humble round of duties which women have come to regard as a wearisome task should be looked upon as a grand and noble work. It is the mother's privilege to bless the world by her influence, and in doing this she will bring joy to her own heart. She may make straight paths for the feet of her children, through sunshine and shadow, to the glorious heights above. But it is only when she seeks, in her own life, to follow the teachings of Christ that the mother can hope to form the character of her children after the divine pattern. The world teems with corrupting influences. Fashion and custom exert a strong power over the young. If the mother fails in her duty to instruct, guide, and restrain, her children will naturally accept the evil, and turn from the good. Let every mother go often to her Saviour with the prayer, 'Teach us, how shall we order the child, and what shall we do unto him?' Let her heed the instruction which God has given in His Word, and wisdom will be given her as she shall have need."—*Patriarchs and Prophets, 572-573.*

INTRODUCTION

Most women today do not deliver babies; but you never know what might happen. Perhaps you live in a cabin in an isolated part of the Yukon. Or perhaps someday, because your husband is working a late shift, you might need to catch a cab, in the middle of the night, to take you to the hospital. If so, take this *Encyclopedia* with you. Who knows; if the cab driver does not make it to the hospital before the baby arrives, you might need to read this chapter to him!

However, every prospective mother will learn much helpful information from reading this brief chapter.

The woman should eat plenty of nutritious food (no sugar or junk food) during the nine months; so she will have strength, during childbirth, to avoid complications and lessen the likelihood of excessive bleeding, etc.

Reading this chapter can teach a woman the basics of midwifery! There is excellent information here.

BASIC THINGS TO HAVE READY

By the seventh month, you should have the following things ready at hand:

Soap and a clean scrub brush (for cleaning hands and fingernails). A lot of very clean cloths, alcohol for rubbing hands after washing them, and clean cotton. A new unwrapped razor blade (to cut the umbilical cord) or a pair of clean, rust-free scissors. (Boil for 15 minutes. It will be used to cut the cord.)

Sterile gauze or patches of thoroughly clean cloth for covering the naval. Two ribbons or strips of clean cloth (to tie the cord). Both should be wrapped and sealed in paper packets and then baked in an oven or ironed.

ADDITIONAL THINGS IT WOULD BE GOOD TO HAVE

Flashlight, suction bulb (for sucking mucus out of baby's nose and mouth). Two bowls: 1 for washing hands and 1 for catching and examining the afterbirth. Blunt-tipped scissors for cutting the cord before the baby is all the way born (to be used in an extreme emergency if the cord is wrapped around the baby's head). Rubber or plastic gloves (which can be sterilized by boiling) to wear when examining the

THIS INFORMATION IS FOR THE EMERGENCY DELIVERY OF A CHILD. YOU USE THIS INFORMATION AT YOUR OWN RISK.

woman while the baby is coming out, when sewing tears in the birth opening, and for catching and examining the afterbirth. Sterile needle and gut thread for sewing tears in the birth opening.

DEFINITIONS

The *fetus* is the *baby*. The *uterus* is the *womb*. The *placenta* is the sack attached to the wall of the uterus and to the *umbilical cord* (also called the *cord*) through which the baby receives food and oxygen and gives off waste. The *amniotic fluid* is the *waters* in the placenta surrounding the baby. After the baby is born, the placenta soon comes out; then it is called the *afterbirth*. The placenta contains the fluid, not only the baby. When the placenta breaks (before birth), it is said that the *bag of waters has broken*.

Commonplace terms will generally be used in this chapter: *baby*, *womb*, *waters*, *cord*, *bag of waters*, and *afterbirth*. The cervix is the birth opening which is tightly closed until the time of birth, when contractions gradually widen it; so the baby can pass down through the *vagina* and the round opening in the *pelvic bone (birth canal)* to the outside world. The baby and its position can be gauged by feeling the *abdomen*, the soft frontal area of the mother that is above the *pubic bone* and below the *ribs*. The area of the mother's skin, sometimes torn during birth, is the *perineum*. The woman helping the mother throughout the time is the *helper* or *midwife*.

GETTING CLOSER TO LABOR

You will want to see the mother more often as birth approaches. If she has already given birth to other children, ask how long labor lasted and if she had any problems. Talk with her about ways to make the birth easier and less painful. Explain the importance of adequate rest, moderate exercise, cheerful surroundings, and a good diet with very little salt intake.

Have her practice deep, slow breathing; so she can later do this during the labor contractions. Explain to her that, when labor begins, relaxing during contractions and resting between them will help her save strength, reduce pain, and speed labor. Also mention that it is best that she not do heavy work or lifting. The baby can prematurely drop and lose the skin on top of its head. Also explain that too active exercise or putting her arms above her head too much might wrap the cord about the baby's neck.

It is helpful to keep records. Here is a summary of what you will want to write down: Date of visit, general health, minor problems, and whether there is anemia (if so, how severe?). Danger signs, swelling (where and how much?), pulse, temperature, weight, blood pressure, protein in urine, sugar in urine, position of the baby in womb, size of womb (how many fingers above or below the navel?). Much of this will be explained below.

RISK AND DANGER SIGNS

- **Severe anemia:** Signs include if the woman is weak, tired, and has pale or transparent skin. The diet needs to be improved. *See Anemia (440, 677, 723).* If not treated, she might die from blood loss during labor at the time of childbirth.
- **Toxemia:** Signs include swelling of the hands, feet, and face with headache, dizziness, and sometimes blurred vision. Other indications include sudden weight gain, high blood pressure, and excessive protein in the urine. She should stay quiet in bed and eat foods rich in protein, but with only a little salt. Salty foods should not be eaten. (But a tiny amount of salt is needed.) If she does not get better quickly, swells more in the face, has trouble seeing, or has convulsions, take her to a hospital immediately.
- **AIDS:** If the woman has HIV, she can pass it on to her child while it is in the womb or at the time of birth. A medicine, called nevirapine, can help prevent the baby from getting HIV. Take 200 mg by mouth when labor begins. Give the baby 6 mg liquid nevirapine (2 mg per body weight) as soon as possible during the first 7 days after birth.

HOW TO CHECK THE GROWTH AND HEIGHT OF THE BABY IN THE WOMB

Each month write down how many finger-widths, above or below the navel, is the top of the womb (the top of the felt bulge of the womb).

Teach the mother to horizontally lay the second and third fingers of her hand by the top of the womb, and use this to measure with. Measure from her navel. Normally, the womb will be 2 fingers higher each month. At 4½ months, it is usually at the level of her navel. So measure two finger-widths down from the

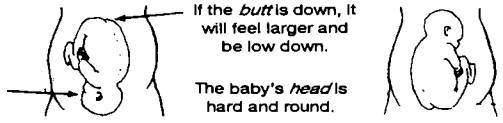
DETERMINING THE GROWTH AND POSITION OF THE BABY IN THE WOMB

The womb is usually 2 fingers higher each month. At 4½ months, it is usually at the level of the navel.

HOW TO CHECK THE HEIGHT OF THE WOMB

1 - Have the mother breathe out all the way.
2 - With the thumb and 2 fingers, push in just above the pelvic bone.
3 - With the other, feel the top of the womb below the breasts.

CHECKING IF THE BABY'S HEAD IS UP OR DOWN



navel, till it reaches the navel; then start measuring up from the navel. ***(See illustrations on on page 728.)***

If the womb seems too big, or is growing too fast, it may mean the woman is going to have twins. But, instead, the cause may be that the womb has more water (amniotic fluid) in it—which will make it more difficult to feel the abdomen and locate the position of the baby inside. Too much water in the womb means there is a greater risk of severe bleeding during childbirth and may mean the baby is deformed. Make sure the mother is on a good diet, so she is not anemic.

HOW TO CHECK THE BABY'S HEARTBEAT

Start listening for the baby's heartbeat (fetal heartbeat) after the first five months; also begin checking for movement. You may be able to hear it by putting your ear against the abdomen, but a stethoscope works better.

A baby's heart beats twice as fast as an adult's. Using a watch with a second hand, count the baby's heartbeats. Anywhere from 120 to 160 beats per minute is normal. If they are less than 120, something is wrong. However, it is possible you heard the mother's heartbeat instead. Check her pulse and see what her heart rate is. The baby's heartbeat is often difficult to hear. It takes practice.

If the baby's heartbeat is heard loudest below the naval in the last month, the baby's head is down and will probably be born head first. This is normal and best.

If the heartbeat is heard loudest above the navel, his head is probably up and it may be a breech birth (with buttocks coming out first).

HOW TO CHECK IF THE BABY'S HEAD IS UP OR DOWN

You want to make sure the baby's head is down, which is the normal and ideal position for birth. Have the mother lay down, with the pelvic area unclothed.

In order to locate where the head is while you are standing beside her, have her breathe out all the way. Then, with thumb and 2 fingers, push in just above her pelvic bone. With the other hand, feel farther up at the top of the womb. ***(See illustration on the top of this page.)***

The baby's butt is larger and wider and the head is hard and round. If the butt is up, that part will feel larger high up. If the butt is down, it will feel larger low down. ***(See illustration on the top of this page.)***

Next, push gently from side to side, first with one hand and then the other. If the baby's butt is pushed gently sideways, its whole body will move also. But if the head is pushed gently sideways, it will bend at the neck and the back will not move.

HOW TO CHECK IF THE BABY HAS DROPPED YET

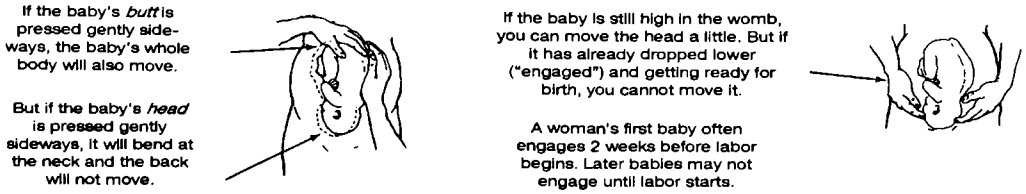
Has the baby dropped yet? (dropped lower into the pelvis, ready for birth). If the head is downward and the baby is still high in the womb, you can move the head a little. But if it has already engaged (dropped lower, getting ready for birth), you cannot move it. ***(See illustration on the bottom of this page.)***

A woman's first baby sometimes engages 2 weeks before labor begins. Later babies may not engage until labor starts.

If the baby's head is down, his birth is likely to go well. If the head is up, it will be a breech birth and more difficult. It is safer for the mother to give birth

CHECKING IF THE BABY HAS DROPPED YET

Push gently from side to side, first with one hand, and then the other.



in, or near, a hospital. If the baby is sideways, the mother should have her baby in a hospital. She and the baby are in danger.

—Important: see Signs of Pregnancy Risk (669).

A few days before labor begins, the baby moves lower. This lets the mother breathe easier; but urination must be more frequent (because of pressure on the bladder).

Some thick mucus may come out a short time before labor or 2-3 days earlier. It may be tinged with blood. This is normal.

Once again, explain to her that as contractions begin, relaxing during contractions and resting between them will help her save strength, reduce pain, and speed labor.

CONTRACTIONS

Labor pains are caused by contractions, tightening of the womb. Between contractions, the womb is relaxed. During each contraction, the womb tightens and lifts upward. Each contraction pushes the baby farther down the birth canal. This causes the cervix (door of the womb) to open a little more each time. ***(See the illustration on the bottom of this page.)***

Contractions may begin up to several days before childbirth. At first, several minutes or hours pass between them. When they become stronger, regular, and more frequent, labor is beginning.

Some women have a few practice contractions weeks earlier. This is normal. Rarely, she may have false labor, which is this: The contractions begin coming strong and close; but then they stop for several hours or days before actual labor begins. Sometimes walking, a warm bath, or resting will help calm the contractions if they are false—or bring on childbirth if they are real.

This is what is meant by "breaking of the bag of waters": The fluid surrounding the baby in the womb usually breaks with a flood of liquid sometime after labor has begun. If the waters break before the contractions start, this usually means the beginning of labor. After they break, the mother should keep very clean: no sexual contact, no sitting in a bath of water, and no douching! Walking back and forth may help bring on labor more quickly. If labor does not begin within 12 hours after the waters break, seek medical help.

THREE STAGES OF LABOR

There are three stages of labor. *First stage:* From the beginning of the strong contractions until the baby drops into the birth canal. *Second stage:* From the dropping into the birth canal until it is born. *Third stage:* From the birth of the baby until the placenta (afterbirth) comes out.

THE FIRST STAGE

This stage usually lasts 10-20 hours or longer, when it is the mother's first birth (primaparia), and from 7-10 hours in later births (multiparia). This can vary quite a bit. During the first stage, the mother should not try to hurry the birth. It is natural for this to go slowly, as the openings gradually expand. Reassure the mother; for she may not think the process is going fast enough. Tell her most women have the same concern.

She should not try to push, or bear down, until the baby is beginning to move down into the birth canal and she feels she has to push.

During this stage, it is important that the mother keep her bladder and bowels empty. If they are full, they get in the way when the baby is being born. She should urinate often. If she has not had a bowel movement in several hours, an enema given to her will make labor easier. As the baby keeps moving downward, it fills a lot of space while pushing other things in the pelvis back.

During labor, she should drink water or other liquids often. Too little liquid in the body can slow or stop the labor. If the labor is long, she should also eat lightly. If she is vomiting, she should sip a little water, herb tea, or fruit juice between each contraction.

During labor, she should often change positions or get up and walk about every so often. She should not lie flat on her back for a long time.

During this first stage of labor, the birth attendant (nurse, midwife, or other helper) should do these three things:

- Wash the mother's belly, genitals, buttocks, and legs well with soap and warm water. The bed should be in a clean place with enough light to clearly see.
- Clean sheets or towels should be spread on the bed and changed whenever they get wet or dirty.
- As mentioned earlier, have a new, unopened razor blade ready for cutting the cord or boiled pair of

BETWEEN AND DURING CONTRACTIONS

Labor pains are caused by contractions (tightening of the womb), as the baby is pushed lower.

Between contractions, the womb is relaxed and appears like this.

During each contraction, the womb tightens and lifts up like this.

Each contraction pushes the baby farther down. This causes the cervix (the bottom door of the womb) to gradually open, more and more.

scissors. Keep the scissors in the boiled water in a covered pan until needed.

The helper should NOT massage or push on the belly. She should NOT ask the mother to push or bear down at this time.

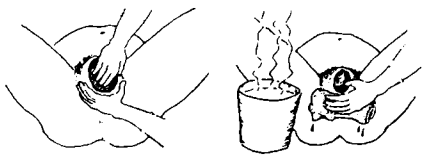
If the mother is frightened or in pain, have her take deep, slow, regular breaths during each contraction and then breathe normally between them. This will help control the pain and calm her. Reassure her that the strong pains are normal and that they help to push the baby out.

THE SECOND STAGE

It is during this stage that the child is born. Sometimes this begins when the bag of waters breaks. This stage is often easier than the first stage, and usually does not last longer than 2 hours. During the contractions, the mother bears down (pushes with her inner muscles) with all her strength. Between contractions, she may seem very tired and half asleep. This is normal.

This is how to bear down: The mother takes a deep breath and then pushes hard with her "stomach" muscles as if she were having a bowel movement. If the child comes slowly after the bag of waters breaks, she can double her knees as she squats on her feet, sitting propped up as she leans against a wall with pillows under and behind her as she holds her knees toward her chest or kneels on the bed or floor, with her legs folded back under her, or lying down as she holds her legs just below the knees.

When the outside birth opening of the mother stretches—and the baby's head begins to show—the helper should have everything ready for the actual birth.



As soon as the baby's head begins to be seen, the mother should NOT try to push! Instead, she should pant and let the head come out slowly, so the birth opening is not torn.

About tearing: It is more likely to happen if this is the mother's first baby. Tearing can be prevented in this way: As soon as the baby's head begins to show, she should not bear down (that is, she should stop pushing), but instead pant (take many short, rapid breaths). This gives the birth opening time to stretch—open up wider. When the birth opening is stretching, the midwife can support it with one hand and with the other hand gently keep the head from coming too fast ***(as shown in the illustration on the lower left)***. Placing warm compresses against the skin below the birth opening is also helpful ***(illustration below)***. Start doing this as soon as the stretching begins. You can also massage the skin with oil. (If a tear does occur, it should be sewed closed, after the placenta comes out, by someone who knows how to carefully sew it shut with gut thread.)

In a normal childbirth, the helper should NEVER put her hand or finger inside the mother. This is the most common cause of infection to the mother after birth!

The helper should have scrubbed her hands and nails thoroughly beforehand; and, it is preferable that she wear gloves previously sterilized. This protects the mother, the baby, and the helper. ***(See illustration on the bottom of this page.)***

THE THIRD STAGE OF LABOR

This stage begins as soon as the baby has been born and continues until the afterbirth (placenta) comes out. Normally, the afterbirth comes out 5 minutes to an hour after the baby is born.

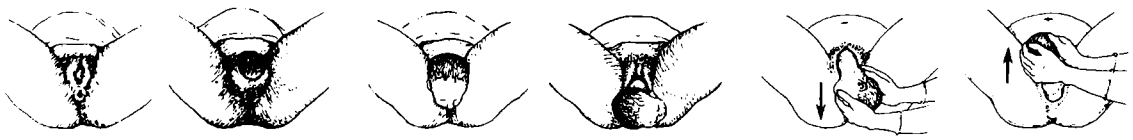
While waiting for the afterbirth, do this:

- Put the baby's head down, so the mucus comes out of his mouth and throat. Do not change this position until he begins breathing.
- Keep the baby below the level of the mother until the cord is tied. This will help extra blood to flow into the baby.

If the baby does not begin breathing right away:

- Rub his back with a towel or cloth. If he still does not breathe, clean the mucus out of his nose and mouth with a suction bulb or clean cloth wrapped around your finger.
- If the baby does not breathe within one minute

THE MOTHER AND HELPER UNITE IN HELPING THE BABY TO BE BORN



1 - Now the mother should push hard

2 - Now she should not push hard. Instead, she should take many short breaths. This will help prevent tearing of the birth opening.

3 - The head usually comes out face down. Its body then turns to one side, so the shoulders come out.

4 - The helper takes the baby's head and very gently lowers it, and a shoulder comes out.

5 - Then the head is raised, so the other shoulder can come out. The helper never pulls on the baby, or twists or bends its neck.

after birth, start mouth-to-mouth breathing at once! *(See page 755, in the chapter on Emergencies, for directions.)* With babies and small children, cover the nose and mouth with your mouth and breathe *very gently* about once every 3 seconds.

• It is important that you not let the baby get chilled, especially if he is premature. Wrap him in a clean cloth.

How to cut the cord:

As soon as the infant is born, the cord will be fat and blue, and pulsing as blood flows through it from the mother to the child. WAIT. You want as much blood as possible to flow into the child. Very soon, the cord becomes thin, white, and stops pulsing. Then it will be time to cut it.

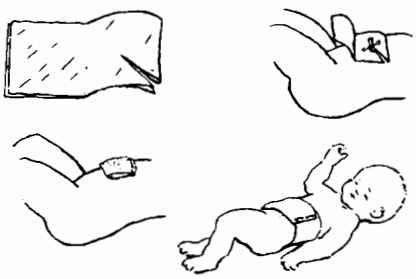
You have ready two pieces of ribbon or narrow cloth strips, recently ironed or heated in an oven. Now tie one ribbon or cloth strip close to the body of the newborn child. (Leave about ¾ inch [2 cm.] of the cord attached to the baby.) Then tie the other a short distance away. Next, wash your hands very well, unwrap the unused (clean) razor blade, and cut the cord. (Or use a freshly boiled pair of scissors.) These precautions protect the baby from tetanus.

You will want to tie the cord as soon as the pulsing has stopped, so that the baby can be brought up and placed on the mother's breast as soon as possible.

Keeping the cord clean: Keep the cord exposed to the air, so it can dry out. If the home is quite clean, with no flying insects, leave it uncovered. If dust and flies are present, cover the cord lightly with sterile gauze or a previously boiled (or recently ironed) cloth. The sooner the cord dries out, the quicker it will fall off.

As shown in the illustration just below, cut the gauze on a corner halfway to the center of one-half of the gauze. Then place it over the cut cord. Gently flip the top half over it; and then gently place a thin and loose cloth around it.

To avoid getting urine on it, the baby's diapers must not cover the naval.



CLEANING THE NEWBORN

Use a clean, warm, soft, damp cloth and gently clean away any blood or fluid from the baby.

Do not bathe the baby until after the cord drops off (usually 5-8 days). Then bathe him daily in warm water, using a mild soap.

PUTTING THE BABY TO THE BREAST

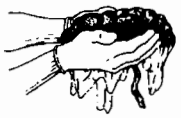
As soon as the cord is tied (which should be as soon as the pulsing in the cord has ceased), put the baby on the mother's breast. If the baby nurses, this will help the afterbirth come out sooner and prevent or control heavy bleeding.

THE AFTERBIRTH

The placenta usually comes out 5 minutes to an hour after the baby is born. But sometimes it is delayed for many hours.

Checking the afterbirth: It is extremely important, as soon as the placenta comes out, that you pick it up and carefully examine it to see if it is complete. If it is torn or any piece seems to be missing, get medical help. At the hospital, they will scrape the womb; this is because, if any piece of the placenta is still inside the womb, it can cause continued bleeding or infection.

Wear gloves or plastic bags on your hands as you handle the placenta. Afterward, wash your hands very well.



If the placenta is delayed in coming out: If the mother is not losing much blood, do nothing; just patiently wait. While waiting, do NOT pull on the cord! This could cause heavy bleeding from the uterus. Sometimes the placenta comes out if the mother squats and pushes (bears down) a little.

If the mother is losing blood, feel the womb. If it is soft, massage it carefully until it gets hard ***(illustration below)***. This should make it contract and push out the placenta.

If the placenta does not come out soon and bleeding continues, push downward on the top of the womb very carefully ***(illustration below, right)*** while supporting the bottom of the womb.

HEAVY BLEEDING AND SHOCK

Warning: The mother may be bleeding heavily inside, with little blood coming out. Feel her abdomen from time to time. If it seems to be getting bigger, it may be filling with blood. Check her pulse often and

watch for signs of shock, which include these: Weak, rapid pulse over 100 per minute. Cold sweat and pale, cold, damp skin. Blood pressure drops dangerously low. Mental confusion, weakness, or loss of consciousness.

In order to prevent or treat shock:

At the first sign of shock or if there is risk of shock: Have the woman lie down with her feet a little higher than her head. Stop any bleeding. If she feels cold, cover her with a blanket. Give her sips of water or other drinks. Keep her calm and reassure her.

If heavy bleeding continues and the placenta still does not come out, call for medical help and do this:

To help prevent or control heavy bleeding: Let the baby suck the mother's breast. If the baby will not suck and the husband is present, have him gently pull and massage the mother's nipples. This will cause her to produce pituitrin, a hormone that helps control uterine bleeding.

Even a slow, steady trickle of blood coming out can cause serious trouble. Make sure medical help is on the way. Have her drink a lot of liquid (water, fruit juices, herb tea, or soup). Put her legs up and head down. This brings blood from the legs into the trunk and head.

Massage the abdomen until you can feel the womb getting hard. If the bleeding stops, check every 5 minutes to make sure the womb is remaining hard. If not, massage it again. As soon as the womb gets hard and bleeding stops, do not massage it. But check every 5 minutes or so and begin massaging if it gets soft again.

If the bleeding still continues: This time, using all your weight, press down with both hands (one hand over the other) on the abdomen, just below the navel. You should continue this press a long time after the bleeding stops.

If bleeding still continues, do this: Press both hands into the abdomen *above* the womb. Scoop up the womb (uterus) and fold it forward (toward the legs), so the womb is pressed hard against the pubic bone. Press as hard as you can, using the weight of your leaning body if your muscles are not strong enough. Keep pressing for several minutes after the bleeding has stopped or until you can get medical help.

DIFFICULT BIRTHS

If the birth is difficult, it is important that you get medical help as soon as possible during the labor.

There are several possible causes of why **labor stops, slows down, or lasts a long time** after earlier being strong or after the waters break.

• **The mother may be frightened or upset.** This can slow or even stop the contractions. Reassure her, so she can relax. Explain that the birth is slow and there are no serious problems. Encourage her to change her body position often and to drink juices, eat some food, and urinate. Stimulating the nipples (either with a massaging or milking motion) can help speed labor.

• **The mother may be dehydrated** if she has been vomiting or has not been drinking liquids. This can slow or stop the contractions. Have her sip fruit juice after each contraction.

• **The mother's pelvis may be too small.** The baby's head may be too large to fit through the mother's pelvis (the birth canal). This is more likely if the woman is short, but unlikely in a woman who has given birth before. By feeling the pelvis, you may notice that the baby does not move down. If you suspect that this may be the problem, get her to a hospital; for she may need a cesarean section. Women who have very narrow hips, or are exceptionally short, should especially have their first child born in, or near, a hospital.

• **The shoulders may get stuck after the head comes out first.** The helper can take the baby's head in her hands and lower it very carefully, so one shoulder can come out. Then she can raise the head a little, so the other shoulder comes out.

• **The baby may not be in the best position.** As mentioned earlier, you can feel the mother's abdomen and know whether the baby is in the best position (head downward), breech (buttocks downward, legs up, and head at the top), or sideways. Sometimes the helper can carefully turn the baby with very gentle handling of the woman's abdomen. Between contractions (not during contractions!), try to work the baby around, little by little, until the head is downward. Do not use force; for this could tear the womb. If the baby cannot be turned, get the mother to the hospital as soon as possible.

[1] **If the baby's head is downward**, the head is probably facing the rear of her body. This is normal.

[2] **If the baby's head is downward, but with the head facing forward**, you may be able to feel the lumpy arms and legs rather than the rounded back. This is usually not a serious problem; but labor may be longer because the mother has more back pain. She should change positions often; for this may help turn the baby. Have her get on her hands and knees. This may help turn him.

[3] **If the baby is sideways** and you cannot turn it, rush the mother to the hospital.

[4] **If the baby's buttocks is downward** and you cannot turn the baby, the buttocks will come out first. This is called a *breech* birth. The helper may be able to tell if the baby is in the breech position by feeling

the mother's abdomen and listening to its heartbeat. A beech birth may be easier if the mother will get down on her hands and knees (with her hands, knees, and lower legs resting on the bed).

[5] **If the baby's legs come out first, but not the arms**. Wash your hands very well; rub them with alcohol (or wear sterile gloves). And then do this:

Slip your fingers inside and push the baby's shoulders toward the back ***(illustration, above)***, pressing his arms against his body.

If the baby gets stuck, have the mother lie face up. Put your finger into the baby's mouth and push his head toward his chest. At the same time have someone push the baby's head down by pressing on the mother's abdomen. Have the mother push hard. But you must not—never—pull on the body of the baby.

[6] **A hand or arm comes out first** ("presentation of a hand or arm"). If this happens, get medical help immediately. A cesarean section may be needed.

[7] **The cord may be wrapped about the head of the baby** so tightly he cannot come out all the way. If this is the case, the birth process has stopped and he is locked in there until the afterbirth comes out. But you cannot wait for that to happen, because he might suffocate. Try to slip the loop of cord from around the baby's neck. If you cannot do this, you may have to clamp, tie, and cut the cord. If you have to do that, you must use boiled blunt-tipped scissors. (At a childbirth, which the principal author attended when he was much younger, this happened. The baby girl's head had come out, stopped, and was turning blue. He knelt and earnestly prayed—and immediately the baby came out and the afterbirth with her! Normally, the afterbirth would not have come out immediately.)

• **The mother may have twins**. Another cause of a difficult birth is if the mother is carrying twins. This is more difficult and dangerous to both mother and infants. It is best if she delivers them in a hospital. Labor often begins early with twins; so a mother expecting twins should be staying close to the hospital after the seventh month of pregnancy. She should rest a lot and be careful to avoid hard work. Doing so will help the twins not be born early. (Twins are often born small and need special care.)

Here are four signs that she may have *twins*:

• The womb grows faster and becomes larger than usual, especially in the last months.

• She is gaining weight faster than normal or the common pregnancy problems are worse than usual: morning sickness, backache, varicose veins, piles, swelling, and difficult breathing.

• If you can feel 3 or more large objects (heads and buttocks) in an extra-large womb.

• If you can hear 2 different heartbeats (other than the mother's); however, hearing both infants' heartbeats may be difficult.

PROBLEMS AT THE TIME OF BIRTH

• **Meconium may be in the waters**. When the waters break, you may see there is a dark green, almost black liquid in them. This is probably the baby's first stools (meconium). This means the baby may be in danger. If he breathes any of it into his lungs, he may die. Therefore, as soon as his head is born, tell the mother not to push, but only take short, rapid breaths. Before the baby starts breathing, you must immediately suck the feces out of his nose and mouth with a suction bulb. Even if he starts breathing right away, you must continue sucking until you get all the feces out.

• **The perineum may have torn**. The birth opening stretches a lot during delivery. Sometimes it tears; this is more likely during the first delivery. How to prevent it was mentioned earlier. If a tear does occur, someone who knows how to do it should carefully sew it shut, after the placenta comes out.

• **The cord may have been pulled too hard**. Some midwives or physicians (more often a physician than a midwife) pull on the cord, so the afterbirth will come out quicker. The cord should not be pulled at all! The afterbirth will come out when it is ready to be expelled. If pulled, it may tear loose from the wall of the uterus, leaving pieces of afterbirth inside. This can cause the mother much bleeding and suffering later on. The only reason for pulling on the cord is so the doctor can go home quicker; that is not a good enough reason.

How to check the afterbirth for tears and missing parts was explained earlier.

CARING FOR THE NEWBORN

• The care of the cord immediately after childbirth was explained earlier.

• To protect the eyes of a newborn baby from conjunctivitis, it is recommended that a drop of 1% silver nitrate be placed in each eye as soon as he is born. If either parent has ever had gonorrhea or chlamydia, this is especially important.

• Keep the baby warm, but not too warm. In cold weather, wrap him well. But leave him naked in hot weather or if he has a fever. Keeping the baby close to his mother's body helps keep him warm. This is especially good to do if the baby was born early or is very small.

• *For much more information about caring for the infant, turn to the section on childbirth and children (685-715).*

IF YOU CHOOSE A HOSPITAL DELIVERY

Perhaps you would prefer to have your baby in the hospital and not try to have it at home. Here are a few things to check on:

Select an understanding physician. Do you want to try to have the baby by natural methods as much as possible? (no drugs, etc.) What is his attitude about this?

What will the hospital or other facility permit you to do while there?

Here are several more questions:

During labor, will they let you walk around or take a shower, or do they just want you to remain in bed the whole time?

How many people will be allowed to stay with you? Can your husband be with you during the childbirth? Do you want an intravenous (IV) line inserted during labor? Although it often is not necessary, in many hospitals it is routinely done.

Do you want to be given drugs (usually oxytocin [Pitocin]) to speed up labor? Often given through an IV, it can make the labor more painful. But it will mean less time spent by the physician and staff.

Do you want any pain medication? If you decide against it, will it still be available later if you change your mind during the labor?

Will it be safe to breast-feed your baby immediately after receiving pain medication?

What methods will be used to monitor the baby during labor?

Will they have you placed in the "lithotomy" position (flat on your back on a padded table, with your feet in stirrups)? Laying in this one position for hours does not give you opportunity to change positions, squat, and do other things mentioned earlier to help the baby come more easily.

Do you want an episiotomy? This is an incision made in the perineum, to enlarge the vaginal opening. This is done so forceps can be used to hasten delivery or to prevent possible tearing in this area (which might not otherwise happen). Tearing takes longer to heal than an incision.

Are you willing to have a cesarean section? Under what emergency conditions will they perform it? Although over 24% of American women who give birth in hospitals have cesareans, the World Health Organization estimates that, anywhere in the world, it is only needed 10%-15% of the time. They cost over twice as much as a vaginal birth and the mother has to remain in the hospital for about two more days. *Four reasons are given for a cesarean:* The umbilical cord is seen before the baby, the baby is in a breech or sideways position, the baby's head is too big to fit through the pelvis (a very uncommon event), or the mother has earlier had a cesarean. But many problems can be solved without resorting to a major operation, which is what a cesarean section is.

SPECIAL RESEARCH STUDY

A scientific research study disclosed the following findings. The study compared the risks of a home delivery by a competent helper vs. delivery of a baby in an average hospital in America. In each instance, hospital deliveries involved a greater risk! Part of the problem may be that some physicians and hospital staff may be anxious to hurry up the procedure. Frankly, competent and caring midwives are a great blessing. *(Source: Lewis Mehl, et al., "Outcome of Elective Home Birth: A Series of 1,147 Cases," Journal of Reproductive Medicine, Vol. 19, No. 5, November 1977, pp. 288-289)*

PROCEDURE — IN THE HOSPITAL

Cesarean operation - Three times greater.

Forceps - 20 times more used.

Oxytocin (a drug to accelerate or induce labor) - Twice as much used.

Analgesia and anesthesia - Nine times more used.

Episiotomy - Nine times greater incidence; at the same time they had more severe tears in need of major repair.

Infant distress in labor - Six times more often.

Maternal high blood pressure - Five times more cases.

Postpartum hemorrhage - Three times greater.

Infection of newborn baby - Four times more infection among the newborn.

Babies needing help to breathe - Three times more babies needed help to begin to breathe.

Birth injuries - There were 30 cases of birth injuries; these included skull fractures, facial nerve palsies, brachial nerve injuries, and severe cephalhematomas. There were no such injuries at home.

Low birth rate (2,501 grams) - 1.3% for home births and 6.4% for hospital births.

Infant death rate - Infant death rate was low in both cases and essentially the same (4.3/1000 for home births and 10.2/1000 for hospital births).

Maternal death rate - There were no maternal deaths for either home or hospital.

"Who are those with thee? . . The children which God hath graciously given thy servant."—*Genesis 33:5.* / "Children are an heritage of the Lord, and the fruit of the womb is His reward."—*Psalm 127:3.* / "Behold, I and the children whom the Lord hath given me."—*Isaiah 8:18.* / "Thus saith the Lord, thy redeemer, and He that formed thee from the womb, I am the Lord that maketh all things."—*Isaiah 24:44.* / "Suffer little children, and forbid them not, to come unto Me."—*Matthew 19:14.* / "Thou knowest not what is the way of the spirit, nor how the bones do grow in the womb of her that is with child: even so thou knowest not the works of God who maketh all."—*Ecclesiastes 11:5.* / "Can a woman forget her sucking child, that she should not have compassion on the son of her womb? yea, they may forget, yet will I not forget thee."—*Isaiah 49:15.* / "Teach us what we shall do unto the child that shall be born."—*Judges 13:8.* / "Thy children shall be taught of the Lord."—*Isaiah 54:13.*

The First Nine Months

1 - PRENATAL GROWTH 736

2 - SPECIAL COMPLICATIONS 738

PRENATAL GROWTH

Just a wonderful little human being! Though small, that is what he is. By **eighteen days** his little heart is already beating. **Before six weeks** (at 40 days), his electrical brain waves (electroencephalograph) has been recorded *(H. Hamilin, Life or Death by E.E.G., JAMA, October 1964)*. **Prior to six weeks** his yoke sac was making his own blood cells; but, **by the sixth week,** his liver begins doing this important work. (Later it will be done within his bones.) He has been moving for quite some time. All twenty milk teeth buds are present at **six-and-a-half weeks**. He is really priceless.

And he is already sensitive to things about him. "In the sixth to seventh weeks . . If the area of the lips is gently stroked, the child responds by bending the upper body to one side and making a quick backward motion with his arms. This is called a 'total pattern response' because it involves most of the body, rather than a local part."—*Leslie B. Arey, "Developmental Anatomy," 6th Edition.*

At **seven weeks** ultrasound scanners can pick up the heart action of the infant *(T. Schawker, "Ultrasound Pictures first-trimester Fetus," Medical World News, February 1978);* and ultrasonic stethoscopes, now common in obstetricians' offices, allow the mother to hear her baby's heart beat as early as **eight weeks**. He is really doing well.

Your child is now just **two months old**—eight weeks! And the brain is completely present. At **eight weeks**, if we tickle the baby's nose, he will flex his head backward away from the stimulus. By **eight weeks** an unborn will grasp something placed in his small hand and hold onto it. Now, that's pretty nice, isn't it?

His stomach is now secreting gastric juice. And experts say that all of his body systems are present.

The nose is short and snub, and the eyes peer out from above it. But later, at the beginning of the third month (twelfth week), the eyelids will grow together, closing the eyes. They will open again during the seventh month.

Weeks ago, the bones began to form and mature. That maturing will continue on for years. The top of the skull does not close until a year-and-a-half after birth. Yet the body skeleton will not itself be fully developed until the age of twenty-five. (That is why people before that age can so wonderfully heal when they injure their bones.)

Well, let's look at his tiny ear: The ear consists of three different parts and originates in three different regions. In the fourth week a bubble is turned inward from the skin on both sides of the rear part of the brain. This will later become the inner ear, with its delicate auditory and balance organs. In the **fifth week** the outer ear, with the auditory canal and the outer side of the eardrum, is developed at the upper end of the first of three grooves; the rest will close. The inner ear will be formed from tissue that comes from down in the pharynx. Only the God of heaven knows how to make little babies.

And yet at twelve weeks he does not weigh much. But don't let someone tell you that his life isn't important, simply because he is so small. Although tiny, he is a growing human being, just as a twelve-year-old boy is a growing human being. The only difference is that one is larger than the other. Both come from God and are fully human. Both of their lives are very important to God and to those who care for them.

From his very earliest days, this little fellow was a human being. We now have ultrasound to let us see an unborn child moving. We have electronic monitoring of an unborn baby's heart. We can identify the baby's sleep cycles. There are now techniques to sample the baby's urine, blood, and skin—and even identify sophisticated chemical reactions between the

baby and the mother.

These new scientific methods clearly show that the separate individuality of the unborn child is a scientific fact. He is not part of his mother. He is a separate human being. She nourishes his body; but, in the sight of God, she does not own it. It was given to her to protect.

When he was still very young—long **before the end of the first trimester**, the little infant could feel pain (he pulls back quickly from pinpricks). And soon noise will bother him, also.

At twelve weeks (three months) this little person weighs one ounce; at sixteen weeks, six ounces; and, at twenty weeks (four months), approximately one pound. A physician describes him:

"We know that he moves with a delightful easy grace in his buoyant world, that foetal (British variant for fetal) comfort determines foetal position. He is responsive to pain and touch and cold and sound and light. He drinks his amniotic fluid, more if it is artificially sweetened, less if it is given an unpleasant taste. He gets hiccups and sucks his thumb. He wakes and sleeps. He gets bored with repetitive signals but can be taught to be alerted by a first signal for a second different one."—*A. William Liley.*

It is now **two months** since pregnancy began, and for the first time you are certain that you are with child. It is at this time that most mothers will go to a doctor for prenatal care. Your physician will tell you that you should not be smoking, for it may damage your unborn child.

The small human being that God has given you to nourish is already remarkably developed. At **nine to ten weeks** he squints, swallows, moves his tongue; and, if you stroke his palm, he will make a tight fist. By **eleven to twelve weeks** he is also breathing fluid steadily and will do so until birth when he will breathe air.

He does not drown by breathing fluid; for he obtains his oxygen through his umbilical cord. But if he had air to breathe, he would breathe air. Certain experiments with unborn babies still in the womb have involved replacing some of the fluid with air in order to outline the baby's movements and position on X-ray film. But some of the baby's positions were such that when the mother laid on her back, the little nose and mouth extended into the air bubble. The baby breathed out the fluid in his lungs and breathed in the air. This, of course, made it possible for their vocal cords to make sound, so some of the babies cried loudly enough day and night to keep their mothers awake. The crying was loud enough to be heard by the others in the room. When the mother would roll on her side, she would submerge the nose and mouth under water again; the infant would breathe out the air, breathe in fluid and the crying would stop. This did not harm the infant; for, in the womb, he was able to breathe both ways *(A.W. Liley, Medical Professor, University of Auckland, New Zealand).*

"Maternal cigarette smoking during pregnancy decreases the frequency of fetal breathing by 20%. The 'well-documented' higher incidence of premature, stillbirth, and slower development of reading skill may be related to this decrease."—*F. Manning, Meeting of the Royal College of Physicians and Surgeons, Canada, Family Practice News, March 15, 1976.*

By eight weeks all of the body systems of your baby are present; by eleven weeks they are all working. He is a little human being; his brain is functioning, his nerves are working, he is moving about. By eleven weeks he is sucking his thumb vigorously *(A. Hellegers, Fetal Development).*

His little fingernails are present by the **eleventh week;** his eyelashes will be there by the **sixteenth week**. The muscles have already been working under the skin for some time, and their movements continue to become more coordinated. The lips open and close, the forehead wrinkles, the brow area raises and the head turns—**all this by the end of the first trimester (the first three months)** of your baby's life.

And now, with the twelfth week, the mother enters her fourth month. **The fourth through sixth months are known as the second trimester.** The little one is already assuming full-term proportions. The head is now about one-third of its entire body length with legs outstretched. The ribs are clearly visible.

Here is what this small human being—your child—looks like at only eight weeks of age. This is one of the most stunning descriptions of early human life ever recorded anywhere:

"Eleven years ago, while giving an anesthetic for a ruptured tubal pregnancy (at two months, or eight weeks), I was handed what I believed to be the smallest human being ever seen. The embryo sac was intact and transparent. Within the sac was a tiny (one-third inch) human male swimming extremely vigorously in the amniotic fluid, while attached to the wall by the umbilical cord. This tiny human was perfectly developed with long, tapering fingers, feet, and toes. It was almost transparent as regards to the skin, and the delicate arteries and veins were prominent to the ends of the fingers.

"The baby was extremely alive and swam about the sac approximately one time per second with a natural swimmer's stroke. This tiny human did not look at all like the photos and drawings of 'embryos' which I have seen, nor did it look like the few embryos I have been able to observe since then, obviously because this one was alive.

"When the tiny sac was opened, the tiny human immediately lost its life and took on the ap-

pearance of what is accepted as the appearance of an embryo at this stage (blunt extremities, etc.)."—*Paul E. Rockwell, M.D., Director of Anesthesiology, Leonard Hospital; Troy, New York (document presented to U.S. Supreme Court, Markle vs. Abele, 72-56, 72-730, p. 11).*

Children can be born with quite a low birth weight and still survive. An unusual example of this is the case of Marion Chapman who was born in South Shields (County Durham), England on June 5, 1938—only 10 ounces! She was born unattended and was nursed by Dr. D.A. Shearer, who fed her hourly through a fountain pen filler. By her first birthday she had attained a weight of 13 pounds. Her weight on her twenty-first birthday was 106 pounds.

How very thankful we can be that God gives us these little babies—to hold, to love, and to raise for Him.

SPECIAL COMPLICATIONS

Unfortunately, there are instances in which a decision is made to suddenly end the growth of this child. People blame one another for what has happened. But, amid our grief, let us turn our attention to factors that are generally given little attention: **the effect of this on the mother and her later children.** This is very important, and you will want to read it. We are here discussing the long-term effects, following a medical termination of pregnancy.

First, there is the problem of immediate injuries to the mother:

American sources will not report deaths or injuries due to abortions. The Ohio State Department of Health, for example, reported in May 1977 that "there is no information available as to complications on the abortion procedure . . The reporting on this statistic has been very minimal."

But in Czechoslovakia a very careful study was made and documented. Here it is:

Charles University, in Prague, did thirteen years of research on records of carefully reported abortions. All were performed under the best-possible conditions (generally better than in America) in the gynecology department of a hospital. The limit was set at very "safe" levels: no abortions past the twelfth week (3 months) of pregnancy. The "safest method" was used: vacuum curettage (cutting the baby apart and then sucking out the pieces). The patient stayed an average of 3 to 5 days in the hospital; and, then, another full week at home (receiving insurance benefits for lost wages). This is what they discovered:

"**Acute inflammatory conditions occur in 5%** of the [abortion] cases, whereas **permanent complications** such as chronic inflammatory conditions of the female organs, sterility, and ectopic [tubal] pregnancies are registered in **20%-30% of all women** [who received abortions] . . these are definitely higher in primagravidas [initial abortions] . . Especially striking is **an increased incidence in later ectopic pregnancies**. A high incidence of cervical incompetence resultant from abortion has raised the incidence of **later spontaneous abortions [miscarriage] to 30%-40%**. We rather often observe complications such as rigidity of the cervical os, placenta adherens, placenta accreta, and atony of the uterus."—*A. Kodasek, "Artificial Termination of Pregnancy in Czechoslovakia," in International Journal of Gynecology and Obstetrics, 1971, Vol. 9, No. 3.*

Young girls are especially liable to physical damage as a result of abortion operations. One medical expert says that **girls of school age have extra risks** from abortion due to the fact that they have small tightly closed cervixes which are especially liable to damage of dilatation. He says: *"Evidence has accumulated steadily over the past 10 years of increased risks for these young mothers."—G.P. Russel, England, Statement made January 10, 1974.*

"Adolescent abortion candidates differ from their sexually mature counterparts, and these differences contribute to higher morbidity [death of the mother]."—*C. Cowell, University of Toronto, Ortho Panel 14.*

"The younger the patient and the further along she is in her pregnancy, the greater the complication rate."—*M. Bulfin, "Deaths and Near Deaths with Legal Abortions," Meeting of the American College of Obstetricians and Gynecologists, Florida, 1975.*

Less well-known, but suspected by the public, is the fact that deaths of mothers from abortion increase with the length of gestation. Abortion in the first eight weeks is the safest; but, **between the ninth and tenth week of pregnancy and onward, the number of deaths to mothers climbs. After 21 weeks, it is even greater.** Using aggregated mortality data, researchers for the Center for Disease Control noted that the abortion death rate increases 40 to 60 percent per week for each week of delay after the eighth week. Abortions performed at 9-10 weeks are nearly three times more dangerous, in terms of deaths, than earlier ones; the small number of abortions performed after 20 weeks' gestation are about 45 times riskier *(CDC, "Morbidity and Mortality Weekly Report," for July 6, 1979).* The main risks result from delay; **the most common complications are bleeding, infection, and injury to the cervix or uterus.** *(See W. Cates, et al., "The Effect of Delay and Method Choice on the Risk of Abortion Morbidity.")*

Another problem is perforation of the uterus:

Horan, et al., in an *Amicus Curiae Brief,* submitted to the Supreme Court in 1971, detailed a list of other damages that could occur to the mother as a result of an abortion. These included **perforation of the uterus; this could result in peritonitis and occasionally death, but more frequently in emergency**

removal of the uterus.

Rupture (breaking) of the uterus takes place in 6 percent of all women who become pregnant after hysterectomy abortions. Substantial risk of rupture was obvious in 26% of such women. The babies born to such women tended to be smaller.

In addition, there are a number of problems which may occur in later years. First, there is the problem of premature births:

A woman who has had an abortion is more likely to have premature births thereafter. This is due to the fact that the cervix was cut and weakened by the abortion; so, thereafter, she is not as able to bear up under the weight of a growing child. It will tend to open prematurely instead of trying to bear up under the weight. This results in a number of problems, as we shall see below.

Women who have had abortions **have twice the likelihood of a premature baby later** *(G. Papaevangelou of the University Hospital, Athens, Greece, in British Commonwealth Journal of Obstetrics and Gynecology, 1973).* After just one legal abortion, **the increase of later premature births is 14% more likely**. After two, it is 18%; and, after three, it is 24% *(Klinger, "Demographic Consequences of the Legalization of Abortion in Eastern Europe," International Journal of Gynecology and Obstetrics, September, 1971).*

As mentioned earlier, Czechoslovakia is one of the few countries that has openly investigated the situation and reported all of its findings. Premature births, the aftereffects of previous abortions, are so frequent that if a pregnant woman is known to have had an earlier abortion, she now receives very special care. This is what is done: If the physicians can see scar tissue on the cervix, they will sew the cervix closed [!] in the 12th or 13th week of pregnancy. The patient will then have to stay in bed in the hospital as long as necessary, which in some cases can mean months.

The problem is that **the cervical muscle, the ring muscle between the vagina and the womb, forms the base upon which the placenta, fluid, and growing fetus must rest.** It is the cervix that bears up this continually increasing weight. When an abortion is done, the cervical muscle must be stretched open to allow the surgeon to enter the uterus. But it is "green" (as the doctors call it)—strong, tight and difficult to open. Undoubtedly, in the process, some muscle fibers will be torn and cuts in the muscle wall will be made. In some of these abrasions, the cervix is permanently weakened. In many instances this results in an "incompetent cervix" which will open prematurely in later pregnancies. It is no longer strong enough to hold the heavier weight of a baby in later stages of growth.

Here is a statement from one of the very best hospitals in America:

"In our hospital amongst nulliparous (first pregnancy) patients undergoing suction curettage for therapeutic abortions, **about one in eight required suture [stitches] of the cervix because of laceration** occurring during the process of dilatation."—*R.C. Goodlin, M.D. of Stanford University Hospital, in "Collected Letters of the International Correspondence Society of Obstetricians and Gynecologists," June 15, 1971.*

"Dilatation" occurs when the ring muscle of the cervix is opened up—in abortions, forceably. Ironically, God has arranged it that in the course of natural events there is no problem. When there is a natural, or spontaneous, miscarriage, the cervix is automatically softened by certain body hormones triggered for this purpose. Also, when a woman who is not pregnant has a D & C for excessive menstruation, the cervix will be soft and easy to work with. The problem is people decide they want to do an abortion when nature says it is not necessary. Then the cervix is hard (because it is the "floor" of the womb and its growing contents); to open it can cause it great damage.

Another problem is later miscarriages:

Spontaneous miscarriages are more common after abortion, and are due to abortion-linked damage of the cervix and uterus.

"If that cervix is injured and this young woman who has undergone a therapeutic abortion has no problems at that time, **there may be problems encountered in future childbearing. She may have repeated spontaneous abortions** due to incompetent cervical Os . . Again, we don't even know yet whether we are causing in these women a situation which might exist for them to have repeated spontaneous miscarriages."—*Kenneth L. Wright, former abortion doctor, testimony before California State Health Department hearing, March 25, 1980.*

"There was a tenfold increase in the number of second trimester miscarriages in pregnancies which followed a vaginal abortion."—*Wright, et al., "Second Trimester Abortion after Vaginal Termination of Pregnancy," in The Lancet, June 70, 1972. (The Lancet is a British medical Journal.)*

Another problem is that of later tubal pregnancies:

Nearly every abortion involves scraping the womb, and many involve cutting up the baby into pieces; in the process, the womb receives cuts also. **A later fertilized egg cannot always locate properly in the walls of such a scarred, damaged womb**; so it fastens to the wall of the mother's tube instead. A few weeks later this will cause an acute abdominal condition because the growing child does not have room to expand. Internal hemorrhaging begins and an emergency operation takes place,—and the tube is removed. *(For more on this, see Amicus Curiae Brief, U.S. Supreme Court, 1971, Horan et al.)*

Still another problem is later sterility:

A large number of the women today who are having abortions are young women who later, after marriage, want to have children and raise a family. **Normally, only about 10% of all marriages will be childless due to sterility. But the situation is greatly changed if an earlier abortion has taken place.** Hilgers and Shearin report that **if a woman has had one legal abortion, the likelihood of permanent sterility thereafter will be increased 10%** *(Hilgers and Shearin, "Induced Abortion, A Documented Report," 1971, p. 30).* Similar reports from Poland, Holland, Russia, Norway, and Japan produce similar statistics.

But, again, the most open and frank confessions come from Czechoslovakia. In 1974, Dr. Bohumil Stipal, Deputy Minister of Health for the nation, said this: **"Roughly 25% of the women who interrupt their first pregnancy have remained permanently childless."** And remember that it is in Czechoslovakia where women receive excellent abortion care in fully staffed, well-equipped hospitals, not in an abortionist's office.

Every mother who is going to receive an abortion should be tested for Rh sensitivity. But much of the time this is not done. A very expensive substance, called *Rhogam*, could be given. But this costs extra money; abortion clinics are notorious for ignoring this matter. The problem here is that **induced abortion, even in the early weeks, can sensitize a mother; so that, in later pregnancies, her babies will have Rh problems**, need transfusions, and occasionally be born dead or die after birth.

Another problem is that of the higher incidence of birth injuries that can result from these premature births:

Czechs have found that the increased number of abortions is resulting in, first, an increased number of premature births. But this is producing a higher percentage of brain injuries at birth. Experts in the field suspect that the outcome of all this is that in countries willing to legalize "abortion-on-demand,"—the number of babies killed by abortion will be offset by **large numbers of defective babies caused by later premature births**, resulting from those earlier abortions.

Another problem is that of brain damage to children who are born later:

"A growing number of children [are] requiring special education because of **mental deficits related to prematurity**."—*"Czechs tighten reins on abortion," in Medical World News, 1973.*

"A growing number of children who are born prematurely must attend special schools because they are not as intelligent as their full term peers."—*Vedra and Zidovsky, in Medical World News, October 12, 1973.*

Still another problem associated with abortion is infant deaths during or concluding later pregnancies:

"Prematurity was a direct or contributory cause in over 50% of deaths during the first month of life. **The death rate of the premature baby ran about thirty times higher** than among full-term infants. If premature infants survive, **they face a higher frequency of the tragic aftermath of mental retardation, neurologic diseases and blindness**."—*Dennis Cavanaugh, M.D., "The Challenge of Prematurity," in Medical World News, February, 1971.*

McDonald and Auro, two researchers in the field, tell us that **the incidence of fetal death during pregnancy and labor is twice the normal amount,** if the mother has had a previous abortion.

Another problem is perforation of the uterus:

Horan, et al., in an *Amicus Curiae Brief,* submitted to the Supreme Court in 1971, detailed a list of other damages that could occur to the mother as a result of an abortion. These included **perforation of the uterus, which could result in peritonitis and occasionally death, but more frequently in emergency removal of the uterus.**

Rupture (breaking) of the uterus takes place in 6 percent of all women who become pregnant after hysterectomy abortions. Substantial risk of rupture was obvious in 26% of such women. The babies born to such women tended to be smaller.

Here are conclusions of other large studies:

A wealth of facts is available—but abortion lobbies and their supporting physicians, hospitals, and clinics would have us believe that an abortion operation is far safer than bringing a child through to birth. But quite the opposite is true. It is political today to be in favor of abortion; but the common decency of telling the truth about what abortion will do to the mother cries to be heard. This statement was published in a medical journal:

"There has been almost a conspiracy of silence in declaring its [abortion's] risks. Unfortunately, because of emotional reactions to legal abortion, well-documented evidence from countries with a vast experience of it receives little attention in either the medical or lay press. This is medically indefensible when patients suffer as a result. For these reasons, we summarize the facts of our experience in this division of Obstetrics and Gynecology. We are proud neither of the number of pregnancies which have been terminated nor the complications described."—*J.A. Stallworthy, et al., "Legal Abortion, A Critical Assessment of Its Risks," in The Lancet, December 4, 1971.*

The above was a report by a British teaching hospital. The statistics of complications to the mothers requesting and receiving abortions was as follows:

• **27% complication rate is due to infection.**

• **9.5% requires blood transfusions in order to survive.**

• **5% of the suction and D & C abortions results in a tearing of the cervical muscle.**

• **1.7% have major perforation.**

"It is significant that some of the more serious complications occurred with the most senior and experienced operators."—*Ibid.* The report concluded with this comment: "[Such complications] are seldom mentioned by those who claim that abortion is safe."—*Ibid.*

Another thorough source of data on this problem comes from the 1969 Survey of the Office of the Prime Minister of Japan. After the abortions were done, the immediate complications were somehow cared for; and the patients went home—this is what happened within the next several years:

• **20% to 30% suffered abdominal pain, dizziness, headaches, and similar problems.**

• **A 400% increase in tubal pregnancies (resulting in death to the fetus and partial sterility to the mother) occurred.**

• **14% had a subsequent pattern of habitual spontaneous miscarriage.**

• **9% were rendered totally sterile.**

• **17% suffered menstrual difficulties and irregularities that they had not had before the abortion took place.**

Next to Czechoslovakia, probably one of the most careful and thorough studies into this problem of abortion-related difficulties was made in England. The *Wynn Report* constitutes one of the most important collections of scientific papers detailing the kind of damage a woman can expect if she elects to have an abortion. Interestingly enough, this exhaustive report of physical and mental complications of induced abortion (in Great Britain and elsewhere) was produced by a group of pro-abortionist doctors. For further details of this study, we refer you to *"Some Consequences of Induced Abortion to Children Born Subsequently [to the abortion]," by Margaret and Arthur Wynn, Foundation of Education and Research in Child Bearing, in London, 1972.*

Lastly, another problem is the effect that this procedure has on the mind:

"The incidence of serious permanent psychiatric aftermath [from abortion] is variously reported as being from **between 9% and 59%.**"—*Report of the Council of the Royal College of Obstetricians and Gynecologists, England, 1966.*

Dr. Paul Gebhart was a foremost authority on the subject, due to his extensive research in the field of sexuality and abnormalities related to it. Testifying before the New Jersey legislature in 1968, he said there was evidence of **prolonged psychiatric trauma (mental and emotional damage) in 9%** of a sample of American women who had undergone abortion operations. That is **nearly one woman out of every ten.**

This is due to the fact that **people sense that killing other humans is wrong, whether born or unborn.** Japan is not a Christian nation; yet, in spite of abortion-on-demand for over a third of a century, a majority of women polled knew that it was wrong. A 1963 Aichi survey reported that **73.1% of women who had undergone an abortion procedure felt "anguish" afterward about what they had done.** A very large survey made in 1969 by the Prime Minister's Office reported that 88% of all women in the Japanese nation considered it to be bad. Guilt is a powerful agency keeping happiness from people who otherwise could have it.

We dislike the pain we cause an animal when we kill it, but think of what it must be when abortion doctors cause pain to a small human. During the first three months, they suck him to pieces with a vacuum cleaner; during the second three months, they cut him to pieces with a curved knife; and, during the third three months, they burn him to death with salt!

But, in this section, we have given our attention to the terrible toll on the poor mothers who have accepted the false report of their physicians who told them that what was eliminated is nothing important and doing so is perfectly safe for the mother.

What the mother is not told is the immense profits that physicians, willing to do such a procedure, make each year. They care neither for the baby nor the mother; they only want to rush through as many patients as possible each day, regardless of how many they damage in the process.

"Who are those with thee? . . The children which God hath graciously given thy servant."—*Genesis 33:5.*

"Children are an heritage of the Lord: and the fruit of the womb is His reward."—*Psalm 127:3.*

"The babe leaped in my womb for joy."—*Luke 1:44.*

"Behold, I and the children whom the Lord hath given me."—*Isaiah 8:18.*

"Thus saith the Lord, thy redeemer, and He that formed thee from the womb, I am the Lord that maketh all things."—*Isaiah 44:24.*

"Suffer little children, and forbid them not, to come unto Me."—*Matthew 19:14.*

"Thou knowest not what is the way of the spirit, nor how the bones do grow in the womb of her that is with child: even so thou knowest not the works of God who maketh all."—*Ecclesiastes 11:5.*

"Can a woman forget her sucking child, that she should not have compassion on the son of her womb? yea, they may forget, yet will I not forget thee."—*Isaiah 49:15.*

"Teach us what we shall do unto the child that shall be born."—*Judges 13:8.*

"Thy children shall be taught of the Lord."—*Isa 54:13.*

TERRORISM ALERT DANGERS - AND OTHER NEW LISTINGS

TERRORIST AND NEW DISEASES -

1 - TERRORIST DISEASES

Also: Terrorist Attacks (750)

RADIATION POISONING

— TERRORISM ALERT —

— The threat of "Dirty bombs" are becoming an increasing danger. Turn to page 750 for ways to protect yourself and your family.

SMALLPOX (Variola)

— TERRORISM ALERT —

— Smallpox is far more dangerous than anthrax, because it is so easily communicated. See pages 235 and 743 for information on this important subject.

ANTHRAX (Bacillus Anthracis)

— TERRORISM ALERT —

SYMPTOMS—Because terrorists distribute a fine, white powder to be breathed, *Pulmonary Anthrax* is the likely result. Early symptoms include low-grade fever, nonproductive cough, malaise, fatigue, myalgia, profound sweats, chest discomfort. Upper respiratory tract symptoms are rare.

One to 5 days after the onset of initial symptoms (but may be preceded by 1-3 days of improvement), there is an abrupt beginning of high fever and severe respiratory distress (dyspnia, stridor, cyanosis). Within 24-36 hours, shock and death occurs.

If the powder gets on the skin, but is not breathed, it can cause *Cutaneous Anthrax*, producing a pustule on the skin that breaks, discharging a heavy serum. In about 36 hours, that area becomes a bluish-black mass of dead tissue. This form is less dangerous if treated early. High fever, vomiting, profuse sweating, and extreme prostration result. Fatal if not treated.

CAUSES—The only cause in the Western World would be a terrorist attack. Fortunately, unlike smallpox, anthrax is not contagious. You have to breath the particles.

TREATMENT—Contact a physician immediately. If not treated early, death will follow.

EBOLA VIRUS (Ebola Hemorrhagic Fever)

— TERRORISM ALERT —

SYMPTOMS—The incubation period ranges from 2 to 21 days. Onset of illness is abrupt and characterized by fever, headache, joint and muscle aches, sore throat, and weakness, followed by diarrhea, vomiting, and stomach pain. A rash, red eyes, hiccups, and internal and external bleeding may occur.

CAUSES—This disease, named after a river in the Congo (formerly Zaire), is a severe, often fatal disease in humans and primates (monkeys and apes) that first appeared in 1976. It is mentioned here because terrorists may try to use it. There are three subgroups, but the symptoms are identical.

The primary cause is eating diseased animal meat. After the first person is infected, others can catch it from direct contact with his blood and/or secretions, while caring for him, or needle contact.

TREATMENT—Caregivers must use masks, gowns, and gloves. Contact a physician immediately.

BUBONIC PLAGUE (Pneumonic Plague)

— TERRORISM ALERT —

— Bubonic Plague is dealt with in detail on p. 571. If not treated within 24-48 hours, it is generally 100% fatal. Knowing what causes it will help you avoid it.

FOOT AND MOUTH DISEASE (Hoof and Mouth Disease)

— TERRORISM ALERT —

This is NOT a disease which humans can contract, and does not affect food safety; but, because terrorists can use it to infect livestock and thus cripple the economy, it is mentioned here.

SYMPTOMS—It infects pigs, sheep, goats, deer, and other cloven-footed animals, and is one of the most dreaded diseases by ranchers.

CAUSES—Although rarely fatal (except among young animals), it is highly contagious and cannot be stopped till it runs its course (2 weeks to 6 months) and heavily reduces the milk and meat supply.

TREATMENT—The virus can be killed by heat, low humidity, or some disinfectants. Although they them-

selves cannot contract it, people can spread the virus to animals. In England, large numbers of livestock have been slaughtered in order to stop the spread of the disease.

TERRORIST AND NEW DISEASES -

2 - NEW DISEASES

WEST NILE VIRUS (West Nile Encephalitis)

SYMPTOMS—*Mild case:* Light illness (fever, headaches, body aches). *Serious:* The virus begins with a low-grade fever and diarrhea. About a week later, it develops into encephalitis (brain infection). Permanent brain damage or death can result if others in your area are contracting the disease. Dead birds, especially crows, are another indication. It is in the elderly that the disease spreads to the nervous system and bloodstream.

CAUSES—This is an inflammation of the brain which is commonly found in Africa, West Asia, and the Middle East. It is caused by viruses transmitted by mosquitoes. The Middle East strain of the disease entered the U.S. through New York in 1999. Of those with severe illnesses, about 3% to 15% die. Fatalities generally occur from 55 years of age, onward.

Stay indoors at dawn, dusk, and early evening. When outside, wear long-sleeved shirts and long pants. Because mosquitoes can bite through thin clothing, spray clothing with repellents containing permethrin or DEET. (An insecticide with 35% DEET is best; higher than that provides no additional protection.) Insecticides are dangerous! Do not put them on the hands of children; for they may put them in their mouths or touch their eyes. Install window and door screens. *(Regarding DEET, read p. 559 and be warned!)*

TREATMENT—Contact a physician.

—See Mosquito Bite (560) and Viral Infections (227).

LYME DISEASE

— For a larger discussion of this very dangerous new disease, turn to p. 568.

CREUTZFELDT-JACOB DISEASE (Mad Cow Disease, Kuru)

— Mad Cow Disease has become a serious menace. Experts warn that it will become the most endemic plague of the 21st century, surpassing that of even AIDS. For more on this relatively new menace, turn to p. 483.

HUNTA VIRUS

SYMPTOMS—The first signs are fever and muscle aches, which appear 1-5 weeks after infection. Then comes shortness of breath and coughing. Once this phase begins, the disease progresses rapidly. It is potentially deadly.

CAUSES—This is a lung infection which results from exposure to rodent (especially deer mouse, but also rat) droppings in warm, dry climates. New Mexico and Arizona have the most cases of this recently introduced disease. The chances that a person will become infected are rare. Poorly maintained cabins in the Southwest are usual sources of infection. It is not contagious. Rats and mice shed the viruses through their urine which, when it dries, goes into the air and is inhaled.

TREATMENT—Residents in that area are acquainted with the symptoms; and they recognize that the disease is serious enough that the patient must be rushed to the hospital.

LA CROSSE ENCEPHALITIS

SYMPTOMS—Symptoms similar to West Nile Virus (WNV): headaches, fever, neck stiffness, and confusion.

CAUSES—This disease is similar to WNV, but less common. Unlike WNV which occurs primarily in older people, La Crosse occurs in children under 16. The disease is usually mild, but long-term effects can include learning disabilities, seizures, and permanent brain damage. La Crosse was first discovered in the U.S. in 1974. The disease is transmitted by infected mosquitoes and small animals, such as squirrels and chipmunks in oak forest areas.

TREATMENT—Contact a physician.

—See Mosquito Bite (560) and Viral Infections (227).

FIRE ANTS (Solenopsis Invicte)

SYMPTOMS—You will find mounds of loose dirt above ground. Worker ants are dark, small, highly variable in size, aggressive, and sting relentlessly. Be aware of your surroundings.

CAUSES—If you must work near fire ants, wear rubber boots and gloves with talcum powder. You will find mounds of loose dirt above ground. Phorid flies (which do not injure people) lay their eggs on fire ants and greatly damage their underground hives.

TREATMENT—If they crawl onto your skin, they first bite with their mandibles in order to anchor for the thrust of the sting. As soon as you feel this pinching action, quickly sweep the ants off before they actually sting and you can avoid most of the damage.

—See Ant Bite (561) and Fire Ant Bite (561).

KILLER BEES

SYMPTOMS—Many repeated bites from extremely ferocious bees.

CAUSES—In 1956, some colonies of African Honey Bees were imported into Brazil. When they escaped, they gradually spread northward. In 1990, they entered southern Texas and Arizona; and they entered California in 1995. They react to disturbances faster than honey bees, attack in great numbers, and chase people for a quarter mile. They have killed about a thousand people since 1956. They endanger the U.S. honey bee industry.

TREATMENT—Be aware of your surroundings, wear proper clothing, take cover as soon as possible.

SHARK ATTACK

SYMPTOMS—A deep bite. Tiger sharks are the only ones which eat people; the great white shark and bull shark only take a bite.

CAUSES—There is an increasing number of shark attacks on our coasts. It is thought that ocean warming may be causing the dangerous shark species to move farther northward. About 100 people are attacked yearly; about 35 die.

WHAT TO DO—

When you are in the water, do not carry dead fish. Do not swim alone, at night, early in the morning, or late in the evening. Stay out of murky water. Do not wear contrasting colors or flashing objects. Purchase an underwater attack gun.

When in shark waters, but no shark is in sight, watch for fins. If you see one fin cutting the surface, it is probably a porpoise. Two fins, one behind the other, is likely to be a shark.

If you spot a shark, stay calm, swim calmly and rhythmically back to land or boat. Keep the shark in sight, especially if you are underwater. In most shark attacks, the victim did not see the shark.

Sharks seem to shy away from people who look directly at them. If he comes at you, hit him on the nose. It is a very sensitive area, and he is likely to retreat.

The most dangerous sharks are the great white, tiger, and bull. Bull sharks are in the Mississippi River as far as Ohio.

FORMOSAN TERMITE

SYMPTOMS—This new pest does not injure people, but eats their homes. The most severe infestation is in New Orleans, where entire city blocks and live oaks are under attack. They eat wood faster than any other termite because they have larger colonies, produce more young, and are more aggressive. They have been known to eat through lead, asphalt, plaster, mortar, rubber and plastic—in order to get to wood. They eat houses and living trees. They live in nests made of chewed wood, saliva, and excrement. The nests may be located above ground. Each colony forages an area of several hundred feet.

CAUSES—The Formosan Termite first entered the U.S. a number of years ago. It is now in Louisiana, Hawaii, Mississippi, Texas, Alabama, Florida, Georgia, South Carolina, southern California, North Carolina, and Tennessee.

TREATMENT—They swarm at dusk in the spring and fall, and are attracted to light. Mud tunnels show their presence; also hollow-sounding walls and floors. Nests in walls may cause them to bulge outward. Check in crawl spaces under structures. Spray for termites.

SEVERE ACUTE RESPIRATORY SYNDROME (SARS)

SYMPTOMS—In the first phase, patients get a fever of 100.4° F. or more—with chills, headaches, and muscle aches. The SARS virus incubates in the body for 2-7 days before symptoms emerge. Within a week, most develop a dry cough and difficulty in breathing. About 10%-20% require a ventilator. There are muscle aches, loss of appetite, and diarrhea which is possibly severe. Chest X-rays are suggestive of pneumonia.

CAUSES—The cause of SARS is a previously unknown virus in the coronavirus family. Those viruses often infect animals; and, until now, they caused only mild illness in people. It is believed that the virus was in poultry and jumped to humans.

SARS is spread by direct person-to-person contact. Unlike influenza *(226)* or tuberculosis *(412)*, SARS is transmitted by droplets spread when an infected person coughs or sneezes, not merely through the air. It is not yet known how long an infected person remains contagious.

TREATMENT—Officially, there is no cure, other than bed rest and the care you would give for fevers *(233)* and virus infections *(227)*.

But a team of doctors (Leonard Horowitz and Joseph Puleo) have developed a natural remedy for coronaviruses; this includes (1) Lomatium dissectum root extract (which was used for centuries by American Indians to treat tuberculosis and other lung infections), (2) Devil's club (oplopanax horridus; which boosts the immune function), (3) Rosaceae plants (Amelanchier ainifolia, Rosa nutkana, or Saskatoons), and edible fruits used by the Indians for stomach problems. In 1995, they were shown to fight coronaviruses. For the tincture, contact 888-508-4787.

PREVENTION—Doctors and nurses caring for SARS patients should take proper safety precautions and wear masks, gloves, and gowns. Washing hands regularly is important. A mask should be worn in areas where there are many cases. Coronaviruses can survive for 24 hours on surfaces; so carefully remove and dispose of your mask after using it.

AVIAN FLU (BIRD FLU)

SYMPTOMS—Eye inflammation; possibly respiratory infections, especially pneumonia.

CAUSES—This is a virus infection which jumps from chickens to humans on chicken farms; and it is then transmitted by sneezed droplets to other people.

TREATMENT—If caught early, give treatment for flu *(226)*. But if a severe case, treat as for pneumonia *(409)*.

GUANARITO VIRUS

SYMPTOMS—Fever, shock, and hemorrhaging.

CAUSES—This is a deadly new virus that emerged when farmers in Venezuela began clearing millions of acres of forest lands in order to grow crops. The farms drew hoards of rats and mice which, through their droppings, brought a new virus. So far, a major outbreak in America has not occurred.

TREATMENT—Treat this viral infection as for fever *(233)* and pneumonia *(409)*. Also see viral infections *(227)*.

NIPAH VIRUS

SYMPTOMS—Fever, leading to a severe brain infection and death.

CAUSES—Another new disease (1999), Nipah virus, first appeared in Malaysia. The droppings of fruit bats, living in the rafters of pig farms, fell into hog drinking troughs. The virus soon spread from pigs to their keepers. The immediate outbreak ended when over a million pigs were slaughtered. There is reason to believe that the epidemic could reoccur and be carried to Western nations.

TREATMENT—Treat this viral infection as for fever *(233)* and pneumonia *(409)*. Also see viral infections *(227)*.

TERRORIST AND NEW DISEASES -
3 - SPECIAL REPORTS

SPECIAL REPORT:
GULF WAR SYNDROME

Veterans of the 1990-1991 Gulf War have experienced a number of puzzling, and often severe, symptoms. This special report will provide you with additional information on this problem.

Physicians at a number of research centers have studied intensively into the problem. For example, in 1999, physicians at the University of Texas Southwestern Medical Center in Dallas presented the results of brain scans performed on victims of the syndrome, which showed depleted brain cells in three areas of the brain.

The scans performed on 12 veterans with severe cases of the syndrome found brain cell losses of between 10%-25% in three regions deep inside the brain: (1) the basal ganglia of the left hemisphere, (2) the basal ganglia of the right hemisphere, and (3) the brain stem.

Scans performed on healthy veterans of the 1990-1991 Gulf War were normal.

Astoundingly, it was found that the amount of brain cell loss in the Gulf War Veterans was comparable to that of patients with brain diseases like Amyotrophic Lateral Sclerosis (ALS or Lou Gehrig's Disease, *475*), Multiple Sclerosis *(478)*, Dementia Praecox *(500)*, and other degenerative neurological disorders, even though the brain areas affected were different.

Examining this more closely, it was found that veterans with damage to the right basal ganglia appeared to share symptoms such as impaired sense of direction, memory lapses, and depression.

Brain cell losses on the left side appeared to cause more general confusion (including difficulty in understanding instructions, reading, solving problems, and making decisions). Left side damage also appeared to correlate with elevated levels of dopamine, a neurotransmitter involved in movement and emotion.

Damage to the brain stem appeared to account, at least in part, for loss of balance and dizzy spells.

These discoveries helped explain why veterans with Gulf War Syndrome show several different types of symptoms. The key appears to be which part of the brain was damaged by chemicals in the war.

There can be damage to one of the three areas, to two of them, or all three.

Earlier research disclosed three primary Gulf War Syndromes. Efforts were made to link sets of symptoms with different combinations of chemicals which were toxic to brain cells.

Syndrome 1 was commonly found in veterans who wore pesticide-containing flea collars. Apparently, the fumes from the flea collars were breathed into the lungs and produced impairment of cognition. Those veterans could not perceive or retain information as well as they could prior to going to Saudia Arabia.

Syndrome 2, called *confusion ataxia*, is the most severe and debilitating. It occurred among veterans who said they were both exposed to low-level nerve gas and had experienced side-effects from swallowing anti-nerve gas PB *(pyridostigmine)* tablets.

Researchers at the University of Texas concluded that it was the combination of low-level nerve gas exposure and the anti-gas tablets that caused the severe brain damage.

Syndrome 3 was characterized by central pain, and was found among veterans who wore both the insect collars containing high levels of DEET, an insect repellent, and had taken the anti-nerve gas tablets.

Tests were also done to verify whether the physical problems could have been caused by combat stress and post-traumatic stress. But no correlation was found to exist. The problem was the chemicals, not the war.

One out of every seven Gulf War veterans suffered later

symptoms from exposure to chemicals (100,000 out of 700,000 U.S. soldiers).

Meanwhile, other investigators found additional factors which were involved:

It was discovered that 15 separate chemical agents had been mixed together and put into artillery shells. These shells had earlier been given to Saddam Hussein who, at the time was thought to be our ally. Caches of those shells, when found by our military in southern Iraq during the Gulf War, were exploded in order to eliminate them. But they forgot to watch the wind, which was blowing south at the time (there is lots of wind in the desert)—and many of our soldiers were gassed by those nerve agents. Alarm systems, previously installed to give warning of the approach of chemical agents, did not function properly.

Another problem was *mycoplasma*, also released by those explosions. Some shells contained several strains of *mycoplasma* bacteria, which had been "engineered" by the U.S. military to be more deadly against an enemy.

Another difficulty was the anthrax vaccines which were given to our soldiers. There were contaminating factors in the vaccines which later caused many soldiers serious problems. It is feared that current supplies of Anthrax vaccine in the U.S. are also contaminated.

Another aspect was the oil smoke, from oil wells set on fire at Saddam's command, which many breathed.

Lastly, there were the excitotoxins *(748)*. Aspartame is marketed as *NutraSweet, Equal, Spoonful,* and *Equal Measure*. It is also found in MSG (monosodium glutamate). When the temperature of a product containing aspartame (so-called "diet foods") exceeds 86° F., the wood alcohol in aspartame converts to formaldehyde and then to formic acid. This produces methanol toxicity which mimics the symptoms of multiple sclerosis. Civilians are having problems with this and our Gulf War veterans did also. Diet drinks were the primary fluid intake for most of them, stored at temperatures approaching 120° F. It is extremely dangerous for pregnant women to drink aspartame. But it is not good for the rest of us either. Even sugar manufacturers are now adding aspartame to their sugar, because it is cheaper than the sugar. It is believed that every major food company now adds aspartame or MSG to its products, to make them more delicious. Read the labels on the food you purchase. For more on this, see the book by Russell Blaylock, M.D., *Excitotoxins: The Taste that Kills*. Also see *Defense Against Alzheimer's Disease*, by H.J. Roberts, M.D. Also available is the lengthy discussion of excitotoxins *(748)* in this *Encyclopedia*.

Summarizing the problem: Pesticide collars and sprays, nerve-gas inhalation, swallowing anti-nerve gas (PB) tablets, *Mycoplasma* infection from the nerve gas, anthrax vaccines, breathing smoke from burning oil wells, and drinking "diet" ("sugarless") soft drinks heated above 86° F.

SPECIAL REPORT:
MAD COW DISEASE

The following information is adapted from the author's very popular 176-page book, *International Meat Crisis*.

It is now known that all the diseases, listed below, are caused by people or animals eating diseased animals.

1 - ***Kuru*** was once epidemic in a certain tribe in New Guinea, because people had a tradition of eating their dead relatives. Gradually, they developed CJD (described below), which they called "Kuru." Researchers from Britain and America, in the early 1950s, brought it to their laboratories. When they could not figure out what it was (because, incredibly, it is misfolded proteins—called **prions**—instead of bacteria or viruses), their samples were tossed out. The disease gradually spread to animals. *(Also see pp. 483, 744.)*

2 - ***Bovine spongiform encephalopathy*** **(BSE)**. This is better known as **mad cow disease**. It is an infectious and incurable disease which affects the entire body while slowly attacking the brain and nervous system of cattle. Spongiform encephalopathy is Latin for "sponge brains." Cattle, which should normally eat only grass, get it from eating feed pellets which primarily consist of dead and often diseased cows, sheep, pigs, and horses. Like the Kuru people, they have been turned into cannibals. Livestock is fed this diet to hasten growth and increase profits for the meat industry.

3 - ***Scrapie*** is the form of BSE which is found in sheep. When the dead animals are fed to cattle, BSE is transmitted. Infected sheep scrape their sides and heads on trees, fence posts, or even barbed wire. The sheep got this disease because they were fed, not just grass, but pellets made from dead, diseased cows and sheep. So they were also forced to become cannibals, eating other sheep.

4 - ***Spongiform encephalopathies*** is the name given to this type of disease in various animals and in man. We get it from eating meat from farm animals which have contracted BSE by being fed diseased animals.

5 - Drs. Creutzfeldt and Jakob were researchers in Berlin who, in the early 1920s, gave their names to a strange disease, which was an extreme rarity, until the researchers brought Kuru samples to the Western World.

6 - By late 1994, a handful of people in Britain had died from the same disease, which by that time had been named ***Creutzfeldt-Jakob disease*** **(CJD)**. This is the name, in people, for **mad cow disease**. (It is pronounced *"Crewtzfelt-Yahkob."*) Although the disease existed as a rarity prior to the New Guinea research, it did not explode on the world until after Kuru was investigated.

7 - ***Alzheimer's disease*** is a non-spongiform disease, and is not at all related to BSE, CJD, or mad cow disease. But it figures strongly into the present discussion because there is clear evidence that many people, dying in America and elsewhere from *Creutzfeldt-Jakob disease* are being misdiagnosed as the victims of Alzheimer's. This is due to the fact that the symptoms of both diseases are practically identical prior to death.

Whether it be Kuru or CJD, patients first show symptoms of mental changes (such as problems with coordination, recent memory loss, and slurred speech). Sometimes obvious twitching of muscles can be seen, the facial expression becomes fixed, and the person may

stumble and fall over. Over the next few weeks, the person becomes confused and unaware, unable to read or recognize even close relatives. **The disease is very similar to Alzheimer's; yet the cause is very different.**

Physicians at the Veterans Administration Medical Center in Pittsburgh autopsied 54 patients who died of dementia. It was found that three had actually died of CJD (mad cow disease)! That is a shockingly high ratio; it means that large numbers of people in America are now dying each year from mad cow disease, misdiagnosed as Alzheimer's.

Since the 1970s, CJD has been able to hide behind Alzheimer's, which in recent decades has had an incredible rapid increase of cases. The truth is that many cases are mad cow disease—caused by eating cattle, sheep, and pigs; all of which are routinely fed feed containing diseased animal blood and (contrary to directives) diseased animal parts.

Alzheimer's is a genetic disease; and genetic diseases do not double and triple their rates. Yet Alzheimer's is doing just that. All the while you are being told that there is no "mad cow disease in America."

Especially in the Western world, which is able to afford commercially raised meat, BSE will, even more than AIDS, eventually become the most prevalent, virulent disease to hit this planet since the bubonic plague of the Middle Ages. You can only avoid it by refusing to eat anything which contains meat. BSE is a long-term disease; people generally die 7 to 35 years after contracting it.

Rendering (turning dead animals into animal feed) is only legal in America. In all other countries, the "cash for corpses" practice is illegal. In the U.S., until 1997, it was fully legal. This firmly established BSE and scrapie in U.S. farm animals. Since 1997, it is still legal to put blood in the animal feed; yet it is known that mad cow disease affects every part of the animal, even though symptoms most heavily affect the brain. Since that year, news reports have disclosed that many meat producers are ignoring the ban and continuing to feed animal parts to U.S. cows, sheep, pigs, chickens, and pond-raised fish. Only old or sickly animals are sold to the animal feed processors, to be rendered into animal feed.

As you may know, news reports tell of wild animals (especially elk and deer) which now have a variant of mad cow disease, called wasting disease. Hunters are known to have died from eating them.

It is, indeed, unfortunate that these problems exist. We deeply wish it were not so. But since the crisis is real, and gradually worsening, it is urgent that solutions be found. *(Also see pp. 483, 744.)*

Unlike the American public which keeps eating animals that are fed diseased blood and animal parts, people in Europe are frightened. Anxious to keep eating meat they are stealing elk, reindeer, ostriches, crocodiles, and other exotic meats from the zoos *(AP, Berlin, January 28, 2001)*. For more on this, and how meat eating increases the chances of other diseases, see the author's book, *International Meat Crisis*.

SPECIAL REPORT:
EXCITOTOXIN SYNDROME

Excitotoxins is the name that has been applied to a group of chemicals which is widely used as food additives, to enhance food flavors and substitute for sugar.

One of these is monosodium glutamate (MSG). Another is aspartame, which is marketed under the name, NutraSweet. *Also see Gulf War Syndrome (746).*

Eating foods containing excitotoxins can affect your child's nervous system, so that in later years he may have learning or emotional difficulties. They can cause brain tumors to develop. They can aggravate or even precipitate many of today's neurodegenerative brain diseases, such as Parkinson's disease *(480)*, Alzheimer's disease *(485)*, or the very rare Huntington's disease. People who eat foods containing excitotoxins are especially at risk if they have diabetes, or have ever had a stroke, brain injury, brain tumor, seizure, or have suffered from hypertension, meningitis, or viral encephalitis.

Both MSG and aspartame can cause the same brain damage. Many of the brain lesions caused by these products are irreversible and, in sufficient concentration, can result from a single exposure to these products.

MSG and aspartame are added to foods in order to increase the flavor and substitute for real sweetening. This sells more food and saves the food industry millions of dollars—since MSG and aspartame cost the manufacturers a lot less than real food. Unfortunately, the food industry frequently disguises these excitotoxin food additives (MSG and aspartame) under different names on food labels.

Here are food additives which always contain MSG: monosodium glutamate, hydrolyzed vegetable protein, hydrolyzed protein, hydrolyzed plant protein, plant protein extract, sodium caseinate, calcium caseinate, yeast extract, textured protein (including TVP), autolyzed yeast, hydrolyzed oat flour, corn oil.

Here are food additives which frequently contain MSG: malt extract, malt flavoring, bouillon, broth, stock, flavoring, natural flavors, natural flavoring, seasoning, spices.

Here are food additives which may contain MSG or excitotoxins: carrageenan, enzymes, soy protein concentrate, soy protein isolate, and whey protein concentrate.

In addition, protease enzymes of various sources can release excitotoxin amino acids from food proteins.

Next, we turn our attention to aspartame, which is an intense source of excitotoxins. Aspartame is a sweetener made up of three chemicals: Aspartic acid, phenylalanine, and methanolphenylalanine. It should be avoided at all costs! Do not eat or drink anything containing aspartame!

Aspartame is the technical name for the brand names of *NutraSweet, Equal, Spoonful,* and *Equal-Measure.* Aspartame was discovered by accident in 1965, when James Schlatter, a chemist of G.D. Searle Company, was testing an anti-ulcer drug. Aspartame was approved for

dry goods in 1981 and for carbonated beverages in 1983. It was originally approved for dry goods on July 26, 1974; but objections filed by neuroscience researcher Dr. John W. Olney and Consumer attorney James Turner (in August 1974), as well as investigations of G.D. Searle's research practices, caused the U.S. Food and Drug Administration (FDA) to put approval of aspartame on hold (December 5, 1974). In 1985, Monsanto purchased G.D. Searle and made Searle Pharmaceuticals and The NutraSweet Company separate subsidiaries.

Aspartame is, by far, the most dangerous substance on the market that is added to foods. Aspartame accounts for over 75 percent of the adverse reactions to food additives reported to the U.S. Food and Drug Administration (FDA). Many of these reactions are very serious (including seizures and death), as recently disclosed in a February 1994 Department of Health and Human Services report.

A few of the 90 different documented symptoms listed in the report as being caused by aspartame include: headaches / migraines, dizziness, seizures, nausea, numbness, muscle spasms, weight gain, rashes, depression, fatigue, irritability, tachycardia, insomnia, vision problems, hearing loss, heart palpitations, breathing difficulties, anxiety attacks, slurred speech, loss of taste, tinnitus, vertigo, memory loss, and joint pain.

According to researchers and physicians studying the adverse effects of aspartame, the following chronic illnesses can be triggered or worsened by ingesting aspartame: brain tumors, multiple sclerosis, epilepsy, chronic fatigue syndrome, Parkinson's disease, Alzheimer's, mental retardation, lymphoma, birth defects, fibromyalgia, and diabetes. *Also see Gulf War Syndrome (746).*

Dr. Russell L. Blaylock, a professor of Neurosurgery at the Medical University of Mississippi, recently published a book *(Excitotoxins: The Taste that Kills)* thoroughly detailing the damage that is caused by the ingestion of excessive aspartic acid from aspartame. Fully 99% of monosodium glutamate is glutamic acid. The damage it causes is also documented in Blaylock's book. Blaylock makes use of almost 500 scientific references, to show how excess free excitatory amino acids (such as aspartic acid and glutamic acid) in our food supply are causing serious chronic neurological disorders and a myriad of other acute symptoms.

The risk to infants, children, pregnant women, the elderly, and persons with certain chronic health problems from excitotoxins are great. Even the Federation of American Societies for Experimental Biology (FASEB), which usually understates problems and sides with the FDA, recently stated in a review that "it is prudent to avoid the use of dietary supplements of L-glutamic acid by pregnant women, infants, and children. The existence of evidence of potential endocrine responses *(i.e.,* elevated cortisol and prolactin) and differential responses between males and females would also suggest a neuroendocrine link and that supplemental L-glutamic acid should be avoided by women of childbearing age and individuals with affective disorders." Aspartic acid from aspartame has the same deleterious effects on the body as glutamic acid.

The exact mechanism is currently being debated. As reported to the FDA, acute reactions to excess free glutamate and aspartate include headaches / migraines, nausea, abdominal pains, fatigue (blocks sufficient glucose entry into brain), sleep problems, vision problems, anxiety attacks, depression, and asthma / chest tightness.

One common complaint of persons suffering from the effect of aspartame is memory loss. Ironically, in 1987, G.D. Searle, the manufacturer of aspartame, undertook a search for a drug to combat memory loss caused by excitatory amino acid damage. Blaylock is one of many scientists and physicians who are concerned about excitatory amino acid damage caused by ingestion of aspartame and MSG. A few of the many experts who have spoken out against the damage being caused by aspartate and glutamate include Adrienne Samuels, Ph.D., an experimental psychologist specializing in research design. Another is Olney, a professor in the department of psychiatry, School of Medicine, Washington University, a neuroscientist and researcher, and one of the world's foremost authorities on excitotoxins. (He informed Searle, in 1971, that aspartic acid caused holes in the brains of mice.) Also included is Francis J. Waickman, M.D., a recipient of the Rinkel and Forman Awards, and Board certified in Pediatrics, Allergy, and Immunology.

As mentioned earlier, aspartame is the technical name for the brand names, *NutraSweet, Equal, Spoonful,* and *Equal-Measure*. Here are some of the food products in which you will find this substance, which is 200 times as sweet as sugar: diet foods, soft drinks, cereals, instant breakfasts, sugar-free chewing gum, cocoa mixes, coffee beverages, juice beverages, frozen desserts, gelatin desserts, milk drinks, breath mints, laxatives, shake mixes, tea beverages, instant teas and coffees, topping mixes, nonprescription pharmaceuticals, tabletop sweeteners, wine coolers, yogurt, some multivitamin supplements. Aspartame is also found in sugar-free gums, sugar-free Kool Aid, Crystal Light, children's medications, and any product claiming to be "low calorie," "diet," or "sugar free."

Aspartame breaks down within 20 minutes at room temperature into several primary toxic ingredients: (1) DKP (diketopiperazine). When ingested, it converts to a near duplicate of a powerful brain tumor-causing agent. (2) Formic acid. This is the venom which ants inject when they sting you. (3) Formaldehyde. This is embalming fluid. (4) Methanol. This substance can cause blindness.

Here is additional information on methanol: It is poisonous, even when consumed in small amounts. It can cause inflammation of the pancreas and heart muscle, swelling of the brain, and/or blindness.

What should you do in order to not eat or drink anything containing aspartame or glutamic acid? The only effective solution is to avoid using all foods containing additives. Primarily eat fresh fruits and vegetables, whole grains, legumes, and nuts. These are the foods consistently recommended throughout this *Encyclopedia*.

TERRORIST ATTACKS

Following September 11, it is important that we be prepared for disasters of various kinds. There are things you can do to protect yourself and your family against (1) terrorist attacks, (2) natural disasters, and (3) individual emergencies. This *Emergency Manual* will provide you with important guidelines. This *Manual* will tell you of preparations you can make in advance and what to do when the crisis occurs.

Terrorist attacks—Keep alert to news broadcasts. The Homeland Security Advisory System is a color coded warning method. Red is severe. This means intelligence reports indicate a very strong likelihood of a terrorist attack, possibly in your area. Yellow is high, light green is elevated, blue is guarded, and green is low.

Possible terrorist acts include bombs and other explosive devices, biological agents, chemical agents, and radiation. It is known that foreign terrorists are also devising ways for cyber attacks—damaging electronic networks, including internet connections.

Biological attacks—*Smallpox* was eliminated in 1977; and the benefit of vaccination wears off in ten years. Terrorists may obtain packets from research institutes. It is far more dangerous than *anthrax (Bacillus anthracis)*, because it is so communicable. Fortunately, about 70% of those who contract smallpox recover *(see p. 235 for more on smallpox).*

Anthrax is caused by bacteria in the form of tiny spores. Fortunately, it cannot be transmitted from one person to another. When spread by terrorists, it is in a white powdery or crystalline form. If diagnosed early enough, it can be treated. The problem is that it may appear to only be a heavy flu.

Botulism, usually found in infected food, cannot be spread from one person to another. It can cause muscle paralysis if not immediately treated. Hospitals can obtain supplies of antitoxin from the CDC.

Pneumonic plague is an infectious disease sometimes found in rodents or fleas. It affects the lungs, similar to pneumonia. Early treatment is essential.

Foot and mouth disease (FMD) only affects hoofed animals (such as cattle and pigs), but not horses. Humans cannot contract it, even from eating infected meat. The problem is that terrorists could spread it to wipe out much of the food supply of a nation. Farmers should watch for excessive salivation, lameness, blisters, or reduced milk production in herds. They should report this to veterinarians or county agricultural officials.

Chemical attacks or spills—Chemical agents could be dispersed through the air; this would affect the lungs, blood, or nervous system.

Radiation—A "dirty bomb" is a small amount of explosive material, plus radioactive material. The blast would irradiate an area, with the intention of terror-

izing the public.

Suspicious mail—The experts advise that the cover of a suspicious letter or package is likely to have no return address, be addressed to a title (not a person), contain mispelled words, and possibly be mailed from outside the U.S. A suspicious package may be rigid or bulky, lopsided or uneven, have excessive tape, and show oily stains, discolorations, or crystalization on the wrapper.

Handle it with care. Don't shake or bump it. Isolate it immediately. Do not open, smell, touch or taste it. Treat it as suspect. Phone local law enforcement authorities.

What should be done—The best solution is to remain in very good health, eat right, and live right in order to build up your immune system *(see pp. 239-241)*. The first part of this *Encyclopedia* tells you how to do just that *(pp. 17-106)*. Be alert, listen to news reports, maintain an emergency food supply, keep an emergency kit. But begin by making a family disaster plan.

An immediate hazard—For a radiological, biological, or chemical bomb or agent: Do not handle, avoid exposure, evacuate immediately, call police, local Hazmat (hazardous materials) unit, and/or postal inspectors. If biological or chemical, wash hands with soap and warm water.

Family Disaster Plan—Discuss with your family the types of disasters that could occur in your area. Finding out what can happen is the first step. Explain to your children how to prepare and respond to each type of disaster. Discuss where to go and what to bring if advised to evacuate. Practice what you have discussed.

Select two meeting places in case you get separated in a disaster. One should be a safe distance from your home in case of a home fire; the other outside your neighborhood in case you cannot return home. Be sure to include any pets in the plan; since they are not permitted in shelters and some hotels.

Choose an out-of-state friend as a check-in contact for everyone to call. He should be located far enough away to be out of the danger area. Each one should have a copy of the e-mail and phone numbers of that person and one another. Give a copy to the head office at the children's school. Keep in mind that, in a crisis, e-mails can sometimes get through when phone calls are jammed.

Post emergency telephone numbers by every phone. Teach children how and when to call 911, police, fire, and which radio station to tune in for emergency information. Learn first aid and CPR. Your local Red Cross chapter teaches it. Teach all family members how and when to turn off gas, electricity, and water.

Check on your school's disaster plan. (Will they send children home, keep them there, etc.?) Be sure the school has updated data on how to reach you. Ask what type of authorization the school may require to release a child to someone you designate, if you are unable to get him. (During times of area emergency, phone lines may be jammed and unusable.)

EMERGENCY SUPPLY LIST

Water—One gallon a day per person. Household liquid bleach, to purify water.

Food—Ready-to-eat canned food (including peanut butter, bread, crackers, and multi-vitamins).

Clothing and bedding—Sturdy shoes or work boots, warm socks, rain gear, hats and gloves. Extra warm clothing. Thermal underwear. Blankets or sleeping bags.

Other supplies—*Items you would need whether you remain home or evacuate:* Mess kits, paper cups, plastic utensils, can opener. Batteries and battery-operated radio. Flashlight and extra bulbs. Signal flare. Paper and pencil. Plastic sheeting. Maps. Money, utility knife, paper towels. Plastic garbage bags and ties, and cell phone. Important family documents. Do not forget your Bible.

Items you would need if you remained at home: Duct tape, wooden matches in waterproof container, aluminum foil, plastic storage containers, needles and thread, shovel and other useful tools. Fire extinguisher. Plastic bucket with tight lid.

You will also need other special items if you have a baby or an elderly person is in your group.

Disaster supplies kit—You may have to evacuate or remain at home. Either way have some essential supplies on hand in an easy-to-carry container or two, such as a duffel bag or small plastic trash can. Include "special needs" items (infant formula, items for those with disabilities), first aid supplies (including prescription medications), change of clothing for each one, a sleeping bag or bedroll for each, battery-powered radio and extra batteries, bottled water, and tools. Include some cash and copies of important family documents (birth certificates, passports, licenses). Outside your home in a safe location (safe-deposit box or in the home of a family member or friend), keep copies of essential documents (powers of attorney, birth and marriage certificates, insurance policies, life-insurance beneficiary designations, your will).

If you are in a position to do so, consider moving to a safer location. Some parts of the nation, especially large cities and certain strategic sites, are more likely to receive terrorist attacks than others.

INDIVIDUAL EMERGENCIES

In each of the following instances, provide emergency help; and, if the situation is serious, call 911 and get him to the hospital.

WOUNDS—*Also see p. 245.*

Call a physician if you cannot wash all the debris out of the wound, if you think stitches may be needed (especially if the wound is in a place where

scarring should be minimized), and if you see any signs of a serious infection (redness, soreness, swelling, red streaks, weeping of pus, or redness that extends more than a finger width beyond a cut).

Call EMS (911 for emergency medical service) if the bleeding is bright red or spurts from the wound, if the wound is very deep or large, if the victim is in severe pain, or you suspect serious internal damage.

Stop the bleeding by applying pressure with a clean, absorbent cloth or, if cloth is unavailable, your fingers. If the blood soaks through, apply a second bandage on top. Do not take off the first one; for to do so would disturb the clotting that has already taken place. If bleeding does not stop, raise the wound above the heart level. Once bleeding stops, clean the wound gently with soap and water, or just water. It is very important to get all the debris and dirt out.

Apply an antiseptic substance to the wound. Goldenseal powder is good. Pure white sugar draws out poisons. Hydrogen peroxide cleans out wounds. Wrap the wound firmly in a cloth or bandage. Do not cut off circulation.

A major open wound—Cover the wound with a dressing; then press your hand firmly against it. Elevate the wound above the level of the heart. Cover the dressings with a roll bandage (like Ace), to hold them in place. If bleeding does not stop, add additional dressings over the roll bandage. Also squeeze a pressure point (you are pressing an artery against a bone). These points are in the bottom upper arm and where the leg bends at the hip. Once the bandages and pressure point are maintained, have someone call EMS, if they have not already been called.

If a body part is torn off—Try to find the part, wrap it in a clean dressing, and place it in a plastic bag. Put the bag on ice, but do not freeze. Take the part to the hospital.

If an object is impaled in a wound—Do not try to remove it; for an artery might be opened. Bandage many dressings around the object, to immobilize and support it in its position.

Injury to the mouth—If injury does not involve the head, neck, or spine, have the victim sit with the head slightly tilted forward. If the victim is unable to reach this position, place him on his side. This ensures the blood drains from the mouth. If his lip is broken, place a clean rolled dressing between the lip and gum. Applying cold can help.

If a tooth is knocked out—Place a small roll of sterile gauze in the gap left by the missing tooth. Pick up the tooth by the crown—not touching the root,—and try to place the tooth back in its proper position in the socket. If this cannot be done, put the tooth in a container of cool, fresh milk; if this cannot be done, put it in water.

Splinters—A small splinter in the skin can be removed with tweezers. If it is in the eye, do not touch; immediately call for help.

BURNS—*(Also see p. 252).*

First degree (superficial) burns only involve the top layer of skin. This is red, dry, and usually painful. Included here are most sunburns. They usually heal in 5-6 days.

Second degree burns involve the top layers of skin. It is red with blisters that may open and weep clear fluid, giving the skin a wet appearance. It may also look mottled. Swelling often occurs. It usually heals in 3-4 weeks.

Third degree burns destroy all layers of skin and any or all of the underlying structures (fat, muscles, bones and nerves). It appears brown or black (charred) with the lower tissues possibly appearing white. It may be very painful or painless if nerves have been destroyed. Immediate medical attention is needed.

Thermal burns—Remove the victim from the source of burning. Cool the burn with large amounts of cool water. Never use ice, except on small superficial burns, because it causes a loss of body heat. If the area cannot be immersed, soak a clean cloth and apply it to the burn, being sure to continue adding water to keep the cloth cool.

For minor burns, wash the burned area with soap and water; keep it clean and apply vitamin E oil.

For severe burns, lay him down unless he is having trouble breathing. Try to raise the burned area above the level of his heart. Protect him from drafts. Take him to a physician or call 911. If able to do so, cover the burn (using dry, sterile dressings or a clean cloth) in order to prevent infection and reduce pain. Bandage loosely.

Chemical burns—These can be lab chemicals, household bleach, garden sprays, paint removers, etc. Remove the chemical from the skin or eyes immediately, by flushing the area with large amounts of cool, running water until EMS arrives. Remove any clothes with chemicals on them, being careful not to spread the chemical to other body parts or to yourself.

Electrical burns—These can be caused by power lines, lightning, defective electrical equipment, and unprotected electrical outlets. Call 911. Do not go near the victim if he is in contact with a power source, unless the power source has been turned off. The burn itself will not be the major problem. If he is unconscious, check breathing and pulse. Check for other injuries and do not move him (he may have spinal injuries). Cover the burn with a dry, sterile dressing. Do not cool the burn area. Prevent him from getting chilled. There may be two wounds: the first where the current entered the body and, second, where it left it; and both may be deep.

Solar (sun) burns—*See p. 253.*

BROKEN BONES—*See p. 504. Broken ribs, see p. 508.* Here is additional information on severe

breaks:

Call 911: If the victim has a severely broken bone, do not move him unless it is absolutely necessary. If you think he may have had a head or spinal injury, do not move him. Leave him lying flat.

Signs of head and spine injuries: changes in consciousness, vision and breathing problems, nausea and vomiting, inability to move a body part, a steady headache. Other indications include tingling or loss of sensation in hands, fingers, feet, or toes. Also blood in ears or nose, seizures, severe pain. There is pressure or bleeding in head, neck, or back. And there is bruising of the head and loss of balance.

If you must move him, you must immobilize the injured body part. One way is to splint it. But you must do this without hurting him; and always splint the part in the position you found it. Splint the injured area and the parts above and below it. In some instances, you may use another body part (putting the two legs together and wrapping them). A soft splint can be made from folded blankets or towels, or use a triangular bandage to make a sling to support an arm, wrist, or hand. A rigid splint can be made with folded magazines, newspapers, cardboard, or metal strips. Use several folded triangular bandages to secure the injured part to the splinting material; tie them securely, but not too tightly. Apply ice, raise the injured part, and prevent him from getting chilled or overheated. Reassure him that everything will be okay.

SHOCK—Signs of shock include restlessness, irritability, and altered consciousness. Also pale, moist, cool, and eventually blue skin. There is rapid breathing and rapid pulse. Call EMS immediately. Have him lie down. Control any bleeding. Prevent him from becoming chilled or overheated. Reassure him. Elevate the legs about a foot, unless you suspect head, neck, back injuries, or broken bones in the hips or legs.

This is a life-threatening condition that can be caused by severe bleeding, injury, or sudden illness. The circulatory system is not functioning properly; major organs cannot work, triggering a series of reactions called shock. When a severe injury or illness occurs, the blood is sent to the vital organs (brain, heart, lungs, liver, etc.). But then the arms and legs begin failing, so the blood is sent there—away from the vital organs. The victim goes unconscious, breathing slows, heartbeat slows and may stop. Without proper medical treatment, a person in shock will die.

HEART ATTACK SIGNALS—If victim experiences any symptoms of a heart attack, call EMS immediately. *What to do during a heart attack: Read this in advance, so you will know what to do! (419). How to prevent them (418-439). How to give CPR (753). How to do Rescue Breathing when unconscious (755).* ***Here are the signals of a heart attack:***

Persistent pain or discomfort in the chest: This constant pain can range from a mild discomfort to a very painful crushing sensation in the chest. Common descriptions of this chest pain include pressure, heaviness, squeezing, tightness, or aching. The pain is usually located in the center of the chest. And it can spread to the shoulder, arm, neck, jaw, or back. The situation is especially serious if the pain is severe, does not stop after 10 minutes, or is still felt during rest.

Difficult breathing: This may accompany chest pains along with pale or bluish skin and heavy sweating.

Changes in pulse rate: The pulse rate may be irregular, or may be faster or slower than his normal pulse rate.

If, instead, the symptoms are a brief stabbing pain, or pain that gets worse with bending or breathing deeply,—the problem is probably something other than a heart condition.

If the person is conscious, ask him if he has a history of heart disease or if he is on any medication for a heart condition. Keep him calm by remaining calm yourself. Be alert to any changes in his condition; and be prepared to perform cardiopulmonary resuscitation (CPR).

HOW TO GIVE CPR—This is given if the victim's heart stops. One problem is that it is generally not successful. Usually only experts with a defibrillator (which electrically shocks the heart into starting again) are able to get it started. Also, CPR often breaks the ribs. So the victim (if he survives) can later sue you—unless you have CPR certification (and are thus protected by the Good Samaritan Act). Here is the procedure:

CPR on an adult: If, during the preliminary check, you determine that the victim is not breathing, give him 2 slow breaths (see rescue breathing, below). If you find that the victim has no pulse, CPR should be started.

Correct hand position: First, kneel next to the victim's chest. Find the notch at the tip of the breastbone where the lower ribs meet the sternum (the xyphoid process). Do not push directly down on this, or you may rupture his liver and perhaps some other vital organs. In order to avoid doing this, place your middle finger on this notch. Then place the index (first) finger of the same hand next to your middle finger. That way, you are at least a good two fingers on the rib cage, away from the xyphoid. Next, place the heel of your other hand on the victim's sternum next to your index finger. Now place your first hand directly on top of the other one and interlace your fingers.

Straighten your arms and lock your elbows. Your shoulders should be directly over your hands. Each chest compression should push the sternum down 1½ to 2 inches.

Count aloud, "one and two and three, etc." as

you do the compressions; and maintain a smooth, steady rhythm. When you give breaths, be sure to open the victim's airway with a head tilt and a chin lift.

Do cycles of 15 chest compressions and 2 slow breaths.

After 4 continuous cycles, check for a pulse. If there is no pulse, continue CPR; begin with chest compressions and recheck for a pulse every few minutes. If you do find a pulse, check for breathing. If the victim has a pulse but is not breathing, go to rescue breathing (below).

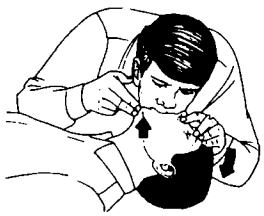
CPR on a child: If during your initial check, you determine that the child is not breathing, give 2 slow breaths (see rescue breathing, 755). If you find that the victim has no pulse, you will want to begin CPR.

Correct hand position: First, kneel next to the victim's chest. Find the notch at the tip of the breastbone where the lower ribs meet the sternum (the xyphoid process). Do not push directly down on this, or you may rupture his liver and perhaps some other vital organs. In order to avoid doing that, place your middle finger on this notch. Then place the index

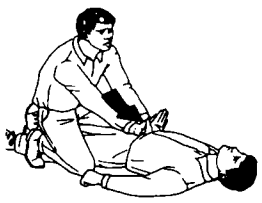
---

IF CONSCIOUS, BUT CHOKING — Give abdominal thrusts until the object comes out. ***(755)***

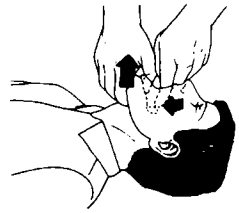
IF UNCONSCIOUS AND NOT BREATHING, DO RESCUE BREATHING — Give 1 slow breath about every 5 seconds. If your breaths are not going in, retilt head and give more breaths. ***(755)***



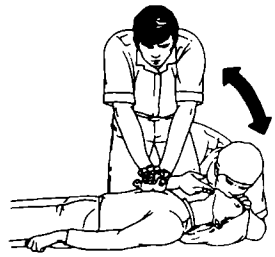
IF AIR STILL WON'T GO IN — Give up to 5 abdominal thrusts. ***(755)***



Then pause and, with a hooked finger-sweep, remove any object from his mouth. Then give two slow breaths to check if throat cleared. If not, give 5 more thrusts ***(756)***



IF NOT BREATHING, AND THERE IS NO PULSE — GIVE CPR Count aloud, "one and two and three, etc." as you do the compressions. Maintain a smooth, steady rhythm. When you give breaths, be sure to open the victim's airway with a head tilt and a chin lift. ***(753)***



Do cycles of 15 chest compressions and 2 slow breaths. After 4 continuous cycles, check for a pulse. If there is no pulse, continue CPR. Begin with chest compressions and recheck for a pulse every few minutes. If you do find a pulse, check for breathing. If the victim has a pulse but is not breathing, go to rescue breathing.

(first) finger of the same hand next to your middle finger. That way, you are at least a good two fingers on the rib cage, away from the xyphoid. Next, place the heel of your other hand on the victim's sternum next to your index finger.

So far, you have done the same hand movements as for an adult. Now place your other hand, not on the other hand, but gently on the child's forehead to maintain an open airway.

Lock your elbow and push straight down, with your shoulder directly over your hand. Each compression should push the sternum down 1 to 1½ inches.

Count aloud, "one and two and three, etc." as you do the compressions. Maintain a smooth, steady rhythm. When you give breaths, be sure to open the victim's airway with a head tilt and a chin lift.

Do cycles of 15 chest compressions and 1 slow breath.

After 4 continuous cycles, check for a pulse. If there is no pulse, continue CPR. Begin with chest compressions and recheck for a pulse every few minutes. If you do find a pulse, check for breathing. If the victim has a pulse but is not breathing, go to rescue breathing (below).

CPR on an infant: If during your initial check, you determine that the infant is not breathing, give 2 slow breaths (see rescue breathing, below). If you find that the victim has no pulse, you will want to begin CPR.

Correct hand position: First, kneel beside the infant, placing one hand on his head in order to maintain an open airway. Imagine a line across the infant's chest between the infant's nipples. Place your index finger on the sternum just below this imaginary line. Now place pads of the next two fingers on the sternum next to your index finger. If you can feel the notch where the lower ribs meet the sternum (the xyphoid process), move your fingers up a little bit.

Raise your index finger and use the pads of the two fingers next to your index finger to compress the infant's chest ½ to 1 inch. Maintain a smooth steady rhythm ("one and two and . .") while doing compressions. Be sure to do a very slight head tilt and chin lift, to open the airway when giving breaths.

Do cycles of 5 chest compressions and 1 breath.

After 1 minute of continuous CPR (about 12 cycles), check the pulse on the front side of his neck. If there is no pulse, continue CPR, beginning with chest compressions and rechecking for a pulse every few minutes. If you find a pulse, check for breathing. If the victim has a pulse but is not breathing, go to rescue breathing (below).

When to stop CPR: You stop if another trained person takes over CPR for you, if more advanced medical personnel take over, if the scene becomes unsafe, or if the victim's heart starts beating.

HOW TO DO RESCUE BREATHING FOR UNCONSCIOUSNESS

—When a person stops breathing, there are a crucial few minutes that pass before brain damage and death occur. In a child, this time frame is even shorter. (So, if alone, you must give a child several minutes of breathing before you dare stop to phone 911.) Rescue breathing is the act of breathing for a person who is not breathing, but who has a pulse. Get someone to call 911.

On an adult: You are advised never to perform rescue breathing on a stranger unless you have a resuscitation mask, so you will not catch a fatal disease.

Use a head tilt by lifting his chin to keep his airway open. Use your thumb and index finger to gently pinch his nose shut. Place your mouth over his mouth, making a seal. Breathe slowly into him, watching to see his chest rise. Pause between each breath to let the air flow out. If his chest does not rise and fall, retilt the head and try again. If the air still does not go in, he has an obstructed airway; and you must preform abdominal thrusts *(Heimlich maneuver)* to force it out. (See *Adominal Thrusts for Choking*, below.)

After giving 2 breaths, check for a pulse. If he has a pulse but still is not breathing, continue rescue breathing. Give 1 breath every 5 seconds. Count the seconds as "one-one thousand, two-one thousand," etc., taking a breath on "four-one thousand" and breathing into him on "five-one thousand." Check for a pulse after about 1 minute of rescue breathing (about 12 breaths). If he has a pulse but still is not breathing, continue rescue breathing and check the pulse every minute. If his pulse stops, it is best that CPR begins.

On an infant or child: You do not need to tilt his head as far back as an adult's. A very slight tilt should allow air to go in. Give a child or infant 1 slow breath every 3 seconds. On an infant, you must make a seal over the infant's mouth and nose. After 1 minute of rescue breathing (about 20 breaths), check for a pulse. If the victim has a pulse but still is not breathing, continue rescue breathing and check the pulse each minute. If breaths do not go in, retilt and try again. If they still do not go in, you must do abdominal thrusts. If the pulse stops, CPR can be started.

Stop rescue breathing if he begins breathing on his own, if he has no pulse, if more advanced medical personnel take over, or you are too exhausted to continue.

A person can stop breathing due to sudden illness, allergy, a serious accident, or some other cause.

HOW TO DO ABDOMINAL THRUSTS FOR CHOKING

—Something is obstructing a person's throat, so he cannot breathe.

This can also be used on a drowning person who is laid flat in order to get the water out of his lungs, before breathing in air.

Conscious, choking adult: If a person is clutching his or her throat with both hands, he is making the universal sign for choking. If he can cough or talk, encourage him to continue coughing. Once he can no longer talk or cough, you must clear the obstructed airway. To do this, you must perform the *Heimlich maneuver*, also known as abdominal thrusts.

Stand behind the conscious, choking adult, wrapping your arms around his or her waist. With one hand, make a fist. Place the thumb side of the fist against the victim's abdomen just above the belly button. Be sure your hand is far below the tip of the breastbone. Put your other hand over the fist and give quick upward thrusts into the victim's abdomen. Continue giving thrusts until the object blocking the airway is dislodged and the victim begins to breathe, or until the victim becomes unconscious.

If alone, lean over an upright chair and give them to yourself.

Unconscious adult: You may not at first know what the problem is. If you try rescue breathing (described on page 755) and your breaths would not go in an unconscious adult, and you retilted the head and tried again but the breaths still would not go in, you must assume his airway is obstructed.

He may have earlier been conscious and, while choking, went unconscious. Lower him to the floor on his back. Perform a head tilt and chin lift to try to open the airway, and attempt to remove the obstruction by sweeping it out of the victim's mouth with your finger. This is called a *finger sweep*. Always use a hooking action, being careful not to lodge the object in further. Perform a head tilt and a chin lift and give 2 *slow* breaths. If your breaths still do not go in, go to abdominal thrusts.

Straddle one or both of the victim's thighs. Place the heel of one hand on the victim's abdomen, just above the belly button, yet far below the tip of the breastbone. Place your other hand on top of the first, interlacing your fingers, and give 5 quick upward thrusts. Then do a finger sweep and give 2 *slow* breaths. If air still will not go in, continue giving 5 abdominal thrusts, a finger sweep, and 2 slow breaths. Continue giving thrusts until the object is dislodged, air goes into the victim, or trained medical personnel takes over. If the victim is not breathing but has a pulse, you must perform rescue breathing. If he is not breathing and does not have a pulse, go to CPR.

Conscious, choking child: Follow essentially the same procedure as for a conscious adult.

Unconscious child: Follow the same procedure as for an unconscious adult.

Conscious, choking infant: You may see that the infant is conscious and cannot breathe, cough, or cry. You must give 5 back blows and 5 chest thrusts in this manner:

Place the infant face up on your forearm. Put your other arm on top of the infant. Use your thumb and fingers to hold the infant's jaw, sandwiching the infant between your forearms. Turn the infant over, face down on your forearm. Place this arm down on your thigh, being sure that the infant's head is lower than his or her chest. Using the heel of your hand, give 5 back blows between the infant's shoulder blades. Be sure to hold the infant's jaw with your thumb and fingers to stabilize his head.

You must turn the infant back over to give chest thrusts. Place your free hand and forearm across the infant, sandwiching it between your forearms and supporting his or her head. Turn the infant over onto his back and place your arm down on your thigh, making sure the infant's head is lower than his chest. Imagine a line across the infant's chest between the nipples. Place your second (middle) finger on the infant's breastbone just below the imaginary line. Place the pads of the next two fingers just under the line. Raise your second finger, and if you can feel the notch at the tip of the infant's breastbone, move your fingers up a little bit. Then let the breastbone return to its normal position. Give 5 compressions. Continue giving back blows and chest thrusts until the infant can breathe, cough, or is conscious.

Unconscious infant: If the infant was a conscious, choking victim who became unconscious, place him down on his back. You may have determined, during the initial check and even after retilting the head and trying again, that air would not go in; then perform 5 back blows and then 5 chest thrusts. Do a foreign body check: Open the infant's mouth. Holding the tongue and lower jaw, lift them upward and look for an object. If you do see an object, do a finger sweep to remove it with your little finger. Then give 2 *slow* breaths. If air still will not go in, continue doing back blows, chest thrusts, foreign body check, and 2 *slow* breaths until the infant starts to breathe or cough or air goes in. If the infant is not breathing but has a pulse, you must perform rescue breathing. If the infant is not breathing and does not have a pulse, go to CPR.

Conscious, choking pregnant woman or obese person: If a choking person is noticeably pregnant or too obese for you to wrap your arms around in order to perform abdominal thrusts, you must give chest thrusts instead.

Stand behind the victim, placing your arms under his armpits and around his or her chest. Make a fist with one hand and put the thumb side of the fist against the center of the victim's breastbone. Make sure your thumb is on the breastbone, not the ribs, and that you are not near the tip of the breastbone. Put your other hand over the fist and give quick inward thrusts. Continue giving thrusts until the object is dislodged or the victim becomes unconscious.

Unconscious pregnant woman or obese per-

son: Lower the victim gently onto his or her back on the floor. Or you may have determined during the preliminary check, even after retilting the head and trying again, that air would not go into the victim. You must give chest thrusts.

Kneel beside the victim, placing one hand on the center of the victim's breastbone and then placing your other hand on top of it. Give 5 quick thrusts, compressing the chest 1½ to 2 inches. Do a finger sweep, open the airway with a head tilt and a chin lift, and give 2 slow breaths. If air still will not go in, continue giving chest thrusts, finger sweeps, and 2 slow breaths until the object is expelled and air goes in. If the victim is not breathing and has a pulse, go to rescue breathing *(755)*. If the victim is not breathing and does not have a pulse, CPR would be next.

NATURAL DISASTERS

FLOOD—Find out if you live in a flood plain. If so, do the following: Learn the safest route to high, safe ground if you have to evacuate quickly. Have an emergency supply kit ready. It should include a portable radio, emergency cooking equipment, and flashlights.

If you live in a frequently flooded area, have shovels and sandbags. Fill the bags half full of sand immediately before or during the storm. (If done earlier, the bags will rot.) They will not completely seal out water. Keep children away from creeks, streams and storm drains. Water can rise fast.

Have check valves installed in your home's sewer traps, to prevent flood waters from backing sewage up into house. Use large corks or stoppers to plug showers, basins, etc. Move valuable things to upstairs floors. Fill bathtubs, sinks, and jugs with clean water, in case water becomes contaminated. If instructed to do so by local authorities, turn off all utilities. Be prepared to evacuate.

If outdoors, climb to high ground and stay there. If moving swiftly, even water 6 inches deep can sweep you off your feet. If in a car and you come to a flooded area, turn around and go another way. If car stalls, immediately leave it and go to higher ground. If indoors, move to the second floor or the roof. Take warm clothing, flashlight, and a portable radio with you. Do not try to swim to safety. Do not touch any electrical equipment, unless it is in a dry area and you are standing on a piece of dry wood while wearing rubber gloves and rubber-soled boots or shoes.

Afterward, throw away all food, including canned goods, that has come in contact with flood waters—for they have harmful bacteria. Until public drinking water is declared safe, boil drinking and cooking water 10 minutes before using it.

TORNADO—Keep alert to weather news. Know how likely you are to have a tornado in your area. In case of trouble, a storm cellar provides the best protection against a tornado. The next best place is a basement corner, a small interior room, or lay flat beneath a table or bed, away from windows. It is best to crouch in the southwest corner; since debris usually falls in the northeast corner. If you are in a car, do not try to outrun a tornado. Get out and take shelter in a ditch or on low ground, but not under a tree.

HURRICANE—Read the sections, above, on floods and tornadoes. Watch news reports. Have an emergency kit, board up all windows, and go inland. The full fury of a hurricane only affects the 12 miles near the ocean; inland, the danger is from flooding.

EARTHQUAKE—In advance, know the safe spots in your house (inside walls, under sturdy tables, in stout doorways. And be sure those places are away from windows, fireplaces, tall furniture). It is not the shaking that can kill or injure; but it is the collapsing walls, flying glass, and falling objects. If inside, stay there. Take cover in a safe place—and hold on. If outdoors, move into the open—away from buildings, street lights, and utility wires. Stay there until the shaking stops. If in a car, slow down, stay in the vehicle, and move to a clear area away from buildings, trees, overpasses, or utility wires. When the shaking stops, proceed with caution; and avoid bridges or ramps that may have been damaged. Be prepared for aftershocks which might come even months later. They can be strong enough to topple more buildings and sever utility lines.

WILDFIRE—If you live near wildlands or woodland areas, be on guard. Have a portable gas-powered water pump, in case electricity fails. Install hose spigots on at least two sides of the house and near remote buildings, like garages. Install more outlets at 50 feet from the home.

Have a garden hose long enough to reach anything that is burning. It is good to have a small pond you can draw water from. Have a ladder as tall as your roof, rake, ax, handsaw or chainsaw, shovel, and buckets.

Be ready to evacuate. Tune radio to fire reports. Until then, protect your home. Wear sturdy shoes, protective clothing, gloves, and handkerchief to protect your face. Back car into garage or in open space, facing direction of escape. Leave key in ignition. Shut doors and windows, but leave unlocked. Disconnect automatic garage door openers. Shut off gas at meter, turn off pilot lights. Open fireplace damper; close fireplace screens. Move flammable furniture away from windows. Turn on a light in each room to increase visibility in heavy smoke. Turn off propane tanks. Put lawn sprinklers on roof and above ground fuel tanks. Turn them on and wet everything down. Wet or remove shrubs within 15 feet of house.

When you return after the fire, check roof and attic immediately and put out any sparks or embers. Watch for hot spots in the area that may start burning again. Recheck the house for hours afterward.

INTRODUCTION

Anatomy is the study of the structure of the human body; and ***physiology*** is the study of how it functions. But, since the word physiology is frequently used to summarize both, it will be so used in this chapter.

This is a very important study. We need to better understand the house we live in, so that we can give it better care.

As you read this section, be aware of the fact that you are reading an astounding, ongoing miracle. Two tiny cells come together—and grow into all this utter complexity of a human being!

It is a basic theory of evolution that everything in our world was produced by purposeless, random effects. Sloshing seawater mixed with sand, one day, and produced the first organisms. These creatures kept changing into ever larger ones, till we have our present world of living plants and animals. That is the theory.

Yet, in the study of the human body, as in every other aspect of the natural world, you will find that each tiny detail reveals super-human planning. Only God, the Creator of heaven and earth, could make the human body! Read and believe.

BODY SYSTEMS

Tissues—*Cells* of the same kind are joined together to form ***tissues***. There are as many tissues as there are kinds of cells. Every tissue has a special function.

- ***Epithelial*** - Covers surfaces and lines cavities (skin, hair, nails, lining of parts of the body, including gastro-intestinal tract, urinary tract, etc.).
- ***Connective*** - Anchors and holds other tissues together (ligaments, tendons, cartilage, bone).
- ***Muscular*** - Contracts (muscle tissue).
- ***Nerve*** - Sends and receives sensations (brain, spinal cord, nerves).
- ***Blood*** - Carries food and oxygen to the cells, and carries wastes away. Through a network of blood vessels, it fights infections and poisons.

Organs—Different kinds of ***tissues*** are grouped together to form ***organs***. The heart, for example, is a combination of muscle, nerve, blood, and epithelial tissues. Every organ has one or more special functions. Each organ works with the other organs. They are so marvelous that only God could have made them.

Systems—This is a still larger category, and includes organs which work together.

1. ***Skeletal*** - The bones are the body's framework.
2. ***Muscular*** - The muscles; these are attached to the bones, and make body movements possible.
3. ***Circulatory*** - The heart, blood, blood vessels, lymph, and lymph vessels. They carry food, water,

oxygen, and wastes in the body.

4. *Digestive* - The mouth, salivary glands, pharynx, esophagus, stomach, intestines, liver, and pancreas. They liquefy and absorb food.

5. *Respiratory* - The nose, pharynx, larynx, trachea, bronchi, and lungs. They bring in the body's supply of oxygen and eliminate carbon dioxide waste.

6. *Urinary* - The kidneys, ureters, urinary bladder, and urethra. They eliminate waste products from the body. Sometimes this is included, with the respiratory and digestive systems and skin, as part of the excretory system.

7. *Reproductive* - The ovaries, fallopian tubes, uterus, vagina, and mammary glands in the woman. The testes, accessory glands, and penis in the man. The perpetuate the human race.

8. *Endocrine* - The endocrine or ductless glands. They secrete hormones that regulate various body organs.

9. *Nervous* - The brain, spinal cord, and nerves. They control and coordinate the activities of the body.

10. *Sense organs* - The eyes, ears, tongue, and certain nerves. These are the means by which we make contact with the world.

1 - THE SKIN

Function—The ***skin*** protects the body, excretes fluids, regulates body temperature, and produces vitamin D upon exposure to the sun.

Layers—The ***epidermis*** is the outside layer of the skin and contains ***pigment*** which colors the skin. The cells on top die and drop off continually. Below it is the ***dermis*** (*corium*), the inner layer or true skin. It has live cells in a network of lymph vessels, capillaries and nerves projecting out to form ridges. The nerves regulate the size of the capillaries, and produce blushing and paling (blanching) of the skin.

Hairs—Except in a few areas (such as the palms of the hands and the soles of the feet), the skin is covered with tiny hairs. The part of the hair above the skin is the ***shaft***; the part below is the ***root***. The bottom of the roots are in tiny sacs, the hair ***follicles***. Organs of touch lie close to the hairs, which is why you sense when those hairs are touched. As long as the hair follicle is alive, a new hair will continue to grow. Brushing the hair or massaging the scalp will help increase hair growth.

Glands—There are two kinds of glands in the skin: the ***sebaceous glands***, or *oil glands*. These lie close to the hair follicles and discharge oily ***sebum*** into them. This keeps the hair soft and pliable. There are also ***sweat glands*** *(sudoriferic glands)*, which remove waste from the body in ***perspiration***. They extract water and salt wastes from the blood and discharge them through tiny outlets on the skin surface, the ***pores***. Perspiration also helps control body temperature.

Nails—These are tightly packed cells of the epidermis, and are made of cartilage. The roots are alive and the outer ends are dead. Fingernails grow 1/10th of a millimeter per day; toenails grow at half that rate.

2 - THE SKELETAL SYSTEM

Number—There are 206 bones in the human body. Six of them are the ***ossicles*** in the ear. Infants have about 350 bones; but many of these eventually connect, forming the 206 bones in the adult.

Function—The bones provide a solid framework, supporting and shaping the body. They protect delicate or soft parts and anchor the muscles.

Substance—***Bones*** are *osseous cells* hardened by calcium and phosphorus from the food we eat. ***Periosteum*** is a membrane that covers every bone. It is filled with blood vessels that carry bone-building materials and minerals to the bone cells, to keep them alive and harden the bone by filling in the spaces between the cells. The bones of a baby are partly cartilage, which is bone cells not fully hardened. Bones are not completely hardened until a person is about 20 years old. This is why adults can break their bones easier than children. Bone cells multiply rapidly during the growing years, but slowly thereafter as bones needs to be repaired. With age, bones become harder and more brittle.

Long bones—The ***shaft***, or *diaphysis*, is the lengthy section, and is hard and compact. The ***end***, or *epiphysis*, is sponge-like and covered by a shell of harder bone. The shaft and end do not fuse until full growth is achieved.

Joints—These are the places where the bones are attached to one other. They enable you to move your arms and legs. Strong, fibrous bands, called ***ligaments***, hold them together. The moving joints are lined with a membrane that secretes a fluid, called ***synovial fluid***. This keeps the joints "oiled" and working smoothly. *Cartilage plates* on the ends of bones make a slick surface for rotation.

Types of joints—Finger joints move like a door on hinges, and are called ***hinge joints***. Shoulder and hip joints are ***ball-and-socket joints***, and allow rotating movement. The rounded end of one bone fits into the hollowed-out end of the other.

Joint problems—*Arthritis* and *rheumatoid arthritis* occurs in the joints. Other types include *tubercular (TB) arthritis, gonerrheal arthritis,* and *gout. Synovitis* is inflammation of the lining of the joint. (Rheumatism is an inflammation in the muscles.)

Vertebral column—Your ***spine*** supports your head, stiffens the mid-portion of your body, and anchors your ribs and pelvic bones. It also protects the ***spinal cord***, which passes from the brain down

through its bony rings. The spine also carries the body weight, and consists of 26 irregularly shaped bony rings called ***vertebrae*** (***Vertebra*** is singular). On the inner side of each of the vertebra is a bony structure, called the ***arch***, which forms an opening or ***spinal foramen*** through which the spinal cord passes. Jutting from the arch are several finger-like extensions or ***processes*** on which ligaments and tendons are anchored. The ***discs*** are plates of cartilage between these rings, which are shock absorbers when you walk, sit, or fall. They make the joints flexible, so you can bend and turn.

Spinal curves—The spine has four normal curves. Disease, injury, or poor posture distort these curves, producing ***kyphosis*** *(hunchback)*, ***lordosis*** *(swayback)*, or ***scoliosis*** *(lateral curvature)*.

The seven top vertebra (in your neck) are the ***cervicals***. The next 12 in your upper back are the ***thoracics***. The next five, below that, are the ***lumbers*** in your lower back. Then come five ***sacral*** vertebra and, lastly, four ***coccygeal*** in your, so-called, "tail bone." Without that section, you could not sit properly.

Ribs—Your ***rib cage*** is formed by 12 ribs on each side of a central divide. The ***sternum*** is the ***breast bone***, a flat bone in the upper center of your chest. The upper seven pairs of ribs are attached to the sternum in front. The next three pairs are attached to each other and indirectly to the sternum. The last two are free in front and are called ***floating ribs***. They help your chest expand as you inhale.

Pelvic bones—Your ***pelvic girdle*** is formed from several bones. In women, the central opening is called the ***birth canal***. If it was not larger than in men, babies could not be born.

Leg bones—The ***femur*** is the upper bone of the leg and is the longest and strongest bone in your body. Its upper end is attached to the pelvic bone in a ball-and-socket joint. Try to avoid falls, which could break that joint, called "breaking the hip." There are two bones in the lower leg: the ***tibia,*** or ***shin bone*** in front, and the ***fibula*** in back. The ***knee cap (patella)*** covers the knee joint, so you can kneel.

Ankle and foot bones—There are seven ***tarsal bones*** in the ankle, with the largest in the heel. They join the five ***metatarsals*** *(instep bones)*, to form two ***arches***—one lengthwise across the foot (the *longitudinal arch*) and the other from side to side (the *metatarsal arch*). Weak muscles reduces the "spring"; and *flat feet* can result. The 14 bones of the toes, the ***phalanges***, are attached to the metatarsal bones. The *great toe* has two phalanges; each of the others has three.

Shoulder bones—In front are two long, thin bones—the ***clavicles*** or ***collarbones***. In back, there are the two *scapula* (***scapulars***), or ***shoulder blades***. Because all these bones are only attached to the sternum, you can freely move your shoulders and arms up, down, forward, and back.

Arm bones—The ***humerus*** (no, it's not the "funny bone") is the single long bone in the upper arm. The upper end is attached to the scapula; the lower end connects with the ulna to form the elbow joint (and that is what people call your "funny bone"). There are two bones in the forearm. The larger is the ***ulna*** and the other is the ***radius***. Because God gave you two bones in your forearm, instead of one, you can rotate your hand in a semicircle. As you extend your hand with the thumb up, the radius is on top and is the one that rotates.

Hand bones—There are eight ***carpal***, or ***wrist, bones***. Next come five ***metacarpal bones,*** forming the palm of your hand; then come the ***phalanges*** *(finger bones)*. There are three phalanges in each finger and two in the thumb. You have 29 (!) joints in each wrist and hand; so you can produce fine movements.

3 - THE MUSCULAR SYSTEM

Muscles—Without muscles, you could not move an inch. Muscles are connected to bones by ***tendons,*** which enable muscles to move the bones. Muscle cells are tiny elastic threads of protein, wrapped together in bundles; several bundles make a muscle. Each muscle is covered by a sheath of connective tissue called *fascia*, the ends of which lengthen into tough cords, called ***tendons***, which are attached to bones.

Bursas—The tendons have sheaths lined with ***synovial membrane*** that allows a smooth, gliding movement. ***Bursas*** (Bursae) are small sacs lined with synovial membrane found wherever pressure is exerted over moving parts. When bursae become inflamed, *bursitis* is the result. Often this occurs in the knee joint, and is commonly called "housemaid's knee."

Muscles work in pairs. Nerves in the muscle bundles direct movements, and blood vessels carry food materials. An overstretched or damaged muscle hurts.

Flexion and extension—When you bend your arm, your arm muscle becomes shorter and thicker; that is ***flexion***. When you straighten it out, the muscles lengthen and narrow; that is ***extension***. A muscle is most powerful when contracted. By keeping your arm muscles close to your body, and your back straight when you move something, you are less likely to overstrain. Pick things up with your muscles, not your spine.

Power—Muscles use oxygen and a type of sugar to provide the power to do things. The result is energy and heat. In fact, most of the heat in the body is produced by muscles (with the liver in second place

as a heat source). Using muscles build them up. Otherwise they become flabby.

Waste products—Two waste products are produced when a muscle works. ***Carbon dioxide*** is carried to the lungs while ***lactic acid*** is removed through the kidneys and sweat glands. If you work too hard, so much lactic acid remains in the muscles that they ache and feel sore afterward.

Rehabilitation—An injured or inactive muscle can be retrained to do its work. This must be done slowly and carefully. The person you are helping must be encouraged to persevere.

Control—There are two types of muscles: You consciously control the ***voluntary (skeletal) muscles***. The ***involuntary (smooth) muscles*** work automatically. These latter muscles include the stomach, heart, kidneys, etc.

Breathing muscles—Of the 325 muscles in the body, some are especially important for breathing. The ***diaphragm*** is between the abdominal and chest cavities, and helps you breathe. Muscles between the ribs, the ***intercostals***, also help enlarge the chest cavity.

Abdominal muscles—These are mentioned because they are the ones most likely to produce hernias. They are arranged to give support by overlapping in layers from various angles. There are also special places where ***rupture (hernia)*** with ***protrusion*** of part of the intestine may occur. These weak places are areas where blood vessels, nerves, ligaments, and cords pass through the muscles. The ***inguinal rings,*** the ***femoral rings,*** and the ***umbilicus*** are common sites for hernias.

Shoulders and buttocks—These muscles are important in case you need to give *intramuscular injections* to someone. In addition, the shoulder muscles sometimes become chilled and aches develop in them.

Leg muscles—The ***Achilles tendon*** is the name for the large tendon which attaches the calf muscle to the heel bone. Sometimes it becomes strained or injured.

4 - THE CIRCULATORY SYSTEM

Blood—Blood is composed of liquid, red and white cells, and various other elements; all of them are extremely important. An adult usually has 1 to 1½ gallons of blood.

Blood plasma—This is the carrying agent for blood cells, carbon dioxide, and other dissolved wastes. It also brings hormones and antibodies to the tissues. It is composed of water, dissolved food materials, and a substance (***fibrinogen***) that helps blood clotting. About 55% of the blood is plasma.

Red blood cells—These are tiny pink disks, with the outer part bulged, which are called ***erythrocytes*** or ***RBCs***. These are mature cells in the body which have no nucleus. They are very tiny; approximately 3,000 of them could lie side by side in a distance of one inch. A person who has a decreased amount of RBCs has *iron (simple) anemia*.

Hemoglobin—This is a substance which contains *iron* and gives the red blood cells their color. As the blood passes through the lungs, the hemoglobin picks up oxygen which it carries to the body cells. When hemoglobin is saturated with oxygen, it is bright red. Body waste makes it a darker red. It takes trillions of red cells to carry the body's oxygen supply. In a blood count, the average number of RBCs is 4½ to 5 million per cubic millimeter (in an amount of blood smaller than a tiny drop). They wear out in less than a month, and are then destroyed in the spleen and liver. Red blood cells are made in the red marrow of the bones. Leukemia is a cancer of the bone marrow, which results in RBCs not being made. Decreased RBCs and increased WBCs are the sign of this.

White blood cells—These are also called ***leukocytes*** or ***WBCs***. They are colorless cells that protect the body against disease organisms or irritants. There are two main types: *granular* and *nongranular* leukocytes.

Since the number of WBCs in the blood varies with certain diseases, a common aid to diagnosis is a ***white cell count***. A tiny drop of blood is viewed under a microscope, and the number of WBCs is estimated. Normally, they would average from 7,000 to 9,000 per cubic millimeter. This number may be increased from 15,000 to 25,000 when infection is present. For example, an increased number of WBCs indicates infection, allergies, hookworm, etc. A decreased number is a sign of typhoid fever, toxins, influenza, or tuberculosis.

At the first sign of danger, the white cells multiply and rush to the spot where the threatening organisms are at work; they gobble them up, destroy their poisons, and dissolve the damaged tissues.

Differential count—In some diseases, the relative proportion of the two kinds of WBCs may vary. Therefore a *differential count* is made, in which the number of granular and nongranular WBCs are compared.

Platelets—These are also called ***thrombocytes***. Like the red and white cells, they are formed elements in the blood. Platelets help in the clotting of blood. A blood count of 250,000 to 500,000 could be considered normal.

Blood clotting—When a blood vessel is cut, ***fibrinogen*** and ***platelets (clotting factors)*** in the escaping plasma go into action. The fibrinogen suddenly changes into a tangled mass of threads which traps the blood cells and makes a ***clot***, which stops the blood flow and tends to draw the cut edges together. If a clot forms inside a blood vessel and re-

mains there, it is called a *thrombus*. A deficiency of *vitamin K* lowers the amount of clotting substance in the blood. Green leafy vegetables contain this vitamin (frozen foods lack it). *Hemophilia* (bleeder's disease) is caused by an improper function of the platelets.

Hemorrhage—The word means the escape of blood from blood vessels, but we generally use it to refer to the loss of a considerable amount of blood. If too much blood is flowing or there is a lack of clotting factors, clotting does not occur adequately.

Blood transfusion—Severe hemorrhage is serious because of the loss of fluid, food materials, and oxygen-carrying red blood cells. A blood transfusion from one person to another will replace the volume of fluid and the blood cells. Tests must first be made to match blood types of donor's and recipient's blood.

Blood types—All bloods fall into one of 4 groups: ***AB, A, B, and O***. Blood from a person in your group would match yours safely. ***Type O*** can be given to any other blood group and is called the ***universal donor***. ***Type AB*** can receive blood of any other group and is called the ***universal recipient***. If the blood is incompatible, it will form dangerous blood clots in the recipient's blood vessels. Plasma transfusion is always safe and quicker than a transfusion of whole blood, but blood plasma does not contain red and white blood cells.

Blood pressure—Blood in the *arteries (arterial blood)* always exerts some pressure against their walls. When the heart muscle is contracting, the pressure is higher than when it is relaxed. The higher pressure is more important because it shows the condition of the arteries—their resistance to the blood flow. When a physician says that a blood pressure is 140 over 100, he means these two pressures. When the heart muscle is contracted, this is the ***systolic*** (higher) pressure. When it is relaxed, this is the ***diastolic*** (lower) pressure. Throughout a typical day, blood pressure can vary—depending on activity, emotion, and strain. But this is normal and only temporary.

Blood pressure and age—Children generally have lower blood pressures than adults. From the ages of 20 to 50, most people show little change. However, women often develop high blood pressure in their forties; it occurs more frequently after 50 in men.

Blood pressure and elasticity—If the walls of the *arteries* become hardened and less elastic *(arteriosclerosis)*, the heart has to pump harder to force the blood through them. When the pressure in the arteries remains high (*hypertension*; generally a systolic over 160), the heart muscles become thicker, and the heart enlarges. The arteries lose some of their elasticity with age; but diet, emotional strain, or overweight can cause it to occur in younger people.

Low blood pressure—Some people have slower than average blood pressure. Unless this is caused by disease, their prospects for a long life are good.

Rh factor—The Rh factor is an inherited blood type characteristic. About 85% of white Americans have this Rh factor (they are ***Rh positive***). The others (15%) are ***Rh negative***. The percentage of Rh negative people is lower in other races. For example, only 7% of blacks and 1% of Chinese are Rh negative.

Rh factor marriages—If an Rh-positive man and an Rh-negative woman marry (only about 13% of marriages), and only if a baby inherits the father's Rh-positive blood,—then the mother's body may produce antibodies that destroy the baby's red blood cells. This may not cause trouble with the first baby; but it may affect later pregnancies. Usually such a baby is born successfully, but its life is threatened by the destruction of its red blood cells. This condition is called *erythroblastosis fetalis*. Physicians can test the parents before birth and be ready to give the baby an Rh-negative blood transfusion, if necessary, to replace its Rh-positive blood.

Heart—Your heart is a powerful pump that may drive 5 to 6 quarts of blood per minute through thousands of feet of tubes in your body. Every stroke of the pump is a heart beat. A healthy man can increase his cardiac output from 5 quarts per minute during rest to as much as 20 quarts during active exercise.

Heart muscle—Your heart, about the size of your doubled-up fist, lies in the left lower part of your chest cavity. It has four ***chambers***. The two upper ones, the ***atria,*** or ***auricles***, receive blood, and the two lower ones, the ***ventricles***, pour it out. The heart is divided into a left and right half by a complete wall, the ***septum***.

(Clarification: We are here speaking of the person's own "right" and "left." This is standard medical nomenclature. Therefore, if you are working with someone else, his "right" side will appear on your left as you look at him. Example: When looking at a person in front of you, think of four quarters to his heart; his top right is the right atria, top left is the left atria; bottom left is the left ventricle, bottom right is the right ventricle.)

Blood circulation—Blood, having delivered its oxygen, flows into the heart through ***the right auricle***, goes down into the ***right ventricle***, and is pumped to the lungs to pick up a fresh load of oxygen. This trip to the lungs is called the ***pulmonary circulation***. It returns, brighter red, because it has exchanged its carbon dioxide waste for oxygen. Entering the ***left auricle***, it goes down into the ***left ventricle*** and is pumped out again, through the *aorta*, and then to the ***arteries*** on another trip to carry oxygen to the body. At one point, it arrives at the liver and picks up a load of food; at another, it enters the

kidneys and is cleaned. Finally, it returns through the veins to the heart.

The heart nodes—These special bundles of unique tissue are simply astounding. The first is embedded in the wall of the right atrium, and is called the ***sinoatrial node (S.A. node)*** and is the ***"pacemaker"*** of the heart. (Artificial pacemakers derive their name from it.) The other bundle is in the lower part of the septum, and is the ***atrioventricular node (A.V. node)***. The ***bundle of His*** is also in this area, and is called the ***coordinator***.

Heartbeat—The heartbeat originates in the S.A. node, and immediately the entire auricle contracts. Then the A.V. node picks up the message and relays the signal to the muscle fibers of the ventricle, which contracts. *Heart block* is a condition which occurs when disease of the bundle of His interrupts communication between the auricle and the ventricles. A proper balance of calcium, sodium, and potassium is needed for the heart to function properly. If you eat only good food, you should have the proper nutritional balance.

Heart rate—The heart rate is controlled by the *medulla* in the brain and *sensory nerve impulses* to the heart. It is speeded up by emotional reaction, fever, or physical exertion. It is decreased by increased blood pressure, a lack of oxygen, or excess carbon dioxide.

Heart valves—The openings into the aorta and the pulmonary artery are fitted with flaps, called valves. There are similar valves at the openings between the auricles and ventricles. The valve between the right auricle and right ventricle is called the ***tricuspid valve***. The valve between the left auricle and left ventricle is called the ***mitral,*** or ***bicuspid valve***. After the blood is squeezed into the ventricles, these valves close, and those over the artery outlets open. This keeps the blood from flowing back when the heart relaxes.

Blood vessels—These are the tubes which carry blood throughout the body. Those that carry blood away from the heart are the ***arteries***; those that take it to the heart are the ***veins***. (One oddity in following this rule is the pulmonary circulation, which sends blood to the lungs and back to the heart. Arteries carry deoxygenated blood away from the heart and veins carry fresh, oxygenated blood to the heart. Elsewhere in the body, only arteries carry the fresh blood.)

Coronary arteries—These are especially important arteries because they are the ones supplying food and oxygen to the heart muscle itself. If these arteries become narrowed, or if a blood clot blocks part of them, the heart is not supplied with blood and serious trouble may occur. We call this ***coronary heart disease***; it is the cause of most of the deaths from heart trouble after middle age.

Brain arteries—If a blockage occurs in a brain artery, a ***stroke*** can occur.

Capillaries—Blood travels out from the heart through the ***aorta***, and thence through smaller ***arteries***, and finally through very small arteries ***(arterioles)*** into the ***capillaries*** (the smallest blood vessels). From there, the blood travels into the smallest veins ***(venules),*** then into ***veins,*** and finally to ***superior*** and ***inferior venae cava*** and back into the heart.

Special systems—We have already mentioned the pulmonary circulation, which takes blood from the heart to the lungs and back again—so the blood can pick up oxygen. Another important one is the ***portal system***. All the veins from the stomach, intestines, spleen, and pancreas empty into the portal vein, which leads to the liver—so the blood can pick up food. Blood leaves the liver through the ***hepatic vein*** and goes to the heart.

Lymphatic system—Your body is filled with lymphatic vessels. They do not carry blood; they carry excess fluids and waste and empty into the ***thoracic duct*** and ***right lymphatic duct***, from whence it goes into veins at the back of the neck. Body muscles keep the lymph flowing; valves in the vessels keep it from flowing backward.

Lymph nodes—There are lymph nodes at several places in your body; these filter out harmful substances such as bacteria and cancer cells. They also manufacture *lymphocytes* (one type of white blood cell). There are six places where these ***nodes*** are found: under the arms, on the right and left side of the groin, and the right and left side of the neck. If they become infected, the disease is called *adenitis*.

Spleen—The spleen lies directly below the diaphragm, above the left kidney, and behind the stomach. It destroys old red blood cells, makes one type of white blood cell, and filters toxins from the blood. It also produces antibodies, which give us immunity to certain diseases. It stores iron, bile pigments, and antibodies. It becomes enlarged in anemia, malaria, and leukemia.

Tonsils—The three tonsils in the pharyngeal wall at the back of your throat strain out toxins and make *lymphocytes*. It is significant that the tonsils guard the entrance to the gastro-intestinal tract and the appendix guards the outlet of the small intestine.

5 - THE DIGESTIVE SYSTEM

The G.I. tract—This system starts when food enters your body and ends when the waste leaves it. The process is called ***digestion*** and it takes place in the *digestive tube*, also called the ***alimentary canal***, the ***gastro-intestinal system***, or the ***G.I. tract***. The entire length is from 30 to 40 feet long. The tract is lined with a protective tissue, called ***mucous mem-***

brane. It is always moist and smooth, has many nerves, and helps the food to slide along.

Organs in the system—The ***mouth, pharynx, esophagus, stomach, small intestine,*** and ***large intestine*** are the ***alimentary canal organs***. Other organs in the system which help in digestion include the ***teeth, tongue, salivary glands, pancreas,*** and ***liver***.

Absorption—After food is processed, it passes through the walls of the digestive tube, into the circulation, and is taken by the bloodstream to the cells or to storage places in the body. This is known as absorption.

Types of foods—The purpose of digestion is to extract the basic food materials from the food that is taken in and convert them into a form the body can absorb. There are three main food materials: ***carbohydrates, proteins,*** and ***fats***. The chemicals that most of these digestive processes use are called ***enzymes***. Each type of enzyme acts only on a specific substance. Some act on protein, others on fat, etc.

Mouth—Digestion begins in the mouth, which has ***lips, cheeks, the tongue, a hard palate*** on top, and ***a soft palate*** on the bottom. Food is cut up by the teeth, rolled around by the tongue, and moistened by ***saliva*** from the ***salivary glands***; then it is rolled into a ball (the *bolus*) and swallowed.

Teeth—Everyone develops 2 sets of teeth. There are 20 in the first set of ***deciduous,*** or ***baby, teeth***. These first begin to come when the baby is 6 to 8 months old, and he has them all when he is about 2½ years old. When he is about six, the ***permanent teeth*** begin to appear. There are 32 in the permanent set. The front and side teeth are biters (***incisors***) and cutters (***canines***); the back teeth are grinders (***molars***). The last upper and lower teeth, at the far back, are the ***wisdom teeth***, and sometimes do not appear before the 25th year.

Parts of the tooth—A tooth has 3 parts: the exposed part (the crown), the narrowed *neck* at the gum line, and the root in the bony socket. A root may have from 1 to 4 branches. Most of a tooth is hard dentin. The dentin in the crown is covered by enamel, which is harder than bone. Cement covers the dentin on the root of the tooth. A cavity inside the root opens into a canal that connects the tooth with the covering of the bony socket. Blood vessels never go into the cavity through this canal.

Tongue—The rough upper surface is sprinkled with small bumps ***(papillae)***; some of these are ***taste buds***. They distinguish between sweet (on the top), sour (sides), salty (tip and sides), and bitter (at the back). The tongue mixes food with saliva from several salivary glands.

Salivary glands—Three pairs of glands from the mouth, cheek, and jaw pour ***saliva*** into the mouth. The saliva moistens the food and begins the process of digestion by changing starches into sugars. Proper chewing in the mouth is important for good digestion.

Pharynx—The tongue lifts the food and passes it into a muscular tube behind the mouth, the pharynx. This tube contracts, pushing the food down into the esophagus. The pharynx connects with the ear through the ***eustachian tube***. The *tonsils* are in back of the pharynx. The pharynx is also the top part of the airway into the lungs.

Esophagus—This is another muscular tube, about 10 inches long. It extends from the pharynx down through the neck and chest and into the stomach. It takes about 6 seconds for semisolids to pass from the top of esophagus into the stomach. They are pushed along by contraction waves, called ***peristalsis***. Liquids just drop down, without any contraction.

Stomach—This is a collapsible pouch-like sac which is capable of great ***distension*** (enlargement). It is located in the upper left portion of the *abdominal cavity*. Food enters the stomach through ***the cardiac orifice*** (also called the *esophageal opening*), and leaves at the bottom through the ***pyloric orifice***. Both are guarded by round ***sphincter muscles*** which can tightly close.

(*Note:* At various points in the G.I. tract, there are sphincter muscles which act as closure valves on tubes. A sphincter muscle works like the drawstring on a sack.)

Stomach digestion—The rounded top portion of the stomach is the ***fundus***. Some food can remain here, being partly digested by saliva from the mouth, while the food below it is washed by ***stomach (gastric) juices***. Digestion continues in the stomach, where the gastric juices mix with the food; the mass is churned and moved about by the *contraction* (***peristalsis***) of the muscular stomach walls. When the bottom part of the food is digested well enough, the pyloric valve relaxes, and food begins traveling into the small intestine.

Vomiting—The contraction waves are usually downward; but, if the stomach is too full or contains an irritating substance, the waves may reverse. This forces the material back up into the lower part of the esophagus. Stomach and esophagus contractions force the food up during vomiting.

Gastric juices—Gastric juices are secreted by glands in the stomach wall. Two of these digestive juices are especially important. ***Pepsin*** *(gastric protease)* digests protein. ***Renin***, a milk casein, breaks up milk by curdling it. ***Hydrochloric acid (HCl)*** makes everything so acid that the enzymes in the other gastric juices can work. HCl also destroys organisms and helps regulate the pyloric valve at the stomach

outlet. The digestion of protein is the primary work done in the stomach.

Digestion time in stomach—It usually takes 5 or 6 hours for an ordinary meal to move on out of the stomach. (A very large meal will take longer, because it is difficult for the stomach to digest it.) For this reason, nutritionists will tell you not to eat more than three meals a day; and, if you digest food well, only two. If you are overweight, try it. Unpleasant emotions at mealtime slow digestion because they prevent digestive juices from flowing freely.

Stomach ulcers—Continual negative attitudes or problems can overstimulate the gastric nerve, causing an ongoing excess of HCl into the stomach. Since its objective is to digest protein, the stomach wall, blanched of blood because of nervous tension, begins being eaten by the hydrochloric acid. We call that a *gastric ulcer*.

Small intestine—The food (now called *chyme*) is thin and watery as it passes from the stomach, a little at a time, into the intestine. The small intestine is 1½ inches wide and 23 feet long.

Duodenum—The top 10 to 12 inches of the small intestine is the duodenum, a "C"-shaped area. Digestive juices from the pancreas and liver pour into this area. One objective is to alkalinize the food. Another is to aid in digestion. ***Pancreatic juice*** comes in from the pancreas and other juices from the walls of the duodenum (***intestinal juice glands***). These break down proteins, sugars, and starches into materials the body can use. (More digestive juice will also flow in from the lower small intestine.) Greenish ***bile***, made by the liver, pours in from the ***liver ducts*** through the ***gallbladder***. It breaks down fats.

Rest of the small intestine—As the food travels on, it first passes through 7½ feet of small intestine, called the ***jejunum***. Then it goes into the ***ileum***, the remaining 15 or so feet.

Food absorption—Throughout the whole length of small intestine are tiny, finger-like projections, called ***villi***. In the center of each is a ***lymph channel (lacteal)***, with surrounding blood capillaries. The intestinal juice glands are located in the areas between the villi. The digested food passes into the villi, then is taken into the *bloodstream* and carried throughout the body, to nourish the *cells*. That part of the fat that is not absorbed by the villi is absorbed directly into the lacteals and is mixed with lymph. This mixture eventually reaches the bloodstream through the thoracic duct. Most of the food has been absorbed by the time the large intestine is reached.

Large intestine—This is a large tube, also called the ***colon***, which is 2½ inches wide and about 5 feet in length. Its entrance, called the ***cecum***, has the ***appendix*** attached to it. Another sphincter muscle (***ileocecal valve***) guards it, so nothing from the colon can travel back into the small intestine.

The colon then proceeds upward on your right side ***(ascending colon)***, goes horizontally ***(transverse colon)*** across the upper part of the abdomen, and then descends ***(descending colon)*** down the left side. The bottom of it is "S"-shaped, called the ***sigmoid flexure***. Then comes the ***rectum***, about 5 inches long, which ends at the ***anal canal***, about 1 to 1½ inches long. The opening, the ***anus***, is guarded by an internal and external sphincter muscle.

Activity in the colon—As the contents move along, most of the water passes through the intestinal walls into the circulation, to keep up the body's water supply. The woody fibers, left from food, mass together as the water leaves and passes on to the rectum. This solid waste, the ***feces***, contains bacteria and normally a small amount of water.

Constipation and diarrhea—The contents presses against the sphincter muscles of the anus, signaling the need for a bowel movement. If this signal is not obeyed, the impulse dies. If the contents remain in the rectum too long, they continue to lose water and become drier and harder. Dry, hard feces are difficult to expel. This is *constipation*. Irritants in the intestine will stimulate contraction waves that rapidly rush the contents through, water and all; this is *diarrhea*.

Liver—Although not in the digestive tract, the ***liver, gallbladder,*** and ***pancreas*** are part of the digestive system. The liver is the largest and heaviest gland in the body. Located just below the diaphragm, it fits in front of and over the right kidney, part of the colon, and most of the stomach. The liver weighs from 3 to 3½ pounds and is divided into 4 lobes.

Functions of the liver—The liver has over 2,000 functions; about 400 of these are primary ones! (1) It is a filtration plant; for it removes products from the bloodstream. (2) It is a manufacturing plant and chemical laboratory; for it produces bile, *glycogen* (a form of stored sugar), and substances which aid in blood clotting (*prothrombin* and *fibrinogen*) and prevent clotting (*heparin*). (3) It is a warehouse; for it stores iron, vitamins, copper, glycogen, *amino acids* (the absorbable form of proteins), and fats. (4) It is a heating plant; for it produces large amounts of heat, second only to the amount produced by the muscles. (5) It is a waste disposal plant, because it prepares substances for excretion and tries to remove harmful substances from various poisons (including medicinal drugs), so they can be excreted.

Gallbladder—Bile produced in the liver is carried by two bile ducts into the gallbladder for storage, until it is needed to digest (*emulsify*) fats. Sometimes ***gallstones*** form. If bile cannot pass out of the intestines normally, it will be absorbed into the blood, causing the skin to become yellow or ***jaundiced***. The

stool is then *clay-colored,* due to the absence of bile and poor fat absorption.

Pancreas—This is a long fish-shaped gland behind the stomach, and is made of two different tissues. The ducted cells in one of them secretes *pancreatic juice* for food digestion. The ductless cells in the other tissue, called the ***islands (islets) of Langerhans***, secrete ***insulin***, a hormone which body cells must have. Without it, they cannot use sugar. *Diabetes* is caused by lack of insulin.

Metabolism—The food materials, which have been absorbed into the bloodstream, travel to the cells. The cells burn some foods, to supply the body with heat and energy. They build and repair tissues with others. Certain materials help the cells do their work more efficiently. Normally, the process continues evenly, with some food used up and other food stored. The amount of food burned up and the amount of heat produced can be measured, and is called the metabolic rate. If an inactive person overeats, the cells are provided with too much food; so the excess is stored, and he becomes overweight.

6 - THE RESPIRATORY SYSTEM

Introduction—Your cells must have oxygen to burn food, and air is about 20% oxygen. You breathe it in through your respiratory system. In the food-burning process, carbon dioxide is formed; your blood carries it to the air passages, where you breathe it out. *Inspiration* is breathing in and *expiration* is breathing out.

Nose—Air enters your body through your nose (which has two compartments, divided by a ***septum***) and passes into the ***nasal cavities***. Nerve endings in the septum and nasal passages provide you with the ***sense of smell***. Two ***eustachian tubes*** go from the ***nasal cavity*** to your ears. They are needed because your middle ear has to have air in it, and the eustachian tubes equalize air pressure. As you know, they can become infected. The nasal cavities are lined with hair-like (*ciliated*) mucous membranes that are richly supplied with blood, which aid in warming and moistening the air before it reaches the lungs. The mucous secretion is sticky and catches impurities in the incoming air. Small hairs in the nose help stop some larger items.

Pharynx—Air passes from the nose into the tube, called the pharynx, a passageway for both air and food. It lies behind the nose and mouth. The part behind the mouth is called the *throat*. The *tonsils* are at the back of the throat. A leaf-shaped cartilage, the ***epiglottis***, covers the air passage that leads out of the pharynx so that, when you swallow, food does not enter the lungs and choke you.

Larynx—The air passes from the pharynx into the larynx, a box-like area made of tough cartilages that are held together by ligaments and located in front of the neck. The cartilages move when you talk. Inside are two triangular folds of mucous membrane and the ***vocal cords*** which extend from back to front. They vibrate as air passes over them.

Trachea and bronchi—Air passes into the trachea, a tube made of membranes inside horseshoe-shaped bars of cartilage. At the lower end, it divides into two smaller tubes (the ***bronchi***), one ***bronchus*** going to each lung. Within the lung, they divide into many smaller branches, the ***bronchioles***. These keep thinning out (quite similar to branches of a tree) and end in sac-like air spaces, called ***atria***. Each atria has many irregular projections, called ***alveoli*** or air cells. It resembles a bunch of grapes. The lungs have over 400 million alveoli, along with blood and lymph vessels, nerves, and connective tissue.

Lungs—The lungs are two cone-shaped organs which fill the chest cavity. They are separated by the heart. The top of each cone is called the *apex*; the *base* is the lower, wider portion above the diaphragm. This is where the blood exchanges *carbon dioxide* for *oxygen*. The lungs have ***lobes***; infection in only one lobe is called *lobar pneumonia*.

Pleura—The chest cavity is lined with a membrane, the pleura, that folds back against the lungs. The surface is moist, so the lungs can move smoothly without friction when you breathe. Infection of the pleura is *pleurisy*.

Breathing—There are two kinds of breathing: breathing which occurs within body cells and lung breathing. The lungs hold about 3½ quarts of air. You normally take in and let out about a pint with every breath. The ***diaphragm***, that dome-shaped muscle between your breathing and digestive apparatus, helps push in and let out the air.

7 - THE URINARY SYSTEM

Why it is needed—Activity in the human body produces wastes of various kinds. Carbon dioxide is removed through the respiratory system, but there are other wastes which result when body cells burn food. Many of these wastes are in the circulating blood. Some of them are removed in the blood filtration and removal plant, which is the ***urinary system***.

Location and appearance of the kidneys—These are two reddish-brown, bean-shaped organs, located in the small of the back at the lower edge of the ribs, on either side of the spine. Because their appearance is so similar, "kidney beans" are named after them. Each kidney is embedded in fatty tissue; and, in turn, all this is surrounded by a fibrous covering, called the ***renal fascia***. This attaches to muscles of the lower pelvis and helps hold the kidneys in place.

Inside the kidneys—The kidneys receive a rich supply of blood. Each kidney has two distinct por-

tions: the outside (***cortex***) and the inner portion (***medulla***). In addition to blood and lymph vessels and nerve fibers, most of the kidney consists of over a million tiny units, called ***nephrons***.

Nephrons—Each nephron is a capillary cluster with a coiled tube (known as a ***convoluted tubule***) attached to it. As the blood passes through the capillary cluster, water and waste products filter through the capillary walls and into the tubule. Much of this water is reabsorbed back into the body. But the wastes remain behind in a concentrated solution. It is very important that you drink enough water, so you will not wear out your kidneys!

Ureters—This concentrated mixture of waste products and water is ***urine***. A tube (the ***ureter***) leads from each kidney to the bladder. Each tube is 10 to 12 inches long and the size of a goose quill (1/5-inch in diameter). The upper end of the ureter extends into the hollowed-out area of the kidney (remember the shape of that kidney bean). That hollowed-out area is called the ***renal pelvis***. Infection in that area is called *pyelitis*.

Bladder—Both tubes lead down into the bladder. It is a muscular sac that lies in front in the lowest part of the ***abdominal cavity***. The bladder is the reservoir where the urine collects. It has 3 layers of muscle and is lined with mucous membrane (as is the entire urinary system). The bladder can greatly enlarge, so much so that it can rise to the height of the *umbilicus (belly button)*. Although capacity varies, the desire to void is generally present when it fills to about 200 cc. A total of 1 pint can be retained before voiding.

Sphincters—The ***external*** and ***internal sphincter muscles*** are valves keeping the bladder outlet closed. When enough urine has collected to stretch the bladder walls, nerve signals relax the inner sphincter and more signals reach the brain. The decision is made to ***void***, and this causes other nerve signals to tell the outer sphincter to relax. Urine flows and the bladder is emptied.

Urethra—Urine leaves the bladder through the urethra. In the male, it extends the length of the *penis*, and has a total length of about 7 inches. In the female, it is about 1½ inches long.

Urine—Normal urine contains water (about 95%), salt, and protein wastes filtered out of the blood by the kidneys. It is a yellowish, clear fluid with an ammonia-like odor. Its color, odor, composition and amount are influenced by diet, amount of liquid drunk, perspiration, hemorrhage, diarrhea, vomiting, fever, emotional disturbances, drugs, as well as diseases affecting the pancreas, kidneys, bladder, heart, and blood vessels. *Albumin* in the urine is a sign of *kidney damage*. *Sugar* in varying amounts indicates *diabetes*.

Water intake—A healthy person usually eliminates a quart or more of urine each day. It is of extreme importance that you drink enough water! People who obtain their fluid intake only from coffee or soft drinks are not only taking harmful substances into their bodies, but they generally are not getting enough water. Learn to drink plain water, and enough of it! Water is not only needed for thousands of body functions, but it also helps reduce heat. On a hot day, you lose heat through perspiration.

8 - THE NERVOUS SYSTEM

Autonomic nervous system—Many functions are done automatically, without any thinking on your part. This is called the autonomic nervous system. This includes such things as the digestion of food and circulation of blood, activity within the cells, and control of the muscles in the glands and blood vessels.

Central nervous system—The central nervous system includes the ***brain*** and ***spinal cord*** (which are also used by the autonomic nervous system). The brain and spinal cord are the switchboard, and the ***nerves*** are the wires that carry incoming and outgoing messages.

Brain—The human brain is the center for thinking. It weighs about 3 pounds and is in the ***skull***, which protects its delicate structure. It has several sections.

Cerebrum—The cerebrum is divided into two halves, one on either side, called ***hemispheres***. The outside portion ***(cerebral cortex)*** is soft grayish, wrinkled matter that is mostly nerve cells. Underneath is the ***white matter***, containing nerve fibers, that help store and move data around. Some centers in the cerebrum record and store data; others are connected with hearing, seeing, moving, and speaking.

Hemispheres—The cerebrum has a right and left side, with duplicate motor control centers in each side. The right side controls muscles on the left side of the body and vice-versa. Thus an injury to the left side would affect the right side of the body.

Thalamus—Directly beneath the cerebral hemispheres are the thalamus and hypothalamus. The thalamus is a relay station. It receives impulses from every part of the body and relays them to appropriate parts of the cortex. The thalamus also tells you whether sensations are pleasant or unpleasant.

Hypothalamus—This structure regulates the action of various body organs, so normal conditions can be maintained. It helps maintain body temperature by causing us to shiver when we are cold. It sends messages to the ***pituitary***, which, in turn, sends messages to the ***thyroid,*** to send out more ***thyroxin*** to the cells to increase energy levels. The hypothalamus also regulates the expression of certain emotions.

Cerebellum—The cerebellum helps you keep

your balance. It coordinates groups of muscles, so they can work together. You could not handwrite or typewrite without the help of your cerebellum. It keeps you walking straight and makes your movements graceful.

Midbrain—At the top of the brain stem is a small bit of tissue, called the midbrain. It is an important reflex center. A ***reflex*** is an action that takes place automatically in response to some stimulus. As an example, if you look in a mirror and shake your head from side to side, you will see your eyes continue to look straight forward. That is a reflex effect, controlled by the midbrain.

Pons—The word means "bridge"; the pons bridge between the cerebral cortex and the cerebellum, carrying messages back and forth.

Medulla—Lying just below the pons, the medulla rests on the *floor of the skull*. It connects the spinal cord with the brain. It also directly controls such things as changing breathing rate, in response to carbon dioxide rate, and changing the rate of heartbeat and muscles in the smallest arteries.

Spinal cord—The spinal cord is inside the column of vertebral rings; it is a long mass of nerve cells and fibers, extending from the medulla down the backbone. It conducts impulses from various nerves to the brain and vice-versa. It is also a reflex center. If you touch something hot, the message goes from your hand to the spine, which immediately sends back the message to remove your hand. The truth is that part of your brain is in your spine!

Nerves—The nerves connect the body, brain, and spinal cord. A complete nerve cell consists of a cell body with thread-like fibers. The whole thing is called a ***neuron***. Each one can be rather long, and transmits impulses in only one direction. ***Axons,*** on one end, conduct impulses away from the cell body. ***Dendrites***, on the other end, conduct impulses to the cell.

Cranial nerves—There are 12 pairs of cranial nerves and 31 pairs of spinal nerves. The cranial nerves attach directly to the brain; and most of them carry impulses to and from the brain and various structures about the head (sensory organs, swallowing, speech, jaw muscles, etc.). Other cranial nerves act on the organs of the thorax (upper chest and back area) and abdomen.

Spinal nerves—Spinal nerves are attached to the spinal cord and carry sensory messages (pain, pleasure, etc.) from the skin to the central nervous system. They also send motor impulses to the skeletal muscles.

Sensory and motor nerves—Sensory neurons receive messages from all parts of the body and transmit them to the central nervous system. Motor neurons transmit messages from the central nervous system to points throughout the body. The message may be to alter muscle activity or to cause glands to secrete.

Nerve covering—A sheath, called a ***myelin sheath,*** covers the outside of the brain and spinal cord. It is like the insulation on electric wires, and has the same purpose. An outer covering over this sheath is the ***Neurilemma***. Its function is to grow new nerve tissue. This is slow growth, so paralysis or numbness may persist for months. Sometimes nerve tissue does not repair itself at all.

Message routes—Nerve messages can be routed in many different paths; yet they always follow the shortest, quickest one.

9 - THE ENDOCRINE SYSTEM

Endocrines—This is another amazing part of your body. Without your glandular secretions, you could not survive; yet, as with most of the rest of the human body, they are a bewildering complexity which could not be originated by chance. There are eight main types of endocrine glands: ***pineal, pituitary, parathyroids, thyroid, thymus, adrenals, islets of Langerhans, gonads (testes and ovaries)***. Located in different parts of the body, they pour their secretions directly into the bloodstream; so they are called ***ductless glands***. A *duct* is a tubular structure that a fluid passes through. Examples of *ducted glands* would be gastric and duodenal glands, which secrete digestive juices through ducts.

Hormones—The endocrine glands produce substances, called hormones, which speed up or slow down activities of various body organs. They also affect each other's actions. Too much or too little of one hormone not only affects one organ, but also interferes with the work of other hormones.

Thyroid—Located in the front of the neck, the thyroid covers the sides and lower front of the *larynx* (your voice box). It looks something like a butterfly with wings 2 to 3 inches wide. The thyroid secretes the hormone, ***thyroxine***. (T_3 is the most active subtype of thyroxine.)'

Thyroxin—This substance regulates the rate at which the cells burn food. If not enough hormone is secreted, the cells burn food too slowly; and this interferes with the development of the body and slows its activities. If too much is secreted, the body burns food so rapidly that it uses up its daily supply and draws on the stored reserves of food. All activities are speeded up.

Iodine—Over half of what is in thyroxin is iodine. The thyroid gland gets iodine from the blood. If not enough is available in the diet, the thyroid grows larger in its effort to make enough thyroxin. This enlarged condition is *goiter*. A *basal metabolism* test can help indicate how close the person's body is to the *normal*

metabolic rate (the normal rate of burning food in the cells).

Parathyroids—These are four small glands, each about the size of a pea. Two are on each side behind the thyroid. If removed, the person immediately dies. They secrete a hormone ***(parathyroid hormone)*** that regulates the amount of *calcium in the blood*, thus affecting the amount of nerve and muscle irritability. Too little calcium produces muscle spasms and convulsions and lead to death within hours. If too much hormone is secreted, the diet cannot supply enough calcium and calcium salts are drawn from the bones, making them soft and unable to support weight *(osteitis fibrosa cystica)*.

Adrenals—The two adrenal glands are located at the upper end of the kidneys. Each one is curved and the size of the last joint in the little finger. Each adrenal gland is actually two separate glands in one.

Adrenal medulla—The central part of each one is the medulla, secreting ***epinephrine (adrenaline)***. This brings many body processes into action quickly. It makes the heart beat faster, raises blood pressure, increases muscle power, raises blood sugar level, and makes blood clot more rapidly. It is the "fight or flight" hormone, needed for sudden emergencies. Emotions of fright, anger, pain, love, or grief trigger it to action.

Adrenal cortex—The outer part of the adrenals, the cortex, secretes several hormones. One is ***Cortin***, which regulates the behavior of salt and water content in the body. If part of the gland is destroyed, Addison's disease develops. This is a condition of extreme muscle weakness, highly pigmented (bronzed) skin, and decreased kidney activity. Both male and female sex hormones are also secreted by the adrenal cortex. Disorders of the cortex can produce tumors, hasten sex development in boys, or cause male characteristics in girls (facial hair, absence of menses).

Pancreas—There are small bunches of tissue scattered through the pancreas, called the ***islets (islands) of Langerhans***. They secrete ***insulin***, which regulates the amount of sugar in the blood. If they secrete too little insulin, sugar accumulates, and the kidneys try to get rid of it in the urine. This condition is called *diabetes mellitus*, and is controlled by injections of insulin.

Pituitary—This is one of the most protected glands in your body. Located at the base of the brain and behind your eyes, it is almost in the center of your skull. About the size of a pea, it probably secretes more potent hormones than any other gland, and has been called the "master gland." It is made up of two parts: the anterior lobe and the posterior lobe.

Pituitary posterior lobe—This frontal lobe secretes two hormones that affect the smooth muscles, raise blood pressure, and stimulate the reabsorption of water in the kidney tubules, thus affecting water balance.

Pituitary anterior lobe—This rear lobe secretes several hormones. One ***(ACTH)*** controls the adrenal cortex. Others regulate the thyroid, stimulate the activity of sex and mammary glands, and regulate growth of bone and fibrous tissue. Too little of this hormone in youth results in *dwarfism*. Too much of the growth hormone in youth causes *gigantism*; in adults, it makes the hands and feet and head abnormally large, a condition called *acromegaly*.

Gonads—The testes and ovaries are the glands of reproduction and sexual characteristics.

Testes—These secrete the male sex hormones, ***androgens***. One of these, ***testosterone***, controls the development of sex characteristics—such as male body form, hair distribution, and voice.

Ovaries—These produce two hormones: ***Estrogen*** helps maintain normal menstrual cycle and controls and maintains sex growth. ***Progesterone*** is necessary for implantation of the fertilized ovum and continuation of pregnancy. Both hormones prepare the endometrium for pregnancy and are necessary for a woman's normal emotional life.

Thymus—This gland lies behind the sternum (breast bone). It has two main lobes and aids in attaining sexual maturity. It atrophies (ceases to function) following puberty.

Pineal gland—This gland, located in the brain behind the pituitary, affects body growth.

Other hormones—There are other hormones which are not often discussed. The stomach wall secretes a hormone, ***gastrin***, that affects the blood vessels and secretions of the stomach digestive juice glands. The lining of the upper part of the small intestine (duodenum) secretes ***secretin***, which stimulates the pancreas to send pancreatic juice to help digest food. The duodenal lining also secretes another hormone that tells the gallbladder to open and send gall to emulsify fat. The ***placenta*** acts as a temporary endocrine gland, helping in the maintenance of pregnancy.

10 - THE REPRODUCTIVE SYSTEM

Introduction—Asexual reproduction is done by mitosis, as in protozoa. Human beings reproduce by sexual methods. Each female and male possesses sex glands ***(gonads)*** which produce special sex cells ***(gametes)***. When the male gamete is brought into contact with the female gamete, they unite and form a new single-celled individual (a ***zygote***). The zygote undergoes repeated divisions, resulting in another individual, a composite of its parents and other ancestors.

MEN

Testes—These are two oval-shaped glands which produce large numbers of ***sperm cells***. They are sus-

pended in a sac, called the ***scrotum***. The sperm cells are in a fluid called ***semen***; most of this is produced by the testes. Hormones which aid in the development of changes occurring at puberty are also produced by the testes. The ***sperm*** is a microscopic cell with a whip-like tail, and it swims rather rapidly in the semen. Millions of sperm are in 1 drop of ***seminal fluid*** (semen).

Epididymis—This is a 20 foot tube, which is coiled along the top and side of the testes; it is so narrow it can barely be seen by the naked eye. The sperm swims through this tube.

Seminal duct—This duct is also called the ***vas deferens*** or ***ductus deferens***. It is a tube which goes from the epididymis tube, through the ***inguinal canal***, all the way up and around the bladder and into the prostate gland. (An *inguinal hernia* can occur at the inguinal canal opening into the abdomen.)

Seminal vesicles—These are pouches which secrete additional fluid for the semen. They also store sperm which has traveled that far. Ducts (tubes) leading from them join with the seminal ducts at the entrance to the prostate gland.

Prostate gland—This is a doughnut-shaped gland located just below the bladder. It contains 30 to 50 *alveola glands*, and encircles the seminal duct and the urethra (the tube that carries urine to its final outlet). The prostate adds an alkaline fluid to the seminal fluid which greatly increases how fast the sperm, which pass beyond it, are able to swim.

Urethra—As the seminal duct is about to exit the prostate, it joins with the urethra (normally used as a urine tube). It is well-known that, in older men the prostate sometimes enlarges, reducing the flow of urine through the urethra. Less well-known is the reason why the prostate gland surrounds the urethra: A little before sexual intercourse, a signal is sent to the prostate, to clamp down and close off the urine tube so it is empty. The inflowing semen purifies it, prior to ejaculation. Just beyond the prostate, two ***cowper's glands*** each the size of a pea, add a mucous-like lubricating fluid into the semen in the urethra. The urethra continues on down to its outlet, at the tip of the penis.

Penis—This is a cylinder-shaped organ located externally. It has cavern-like spaces in it which can greatly engorge with blood. At the end of this organ is a fold of loose skin which forms the hood-like ***foreskin (prepuce)***. *Circumcision* is the cutting off of this foreskin.

WOMEN

Ovaries—The ***ovum*** is the female cell of reproduction. The ***ova***, or eggs (***ovum*** is singular), are produced by the ovaries, which are two glands about the size of an unshelled almond, located within the abdominal cavity just below the top of the pelvis; one is on each side. Imbedded in the ovaries are thousands of microscopic structures called ***graafian follicles***. The ova are encased inside these follicles. A female infant has 400,000 follicles; an adult has 200,000, of which about 400 mature into ova and are discharged. The ovaries also secrete hormones that help regulate reproduction.

Menstruation—Upon reaching menstrual age, the ova begin maturing in the follicles. Once each month one follicle ripens, pushes its way to the surface of the ovary, breaks open, and discharges the egg (ova) into the pelvic cavity. This is ***ovulation***.

Fallopian tubes—There are two fallopian tubes (*uterine tubes*), one on each side. Each of these tubes is about 4-5 inches in length. The mature ovum bursts from the ovary into the ***peritoneal cavity***. Just beneath it is the open end of a fallopian tube. Finger-like projections (called ***processes***) on that open end wave the ovum into one of the tubes, where it travels on down into the uterus.

Uterus—The fallopian tubes are attached to the uterus (***womb***), which is a hollow, very muscular, pear-shaped organ in the center of the pelvic cavity. It is about three inches long and has two parts, the body and the neck (***cervix***). The body rounds into a bulging surface, about the level where the tubes enter it. This area is called the ***fundus***. The cervix, below it, is narrow and thicker. Its lower portion is called the ***cervical canal***. The opening of the cervix is the ***external os***. ("Os" means a mouth or opening.) The inside is lined with a tissue filled with blood vessels. This tissue is a mucous membrane layer called ***endometrium***. Strong ligaments keep it in position. The uterus is capable of great expansion, since it is the organ in which the baby grows.

Vagina—The neck of the uterus opens into a muscular canal, the vagina, which opens into the ***vulva***, which has the external genital organs (the ***labia***, two sets of lip-like folds on each side of the vaginal opening, and the ***clitoris***). The vagina is the female organ of intercourse and is part of the ***birth canal***. (The birth canal is the route taken by the baby in the process of being born into the world.) The ***urinary meatus***, the urinary outlet, is between the clitoris and vaginal opening (orifice). Initially, the ***hymen*** partially closes the external opening of the vagina.

Perineum—This is the space between the lower end of the vagina and the rectum. During childbirth, it is sometimes torn or deliberately cut. If either occurs, it requires special care after birth.

Breasts—These are the ***mammary glands***. They are stimulated by endocrines to secrete ***milk***, after a child is born. Each breast, composed of glandular tissues and fat, is divided into 16 to 20 separate *lobes* that secrete milk. Each lobe has a main duct; these ducts converge toward the ***nipple (areola)***, like

the spokes of a wheel. They terminate in tiny openings on the surface of the nipple. The breasts enlarge during pregnancy, and the skin around the nipples become pigmented (darker in color).

Fertilization—An ovum leaves the ovary about halfway between menstrual cycles; it enters the fallopian tube and travels down toward the uterus. During intercourse, millions of sperm cells (200 million to 400 million) are discharged by ***ejaculation*** into the vagina. They enter the uterus and move into the fallopian tubes. These sperm, earlier nourished by the semen, only live about 24 hours (since they swim upward, away from the semen). If one of the sperm cells meets an ovum, the two cells join. The new cell (a ***zygote***) then proceeds down the tube and attaches itself to the wall of the uterus, and ***pregnancy*** is established. It rarely attaches to the wall of the fallopian tube, which results in ***tubal pregnancy*** and is a serious problem.

Menstruation—About every 28 days a rhythmical series of changes occurs, called the ***menstrual cycle (period)***. The various changes that occur are the result from several hormones.

During 7 to 10 days after the flow has ceased, a graafian follicle and an ovum are maturing (caused by a hormone from the pituitary). As the follicle matures, it produces a hormone called ***estrogen***, which, in turn, causes the lining (endometrium) of the uterus to greatly thicken in preparation for a possible pregnancy.

At the end of this time (about the 7th to 10th day following cessation of the flow), ovulation occurs. As soon as the ovum is released, the follicle it used to be in now becomes a yellow body with a new name: ***corpus luteum***. This secretes a second female hormone, ***progesterone***, which continues the work begun by estrogen in further preparing the uterus for pregnancy.

Non-fertilization—The ovum can only be fertilized for a day or two following its release. If that does not occur, the ovum soon perishes and the corpus luteum stops producing progesterone. Without that hormone, the blood supply to the endometrium is affected and it begins to disintegrate. Soon the endometrium is sloughed off, and a discharge (the ***menstrual flow***) from the uterus occurs. This lasts one to five days, during which time a new follicle starts to ripen and another cycle begins.

Fertilization—If fertilization (the uniting of the sperm with the ovum) occurs, it usually takes place while the ovum is in the fallopian tube. The fertilized ovum (now a zygote) moves to the uterus and implants itself in the uterine wall. This immediately causes the corpus luteum to increase its production of progesterone. Because there is now a use for the endometrium, menstruation ceases.

Menopause—As long as ovarian hormones act on the uterine lining, menstruation continues. The ovaries gradually become less active as forties approach. In women between 45 and 55 (usually beginning 45-50), mature egg cells and the hormones that act on the uterine line cease being produced. Then menstruation ceases. This span of time is called menopause. It should be a gradual change that the body can adjust to with little difficulty. But sometimes there are problems, such as hot flashes (sudden warm flushes over the skin, induced by the thyroid, that are temporary disturbances of the circulation). When menopause is excessive or prolonged, headaches, sweating, dizzy spells, worry, fear, irritability, and/or persistent depression may occur.

11 - THE SPECIAL SENSES

External ear—This is the only visible part. It is mostly cartilage, shaped to receive sounds, with the small end opening into a tube, the ***auditory canal*** *(meatus)*. This canal ends at a thin wall, called the ***ear drum (typanic membrane)***. The lining of the auditory canal is covered with tiny hairs and secretes a waxy substance, called ***cerumen***. This aids the transmission of sound and the taste of it causes entering insects to hurriedly exit.

Middle ear—This is a small cavity, behind the ear drum, in the temporal bone of the skull. It has two openings: one into the ***mastoid cells*** behind it and the other into the ***eustachian tube*** that goes down to the back of the nose *(nasopharynx)*. If the eustachian tube was not there, your ear drum would be destroyed as soon as you climbed or descended a few thousand feet. Because it is there, the ear drum can vibrate freely, transmitting sound. The tube only opens during swallowing. Infection can travel from the throat to the middle ear through that tube.

Three small bones ***(the ossicles)*** hang between the ear drum and the cavity side wall, which are named for their strange shapes: the ***hammer (malleus)***, the ***anvil (incus)***, and the ***stirrup (stapes)***. Sound waves start vibrations of the ear drum that set these bones in motion, and they carry the sound across the middle ear.

Inner ear—The internal ear has two parts: the ***cochlea*** and the semicircular canals. The cochlea looks like a snail shell. Its coils are filled with fluid that carries the sound waves that enter from the middle ear. The base of the stirrup bone fits into the opening between the middle ear and the inner ear. When the stirrup sets the fluid in the cochlea in motion, the tiny receptive nerve endings pass the vibrations on to the ***auditory nerve***, which carries them to the ***brain***. The brain interprets these vibrations as ***sounds***.

Semicircular canals—The three semicircular canals in each ear, shaped like horseshoes, lie beside the cochlea. They are partly filled with fluid that is

set in motion by head or body movements. Because this fluid also has communication with the brain, we are able to sense and maintain proper balance.

Eye—As with everything else in the human body, the human eye is astounding. Instead of being a camera, the eye registers every new image, one immediately after the other (about 20 per second). In addition, because there are two eyes, ***in-depth (binocular) vision*** is accomplished. Because the eyeballs can move separately, and the lens can change thickness, you can see things both closer and at a distance. The eye lies in a circular cavity within several bones which, before birth, fused together. Each eye has optical equipment, muscles, conjunctiva, tear apparatus, and eyelids. Here is a very simplified description of the many wonders in the eye:

Eyeball—As you look at the eye, the white of the eye is the ***sclera***. Inside that is the colored part, or ***iris***. Inside that is the black spot, the ***pupil***. Light passes into the eyeball through the pupil, which can enlarge (dilate) or shrink (contract) in size. (A camera has a similar mechanism, which is called the diaphragm or "stop").

Behind the pupil, the light travels through the ***lens***, double convex in shape. Behind that is a clear fluid throughout the middle of the eyeball ***(vitreous humor)***. At the back of the eyeball, the light strikes the ***retina***, which contains nerve fibers of the ***optic nerve*** and the ***nerve cells*** sensitive to light. Two types of cells are there: rods and cones. There are 100 million ***rods*** in each retina, which can see things as light and dark ("black and white"), even in very dim light. There are less ***cones***; they see color, but only in brighter light. This is why, at night, you only see objects as dark and light, without any color to them.

The lens bends thicker or thinner in order to focus the light into a sharp image. This focusing is called ***accommodation***. The light image is then carried to the cells and nerves in the retina and is sent through the optic nerve, to the sight center in the brain.

Eye muscles—Smooth muscles in the eye control the size of the pupil and focusing action of the lens. Three pair of eye muscles outside the eyeball move the eyeball. Another muscle holds the ***eyelid*** open (or relaxes and lets it shut).

Tear glands—The ***lacrimal (tear) glands*** are above the eyeball. They secrete tears which keep the eyeball moist. They drain into the ***conjunctival sacs*** and then drain into the inner corners of the eyelids. From there, they drain through small ducts into the nose. When they flow rapidly, tears run down the cheeks.

Eye problems—When a lens becomes cloudy, the condition is called *cataract*. If the eyeball is too short, the light rays focus behind the retina instead of on it. This causes *far-sightedness (hyperopia)*. Corrective convex lenses are needed. In *near-sightedness (myopia)*, the eyeball is too long or the lens too strong, and the light rays are focused in front of the retina. Corrective concave lenses are needed. *Presbyteria* is lack of lens elasticity, which tends to occur in old age. If the eye has a defective shape, the rays do not exactly focus on a point on the retina. This is *astigmatism*. Corrective lenses must be slightly cylindrical. *Cross eyes* converge excessively. *Wall eyes* diverge too much.

Smell—The sense of smell is obtained through the ***olfactory cells***, which are nerve receptors in the walls of the nasal cavity. Tiny particles of odorous substances in the air, in these cells, are dissolved in a special secretion. A message is then sent to the brain, where they are interpreted as a particular odor.

Taste—The taste receptor nerves are called taste buds. Buds on the sides sense *sour* (which is acid). Those on top sense *sweet* (organic products, especially carbohydrates). Those on the tip and sides sense *salty* (chlorides). Those at the back of the tongue sense *bitter* (alkaloids and bile).

Touch—You have sensory organs in your skin, so you know when you touch or are touched. You can sense pressure, heat, cold, and pain. These receptors vary from 16,000 for heat to 4 million for pain.

Kinesthetic—This is the sense of position *(proprioceptive sense)*. You are able to sense your position, erect posture, muscle tonus, weight, pressure, and coordinated body movements. You have sense organs in certain skeletal muscles *(interfusal fibers* and *neuromuscular spindles)*. You also have sense organs in your tendons *(neurotendinous spindles)*. And, of course, you have the semicircular canals in your ears which, by locating the pull of gravity, help you maintain balance.

IMPORTANT MUSCLES

The human body has over 600 muscles. *Smooth muscles* include the heart and liver, and are involuntary. *Skeletal muscles* are under your control. Here are the most prominent of them:

Shoulder muscle - Deltoid
Back shoulder-to-neck muscle - Trapezius
Top upper arm muscle - Biceps
Lower upper arm muscle - Triceps
Chest muscle - Pectorals
Abdominal muscle - Rectus abdominis
Rump muscle - Gluteus maximus
Front upper leg muscle - Quadriceps femorus
Rear lower leg muscle - Gastrocnemius
Also: ankle tendon - Achilles tendon

The Natural Remedies Encyclopedia

How to Quit Smoking and Drinking

1 - HOW TO QUIT TOBACCO 773
2 - HOW TO QUIT ALCOHOL 775

The information in each of these two sections is helpful for both those who want to quit smoking and those who want to quit drinking alcoholic beverages. The principles are similar. If you want to quit one of them, it would be well to read both sections.

The information below was taken from two books by the author: *You Can Quit Smoking* and *You Can Quit Alcohol.*

HOW TO QUIT TOBACCO

The best way to quit smoking is to stop all at once—none of this tapering-off business. It is better to have a few rough days and be through with it than to drag it out for weeks and months. Slow torture is no fun.

Decide to quit—and do it with a positive enthusiasm. Do not be negative, thinking how much you miss it. Be thankful you are getting rid of the habit.

After quitting, the hardest part comes in the first three days; but, by the end of five days, the majority of individuals find the craving definitely less or gone. Continue for ten days, and you make it.

Say to yourself: "I choose not to smoke." The power of the will is important. It is the key to victory. Keep repeating your decision throughout the day from morning till night. The more you say it, the more you mean it.

You know the issues that are involved; the future—for yourself and your loved ones. You know what a miserable life it is to smoke and have it constantly getting in your eyes, costing you money, and craving it in places where smoking is not permitted. And you know it is going to shorten your life.

The facts are out there; you hear them all the time: cancer of the throat, lung cancer, emphysema, hardening of the arteries, slowing of mental activity and reflex responses, cholesterol buildup, reduced heart action and physical endurance, blood pressure problems.

Just one statistic: Dr. Harold F. Dorn studied 200,000 military veterans; and he found that the death rate among all types of cigarette smokers was 58 percent higher than among non-smokers.

There are over 2,000 known harmful chemicals in tobacco; and 400 of them are known to be carcinogenic. These are the facts.

Make a decision to quit. Make a list of reasons why you are quitting. Read over the list while you are quitting.

Learn to depend on prayer. Only God can give you the help you need. There are no atheists in foxholes; and you had better not be one now. This is a crisis in your life; and you need God's help.

If you can, find someone who will pray with and for you, someone who is a real friend and not just a critic. Call your friend on the phone and talk to him when things get rough.

Carry with you some Bible promises:

"I can do all things through Christ which strengtheneth me."—*Philippians 4:13.*

"But thanks be to God, which giveth us the victory through our Lord Jesus Christ."—*1 Corinthians 15:57.*

"Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee."—*Isaiah 41:10.*

Believe that these promises were written just for you and your need, just now. Repeat them often.

Get rid of all your tobacco products, including ash trays and all the rest.

Stay away from other smokers as much as possible for the next few weeks.

Two or even three times a day, take a warm bath for 15 or 20 minutes at a time. Relax and enjoy it. This will help soak the poisons out quicker.

Since you will be tense at this time, the baths will help relax you. (Frankly, while you were smoking, you

were tense all the time!)

If you are able to take it and have no cardiac problems—hot showers, hot baths, or steam baths (best of all) will get the nicotine out quicker.

It is a known fact that the quicker the yellow nicotine leaves your body, the quicker the addiction goes with it.

When you go off tobacco, you are likely to find that your sweat at night will yellow the sheets. That is good; you want the nicotine out of your body.

After the bath or shower, take a "cold mitten friction." This water therapy is described in this *Encyclopedia*, on pp. 187-188.

Each time you crave a smoke or drink, begin slow deep breathing. Slowly take in as much air as you can; then exhale it slowly. Repeat your resolve: "I choose not to smoke; I choose not to drink."

As often as you can, go outside in the open air and breathe deeply. There is energy in fresh air; and it is helping to clean you out.

Drink at least 6-8 glasses of water daily. Do this between meals. If necessary, keep a record of how much water you are drinking. This helps flush out poisons.

Take no alcoholic beverages, none at all. They will cloud your mind, weaken your will power, and you will go back to smoking.

Eat lots of fresh fruit and vegetables. Fresh fruit is especially important now. There was a man who hitched a ride across country. He slipped into a refrigerator car and got locked in. It was full of oranges.

By the time he got out—about six days later—he found he had no craving for cigarettes. For six days, he had nothing to eat but oranges. Eating them took away the craving. The vitamin C in the oranges also helps destroy the poisons in your body, lessening the craving.

You may find that you may gain some weight. But getting rid of tobacco is far more important than the few pounds gained!

You are increasing your will power; and you will later be able to use it to lessen the amount of food you eat, so you can get your weight back down.

Walk outdoors for 15-30 minutes after each meal, breathing deeply as you go. Don't just sit after a meal; for this is the time of day that you will especially want to smoke. Instead, get outside.

Open up the curtains, raise the windows, and let in the purifying sunlight and air. There is tobacco odor all over your house. Get it out. This is important.

Avoid mustard, spices, pepper, vinegar, ketchup, hot sauce, chili, and horseradish. These foods tend to arouse cravings.

Skip all sweets, pastries, cake, ice cream, and chocolate during the first 10 days at least. Avoid rich, sugar-heavy desserts.

Heavy smokers often like highly spiced foods; they frequently eat a heavy meat diet, plus gravies, fried foods, and other rich foods. Avoid them if you want success in kicking the habit.

If you are starting to get squeamish, ask yourself: How serious am I about this?

Do not use fish, fowl, meat, tea, coffee, or cola beverages. The uric acid, ammonia, purines, and other wastes in meat is what gives it that special flavor. It also stimulates your nerves and increases your craving for nicotine and alcohol. The caffeine in tea, coffee, and cola drinks can so trigger your nerves that, in a matter of minutes, you will have an uncontrollable desire to light up.

A lot of sugar in the diet makes you more jumpy and irritable. This is because it steals B vitamins and minerals, especially calcium. Calcium helps strengthen and calm your nerves.

Do not try to solve any major problems just now. Make life as pleasant as possible; keep on the positive side.

Be thankful for your blessings and name them. Thank God for help and ongoing victory. Your prayers will be a sham if you stop praying, after you have gotten the victory over tobacco.

Avoid all sedatives and stimulants.

Tobacco raises blood sugar for 2½ to 3 minutes; and this is part of its addictive power. So, if necessary, carry a few pieces of honey-drop candy in the pocket you formerly kept your cigarette pack in. If the going gets rough, chew on one.

Do not go where people are drinking liquor. Avoid old friends who like to drink.

Gentian root is an herb that can be chewed. It removes the taste for tobacco. Chamomile is another helpful herb. You can chew the blossoms between meals when you want a smoke.

The most important part of this program is the earnest prayer to God. Commit your life to Him, and your future will be much happier than your past. Place your will on the side of God. Determine that, with His help, you will succeed.

A sweat bath once a week will help eliminate the nicotine from your system. Keep in the open air as much as possible.

Keep your mind occupied. When tempted, repeat, "Through the power of Christ, I choose not to smoke." When you need to, phone your prayer partner.

Carrot sticks or raw celery at the close of a meal will lessen the craving. Chewing raisins helps somewhat. Carry a small package of raisins in your pocket.

You will notice that each time the craving comes, it will keep weakening more quickly in a few minutes.

When friends tell you that you can't do it, do not become angry; but pleasantly tell them to wait and see. (They only tell you that because they don't think they could do it.) Take the initiative: Tell them they

need to give it up too.

If you know you are going to be in a situation where people are smoking, prepare for it. Meet it in a positive manner. Settle it, that you are not a timid rabbit. Your days of slavery to the tobacco leaf are over with.

Vitamin C is a great help for cutting the smoking habit. Take vitamin C tablets with water or juice.

Vitamin B complex is also important. Take a B complex supplement at each meal.

Hot water with lemon juice is helpful. Go on a fast for a day or two at a time, drinking only hot water and lemon juice. That will clean the poisons out the fastest. Remember that the quicker they are eliminated, the quicker the craving will go.

Keep positive. Keep busy doing something. Keep praying. Keep thanking Him. Keep thinking of the brighter future for you and your loved ones.

Now that you have kicked the habit, live for others. Find ways to bring more happiness into the lives of those around you. Regularly attend church. Live for God. Encourage others to find the better way of life you have discovered.

There are principles in *How to Quit Alcohol*, below, that will also help you quit smoking. Be sure and read them. *Also see pp. 607, 208.*

HOW TO QUIT ALCOHOL

First read over the preceding section on how to quit tobacco. Many of the same principles apply. We will not repeat many of them here. *Also see p. 608.*

First, accept the fact that you have an alcohol problem. Many people refuse to accept this fact, so they continue on with the problem.

You know the situation already: Drinking alcohol shortens the life span drastically. The death records of 2 million policy holders in 43 American life insurance companies, for a 20 year period, were summarized:

People drinking 2 glasses of beer or 1 glass of whisky per day—were 18% more likely to die than the average American. Among those using over 2 glasses of beer or 1 glass of whisky daily—death was 86% higher.

Alcohol produces cirrhosis of the liver. It is progressive and leads to death. It lowers resistance to disease, especially pneumonia. Chronic alcoholism leads to mental disease. A study of 56,000 patients in Massachusetts revealed that one-fifth of all admissions were alcoholics.

Alcohol is not a food and can neither nourish nor strengthen the body. It seems to warm you; but that is only because blood is being drawn from the internal organs to the surface. Alcohol drys out brain cells; and, over a period of time, more cells keep being destroyed. How well do you want your mind to work when you are older?

Alcoholics tend to need friends. Find a friend or several of them. Part of the AA (Alcohol Annonymous) success is the weekly group meeting, plus the fact that everyone has someone he can phone when he needs to.

In a 1967 experiment by U.D. Register, M.D. (Loma Linda University in California), he found that rats fed junk food wanted to drink diluted alcohol instead of water. When he added coffee to their diet, their alcohol intake greatly increased. When they were switched over to an exclusively nutritious diet, nearly all the rats quit the alcohol entirely and returned to drinking water.

Nearly a century ago, Horace Fletcher, a researcher into the careful chewing of food, paid some drunks to go on an experiment. They could have all the liquor they wanted, free, if they did two things: eat nutritious meals—and slowly chew every mouthful of liquor before swallowing it. Those that did this lost their interest in alcohol—even though they could have all they wanted, free of charge.

Drinking alcohol causes a deficiency of the B complex vitamins. So, as you begin quitting liquor, take B complex supplements every day.

Niacin (B_3) is considered by many researchers to be the most important single vitamin in overcoming the alcohol habit. "B_3 far surpasses other therapeutic agents commonly used in the treatment of alcoholics."—*Dr. Russell F. Smith, University of Michigan.* A dose of 12 grams of niacin each day, and onward for several years thereafter, has been suggested. (Be aware that niacin tends to cause the face to flush red for a few minutes when you swallow it. This is natural and in no way harmful.)

Vitamin B_6 (pyridoxine) is also very important.

Other important vitamins include vitamins C, B_1, B_{12}, and E. The entire B complex works together; increased amounts of all the B vitamins should be supplied.

It should be mentioned that increased B_3 dosage depletes the amount of vitamin C in the body; so more vitamin C is needed (An average dose of 1000 mg. of vitamin C daily is frequently used.)

Be sure to remain on a nutritious diet and take these vitamins after you have victory over liquor.

Magnesium is an important mineral. It is significant that the symptoms of magnesium deficiency are identical to the symptoms of *delerium tremens*. Dr. Edmund G. Flink, at West Virginia University Medical School, discovered that magnesium (a trace mineral) greatly reduces the withdrawal symptoms called *delirium tremens* (the D.T.s).

Studies reveal that poor food (such as hot dogs, spaghetti meat balls, sweet rolls, and soft drinks) and/or narcotics (coffee, tea, cigarettes, hard drugs) and/or irritating foods (spices, condiments, sauces, ketchups, gravies)—all increase the craving for alcohol.

Physicians recommend an "aversion therapy." A measured amount of an alcoholic beverage is given. But into it a certain amount of a nausea-producing agent has been mixed. Two such agents are apomorphine and emetine. This tends to develop a loathing for alcohol. Because of the severe physical reactions, this treatment should be accompanied by close medical supervision.

But such treatments are often only temporary. Far better is a nutritious program, trust in God, earnest prayer, resolute decision, and a friend to talk to.

Alcoholics Annonymous was started in 1935 by an alcoholic who solved his own alcohol problem—by trying to help another drunk get off of it. This gave him something worthwhile to live for. It energized him. He had to help other people.

Alcoholics Annonymous provides friends to talk to; and this is important.

Here is the twelve-step program of Alcoholics Annonymous:

Step 1: We admitted that we were powerless over alcohol; our lives had become unmanageable.

Step 2: We came to believe that a Power greater than ourselves could restore us to sanity.

Step 3: We made a decision to turn our will and our lives over to the care of God as we understood Him.

Step 4: We made a searching and fearless moral inventory of ourselves.

Step 5: We admitted to God, to ourselves, and to other human beings the exact nature of our wrongs.

Step 6: We were entirely ready to have God remove all these defects of character.

Step 7: We humbly asked Him to remove our shortcomings.

Step 8: We made a list of all persons we had harmed; and we became willing to make amends to them all.

Step 9: We made direct amends to such people whenever possible, except when to do so would injure them or others.

Step 10: We continued to take personal inventory; and we promptly admitted when we were wrong.

Step 11: We sought through prayer and meditation to improve our conscious contact with God as we understood Him, praying only for knowledge of His will for us and the power to carry that out.

Step 12: Having had a spiritual awakening as the result of these steps, we tried to carry this message to alcoholics and to practice these principles in all our affairs.

Recently a new group therapy approach has been started. It is called the *4-DK Plan* (Four-Dimensional Key to the Cause of Alcoholism). The four dimensions are physical, mental, social, and spiritual.

The plan is educational, can be started in any community, is positive, and emphasizes good health and wholesome living. For more information, contact the International Commission for the Prevention of Alcoholism: 12501 Old Columbia Pike, Silver Spring, MD 20904-6600.

Alcohol is a problem that can be overcome. Others have done it and you can do it also. Carefully read the following information and do exactly what it says. This can mean the beginning of a new way of life for you.

First: You must accept the fact that you have a problem. You must be convinced that you have to quit, for your own sake and for the sake of your loved ones.

Second: You must accept the fact that you cannot do it by yourself. Only in the strength of God can it be done. You can only receive that strength through earnest prayer for help. Go on your knees alone—all by yourself—and cry to God over the whole thing. Tell Him what you've done wrong and ask Him to forgive you. And mean it. Tell Him that you are going to dedicate the rest of your life to Him. And mean it. Tell Him you are willing to sacrifice anything that such a dedication requires. And mean it. Then ask Him for strength to break from this terrible habit. Ask Him to help you to either do it by yourself or provide you with one or more friends that will provide encouragement.

Third: Accept the fact that you are not going to stay close to God unless you read His written Word—the Bible—every day; and every day send up your prayers for forgiveness and for help. Each day is a new one, and you must start it with God. There are no shortcuts; for they only lead to detours. You must start every day with God and then walk with Him all day long.

Fourth: Accept the fact that continued prayer for help must be mixed with continued praise. Thankfulness is powerful. Believe God. Believe that He is there; believe that He will help. Believe it all day long, and at night too. Talk to Him often. —You will have the help when you need it, if you will sincerely stay with Him. Believe that He will forgive and accept you, even when you make mistakes. Believe that He loves you deeply, more deeply than you have ever thought possible. He has tried to help you for years, but your stubborn ways have hindered Him. Let Him give you the help now that He wants to give you. Thank Him continually for it. Thank Him even when things look dark and you seem to have no one on your side.

Fifth: You must make some changes in your life. You will have to get more exercise in the open air and more rest at night. You will have to put away the things that tend to separate you from God. If television and radio and the music and magazines you are used to are pulling you away for God, then throw them out. You may find that you have to make some new friends and avoid some old ones. They don't care for your

new way of life and want your company in doing things you are no longer interested in doing. The best solution is to find new friends. Go to church regularly. That's where you are more likely to find better ones.

Sixth: It will greatly help if you will go on an initial cleansing program. This will help expel the alcohol from your system more quickly. As with nicotine, the more quickly alcohol is out of your body, the more quickly the old cravings will subside. Such a program will also help you over the initial tremors.

As you know, one must stop these dangerous practices all at once; they cannot be put away simply by gradually cutting down. You want to get rid of the craving as quickly as possible.

Here is a four-day program:

In order to carry out this program, you may need someone to help you. The baths mentioned below will help expel impurities more quickly. Continue them, to a lesser extent, later on. This is a four-day program; and, in order to do it, you will need to stay home during those four days. You will be expelling impurities, getting better nutrition, and obtaining a lot of rest.

Prepare an herbal tea from the following powdered herbs: equal parts of skullcap, catnip, and blue vervain with no sweetening. Combine them in a pot and place 2 tablespoons in a quart of water that has been brought to a boil; then turn off and let it sit for 20 minutes, with the lid on. (This is called "steeping.") Two quarts should last a day and a half, and can be kept refrigerated until it is used up. An eight-ounce glass of tea should be taken every two hours, except when sleeping at night. (The skullcap and catnip will help you relax and sleep; the blue vervain will help you sweat.)

First day—At 7 a.m., drink a glass of water. At 8 a.m., drink 8 oz. of tea. This is a relaxant tea and will help you sleep. The idea here is the more sleep during withdrawal from alcohol, the less problem with the withdrawal symptoms (delerium tremens, hallucinations, etc.). And it works. Stay in bed and rest. Sleep all you can. Every two hours another glass of tea should be brought to you. At 6 p.m. each evening, take a hot and cold shower.

Second day—Same as the first day; but that evening you can have a glass of tomato juice with a ½ teaspoon of cayenne in it. The stomach is used to the bite of alcohol and the red pepper helps take its place just now. Do not use black pepper.

Third day—Same as preceding days. But now you can add a meal, in the evening, of sliced tomato; or, if you prefer, stay with the tomato juice and cayenne.

Fourth day—The usual pattern, except as follows: In the morning, a small meal of fresh fruit or soaked dried fruit; at noon a medium-sized salad, but not too much.

Fifth day—Eat normally, but of nutritious food. Be done with junk food. The program is over.

The above program was developed by an herbalist who died in the 1970s. She successfully used it with many people, and saw it work repeatedly for both those coming off alcohol and those trying to quit tobacco.

During the initial withdrawal and immediately after, sleep is essential. One method of obtaining this is by the use of prolonged baths (with the water temperature maintained at around 92° to 94° F.). Quiet surroundings during this time are absolutely essential. The diet should not include coffee, spices, and condiments; they should be permanently stopped. It is now known that these only whet the appetite to return to alcohol. Fruit, vegetables, and grains are needed, along with water in order to replace body losses.

Dr. Theron G. Randolph discovered that people who regularly drink alcohol become overly sensitive to the things that the alcoholic beverage was derived from. "Sensitivity to corn, malt, wheat, rye, grape, and potato were encountered [in alcoholics] in that order of frequency. It is well-known that alcoholic beverages consumed in this country are derived from foods in approximately the same order."

But more important, than all else, is a personal surrender to Jesus Christ and a strict obedience, by faith in Him, to all Ten of the Commandments (Exodus 20:3-17). God will help you.

FOR MORE INFORMATION ON QUITTING TOBACCO, ALCOHOL, COFFEE, AND DRUGS GO TO PAGES 607-610.

Anodyne herbs lessen the excitability of the nerves and nerve centers. Most can be used externally as fomentations or internally as teas, tinctures, or powders. *Here is a list of them:* chamomile, cloves, echinacea, ginger, hops, juniper berries, kava kava, lady's slipper, mullein, pulsatilla, skullcap, valerian, vervain, white willow, wild lettuce, wild yam, wood betony. Chamomile and skullcap are among the best.

Hard Drugs Warning Signals

Sixteen Warning Signals: A Message to Parents 778
Thirty-four Warning Signs of Drug Use 779
Why Young People Do It: The Help that is Needed 779
Where to Obtain Help 780
The Legal Penalties 780

This chapter is excerpted from the author's book, Hard Drugs Can Ruin You.

SIXTEEN WARNING SIGNALS: A MESSAGE TO PARENTS

All of the following warning signs have been suggested by professionals in the field of detecting and caring for drug abusers and addicts. One sign alone may mean nothing; several together can be very significant.

1 - SCHOOL GRADES SUDDENLY GO DOWN—This is an important sign. The teenager may offer many different reasons and excuses; but there may be another reason—drugs. A closely related sign is the absence of report cards: They are no longer being shown to you. Check into it; you may find that your A and B student may suddenly have become a C, with occasional F, student.

2 - SUDDENLY DIFFERENT FRIENDS—Young people feel that they have a right to select their own friends; and so they may not appreciate your interest in who their friends are. Notice a strange narrowing of the circle of friends that your adolescent is chumming around with. Keep track of who their friends are. If they suddenly change, or narrow to only a few friends, or seem to drop off entirely, ask about this some evening and see what the reaction is. The kind of friends we have reveals our values and interests. Friends reveal behavior. When our values and actions change, our friendships will change also.

3 - SUDDENLY OLDER FRIENDS—If their friends suddenly change from their own age to four or five years older, this is significant. Why the new acquaintances? The older person has something that the younger wants; and the younger has something the older one wants.

4 - A MAJOR CHANGE IN ATTITUDES AND FEELINGS—Temper tantrums, extreme irritability, or no feelings at all. How did all this start? What has made the change? What caused the switch from an upbeat, energetic attitude to an apathetic, indifferent shrug which seems to be uninterested or not involved in anything worthwhile?

5 - SUDDENLY MONEY COMING IN—Does your son or daughter act as if he or she has inherited wealth? Clothes, food, drink, recreational equipment, electronics.

6 - SUDDENLY MONEY GOING OUT—This is the opposite of the previous possibility: Does your son or daughter suddenly have no money, when he used to have enough for his simple needs?

7 - PHONE CALLS AT ODD HOURS—When the phone rings at 11:30 p.m. on a school night and your son yells "I'll get it." Phone calls late at night after your known bedtime are a cause for concern. Listen in and confront him if what you have heard is the awful truth you have suspected.

8 - THE BEDROOM—What does his or her bedroom look like? Has it recently changed from neatness to sloppiness? Does it look like a cave or a horror movie? Are there blankets on the windows to shut out all light? Is there a total disregard to health and proper environment? Is there unusual equipment in the bedroom (such as hypodermic needles, smoking gadgets, spoons, saucers, white or brown powders, pills, tablets, or ampoules)?

9 - LIVING IN AN UNREAL WORLD—Does your teenager live in a totally different world than most of his or her companions? Does he dream of a great occupation as an astronaut, yet gives no attention to school studies? Does she dream of romance with a rock star, yet shuts herself away from boys her own age? Living in a fantasy world can be an early step into the drug culture. Becoming conditioned to not want to cope with real life can prepare

one for the unreal dead-end street of drug entertainment.

10 - CONCERNED NEIGHBORS AND FRIENDS—People tend to keep to themselves and not speak up, even when they should. But if some of your friends and neighbors begin warning you about the behavior of your teenager, then you had better sit up and listen. If someone comes to you about your youngster, it may be serious. Pay attention and do something about it.

First try to solve the problem in your home; and, if that does not work, there are resources outside the home. Be a loving, helpful parent. But also be watchful. And if warning signs arise, bring it out into the open. If necessary tell them, "If you're buying dope, I want to know about it. I'm not going to throw you out. I love you, but I want to know about it."

11-16 - SIX MORE SIGNS—(1) The youngster becomes sleepy, apathetic, secretive, cranky, and unreliable. (2) He loses interest in his schoolwork, his hobbies, and in physical exertion. (3) He locks himself in the bathroom for long periods. (4) He takes money or articles of value from the home. (5) He wants to quit school and usually does. (6) His arms may be covered with the marks of a hypodermic needle.

THIRTY-FOUR WARNING SIGNS OF DRUG USE

Here are additional warning signs. The list comes from helpforteens.net. If you wish to phone for counseling, here is the number: 800-637-0701.

Neglected appearance / hygiene. Poor self-image. Grades dropping. Violent outbursts at home. Frequent use of eye wash. Unexplained weight drop. Drug paraphernalia. Slurred speech. Curfew violations. Running away. Skin abrasions. Hostility toward family members. Chemical breath. Glassy eyes. Red eyes. Valuables missing. Possessing unexplained valuables. Stealing / borrowing money. Change in friends. Depression. Withdrawal. Apathy. Reckless behavior. No concern about future. Defies family values. Disrespect to parents. Lying and deception. Sneaky behavior. Disregards consequences. Loss of interest in healthy activities. Verbally abusive. Manipulative / self-centered. Lack of motivation. Truancy.

FIFTEEN INHALANT WARNING SIGNS

Here are twelve warning signs of inhalant drug use:

Chemical smell on child or child's clothing. Correction fluid in nose, on fingers or clothing. Markers in pockets. Red eyes. Nonsensical talk. Irritability. "Drunk" appearance. Slurred speech. Unusual breath odor. Decreased appetite. Frequent headaches. Sores around mouth. Lack of concentration. Low grades. School absences.

WHY YOUNG PEOPLE DO IT: THE HELP THAT IS NEEDED

1 - TO ESCAPE FROM REALITY—The adult life is just ahead of them; but teenagers often are quite uncertain whether they will be able to successfully handle it when it arrives. They can imagine that their fears, anxieties, and sense of inadequacy can be momentarily forgotten by taking street drugs.

Before they reach the teen years, teach them to value the worthwhile real things of life: the benefits of hard work and the importance of a genuine Christian experience. Be yourself what you want your children to be, and their future will be bright.

2 - SEARCH FOR A CHEAP THRILL—They want a quick and inexpensive "kick." What they haven't learned is that the cheap thrills in life are always disappointing, always damaging in the long run.

Before they reach the teen years, teach them to value the success and self-respect that comes from bearing responsibility and carrying necessary duties in the home. Teach them how to work and appreciate what they do.

3 - LACK OF INFORMATION—Teach them the dangers in the street drugs. Give them information; they need it and want it. If you do not give them this information, they will obtain it from the drug pusher at school.

Hand them a copy of this book and let them read it from cover to cover. Read it yourself; and discuss it with them, when they have completed it. Many teenagers, having been forewarned of the dangers, choose never to indulge in the drug culture that is pervading our time in history.

4 - PROLONGING ADOLESCENCE—Many parents, having had to work hard to succeed in life, feel that their present duty is to "protect" their children from hard work and decision making. But this only prepares them to escape to the unreal world of drug fantasy, so that they can forget about the adult world that they have not been trained to meet.

From their childhood, teach them how to bear responsibility and be in charge of routine duties about the home. Take up gardening and let it be something your whole family can enjoy together. Life is real and not make-believe. The only people who succeed in it are the people who enjoy working for its own sake.

5 - DO NOT USE DRUGS YOURSELF—This is the downfall of many young people: Their parents do it already. Cigarettes, alcohol, chewing tobacco, cigars, a weekly drunk night, and all the rest.

Do not give this as a heritage to your children. Get off of the bad things yourself, and it will be far easier for your sons and daughters to follow your example.

6 - HAVE STANDARDS IN YOUR HOME—Far too many parents seem to care little what their children do. We live in an age of permissiveness. Do as you please. Explore and try new things. If you get burned a little, then you are finding out what life is like. But young people of all ages need parental guidance that is based on solid, worthwhile standards.

The Bible has the best standards in the world. Christianity is the only thing in the world that can change the heart, the motives, and the life for the better. Go to God and give Him your life. Win your children and loved ones. Begin attending church again. Have morning and evening family worship each day. Pray together. And when alone, pray for one another. Life is real; and it takes a personal, daily relationship with God to make it succeed.

With your family, find ways to help others. Help old folks. Paint their homes, clean outside and in. Visit nursing homes. Find people who need help. Do things that are worthwhile.

Write to the publisher of this book for a list of very helpful books that can enable you to come back to God. Peace with God: This is what many of us want and need. And peace with God is something you can have. There is no greater happiness than a conscious awareness of His forgiveness and His presence. There is no greater satisfaction than working with Him to minister to the needs of others around you.

WHERE TO OBTAIN HELP

Toll free Parent Hotline — 800-637-0701 A consultant is on standby at all times, to help you locate resources which can help you.

Free Resource Catalog — 888-200-5061 Lists residential centers, treatment programs, or specialty schools.

Free Resource Video — 800-637-0701 Parents telling of resources that they have found effective in dealing with their troubled son or daughter.

THE LEGAL PENALTIES

Federal penalties for the illegal possession or usage of narcotics were first established under the Harrison Act of 1914, which provides that illegal possession of narcotics is punishable by fines and/or imprisonment.

Prison sentences can range from 2 to 10 years for the first offense, 5 to 20 years for the second, and 10 to 20 years for further offenses.

Illegal sale of narcotics can mean a fine of $20,000 and a sentence of 5 to 20 years, for the first offense, and 10 to 40 years for further offenses. A person who sells narcotics to someone under 18 is refused parole and probation, even for the first offense. If the drug is heroin, the sentences are very stiff.

Take a good, hard look at the information given in this book and the legal penalties in this chapter; and determine that you will have nothing to do with those terrible habits. All they will do is get you in trouble. And they always will. It may take a few weeks or months; but trouble will be headed your way.

This is because once you start, you will tend to keep coming back to it. And on it goes until you are damaged physically, worn-out mentally, unable to obtain decent employment, and perhaps imprisoned.

Now it is a much easier decision to stay out of it. But if you choose to get into it, later it will be much more difficult for you to get out.

Who wants to spend their life as a slave to dope, prostitution, theft, and crime? But that is what the street drugs can bring into your life. And remember that the little things lead to bigger things. Stay away from the "innocent" drugs and narcotics, and you will never be tempted with the bigger ones. Avoid coffee, tea, cola drinks. Never take up smoking or drinking beer, wine, or any other liquor.

If someone offers you any of these things, just tell him, "I have enough problems now; I don't need anymore." He will probably just stare at you and walk away, knowing that he wishes he could get away from the problem he is trying to get you started on.

Live and act from principle. Enjoy doing right because it is right. Find the deep peace and happiness that comes from accepting Christ as your Saviour from sin. He alone can enable you, by His grace, to resist temptation and sin. He alone can empower you to obey the Ten Commandments of Exodus 20:3-17.

And this is what you really want: a better, happier life. But such a life cannot be found in swallowing, sniffing, smoking, or mainlining drugs.

The key to victory is self-control; and the key to self-control is surrender to God. He can give you the help that you can obtain nowhere else. He is your heavenly Father, the one who created you; and He loves you deeply as no other one can. In His strength, you can overcome hereditary and cultivated desires that are injuring your body and your life.

Write to me, the author of this book, at the publisher's address given on the second page of this book; and I will send you printed materials that can help you find this better life.

Is Evolution Scientific?

1 - THE BIG BANG THEORY 781
2 - DNA AND PROTEIN VS. EVOLUTION 788

Included in this section are portions of two chapters from the author's book, *The Evolution Cruncher.*

***The Big Bang is a Fizzle* (from pp. 68-89 of the book) refutes certain basic assumptions of astronomical evolutionary theory. Only God can make the stars.**

***DNA and Protein vs. Evolution* (pp. 242-265, 270-276) shows the utter impossibility that DNA and protein could be produced by random chance. Only God can make living creatures.**

***The Evolution Cruncher* contains 928 pages of solid evidence against every basic aspect of evolutionary theory, thousands of scientific facts, and 1,350 scientific quotations. In small, boxful quantities, the book is available in the box for $1.50 a book for distribution to students and others. Write to Harvestime Books for details.**

(An asterisk [*] means the person is not a creationist.)

THE BIG BANG IS A FIZZLE

INTRODUCTION

Look about you. There are clouds, seas, and mountains, grass carpets, the plains; and birds sing in the trees. Farm animals graze in the meadows, and water brooks run through the fields. In city and country, people use their astounding minds to plan and produce intricate things. At night the stars come out, and overhead are billions of stars in our galaxy. Beyond them are 100 billion island universes, each with 100 billion stars.

Yet all of these things are made of matter and energy. Where did it all come from? How did everything begin—all the wonderful things of life and nature?

Evolutionary scientists tell us that it all came from nothing. Yes, nothing.

That is what is being taught to your friends, children, and loved ones. You should know the facts in the case.

In this chapter we shall briefly view what evolutionary scientists teach about the origin of matter, stars, galaxies, and planets;—and we will give you basic scientific reasons why their cosmological theories are incorrect. (*Cosmology* is the word used for theories about the origin of matter and stellar objects.)

1 - THE BIG BANG THEORY

The Big Bang theory has been accepted by a majority of scientists today. **It theorizes that a large quantity of nothing decided to pack tightly together and, then, explode outward into hydrogen and helium. This gas is said to have flowed outward through frictionless space ("frictionless," so the outflowing gas cannot stop or slow down) to eventually form stars, galaxies, planets, and moons.** It all sounds so simple, just as you would find in a science fiction novel. And that is all it is.

WHAT IT IS ALL ABOUT

The originators—*George Lemaitre, a Belgium, struck on the basic idea in 1927; and *George Gamow, *R.A. Alpher, and *R. Herman devised the basic Big Bang model in 1948. But it was *Gamow, a well-known scientist and science fiction writer, that gave it its present name and then popularized it** *(*Isaac Asimov, Asimov's New Guide to Science, 1984, p. 43).* Campaigning for the idea enthusiastically, he was able to convince many other scientists. He used quaint little cartoons to emphasize the details. The cartoons really helped sell the theory.

The theory—According to this theory, in the beginning, **there was no matter, just nothingness. Then this nothingness condensed by gravity into a single, tiny spot; and it decided to explode!**

That explosion produced protons, neutrons, and electrons which flowed outward at incredible speed throughout empty space; for there was no other matter in the universe.

As these protons, neutrons, and electrons hurled themselves outward at supersonic speed, they are said to have formed themselves into typical atomic structures of mutually orbiting hydrogen and helium atoms.

Gradually, the outward-racing atoms are said to have begun circling one another, producing gas clouds which then pushed together into stars.

These first stars only contained lighter elements (hydrogen and helium). Then all of the stars repeatedly ex-

ploded. It took at least two explosions of each star to produce our heavier elements. Gamow described it in scientific terms: In violation of physical law, emptiness fled from the vacuum of space—and rushed into a superdense core, that had a density of 10^{94}gm/cm^2 and a temperature in excess of 10^{39} degrees absolute. **That is a lot of density and heat for a gigantic pile of nothingness! (Especially when we realize that it is impossible for nothing to get hot.** Although air gets hot, air is matter, not an absence of it.)

Where did this "superdense core" come from? Gamow solemnly came up with a scientific answer for this; he said it came as a result of *"the big squeeze,"* when the emptiness made up its mind to crowd together. Then, with true scientific aplomb, he named this solid core of nothing, *"ylem"* (pronounced "ee-lum"). With a name like that, many people thought this must be a great scientific truth of some kind. In addition, numbers were provided to add an additional scientific flair: This remarkable lack-of-anything was said by Gamow to have a density of 10 to the 145th power g/cc, or one hundred trillion times the density of water!

Then all that packed-in blankness went boom!

Let's take it point by point—That is the theory. It all sounds so simple, just as you would find in a science fiction novel. And that is all it is. **The theory stands in clear violation of physical laws, celestial mechanics, and common sense.** ***Here are a number of scientific reasons why the Big Bang theory is unworkable and fallacious.***

THE BIG BANG EXPLOSION

1 - The Big Bang theory is based on theoretical extremes. It may look good in math calculations, but it can't actually happen. **A tiny bit of nothing packed so tightly together that it blew up and produced all the matter in the universe.** Seriously now, this is a fairy tale. It is **a bunch of armchair calculations, and nothing else.** It is easy to theorize on paper. The Big Bang is a theoretical extreme, just as is a black hole. It is easy to theorize that something is true, when it has never been seen and there is no definitive evidence that it exists or ever happened. But let us not mistake Disneyland theories for science.

2 - Nothingness cannot pack together. It would have no way to push itself into a pile.

3 - A vacuum has no density. It is said that the nothingness got very dense, and that is why it exploded. But a total vacuum is the opposite of total density.

4 - There would be no ignition to explode nothingness. No fire and no match. It could not be a chemical explosion, for no chemicals existed. It could not be a nuclear explosion, for there were no atoms!

5 - There is no way to expand it. How can you expand what isn't there? Even if that magical vacuum could somehow be pulled together by gravity, what would then cause the pile of emptiness to push outward? The "gravity" which brought it together would keep it from expanding.

6 - Nothingness cannot produce heat. The intense heat caused by the exploding nothingness is said to have changed the nothingness into protons, neutrons, and electrons. *First,* an empty vacuum in the extreme cold of outer space cannot get hot by itself. *Second,* an empty void cannot magically change itself into matter. *Third,* there can be no heat without an energy source.

7 – The calculations are too exacting. Too perfect an explosion would be required. **On many points, the theoretical mathematical calculations needed to turn a Big Bang into stars and our planet cannot be worked out; in others they are too exacting.** Knowledgeable scientists call them "too perfect." Mathematical limitations would have to be met which would be next to impossible to achieve. The limits for success are simply too narrow.

Most aspects of the theory are impossible, and some require parameters that would require miracles to fulfill. **One example of this is the expansion of the original fireball** from the Big Bang, which they place precisely within the narrowest of limits. An evolutionist astronomer, *R.H. Dicke, says it well:

> "If the fireball had expanded only .1 percent faster, the present rate of expansion would have been 3×10^3 times as great. Had the initial expansion rate been 0.1 percent less, the Universe would have expanded to only 3×10^{-6} of its present radius before collapsing. At this maximum radius the density of ordinary matter would have been 10^{-12} grm/m^3, over 10^{16} times as great as the present mass density. No stars could have formed in such a Universe, for it would not have existed long enough to form stars."—*R.H. Dickey, Gravitation and the Universe (1969), p. 62.*

8 - Such an equation would have produced not a universe but a hole. *Roger L. St. Peter in 1974 developed a complicated mathematical equation that showed that the theorized Big Bang could not have exploded outward into hydrogen and helium. In reality, St. Peter says the theoretical explosion (if one could possibly take place) would fall back on itself and make a theoretical black hole! This means that one imaginary object would swallow another one!

9 - There is not enough antimatter in the universe. This is a big problem for the theorists. The original Big Bang would have produced equal amounts of positive matter (matter) and negative matter (antimatter). But only small amounts of antimatter exist. There should be as much antimatter as matter—if the Big Bang was true.

> "Since matter and antimatter are equivalent in all respects but that of electromagnetic charge oppositeness, any force [the Big Bang] that would create one should have to create the other, and the universe should be made of equal quantities of each. This is a dilemma. Theory tells us there should be antimatter out there, and observation refuses to back it up."—*Isaac Asimov, Asimov's New Guide to Science, p. 343.*

> "We are pretty sure from our observations that the universe today contains matter, but very little if any antimatter."—*Victor Weisskopf, "The Origin of the Universe," American Scientist, 71, p. 479.*

10 - The antimatter from the Big Bang would have destroyed all the regular matter. This fact is well-known to physicists. As soon as the two are produced in the laboratory, they instantly come together and annihilate one another.

We have mentioned ten reasons why matter could

not be made by a supposed Big Bang. But now we will discuss what would happen IF it actually had.

THE OUTWARD RUSHING PARTICLES

1 - There is no way to unite the particles. As the particles rush outward from the central explosion, they would keep getting farther and farther apart from one another.

2 - Outer space is frictionless, and there would be no way to slow the particles. The Big Bang is postulated on a totally empty space, devoid of all matter, in which a single explosion fills it with outward-flowing matter. There would be no way those particles could ever slow.

3 - The particles would maintain the same vector (speed and direction) forever. Assuming the particles were moving outward through totally empty space, there is no way they could change direction. They could not get together and begin circling one another.

4 - There is no way to slow the particles. They are traveling at supersonic speed, and every kilometer would separate them farther from one other.

5 - There is no way to change the direction of even one particle. They would keep racing on forever, never slowing, never changing direction. There is no way to get the particles to form into atoms or cluster into gaseous clouds. Angular momentum would be needed, and the laws of physics could not produce it.

6 - How could their atomic structures originate? Atoms, even hydrogen and helium, have complex structures. There is no way that outward shooting particles, continually separating farther from each other as they travel, could arrange themselves into atomic structures.

We will now assume that, contrary to physical laws, (1) the particles magically DID manage to move toward one another together, and (2) the particles COULD slow down and change directions.

THE PARTICLES CHANGED DIRECTIONS AND FORMED GAS CLOUDS

The theory—Gradually, the outward-racing particles are said to have begun circling one another, forming atoms. These atoms then changed direction further (this time toward one another) and formed gas clouds which then pushed together into stars.

This aspect of the stellar evolution theory is as strange as that which preceded it.

1 - Gas molecules in outer space are widely separated. By "gas," we mean atoms of hydrogen and/or helium which are separated from one another. **All gas in outer space has a density so rarified that it is far less than the emptiest atmospheric vacuum pressure bottle in any laboratory in the world!** Gas in outer space is rarer (less dense; atoms more separated) than anything on earth.

2 - Neither hydrogen nor helium in outer space would clump together. In fact, there is no gas on earth that clumps together either. Gas pushes apart; it does not push together. Separated atoms of hydrogen and/or helium would be even less likely to clump together in outer space.

We will now ASSUME that the outward-moving, extremely fast, ever separating atoms (shot out by the Big Bang explosion) could slow, change direction, and form themselves into immense clouds.

GAS CLOUDS PUSH THEMSELVES INTO STARS

1 - Because gas in outer space does not clump, the gas could not build enough mutual gravity to bring it together. And if it cannot clump together, it cannot form itself into stars. The idea of gas pushing itself together in outer space to form stars is more scienceless fiction. Fog, whether on earth or in space, cannot push itself into balls. Once together, a star maintains its gravity quite well, but there is no way for nature to produce one. Getting it together in the first place is the problem. Gas floating in a vacuum cannot form itself into stars. Once a star exists, it will absorb gas into it by gravitational attraction. But before the star exists, gas will not push itself together and form a star—or a planet, or anything else. Since both hydrogen and helium are gases, they are good at spreading out, but not at clumping together.

2 - Careful analysis has revealed that there is not enough matter in gas clouds to produce stars.

3 - There would not be enough time for the gas to reach the currently known expanse of the universe, so it could form itself into stars. Evolutionists tell us that the Big Bang occurred 10 to 15 billion years ago, and stars were formed 5 billion years later. They only allow about 2½ billion years for it to clump together into stars! Their dating problem has been caused by the discovery of supposedly faraway quasars (which we will discuss later), some of which are dated at 15 billion light-years, since they have a redshift of 400 percent. That would make them 15 billion years old, which is too old to accommodate the theory. It doesn't take a nuclear scientist to figure out the math in this paragraph. Simple arithmetic will tell you there is not enough time.

4 - Gas clouds in outer space expand; they do not contract. Yet they would have to contract to form anything. Any one of these points alone is enough to eliminate the stellar evolution theory.

5 - If the Big Bang theory were true, instead of a universe of stars, there would only be an outer rim of fast-moving matter. The outwardly flowing matter and/or gas clouds would keep moving outward without ever slowing. In frictionless space, with no matter ahead of it to collide with, the supposed matter from the initial explosion would keep moving outward forever. This fact is as solid as the ones mentioned earlier.

6 - In order for the gas to produce stars, it would have to move in several directions. *First,* it would have to stop flowing outward. *Then* it would have to begin moving in circles (stellar origin theories generally require rotating gas). *Then* the rotating gas would have to move closer together. But there would be nothing to induce these motions. The atoms from the supposed Big Bang should just keep rushing outward forever. *Linear motion* would have to mysteriously change to *angular momentum.*

7 - A quantity of gas moving in the same direction in frictionless space is too stable to do anything but keep moving forward.

8 - Gas in outer space which was circling a com-

mon center would fly apart, not condense together.

9 - There is not enough mass in the universe for the various theories of origin of matter and stars. The total mean density of matter in the universe is about 100 times less than the amount required by the Big Bang theory. The universe has a low mean density. To put it another way, there is not enough matter in the universe. This "missing mass" problem is a major hurdle, not only to the Big Bang enthusiasts but also to the expanding universe theorists *(*P.V. Rizzo, "Review of Mysteries of the Universe," Sky and Telescope, August 1982, p. 150).* Astronomers are agreed on the existence of this problem. *Hoyle, for example, says that without enough mass in the universe, it would not have been possible for gas to change into stars.

"Attempts to explain both the expansion of the universe and the condensation of galaxies must be largely contradictory so long as gravitation is the only force field under consideration. For if the expansive kinetic energy of matter is adequate to give universal expansion against the gravitational field, it is adequate to prevent local condensation under gravity, and vice versa. That is why, essentially, the formation of galaxies is passed over with little comment in most systems of cosmology."—*F. Hoyle and *T. Gold, quoted in *D.B. Larson, Universe in Motion (1984). p. 8.*

10 - Hydrogen gas in outer space does not clump together. *Harwit's research disproves the possibility that hydrogen gas in outer space can clump together. This is a major breakthrough in disproving the Big Bang and related origin of matter and stars theories. The problem is twofold: (1) **The density of matter in interstellar space is too low.** (2) **There is nothing to attract the particles of matter in outer space to stick to one another.** Think about it a minute; don't those facts make sense?

*This point is so important (for it devastates the origin of stars theory) that *Harwit's research should be mentioned:*

***Harwit's research dealt with the mathematical likelihood that hydrogen atoms could stick together** and form tiny grains of several atoms, by the random sticking of interstellar atoms and molecules to a single nucleus as they passed by at a variable speed. Using the most favorable conditions and the maximum possible sticking ability for grains, Harwit determined that **the amount of time needed for gas or other particles to clump together into a size of just a hundred-thousandth of a centimeter in radius—would take about 3 billion years**! Using more likely rates, 20 billion years would be required—to produce one tiny grain of matter stuck together out in space. As with nearly all scientists quoted in our 1,326-page *Evolution Disproved Series* (which this book is condensed from), *Harwit is not a Creationist *(*M. Harwit, Astrophysical Concepts, 1973, p. 394).*

11 - *Novotny's research findings are also very important. *Novotny, in a book published by Oxford University, discusses the problem of "gaseous dispersion." **It is a physical law that gas in a vacuum expands instead of contracts; therefore it cannot form itself into stars, planets, etc.** That which cannot happen, cannot happen given any amount of time. Do you agree?

If you agree, you are being scientific (for you are agreeing with scientific facts); if you disagree, you are fooling yourself.

We will now ASSUME that the clouds formed themselves into what evolutionists call proto-stars, or first-generation stars.

STARS EXPLODE AND SUPERNOVAS PRODUCE HEAVY ELEMENTS

The problem—The Big Bang only produced hydrogen and helium. Somehow, the 90 heavier (post-helium) elements had to be made. The theorists had to figure out a way to account for their existence.

The theory—The first stars, which were formed, were so-called "first-generation stars" (also called "population III stars"). They contained only lighter elements (hydrogen and helium). Then all of these stars repeatedly exploded. Billions upon billions of stars kept exploding, for billions of years. Gradually, these explosions are said to have produced all our heavier elements.

This concept is as wild as those preceding it.

1 - Another imaginative necessity. Like all the other aspects of this theory, this one is included in order to somehow get the heavier (post-helium) elements into the universe. The evolutionists admit that the Big Bang would only have produced hydrogen and helium.

2 - The nuclear gaps at mass 5 and 8 make it impossible for hydrogen or helium to change itself into any of the heavier elements. This is an extremely important point, and is called the *"helium mass 4 gap"* (that is, there is a gap immediately after helium 4). Therefore exploding stars could not produce the heavier elements. (Some scientists speculate that a little might be produced, but even that would not be enough to supply all the heavier elements now in our universe.) Among nuclides that can actually be formed, gaps exists at mass 5 and 8. **Neither hydrogen nor helium can jump the gap at mass 5.** The first gap is caused by the fact that neither a proton nor a neutron can be attached to a helium nucleus of mass 4. Because of this gap, the only element that hydrogen can normally change into is helium. Even if it spanned this gap, it would be stopped again at mass 8. Hydrogen bomb explosions produce deuterum (hydrogen 2), which, in turn, forms helium 4. The hydrogen bomb chain reaction of nuclear changes would continue changing into ever heavier elements until they reached uranium;—but the process is stopped at the gap at mass 5. If it were not for that gap, our sun would be radiating uranium toward us!

"In the sequence of atomic weight numbers 5 and 8 are vacant. That is, there is no stable atom of mass 5 or mass 8 . . The question then is: How can the build-up of elements by neutron capture get by these gaps? The process could not go beyond helium 4 and even if it spanned this gap it would be stopped again at mass 8. This basic objection to Gamow's theory is a great disappointment in view of the promise and philosophical attractiveness of the idea."—*William A. Fowler, California Institute of Technology, quoted in Creation Science, p. 90.*

Clarification: If you will look at any standard table of the elements, you will find that the atomic weight of hydro-

gen is 1.008. (Deuterum is a form of hydrogen with a weight of 2.016.) Next comes helium (4.003), followed by lithium (6.939), beryllium (9.012), boron (10.811), etc. Gaps in atomic weight exist at mass 5 and 8.

But cannot hydrogen explosions cross those gaps? No. Nuclear fision (a nuclear bomb or reactor) splits (unevenly halves) uranium into barium and technetium. Nuclear fusion (a hydrogen bomb) combines (doubles) hydrogen into deuterum (helium 2), which then doubles into helium 4—and stops there. **So a hydrogen explosion (even in a star) does not go across the mass 5 gap.**

We will now ASSUME that hydrogen and helium explosions could go across the gaps at mass 5 and 8:

3 - <u>There has not been enough theoretical time to produce all the needed heavier elements</u> that now exist. We know from spectrographs that heavier elements are found all over the universe. The first stars are said to have formed about 250 million years after the initial Big Bang explosion. (No one ever dates the Big Bang over 20 billion years ago, and the date has recently been lowered to 15 billions years ago.) At some lengthy time after the gas coalesced into *"first-generation"* stars, most of them are theorized to have exploded and then, 250 million years later, reformed into *"second-generation"* stars. These are said to have exploded into *"third-generation"* stars. Our sun is supposed to be a second- or third-generation star.

4 - <u>There are no population III stars (also called first-generation stars)</u> in the sky. According to the theory, there should be *"population III"* stars, containing only hydrogen and helium, many of which exploded and made *"population II"* (second-generation stars), but there are only population I and II stars *(*Isaac Asimov, Asimov's New Guide to Science, 1984, pp. 35-36).*

5 - <u>Random explosions do not produce intricate orbits</u>. The theory requires that countless billions of stars exploded. How could haphazard explosions result in the marvelously intricate circlings that we find in the orbits of suns, stars, binary stars, galaxies, and star clusters? Within each galactic system, hundreds of billions of stars are involved in these interrelated orbits. Were these careful balancings not maintained, the planets would fall into the stars, and the stars would fall into their galactic centers—or they would fly apart! Over half of all the stars in the sky are in binary systems, with two or more stars circling one another. How could such astonishing patterns be the result of explosions? Because there are no "first generation" ("Population I") stars, Big Bang theory requires that every star exploded at least one or two times. But random explosions never produce orbits.

6 - <u>There are not enough supernova explosions to produce the needed heavier elements</u>. There are 81 stable elements and 90 natural elements. Each one has unusual properties and intricate orbits. When a star explodes, it is called a *nova*. When a large star explodes, it becomes extremely bright for a few weeks or months and is called a *supernova*. It is said that only the explosions of supernovas could produce much of the needed heavier elements, yet there have been relatively few such explosions.

7 - Throughout all recorded history, <u>there have been almost no supernova explosions</u>. If the explosions occurred in the past, they should be occurring now. Research astronomers tell us that one or two supernova explosions are seen every century, and only 16 have exploded in our galaxy in the past 2,000 years. Past civilizations carefully recorded each one. The Chinese observed one, in A.D. 185, and another in A.D. 1006. The one in 1054 produced the Crab nebula, and was visible in broad daylight for weeks. It was recorded both in Europe and the Far East. Johannes Kepler wrote a book about the next one, in 1604. The next bright one was 1918 in Aquila, and the latest in the Veil Nebula in the Large Magellanic Cloud on February 24, 1987.

> "Supernovae are quite different . . and astronomers are eager to study their spectra in detail. The main difficulty is their rarity. About 1 per 650 years is the average for any one galaxy . . The 1885 supernova of Andromeda was the closest to us in the last 350 years."—**Isaac Asimov, New Guide to Science (1984), p. 48.*

8 - <u>Why did the stellar explosions mysteriously stop</u>? The theory required that all the stars exploded, often. The observable facts are that, throughout recorded history, stars only rarely explode. In order to explain this, *evolutionists postulate that 5 billion years ago, the explosions suddenly stopped.* Very convenient. When the theory was formulated in the 1940s, through telescopes astronomers could see stars whose light left them 5 billion light-years ago. But today, we can see stars that are 15 billion light-years away. Why are we not seeing massive numbers of stellar explosions far out in space? The stars are doing just fine; it is the theory which is wrong.

9 - <u>The most distant stars</u>, which are said to date nearly to the time of the Big Bang explosion, <u>are not exploding</u>,—and yet they contain heavier elements. We can now see out in space to nearly the beginning of Big Bang time. Because of the Hubble telescope, we can now see almost as far out in space as the beginning of the evolutionists' theoretical time. But, as with nearby stars, the farthest ones have heavier elements (are "second-generation"), and they are not exploding any more frequently than are the nearby ones.

10 - <u>Supernovas do not throw off enough matter to make additional stars</u>. There are not many stellar explosions and most of them are small-star (nova) explosions. Yet novas cast off very little matter. A small-star explosion only loses a hundred-thousandth of its matter; a supernova explosion loses about 10 percent; yet even that amount is not sufficient to produce all the heavier elements found in the planets, interstellar gas, and stars. So supernovas—Gamow's fuel source for nearly all the elements in the universe—occur far too infrequently and produce far too small an amount of heavy elements—to produce the vast amount that exists in the universe.

11 - <u>Only hydrogen and helium have been found in the outflowing gas from supernova explosions</u>. The theory requires lots of supernova explosions in order to produce heavy elements. But there are not enough supernovas,—*and research indicates that they do not produce heavy elements!* All that was needed was to turn a spectroscope toward an exploded supernova and analyze the elements in the outflowing gas from the former star. *K. Davidson did that in 1982, and found that the Crab nebula

(resulting from an A.D. 1054 supernova) only has hydrogen and helium. This means that, regardless of the temperature of the explosion, the helium mass 4 gap was never bridged. (It had been theorized that a supernova would generate temperatures high enough to bridge the gap. But the gap at mass 4 and 8 prevented it from occurring.)

12 - **An explosion of a star would not produce another star.** It has been theorized that supernova explosions would cause nearby gas to compress and form itself into new stars. But if a star exploded, it would only shoot outward and any gas encountered would be pushed along with it.

So we find that the evidence does not support the various aspects of the Big Bang and stellar evolution theories.

MORE FACTS WHICH BURY THE THEORY

MORE PROBLEMS FOR STELLAR EVOLUTION

1 - According to the theory, older stars should have more heavy elements because they are continually making them. But **the so-called "older stars" have been found to have no more heavy elements than the so-called "younger stars."** All stars, from "young" to "old," have the same amount of heavy elements.

2 - The theory says that gas floating in interstellar space is leftover from the Big Bang, and can only consist of hydrogen and helium. But *Rubins has shown that this is not true. **Extra-galactic gas has a variety of heavier elements in it.**

3 - The theory says that the super-fast particles, hurled outward by the Big Bang, were evenly radiated. Yet, as scientists have noted, **a perfectly smooth cosmic explosion would only have produced perfectly smooth, increasingly rarified (ever farther apart) particles.** So the very existence of stars disproves the theorized original giant explosion.

4 - The theory requires a continual rush of particles outward—leaving nothing inside this outer parimeter of outflowing matter. Yet **there are stars and galaxies all through space, not just at the outer edge. Even if clumped gas could have formed any stars, everything would continue to be hurled to the thin, outer edges of space—with an expanding center containing nothing.**

5 - According to the theory, the farther we look out into space, the farther back into past eons of time we are gazing. This means that **the farthest stars and galaxies ought to be the youngest. Yet research reveals the farthest stars are just like those nearby.**

6 - ***Angular momentum* is another serious problem.** Why do stars turn? Why do galaxies rotate? Why do planets orbit stars? Why do binary stars circle one another? **How could the super-fast linear (straight line) motion, started by the supposed Big Bang, have changed into rotation (spinning or revolving motion) and revolutions (orbiting motion)?** How could angular momentum exist—and in such perfectly balanced orbits throughout space? There is no possible way that floating gas could transform itself into rotating and orbiting objects, like stars, planets, and moons.

7 - **Inward pushing gas would not change to a rotating star.** According to the theory, stars were formed by the "inward gravitational collapse of hydrogen gas clouds." If so, why do the resultant stars rotate? Some stars rotate very fast. If ten people in a circle pushed marbles in toward a common center, the marbles would not begin rotating or circling after they reached it.

8 - **Matter-origin theories cannot explain why stars spin.** The theorists tell us that stars somehow started spinning; but, with age, they slow down. Yet some stars spin faster than either "younger" or "older" stars. Some spin once in less than an earth-day. The fastest, Hz 1883, has a spin period of only 6 hours.

9 - **Some stars orbit backward** to that of other stars. The theorists cannot explain this.

10 - **There are high-velocity stars that are traveling far too fast** to accommodate the evolutionary theories of matter and stellar origins.

11 - If the Big Bang theory were true, all stars would move the same direction; but **stars, clusters, and galaxies are moving in various directions opposite to one another.** (More about the expanding universe theory later.)

12 - **Evidence is accumulating that the entire universe is rotating!** This is angular momentum on the most gigantic of proportions. Yet the Big Bang should only have produced linear movement outward from it.

13 - Theorists are deeply bothered by, what they call, the "lumpy" problem. **The universe is "lumpy"; that is, it has stars, planets, etc. in it. Yet none should exist if the Big Bang theory were true.** They argue fiercely over these problems in their professional journals, while assuring the public the theory is accepted by all astrophysicists. They consider this to be a major, unsolved problem.

> "As IBM's Philip E. Seiden, put it: 'The standard Big Bang model does not give rise to lumpiness. That model assumes the universe started out as a globally smooth, homogeneous expanding gas. If you apply the laws of physics to this model, you get a universe that is uniform, a cosmic vastness of evenly distributed atoms with no organization of any kind.' No galaxies, no stars, no planets, no nothing. Needless to say, the night sky, dazzling in its lumps, clumps, and clusters, says otherwise. How then did the lumps get there? No one can say."—**Ben Patrusky, "Why is the Cosmos 'Lumpy'?" Science 81, June 1981, p. 96.*

14 - **The universe is full of stars, with relatively little gas. But it should be the other way around: full of gas and no stars.** The Big Bang should have produced a "homogenous" universe of smooth gas ever flowing outward with, at best, almost no "inhomogenities," or "lumps" such as stars and island universes.

15 - **The universe is full of super clusters.** These are the biggest "lumps" of all. It has recently been discovered that the galaxies are grouped into galaxy clusters, and these into still larger super clusters. The "Big Bangers," as their colleagues call them, excuse the problem by saying that "gravity waves" produced the galaxies. But gravity, in any form, could not press floating hydrogen and helium into a star or planet out of gas, make a marvelously organized disk network of stars, or produce the precisely balanced spinning and orbiting of planets and stars.

"The main efforts of investigators have been in papering over holes in the Big Bang theory, to build up an idea that has become ever more complex and cumbersome . . I have little hesitation in saying that a sickly pall now hangs over the Big Bang theory. When a pattern of facts becomes set against a theory, experience shows that the theory rarely recovers."—*Sir Fred Hoyle, "The Big Bang Theory under Attack," Science Digest, May 1984, p. 84.*

16 - **Solar collapse, not nuclear fusion has been found to be the cause of solar energy. But that would undercut the entire theory of the Big Bang.** We will briefly summarize the data here. You will find it discussed more fully (along with additional quotations) in the chapter, *Origin of the Stars*, in our 3-volume set on our website. It is also partially referred to in *"6 - Solar Collapse"* in the *Age of the Earth* chapter in this paperback.

There is evidence that **our sun "shines," not by hydrogen explosions, but by solar collapse. Yet stellar evolution is keyed to the fact that stars are fueled by (shine because of) hydrogen explosions (nuclear fusion).** The amount of mass/energy our sun would have to lose daily amounts to 4 million tons [3.6 million mt] a second. **The problem is the fusion process should produce lots of sub-atomic particles called *neutrinos*, and each square inch of earth's surface should be hit each second by a trillion neutrinos.** Scientists have neutrino detectors in place and have searched for them since the mid-1970s, **but hardly any arrive from the sun.** This fact alone would appear to disprove the hydrogen theory of solar energy *(cf. *J.H. Bahcall, Astronomical Journal, 76:283, 1971).* *Corliss, the world leader in tracking down scientific anomalies, considers the "missing neutrinos" to be "one of the most significant anomalies in astronomy" *(*W.R. Corliss, Stars, Galaxies, Cosmos, 1987, p. 40).* It was not until the 1930s that the nuclear theory of starlight was developed by *Hans Bethe and *Carl von Weizsacker. Yet it remains a theory. In contrast, there is strong evidence pointing to solar collapse as the true cause of solar energy.

The scientific basis for solar collapse, as the source of solar energy, was developed over a century ago by two brilliant scientists: Hermann von Helmholtz and Lord Kelvin. If each star is slowly contracting, great amounts of energy would be constantly released. **But evolutionists cannot accept this possibility, because it would mean the universe (and the earth) is much younger. Nuclear fusion would mean billions of years for a star's life; solar collapse only a few million.** A change in the radius of our sun of about 80 feet a year is all that would be necessary to produce our sun's actual energy release. This is a radius shirnkage of only .009 feet [.27 cm] per hour.

Some scientists have found evidence of solar collapse. One major study was done by *John A. Eddy and *Aram Boornazian *(*New Scientist, March 3, 1983, p. 592).* The basis for this is an analysis of solar transit measurements, made at the Royal Greenwich Observatory since 1836 and the U.S. Naval Observatory since 1846. It was calculated that the sun is shrinking at the rate of 5 ft/hr in diameter (0.1% per century, 2 arc-sec/century). They also analyzed solar eclipses for the past four centuries. A separate report by *Ronald Gilliland confirmed the *Eddy and *Boornazian report *(*op. cit., p. 593).*

"The sun has been contracting about 0.0% per century . . corresponding to a shrinkage rate of about 5 feet per hour [15.24 dm]."—*G.B. Lublihn, Physics Today, Vol. 32, No. 17, 1979.*

The above findings would indicate that our sun's output of radiant energy is generated by this shrinkage and not by hydrogen explosions (thermonuclear fusion) deep within it. **If hydrogen was the solar fuel, we should be receiving a very large quantity of neutrinos; yet almost none are detected.**

Jupiter is also apparently contracting, because it is giving off more heat than it receives from the sun. A surface contraction of just one centimeter per year would account for the measured heat flow from Jupiter. **A similar situation exists for Saturn.**

"Jupiter . . radiates twice as much energy as it absorbs from the sun through a contraction and cooling process."—*Star Date radio broadcast, November 8, 1990.*

"Saturn emits 50% more heat than it absorbs from the sun."—*Science Frontiers, No. 73, January-February 1991.*

These facts are known; but, **in order to defend evolutionary theory, the decision has been made to stick with solar fusion** as the cause of solar energy and sunshine.

"Astronomers were startled, and laymen amazed, when in 1979 Jack Eddy, of the High Altitude Observatory in Boulder, Colorado, claimed that the sun was shrinking at such a rate that, if the decline did not reverse, our local star would disappear within a hundred million years."—*John Gribbin, "The Curious Case of the Shrinking Sun," New Scientist, March 3, 1983.*

"Geological evidence, however, indicates that the terrestrial crust [our earth's rock strata] has an age of several billion years, and it is surely to be expected that the sun is at least as old as the earth . . We must conclude that . . another source must be responsible for most of the energy output of a star."—*Eva Novotny, Introduction to Stellar Atmospheres and Interiors (1973), p. 248.*

Summarizing solar collapse: **The evidence that hydrogen explosions (thermonuclear fusion) is the cause of solar energy (sunshine) would be a great abundance of neutrino radiation. But that evidence is missing. The evidence that solar collapse (gradual shrinkage) is the cause has been definitely found. Evolutionists reject solar collapse as the cause, (1) since it would mean our sun and the universe could not be more than a few million years old; (2) their cosmology theories would be wrong and (3) the Big Bang theory would be gutted.**

2 - DNA AND PROTEIN VS. EVOLUTION

One of the most important discoveries of the twentieth century was the discovery of the DNA molecule. It has had a powerful effect on biological research. **It has also brought quandary and confusion to evolutionary scientists. If they cared to admit the full implications of DNA, it would also bring total destruction to their theory.**

This chapter goes hand in hand with the previous one. In the chapter on Primitive Environment, we learned that earthly surroundings—now or earlier—could never permit the formation of living creatures from non-living materials. **This present chapter will primarily discuss the DNA code, the components of protein—and will show that each are so utterly complicated as to defy any possibility that they could have been produced by chance events.**

Yet random actions are the only kind of occurrences which evolutionists tell us have ever been used to accomplish the work of evolution.

The significance of all this is immense. **Because of the barrier of the multi-billion DNA code, not only was it impossible for life to form by accident,—it could never thereafter evolve into new and different species!** Each successive speciation change would require a totally new and different—but highly exacting code to be in place on the very first day of its existence as a unique new species.

As with a number of other chapters in this book, this one chapter alone is enough to completely annihilate evolutionary theory in regard to the origin or evolution of life.

1 - DNA AND ITS CODE

GREGOR MENDEL—*(*#1/7 Gregor Mendel's Monumental Discovery*)* It was Mendel's monumental work with genetics in the mid-19th century that laid the foundation for all modern research work in genetics. The complete story will be found on our website.

YOUR BODY'S BLUEPRINT—*(*#2 The Story of DNA*)* Each of us starts off as a tiny sphere no larger than a dot on this page. Within that microscopic ball there is over six feet of DNA *(deoxyribonucleic acid)*, all coiled up. Inside that DNA is the entire code for what you will become,—all your organs and all your features.

The DNA itself is strung out within long coiling strips. DNA is the carrier of the inheritance code in living things. It is like a microscopic computer with a built-in memory. DNA stores a fantastic number of "blueprints," and at the right time and place issues orders for distant parts of the body to build its cells and structures.

You have heard of "genes" and "chromosomes." Inside each *cell* in your body is a *nucleus*. Inside that nucleus are, among other complicated things, *chromosomes*. Inside the chromosomes are *genes*. The genes are attached to chromosomes like beads on a chain. Inside the genes is the complicated chemical structure we call *DNA*. Each gene has a thousand or more such DNA units within it. Inside each cell are tens of thousands of such genes, grouped into 23 pairs of chromosomes.

Inside the DNA is the total of all the genetic possibilities for a given species. This is called the *gene pool* of genetic traits. It is also called the *genome*. That is all the traits your species can have; in contrast, the specific subcode for YOU is the *genotype*, which is the code for all the possible inherited features you could have. The genotype is the individual's code; the genome applies to populations, the entire species.

(For clarification, it should be mentioned here that the *genotype* includes all the features you could possibly have in your body, but what you will actually have is called the *phenotype*. This is because there are many unexpressed or recessive characters in the genotype that do not show up in the phenotype. For example, you may have had both blue and brown eye color in your genotype from your ancestors, but your irises will normally only show one color.)

COILED STRIPS—*(*#3/33 The Origin of DNA*)* **Your own DNA is scattered all through your body in about 100 thousand billion specks**, which is the average number of living cells in a human adult. What does this DNA look like? It has the appearance of two intertwined strips of vertical tape that are loosely coiled about each other. From bottom to top, horizontal rungs or stairs reach across from one tape strip to the other. Altogether, each DNA molecule is something like a spiral staircase.

The spiraling sides in the DNA ladder are made of complicated sugar and phosphate compounds, and the crosspieces are nitrogen compounds. It is the arrangement of the chemical sequence in the DNA that contains the needed information.

The code within each DNA cell is complicated in the extreme! If you were to put all the coded DNA instructions from just ONE single human cell into English, it would fill many large volumes, each volume the size of an unabridged dictionary!

DOUBLE-STRANDED HELIX—Deoxyribonucleic acid (DNA) is a double-stranded helix found within the chromosomes, which are located inside the nuclei of every living cell. The molecule consists of just four nucleotide units, one containing adenine, one guanine, one cytosine, and one either thymine (in DNA) or uracil (in RNA). The sides of the helix consist of alternating deoxyribose sugars and phosphates.

The illustration on a nearby page shows the strange shape of DNA. **It has that shape because it must fit inside the chromosome.** It does this by squashing an immense length into the tiny chromosome. It could not do this if it did not have a twisted shape. *The four illustrations* show progressively smaller views of a DNA molecule and what is in it.

DIVIDING DNA—DNA has a very special way of dividing and combining. The ladder literally "unhooks" and "rehooks." When cells divide, the DNA ladder splits down the middle. There are then two single vertical strands, each with half of the rungs. Both now duplicate themselves

instantly—and there are now two complete ladders, where a moment before there was but one! Each new strip has exactly the same sequence that the original strip of DNA had.

This process of division can occur at the amazing rate of 1000 base pairs per second! If DNA did not divide this quickly, it could take 10,000 years for you to grow from that first cell to a newborn infant.

Human cells can divide more than 50 times before dying. When they do die, they are immediately replaced. Every minute 3 billion cells die in your body and are immediately replaced.

THE BASE CODE—*(*#7 Coding in the Information*)* The human body has about 100 trillion *cells*. In the nucleus of each cell are 46 *chromosomes*. In the chromosomes of each cell are about 10 billion of those *DNA ladders*. Scientists call each *spiral ladder* a *DNA molecule;* they also call them *base pairs*. **It is the sequence of *chemicals* within these base pairs that provides the instructional code for your body. That instructional code oversees all your heredity and many of your metabolic processes.**

Without your DNA, you could not live. Without its own DNA, nothing else on earth could live. Within each DNA base pair is a most fantastic information file. *A-T-C-T-G-G-G-T-C-T-A-AT-A,* and on and on, is the code for one creature. *T-G-C-T-C-A-A-G-A-G-T-G-C-C,* and on and on, will begin the code for another. Each code continues on for millions of "letter" units. Each unit is made of a special chemical.

The DNA molecule is shaped like a coiled ladder, which the scientists describe as being in the shape of a *"double-stranded helix."* Using data from a woman researcher (which they did not acknowledge), *Watson and *Crick "discovered" the structure of DNA.

UTTER COMPLEXITY—In order to form a protein, the DNA molecule has to direct the placement of amino acids in a certain specific order in a molecule made up of hundreds of thousands of units. For each position, it must choose the correct amino acid from some twenty different amino acids. DNA itself is made up of only four different building blocks (A, G, C, and T). These are arranged in basic code units of three factors per unit (A-C-C, G-T-A, etc.). This provides 64 basic code units. With them, millions of separate codes can be sequentially constructed. Each code determines one of the many millions of factors in your body, organs, brain, and all their functions. **If just one code were omitted, you would be in serious trouble.**

AN ASTOUNDING CLAIM—The evolutionists applied their theory to the amazing discoveries about DNA—and came up with a totally astonishing claim:

All the complicated DNA in each life-form, and all the DNA in every other life-form—made itself out of dirty water back in the beginning! There was some gravel around, along with some dirt. Nearby was some water, and overhead a lightning storm. **The lightning hit the dirty water and made living creatures complete with DNA. They not only had their complete genetic code, but they were also immediately able to eat, digest food, move about, perform enzymatic and glandular functions, and all the rest.**

Instantly, they automatically knew how to produce additional cells; their DNA began dividing (cells must continually replenish themselves or the creature quickly dies); their cells began making new ones; and every new cell could immediately do the myriad of functions that the first creature, an amoeba, can and must do.

That same stroke of lightning made both a male and a female pair and their complete digestive, respiratory, and circulatory organs. It provided them with complete ability to produce offspring and they, in turn, more offspring. That same stroke of lightning also made their food, with all its own DNA, male and female pairs, etc., etc.

In this chapter, we will not consider most of the above points. Instead, we will primarily focus on the *DNA* and *protein* in each cell within each living creature.

THE FIVE CHEMICALS IN DNA AND RNA—DNA is an extremely complex chemical molecule. Where did it come from? How did it form itself back in the beginning? How can it keep making copies of itself? **There are two kinds of bases in the DNA code: *purines* (adenine and guanine) and *pyrimidines* (thymine or, in RNA, uracil; and cytosine). Where did these five chemicals come from?** Charlie, you never told us the origin of the species; now help us figure out the origin of DNA!

Do you desire fame and fortune? If you want a Nobel prize, figure out how to synthesize all five DNA chemicals. If you want a major place in history, figure out how to make living, functioning DNA. If sand and seawater did it, our highly trained scientists ought to be able to do it too.

Scientists eventually devised complicated ways in expensive laboratories to synthesize dead compounds of four of these five, using rare materials such as hydrogen cyanide or cyanoacetylene. (Thymine remains unsynthesizable.) Sugar can be made in the laboratory, but the phosphate group is extremely difficult. In the presence of calcium ions, found in abundance in oceans and rivers, the phosphate ion is precipitated out. **In life-forms enzymes catalyze the task, but how could enzymatic action occur outside of plants or animals?** It would not happen.

Then there are the polynucleotide strands that have to be formed in exactly the fit needed to neatly wrap about the DNA helix molecule. A 100 percent exact fit is required. But chemists seem unable to produce much in the way of synthesized polynucleotides, and they are totally unable to make them in predetermined sizes and shapes *(*D. Watts, "Chemistry and the Origin of Life," in Life on Earth, Vol. 4, 1980, p. 21).*

If university-trained scientists, working in multi-million-dollar equipped and stocked laboratories, cannot make DNA and RNA, how can random action of sand and dirty water produce it in the beginning?

NON-RANDOM: ONLY FROM INTELLIGENCE—Non-random information is what is found in the genetic code. But such information is a proof that the code came from an intelligent Mind.

Those searching for evidence of life in outer space

have been instructed to watch for non-random signals as the best evidence that intelligent people live out there. Ponnamperuma says that such a "non-random pattern" would demonstrate intelligent extraterrestrial origin *(*C. Ponnamperuma, The Origins of Life, 1972, p. 195).* *Carl Sagan adds that a message with high information content would be "an unambiguously artificial [intelligently produced] interstellar message" *(*Carl Sagan, Cosmos, 1980, p. 314).*

"To involve purpose is in the eyes of biologists the ultimate scientific sin . . The revulsion which biologists feel to the thought that purpose might have a place in the structure of biology is therefore revulsion to the concept that biology might have a connection to an intelligence higher than our own."—**Fred Hoyle and *Chandra Wickramasinghe, Evolution from Space (1981), p. 32.*

EACH CHARACTERISTIC CONTROLLED BY MANY GENES—The more the scientists have studied genetics, the worse the situation becomes. **Instead of each gene controlling many different factors in the body, geneticists have discovered that many different genes control each factor! Because of this, it would thus be impossible for the basic DNA code to gradually "evolve."** The underlying DNA code had to be there "all at once"; and once in place, that code could never change!

"However it gradually emerged that most characters, even simple ones, are regulated by many genes: for instance, fourteen genes affect eye color in *Drosophila.* (Not only that. The mutation which suppresses 'purple eye' enhances 'hairy wing,' for instance. The mechanism is not understood.) Worse still, a single gene may influence several different characters. This was particularly bad news for the selectionists, of course . . In 1966 Henry Harris of London University demonstrated, to everyone's surprise, that as much as 30 per cent of all characters are polymorphic [that is, each character controlled several different factors instead of merely one]. It seemed unbelievable, but his work was soon confirmed by Richard Lewontin and others."—**G.R. Taylor, Great Evolution Mystery (1983), pp. 165-166.*

(A clarification is needed here about the basic DNA code in a true species which never changes: Chapter 11, *Animal and Plant Species*, will explain how **the DNA gene pool within a given true species can be broad enough to produce hybrids or varieties.** This is why there are so many different types of dogs or why some birds, when isolated on an island—such as **Darwin's finches** on the Galapagos—can produce bills of different length. This is why there are **two shades of peppered moth** and various **resistant forms of bacteria.**)

In order to make the evolutionary theory succeed, the total organic complexity of an entire species somehow had to be invented long ago by chance,—*and it had to do it fast*, too fast—within seconds, or the creature would immediately die!

2 - MATHEMATICAL POSSIBILITIES OF DNA

SCIENTIFIC NOTATION—This is a number plus a small superscript numeral. Using it, small numbers can be written to denote numbers that are so immense that they are incomprehensible and can only with difficulty be written out. Thus, 8 trillion (8,000,000,000,000) would be written 8×10^{12}, and 1 billion (1,000,000,000) would be written simply as 10^9. Here are a few comparisons to show you the impossible large size of such numbers:

Hairs on an average head	2×10^6
Seconds in a year	3×10^7
Retirement age (0 to 65) in seconds	2×10^9
World population	5×10^9
Miles [1.6 km] in a light-year	6×10^{10}
Sand grains on all shores	10^{22}
Observed stars	10^{22}
Water drops in all the oceans	10^{26}
Candle power of the sun	3×10^{27}
Electrons in the universe	10^{80}

It is said that any number larger than 2×10^{30} cannot occur in nature. In the remainder of this chapter, we will look at some immense numbers!

MATH LOOKS AT DNA—*(*#4/37 More Mathematical Impossibilities*)* In the world of living organisms, there can be no life or growth without DNA. **What are the mathematical possibilities (in mathematics, they are called *probabilities*) of JUST ONE DNA molecule having formed itself by the chance?**

"Now we know that the cell itself is far more complex than we had imagined. It includes thousands of functioning enzymes, each one of them a complex machine itself. Furthermore, each enzyme comes into being in response to a gene, a strand of DNA. The information content of the gene in its complexity must be as great as that of the enzyme it controls.

"A medium protein might include about 300 amino acids. The DNA gene controlling this would have about 1000 nucleotides in its chain. Since there are four kinds of nucleotides in a DNA chain, one consisting of 1000 links could exist in 4^{1000} different forms.

"Using a little algebra (logarithms) we can see that 4^{1000} is equivalent to 10^{600}. Ten multiplied by itself 600 times gives the figure 1 followed by 600 zeros! This number is completely beyond our comprehension."—**Frank Salisbury, "Doubts about the Modern Synthetic Theory of Evolution," American Biology Teacher, September 1971, pp. 336-338.*

So the number of possible code combinations for an average DNA molecule is the numeral 4 followed by 1000 zeros! That is not 4000 (4 followed by 3 zeros), but 4 times itself a thousand times—or a little more than 10^{602}! **How could random action produce the right combination out of that many possibilities for error?**

LIFE REQUIRED—In addition to DNA, many other materials, such as proteins, enzymes, carbohydrates, fats, etc, would have to be instantly made at the same time. The beating heart, the functioning kidneys, the circulatory vessels, etc. **They would all need to be arranged within the complicated structure of an organism,—and then they would have to be endued with LIFE!**

Without LIFE, none of the raw materials, even though arranged in proper order, would be worth any-

thing.

One does not extract life from pebbles, dirt, water, or a lightning bolt. Lightning destroys life; it does not make it.

GOLEY'S MACHINE—A communications engineer tried to figure out the odds for bringing a non-living organism with few parts (only 1500) up to the point of being able to reproduce itself.

> "Suppose we wanted to build a machine capable of reaching into bins for all of its parts, and capable of assembling from those parts a second machine just like itself."—**Marcel J.E. Goley, "Reflections of a Communications Engineer," in Analytical Chemistry, June 1961, p. 23.*

Likening a living organism to a machine that merely reached out and selected parts needed to make a duplicate of itself, Goley tried to figure the odds for 1500 needed items—requiring 1500 right choices in a row. Many different parts would be needed, and Goley assumed they would all be lying around near that manufacturing machine! **Goley assumes that its mechanical arm will have only a 50-50 chance of error in reaching out and grabbing the right piece! Such a ratio (1500 50.50 choices) would be impossible for the randomness of chance ("natural selection") to produce.** Goley then figures the odds based on such a one-in-two success rate of reaches. But if such a high rate of accurate selection were possible, Goley discovered there was only one chance in 10^{450} that the machine could succeed in reproducing itself! That is 1 followed by 450 zeros! The more it tried to reproduce itself, the farther it would get from success.

Far smaller are all the words in all the books ever published. They would only amount to 10^{20}, and that would be equivalent to only 66 of those 1500 50-50 choices all made correctly in succession!

TOO MANY NUCLEOTIDES—Just the number of nucleotides alone in DNA would be too many for Goley's machine calculations. There are not 1500 parts to work out the probabilities on—there are multiplied thousands of factors, of which the nucleotides constitute one factor.

(1) There are 5,375 nucleotides in the DNA of an extremely small bacterial virus *(theta-x-174).* (2) There are about 3 million nucleotides in a single cell bacteria. (3) **There are more than 16,000 nucleotides in a human mitochondrial DNA molecule.** (4) **There are approximately 3 billion nucleotides in the DNA of a mammalian cell.** (People and most animals are mammals.)

Technically, a *"nucleotide"* is a complex chemical structure composed of a (nucleic acid) purine or pyrimidine, one sugar (usually ribose or deoxyribose), and a phosphoric group. **Each one of those thousands of nucleotides within each DNA is aligned sequentially in a very specific order! Imagine 3 billion complicated chemical links, each of which has to be in a precisely correct sequence!**

NOT POSSIBLE BY CHANCE—Many similar mathematical comparisons could be made. The point is that chance cannot produce what is in a living organism—not now, not ever before, not ever in the future. It just cannot be done.

And even if the task could be successfully completed, when it was done, that organism would still not be alive! Putting stuff together in the right combination does not produce life.

And once made, it would have to have an ongoing source of water, air, and living food continually available as soon as it evolved into life. When the evolutionist's organism emerged from rock, water, and a stroke of lightning hitting it on the head,—it would have to have its living food source made just as rapidly.

The problems and hurdles are endless.

> "Based on probability factors . . any viable DNA strand having over 84 nucleotides cannot be the result of haphazard mutations. At that stage, the probabilities are 1 in 4.80×10^{50}. Such a number, if written out, would read:
>
> 480,000,000,000,000,000,000,-
> 000,000,000,000,000,000,000,000,000,000.
>
> "Mathematicians agree that any requisite number beyond 10^{50} has, statistically, a zero probability of occurrence (and even that gives it the 'benefit of the doubt'). Any species known to us, including 'the smallest single-cell bacteria, have enormously larger numbers of nucleotides than 100 or 1000. In fact, single cell bacteria display about 3,000,000 nucleotides, aligned in a very specific sequence. This means, that there is no mathematical probability whatever for any known species to have been the product of a random occurrence—random mutations (to use the evolutionist's favorite expression)."—**I.L. Cohen, Darwin Was Wrong (1984), p. 205.*

Wysong explains the requirements needed to code one DNA molecule. By this he means selecting out the proper proteins, all of them left handed, and then placing them in their proper sequence in the molecule—and doing it all by chance:

> "This means $1/10^{89190}$ DNA molecules, on the average, must form to provide the one chance of forming the specific DNA sequence necessary to code the 124 proteins. 10^{89190} DNAs would weigh 10^{89147} times more than the earth, and would certainly be sufficient to fill the universe many times over. It is estimated that the total amount of DNA necessary to code 100 billion people could be contained in ½ of an aspirin tablet. Surely 10^{89147} times the weight of the earth in DNAs is a stupendous amount and emphasizes how remote the chance is to form the one DNA molecule. A quantity of DNA this colossal could never have formed."—*R.L. Wysong, The Creation-Evolution Controversy, p. 115.*

3 - AMINO ACIDS AND PROTEIN

PROTEIN NEEDED ALSO—*(*#6 Amino Acid Functions*)* Now let's look at protein:

Putting protein and DNA together will not make them alive; but, on the other hand, there can be no life without BOTH the protein and the DNA. **Proteins would also have had to be made instantly, and in the right combination and quantity,—at the very beginning.** And do not forget the sequence: **Protein has to be in its proper sequence, just as DNA has to be in its correct sequential pattern.**

Proteins come in their own complicated sequence! They

have their own coding. That code is "spelled out" in a long, complicated string of materials. Each of the hundreds of different proteins is, in turn, composed of still smaller units called *amino acids*. There are twenty essential amino acids (plus two others not needed after adulthood in humans). The amino acids are complex assortments of specifically arranged *chemicals*.

Making those amino acids out of nothing, and in the correct sequence,—and doing it by chance—would be just as impossible, mathematically, as a chance formation of the DNA code!

TOTAL IGNORANCE—*(*#5/29 DNA, Protein and the Cell*)* Scientists have a fairly good idea of the multitude of chemical steps in putting together a DNA molecule; but, **not only can DNA not be synthesized "by nature" at the seashore, highly trained technicians cannot do it in their million-dollar laboratories!**

> "The evolution of the genetic machinery is the step for which there are no laboratory models; hence we can speculate endlessly, unfettered by inconvenient facts."—**R. Dickerson, "Chemical Evolution and the Origin of Life," in Scientific American, September 1978, p. 70.*

Dozens of inherent and related factors are involved. One of these is the *gene-protein link*. This had to occur before DNA could be useable, yet no one has any idea how it can be made now, much less how it could do it by itself in a mud puddle.

4 - ADDITIONAL MATHEMATICAL IMPOSSIBILITIES

ALL BY CHANCE—Earlier in this chapter, we said that the possible combinations of *DNA* were the number 4 followed by a thousand zeros. That tells us about DNA combinations; what about protein combinations?

The possible arrangements of the 20 different amino acids are 2,500,000,000,000,000,000. If evolutionary theory be true, every protein arrangement in a life-form had to be worked out by chance until it worked right—first one combination and then another until one was found that worked right. But by then the organism would have been long dead, if it ever had been alive!

Once the chance arrangements had hit upon the right combination of amino acids for ONE protein—the same formula would have to somehow be repeated for the other 19 proteins. And then it would somehow have to be correctly transmitted to offspring!

THE STREAM OF LIFE—**The primary protein in your red blood cells has 574 amino acids in it. Until that formula is first produced correctly by chance, and then always passed on correctly, your ancestors could not live a minute, much less survive and reproduce.**

You have billions upon billions upon billions of red blood cells ("RBCs," the scientists call them) in your body. This is what makes your blood red. **Each red blood cell has about 280 million molecules of hemoglobin, and it would take about 1000 red blood cells to cover the period at the end of this sentence.** (Hemoglobin is the iron-carrying protein material in RBCs, which carries oxygen from the lungs to the tissues, and carbon dioxide from the tissues to the lungs.) Both in complexity and in enormous quantity, your red blood cells are unusual. Several large books could be filled with facts about your red blood cells.

MAKING PROTEIN BY CHANCE—**The probability of forming 124 specifically sequenced proteins of 400 amino acids each by chance is 1×10^{64489}.** THAT is a BIG number! *If we put a thousand zeros on each page, it would take a 64-page booklet just to write the number!*

The probability of those 124 specifically sequenced proteins, consisting of 400 all-left-amino acids each, being formed by chance, if EVERY molecule in all the oceans of 10^{31} planet earths was an amino acid, and these kept linking up in sets of 124 proteins EVERY second for 10 billion years would be 1×10^{78436}. And THAT is another BIG number! *That is one followed by 78,436 zeros!*

As mentioned earlier, such "probabilities" are "impossibilities." They are fun for math games, but nothing more. They have nothing to do with reality. Yet such odds would have to be worked out in order to produce *just 124 proteins!* Without success in such odds as these, multiplied a million-fold, evolution would be totally impossible.

Throughout this and the previous chapter, we have only discussed the basics at the bottom of the ladder of evolution. We have, as it were, only considered the first few instants of time. But what about all the development after that?

More total impossibilities.

ENZYMES—***Fred Hoyle wrote in *New Scientist* that 2000 different and very complex enzymes are required for a living organism to exist.** And then he added that random shuffling processes could not form a single one of these in even 20 billion years! He then added this:

> "I don't know how long it is going to be before astronomers generally recognize that the arrangement of not even one among the many thousands of biopolyers [enzymes, proteins, hormones, etc.] on which life depends could have been arrived at by natural processes here on the earth.
>
> "Astronomers will have a little difficulty in understanding this because they will be assured by biologists that it is not so; the biologists having been assured in their turn by others that it is not so. The 'others' are a group of persons [the evolutionary theoreticians] who believe, quite openly, in mathematical miracles.
>
> "They advocate the belief that, tucked away in nature outside of normal physics, there is a law which performs miracles (provided the miracles are in the aid of biology). This curious situation sits oddly on a profession that for long has been dedicated to coming up with logical explanations . . The modern miracle workers are always found to be living in the twilight fringes of [the two laws of] thermodynamics."—**Fred Hoyle, "The Big Bang in Astronomy," in New Scientist, November 19, 1981, pp. 521-527.*

*****Taylor says that **proteins, DNA, and enzymes—all of which are very complicated—would all be required as soon as a new creature was made by evolution.**

> "The fundamental objection to all these [evolutionary] theories is that they involve raising oneself by one's own bootstraps. You cannot make proteins without DNA,

but you cannot make DNA without enzymes, which are proteins. It is a chicken and egg situation. That a suitable enzyme should have cropped up by chance, even in a long period, is implausible, considering the complexity of such molecules. And there cannot have been a long time [in which to do it]."—*GR. Taylor, Great Evolution Mystery (1983), p. 201.*

Enzyme systems do not work at all in the body—until they are all there.

"Dixon [a leading enzymologist] confesses that he cannot see how such a system could ever have originated spontaneously. The main difficulty is that an enzyme system does not work at all until it is complete, or nearly so. Another problem is the question of how enzymes appear without pre-existing enzymes to make them. 'The association between enzymes and life,' Dixon writes, 'is so intimate that the problem of the origin of life itself is largely that of the origin of enzymes.' "—*Michael Pitman, Adam and Evolution (1984), pp. 144-145.*

DIXON-WEBB CALCULATION—In 1964 *Malcolm Dixon and *Edwin Webb, on page 667 of their standard reference work, *Enzymes,* mentioned to fellow scientists that **in order to get the needed amino acids in close enough proximity to form a single protein molecule, a total volume of amino-acid solution equal to 10^{50} times the volume of our earth would be needed!** That would be 1 with 50 zeros after it multiplied by the contents of a mixing bowl. And the bowl would be so large that planet earth would be in it!

After using the above method to obtain *ONE protein molecule,* **what would it take to produce *ONE hemoglobin (blood) molecule* which contains 574 specifically coded amino acids?** On page 279 of their *Introduction to Protein Chemistry,* *S.W. Fox and *J.F. Foster tell how to do it:

First, large amounts of random amounts of all 20 basic types of protein molecules would be needed. In order to succeed at this, enough of the random protein molecules would be needed to fill a volume 10^{512} TIMES the volume of our entire known universe! And all of that space would be packed in solid with protein molecules. In addition, all of them would have to contain only left-handed amino acids (which only could occur 50 percent of the time in synthetic laboratory production).

Then and only then could random chance produce just the right combination for ONE hemoglobin molecule, with the proper sequence of 574 left-handed amino acids!

Yet there are also thousands of other types of protein molecules in every living cell, and even if all of them could be assembled by chance,—the cell would still not be alive.

BEYOND DNA AND PROTEIN—We have focused our attention on DNA and protein sequence in this chapter. Just for a moment, **let us look beyond DNA and protein to a few of the more complicated organs in the human body. As we do so, the requirements which randomness would have to hurdle become truly fabulous.** Consider the human brain, with its ten billion integrated cells in the cerebral cortex. How could all that come about by chance? Ask an expert on ductless glands to explain hormone production to you. Your head will swim. Gaze into the human eye and view how it is constructed, how it works. You who would cling to evolution as a theory that is workable give up! give up! There is no chance! Evolution is impossible!

COMPUTER SIMULATION—Prior to the late 1940s, men had to work out their various evolutionary theories with paper and pencil. But then advanced computers were invented. This changed the whole picture. By the 1970s, it had become clear that the "long ages" theories just did not work out. **Computer calculations have established the fact that, regardless of how much time was allotted for the task,—evolution could not produce life-forms!**

Evolutionists can no longer glibly say, "Given enough time and given enough chance, living creatures could arise out of seawater and lightning, and pelicans could change themselves into elephants." (Unfortunately, evolutionists still say such things, because the ignorant public does not know the facts in this book.)

But **computer scientists can now feed all the factors into a large computer—and get fairly rapid answers. Within a dramatically short time they can find out whether evolution is possible after all!**

Unfortunately, the evolutionists prefer to stay away from such computer simulations; they are afraid to face the facts. Instead they spend their time discussing their dreamy ideas with one another and writing articles about their theories in scientific journals.

It was not until the late 1960s, that these new high-speed electronic computer experts turned their attention to the claims of the evolutionists. Although far slower than today's computers, the ones they had were well able to calculate the possibility of random changes occurring over a period of millions of years.

Remember, evolution requires billions upon billions of positive changes large numbers of plant and animal species.

M.P. Shutzenberger and other computer scientists spoke at the Wistar Institute of Anatomy and Biology Symposium in 1967. Their findings revealed that it was totally impossible ("less than $1/10^{1000}$") for even ONE mutation to prove beneficial enough to change ONE DNA molecule.

"There is no chance (less than $1/10^{1000}$) to see this mechanism (*this single changed characteristic* in the DNA) appear spontaneously and, if it did, even less [chance] for it to remain!"—*M.P. Schutzenberger, Mathematical Challenges to the Neo-Darwinian Interpretation of Evolution (1967), pp. 73-75 (an address given at the Wistar Institute of Anatomy and Biology Symposium).*

Now, $1/10^{1000}$ is one with a thousand zeros after it! In contrast, one chance in a million only involves six zeros! Compare it with the almost impossible likelihood of your winning a major multimillion-dollar state lottery in the United States: That figure has been computed, and is only a relatively "tiny" number of six with six zeros after it. Evolution requires probabilities which are totally out of the realm of reality. Everyone agrees there are only two alternatives: Everything was either made by random chance (all that evolution really is) or by a super-intelligent God.

The Natural Remedies Encyclopedia

The Cause of Pain and Suffering

How DID evil begin? Why IS there sin anyway? Here is one of the most sweeping chapters in this entire book of the ages. Read that most amazing of stories—how sin began—

Although surrounded by continual selflessness, something happened. What could turn an angel of light into a devil—and do it right in the middle of heaven? This is something you will want to read. *It will tell you why God had to wait—and the wonderful future in store for His children—because He did—*

To many minds, the origin of sin and the reason for its existence are a source of great perplexity. They see the work of evil, with its terrible results of woe and desolation, and they question how all this can exist under the sovereignty of One who is infinite in wisdom, in power, and in love. Here is a mystery, of which they find no explanation. And in their uncertainty and doubt, they are blinded to truths plainly revealed in God's Word, and essential to salvation. There are those who, in their inquiries concerning the existence of sin, endeavor to search into that which God has never revealed; hence they find no solution of their difficulties; and such as are actuated by a disposition to doubt and cavil seize upon this as an excuse for rejecting the words of Holy Writ. Others, however, fail of a satisfactory understanding of the great problem of evil, from the fact that tradition and misinterpretation have obscured the teaching of the Bible concerning the character of God, the nature of His government, and the principles of His dealing with sin.

It is impossible to so explain the origin of sin as to give a reason for its existence. Yet enough may be understood concerning both the origin and the final disposition of sin to fully make manifest the justice and benevolence of God in all His dealings with evil. Nothing is more plainly taught in Scripture than that **God was in nowise responsible for the entrance of sin**; that there was no arbitrary withdrawal of divine grace, no deficiency in the divine government, that gave occasion for the uprising of rebellion. **Sin is an intruder, for whose presence no reason can be given. It is mysterious, unaccountable; to excuse it is to defend it.** Could excuse for it be found, or cause be shown for its existence, it would cease to be sin. **Our only definition of sin is that given in the Word of God; it is "the transgression of the law";** it is the outworking of a principle at war with the great law of love which is the foundation of the divine government.

BACK IN THE BEGINNING

Before the entrance of evil, there was peace and joy throughout the universe. All was in perfect harmony with the Creator's will. Love for God was supreme, love for one another impartial. Christ the Word, the only Begotten of God, was one with the eternal Father,—one in nature, in character, and in purpose,—the only being in all the universe that could enter into all the counsels and purposes of God. By Christ the Father wrought in the creation of all heavenly beings. "By him were all things created, that are in Heaven . . whether they be thrones, or dominions, or principalities, or powers" (Colossians 1:16); and to Christ, equally with the Father, all Heaven gave allegiance.

The law of love being the foundation of the government of God, the happiness of all created beings depended upon their perfect accord with its great principles of righteousness. **God desires from all His creatures the service of love—homage that springs from an intelligent appreciation of His character. He takes no pleasure in a forced allegiance**, and to all He grants freedom of will, that they may render Him voluntary service.

HOW SIN BEGAN

But there was one that chose to pervert this freedom. Sin originated with him, who, next to Christ, had been most honored of God, and who stood highest in power and glory among the inhabitants of Heaven. **Before his fall, Lucifer was first of the covering cherubs, holy and undefiled.**

"Thus saith the Lord God: Thou sealest up the sum, full of wisdom, and perfect in beauty. Thou hast been in Eden the garden of God; every precious stone was thy covering . . Thou art the anointed cherub that covereth; and I have set thee so; thou wast upon the holy mountain of God; thou hast walked up and down in the midst of the stones of fire. Thou wast perfect in thy ways from the day that thou wast created, till iniquity was found in thee." Ezekiel 28:12-15.

Lucifer might have remained in favor with God, beloved and honored by all the angelic host, exercising his noble powers to bless others and to glorify His Maker. But, says the prophet, "Thine heart was lifted up because of thy beauty, thou hast corrupted thy wisdom by reason of thy brightness." Ezekiel 28:17. **Little by little, Lucifer came to indulge a desire for self-exaltation.** "Thou hast set thine heart as the heart of God." "Thou hast said . . I will exalt my throne above the stars of God; I will sit also upon the mount of the congregation . . I will ascend above the heights of the clouds; I will be like the Most High." Ezekiel 28:6; Isaiah 14:13, 14. **Instead of seeking to make God supreme in the affections and allegiance of His creatures, it was Lucifer's endeavor to win their service and homage to himself.** And, coveting the honor which the infinite Father had bestowed upon His Son, this prince of angels aspired to power which it was the prerogative of Christ alone to wield.

All Heaven had rejoiced to reflect the Creator's glory and to show forth His praise. And while God was thus honored, all had been peace and gladness. But a note of discord now marred the celestial harmonies. The service and exaltation of self, contrary to the Creator's plan, awakened forebodings of evil in minds to whom God's glory was supreme. **The heavenly councils pleaded with Lucifer.** The Son of God presented before him the greatness, the goodness, and the justice of the Creator, and the sacred, unchanging nature of His law. God Himself had established the order of Heaven; and in departing from it, Lucifer would dishonor his Maker, and bring ruin upon himself. **But the warning, given in infinite love and mercy, only aroused a spirit of resistance. Lucifer allowed jealousy of Christ to prevail, and he became the more determined.**

Pride in his own glory nourished the desire for supremacy. The high honors conferred upon Lucifer were not appreciated as the gift of God, and called forth no gratitude to the Creator. He gloried in his brightness and exaltation, and aspired to be equal with God. He was beloved and reverenced by the heavenly host. Angels delighted to execute his commands, and he was clothed with wisdom and glory above them all. **Yet the Son of God was the acknowledged sovereign of Heaven, one in power and authority with the Father. In all the counsels of God, Christ was a participant, while Lucifer was not permitted thus to enter into the divine purposes.** "Why," questioned this mighty angel, "should Christ have the supremacy? Why is He thus honored above Lucifer?"

A PATTERN OF DECEIT

Leaving his place in the immediate presence of God, Lucifer went forth to diffuse the spirit of discontent among the angels. Working with mysterious secrecy, and for a time concealing his real purpose under an appearance of reverence for God, **he endeavored to excite dissatisfaction concerning the laws that governed heavenly beings, intimating that they imposed an unnecessary restraint.** Since their natures were holy, he urged that the angels should obey the dictates of their own will. He sought to create sympathy for himself, by representing that God had dealt unjustly with him in bestowing supreme honor upon Christ. **He claimed that in aspiring to greater power and honor he was not aiming at self-exaltation, but was seeking to secure liberty for all the inhabitants of Heaven, that by this means they might attain to a higher state of existence.**

God, in His great mercy, bore long with Lucifer. He was not immediately degraded from his exalted station when he first indulged the spirit of discontent, nor even when he began to present his false claims before the loyal angels. Long was he retained in Heaven. Again and again he was offered pardon, on condition of repentance and submission. **Such efforts as only infinite love and wisdom could devise, were made to convince him of his error. The spirit of discontent had never before been known in Heaven. Lucifer himself did not at first see whither he was drifting;** he did not understand the real nature of his feelings. **But as his dissatisfaction was proved to be without cause, Lucifer was convinced that he was in the wrong, that the divine claims were just, and that he ought to acknowledge them as such before all Heaven. Had he done this, he might have saved himself and many angels.** He had not at this time fully cast off his allegiance to God. Though he had forsaken his position as covering cherub, yet if he had been willing to return to God, acknowledging the Creator's wisdom, and satisfied to fill the place appointed him in God's great plan, he would have been re-instated in his office. **But pride forbade him to submit. He persistently defended his own course, maintained that he had no need of repentance, and fully committed himself, in the great controversy, against his Maker.**

A MYSTERY OF INIQUITY

All the powers of his master mind were now bent to the work of deception, to secure the sympathy of

the angels that had been under his command. Even the fact that Christ had warned and counseled him, was perverted to serve his traitorous designs. To those whose loving trust bound them most closely to him, Satan had represented that he was wrongly judged, that his position was not respected, and that his liberty was to be abridged. **From misrepresentation of the words of Christ, he passed to prevarication and direct falsehood**, accusing the Son of God of a design to humiliate him before the inhabitants of Heaven. He sought also to make a false issue between himself and the loyal angels. **All whom he could not subvert and bring fully to his side, he accused of indifference to the interests of heavenly beings. The very work which he himself was doing, he charged upon those who remained true to God.** And to sustain his charge of God's injustice toward him, he resorted to misrepresentation of the words and acts of the Creator. **It was his policy to perplex the angels with subtle arguments concerning the purposes of God. Everything that was simple he shrouded in mystery**, and by artful perversion cast doubt upon the plainest statements of Jehovah. His high position, in such close connection with the divine administration, gave greater force to his representations, and many were induced to unite with him in rebellion against Heaven's authority.

God in His wisdom permitted Satan to carry forward his work, until the spirit of disaffection ripened into active revolt. It was necessary for his plans to be fully developed, that their true nature and tendency might be seen by all. Lucifer, as the anointed cherub, had been highly exalted; he was greatly loved by the heavenly beings, and his influence over them was strong. God's government included not only the inhabitants of Heaven, but of all the worlds that He had created; and **Satan thought that if he could carry the angels of Heaven with him in rebellion, he could carry also the other worlds.** He had artfully presented his side of the question, employing sophistry and fraud to secure his objects. His power to deceive was very great, and by disguising himself in a cloak of falsehood he had gained an advantage. **Even the loyal angels could not fully discern his character or see to what his work was leading.**

THE PRINCIPLES OF BOTH MUST BE FULLY REVEALED

Satan had been so highly honored, and all his acts were so clothed with mystery, that it was difficult to disclose to the angels the true nature of his work. Until fully developed, sin would not appear the evil thing it was. Heretofore it had had no place in the universe of God, and holy beings had no conception of its nature and malignity. They could not discern the terrible consequences that would result from setting aside the divine law. **Satan had, at first, concealed his work under a specious profession of loyalty to God. He claimed to be seeking to promote the honor of God, the stability of His government, and the good of all the inhabitants of Heaven.** While instilling discontent into the minds of the angels under him, he had artfully made it appear that he was seeking to remove dissatisfaction. When he urged that changes be made in the order and laws of God's government, it was under the pretense that these were necessary in order to preserve harmony in Heaven.

In his dealing with sin, God could employ only righteousness and truth. Satan could use what God could not—flattery and deceit. He had sought to falsify the word of God and had misrepresented His plan of government before the angels, claiming that God was not just in laying laws and rules upon the inhabitants of Heaven; that in requiring submission and obedience from His creatures, He was seeking merely the exaltation of himself. **Therefore it must be demonstrated before the inhabitants of Heaven as well as of all the worlds, that God's government was just, His law perfect.** Satan had made it appear that He Himself was seeking to promote the good of the universe. The true character of the usurper, and his real object, must be understood by all. He must have time to manifest himself by his wicked works.

The discord which his own course had caused in Heaven, Satan charged upon the law and government of God. All evil he declared to be the result of the divine administration. He claimed that it was his own object to improve upon the statutes of Jehovah. Therefore it was necessary that he should demonstrate the nature of His claims, and show the working out of his proposed changes in the divine law. **His own work must condemn him. Satan had claimed from the first that he was not in rebellion. The whole universe must see the deceiver unmasked.**

Even when it was decided that he could no longer remain in Heaven, infinite wisdom did not destroy Satan. Since the service of love can alone be acceptable to God, the allegiance of His creatures must rest upon a conviction of His justice and benevolence. **The inhabitants of Heaven and of other worlds, being unprepared to comprehend the nature or consequences of sin, could not then have seen the justice and mercy of God in the destruction of Satan.** Had he been immediately blotted from existence, they would have served God from fear, rather than from love. The influence of the deceiver would not have been fully destroyed, nor would the spirit of rebellion have been utterly eradicated. **Evil must be permitted to come to maturity. For the good of the entire universe through ceaseless ages, Satan must more fully develop his principles**, that his charges against the divine government might be seen in their true light by all created beings, that the justice and mercy of God and the immutability of His law might forever be placed beyond

all question.

A LESSON TO THE UNIVERSE

Satan's rebellion was to be a lesson to the universe through all coming ages, a perpetual testimony to the nature and terrible results of sin. The working out of Satan's rule, its effects upon both men and angels, would show what must be the fruit of setting aside the divine authority. It would testify that with the existence of God's government and His law is bound up the well-being of all the creatures He has made. Thus the history of this terrible experiment of rebellion was to be a perpetual safeguard to all holy intelligences, to prevent them from being deceived as to the nature of transgression, to save them from committing sin and suffering its punishment.

To the very close of the controversy in Heaven, the great usurper continued to justify himself. When it was announced that with all his sympathizers he must be expelled from the abodes of bliss, then the rebel leader boldly avowed his contempt for the Creator's law. He reiterated his claim that angels needed no control, but should be left to follow their own will, which would ever guide them right. **He denounced the divine statutes as a restriction of their liberty and declared that it was his purpose to secure the abolition of law**; that, freed from this restraint, the hosts of Heaven might enter upon a more exalted, more glorious state of existence.

With one accord, Satan and his host threw the blame of their rebellion wholly upon Christ, declaring that if they had not been reproved, they would never have rebelled. Thus stubborn and defiant in their disloyalty, seeking vainly to overthrow the government of God, yet blasphemously claiming to be themselves the innocent victims of oppressive power, **the archrebel and all his sympathizers were at last banished from Heaven.**

THE CHOICE BROUGHT TO MANKIND

The same spirit that prompted rebellion in Heaven still inspires rebellion on earth. Satan has continued with men the same policy which he pursued with the angels. His spirit now reigns in the children of disobedience. Like him they seek to break down the restraints of the law of God and promise men liberty through transgression of its precepts. Reproof of sin still arouses the spirit of hatred and resistance. When God's messages of warning are brought home to the conscience, **Satan leads men to justify themselves, and to seek the sympathy of others in their course of sin. Instead of correcting their errors, they excite indignation against the reprover**, as if he were the sole cause of difficulty. From the days of righteous Abel to our own time such is the spirit which has been displayed toward those who dare to condemn sin.

By the same misrepresentation of the character of God as he had practiced in Heaven, causing him to be regarded as severe and tyrannical, **Satan induced man to sin. And having succeeded thus far, he declared that God's unjust restrictions had led to man's fall, as they had led to his own rebellion.**

But the Eternal One Himself proclaims His character: "The Lord God, merciful and gracious, long-suffering, and abundant in goodness and truth, keeping mercy for thousands, forgiving iniquity and transgression and sin, and that will by no means clear the guilty." Exodus 34:6, 7.

CALVARY REVEALED GOD'S CHARACTER

In the banishment of Satan from Heaven, God declared His justice and maintained the honor of His throne. But when man had sinned through yielding to the deceptions of this apostate spirit, God gave an evidence of His love by yielding up His only-begotten Son to die for the fallen race. In the atonement the character of God is revealed. The mighty argument of the cross demonstrates to the whole universe that the course of sin which Lucifer had chosen was in nowise chargeable upon the government of God.

In the contest between Christ and Satan, during the Saviour's earthly ministry, the character of the great deceiver was unmasked. Nothing could so effectually have uprooted Satan from the affections of the heavenly angels and the whole loyal universe as did his cruel warfare upon the world's Redeemer. The daring blasphemy of his demand that Christ should pay him homage, his presumptuous boldness in bearing Him to the mountain summit and the pinnacle of the temple, the malicious intent betrayed in urging Him to cast Himself down from the dizzy height, the unsleeping malice that hunted Him from place to place, inspiring the hearts of priests and people to reject His love, and at the last to cry, "Crucify Him! crucify Him!"—all this excited the amazement and indignation of the universe.

It was Satan that prompted the world's rejection of Christ. The prince of evil exerted all his power and cunning to destroy Jesus; for he saw that the Saviour's mercy and love, His compassion and pitying tenderness, were representing to the world the character of God. Satan contested every claim put forth by the Son of God and employed men as His agents to fill the Saviour's life with suffering and sorrow. The sophistry and falsehood by which he had sought to hinder the work of Jesus, the hatred manifested through the children of disobedience, his cruel accusations against Him whose life was one of unexampled goodness, all sprang from deep-seated revenge. **The pent-up fires of envy and malice, hatred and revenge, burst forth on Calvary against the Son of God, while all Heaven gazed upon the scene in silent horror.**

When the great sacrifice had been consummated,

Christ ascended on high, refusing the adoration of angels until He had presented the request: "I will that they also, whom thou hast given Me, be with Me where I am." John 17:24. Then with inexpressible love and power came forth the answer from the Father's throne: "Let all the angels of God worship Him." Hebrews 1:6. Not a stain rested upon Jesus. His humiliation ended, His sacrifice completed, there was given unto Him a name that is above every name.

SATAN'S CHARACTER REVEALED

Now the guilt of Satan stood forth without excuse. He had revealed his true character as a liar and a murderer. It was seen that the very same spirit with which he ruled the children of men, who were under his power, he would have manifested had he been permitted to control the inhabitants of Heaven. **He had claimed that the transgression of God's law would bring liberty and exaltation; but it was seen to result in bondage and degradation.**

Satan's lying charges against the divine character and government appeared in their true light. He had accused God of seeking merely the exaltation of Himself in requiring submission and obedience from His creatures, and had declared that, while the Creator exacted self-denial from all others, He Himself practiced no self-denial made no sacrifice. **Now it was seen that for the salvation of a fallen and sinful race, the Ruler of the universe had made the greatest sacrifice which love could make**; for "God was in Christ, reconciling the world unto Himself." 2 Corinthians 5:19. It was seen, also, that while Lucifer had opened the door for the entrance of sin, by his desire for honor and supremacy, **Christ had, in order to destroy sin, humbled Himself, and become obedient unto death.**

THE LAW OF GOD VINDICATED

God had manifested His abhorrence of the principles of rebellion. All Heaven saw His justice revealed, both in the condemnation of Satan and in the redemption of man. Lucifer had declared that if the law of God was changeless, and its penalty could not be remitted, every transgressor must be forever debarred from the Creator's favor. He had claimed that the sinful race were placed beyond redemption and were therefore his rightful prey. **But the death of Christ was an argument in man's behalf that could not be overthrown.** The penalty of the law fell upon him who was equal with God, and man was free to accept the righteousness of Christ and by a life of penitence and humiliation to triumph, as the Son of God had triumphed, over the power of Satan. Thus God is just, and yet the justifier of all who believe in Jesus.

But it was not merely to accomplish the redemption of man that Christ came to the earth to suffer and to die. He came to "magnify the law" and to "make it honorable." Not alone that the inhabitants of this world might regard the law as it should be regarded; but it was to demonstrate to all the worlds of the universe that God's law is unchangeable. **Could its claims have been set aside, then the Son of God need not have yielded up His life to atone for its transgression. The death of Christ proves it immutable.** And the sacrifice to which infinite love impelled the Father and the Son, that sinners might be redeemed, demonstrates to all the universe—what nothing less than this plan of atonement could have sufficed to do—that justice and mercy are the foundation of the law and government of God.

THE FINAL JUDGMENT

In the final execution of the Judgment it will be seen that no cause for sin exists. When the Judge of all the earth shall demand of Satan, "Why hast thou rebelled against Me, and robbed Me of the subjects of My kingdom?" the originator of evil can render no excuse. Every mouth will be stopped, and all the hosts of rebellion will be speechless.

The cross of Calvary, while it declares the law immutable, proclaims to the universe that the wages of sin is death. In the Saviour's expiring cry, "It is finished," the death knell of Satan was rung. The great controversy which had been so long in progress was then decided, and the final eradication of evil was made certain. The Son of God passed through the portals of the tomb, that "through death He might destroy him that had the power of death, that is, the devil." Hebrews 2:14. Lucifer's desire for self-exaltation had led him to say, "I will exalt my throne above the stars of God . . I will be like the Most High." God declares, "I will bring thee to ashes upon the earth . . and never shalt thou be any more." Isaiah 14:13, 14; Ezekiel 28:18, 19. When **"the day cometh that shall burn as an oven . . all the proud, yea, and all that do wickedly, shall be stubble: and the day that cometh shall burn them up**, saith the Lord of hosts, that it shall leave them neither root nor branch." Malachi 4:1.

The whole universe will have become witnesses to the nature and results of sin. And its utter extermination, which in the beginning would have brought fear to angels and dishonor to God, will now vindicate His love and establish His honor before a universe of beings who delight to do His will, and in whose heart is His law. Never will evil again be manifest. Says the Word of God, "Affliction shall not rise up the second time." Nahum 1:9. The law of God, which Satan has reproached as the yoke of bondage, will be honored as the law of liberty. **A tested and proved creation will never again be turned from allegiance to Him whose character has been fully manifested before them as fathomless love and infinite wisdom.**

BASIC STEPS TO CHRIST

– Part One –

How Can I Come to God?

Nature and revelation alike testify of God's love. It is transgression of God's law—the law of love—that has brought woe and death. Yet even amid the suffering that results from sin, God's love is revealed. "God is love" is written upon every opening bud, upon every spire of springing grass.

Jesus came to live among men to reveal the infinite love of God. Love, mercy, and compassion were revealed in every act of His life; His heart went out in tender sympathy to the children of men. He took man's nature, that He might reach man's wants. The poorest and humblest were not afraid to approach Him. Such is the character of Christ as revealed in His life. This is the character of God.

It was to redeem us that Jesus lived and suffered and died. He became a "Man of Sorrows," that we might be made partakers of everlasting joy. But this great sacrifice was not made in order to create in the Father's heart a love for man, not make Him willing to save. No, no! "God so loved the world, that He gave His only-begotten Son." *John 3:16.* The Father loves us, not because of the great propitiation, but He provided the propitiation because He loves us. None but the Son of God could accomplish our redemption.

What a value this places upon man! Through transgression the sons of man become subjects of Satan. Through faith in the atoning sacrifice of Christ the sons of Adam may become the sons of God. The matchless love of God for a world that did not love Him! The thought has a subduing power upon the soul and brings the mind into captivity to the will of God.

Man was originally endowed with noble powers and a well-balanced mind. He was perfect in his being and in harmony with God. His thoughts were pure, his aims holy. But through disobedience, his powers were perverted and selfishness took the place of love. His nature became so weakened through transgression that it was impossible for him, in his own strength, to resist the power of evil.

It is impossible for us, of ourselves, to escape from the pit of sin in which we are sunken. Our hearts are evil, and we cannot change them. There must be a power working from within, a new life from above, before men can be changed from sin to holiness. That power is Christ. His grace alone can quicken the lifeless faculties of the soul and attract it to God, to holiness. To all, there is but one answer, "Behold the Lamb of God, which taketh away the sin of the world" (John 1:29). Let us avail ourselves of the means provided for us that we may be transformed into His likeness and be restored to fellowship with the ministering angels, to harmony and communion with the Father and the Son.

How shall a man be just with God? How shall the sinner be made righteous? It is only through Christ that we can be brought into harmony with God, with holiness; but how are we to come to Christ?

Repentance includes sorrow for sin and a turning away from it. We shall not renounce sin unless we see its sinfulness; until we turn away from it in heart, there will be no real change in the life.

But when the heart yields to the influence of the Spirit of God, the conscience will be quickened and the sinner will discern something of the depth and sacredness of God's holy law, the foundation of His government in heaven and on earth. Conviction takes hold upon the mind and heart.

The prayer of David, after his fall, illustrates the nature of true sorrow for sin. His repentance was sincere and deep. There was no effort to palliate his guilt; no desire to escape the judgment threatened, inspired his prayer. David saw the enormity of his transgression; he saw the defilement of his soul; he loathed his sin. It was not for pardon only that he prayed, but for purity of heart. He longed for the joy of holiness, to be restored to harmony and communion with God. A repentance such as this, is beyond the reach of our own power to accomplish; it is obtained only from Christ.

Christ is ready to set us free from sin, but He does not force the will. If we refuse, what more can He do? Study God's Word prayerfully. As you see the enormity of sin, as you see yourself as you really are, do not give up in despair. It was sinners that Christ came to save. When Satan comes to tell you that you are a great sinner, look to your Redeemer and talk of His merits. Acknowl-

edge your sin, but tell the enemy that "Christ came into the world to save sinners" and that you may be saved (1 Tim. 1:15).

"He that covereth his sins shall not prosper: but whoso confesseth and forsaketh them shall have mercy." *Proverbs 28:13.* The conditions of obtaining the mercy of God are simple and just and reasonable. Confess your sins to God, who only can forgive them, and your faults to one another. Those who have not humbled their souls before God, in acknowledging their guilt, have not yet fulfilled the first step of acceptance. We must be willing to humble our hearts and comply with the conditions of the Word of truth. The confession that is the outpouring of the inmost soul finds its way to the God of infinite pity. True confession is always of a specific character and acknowledges particular sins. All confession should be definite and to the point. It is written, "If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness" (1 John 1:9).

God's promise is, "Ye shall seek Me, and find Me, when ye shall search for Me with all your heart." *Jeremiah 29:13.* The whole heart must be yielded, or the change can never be wrought in us by which we are to be restored to His likeness.

The warfare against self is the greatest battle that was ever fought. The yielding of self, surrendering all to the will of God, requires a struggle; but the soul must submit to God before it can be renewed in holiness.

In giving ourselves to God, we must necessarily give up all that would separate us from Him. There are those who profess to serve God while they rely upon their own efforts to obey His law, to form a right character, and secure salvation. Their hearts are not moved by any deep sense of the love of Christ, but they seek to perform the duties of the Christian life as that which God requires of them in order to gain heaven. Such religion is worthless.

When Christ dwells in the heart, the soul will be so filled with His love, with the joy of communion with Him, that it will cleave to Him; and in the contemplation of Him, self will be forgotten. Love to Christ will be the spring of action. Such do not ask for the lowest standard, but aim at perfect conformity to the will of their Redeemer.

Do you feel that it is too great a sacrifice to yield all to Christ? Ask yourself the question, "What has Christ given for me?" The Son of God gave all—life and love and suffering—for our redemption. And can it be that we, the unworthy objects of so great love, will withhold our hearts from Him? What do we give up, when we give all? A sin-polluted heart, for Jesus to purify, to cleanse by His own blood, and to save by His matchless love. And yet men think it hard to give up all! God does not require us to give up anything that it is for our best interest to retain. In all that He does, He has the well-being of His children in view.

Many are inquiring, "*How* am I to make the surrender of myself to God?" You desire to give yourself to Him, but you are weak in moral power, in slavery to doubt, and controlled by the habits of your life of sin. Your promises and resolutions are like ropes of sand. You cannot control your thoughts, your impulses, your affections. The knowledge of your broken promises and forfeited pledges weakens your confidence in your own sincerity, and causes you to feel that God cannot accept you; but you need not despair.

What you need to understand is the true force of the will. This is the governing power in the nature of man, the power of decision, or of choice. Everything depends on the right action of the will. The power of choice God has given to men; it is theirs to exercise. You cannot change your heart, you cannot of yourself give to God its affections; but you can *choose* to serve Him. You can give Him your will; He will then work in you to will and to do according to His good pleasure. Thus your whole nature will be brought under the control of the Spirit of Christ; your affections will be centered upon Him, your thoughts will be in harmony with Him.

Desires for goodness and holiness are right as far as they go; but if you stop here, they will avail nothing. Many will be lost while hoping and desiring to be Christians. They do not come to the point of yielding the will to God. They do not *now choose* to be Christians.

Through the right exercise of the will, an entire change may be made in your life. You will have strength from above to hold you steadfast, and thus through constant surrender to God you will be enabled to live the new life, even the life of faith.

As your conscience has been quickened by the Holy Spirit, you have seen something of the evil of sin, of its power, its guilt, its woe; and you look upon it with abhorrence. It is peace that you need. You have confessed your sins, and in heart put them away. You have resolved to give yourself to God. Now go to Him, and ask that He will wash away your sins and give you a new heart.

Then believe that He does this *because He has promised.* The gift which God promises us, we must believe we do receive, and it is ours. You are a sinner. You cannot atone for your past sins; you cannot change your heart and make yourself holy. But God promises to do all this for you through Christ. You *believe* that promise. You confess your sins and give yourself to God. You will to serve Him. Just as surely as you do this, God will fulfill His Word to you. If you believe the promise,—God supplies the fact. Do not wait to *feel* that you are made whole, but say, "I believe it; it is so, not because I feel it, but because God promised."

—Summary of all the key points in Steps to Christ, pp. 9-51, in the author's own words.

– Part Two –

How Can I Remain True to God?

Jesus says, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them" (Mark 11:24). There is a condition to this promise—that we pray according to the will of God. But it is the will of God to cleanse us from sin, to make us His children, and to enable us to live a holy life. So we may ask for these blessings, and believe that we receive them, and thank God that we *have* received them.

Henceforth you are not your own; you are bought with a price. Through this simple act of believing God, the Holy Spirit has begotten a new life in your heart. You are

a child born into the family of God, and He loves you as He loves His Son.

Now that you have given yourself to Jesus, do not draw back, do not take yourself away from Him, but day by day say, "I am Christ's; I have given myself to Him"; and ask Him to give you His Spirit and keep you by His grace. As it is by giving yourself to God, and believing Him, that you become His child, so you are to live in Him.

Here is where thousands fail; they do not believe that Jesus pardons them personally, individually. They do not take God at His Word. It is the privilege of all who comply with the conditions to know for themselves that pardon is freely extended for every sin. Put away the suspicion that God's promises are not meant for you. They are for every repentant transgressor.

Look up, you that are doubting and trembling; for Jesus lives to make intercession for us. Thank God for the gift of His dear Son.

"If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." *2 Corinthians 5:17.*

A person may not be able to tell the exact time or place, or trace all the chain of circumstances in the process of conversion; but this does not prove him to be unconverted. A change will be seen in the character, the habits, the pursuits. The contrast will be clear and decided between what they have been and what they have become. Who has the heart? With whom are our thoughts? Of whom do we love to converse? Who has our warmest affections and our best energies? If we are Christ's, our thoughts are with Him. There is no evidence of genuine repentance unless it works reformation. The loveliness of the character of Christ will be seen in His followers. It was His delight to do the will of God.

There are two errors against which the children of God especially need to guard: The first is that of looking to their own works, trusting to anything they can do, to bring themselves into harmony with God. All that man can do without Christ is polluted with selfishness and sin. It is the grace of Christ alone, through faith, which can make us holy.

The opposite and no less dangerous error is that belief in Christ releases men from keeping the law of God; that since by faith alone we become partakers of the grace of Christ, our works have nothing to do with our redemption.

Obedience is the fruit of faith. Righteousness is defined by the standard of God's holy law, as expressed in the ten commandments (Ex. 20:3-17). That so-called faith in Christ, which professes to release men from the obligation of obedience to God, is not faith, but presumption. The condition of eternal life is now just what it always has been,—just what it was in paradise before the fall of our first parents,—perfect obedience to the law of God, perfect righteousness. If eternal life were granted on any condition short of this, then the happiness of the whole universe would be imperiled. The way would be open for sin, with all its train of woe and misery, to be immortalized.

Christ changes the heart. He abides in your heart by faith. You are to maintain this connection with Christ by faith and the continual surrender of your will to Him; and so long as you do this, He will work in you to will and to do according to His good pleasure.

The closer you come to Jesus, the more faulty you will appear in your own eyes; for your vision will be clearer. This is evidence that Satan's delusions are losing their power. No deep-seated love for Jesus can dwell in the heart that does not realize its own sinfulness. The soul that is transformed by the grace of Christ will admire His character. A view of our sinfulness drives us to Him who can pardon; and when the soul, realizing its helplessness, reaches out after Christ, He will reveal Himself in power. The more our sense of need drives us to Him and to the Word of God, the more exalted views we shall have of His character, and the more fully we shall reflect His image.

The change of heart by which we become children of God is in the Bible spoken of as birth. Again it is compared to the germination of the good seed sown by the husbandman. It is God who brings the bud to bloom and the flower to fruit. It is by His power that the seed develops.

As the flower turns to the sun, that the bright beams may aid in perfecting its beauty and symmetry, so should we turn to the Sun of Righteousness, that heaven's light may shine upon us, that our character may be developed into the likeness of Christ.

Do you ask, "How am I to abide in Christ?" In the same way as you received Him at first. "As ye have therefore received Christ Jesus the Lord, so walk in Him." *Colossians 2:6.* By faith you became Christ's, and by faith you are to grow up in Him—by giving and taking. You are to give all,—your heart, your will, your service,—give yourself to Him to obey all His requirements; and you must take all—Christ, the fullness of all blessing, to abide in your heart, to be your strength, your righteousness, your everlasting helper—to give you power to obey.

Consecrate yourself to God in the morning; make this your very first work. Let your prayer be, "Take me, O Lord, as wholly Thine. I lay all my plans at Thy feet. Use me today in Thy service. Abide with me, and let all my work be wrought in Thee." This is a daily matter. Each morning consecrate yourself to God for that day. Surrender all your plans to Him, to be carried out or given up as His providence shall indicate. Thus day by day you may be giving your life into the hands of God, and thus your life will be molded more and more after the life of Christ.

A life in Christ is a life of restfulness. There may be no ecstasy of feeling, but there should be an abiding, peaceful trust. When the mind dwells upon self, it is turned away from Christ, the source of strength and life. Hence, it is Satan's constant effort to keep the attention diverted from the Saviour and thus prevent the union and communion of the soul with Christ.

When Christ took human nature upon Him, He bound humanity to Himself by a tie of love that can never be broken by any power save the choice of man himself. Satan will constantly present allurements to induce us to break this tie—to choose to separate ourselves from Christ. But let us keep our eyes fixed upon Christ, and He will preserve us. Looking unto Jesus, we are safe.

Nothing can pluck us out of His hand. All that Christ was to the disciples, He desires to be to His children today.

Jesus prayed for us, and He asked that we might be one with Him, even as He is one with the Father. What a union is this! Thus, loving Him and abiding in Him, we shall "grow up into Him in all things, which is the head, even Christ" (Ephesians 4:15).

God is the source of life and light and joy to the universe. Wherever the life of God is in the hearts of men, it will flow out to others in love and blessing.

Our Saviour's joy was in the uplifting and redemption of fallen men. For this He counted not His life dear to Himself, but endured the cross, despising the shame. When the love of Christ is enshrined in the heart, like sweet fragrance it cannot be hidden. Love to Jesus will be manifested in a desire to work as He worked for the blessing and uplifting of humanity. It will lead to love, tenderness, and sympathy toward all the creatures of our heavenly Father's care. Those who are the partakers of the grace of Christ will be ready to make any sacrifice, that others for whom He died may share the heavenly gift. They will do all they can to make the world better for their stay in it. This spirit is the sure outgrowth of a soul truly converted. No sooner does one come to Christ than there is born in his heart a desire to make known to others what a precious friend he has found in Jesus. If we have tasted and seen that the Lord is good, we shall have something to tell. We shall seek to present to others the attractions of Christ and the unseen realities of the world to come. There will be an intensity of desire to follow in the path that Jesus trod.

And the effort to bless others will react in blessings upon ourselves. Those who thus become participants in labors of love are brought nearest to their Creator. The spirit of unselfish labor for others gives depth, stability, and Christlike loveliness to the character, and brings peace and happiness to its possessor. Strength comes by exercise. We need not go to heathen lands, or even leave the narrow circle of the home, if it is there that our duty lies, in order to work for Christ. With a loving spirit we may perform life's humblest duties "to the Lord" (Col. 3:23). If the love of God is in the heart, it will be manifested in the life. You are not to wait for great occasions or to expect extraordinary abilities before you go to work for God. The humblest and poorest of the disciples of Jesus can be a blessing to others.

Many are the ways in which God is seeking to make Himself known to us and bring us into communion with Him. If we will but listen, Nature speaks to our senses without ceasing. God's created works will teach us precious lessons of obedience and trust.

No tears are shed that God does not notice. There is no smile that He does not mark. If we would but fully believe this, all undue anxieties would be dismissed. Our lives would not be so filled with disappointment as now; for everything, whether great or small, would be left in the hands of God.

God speaks to us through His providential works and through the influence of His Spirit upon the heart. God speaks to us in His Word. Here we have in clearer lines the revelation of His character, of His dealings with men, and the great work of redemption. Fill the whole heart with the words of God. They are the living water, quenching your burning thirst. They are the living bread from heaven.

The theme of redemption is one that the angels desire to look into; it will be the science and the song of the redeemed throughout the ceaseless ages of eternity. Is it not worthy of careful thought and study now? As we meditate upon the Saviour, there will be a hungering and thirsting of soul to become like Him whom we adore.

The Bible was written for the common people. The great truths necessary for salvation are made as clear as noonday. There is nothing more calculated to strengthen the intellect than the study of the Scriptures. But there is little benefit derived from a hasty reading of the Bible. One passage studied, until its significance is clear to the mind and its relation to the plan of salvation is evident, is of more value than the perusal of many chapters with no definite purpose in view and no positive instruction gained.

Keep your Bible with you. As you have opportunity, read it; fix the texts in your memory.

We cannot obtain wisdom without earnest attention and prayerful study. Never should the Bible be studied without prayer. Before opening its pages, we should ask for the enlightenment of the Holy Spirit, and it will be given. Angels from the world of light will be with those who in humility of heart seek for divine guidance. How must God esteem the human race, since He gave His Son to die for them and appoints His Holy Spirit to be man's teacher and continual guide!

Through nature and revelation, through His providence, and by the influence of His Spirit, God speaks to us. But these are not enough; we need also to pour out our hearts to Him. In order to commune with God, we must have something to say to Him concerning our actual life.

Prayer is the opening of the heart to God as to a friend. Not that it is necessary in order to make known to God what we are, but in order to enable us to receive Him. Prayer does not bring God down to us, but brings us up to Him.

Our heavenly Father waits to bestow upon us the fullness of His blessing. What a wonder it is that we pray so little! God is ready and willing to hear the sincere prayer of the humblest of His children. What can the angels of heaven think of poor helpless human beings who are subject to temptation, when God's heart of infinite love yearns toward them, ready to give them more than they can ask or think, and yet they pray so little and have so little faith?

The darkness of the evil one encloses those who neglect to pray. The whispered temptations of the enemy entice them to sin; and it is all because they do not make use of prayer. Yet prayer is the key in the hand of faith to unlock heaven's storehouse, where are treasured the boundless resources of Omnipotence.

There are certain conditions upon which we may expect that God will hear and answer our prayers:

One is that we feel our need of help from Him. If we regard iniquity in our hearts, if we cling to any known sin, the Lord will not hear us; but the prayer of the penitent, contrite soul is always accepted. When all known wrongs

are righted, we may believe that God will answer our petitions.

Another element of prevailing prayer is faith. When our prayers seem not to be answered, we are to cling to the promise; for the time of answering will surely come, and we shall receive the blessing we need most. But to claim that prayer will always be answered in the very way and for the particular thing that we desire, is presumption.

When we come to God in prayer, we should have a spirit of love and forgiveness in our own hearts.

Perseverance in prayer has been made a condition of receiving. We must pray always if we would grow in faith and experience.

We should pray in the family circle; and above all we must not neglect secret prayer, for this is the life of the soul. Family or public prayer alone is not sufficient. Secret prayer is to be heard only by the prayer-hearing God.

There is no time or place in which it is inappropriate to offer up a petition to God. In the crowds of the street, in the midst of a business engagement, we may send up a petition to God and plead for divine guidance.

Let the soul be drawn out and upward, that God may grant us a breath of the heavenly atmosphere. We may keep so near to God that in every unexpected trial our thoughts will turn to Him as naturally as the flower turns to the sun. Keep your wants, your joys, your sorrows, your cares, and your fears before God. You cannot burden Him; you cannot weary Him. He is not indifferent to the wants of His children.

We sustain a loss when we neglect the privilege of associating together to strengthen and encourage one another in the service of God. If Christians would associate together, speaking to each other of the love of God and the precious truths of redemption, their own hearts would be refreshed and they would refresh one another.

We must gather about the cross. Christ and Him crucified should be the theme of contemplation, of conversation, and of our most joyful emotion. We should keep in our thoughts every blessing we receive from God; and, when we realize His great love, we should be willing to trust everything to the hand that was nailed to the cross for us.

The soul may ascend nearer heaven on the wings of praise. As we express our gratitude, we are approximating to the worship of the heavenly hosts.

Many are at times troubled with the suggestions of skepticism. God never asks us to believe, without giving sufficient evidence upon which to base our faith. Disguise it as they may, the real cause of doubt and skepticism, in most cases, is the love of sin. We must have a sincere desire to know the truth and a willingness of heart to obey it. —*Summary of Steps to Christ, pages 51 to 111, in the author's own words.*

A CLOSER WALK WITH GOD

THE BIBLE:

DIVINE GUIDANCE FOR YOUR LIFE

What is the purpose of the Bible?

2 Peter 1:21—"For the prophecy came not in old time by the will of man, but holy men of God spake as they were moved by the Holy Ghost."

John 20:30-31—"And many other signs truly did Jesus in the presence of His disciples, which are not written in this book: But these are written, that ye might believe that Jesus is the Christ, the Son of God; and that believing ye might have life through His name."

Psalm 119:11—"Thy Word have I hid in mine heart, that I might not sin against Thee."

Psalm 119:105—"Thy Word is a lamp unto my feet, and a light unto my path."

Romans 15:4—"For whatsoever things were written aforetime were written for our learning, that we through patience and comfort of the Scriptures might have hope."

How should we study the Bible?

Acts 17:11—"These were more noble than those in Thessalonica, in that they received the Word with all readiness of mind, and searched the Scriptures daily, whether those things were so."

Isaiah 28:10—"For precept must be upon precept, precept upon precept; line upon line, line upon line; here a little, and there a little."

2 Timothy 2:15—"Study to shew thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word of truth."

John 5:39—"Search the Scriptures; for in them ye think ye have eternal life: and they are they which testify of Me."

THE PLAN OF REDEMPTION:

GOD'S PLAN TO SAVE YOU FROM SIN

In what condition are all men naturally?

Romans 3:23—"For all have sinned, and come short of the glory of God."

Isaiah 53:6—"All we like sheep have gone astray; we have turned every one to his own way; and the Lord hath laid on him the iniquity of us all."

Isaiah 59:2—"But your iniquities have separated between you and your God, and your sins have hid His face from you, that He will not hear."

What is the wages of sin?

Romans 6:23—"The wages of sin is death."

What is the gift of God?

Romans 6:23—"The gift of God is eternal life."

In whom is now this gift?

1 John 5:11—"This is the record, that God hath given to us eternal life, and this life is in His Son."

How many may have this life?

Revelation 22:17—"And the Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely."

1 John 5:12—"He that hath the Son hath life; and he that hath not the Son of God hath not life."

John 14:6—"Jesus saith unto him, I am the way, the truth, and the life; no man cometh unto the Father, but by Me."

How do we really have Christ in us unto eternal life?

John 6:47—"He that believeth on Me hath everlasting life."

Acts 16:31—"Believe on the Lord Jesus Christ, and thou shalt be saved."

What is it that Jesus Christ can do for us?

Matthew 1:21—"She shall bring forth a Son, and thou shalt

call His name Jesus: for He shall save His people from their sins."

1 Timothy 1:15—"This is a faithful saying, and worthy of all acceptation, that Christ Jesus came into the world to save sinners."

How alone can we be saved?

Acts 4:12—"Neither is there salvation in any other: for there is none other name under heaven given among men, whereby we must be saved."

John 15:5—"I am the vine, ye are the branches . . without Me ye can do nothing."

Hebrews 7:25—"Wherefore He is able also to save them to the uttermost that come unto God by Him, seeing He ever liveth to make intercession for them."

God wants to save us.

2 Peter 3:9—"The Lord is not slack concerning His promise, as some men count slackness; but is longsuffering to us-ward, not willing that any should perish, but that all should come to repentance."

Exodus 34:6-7—"The Lord God, merciful and gracious, longsuffering, and abundant in goodness and truth, keeping mercy for thousands, forgiving iniquity and transgression and sin, and that will by no means clear the guilty."

John 3:16-20—"For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life. For God sent not His Son into the world to condemn the world; but that the world through Him might be saved. He that believeth on Him is not condemned: but he that believeth not is condemned already, because he hath not believed in the name of the only begotten Son of God. And this is the condemnation, that light is come into the world, and men loved darkness rather than light, because their deeds were evil. For every one that doeth evil hateth the light, neither cometh to the light, lest his deeds should be reproved."

Luke 19:10—"For the Son of man is come to seek and to save that which was lost."

John 3:3—"Verily, verily, I say unto thee, Except a man be born again, he cannot see the kingdom of God."

When is the right time to come to God?

2 Corinthians 6:2—"Now is the accepted time; behold, now is the day of salvation."

What will God do for us if we come to Him in repentance?

John 1:12—"But as many as received Him, to them gave He power to become the sons of God, even to them that believe on His name."

Galatians 2:20—"I am crucified with Christ: nevertheless I live; yet not I, but Christ liveth in me: and the life which I now live in the flesh I live by the faith of the Son of God, who loved me, and gave Himself for me."

2 Corinthians 5:17—"Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new."

Philippians 2:13—"For it is God which worketh in you both to will and to do of His good pleasure."

Hebrews 10:16—"I will put My laws into their hearts, and in their minds will I write them."

1 John 1:9—"If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness."

Philippians 4:13—"I can do all things through Christ which strengtheneth me."

Matthew 24:13—"But he that shall endure unto the end, the same shall be saved."

2 Corinthians 9:15—"Thanks be unto God for His unspeakable gift."

OBEDIENCE BY FAITH:
HOW GOD ENABLES YOU TO OBEY HIM

1 - GOD HAS A GOVERNMENT

Psalm 103:19—"The Lord hath prepared His throne in the heavens; and His kingdom ruleth over all."

2 - THERE CAN BE NO GOVERNMENT WITHOUT LAW

Romans 7:12—"The law is holy, and the commandment holy, and just, and good."

Romans 7:14—"For we know that the law is spiritual: but I am carnal, sold under sin."

Proverbs 28:9—"He that turneth away his ear from hearing the law, even his prayer shall be abomination."

3 - GOD'S LAW WAS FOR MEN IN BIBLE TIMES

Romans 3:31—"Do we then make void the law through faith? God forbid: yea, we establish the law."

James 2:10-12—"For whosoever shall keep the whole law, and yet offend in one point, he is guilty of all. For He that said, Do not commit adultery, said also Do not kill. Now if thou commit no adultery, yet if thou kill, thou art become a transgressor of the law. So speak ye, and so do, as they that shall be judged by the law of liberty."

4 - GOD'S LAW IS FOR THE REMNANT IN THE LAST DAYS

Revelation 12:17—"And the dragon was wroth with the woman, and went to make war with the remnant of her seed, which keep the commandments of God, and have the testimony of Jesus Christ."

Revelation 14:12—"Here is the patience of the saints: here are they that keep the commandments of God, and the faith of Jesus" *(verses 13-15).*

5 - THERE IS GENERAL REBELLION AGAINST GOD'S LAW

Romans 8:7—"The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."

Psalm 119:126—"It is time for Thee, Lord, to work: for they have made void Thy law."

6 - THERE ARE PROMISES FOR THE OBEDIENT

Psalm 119:165—"Great peace have they which love Thy law: and nothing shall offend them."

Isaiah 48:18—"O that thou hadst hearkened to My commandments! then had thy peace been as a river, and thy righteousness as the waves of the sea."

7 - THE SACRIFICIAL LAWS WERE ABOLISHED AT THE CROSS

Hebrews 10:1-16 discusses these "shadow laws."

Colossians 2:14—"Blotting out the handwriting of ordinances that was against us, which was contrary to us, and took it out of the way, nailing it to His cross."

Colossians 2:17—"Which are a shadow of things to come; but the body is of Christ."

8. WHAT DOES THE LAW DO FOR THE SINNER?

God uses the law to do for the sinner just what needs to be done. The sinner must realize that he is a sinner. The heavy hand of the law must be laid upon him, and he must be arrested in his course. Notice the following carefully:

1. **It gives a knowledge of sin.**

Romans 3:20—"By the law is the knowledge of sin" *(Romans*

7:7).

2. It brings guilt and condemnation.

Romans 3:19—"Now we know that what things soever the law saith, it saith to them who are under the law: that every mouth may be stopped, and all the world may become guilty before God."

3. It acts as a spiritual mirror.

James 1:23-25—"If any be a hearer of the Word, and not a doer, he is like unto a man beholding his natural face in a glass: for he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was. But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed" *(James 2:9-12).*

Without the law, the sinner is like a man who is afflicted with a deadly disease that he doesn't know he has. Paul said, "I had not known sin, but by the law" *(Romans 7:7).*

9 - WHAT IS THE LAW UNABLE TO DO FOR THE SINNER?

The law cannot forgive. Law does not possess the power to forgive those who transgress its precepts. Only the Lawgiver can do that. Jesus died to redeem us from the curse of the law *(Galatians 3:13).* The law cannot keep the sinner from sinning because "the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be" *(Romans 8:7).*

The law only shows the sinner where he needs to change; but the law, itself, cannot change him. And so let us get three facts about the law very clear.

1. It cannot forgive or justify.

Romans 3:20—"By the deeds of the law there shall no flesh be justified in His sight."

2. It cannot keep from sin or sanctify.

Galatians 3:21—"Is the law then against the promises of God? God forbid: for if there had been a law given which could have given life, verily righteousness should have been by the law."

3. It cannot cleanse or keep the heart clean *(Romans 9:3, 7-8).*

The law is limited in its ability to do all that needs to be done for the sinner. A wound cannot be sewed up with only a needle. The thread of the gospel must do that.

10 - WHAT DOES THE GRACE OF CHRIST DO FOR THE SINNER?

When the law of God and the Spirit of God have made the sinner conscious of his sin, he will then feel his need of Christ and go to the Saviour for pardon. The publican found it so *(Luke 18:13-14).* The woman taken in adultery felt condemned and ashamed. She needed sympathy and forgiveness, and Christ was ready to grant these to her. Then He said, "Sin no more."

If we confess and put away sin, He will forgive *(1 John 1:9).* This is grace, or unmerited favor. This gracious love of Christ awakens love in the heart of the sinner, and he then desires to serve and obey God. Here are four elements of the saving grace of Christ:

1. It forgives and justifies.

Acts 13:38-39—"Be it known unto you therefore, men and brethren, that through this man is preached unto you the forgiveness of sins: and by Him all that believe are justified from all things, from which ye could not be justified by the law of Moses" *(Luke 18:13-14).*

2. It saves from sin, or sanctifies.

Matthew 1:21—"She shall bring forth a son, and thou shalt call His name Jesus: for He shall save His people from their sins."

1 Corinthians 1:30—"But of Him are ye in Christ Jesus, who of God is made unto us wisdom, and righteousness, and sanctification, and redemption."

3. It inspires faith.

Ephesians 2:8-10—"By grace are ye saved through faith; and that not of yourselves: it is the gift of God: not of works, lest any man should boast. For we are His workmanship, created in Christ Jesus unto good works, which God hath before ordained that we should walk in them."

4. It brings God's power.

Romans 1:16—"I am not ashamed of the gospel of Christ: for it is the power of God unto salvation to every one that believeth; to the Jew first, and also to the Greek."

Forgiveness of sin and power over sin came through the exercise of simple faith in God's promises and a full surrender of the heart to Him.

11 - HOW DOES A SINNER SAVED BY GRACE RELATE TO THE LAW?

1. The law becomes the standard of his life.

1 John 5:3—"This is the love of God, that we keep His commandments."

2. He permits Christ to fulfill in him the righteousness of the law.

Romans 8:3-4—"God sending His own Son in the likeness of sinful flesh, and for sin, condemned sin in the flesh: that the righteousness of the law might be fulfilled in us, who walk not after the flesh, but after the Spirit."

3. Christ writes the law in his heart.

Hebrews 8:10—"This is the covenant that I will make with the house of Israel after those days, saith the Lord; I will put My laws into their mind, and write them in their hearts: and I will be to them a God, and they shall be to Me a people" *(Psalm 119:11).*

How very thankful we can be that He does all this for us, so that we can become like Him!

A PRECIOUS BIBLE TRUTH:

FACT NUMBER ONE—**The Sabbath was given to all mankind at the Creation of this world.**

The seventh-day Sabbath was given to mankind on the seventh day of Creation Week.

"Thus the heavens and the earth were finished, and all the host of them. And on the seventh day God ended His work which He had made; and He rested on the seventh day from all His work which He had made.

"And God blessed the seventh day, and sanctified it: because that in it He had rested from all His work which God created and made."—*Genesis 2:1-3.*

God dedicated and set aside the Sabbath as a rest day—2,000 years before the first Jew. Abraham is considered by all to have been the first Jew. He lived about 2000 B.C. Biblical records indicate that the Creation of this world took place about 4000 B.C. So the Bible Sabbath is not Jewish! It is for mankind; it is for all the world.

"The Sabbath was made for man."—*Mark 2:27.*

FACT NUMBER TWO—**The Sabbath is a memorial of Creation and our salvation.**

***First,* it is a memorial of Creation.**

"It is a sign between Me and the children of Israel for ever: for in six days the Lord made heaven and earth, and on the seventh day He rested, and was refreshed."—*Exodus 31:17.*

As a memorial of the Creation of this world, the Sabbath cannot pass away without first having this world pass away—and creating a new one! Our planet could not have a new or different Sabbath day, without having it first hurled into oblivion—and then a new planet created from nothing. But no such event has occurred.

***Second,* the Sabbath is a symbol of our salvation.** When we keep it, we tell all the world that we belong to God and that we serve and obey Him. The seventh-day Sabbath is a sign of our conversion, sanctification, and salvation:

"Verily My Sabbaths ye shall keep: for it is a sign between Me and you throughout your generations; that ye may know that I am the Lord that doth sanctify you."—*Exodus 31:13.*

"Moreover also I gave them My Sabbaths to be a sign between Me and them, that they might know that I am the Lord that sanctify them."—*Ezekiel 20:12.*

"And hallow My Sabbaths; and they shall be a sign between Me and you, that ye may know that I am the Lord your God."—*Ezekiel 20:20.*

But what about Christ's resurrection? Nowhere in Scripture were we told to keep any day in honor of Christ's resurrection. To do so is unscriptural. On the contrary, to set aside the Creation and sanctification Sabbath of the Bible—for another day of the week—and excuse it by saying that we do so "in honor of Christ's resurrection"—is indeed to do a very daring thing. Who dare presume to set aside the Memorial of Creation and salvation for any reason! To knowingly do so, flies in the face of repeated, direct, Biblical commands by the God of heaven. To do so denies that He is our Creator and Redeemer.

If we abandon the Bible Sabbath and keep another day holy, in the Judgment what excuse can we offer? There is no Bible reason for keeping the first day of the week holy instead of the seventh day.

***FACT NUMBER THREE*—The people of God kept the Bible Sabbath before the Ten Commandments were given at Mount Sinai.**

The Sabbath Truth was first given to our race in Eden before the fall of man. It was given before sin existed. It was given to every man to link him to his God. And if Adam needed the Sabbath, we need it all the more today.

God's people had it before Mount Sinai. Four chapters before the Ten Commandments were given on Mount Sinai, the God of heaven spoke in such a way that it is obvious that the seventh-day Sabbath was already well-known by the people of God—but not always well-kept: Read Exodus 16.

There are those who say that the seventh-day Sabbath was not commanded by God, nor kept by man before it was spoken from Mount Sinai in Exodus 20. But Genesis 2:1-3 and Exodus 16 prove otherwise.

***FACT NUMBER FOUR*—The seventh-day Sabbath Commandment lies in the very heart of the Moral Law of Ten Commandments.**

"Remember The Sabbath day, to keep it holy.

"Six days shalt thou labour, and do all thy work. But the seventh day is the Sabbath of the Lord thy God: in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy manservant, nor thy maidservant, nor thy cattle, nor thy stranger that is within thy gates.

"For in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the Sabbath day, and hallowed it."—*Exodus 20:8-11.*

The Sabbath Commandment is part of the Moral Law of Ten Commandments. The Apostle James tells us that if we break any part of this law, we have broken it all (James 2:10-12). We cannot tear out the Fourth Commandment without setting aside all the others as well. They all stand together, because the God of Heaven put them all together.

We do not decide which day of the week is to be kept holy unto God; He alone is to do this. It is for Him to command; it is for us to obey.

Some say that Genesis 2:1-3 is not a command for man to keep the Sabbath, and therefore we do not obey it. But Exodus 16 and 20 clearly show that man *is* commanded to keep it holy. And who dare say that the Ten Commandments were only for the Jewish race? Are the rest of us permitted to lie, steal, cheat, and commit adultery? Are only the Hebrews to observe these ten moral principles?

The reason for the commandment is the Creation of this world: "For in six days the Lord made heaven and earth." This is not something local, merely for a Semitic race;—it is a commandment for all in the entire world who shall bow down and worship their Creator in humble thankfulness for His plan to save them through the life and death of Jesus Christ. It was given at the Creation of this world; and it was given to every man, woman, and child who shall live on this planet.

God wrote these Ten Commandments with His own finger (Ex 31:18; Deut 9:10). **He wrote them on the most enduring thing in the world,** and that is rock (Ex 31:18). And He wishes to write them also on our hearts.

"This is the covenant that I will make with them after those days, saith the Lord, I will put My laws into their hearts, and in their minds will I write them."—*Hebrews 10:16 (Heb 8:10; Jer 31:33).*

And, if we will let Him, through the New Covenant He will write His holy law upon our hearts. To have the Ten Commandments written on our hearts means two things: First, it means a willingness to obey them and, second, letting God enable us to do so by the grace of Jesus, His Son. Obedience to God's law is to become an integral part of our lives.

***FACT NUMBER FIVE*—The weekly seventh-day Sabbath is part of the Moral Law contained in the Ten Commandments. It will stand forever. The yearly sabbaths were part of the ceremonial laws that prefigured, or foreshadowed, the death and ministry of Christ.**

These "shadow laws," such as the Passover and the Wave Sheaf, which were a part of the ceremonial or sacrificial law, would not endure past the death of Christ.

"For the [ceremonial] law having a shadow of good things to come, and not the very image of the things, can never with those sacrifices which they offered year by year continually make the comers thereunto perfect. For then would they not have ceased to be offered? . . But in those sacrifices there is a remembrance again made of sins every year. For it is not possible that the blood of bulls and of goats should take away sins."—*Hebrews 10:1-4.*

These ceremonial laws were not written on rock; but they were contained in ordinances which were written on parchment. The rock was to endure; but the ordinances that foreshadowed the death of Christ were to pass away at His death. It is for this reason that we do not today observe the yearly sabbaths of the Passover and the Wave Sheaf.

"Blotting out the handwriting of ordinances that was against us, which was contrary to us, and took it out of the way, nailing it to His cross . . Let no man therefore judge you in meat, or in drink, or in respect of an holyday, or of the new moon, or of the sabbath days. Which are a shadow of things to come; but the body is of Christ."—*Colossians 2:14, 16-17.*

In the Greek it says, "or of the sabbaths." **There is one weekly Sabbath; it comes down to us from the Creation of this world and will be kept in the New Earth** (Isa 66:22-23). **But the yearly sabbaths did not begin until Moses.** They foreshadowed and explained the coming death of Christ till it happened; and, at His death, they were nailed to His cross.

If the ordinances containing the yearly sabbaths had not been set aside at Calvary, we would need now to sacrifice animals on various occasions throughout the year. But we are not now to slay lambs; for Christ, our Passover Lamb, has been sacrificed for us.

"Behold the Lamb of God, which taketh away the sin of the world."—*John 1:29.*

"For even Christ our Passover is sacrificed for us."—*1 Corinthians 5:7.*

***FACT NUMBER SIX*—Christ's disciples faithfully kept the Bible Sabbath, not Sunday.**

The disciples had been with Jesus for three and a half years, and had listened closely to His teachings. What they did at the time of His death on Calvary shows what He taught them. The sacred importance of the seventh-day Sabbath was of such concern to them that they would not even prepare the body of Jesus properly for burial on Friday, lest they transgress the Fourth Commandment.

"And now when the even was come, because it was the preparation, that is, the day before the Sabbath . . Mary Magdalene and Mary the mother of Joses beheld where He was laid.

"And when the Sabbath was past, Mary Magdalene, and Mary the mother of James, and Salome, had bought sweet spices, that they might come and anoint Him. And very early in the morning the first day of the week, they came unto the sepulchre at the rising of the sun. And they said among themselves, Who shall roll us away the stone from the door of the sepulchre?"—*Mark 15:42, 47-16:3.*

For more on this, read Luke 23:53-24:2.

***FACT NUMBER SEVEN*—According to the New Testament, the Apostles of Jesus always kept the Bible Sabbath.**

The Apostles kept the Bible Sabbath. Read Acts 13:14; Acts 13:42; Acts 16:13; Acts 17:1-2.

Paul supported himself by tentmaking; and, then on the Sabbath, he would preach the gospel.

"Because he was of the same craft, he abode with them, and wrought: for by their occupation, they were tentmakers . . And he reasoned in the synagogue every Sabbath, and persuaded the Jews and the Greeks . . He continued there a year and six months, teaching the Word of God among them."—*Acts 18:3-4, 11.*

Paul's manner was the same as Christ's custom: to keep the Bible Sabbath (Acts 17:1-2, Luke 4:16).

Paul never taught that the Moral Law was, or could be, set aside. It will ever govern the conduct of mankind:

"Do we then make void the law through faith? God forbid: yea, we establish the law."—*Romans 3:31.*

"What shall we say then? Shall we continue in sin, that grace may abound? God forbid. How shall we, that are dead to sin, live any longer therein?"—*Romans 6:1-2.*

"What shall we say then? Is the law sin? God forbid. Nay, I had not known sin, but by the law: for I had not known lust, except the law had said, Thou shalt not covet."—*Romans 7:7.*

Paul clearly saw that the problem was that we needed to obey the law; there was nothing wrong with the requirements of the law itself.

"Wherefore the law is holy, and the commandment holy, and just, and good."—*Romans 7:12.*

"Circumcision is nothing, and uncircumcision is nothing, but [that which is important is] the keeping of the commandments of God."—*1 Corinthians 7:19.*

The moral standard that governs mankind was not relaxed or destroyed by the death of Christ; for, indeed, it is through the merits of Christ's sacrifice that we can be empowered to keep that law.

"Thou shalt call His name Jesus: for He shall save His people from their sins."—*Matthew 1:21.*

Jesus saves us from our sins, not in our sins. And since sin is the breaking of the Ten Commandments, it is obvious that He saves us by enabling us, strengthening us, to keep that law.

"Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law."—*1 John 3:4.*

The other Apostles saw this same great truth, that the moral standard that governs mankind was not relaxed or destroyed by the death of Christ:

"But be ye doers of the Word, and not hearers only, deceiving your own selves. For if any be a hearer of the Word, and not a doer, he is like unto a man beholding his natural face in a glass. For he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was.

"But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed . . For whosoever shall keep the whole law, and yet offend in one point, he is guilty of all. For He that saith, Do not commit adultery, said also, Do not kill. Now if thou commit no adultery, yet if thou kill, thou art become a transgressor of the law. So speak ye, and so do, as they that shall be judged by the law of liberty . . Faith, if it hath not works, is dead, being alone. Yea, a man may say, Thou hast faith, and I have works: shew me thy faith without thy works, and I will shew thee my faith by my works."—*James 1:22-25; 2:10-12, 17-18.*

"By this we know that we love the children of God, when we love God, and keep His commandments. For this is the love of God, that we keep His commandments: and His commandments are not grievous."—*1 John 5:2-3.*

***FACT NUMBER EIGHT*—God predicted in Scripture that men**

would later try to change the Law of God—and especially the "time law."

The Bible Sabbath is very important—for it is the very center of our worship of God! If men were later to try to change it to another day, we should surely expect a Bible prophecy saying that it would happen.

"And he [the little horn power] shall speak great words against the most High, and shall wear out the saints of the most High, and think to change times and laws: and they shall be given into His hand until a time and times and the dividing of time."—*Daniel 7:25.*

The church of the Dark Ages was to rule the world for 1260 years; and, during this time, they would try to tear out God's holy Time Law and put a counterfeit in its place. Oh, what blasphemy men can dream up, when they are tempted by Satan to gain religious control of their fellow men!

"For that day [the Second Coming of Christ] shall not come, except there come a falling away first, and that man of sin be revealed, the son of perdition; who opposeth and exalteth himself above all that is called God, or that is worshipped."—*2 Thessalonians 2:3-4.*

God said:

"And hallow My Sabbaths; and they shall be a sign between Me and you, that ye may know that I am the Lord your God."—*Ezekiel 20:20.*

After the New Testament was finished and the Apostles had died, men tried to transfer the sacredness from the seventh to the first day of the week. They tried to change the "time law."

Roman Catholic: "It is well to remind the Presbyterians, Baptists, Methodists, and all other Christians, that the Bible does not support them anywhere in their observance of Sunday. Sunday is an institution of the Roman Catholic Church, and those who observe the day observe a commandment of the Catholic Church."—*Priest Brady, in an address at Elizabeth, N.J., March 17, 1903; reported in the Elizabeth, N.J., News of March 18, 1903.*

"You may search the Bible from Genesis to Revelation, and you will not find a single line authorizing the sanctification of Sunday. The Scriptures enforce the religious observance of Saterday, a day which we never sanctify."—*James Cardinal Gibbon, The Faith of Our Fathers, chapter 8.*

"If Protestants would follow the Bible, they should worship God on the Sabbath day. In keeping the Sunday they are following a law of the Catholic Church."—*Albert Smith, Chancellor of the Archdiocese of Baltimore, replying for the Cardinal, in a letter of February 10, 1920.*

"We hold upon this earth the place of God Almighty."—*Pope Leo XIII, Encyclical Letter, June 20, 1894; The Great Encyclical Letters of Leo XIII, p. 304.*

"Prove to me from the Bible alone that I am bound to keep Sunday holy. There is no such law in the Bible. It is a law of the holy Catholic Church alone. The Bible says 'Remember the Sabbath day to keep it holy.' The Catholic Church says, No. By my divine power I abolish the Sabbath day and command you to keep holy the first day of the week. And lo! The entire civilized world bows down in reverent obedience to the command of the Holy Catholic Church."—*Priest Thomas Enright, CSSR, President of Redemptorist College, Kansas City, MO, in a lecture at Hartford, Kansas Weekly Call, February 22, 1884, and the American Sentinel, a New York Roman Catholic journal, in June 1893, p. 173.*

"Of course the Catholic Church claims that the change was her act . . AND THE ACT IS A MARK of her ecclesiastical power."—*From the office of Cardinal Gibbons, through Chancellor H.F. Thomas, November 11, 1895.*

How important it is that we obey the commandments of God rather than the commandments of men.

"Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey?"—*Romans 6:16.*

"It is written, Thou shalt worship the Lord thy God, and Him only shalt thou serve."—*Matthew 4:10.*

"But in vain they do worship Me, teaching for doctrines the commandments of men."—*Matthew 15:9.*

"How long halt ye between two opinions? If the Lord be God, follow Him; but if Baal, then follow him."—*1 Kings 18:21.*

***FACT NUMBER NINE*—The seventh-day Sabbath, instituted by God at the Creation of this world, is the seal of His governmental authority.**

God's basic governmental code for mankind is the Ten Commandments. Of those ten, only the Sabbath commandment reveals the name of our Creator and Lawgiver.

Of all the commandments in the Decalogue, only the Fourth Commandment reveals the (1) name, (2) authority, and (3) dominion of the Author of this Law:

In six days, (1) the Lord (name) (2) made (office—the Creator) (3) heaven and earth (dominion or territory over which He rules). **This commandment alone contains the seal of God.**

Examine the notary seal of a notary public or any other legal seal. Each seal will always contain the above three identifying marks.

"Remember the Sabbath day, to keep it holy . . for in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the Sabbath day, and hallowed it."—*Exodus 20:8, 11.*

The Sabbath commandment contains the seal of God; and the Sabbath itself—given in this commandment—is inseparably connected with this seal. For the Sabbath is the basis of all true worship of our Creator. And this worship lies at the heart of all our acknowledgment of His authority as our Creator and our God. The Sabbath is ever to be kept as a sign that we belong to Him. And the keeping of it brings us within the circle of this seal.

The seal is impressed in order that all may know the authority from whence it comes—and that all may know that it is not to be changed. **The seventh-day Sabbath comes from God. Let no man dare to tamper with it—for the seal of God is upon it.**

"Now, O king, establish the decree, and sign the writing, that it be not changed."—*Daniel 6:8.*

"Bind up the testimony, seal the law among My disciples."—*Isaiah 8:16.*

"It [the Sabbath] is a sign between Me and the children of Israel forever: for in six days the Lord made heaven and earth, and on the seventh day He rested, and was refreshed."—*Exodus 31:17.*

"And hallow My Sabbaths; and they shall be a sign between Me and you, that ye may know that I am the Lord your

God."—*Ezekiel 20:20.*

The Sabbath is a powerful sign of God's creative power—not only of this earth, but within our lives as well. It requires the same power to clean our lives and redeem us as it did to create us in the first place.

"Create in me a clean heart, O God."—*Psalm 51:10.*

"We are . . created in Christ Jesus unto good works."—*Ephesians 2:10.*

The Bible tells us there is to be a special sealing work in these last days, just before the return of Jesus in the clouds of heaven.

"And I saw another angel ascending from the east, having the seal of the living God: and he cried with a loud voice to the four angels . . saying, Hurt not the earth, neither the sea, or the trees, till we have sealed the servants of our God in their foreheads."—*Revelation 7:2-3 (Ezekiel 9:1-6).*

"And I looked, and, lo, a Lamb stood on the mount Sion, and with Him an hundred forty and four thousand, having His Father's name written in their foreheads."—*Revelation 14:1.*

The name of the Father is expressive of His character. When Moses asked to see the glory of God, the Lord passed by and told His name—that which He was like:

"The Lord, the Lord God, merciful and gracious, long-suffering, and abundant in goodness and truth."—*Exodus 34:6.*

And as we look at God's holy law, we see another view of His character. It is a transcript of that character. It is God's characteristics written on everlasting stone. He wants us to live it out in our lives.

When God writes His name on your forehead and right hand, this means He writes His law on your heart. This is the work of the new covenant (Heb 8:10, 10:16, Jer 31:33); and that work reaches its climax when God "seals in" His own people, just before He returns the second time in the clouds of heaven. What are those sealed ones like? They are fully obedient to the Law of God:

"And in their mouth was found no guile: for they are without fault before the throne of God."—*Revelation 14:5.*

But in the final crisis before His return, there will be a people who will yield obedience to the beast instead of to God.

"And the third angel followed them, saying with a loud voice, If any man worship the beast and his image, and receive his mark in his forehead, or in his hand, the same shall drink of the wine of the wrath of God."—*Revelation 14:9-10.*

"And he [the beast] causeth all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads."—*Revelation 13:16.*

In contrast with those who serve the beast and receive his mark, in the last days, are those who will serve God and receive His seal. How can they be identified? God has told us in His Word. Here is a description of God's remnant people at the end of time:

"And the dragon [Satan, working through his agents] was wroth with the woman [the true church], and went to make war with the remnant of her seed, which keep the commandments of God, and have the testimony of Jesus Christ."—*Revelation 12:17.*

And the third angel of Revelation 14, which warns men to not receive the mark of the beast, also tells them how to avoid receiving it—by keeping the commandments of God through the faith of Jesus Christ:

"And the third angel followed them, saying with a loud voice, If any man worship the beast and his image, and receive his mark in his forehead, or in his hand, the same shall drink of the wine of the wrath of God, which is poured out without mixture . . Here is the patience of the saints: here are they that keep the commandments of God, and the faith of Jesus."—*Revelation 14:9-10, 12.*

The final crisis will be caused by a decree by the beast, that all men must disobey a commandment of the law of God. The nations and churches of the world will not require men to steal or lie or commit adultery. The growing movement toward national Sunday laws is growing stronger every passing year. It is seen that in this point, and in this alone, will be found the heart of the crisis of Revelation 13 and 14.

The first angel of Revelation 14 calls on all men everywhere, today, to reverence God—by returning to the worship of the Creator of all things.

"And I saw another angel fly in the midst of heaven, having the everlasting gospel to preach unto them that dwell on the earth, and to every nation, and kindred, and tongue, and people:

"Saying with a loud voice, Fear God, and give glory to Him; for the hour of His judgment is come: and worship Him that made heaven, and earth, and the sea, and the fountains of waters."—*Revelation 14:6-7.*

As the crisis nears, we must prepare for it.

"The observance of Sunday by the Protestants is an homage they pay, in spite of themselves, to the authority of the [Catholic] Church."—*Monsignor Louis Segur, Plain Talk About the Protestantism of Today, p. 213.*

Already we are facing Sunday closing laws on local levels. Men are prohibited from doing business on the first working day of the week, lest they be fined or imprisoned. And the situation will grow worse in the days just ahead.

"That the image of the beast should both speak, and cause [decree] that as many as would not worship the image of the beast should be killed. And he causeth all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads: and that no man might buy or sell, save he that had the mark."—*Revelation 13:15-17.*

But there is victory for those who will stand true to the God of heaven. There is overcoming power for those who will "keep the commandments of God and the faith of Jesus" (Rev 14:12).

"And I saw . . them that had gotten the victory over the beast, and over his image, and over his mark, and over the number of his name, stand on the sea of glass, having the harps of God."—*Revelation 15:2.*

***FACT NUMBER TEN*—God's remnant people will keep the Bible Sabbath; and that holy day will be kept throughout eternity.**

(1) **Even though there are over two thousand denominations today, the remnant people of God, living at the end of time, can be identified. God has identified them for us.** After speaking about how the antichrist power in the Dark Ages tried for centuries to destroy the people of God, **we are told how to identify them in these last days, just before Christ returns in the clouds for His own:**

"And the dragon was wroth with the woman, and went to make war with the remnant of her seed, which keep the commandments of God, and have the testimony of Jesus Christ."—

Revelation 12:17.

And the third angel, after warning all men against receiving the mark of the beast, tells us clearly who will be the little group that will stand apart from this almost universal apostasy:

"Here is the patience of the saints: here are they that keep the commandments of God, and the faith of Jesus."—*Revelation 14:12.*

It will be an almost universal apostasy. All around us can be seen a rising tide of rebellion against the Ten Commandments. The colleges and universities teach that man is but an animal descended from worms and amoeba. The churches teach that God destroyed the Ten Commandments at Calvary, and that Jesus died to take sinners to heaven just as they are. Governmental agencies are relaxing moral restrictions and permitting gambling, abortion, homosexuality, and other vices.

This world is becoming a curse; but soon God will intervene. Prophecy tells us that before the end there will be a small company who will stand true to the commandments of God, by faith in Jesus Christ.

(2) And soon this present evil world will be ended suddenly by the return of Jesus Christ—and heaven will begin for the faithful.

And in that heaven the seventh-day Sabbath will be kept forever. God's people suffered and died for it down here; and they will worship God on that holy day through all ages to come.

Revelation 21 and 22 tells us about this new life with Jesus, when sin has come to an end and the wicked are no longer alive.

"And I saw a new heaven and a new earth: for the first heaven and the first earth were passed away; and there was no more sea . . And he shewed me a pure river of water of life, clear as crystal, proceeding out of the throne of God and of the Lamb."—*Revelation 21:1, 22:1.*

And then **we are told who will enter that beautiful new world:**

"Blessed are they that do His commandments, that they may have right to the tree of life, and may enter in through the gates into the city."—*Revelation 22:14.*

But more: **There is the promise that they will keep the holy Sabbath through all eternity:**

"For, behold, I create a new heavens and a new earth: and the former shall not be remembered, nor come into mind . . And they shall build houses, and inhabit them; and they shall plant vineyards, and eat the fruit of them. They shall not build, and another inhabit; they shall not plant, and another eat: for as the days of a tree are the days of My people, and Mine elect shall long enjoy the work of their hands . . The wolf and the lamb shall feed together, and the lion shall eat straw like the bullock; and dust shall be the serpent's meat. They shall not hurt nor destroy in all My holy mountain, saith the Lord . .

"For as the new heavens and the new earth, which I will make, shall remain before Me, saith the Lord, so shall your seed and your name remain. And it shall come to pass, that from one new moon to another, and from one Sabbath to another, shall all flesh come to worship before Me, saith the Lord."—*Isaiah 65:17, 21-22, 25; 66:22-23.*

Now you have seen God's plan for His people. And it is a wonderful one. It can begin for you right now. And it will continue on throughout eternity. Why not begin today—this very week? Ask God to forgive you for the past; and tell Him that, by His grace, you will worship your Creator on His day! This is the best decision you can make. Go to Him just now. He will help you do it.

And next Sabbath—begin that holy walk with God on His day, the holy day of Isaiah 58. Read that chapter and see the blessings He will add, if you will but let Him take over your life.

But think not that there will be no problems or trials. Satan will bring many upon you. He hates the Sabbath and all who will stand loyal to it. Yet if you will determine to be true to God and His Word, you will have strength from above to go through all that lies ahead.

And one day soon, if faithful to the end, you with the redeemed of all ages will rejoice on the sea of glass and will receive from the hand of Jesus the overcomer's crown. And you will be given that new name, expressive of a new character. And you will begin a walk with Jesus that will last through all eternity to come.

"And one of the elders answered, saying unto me, What are these which are arrayed in white robes? and whence come they?

"And I said unto him, Sir, thou knowest. And he said unto me, These are they which came out of great tribulation, and have washed their robes, and made them white in the blood of the Lamb.

"Therefore are they before the throne of God, and serve Him day and night in His temple: and He that sitteth on the throne shall dwell among them.

"They shall hunger no more, neither thirst anymore; neither shall the sun light on them, nor any heat.

"For the Lamb which is in the midst of the throne shall feed them, and shall lead them unto living fountains of waters: and God shall wipe away all tears from their eyes."—*Revelation 7:13-17.*

OUR BELOVED DEAD:
WHERE ARE THEY NOW?

1. MAN BY NATURE IS MORTAL (subject to death)

Job 4:17—"Shall mortal man be more just than God? Shall a man be more pure than his Maker?"

2. GOD ALONE HAS NATURAL IMMORTALITY

1 Timothy 6:15-16—"Which in His times He shall shew, who is the blessed and only Potentate, the King of kings, and Lord of lords; Who only hath immortality, dwelling in the light which no man can approach unto; whom no man hath seen, nor can see: to whom be honour and power everlasting."

3. CHRIST SHOWS US HOW WE CAN HAVE IT

2 Timothy 1:10—"But is now made manifest by the appearing of our Saviour Jesus Christ, who hath abolished death, and hath brought life and immortality to light through the gospel."

4. IMMORTALITY (ETERNAL LIFE) COMES TO MAN AS A GIFT FROM GOD THROUGH CHRIST; AND MAN IS TO SEEK FOR IT

Romans 2:6-7—"Who will render to every man according to his deeds: To them who by patient continuance in well doing seek for glory and honour and immortality, eternal life."

Romans 6:23—"For the wages of sin is death; but the gift of God is eternal life through Jesus Christ our Lord."

5. IMMORTALITY IS OUR BLESSED HOPE NOW, AND WILL ACTUALLY BE RECEIVED AT THE RESURRECTION WHEN CHRIST RETURNS

1 Corinthians 15:53-54—"For this corruptible must put on incorruption, and this mortal must put on immortality. So when this corruptible shall have put on incorruption, and this mortal shall have put on immortality, then shall be brought to pass the saying that is written, Death is swallowed up in victory."

Titus 3:7—"That being justified by his grace, we should be made heirs according to the hope of eternal life."

6. WHAT IS DEATH?

By what figure does the Bible represent death?

1 Thessalonians 4:13—"But I would not have you to be ignorant, brethren, concerning them which are asleep, that ye sorrow not, even as others which have no hope" (1 Cor. 15:18, 20; John 11:11-14).

Where do the dead sleep?

Daniel 12:2—"And many of them that sleep in the dust of the earth shall awake."

What must take place before Job could expect to awake?

Job 14:14—"If a man die, shall he live again? All the days of my appointed time will I wait, till my change come."

Where does he wait?

Job 17:13—"If I wait, the grave is mine house: I have made my bed in the darkness."

While in this condition, what does one know of those he has left behind?

Job 14:21—"His sons come to honour, and he knoweth it not; and they are brought low, but he perceiveth it not of them."

What becomes of man's thoughts at death?

Psalm 146:4—"His breath goeth forth, he returneth to his earth; in that very day his thoughts perish."

Do the dead know anything?

Ecclesiastes 9:5—"For the living know that they shall die: but the dead know not any thing, neither have they any more a reward; for the memory of them is forgotten."

What part, if any, do they take in earthly things?

Ecclessiastes 9:6—"Also their love, and their hatred, and their envy, is now perished; neither have they any more a portion for ever in any thing that is done under the sun."

What does the psalmist say about the dead's praising the Lord?

Psalm 115:17—"The dead praise not the Lord, neither any that go down into silence."

How much does one know of God when dead?

Psalm 6:5—"For in death there is no remembrance of Thee."

But are not the righteous dead in heaven?

Acts 2:34—"For David is not ascended into the heavens."

The dead are asleep and unconscious.

Ecclesiastes 9:10—"Whatsoever thy hand findeth to do, do it with thy might; for there is no work, nor device, nor knowledge, nor wisdom, in the grave, whither thou goest."

Ecclesiastes 3:20—"All go on unto one place; all are of the dust, and all turn to dust again."

THE FIRST RESURRECTION:
THE RIGHTEOUS ARISE FROM THE DEAD

If the dead cannot praise God, what must take place to enable them to do so?

Isaiah 26:19—"Thy dead men shall live, together with My dead body shall they arise. Awake and sing, ye that dwell in dust: for thy dew is as the dew of herbs, and the earth shall cast out the dead."

What was the only thing with which David would be satisfied?

Psalm 17:15—"As for me, I will behold Thy face in righteousness: I shall be satisfied, when I awake, with Thy likeness."

If there should never be an awakening of the dead, what would be the result?

1 Corinthians 15:18—"For if the dead rise not, then is not Christ raised: And if Christ be not raised, your faith is vain; ye are yet in your sins. Then they also which are fallen asleep in Christ are perished."

When does the resurrection of the righteous take place?

1 Thessalonians 4:16—"For the Lord Himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first" (1 Cor. 15:23).

There are two resurrections: The first is of the righteous and the second is of the unjust.

Revelation 20:6—"Blessed and holy is he that hath part in the first resurrection: on such the second death hath no power, but they shall be priests of God and of Christ, and shall reign with Him a thousand years."

John 5:28-29—"Marvel not at this: for the hour is coming, in the which all that are in the graves shall hear His voice, and shall come forth; they that have done good, unto the resurrection of life; and they that have done evil, unto the resurrection of damnation."

Acts 24:15—"And have hope toward God, which they themselves also allow, that there shall be a resurrection of the dead, both of the just and unjust."

God's people depend, for their reward, upon the Second Coming of Christ and the resurrection.

Luke 14:14—"And thou shalt be blessed; for they cannot recompense thee: for thou shalt be recompensed at the resurrection of the just."

THE SECOND COMING:
WHEN CHRIST RETURNS FOR HIS OWN

Christ has promised that He will return again

John 14:1-3—"Let not your heart be troubled: ye believe in God, believe also in Me. In my Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also."

His coming will be visible; and all the world will see it.

Acts 1:9-11—"And when He had spoken these things, while they beheld, He was taken up; and a cloud received Him out of their sight. And while they looked stedfastly toward heaven as He went up, behold, two men stood by them in white apparel; Which also said, Ye men of Galilee, why stand ye gazing up into heaven? this same Jesus, which is taken up from you into heaven, shall so come in like manner as ye have seen Him go into heaven."

Matthew 24:30-31—"And then shall appear the sign of the Son of man in heaven: and then shall all the tribes of the earth mourn, and they shall see the Son of man coming in the clouds of heaven with power and great glory. And He shall send his angels with a great sound of a trumpet, and they shall gather together His elect from the four winds, from one end of heaven to the other."

Revelation 1:7—"Behold, He cometh with clouds; and every eye shall see Him, and they also which pierced Him: and all kindreds of the earth shall wail because of Him."

It will be a thrilling moment to His people when He returns.

I Corinthians 15:51-55—"Behold, I shew you a mystery; We shall not all sleep, but we shall all be changed, in a moment, in the twinkling of an eye, at the last trump: for the trumpet shall sound, and the dead shall be raised incorruptible, and we shall be changed. For this corruptible must put on incorruption, and this mortal must put on immortality. So when this corruptible shall have put on incorruption, and this mortal shall have put on immortality, then shall be brought to pass the saying that is written, Death is swallowed up in victory. O death, where is thy sting? O grave, where is thy victory?"

THE SECOND RESURRECTION:
THE RESURRECTION OF THE UNJUST OCCURS AFTER THE MILLENNIUM

At Christ's second advent, He takes His people to heaven, to judge the wicked dead. During that time, the devil is limited to the earth, with no one to tempt for a thousand years.

Revelation 20:1-4—"And I saw an angel come down from heaven, having the key of the bottomless pit and a great chain in his hand. And he laid hold on the dragon, that old serpent, which is the Devil, and Satan, and bound him a thousand years, and cast him into the bottomless pit, and shut him up, and set a seal upon him, that he should deceive the nations no more, till the thousand years should be fulfilled: and after that he must be loosed a little season. And I saw thrones, and they sat upon them, and judgment was given unto them: and I saw the souls of them that were beheaded for the witness of Jesus, and for the Word of God, and which had not worshipped the beast, neither his image, neither had received his mark upon their foreheads, or in their hands; and they lived and reigned with Christ a thousand years."

Revelation 20:6—"Blessed and holy is he that hath part in the first resurrection: on such the second death hath no power, but they shall be priests of God and of Christ, and shall reign with Him a thousand years."

At the end of the thousand years, the wicked are raised to life. This is the second resurrection.

Revelation 20:5—"But the rest of the dead lived not again until the thousand years were finished."

Satan then leads the wicked in a final attempt to slay the saints of God; but fire falls from heaven and devours the wicked.

Revelation 20:7-9—"And when the thousand years are expired, Satan shall be loosed out of his prison, and shall go out to deceive the nations which are in the four quarters of the earth, Gog and Magog, to gather them together to battle: the number of whom is as the sand of the sea. And they went up on the breadth of the earth, and compassed the camp of the saints about, and the beloved city: and fire came down from God out of heaven, and devoured them."

WHEN THE END COMES:
HOW GOD WILL REMOVE SIN FROM THE UNIVERSE

The wicked are mortal and have no promise of eternal life.

John 3:16—"For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life."

John 3:36—"He that believeth on the Son hath everlasting life: and he that believeth not the Son shall not see life; but the wrath of God abideth on him."

2 Thessalonians 1:7-9—"And to you who are troubled rest with us, when the Lord Jesus shall be revealed from heaven with His mighty angels, in flaming fire taking vengeance on them that know not God, and that obey not the gospel of our Lord Jesus Christ: Who shall be punished with everlasting destruction from the presence of the Lord, and from the glory of His power."

What and where is hell?

Psalm 9:17—"The wicked shall be turned into hell, and all the nations that forget God."

1 Peter 4:17—"For the time is come that judgment must begin at the house of God: and if it first begin at us, what shall the end be of them that obey not the gospel of God?"

It will be everlasting punishment for the wicked; it is called everlasting destruction.

2 Thessalonians 1:9—"Who shall be punished with everlasting destruction from the presence of the Lord, and from the glory of His power."

This destruction of the wicked will be complete.

Matthew 10:28—"And fear not them which kill the body, but are not able to kill the soul: but rather fear Him which is able to destroy both soul and body in hell."

Ezekiel 18:4—"Behold, all souls are Mine; as the soul of the father, so also the soul of the son is Mine: the soul that sinneth, it shall die."

Psalm 37:20—"But the wicked shall perish, and the enemies of the Lord shall be as the fat of lambs: they shall consume; into smoke shall they consume away."

Nahum 1:10—"For while they be folden together as thorns, and while they are drunken as drunkards, they shall be devoured as stubble fully dry."

The fire is called everlasting fire; and its effects are eternal.

Matthew 25:41—"Then shall he say also unto them on the left hand, Depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels."

Jude 7—"Even as Sodom and Gomorrha, and the cities about them in like manner, giving themselves over to fornication, and going after strange flesh, are set forth for an example, suffering the vengeance of eternal fire."

2 Peter 2:6—"And turning the cities of Sodom and Gomorrha into ashes condemned them with an overthrow, making them an ensample unto those that after should live ungodly." (They were reduced to ashes, as an example to the ungodly; and both cities are not burning now. The fire had everlasting results; and the cities no longer exist.)

The word, "forever," often refers to a limited period; for instance, a man's lifetime (Ex. 21:5-6, Jonah 1:17, 2:6). The phrase, "forever and ever" is used of the land of Idumea which is not burning now (Isa. 34:10).

The fire is said to be "unquenchable"; that is, it cannot be quenched or put out until its work is finished.

Matthew 3:11-12—"I indeed baptize you with water unto repentance: but He that cometh after me is mightier than I, whose shoes I am not worthy to bear: He shall baptize you with the Holy Ghost, and with fire: Whose fan is in His hand, and He will thoroughly purge His floor, and gather His wheat into the garner; but He will burn up the chaff with unquenchable fire."

Because of the disobedience of Israel, God threatened to kindle a fire in the gates of Jerusalem that "shall not be quenched" (Jeremiah 17:19-27). This fire was kindled when the Babylonians captured Jerusalem in the 6th century B.C. (2 Chronicles 36:14-19). Just as God had earlier predicted, this was unquenchable fire—for no one

could put it out and it did its work. But it is not burning in the gates of Jerusalem now. (Also see Prov. 10:25, Mal. 4:1-3, Ps. 68:2, Obadiah 16.)

When will the wicked be cast into hellfire?

The Bible clearly reveals that the fires of hell will not burn until "the end of the world."

Matthew 13:30—"Let both grow together until the harvest: and in the time of harvest I will say to the reapers, Gather ye together first the tares, and bind them in bundles to burn them: but gather the wheat into My barn."

John 15:6—"If a man abide not in Me, he is cast forth as a branch, and is withered; and men gather them, and cast [them] into the fire, and they are burned."

The "harvest" is the end of the world; therefore the wicked are not being punished now (Matt. 13:39).

2 Peter 2:4, 9—"For if God spared not the angels that sinned, but cast them down to hell, and delivered them into chains of darkness, to be reserved unto judgment . . The Lord knoweth how to deliver the godly out of temptations, and to reserve the unjust unto the day of judgment to be punished."

Matthew 16:27—"For the Son of man shall come in the glory of His Father with His angels; and then He shall reward every man according to his works." (Notice the word "then" in this verse.)

The fruit of man's life will not be noticed till the end of the world (Jeremiah 32:19).

Where will hell be located?

Proverbs 11:31—"Behold, the righteous shall be recompensed in the earth: much more the wicked and the sinner."

2 Peter 3:7, 10, 12—"But the heavens and the earth, which are now, by the same word are kept in store, reserved unto fire against the day of judgment and perdition of ungodly men . . But the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up . . Looking for and hasting unto the coming of the day of God, wherein the heavens being on fire shall be dissolved, and the elements shall melt with fervent heat?"

The wicked will be brought forth in the second resurrection and cast into the lake of fire" (Job 21:21).

This hellfire (which will not occur until the end of world, as we now know it) will burn on the surface of the earth while the righteous are gathered safely inside the Holy City, New Jerusalem.

Revelation 20:9—"And they went up on the breadth of the earth, and compassed the camp of the saints about, and the beloved city: and fire came down from God out of heaven, and devoured them." (Also see Isa. 34: 8-9, Nahum 1:5-9, Mal. 4:1-3.)

When this hellfire has done its work, it will go out. All the wicked will have mercifully perished.

Out of the millions who have lived on Planet Earth, only God's faithful ones will remain alive.

Malachi 4:1-3—"For, behold, the day cometh, that shall burn as an oven; and all the proud, yea, and all that do wickedly, shall be stubble: and the day that cometh shall burn them up, saith the Lord of hosts, that it shall leave them neither root nor branch. But unto you that fear My name shall the Sun of righteousness arise with healing in His wings; and ye shall go forth, and grow up as calves of the stall. And ye shall tread down the wicked; for they shall be ashes under the soles of your feet in the day that I shall do this, saith the Lord of hosts."

The above passage reveals that nothing of the wicked will be left when the fire ends and the redeemed go forth to "inherit the earth" (Matt. 5:5, Ps. 37:11). The wicked will be as "stubble" that has been burned up, as "ashes." Nothing burns as quickly as stubble, and ashes are past the burning stage.

Revelation 5:13—"And every creature which is in heaven, and on the earth, and under the earth, and such as are in the sea, and all that are in them, heard I saying, Blessing, and honour, and glory, and power, be unto Him that sitteth upon the throne, and unto the Lamb for ever and ever."

Psalm 37:10-11—"For yet a little while, and the wicked shall not be: yea, thou shalt diligently consider his place, and it shall not be. But the meek shall inherit the earth; and shall delight themselves in the abundance of peace."

Even the "place" of the wicked (the lake of fire) will not be. There will not be a coal to warm at (Isa. 47:14). There will be no pain anywhere (Rev. 21:1-4). There will be no more curse (Rev. 22:3).

Four words are translated "hell" in the Bible.

The first is a the Hebrew word, *"sheol."* Sometimes it is translated "hell" (31 times), the "grave" (31 times), or "the pit" (3 times). All these words mean the grave. Sheol is a place of rest, silence, secrecy, darkness, sleep, and corruption. It is the grave.

Both the righteous and wicked go to sheol.

Jacob, a man of God, went to sheol (Gen. 37:35). Wicked men went there also (Num. 16:30, 33). All men go there (Ps. 89:48).

Sheol is the same as the Greek word, "hades," in the New Testament. Compare Ps. 16:10 (sheol) with Acts 2:27 (hades).

Sometimes hades is translated "hell"; but, like sheol, it never means the place of punishment. Here is every text where hades is used in the New Testament: Matt. 11:23; 16:18; Luke 10:15; 16:23; Acts 2:27, 31; 1 Cor. 15:55; Rev. 1:18; 6:8; Rev. 20:13-14. Hades is obviously not a place of torment, but only the grave.

The third word, *"gehenna,"* is a Greek word used in the New Testament. It was the name of the garbage dump on the south side of Jerusalem, where the refuse was quickly burned up and turned to ashes. It came to symbolize annihilation, destruction. It is not a place where the wicked are now being punished or where they will be kept alive in endless torments (Joshua 15:8; 18:16; 2 Kings 23:10; 2 Chronicles 28:3; 33:6; Jeremiah 7:31-32; 19:2, 6; 32:35). Here are examples of how gehenna is used in the New Testament: Matthew 5:22, 29-30; 10:28; 18:9; 23:15, 33; Mark 9:43, 45, 47; Luke 12:5; James 3:6. It is clear that the use of this word refers to the lake of fire, where the wicked will be destroyed.

The fourth word, *"tartaroo,"* is a Greek word found only once (2 Peter 2:4); and, according to Greek lexicons, it refers to the darkness that surrounds the material universe. 2 Peter 2:4 refers to how the evil angels live amid darkness (tartaroo) until they are finally destroyed in hellfire.

The meaning of the parable of the rich man in hell.

Read Luke 16:19-31. It comes at the end of a series of parables (Luke 13-16) and cannot be a literal description of the condition of man after death. "Abraham's bosom" is figurative, not literal. "One drop of water" would not be enough to cool a man in hell. Heaven and hell would not be so near that people could talk back and forth. If there was an eternal hell near them, the redeemed could never, never be happy! In this parable, Jesus taught that no man was valued for his possessions. In this life, we settle our eternal destiny. After death a great gulf is fixed. "They have Moses and the prophets" (Luke 16:29-31). This shows that the writings of the Old Testament give the true teaching on the state of man after death; for the brothers of the rich man were referred to them. They teach the sleep of the

dead.

The Bible teaches that sinners are not judged until the day of judgment

2 Peter 2:9—"The Lord knoweth how to deliver the godly out of temptations, and to reserve the unjust unto the day of judgment to be punished."

Revelation 20:15—"And whosoever was not found written in the book of life was cast into the lake of fire."

The righteous are not rewarded until the resurrection at the second coming of Christ.

John 5:28—"Marvel not at this: for the hour is coming, in the which all that are in the graves shall hear His voice" (John 6:39-40, 14:1-3, 2 Tim. 4:6-8, 1 Thess. 4:13-18, 1 Cor. 15:51-54).

The dead are not conscious.

Psalm 146:3-4—"Put not your trust in princes, nor in the son of man, in whom there is no help. His breath goeth forth, he returneth to his earth; in that very day his thoughts perish."

Ecclesiastes 9:5, 6, 10—"For the living know that they shall die: but the dead know not any thing, neither have they any more a reward; for the memory of them is forgotten. Also their love, and their hatred, and their envy, is now perished; neither have they any more a portion for ever in any thing that is done under the sun . . Whatsoever thy hand findeth to do, do it with thy might; for there is no work, nor device, nor knowledge, nor wisdom, in the grave, whither thou goest."

The thief on the cross.

Read Luke 23:39-45—Remember that the comma is not inspired. Put it where it belongs, after "today," and then this text is in harmony with all the rest of Scripture. See the use of the word, "today" in Heb. 3:7, 15; 4:7; 5:5; Zech. 9:12.

Jesus did not go to paradise that day. Where is "paradise"? The tree of life is in the midst of paradise (Rev. 2:7); it is by the throne of God (Rev. 22:1-2). Paradise is therefore the third heaven, where God is (2 Cor. 12:1-4).

Three days later, Jesus said He had not yet ascended to the Father (John 20:17). The thief did not die that day (Friday). The day in the Bible ends at sunset (Lev. 23:32); and the two thieves were still alive when the soldiers came to break their bones (John 19:31-37).

SPIRITUALISM:

BEWARE OF WITCHCRAFT AND SEANCES

The basic doctrine of spiritualism is that the dead are now alive; and that they communicate with the living. But the Bible says this is impossible.

Ecclesiastes 9:6—"Also their love, and their hatred, and their envy, is now perished; neither have they any more a portion for ever in any thing that is done under the sun."

Job 7:9-10—"As the cloud is consumed and vanisheth away: so he that goeth down to the grave shall come up no more. He shall return no more to his house, neither shall his place know him any more."

God's Word condemns spiritualism as sinful and dangerous. We are not to have any contact with any form of witchcraft.

Leviticus 19:31—"Regard not them that have familiar spirits, neither seek after wizards, to be defiled by them: I am the Lord your God."

Deuteronomy 13:1-5—"If there arise among you a prophet, or a dreamer of dreams, and giveth thee a sign or a wonder, and the sign or the wonder come to pass, whereof he spake unto thee, saying, Let us go after other gods, which thou hast not known, and let us serve them; Thou shalt not hearken unto the words of that prophet, or that dreamer of dreams: for the Lord your God proveth you, to know whether ye love the Lord your God with all your heart and with all your soul. Ye shall walk after the Lord your God, and fear Him, and keep His commandments, and obey His voice, and ye shall serve Him, and cleave unto Him. And that prophet, or that dreamer of dreams, shall be put to death; because he hath spoken to turn you away from the Lord your God, which brought you out of the land of Egypt, and redeemed you out of the house of bondage, to thrust thee out of the way which the Lord thy God commanded thee to walk in. So shalt thou put the evil away from the midst of thee."

Deuteronomy 18:9-13—"When thou art come into the land which the Lord thy God giveth thee, thou shalt not learn to do after the abominations of those nations. There shall not be found among you any one that maketh his son or his daughter to pass through the fire, or that useth divination, or an observer of times, or an enchanter, or a witch, or a charmer, or a consulter with familiar spirits, or a wizard, or a necromancer. For all that do these things are an abomination unto the Lord: and because of these abominations the Lord thy God doth drive them out from before thee. Thou shalt be perfect with the Lord thy God."

Isaiah 8:19—"And when they shall say unto you, Seek unto them that have familiar spirits, and unto wizards that peep, and that mutter: should not a people seek unto their God? for the living to the dead?"

Satan and his fallen angels are the spirits of spiritualism which masquerade as the spirits of the dead! We must not have anything to do with this!

Revelation 12:7-9 —"And there was war in heaven: Michael and his angels fought against the dragon; and the dragon fought and his angels, and prevailed not; neither was their place found any more in heaven. And the great dragon was cast out, that old serpent, called the Devil, and Satan, which deceiveth the whole world: he was cast out into the earth, and his angels were cast out with him."

God "spared not the angels that sinned" (2 Peter 2:4); He is reserving them "under darkness unto the judgment of the great day" (Jude 6).

1 Samuel 28 tells the story of how King Saul visited a witch in a cave near Endor in order to obtain information from the dead. An evil spirit, masquerading as a dead man, then spoke to Saul.

1 Chronicles 10:13-14—"So Saul died for his transgression which he committed against the Lord, even against the word of the Lord, which he kept not, and also for asking counsel of one that had a familiar spirit, to inquire of it; and inquired not of the Lord: therefore He slew him."

"Familiar spirits" are demons which pretend to be departed loved ones, relatives, or people you know about.

Satan's first lie was told through a medium (the serpent).

Genesis 3:1-6—"Now the serpent was more subtil than any beast of the field which the Lord God had made. And he said unto the woman, Yea, hath God said, Ye shall not eat of every tree of the garden? And the woman said unto the serpent, We may eat of the fruit of the trees of the garden: But of the fruit of the tree which is in the midst of the garden, God hath said, Ye shall not eat of it, neither shall ye touch it, lest ye die. And the serpent said unto the woman, Ye shall not surely die: For God doth know that in the day ye eat thereof, then your eyes shall be opened, and ye shall be as gods, knowing good and evil. And when the woman saw that the tree was good for food, and that it was pleasant to the eyes, and a tree to be

desired to make one wise, she took of the fruit thereof, and did eat, and gave also unto her husband with her; and he did eat."

Speaking through his medium, Satan denied the Word of God and declared that those who disobey God (even though they die) will know more than they knew before. Spiritualism continues to be based on this false idea that we can learn great truth from dead spirits.

These evil spirits are called demons or devils in the Bible. They were opposed to the work of Christ on earth.

Mark 5:8-9—"For He said unto him, Come out of the man, thou unclean spirit. And He asked him, What is thy name? And he answered, saying, My name is Legion: for we are many."

Matthew 8:28-29—"And when He [Christ] was come to the other side into the country of the Gergesenes, there met Him two possessed with devils, coming out of the tombs, exceeding fierce, so that no man might pass by that way. And, behold, they cried out, saying, What have we to do with Thee, Jesus, Thou Son of God? art Thou come hither to torment us before the time?"

Two mediums are mentioned in the book of Acts: Elymas, the sorcerer (Acts 13:8), and the damsel at Philippi (Acts 16:16-18).

There is to be a great revival of spiritualism, in various forms, in the last days.

1 Timothy 4:1—"Now the Spirit speaketh expressly, that in the latter times some shall depart from the faith, giving heed to seducing spirits, and doctrines of devils."

Matthew 24:23-24—"Then if any man shall say unto you, Lo, here is Christ, or there; believe it not. For there shall arise false Christs, and false prophets, and shall shew great signs and wonders; insomuch that, if it were possible, they shall deceive the very elect."

Revelation 13:13—"And he doeth great wonders, so that he maketh fire come down from heaven on the earth in the sight of men."

2 Thessalonians 2:9-10—"Even him, whose coming is after the working of Satan with all power and signs and lying wonders, and with all deceivableness of unrighteousness in them that perish; because they received not the love of the truth, that they might be saved."

Spiritualism is one of the evil "works of the flesh," which we should have nothing to do with."

Galatians 5:19-21—"Now the works of the flesh are manifest, which are these; adultery, fornication, uncleanness, lasciviousness, idolatry, witchcraft, hatred, variance, emulations, wrath, strife, seditions, heresies, envyings, murders, drunkenness, revellings, and such like: of the which I tell you before, as I have also told you in time past, that they which do such things shall not inherit the kingdom of God."

Ephesians 6:11-12—"Put on the whole armour of God, that ye may be able to stand against the wiles of the devil. For we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places."

PRECIOUS BIBLE PROMISES

"The Lord God is a sun and shield: the Lord will give grace and glory: no good thing will He withhold from them that walk uprightly." *—Psalm 84:11*

"Be perfect, be of good comfort, be of one mind, live in peace; and the God of love and peace shall be with you." *—2 Corinthians 13:11*

"The Lord preserveth the simple: I was brought low, and He helped me." *—Psalm 116:6*

"But know that the Lord hath set apart him that is godly for Himself: the Lord will hear when I call unto Him." *—Psalm 4:3*

"I will look unto the Lord; I will wait for the God of my salvation; my God will hear me." *—Micah 7:7*

"My grace is sufficient for thee: for My strength is made perfect in weakness." *—2 Corinthians 12:9*

"The Lord shall deliver me from every evil work, and will preserve me unto His heavenly kingdom." *—2 Timothy 4:18*

"They cry unto the Lord in their trouble, and He saveth them out of their distresses." *—Psalm 107:19*

"O taste and see that the Lord is Good: blessed is the man who trusteth Him." *—Ps 34:35*

"Fear thou not, for I am with thee." *—Isaiah 41:10*

"The joy of the Lord is your strength." *—Nehemiah 8:10*

"Unto Him that is able to keep you from falling, and to present you faultless before the presence of His glory with exceeding joy." *—Jude 24*

"God is not ashamed to be called their God: for He hath prepared for them a city." *—Hebrews 11:16*

"Whoso putteth his trust in the Lord shall be safe." *—Proverbs 29:25*

"Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love Him." *—1 Corinthians 2:9*

"The meek shall inherit the earth, and shall delight themselves in the abundance of peace." *—Psalm 37:11*

"Rest in the Lord, and wait patiently for Him: fret not thyself because of him who prospereth in his way . . fret not thyself to do evil." *—Psalm 37:7-8*

"My God shall supply all your need according to His riches in glory by Christ Jesus." *—Philippians 4:19*

"In all thy ways acknowledge Him, and He shall direct thy paths." *—Proverbs 3:6*

"Take heed, brethren, lest there be any of you an evil heart of unbelief, in departing from the living God." *—Hebrews 3:12*

"Blessed are they that do His commandments, that they may have right to the tree of life, and may enter in through the gates into the holy city." *—Revelation 22:14*

"Thou wilt keep him in perfect peace, whose mind is stayed on Thee: because He trusteth in Thee." *—Isaiah 26:3*

"The Lord is nigh unto them that are of a broken heart; and saveth such as be of a contrite spirit." *—Psalm 34:18*

"Blessed are the meek: for they shall inherit the earth." *—Matthew 5:5*

"But whoso hearkeneth unto Me shall dwell safely, and shall be quiet from fear of evil." *—Proverbs 1:33*

"Because he hath set his love upon Me, therefore will I deliver him." —*Psalm 91:14*

"In that day . . the meek shall increase their joy in the Lord." —*Isaiah 29:18-19*

"To this man will I look, even to him that is poor and of a contrite spirit, and trembleth at My Word." —*Isaiah 66:2*

"And whatsoever we ask, we receive of Him, because we keep His commandments, and do those things that are pleasing in His sight." —*1 John 3:22*

"A little that a righteous man hath is better than the riches of many wicked." —*Psalm 37:16*

"In God will I praise His Word . . in God have I put my trust; I will not fear what man can do unto me." —*Psalm 56:10-11*

"God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be anymore pain: for the former things are past away." —*Revelation 21:4*

"Yea, thou shalt lie down, and thy sleep shall be sweet. Be not afraid of sudden fear." —*Isaiah 41:10*

"This God is our God for ever and ever; He will be our guide even unto death." —*Psalm 48:14*

THE MORAL STANDARD GOD GAVE TO MANKIND

And now the thunders ceased; the trumpet was no longer heard; the earth was still. There was a period of solemn silence, and then the voice of God was heard. Speaking out of the thick darkness that enshrouded Him, as He stood upon the mount, surrounded by a retinue of angels, the Lord made known His law. Moses, describing the scene, says: "The Lord came from Sinai, and rose up from Seir unto them; He shined forth from Mount Paran, and He came with ten thousands of saints: from His right hand went a fiery law for them. Yea, He loved the people; all His saints are in Thy hand: and they sat down at Thy feet; every one shall receive of Thy words." *Deuteronomy 33:2, 3.*

Jehovah revealed Himself, not alone in the awful majesty of the judge and lawgiver, but as the compassionate guardian of His people: "I am the Lord thy God, which have brought thee out of the land of Egypt, out of the house of bondage." He whom they had already known as their Guide and Deliverer, who had brought them forth from Egypt, making a way for them through the sea, and overthrowing Pharaoh and his hosts, who had thus shown Himself to be above all the gods of Egypt—He it was who now spoke His law.

The law was not spoken at this time exclusively for the benefit of the Hebrews. God honored them by making them the guardians and keepers of His law, but it was to be held as a sacred trust for the whole world. The precepts of the Decalogue are adapted to all mankind, and they were given for the instruction and government of all. Ten precepts, brief, comprehensive, and authoritative, cover the duty of man to God and to his fellow man; and all based upon the great fundamental principle of love. "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." *Luke 10:27.* See also *Deuteronomy 6:4, 5; Leviticus 19:18.* In the Ten Commandments these principles are carried out in detail, and made applicable to the condition and circumstances of man.

"Thou shalt have no other gods before Me."

Jehovah, the eternal, self-existent, uncreated One, Himself the Source and Sustainer of all, is alone entitled to supreme reverence and worship. Man is forbidden to give to any other object the first place in his affections or his service. Whatever we cherish that tends to lessen our love for God or to interfere with the service due Him, of that do we make a god.

"Thou shalt not make unto thee any graven image,
or any likeness of anything that is in heaven above,
or that is in the earth beneath,
or that is in the water under the earth:
thou shalt not bow down thyself to them, nor serve them."

The second commandment forbids the worship of the true God by images or similitudes. Many heathen nations claimed that their images were mere figures or symbols by which the Deity was worshiped, but God has declared such worship to be sin. The attempt to represent the Eternal One by material objects would lower man's conception of God. The mind, turned away from the infinite perfection of Jehovah, would be attracted to the creature rather than to the Creator. And as his conceptions of God were lowered, so would man become degraded.

"I the Lord thy God am a jealous God."

The close and sacred relation of God to His people is represented under the figure of marriage. Idolatry being spiritual adultery, the displeasure of God against it is fitly called jealousy.

"Visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate Me."

It is inevitable that children should suffer from the consequences of parental wrongdoing, but they are not punished for the parents' guilt, except as they participate in their sins. It is usually the case, however, that children walk in the steps of their parents. By inheritance and example the sons become partakers of the father's sin. Wrong tendencies, perverted appetites, and debased morals, as well as physical disease and degeneracy, are transmitted as a legacy from father to son, to the third and fourth generation. This fearful truth should have a solemn power to restrain men from following a course of sin.

"Showing mercy unto thousands of them that love Me, and keep My commandments."

In prohibiting the worship of false gods, the second commandment by implication enjoins the worship of the true God. And to those who are faithful in His service, mercy is promised, not merely to the third and fourth generation as is the wrath threatened against those who hate

Him, but to thousands of generations.

"Thou shalt not take the name of the Lord thy God in vain:
for the Lord will not hold him guiltless that taketh His name in vain."

This commandment not only prohibits false oaths and common swearing, but it forbids us to use the name of God in a light or careless manner, without regard to its awful significance. By the thoughtless mention of God in common conversation, by appeals to Him in trivial matters, and by the frequent and thoughtless repetition of His name, we dishonor Him. "Holy and reverend is His name." *Psalm 111:9.* All should meditate upon His majesty, His purity and holiness, that the heart may be impressed with a sense of His exalted character; and His holy name should be uttered with reverence and solemnity.

"Remember the Sabbath day, to keep it holy.
Six days shalt thou labor, and do all thy work:
but the seventh day is the Sabbath of the Lord thy God:
in it thou shalt not do any work,
thou, nor thy son, nor thy daughter,
thy manservant, nor thy maidservant,
nor thy cattle, nor thy stranger that is within thy gates:
for in six days the Lord made heaven and earth,
the sea, and all that in them is,
and rested the seventh day:
wherefore the Lord blessed the Sabbath day,
and hallowed it."

The Sabbath is not introduced as a new institution but as having been founded at creation. It is to be remembered and observed as the memorial of the Creator's work. Pointing to God as the Maker of the heavens and the earth, it distinguishes the true God from all false gods. All who keep the seventh day signify by this act that they are worshipers of Jehovah. Thus the Sabbath is the sign of man's allegiance to God as long as there are any upon the earth to serve Him. The fourth commandment is the only one of all the ten in which are found both the name and the title of the Lawgiver. It is the only one that shows by whose authority the law is given. Thus it contains the seal of God, affixed to His law as evidence of its authenticity and binding force.

God has given me six days wherein to labor, and He requires that their own work be done in the six working days. Acts of necessity and mercy are permitted on the Sabbath, the sick and suffering are at all times to be cared for; but unnecessary labor is to be strictly avoided. "Turn away thy foot from the Sabbath, from doing thy pleasure on My holy day; and call the Sabbath a delight, the holy of the Lord, honorable; and . . honor Him, not doing thine own ways, nor finding thine own pleasure." *Isaiah 58:13.* Nor does the prohibition end here. "Nor speaking thine own words," says the prophet. Those who discuss business matters or lay plans on the Sabbath are regarded by God as though engaged in the actual transaction of business. To keep the Sabbath holy, we should not even allow our minds to dwell upon things of a worldly character. And the commandment includes all within our gates. The inmates of the house are to lay aside their worldly business during the sacred hours. All should unite to honor God by willing service upon His holy day.

"Honor thy father and thy mother:
that thy days may be long
upon the land which the Lord thy God giveth thee."

Parents are entitled to a degree of love and respect which is due to no other person. God Himself, who has placed upon them a responsibility for the souls committed to their charge, has ordained that during the earlier years of life, parents shall stand in the place of God to their children. And he who rejects the rightful authority of his parents is rejecting the authority of God. The fifth commandment requires children not only to yield respect, submission, and obedience to their parents, but also to give them love and tenderness, to lighten their cares, to guard their reputation, and to succor and comfort them in old age. It also enjoins respect for ministers and rulers and for all others to whom God has delegated authority.

This, says the apostle, "is the first commandment with promise." *Ephesians 6:2.* To Israel, expecting soon to enter Canaan, it was a pledge to the obedient, of long life in that good land; but it has a wider meaning, including all the Israel of God, and promising eternal life upon the earth when it shall be freed from the curse of sin.

"Thou shalt not kill."

All acts of injustice that tend to shorten life; the spirit of hatred and revenge, or the indulgence of any passion that leads to injurious acts toward others, or causes us even to wish them harm (for "whosoever hateth his brother is a murderer"); a selfish neglect of caring for the needy or suffering; all self-indulgence or unnecessary deprivation or excessive labor that tends to injure health—all these are, to a greater or less degree, violations of the sixth commandment.

"Thou shalt not commit adultery."

This commandment forbids not only acts of impurity, but sensual thoughts and desires, or any practice that tends to excite them. Purity is demanded not only in the outward life but in the secret intents and emotions of the heart. Christ, who taught the far-reaching obligation of the law of God, declared the evil thought or look to be as truly sin as is the unlawful deed.

"Thou shalt not steal."

Both public and private sins are included in this prohibition. The eighth commandment condemns manstealing and slave dealing, and forbids wars of conquest. It condemns theft and robbery. It demands strict integrity in the minutest details of the affairs of life. It forbids overreaching in trade, and requires the payment of just debts or wages. It declares that every attempt to advantage oneself by the ignorance, weakness, or misfortune of another is registered as fraud in the books of heaven.

"Thou shalt not bear false witness against thy neighbor."

False speaking in any matter, every attempt or purpose to deceive our neighbor, is here included. An intention to deceive is what constitutes falsehood. By a glance of the eye, a motion of the hand, an expression of the countenance, a falsehood may be told as effectually as

by words. All intentional overstatement, every hint or insinuation calculated to convey an erroneous or exaggerated impression, even the statement of facts in such a manner as to mislead, is falsehood. This precept forbids every effort to injure our neighbor's reputation by misrepresentation or evil surmising, by slander or tale bearing. Even the intentional suppression of truth, by which injury may result to others, is a violation of the ninth commandment.

"Thou shalt not covet thy neighbor's house,
thou shalt not covet thy neighbor's wife,
nor his manservant, nor his maidservant,
nor his ox, nor his ass,
nor anything that is thy neighbor's."

The tenth commandment strikes at the very root of all sins, prohibiting the selfish desire, from which springs the sinful act. He who in obedience to God's law refrains from indulging even a sinful desire for that which belongs to another will not be guilty of an act of wrong toward his fellow creatures . .

He would also show to all men the sacredness, the importance, and the permanence of His law.

— Patriarchs and Prophets, 304-309

PATHWAY TO BETTER HEALTH

Education in health principles was never more needed than now. Notwithstanding the wonderful progress in so many lines relating to the comforts and conveniences of life, even to sanitary matters and to the treatment of disease, the decline in physical vigor and power of endurance is alarming. It demands the attention of all who have at heart the well-being of their fellow men.

Our artificial civilization is encouraging evils destructive of sound principles. Custom and fashion are at war with nature. The practices they enjoin, and the indulgences they foster, are steadily lessening both physical and mental strength, and bringing upon the race an intolerable burden. Intemperance and crime, disease and wretchedness, are everywhere.

Many transgress the laws of health through ignorance, and they need instruction. But the greater number know better than they do. They need to be impressed with the importance of making their knowledge a guide of life. The physician has many opportunities both of imparting a knowledge of health principles and of showing the importance of putting them in practice. By right instruction he can do much to correct evils that are working untold harm.

The Use of Drugs

A practice that is laying the foundation of a vast amount of disease and of even more serious evils is the free use of poisonous drugs. When attacked by disease, many will not take the trouble to search out the cause of their illness. Their chief anxiety is to rid themselves of pain and inconvenience. So they resort to patent nostrums, of whose real properties they know little, or they apply to a physician for some remedy to counteract the result of their misdoing, but with no thought of making a change in their unhealthful habits. If immediate benefit is not realized, another medicine is tried, and then another. Thus the evil continues.

People need to be taught that drugs do not cure disease. It is true that they sometimes afford present relief, and the patient appears to recover as the result of their use; this is because nature has sufficient vital force to expel the poison and to correct the conditions that caused the disease. Health is recovered in spite of the drug. But in most cases the drug only changes the form and location of the disease. Often the effect of the poison seems to be overcome for a time, but the results remain in the system and work great harm at some later period

By the use of poisonous drugs, many bring upon themselves lifelong illness, and many lives are lost that might be saved by the use of natural methods of healing. The poisons contained in many so-called remedies create habits and appetites that mean ruin to both soul and body. Many of the popular nostrums called patent medicines, and even some of the drugs dispensed by physicians, act a part in laying the foundation of the liquor habit, the opium habit, the morphine habit, that are so terrible a curse to society.

Restorative Power in Nature

The only hope of better things is in the education of the people in right principles. Let physicians teach the people that restorative power is not in drugs, but in nature. Disease is an effort of nature to free the system from conditions that result from a violation of the laws of health. In case of sickness, the cause should be ascertained. Unhealthful conditions should be changed, wrong habits corrected. Then nature is to be assisted in her effort to expel impurities and to re-establish right conditions in the system.

Natural Remedies

Pure air, sunlight, abstemiousness, rest, exercise, proper diet, the use of water, trust in divine power—these are the true remedies. Every person should have a knowledge of nature's remedial agencies and how to apply them. It is essential both to understand the principles involved in the treatment of the sick and to have a practical training that will enable one rightly to use this knowledge.

The use of natural remedies requires an amount of care and effort that many are not willing to give. Nature's process of healing and upbuilding is gradual, and to the impatient it seems slow. The surrender of hurtful indulgences requires sacrifice. But in the end it will be found that nature, untrammeled, does her work wisely and well. Those who persevere in obedience to her laws will reap the reward in health of body and health of mind.

Preservation of Health

Too little attention is generally given to the preservation of health. It is far better to prevent disease than to know how to treat it when contracted. It is the duty of every person, for his own sake, and for the sake of humanity, to inform himself in regard to the laws of life and conscientiously to obey them. All need to become acquainted with that most wonderful of all organisms, the human body. They should understand the functions of the various organs and the dependence of one upon another for the healthy action of all. They should study the influence of the mind upon the body, and of the body upon the

mind, and the laws by which they are governed.

Training for Life's Conflict

We cannot be too often reminded that health does not depend on chance. It is a result of obedience to law. This is recognized by the contestants in athletic games and trials of strength. These men make the most careful preparation. They submit to thorough training and strict discipline. Every physical habit is carefully regulated. They know that neglect, excess, or carelessness, which weakens or cripples any organ or function of the body, would ensure defeat.

How much more important is such carefulness to ensure success in the conflict of life. It is not mimic battles in which we are engaged. We are waging a warfare upon which hang eternal results. We have unseen enemies to meet. Evil angels are striving for the dominion of every human being. Whatever injures the health, not only lessens physical vigor, but tends to weaken the mental and moral powers. Indulgence in any unhealthful practice makes it more difficult for one to discriminate between right and wrong, and hence more difficult to resist evil. It increases the danger of failure and defeat.

"They which run in a race run all, but one receiveth the prize." *1 Corinthians 9:24.* In the warfare in which we are engaged, all may win who will discipline themselves by obedience to right principles. The practice of these principles in the details of life is too often looked upon as unimportant—a matter too trivial to demand attention. But in view of the issues at stake, nothing with which we have to do is small. Every act casts its weight into the scale that determines life's victory or defeat. The Scriptures bids us, "So run, that ye may obtain." *Verse 24.*

With our first parents, intemperate desire resulted in the loss of Eden. Temperance in all things has more to do with our restoration to Eden than men realize.

Pointing to the self-denial practiced by the contestants in the ancient Greek games, the apostle Paul writes: "Every man that striveth for the mastery is temperate in all things. Now they do it to obtain a corruptible crown; but we an incorruptible. I therefore so run, not as uncertainly; so fight I, not as one that beateth the air: but I keep under my body, and bring it into subjection: lest that by any means, when I have preached to others, I myself should be a castaway." *Verses 25-27.*

Basis of Reform

The progress of reform depends upon a clear recognition of fundamental truth. While, on the one hand, danger lurks in a narrow philosophy and a hard, cold orthodoxy, on the other hand there is great danger in a careless liberalism. The foundation of all enduring reform is the law of God. We are to present in clear, distinct lines the need of obeying this law. Its principles must be kept before the people. They are as everlasting and inexorable as God Himself.

One of the most deplorable effects of the original apostasy was the loss of man's power of self-control. Only as this power is regained can there be real progress.

The body is the only medium through which the mind and the soul are developed for the upbuilding of character. Hence it is that the adversary of souls directs his temptations to the enfeebling and degrading of the physical powers. His success here means the surrender to evil of the whole being. The tendencies of our physical nature, unless under the dominion of a higher power, will surely work ruin and death.

The body is to be brought into subjection. The higher powers of the being are to rule. The passions are to be controlled by the will, which is itself to be under the control of God. The kingly power of reason, sanctified by divine grace, is to bear sway in our lives.

The requirements of God must be brought home to the conscience. Men and women must be awakened to the duty of self-mastery, the need of purity, freedom from every depraving appetite and defiling habit. They need to be impressed with the fact that all their powers of mind and body are the gift of God, and are to be preserved in the best possible condition for His service.

In that ancient ritual which was the gospel in symbol, no blemished offering could be brought to God's altar. The sacrifice that was to represent Christ must be spotless. The Word of God points to this as an illustration of what His children are to be—"a living sacrifice," "holy and without blemish," "well-pleasing to God." *Romans 12:1, R.V., margin; Ephesians 5:27.*

Need of Divine Power

Apart from divine power, no genuine reform can be effected. Human barriers against natural and cultivated tendencies are but as the sandbank against the torrent. Not until the life of Christ becomes a vitalizing power in our lives can we resist the temptations that assail us from within and from without.

Christ came to this world and lived the law of God, that man might have perfect mastery over the natural inclinations which corrupt the soul. The Physician of soul and body, He gives victory over warring lusts. He has provided every facility, that man may possess completeness of character.

When one surrenders to Christ, the mind is brought under the control of the law; but it is the royal law which proclaims liberty to every captive. By becoming one with Christ, man is made free. Subjection to the will of Christ means restoration to perfect manhood.

Obedience to God is liberty from the thralldom of sin, deliverance from human passion and impulse. Man may stand conqueror of himself, conqueror of his own inclinations, conqueror of principalities and powers, and of "the rulers of the darkness of this world," and of "spiritual wickedness in high places." *Ephesians 6:12.*

Teaching in the Home

In no place is such instruction as this more needed, and nowhere will it be productive of greater good, than in the home. Parents have to do with the very foundation of habit and character. The reformatory movement must begin in presenting to them the principles of the law of God as bearing upon both physical and moral health. Show that obedience to God's Word is our only safeguard against the evils that are sweeping the world to destruction. Make plain the responsibility of parents, not only for themselves, but for their children. They are giving to their children an example either of obedience or of transgression. By their example and teaching, the destiny of their households is

decided. The children will be what their parents make them.

If parents could be led to trace the result of their action, and could see how, by their example and teaching, they perpetuate and increase the power of sin or the power of righteousness, a change would certainly be made. Many would turn away from tradition and custom, and accept the divine principles of life . .

The Key to Success

Just to the degree in which the Word of God is received and obeyed will it impress with its potency and touch with its life every spring of action, every phase of character. It will purify every thought, regulate every desire. Those who make God's Word their trust will quit themselves like men and be strong. They will rise above all baser things into an atmosphere free from defilement.

When man is in fellowship with God, that unswerving purpose which preserved Joseph and Daniel amidst the corruption of heathen courts will make his a life of unsullied purity. His robes of character will be spotless. In his life the light of Christ will be undimmed. The bright and morning Star will appear shining steadfastly above him in changeless glory.

Such a life will be an element of strength in the community. It will be a barrier against evil, a safeguard to the tempted, a guiding light to those who, amidst difficulties and discouragements, are seeking the right way.

—The Ministry of Healing, 125-131, 136

TIME ALONE WITH CHRIST

Our Lord Jesus Christ came to this world as the unwearied servant of man's necessity. He "took our infirmities, and bare our sicknesses," that He might minister to every need of humanity. *Matthew 8:17.* The burden of disease and wretchedness and sin He came to remove. It was His mission to bring to men complete restoration; He came to give them health and peace and perfection of character.

Varied were the circumstances and needs of those who besought His aid, and none who came to Him went away unhelped. From Him flowed a stream of healing power; and, in body and mind and soul, men were made whole.

The Saviour's work was not restricted to any time or place. His compassion knew no limit. On so large a scale did He conduct His work of healing and teaching that there was no building in Palestine large enough to receive the multitudes that thronged to Him. On the green hill slopes of Galilee, in the thoroughfares of travel, by the seashore, in the synagogues, and in every other place where the sick could be brought to Him, was to be found His hospital. In every city, every town, every village, through which He passed, He laid His hands upon the afflicted ones and healed them. Wherever there were hearts ready to receive His message, He comforted them with the assurance of their heavenly Father's love. All day He ministered to those who came to Him; in the evening He gave attention to such as through the day must toil to earn a pittance for the support of their families . .

Christ recognized no distinction of nationality or rank or creed. The scribes and Pharisees desired to make a local and a national benefit of the gifts of heaven and to exclude the rest of God's family in the world. But Christ came to break down every wall of partition. He came to show that His gift of mercy and love is as unconfined as the air, the light, or the showers of rain that refresh the earth.

The life of Christ established a religion in which there is no caste, a religion by which Jew and Gentile, free and bond, are linked in a common brotherhood, equal before God. No question of policy influenced His movements. He made no difference between neighbors and strangers, friends and enemies. That which appealed to His heart was a soul thirsting for the waters of life.

He passed by no human being as worthless, but sought to apply the healing remedy to every soul. In whatever company He found Himself He presented a lesson appropriate to the time and the circumstances. Every neglect or insult shown by men to their fellow men only made Him more conscious of their need of His divine-human sympathy. He sought to inspire with hope the roughest and most unpromising, setting before them the assurance that they might become blameless and harmless, attaining such a character as would make them manifest as the children of God.

Often He met those who had drifted under Satan's control, and who had no power to break from his snare. To such a one, discouraged, sick, tempted, fallen, Jesus would speak words of tenderest pity, words that were needed and could be understood. Others He met were fighting a hand-to-hand battle with the adversary of souls. These He encouraged to persevere, assuring them that they would win; for angels of God were on their side and would give them the victory . .

The Saviour's life on earth was a life of communion with nature and with God. In this communion He revealed for us the secret of a life of power . .

In a life wholly devoted to the good of others, the Saviour found it necessary to turn aside from ceaseless activity and contact with human needs, to seek retirement and unbroken communion with His Father. As the throng that had followed Him depart, He goes into the mountains, and there, alone with God, pours out His soul in prayer for these suffering, sinful, needy ones.

When Jesus said to His disciples that the harvest was great and the laborers were few, He did not urge upon them the necessity of ceaseless toil, but bade them, "Pray ye therefore the Lord of the harvest, that He will send forth laborers into His harvest." *Matthew 9:38.* To His toil-worn workers today as really as to His first disciples He speaks these words of compassion, "Come ye yourselves apart . . and rest awhile."

All who are under the training of God need the quiet hour for communion with their own hearts, with nature, and with God. In them is to be revealed a life that is not in harmony with the world, its customs, or its practices; and they need to have a personal experience in obtaining a knowledge of the will of God. We must individually hear Him speaking to the heart. When every other voice is hushed, and in quietness we wait before Him, the silence

of the soul makes more distinct the voice of God. He bids us, "Be still, and know that I am God." *Psalm 46:10.* This is the effectual preparation for all labor for God. Amidst the hurrying throng and the strain of life's intense activities, he who is thus refreshed will be surrounded with an atmosphere of light and peace. He will receive a new endowment of both physical and mental strength. His life will breathe out a fragrance, and will reveal a divine power that will reach men's hearts . .

To the curious crowd pressing about Jesus there was imparted no vital power. But the suffering woman who touched Him in faith received healing. So in spiritual things does the casual contact differ from the touch of faith. To believe in Christ merely as the Saviour of the world can never bring healing to the soul. The faith that is unto salvation is not a mere assent to the truth of the gospel. True faith is that which receives Christ as a personal Saviour. God gave His only begotten Son, that *I*, by believing in Him, "should not perish, but have everlasting life." *John 3:16.* When I come to Christ, according to His word, I am to believe that I receive His saving grace. The life that I now live, I am to "live by the faith of the Son of God, who loved me, and gave Himself for me." *Galatians 2:20.*

Many hold faith as an opinion. Saving faith is a transaction, by which those who receive Christ join themselves in covenant relation with God. A living faith means an increase of vigor, a confiding trust, by which, through the grace of Christ, the soul becomes a conquering power.

Faith is a mightier conqueror than death. If the sick can be led to fix their eyes in faith upon the Mighty Healer, we shall see wonderful results . .

The Jewish elders had commended the centurion to Christ because of the favor he had shown to "our nation." He is worthy, they said, for "He hath built us a synagogue." But the centurion said of himself, "I am not worthy." Yet he did not fear to ask help from Jesus. Not to his own goodness did he trust, but to the Saviour's mercy. His only argument was his great need.

In the same way every human being can come to Christ. "Not by works of righteousness which we have done, but according to His mercy He saved us." *Titus 3:5.* Do you feel that because you are a sinner you cannot hope to receive blessing from God? Remember that Christ came into the world to save sinners. We have nothing to recommend us to God; the plea that we may urge now and ever is our utterly helpless condition, which makes His redeeming power a necessity. Renouncing all self-dependence, we may look to the cross of Calvary and say:

"In my hand no price I bring;
Simply to Thy cross I cling."

"If thou canst believe, all things are possible to him that believeth." *Mark 9:23.* It is faith that connects us with heaven and brings us strength for coping with the powers of darkness. In Christ, God has provided means for subduing every evil trait and resisting every temptation, however strong. But many feel that they lack faith, and therefore they remain away from Christ. Let these souls, in their helpless unworthiness, cast themselves upon the mercy of their compassionate Saviour. Look not to self, but to Christ. He who healed the sick and cast out demons when He walked among men is still the same mighty Redeemer. Then grasp His promises as leaves from the tree of life: "Him that cometh to Me I will in no wise cast out." *John 6:37.* As you come to Him, believe that He accepts you, because He has promised. You can never perish while you do this—never.

"God commendeth His love toward us, in that, while we were yet sinners, Christ died for us." *Romans 5:8.*

And "if God be for us, who can be against us? He that spared not His own Son, but delivered Him up for us all, how shall He not with Him also freely give us all things?" *Romans 8:31-32.*

"I am persuaded, that neither death, nor life, nor angels, nor principalities, nor things present, nor things to come, nor powers, nor height, nor depth, nor any other creation, shall be able to separate us from the love of God, which is in Christ Jesus our Lord." *Verses 38-39, A.R.V., margin* . .

In some instances of healing, Jesus did not at once grant the blessing sought. But, in the case of leprosy, no sooner was the appeal made than it was granted. When we pray for earthly blessings, the answer to our prayer may be delayed or God may give us something other than we ask; but not so when we ask for deliverance from sin. It is His will to cleanse us from sin, to make us His children, and to enable us to live a holy life. Christ "gave Himself for our sins, that He might deliver us from this present evil world, according to the will of God and our Father." *Galatians 1:4.* "And this is the confidence that we have in Him, that, if we ask anything according to His will, He heareth us: and if we know that He hear us, whatsoever we ask, we know that we have the petitions that we desired of Him." *1 John 5:14-15.*

Jesus looked upon the distressed and heart-burdened, those whose hopes were blighted, and who with earthly joys were seeking to quiet the longing of the soul, and He invited all to find rest in Him.

"Ye Shall Find Rest"

Tenderly He bade the toiling people, "Take My yoke upon you, and learn of Me; for I am meek and lowly in heart: and ye shall find rest unto your souls." *Matthew 11:29.*

In these words, Christ was speaking to every human being. Whether they know it or not, all are weary and heavy-laden. All are weighed down with burdens that only Christ can remove. The heaviest burden that we bear is the burden of sin. If we were left to bear this burden, it would crush us. But the Sinless One has taken our place. "The Lord hath laid on Him the iniquity of us all." *Isaiah 53:6.*

He has borne the burden of our guilt. He will take the load from our weary shoulders. He will give us rest. The burden of care and sorrow also He will bear. He invites us to cast all our care upon Him; for He carries us upon His heart.

The Elder Brother of our race is by the eternal throne. He looks upon every soul who is turning his face toward Him as the Saviour. He knows by experience what are the weaknesses of humanity, what are our wants, and where lies the strength of our temptations; for He was "in all points tempted like as we are, yet without sin." *Hebrews 4:15.* He is watching over you, trembling child of God. Are you tempted? He will deliver. Are you weak? He will strengthen. Are you ignorant? He will enlighten. Are you wounded? He will heal. The Lord "telleth the

number of the stars"; and yet "He healeth the broken in heart, and bindeth up their wounds." *Psalm 147:4-3.*

Whatever your anxieties and trials, spread out your case before the Lord. Your spirit will be braced for endurance. The way will be open for you to disentangle yourself from embarrassment and difficulty. The weaker and more helpless you know yourself to be, the stronger will you become in His strength. The heavier your burdens, the more blessed the rest in casting them upon your Burden Bearer.

Circumstances may separate friends; the restless waters of the wide sea may roll between us and them. But no circumstances, no distance, can separate us from the Saviour. Wherever we may be, He is at our right hand, to support, maintain, uphold, and cheer. Greater than the love of a mother for her child is Christ's love for His redeemed. It is our privilege to rest in His love, to say, "I will trust Him; for He gave His life for me."

Human love may change, but Christ's love knows no change. When we cry to Him for help, His hand is stretched out to save.

"The mountains may depart, and the hills be removed; but My loving-kindness shall not depart from thee, neither shall My covenant of peace be removed, saith Jehovah that hath mercy on thee."—*Isaiah 54:10, A.R.V., . .*

The Saviour is bending over the purchase of His blood, saying with inexpressible tenderness and pity, "Wilt thou be made whole?" He bids you arise in health and peace. Do not wait to feel that you are made whole. Believe the Saviour's word. Put your will on the side of Christ. Will to serve Him; and, in acting upon His word, you will receive strength. Whatever may be the evil practice, the master passion which through long indulgence binds both soul and body, Christ is able and longs to deliver . .

Never feel that Christ is far away. He is always near. His loving presence surrounds you. Seek Him as One who desires to be found of you. He desires you not only to touch His garments, but to walk with Him in constant communion.

—The Ministry of Healing, 17-18, 25-26, 51, 58, 62, 65-66, 70-72, 84-85

WORDS OF ENCOURAGEMENT

God's everlasting arm encircles the soul that turns to Him for aid, however feeble that soul may be. The precious things of the hills shall perish, but the soul that lives for God shall abide with Him. "The world passeth away, and the lust thereof: but he that doeth the will of God abideth forever." 1 John 2:17. The city of God will open its golden gates to receive him who learned while on earth to lean on God for guidance and wisdom, for comfort and hope, amid loss and affliction. The songs of the angels will welcome him there, and for him the tree of life shall yield its fruit. "The mountains shall depart, and the hills be removed; but My kindness shall not depart from thee, neither shall the covenant of My peace be removed, saith the Lord that hath mercy on thee." Isaiah 54:10.

If you have given yourself to God, to do His work, you have no need to be anxious for tomorrow. He whose servant you are, knows the end from the beginning. The events of tomorrow, which are hidden from your view, are open to the eyes of Him who is omnipotent.

When we take into our hands the management of things with which we have to do, and depend upon our own wisdom for success, we are taking a burden which God has not given us, and are trying to bear it without His aid. We are taking upon ourselves the responsibility that belongs to God, and thus are really putting ourselves in His place. We may well have anxiety and anticipate danger and loss, for it is certain to befall us. But when we really believe that God loves us and means to do us good we shall cease to worry about the future. We shall trust God as a child trusts a loving parent. Then our troubles and torments will disappear, for our will is swallowed up in the will of God.

Christ has given us no promise of help in bearing today the burdens of tomorrow. He has said, "My grace is sufficient for thee" (2 Corinthians 12:9); but, like the manna given in the wilderness, His grace is bestowed daily, for the day's need. Like the hosts of Israel in their pilgrim life, we may find morning by morning the bread of heaven for the day's supply.

One day alone is ours, and during this day we are to live for God. For this one day we are to place in the hand of Christ, in solemn service, all our purposes and plans, casting all our care upon Him, for He careth for us. "I know the thoughts that I think toward you, saith the Lord, thoughts of peace, and not of evil, to give you an expected end." "In returning and rest shall ye be saved; in quietness and in confidence shall be your strength." Jeremiah 29:11; Isaiah 30:15.

If you will seek the Lord and be converted every day; if you will of your own spiritual choice be free and joyous in God; if with gladsome consent of heart to His gracious call you come wearing the yoke of Christ,—the yoke of obedience and service,—all your murmurings will be stilled, all your difficulties will be removed, all the perplexing problems that now confront you will be solved.

—The Mount of Blessing, 99-101

WHAT HEAVEN WILL BE LIKE

In the Bible, the inheritance of the saved is called "a country." Hebrews 11:14-16. There the heavenly Shepherd leads His flock to fountains of living waters. The tree of life yields its fruit every month; and the leaves of the tree are for the service of the nations. There are ever-flowing streams, clear as crystal; and beside them waving trees cast their shadows upon the paths prepared for the ransomed of the Lord. There the wide-spreading plains swell into hills of beauty and the mountains of God rear their lofty summits. On those peaceful plains, beside those living streams, God's people, so long pilgrims and wanderers, shall find a home.

"My people shall dwell in a peaceable habitation, and in sure dwellings, and in quiet resting places." "Violence shall no more be heard in thy land, wasting nor destruction within thy borders; but thou shalt call thy walls Salvation, and thy gates Praise." "They shall build houses, and inhabit them; and they shall plant vineyards, and eat the fruit of them. They shall not build, and another inhabit; they shall not plant, and another eat . . Mine elect shall long enjoy the work of their hands." Isaiah 32:18; 60:18;

65:21, 22.

There, "the wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and blossom as the rose." "Instead of the thorn shall come up the fir tree, and instead of the brier shall come up the myrtle tree." "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid . . and a little child shall lead them." "They shall not hurt nor destroy in all My holy mountain," saith the Lord. Isaiah 35:1; 55:13; 11:6, 9.

Pain cannot exist in the atmosphere of heaven. There will be no more tears, no funeral trains, no badges of mourning. "There shall be no more death, neither sorrow, nor crying: . . for the former things are passed away." "The inhabitant shall not say, I am sick: the people that dwell therein shall be forgiven their iniquity." Revelation 21:4; Isaiah 33:24.

There is the New Jerusalem, the metropolis of the glorified new earth, "a crown of glory in the hand of the Lord, and a royal diadem in the hand of thy God." "Her light was like unto a stone most precious, even like a jasper stone, clear as crystal." ""The nations of them which are saved shall walk in the light of it: and the kings of the earth do bring their glory and honor into it." Saith the Lord: "I will rejoice in Jerusalem, and joy in My people." "The tabernacle of God is with men, and He will dwell with them, and they shall be His people, and God Himself shall be with them, and be their God." Isaiah 62:3; Revelation 21:11, 24; Isaiah 65:19; Revelation 21:3.

In the City of God "there shall be no night." None will need or desire repose. There will be no weariness in doing the will of God and offering praise to His name. We shall ever feel the freshness of the morning and shall ever be far from its close. "And they need no candle, neither light of the sun; for the Lord God giveth them light." Revelation 22:5. The light of the sun will be superseded by a radiance which is not painfully dazzling, yet which immeasurably surpasses the brightness of our noontide. The glory of God and the Lamb floods the Holy City with unfading light. The redeemed walk in the sunless glory of perpetual day.

"I saw no temple therein: for the Lord God Almighty and the Lamb are the temple of it." Revelation 21:22. The people of God are privileged to hold open communion with the Father and the Son. "Now we see through a glass, darkly." 1 Corinthians 13:12. We behold the image of God reflected, as in a mirror, in the works of nature and in His dealings with men; but then we shall see Him face to face, without a dimming veil between. We shall stand in His presence and behold the glory of His countenance.

There the redeemed shall know, even as also they are known. The loves and sympathies which God Himself has planted in the soul shall there find truest and sweetest exercise. The pure communion with holy beings, the harmonious social life with the blessed angels and with the faithful ones of all ages who have washed their robes and made them white in the blood of the Lamb, the sacred ties that bind together "the whole family in heaven and earth" (Ephesians 3:15)—these help to constitute the happiness of the redeemed.

There, immortal minds will contemplate with never-failing delight the wonders of creative power, the mysteries of redeeming love. There will be no cruel, deceiving foe to tempt to forgetfulness of God. Every faculty will be developed, every capacity increased. The acquirement of knowledge will not weary the mind or exhaust the energies. There the grandest enterprises may be carried forward, the loftiest aspirations reached, the highest ambitions realized; and still there will arise new heights to surmount, new wonders to admire, new truths to comprehend, fresh objects to call forth the powers of mind and soul and body.

All the treasures of the universe will be open to the study of God's redeemed. Unfettered by mortality, they wing their tireless flight to worlds afar—worlds that thrilled with sorrow at the spectacle of human woe and rang with songs of gladness at the tidings of a ransomed soul. With unutterable delight the children of earth enter into the joy and the wisdom of unfallen beings. They share the treasures of knowledge and understanding gained through ages upon ages in contemplation of God's handiwork. With undimmed vision they gaze upon the glory of creation—suns and stars and systems, all in their appointed order circling the throne of Deity. Upon all things, from the least to the greatest, the Creator's name is written, and in all are the riches of His power displayed.

And the years of eternity, as they roll, will bring richer and still more glorious revelations of God and of Christ. As knowledge is progressive, so will love, reverence, and happiness increase. The more men learn of God, the greater will be their admiration of His character. As Jesus opens before them the riches of redemption and the amazing achievements in the great controversy with Satan, the hearts of the ransomed thrill with more fervent devotion, and with more rapturous joy they sweep the harps of gold; and ten thousand times ten thousand and thousands of thousands of voices unite to swell the mighty chorus of praise.

"And every creature which is in heaven, and on the earth, and under the earth, and such as are in the sea, and all that are in them, heard I saying, Blessing, and honor, and glory, and power, be unto Him that sitteth upon the throne, and unto the Lamb for ever and ever." Revelation 5:13.

The great controversy is ended. Sin and sinners are no more. The entire universe is clean. One pulse of harmony and gladness beats through the vast creation. From Him who created all, flow life and light and gladness, throughout the realms of illimitable space. From the minutest atom to the greatest world, all things, animate and inanimate, in their unshadowed beauty and perfect joy, declare that God is love.

—The Great Controversy, 675-678

Revelation 2:17—"To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it."

Revelation 3:5—"He that overcometh, the same shall be clothed in white raiment; and I will not blot out his name out of the book of life, but I will confess his name before My Father, and before His angels."

Herb and Seed Supply Sources

Dried Herbs and Extracts 824
Live Herb Plants and Seeds 825
Large Gardening Catalogs 825
Health Organizations and Journals 825

This chapter will provide you with sources of herbal powders and extracts, plus live herbal seeds and plants!

DRIED HERBS AND EXTRACTS

Albi Importa Limited, P.O. Box 35151, Station E, Vancouver, B.C., Canada.

Kwan Yin Chinese Herb Co., P.O. Box 18617, Spokane, WA 99208 —*Special Chinese herbs.*

Bio-Botanica Inc., 2 Willow Park Center, Farmingdale, NY 11735 —*Herbal extracts, done with a cold (not heat) process. Such extractions keep well (but, because they are extracts, they are in alcohol).*

Capriland's Herb Farm, Silver St., Coventry, CT 06238 —*Live herb plants and seeds.*

Geological Botany Co., 622 W. 67th St., Kansas City, MO 64113.

Golden Gate Herbs, Inc., 140 Market St., San Rafael, CA 94901.

Herb Research, Box 77212, San Francisco, CA 94107.

Herbs of Mexico, 3859 Whittier Blvd., Los Angeles, CA 90023 —*Herbs from all over the world.*

Indiana Botanic Gardens, Inc., P.O. Box 5, Hammond, IN 46325 —*Herbs, gums, oils, resins.*

Kiehl Pharmacy, 109 Third Ave., NY, NY 10003.

Larsen's Country Herb Shop, Box 253, Orem, UT 84057 —*Herbs, extracts, tinctures, ointments, capsules, live aloe vera plants.*

Magus, P.O. Box 254, Cedar Grove, NJ 07009 —*Claims that many of their herbs are organic and picked wild.*

Meadowbrook Herb Farm, Route 138, Wyoming, RI 02898 —*Dried herbs, spices.*

Dr. Michael's Herb Products, 5109 North Western Ave., Chicago, IL 60625.

D. Napier & Sons, 17 Bristo Place, Edinburgh, EHI, Scotland —*Started in 1860, many special products.*

Nature's Herb Company, 281 Ellis Street, San Francisco, CA 94102 —*Herbs for medical use, essential oils.*

Paprikas Weiss, Importers, 1546 Second Ave. NY, NY 10028 —*Herbs, spices, misc.*

S.B. Penick & Co., 100 Church Street, NY, NY 1007 —*Bulk imported botanicals at lower cost.*

The Redwood City Seed Co., P.O. Box 361, Redwood City, CA 94064 —*Rare nuts, berries, herbs.*

Otto Richter & Sons, Ltd., Locust Hill, Ontario, Canada —*Rare herbs.*

Rocky Hollow Herb Farm, Lake Wallkill Road, Sussex, NJ 47461 —*Dried herbs in packages.*

A. Shamrock, P.O. Box 40900, San Francisco, CA 94110 —*Herb brokers, mail order herbs.*

San Francisco Herb Co., 47444 Kato Rd. Fremont, CA 94538 —*Wholesale herbs at low prices. Minimum orders $50.00.*

Star Herb Co., 352 Miller Ave., Mill Valley, CA 94941 —*Importers and distributors of botanicals and ginseng.*

Wide World of Herbs, Ltd., 11 Saint Catherine St., East Montreal, 129, Canada —*Fairly inexpensive source.*

Wunderlich-Dietz Corp., State Highway 17, Hasbrouck Heights, NJ 07604 —*Many European herbs.*

LIVE HERB PLANTS AND SEEDS

Capriland's Herb Farm, Silver St., Coventry, CT 06238 —*Live herb plants and seeds.*

Carroll Gardens, P.O. Box 310, East Main St., Westminster, MD 21157 —*Live herbs and medicinal shrubs.*

Clearwater Farms, Des Arc, MO 63636 —*Live ginseng seed.*

Country Herbs, 3 Maple Street, Stockbridge, MA 01262 —*130 varieties of organically grown medicinal, culinary, aromatic, and dye plants.*

Ferndale Nursery & Greenhouse, P.O. Box 218, Askov, MN 55704 —*Wild ginger, blue cohosh.*

Gilberties Herb Garden, Sylvan Avenue, Westport, CT 06860 —*200 varieties of herb plants and shrubs.*

M. Girvan, Stanhope, IA 50246 —*Jewelweed seed (Jewelweed juice is the best antidote for poison ivy on your skin).*

Green Herb Gardens, Greene, RI 02827 —*Herb seeds.*

Halcyon Gardens, Gibsonia, PA 15044 —*100 varieties of medical, culinary, and fragrant herbs.*

J.H. Hudson, Seedsman, P.O. Box 1058, Redwood City, CA 94064 —*Big source of medicinal and other herb seeds.*

Johnny's Selected Seeds, Foss Hill Road, RR 1, Box 2580, Albion, ME 04910 —*Organic seeds for luffa sponge, white clover, burdock.*

Leslie's Wildflower Nursery, 30 Summer St., Methuen, MA 01844 —*Wildflowers, ferns, wild ginger, vervain, boneset, arnica, cinquefoil.*

Midwest Wildflowers, Box 64, Rockton, IL 61072 —*Many medicinal wild flowers, plus other herbs.*

Nichols Garden Nursery, 1190 North Pacific Highway, Albany, OR 97321 —*Hard-to-get herbs, plants. Also peppermint oil.*

Ohio Comfrey Growers, Rt. 1, Box 289A, Millersport, OH 43046 —*Comfrey roots.*

Plant Oddities, Box 127, Basking Ridge, NJ 07926 —*Unusual nursery stock.*

Otto Richter & Sons, Ltd., Box 26A, Goodwood, Ontario, Canada LOCIAO —*300 varieties of herb seeds.*

Clyde Robin, P.O. Box 2091, Castro Valley, CA 94546 —*Rare wildflower plants and seeds.*

Taylor's Herb Gardens, Inc., 1535 Lone Oak Road, Vista, CA 92083 —*200 live medicinal, culinary, and aromatic herb plants. Good source.*

Three Laurels, Rt. 3m, Marshall, NC 28753 —*Wildflower and garden plants, witch hazel, goldenseal, berries.*

Tillotson's Roses, 802 Brown's Valley Road, Watsonville, CA 95076 —*Rose hips, other rose products.*

Woodstream Nursery, Box 510, Jackson, NJ 08527 —*Good wildflower and medicinal herb source.*

Yankee Peddler Herb Farm, Rt. 4, Box 76, Hwy. 36N, Brenham, TX 77933 —*chia, arnica, fenugreek, jewelweed, mullein, shepherd's purse, marshmallow, borage, etc.*

LARGEST GARDENING CATALOGS

Burgess Seed and Plant Co., Galesberg, MI 49053.

W. Atlee Burpee Co., 6350 Rutland, Riverside, CA 92502.

Ferry-Morse Seed Co., Box 200, Fulton, KY 42041.

Henry Field Seed & Nursery Co., Shenandoah, IA 51602.

Gurney Seed & Nursery Co., Yankton, SD 57078.

J.H. Hudson, Seedsman, P.O. Box 1058, Redwood City, CA 94064.

Miller Nurseries, Inc., Canandaigua, NY 14424

R.H. Shumway, Seedsman, P.O. Box 777, Rockford, IL 61101.

HEALTH ORGANIZATIONS AND JOURNALS

National Food Association, P.O. Box 210, Atlanta, TX 75551 —*A large organization concerned with organic farming and food resources.*

National Health Federation, 212 Foothill Blvd., Monrovia, CA 91016 —*Defends natural remedies, health foods, and proper nutrition.*

Prevention, Emmaus, PA 18048 —*The largest and oldest journal dealing with the prevention of disease.*

Organic Gardening and Farming, Emmaus, PA 18048 —*The other Rodale publication; this one is concerned with promoting the best in natural gardening, and avoidance of chemicals and insecticides.*

HOW TO LIVE LONGER

A researcher in Germany discovered that how you deal with problems can affect how long you will live and, to some extent, how you may die!

In this life, each individual is continually confronted by problems—difficulties in relation to persons, situations, and goals. Some of these problems can be quite large. Yet the attitude the person takes toward his problems can, literally, finish him off.

What you are about to read can affect your entire life, so you will want to consider it carefully. Recognize it as good advice; not only start doing it, but also share it with your friends and loved ones.

Ronald Grossarth-Maticek, a Yugoslavian oncologist, and his students were given access to mortality data in Heidelberg, Germany. They carefully studied thousands of deaths, read through autopsy reports, and interviewed relatives of the deceased. He discovered that a person's attitude greatly affects his life span—and in special ways.

There are four methods of dealing with problems. The European researcher dealt with the first three. Other research studies reveal there is also a fourth. Here they are:

Type 1 - The first way of dealing with a problem is to let it get you down. The key words are **"hopeless / helpless."** This person is unable to solve problems relating to others, situations, or goals. If relationships are sour, circumstances unfavorable, and goals seemingly unachievable, he sinks into a depression, characterized by feelings of helplessness and hopelessness. This person seems unable to change his negative view of life. He consistently holds on to depression as a habit to run into and hide. The coronary reports revealed the fact that the person choosing **this type of behavior is highly prone to cancer.**

Type 2 - The second way of dealing with a problem is to blow up. The key words are **"frustrated / angry."** This person also seems unable to deal with problems in a positive way. Instead, he becomes disgusted or loses his temper. The person choosing **this type of behavior is highly prone to heart disease.**

Type 3 - The third way of dealing with a problem is to remain positive and turn one's attention to finding a new way—a different way—to tackle the problem and resolve it. The key words are **"cheerful / positive."** The significant factor, of course, is the continued positive outlook.

The individual selecting this type of response to problems—tends not to get sick! That is what the interviews and coronary reports revealed. These people have the lowest incidence of disease. In fact, they have the lowest incidence of death due to all causes, including accidents.

Here we have two major killers and many smaller ones. The solution to forestalling many of them is a change in outlook and thinking, a change in behavior.

Type 4 - There is also a fourth way of dealing with problems, which other studies have repeatedly shown to be highly beneficial to both mind and body. **This method increases the positive outlook of Type 3 living, intensifies the healthful results, and makes it easier to switch from Type 1 and Type 2 to Type 3 behavior.**

The fourth manner of dealing with a problem is to take it to God in prayer. Here we find a person who has chosen to accept Christ as his Saviour. He has dedicated his life to Him and, by enabling grace, seeks to obey His Written Word each day.

Then when a problem arises, he takes it to God in prayer. Those who do this have found that it produces wonderful results. In some cases, a beautiful solution appears all by itself. At other times, the person will arise from prayer, greatly encouraged to press forward in a Type 3 approach: With a positive outlook, he will try a new way to solve the problem. However, there are difficulties which, unfortunately, cannot easily be solved. They would try to hang as a dead weight around the neck, year after year. Only Type 4 living can deal effectively with such problems.

A Christian can face problems more positively than others. He can cheerfully live with problems which would crush others.

Yet there is something else about Type 4 living which is special: The person who puts God first in his life—will spend much of his thought and energy trying to make the lives of others happier. The person who is busy helping others will always seem to have fewer problems. He is too busy being a blessing to others to give his personal problems much attention.

What have we learned from these four types?

When you have a problem, do this: (1) Take the problem to God in prayer. Make sure you are obeying the Ten Commandments and all that He commands in His Inspired Writings. (2) Keep positive and cheerful. If you have a personal relationship with God, you will especially be able to do this. Trust everything to Him; and believe He will work it all out for the best. (3) Change your behavior in such a way that conditions are changed for the better. Obedience to God's laws will greatly encourage you.

Amid the problems of life, when you walk up to a wall of difficulty, you can go through it, go around it, or go over it. Sometimes, with God's help, the wall just disappears as you walk toward it.

Here are several additional pointers:

Just what is the problem? What new, alternative activities would produce more positive results? Think it through; and then, prayerfully, try making the changes. Always stay on the positive. Failure should not be regarded as a reason for not trying out new types of behavior and activity. Discouragement or anger accomplish nothing. Take it to the Lord in prayer and arise ready to move forward positively again.

Some problems cannot be solved. Sometimes you live with them. This is when Type 4 living—walking hand-in-hand with God—can provide wonderful solutions, even if unfortunately circumstances do not seem to change as quickly as they might. It can also help you live in environments which would crush others.

Choose the sunshine side of life; and problems about you will evaporate. The Christian has heaven coming; he can afford to wait patiently through the days that are dark. For him, the future is bright.

Remember to use your longer life to help and bless others. That is why you were born into this world. Spend your time making others happy. —*vf*

The Natural Remedies Encyclopedia

Disease Index

There are over 1,500 entries in this Disease Index, to help you quickly locate the disease or disorder you are looking for.

An outstanding quality of this book is not only its broad coverage of over 730 disorders but the fact that the diseases and problems are grouped together, so you can easily compare them. Few books do this. However, this makes this *Disease Index* very important, when you are looking for a disease by its name.

Ascaris, 590
Asthma, 580

TABLES OF CONTENTS
IN THIS ENCYCLOPEDIA

MAIN TABLE OF CONTENTS *(pp. 5-6)* - lists all the chapters in the book.

DISEASE TREATMENT TABLE OF CONTENTS *(7-15* - helps you quickly find what is in each of the 25 Disease Chapters in the book.

HERB CHAPTER TABLE OF CONTENTS *(107-108)* - Use this to quickly find the descriptions of each of the 126 most important herbs.

HYDROTHERAPY TABLE OF CONTENTS *(153-154)* - Quickly directs you to each of the more than 100 different types of water therapy treatments.

—In addition, nearly every other chapter in the *Encyclopedia* begins with its own chapter table of contents.

INDEXES
IN THIS ENCYCLOPEDIA

DISEASE INDEX *(828-836)* - Beginning on the page you are now on, this index lists every disease covered in the 25 Disease Chapters *(pp. 212-757)*.

GENERAL INDEX *(838-839)* - All of the basic topics, not including the Disease Chapters, are listed here.

HYDROTHERAPY INDEX *(209-211)* - This can help you quickly locate hydrotherapy treatments for 213 different diseases!

Asthma in Pregnancy, 678
Astigmatism, 301
Atherosclerosis, 427
Athlete's Foot, 292
Athletic Workouts, 536
Atopic Dermatitis, 270
Atrophic Vaginitis, 660
Atrophy, Testicular, 638

Outstanding Health and Healing Books

TWO BOOKS COVER A BROAD RANGE OF NATURAL REMEDIES —

NATURAL REMEDIES ENCYCLOPEDIA—*Part One: The Health Encyclopedia* has 121 principles of good health, 120 principles of right living, 126 most important herbs, 9 best poultices, and a discussion of the healing crisis. The complete book, *Water Therapy Manual.* Basic vitamin and mineral dosages and their purposes. The complete book, *The Eight Laws of Health.*

Part Two: The Disease Encyclopedia is categorized under 25 major areas and 101 subsidiary topics, so similar problems are located near one another. Dr. J.H. Kellogg's (Battle Creek Sanitarium) healing formulas are included. Complete, classified table of contents, complete index—so each disorder can easily be located. Very readable print. *Casebound edition. $85.00, plus $5.00 p&h.*

TWO BOOKS PROVIDE HISTORICAL DATA ON CANCER —

ALTERNATE CANCER REMEDIES—"Facts for Historians and Medical Researchers." Nearly four hundred preventive factors. Over fifty cancer treatment methods that are based on the findings of eighty cancer researchers. The three primary methods used today. Over fifty special herbs. The four leading herbal formulas. Anti-cancer organizations and clinics. Sources of supplies—and much more. A special section discusses facts about drugs, radiation, and surgery. *198 pp., 8½ x 11, $19.95, plus $3.00 p&h.*

THE GERSON THERAPY for those dying of cancer—"Facts for Historians and Medical Researchers." The complete program arranged in a simple, direct style. Sections are easy to locate. Includes a section on non-malignant care. Information on how to contact the Gerson Institute and obtain supplies. *44 pp., 8½ x 11, $4.00 + $2.50 p&h.*

OTHER EXCELLENT HEALTH BOOKS —

MINISTRY OF HEALING—The complete book at the lowest cost available anywhere. Very readable print. Scripture index. *360 pp., 4¼ X 6¾, $10.95 + $2.50 p&h.*

THE VACCINATION CRISIS—Medical facts about the damage that childhood vaccines can do to your children. Legal exemption statutes. How you can avoid having your child vaccinated. *304 pp., 5½ X 8½, $5.95 + $2.50 p&h.*

INTERNATIONAL MEAT CRISIS—The meat you eat is contaminated and infected to a degree never before known in human history. Mad cow disease, antibiotics and dead animals in feed, slaughterhouse contamination. Meat eating is a major source of cancers, osteoporosis, arthritis, obesity, parasites. *176 pp., 4¼ X 6¾, $16.00, plus $2.50 p&h.*

The Conflict of the Ages Series

A REMARKABLE BIBLE COMMENTARY SET —
FROM THE FALL OF SATAN TO THE END OF SIN
— AND ETERNITY BEYOND

The complete, five-volume *Conflict of the Ages Series* is now once again available, in boxful quantities, at the prices they all sold for when the author died.

Now with several outstanding features:

- **The basic text of each book is complete, with nothing missing.**
- **The print size of four of the books is larger than regular paperbacks. (The exception, *Desire of Ages,* is already a very large book.)**
- **Each book has standardized paging notations to the larger, clothbound editions of the book and one or more indexes.**
- **Each has an attractive cover, with a cover price helpful to canvassers.**
- **The first four books in the series consist of Scripture commentaries from Genesis to Revelation. For the first time, at the beginning of each chapter, all four books list the principal Bible passages on which the chapter is based.**

Here are additional features in each volume:

Book One - Patriarchs and Prophets—3,000-year time line from Creation down to the death of David. Complete set of 7 maps of the Holy Land. 130 Old Testament Bible stories (from Creation to the death of David). 28 brief Bible studies. Map Index. *800 pp., $16.95.*

Book Two - Prophets and Kings—1,000-year time line from Judges to the end of the Old Testament. 6 chronology charts (Judges, United Kingdom, Divided Kingdom, Foreign Rule, Book of Jeremiah). 55 Bible stories (from Solomon to the end of the Old Testament). 43 brief Bible studies. Two indexes (Scripture and Topical). *576 pp., $14.95 + $2.50 p&h.*

Book Three - Desire of Ages—110 precious promise passages in this book. Paging of 130 events in the earthly life of Christ. 4 New Testament maps (Judea and Galilee, Galilee and Phoenicia, Jerusalem, environs of Jerusalem). 125 Bible stories in the Gospels, 301 prophecies of Christ and their fulfillments. 2 pages of sample quotations for canvassers. *At the back of the book:* Principles of Healthful Living (Spirit of Prophecy quotations). The Crucifixion (historical, medical, and archaeological information). Two indexes (Scripture and Topical). *856 pp., $16.95 + $2.50 p&h.*

Book Four - Acts of the Apostles—198-year time line, covering the entire First Century (63 B.C. to A.D. 135). 3 chronology charts (Book of Acts, Journeys of Paul, General Epistles). 61 Bible stories from the death of Christ to the end of the Old Testament. Two indexes (Scripture and Topical). *488 pp., $12.95 + $2.50 p&h.*

Book Five - Great Controversy—*The Basic Steps to Christ: How to Come to Christ and How to Remain with Christ* (the heart of the book: *Steps to Christ,* in the author's own words). 58 Bible, historical, and promise charts. *At the back of the book:* The Secret Instructions (from the 1884 edition). An 1884 / 1888 correlation time line. 4 indexes (Source, Chart, Scripture, Topical). *736 pp., $10.95 + $2.50 p&h.*
